Scilan terrified with this disastrous passage by water, purposed to goe by land to *Pequin*, which is done at the Kings cost; in certayn places there being Horses, Lighters, Porters, provisions ready provided. Now thinking to send backe *Ricinus* to *Xanccum*, least some might accuse him in a time of warre for bringing Strangers to the Court; hee shewed some the wonders of his triangle Glasse, which hee was willing to giue the President if hee knew he should hold on with him in the Iourney. They acquainted their Lord, and hee gaue him license to goe to *Nanquin*, and to enter those two Prouinces of *Cequion* or *Cechien*, and *Nanchin* or *Nanquin*. Hee was carryed thither with two of *Scilans* seruants, still hauing Souldiers from all places to guard him, they thinking that some of his Sonnes were there carryed. When hee came to that Mother Citie (for before hee seldome went forth, to prevent all lets) which is in twentie nine degrees, to the Northermost part of the Prouince, hee made shew of himselfe as one of *Scilans* household seruants: and not knowing whither to goe to deliuer his Lettters, hee first went into a Temple of note, which beares name of the *Iron Pillar*. For they fable that one *Huiunfin*, had some hundreds of yeeres agoe, brought perfect Siluer out of Quick-siluer, and had deliuered this Citie from a huge Dragon, whom hee ouerwhelmed in the ground, and tyed to that Iron Pillar, and then flew with his whole house, Mice and all, into Heauen. The building of this Temple is worthy the view, against which are perpetuall Faires, in which nothing is lacking to bee sold. The Priests are those which they call *Thausu*, which let their hayre and beards grow. When hee entred that Temple, much concourse of people came about him to see a Stranger, a strange sight there, yea, reputed holy, for they had thought that the fame of that Idoll, had brought him thither from farre Countries. But when hee did no worship thereto, hee was admonished to doe that which the greatest Magistrates refused not; then threatned, after they would force him, till one of the Ship sayd, hee worshipped no Idols. But seeing the multitude still flocking about him, he returned to the Ship, and signified that hee came with the President, whom euery man knew. The seruants visited their Masters friends, and receiued gifts of some, especially of the Vice-royes Physician.

Scarcely had they sayled out of the chiefe Citie, when they meete with a Lake admirable for the greatnesse and other things: on all the bankes as farre as a man can see, are innumerable Townes, Castles, Villages, great Houses; thence they may passe into *Fuchien*, and thence to the Sea Eastward. Amongst other Townes there is one Citie called *Nancan*, at the foot of a Hill called *Liu*, in which Hill are diuers Anchorites, each in his owne Cell, macerating himselfe with afflicting his bodie. Those Houses are sayd to bee as many, as are dayes in the yeere: and they tell as a miracle, that the Sunne shining cleere round about, that Hill is all Lake. The course of the Riuer is to *Nanquin*, but in that breadth the streame hath small force, and easily may with the winde bee sayled any way. After you are out of the Lake, a great Riuer out of *Vquam* Prouince, runneth thither and therein loseth his name and waters. For the greatnesse, it is thence-forward called *Tamsu*, which signifieth, the *Son of the Sea*, being in many places two or three myles broad, dangerous also for tempests like his Father, and they say the waters are so whirled therein, that swimming can little profit those which fall thereinto. The *Chinois* sayle it with great feare, and are there often wracked. Great Ships sayle therein, and happely our Ships (not the greatest of all) and our Galleyes might sayle hitherto from the Sea. Many other Riuer pay their tributes to it. They sayle it not by night, but betake themselues to some Port, which they may readily doe also in a storme. To this Lake the Spring-tydes at Change and Full come, at other times not obseruable: at *Nanquin* euery day, but it is fresh water. When hee was come to *Nanquin* the Presidents seruants left him,

Chiengan.

Kings Posts,

The Glasse seemed a great lewell, giuen to Scilan, Nancian Metropolis of *Chiansi*.

Nanquin or *Nanchin* by the *Portugals* is called *Lanchin*: for they heard of it by the Inhabitants of the Prouince *Fuchian* or *Fuquian*, which vse *L* for *N*. It is called also *Intiensu*, because the *Gouernour* of the Region there resideth. This is that Citie, which in the *Chinois* opinion excelleth all Cities of the world, both in greatnesse and goodnesse: neither may many be compared to it. For it is full of very great Palaces, Temples, Towers, Bridges, which all yet are exceeded by those of the same kinde in *Europe*. It excelleth also in temperature of the ayre, fertilenesse of the soyle, goodnesse of wits, gentlenesse of manners, elegance of speech, multitude of inhabitants of euery ranke, of People, and Learned, and Magistrates: these also holding equall ranke with those of *Pequin*, in number and dignitie, howbeit by the absence of the King, that equalitie is made vn-equall. And so in all the Kingdome of *China*, and the bordering Kingdomes, it is commonly (all things considered) iudged the first or chiefe Citie. It is compassed with three Walls; the first, that of the Kings Palace exceeding stately. That is also compassed with a three-fold wall, in manner of a Tower, with ditches filled with water. It hath foure or fve *Italian* myles in circuit. And I dare boldly say, that no King any where hath a more excellent Palace (not if you weigh particulars together, but) comparing all things. The second wall encompasseth the Palace, and the principall part of the Citie, opened with twelue Gates, which are fortified with Iron plates, and Ordnance planted ouer against them within the Citie. This second Wall comprehendeth eightene *Italian* myles compasse. The third Wall and vttermoost is not euery where continued, but where need is, Art hath added supplyment to Natures fortification.

The circuit thereof can hardly bee knowne. The Inhabitants say, that two Horse-men in a whole dayes riding, hauing gone out of the same Gate, met together at night: whence the prodigious quantitie may bee obserued, especially the forme of the Citie being Circular, and therefore most capable. Although within the walls are great spaces of Mountaynes, Lakes, Groues, Gardens, yet the greatest part is very frequently inhabited. The garrison Souldiers (which one would not beleue, had not eye-witnesses confirmed it) which keepe the Citie alone, are fortie thousand. The Pole is eleuated 32. degrees, and so it is seated in manner in the midst of the Kingdome, from North to South. The Riuer runneth by it at the West, exceedingly both enriching and beautifying it. Nor doth it onely passe by, but is in many places brought into the Citie by Channels (whereby greater vessels may enter the Citie) being enlarged by Art. In times past it was called the chiefe Citie of the Kingdome, and may seeme to haue bene anciently more glorious.

Ricivs went a-land in the Suburbe, which is without the three Walls, and is so large and frequently inhabited, that it may seeme another great Citie. There a Physician of the Vice-roy of *Schiauchin* knew him, and hee visited the Vice-royes sonne, and by his meanes grew acquainted with others. When he went into the Citie, hee vsed to bee carryed in a close Chayre, to preuent noueltie, and for more authoritie, and because the length of the way to friends houses often required it. There hee thinking to fixe a residence, learned of one *Scintagin* a Magistrate of his former acquaintance, to whom hee had before giuen a Globe and an Houre-glasse, receiuing promises of much kindnesse. To him he went full of hope and not emptie handed: but hee being both miserably couetous, and ambitiously hunting after new places, was offended with his presence (hee pretending that he came to see him) sent for his Host, and threatened him terribly, causing him to ship away his new Ghest; hauing also agreed with the Notarie of his Court to giue euidence against him, as a troublesome and dangerous man formerly expelled from *Schiauchin*. Thus against the streame both of his affection and the Riuer, is *Ricivs* forced (loath to displease Magistrates) to returne to *Chiansi* Prouince. In the way full of thoughts, hee had a vision (as the Storie sayth) in which God appeared to him, and promised to bee propitious in both the Cities Royall to him.

In *Nancian* the chiefe Citie of *Chiansi* hee abode. This is as great in circuit, but not in Merchandise as *Canton*, and though none of those portentuous great Cities, yet is it famous for the number of Learned men, which thence are aduanced to diuers parts: the people are thriftie and contented with little, and many of them obserue that first aforesayd. Of the Learned men there is also a Societie, in which on set dayes the more learned doe Lecture or discourse touching vertues in very modest manner. The Physician aforesayd, famous for his Art and well respected by the

the Vice-roy, was visited by him: Hee now vsed his Silken vest and Cap vsed by the Learned, somewhat like but higher, then that which Priests in *Spain* weare, (for he had learned to keepe state and not to deiect himselfe too much) and carryed two seruants with him in long garments made of Callico, and his gestatorie Chayre: without which pompe a man cannot bee taken for a Learned man, the poorest Student vsing them, and otherwise contemned. The Physician entertained him kindly, and after inuited him to a Feast, where were many Students, and some of the Royall bloud (of which that Citie hath very great store) which were glad of his acquaintance; and when he had once mentioned his staying there, the Physician was so eager in desire thereof, that he feyned that the President *Scilian* had written to him, to procure him residence there, because in the former abode he had not his health. The *Chinois* esteeme such lyes to bee wisdom. Hee sone got credit amongst them by Mathematicall lectures and instruments, and by his artificiall memorie especially. For the *Chinois* aboue all others commit whole bookes to memorie with vnwearyed paynes, and in the first yeeres of their studies doe nothing else. He repeated the most confused and independant Characters in order, yea, backwards as well as forward. Many desired to learne it, and some hee entertained. Physicians being of no great authoritie, he sought to insinuate into fauour of the Magistrates; but a certayne Student had counselled him to neglect their license, and thereupon enquire being made by the Vice-roy, this his friend and landlord very friend-like, would needs throw him suddenly out of doores, and hee was forced by force to defend himselfe. But the Vice-roy hauing receiued a Libell from him, testifying who he was, greatly reioyced (hauing heard of him) and when hee came to his Court, arose from the Tribunal to meete him, would not suffer him to kneele, and gaue him good vsage and magnificent Titles, inuited him also to reside there. Whose affections were after kindled into a greater flame by his Physicians, magnifying his Mathematickes, Memoratiue, Bookes, three square Glasse and other nouelties. The Vice-roy would haue him make him a Dyall, and teach his Sonnes, but for that admirable Glasse, hee would by no kinde force accept the gift.

And whereas time out of minde many of the Royall bloud are there, two of them hauing the tytle of Kings, *Chiengan*, and *Longan*, sent their principall Seruants or Courtiers, to inuite Father *Matthew* to the Palace, which is fitting to Royall Maiestie, both for Greatnesse, magnificence of Building, pleasure of Gardens, and other furniture of household and attendance. *Chiengan* first inuited and entertained him, attyred with a Royall vesture and Diadem. Father *Matthew* gaue him a Dyall with the Signes of the Zodiacke, and a Globe with *China* characters, and other *European* commodities; which hee recompensed with Silkes, weight of Silver, and diuers viands. Nothing gaue him such content as two Bookes of *Iapon* paper, smooth and hard bound in *European* manner: one contayning Maps and other Mathematicall representations, with an explication in their Language; the other was a tractate of Friendship, wherein Dialogue-wise (as *Cicero* in his *Lelins*) hee bringeth in the King, questioning what the men of *Europe* thought of Friendship, and set downe the sentences of Philosophers, Doctors, and other Authors; a worke to this day read there with great applause and admiration. Printed in diuers Prouinces. *Chiengan* continued his friendship and left it as a legacie to his Sonne, who vsed when the Father visited him, to pay the Porters, and to giue money to his seruants, a token with them of great welcome. The Societie also of Learned men grew acquainted with him, and the chiefe of them, hearing him complayne of multitude of visitors, wished him to command his Seruants to say hee was not at home: which officious lye he affirming to bee by our Law vnlawfull, bred in him and the rest much wonder.

In the meane while at *Xauceo* they sustayned abuses, and *Sebastian Fernandes* was vsed ignominiously by the calumnies of their quarrelsome neighbours, and sentence of a partiall Iudge, which caused two Seruants to bee whipped vnheard, and *Fernandus* to stand as in a Pillorie, with his head in a board an ell and halfe square, therein a hole fitted for the necke, to bee opened and shut; so that a man cannot put his hand to his mouth: and this forsooth for beating the Bachelors. This was written as the cause of his punishment. Hee afterwards sought the *Iesuites* fauour, ashamed of his fact, inuited them, and set vp an Edict for their safetie. *Fernandus* was sent hereupon to *Ricim*, and *Catanen* continued alone without any Father, till the yeere 1597. and fell sicke: then going to *Amacao* (Father *Iohn Aroccia* was sent in his place) hee returned with Father *Nicholas Longobard* a *Sicilian*. Father *Matthew* was appointed superiour of the *China* mission by the Visitor *Valignanus*, without subjection to the Rector of *Amacao*. To him precious watches were sent, and Images with other things, which might further their *China* proceedings, the *Portugals* of *Amacao* continuing their liberalitie herein.

Father *Matthew* minding to trie all meanes to peece to the Court, assayed *Chiengan* in vaine, who feared to raise any suspicion of himselfe. Hearing therefore that *Guan* (which had as you heard) visited the house of *Xauceo*, in his way to *Hainan*, was thence called by the King to *Nanquin* to bee President of the first Councell, called *Li Pu*, that is, the Councell of Magistrates: in his way at *Nancian* they visited him with a present, (in which nothing so pleased him as the trigone Glasse) and tooke opportunitie to signifie to him, their desire of presenting the King with some *European* rarities. Hee approued thereof and sayd, they should not onely goe with him to

Nanquin, but to Pegum also; whither within one moneth of his coming hee was to goe. Ricinus with Cataneus attend him (leaving two of the company at Nanchin) with two brethren of the company, Seb. Fernandes, and Emanuel Pererius, of China parentage in Amacao: who of their God-fathers take usually both Christian name and Sir-name, vsing also their Chinese names in dealing with Chinois. They set forth from Nanchin on Midsummer day, 1598. and when they were come to Nanquin they found all full of feare, by reason of the Japonian warre in Co-rai, so that none durst giue vs entertayment, grievous Proclamations having lately forbidden to receiue men any way suspicious, by occasion of Japonian Spyes taken. Even the President himselfe, feared to bee author in so troublesome time of bringing Strangers: and Ricinus when he visited him, vsed his Gestatorie seate. They gaue eight pieces of Gold to a cunning Clerke to write their Petition (so deare doe Learned men there prize their labour) which when they gaue the Chancellour (which sends Petitions from Nanquin to the King) hee would not meddle with it, but put it off to the President, that hee should carrie them with him to Pegum. He being to bee there to gratulate the King at his Birth day, in name of the fixe Tribunals or Counsels, sent his goods by water and the Iesuites with them, but went himselfe by land.

When this President came to Nanquin, other Magistrates visited him with presents after the manner, and one the Vice-roy of that Prouince with a Map of Ricinus his inuention, concealing the name of the Author in a new impression; which hee shewed to Ricinus, who soone knew and challenged his owne. This the President intimated, that the Author was going with him to Pegum. Hee presently sends the Captayne of the Souldiers, to desire the President that he might haue sight of a man whom hee so much admired; sending withall a Chayre, and Porters with Horses also. For the Vice-roy of Nanquin resideth not in Nanquin, because in that High Court are higher Magistrates, which would seeme to eclipse his Greatnesse. So Cataneus went with the Ship, Ricinus to the Vice-roy, whom hee saluted with European gifts. He staid with him ten dayes, so great desire he had to conferre with him. And when hee shewed him the Image of Christ, he would not take view of it there, but would first ascend to a neate Chappell which he had on the top of his House, therein after the rites of their Learned, to worship Heauen; with three doores to it, from the South, East, and West: about it round was a Gallerie distinguished and cancelled. There he caused an Altar to bee erected, and thereon Wax-lights and Incense to be fired; and then the Image being set thereon, hee came in his most sumptuous attire and did worship foure times, after their accustomed rites: after which hee would not stand before it but besides it, to take view, which hee did a good space. After him, his familie did likewise: and euery day they reiterated the same, one also being appointed to keepe perpetuall Odours burning before it. Hee brought other Magistrates also to see the same: and when he might not detain the Father longer, he sent him away with great weight of Siluer, which came fitting to their necessitie. Hee gaue aduise also touching their designe, and told them of that frustrate successe which followed. He went with him to the River, and sent one with him till he had overtaken his companion. The Chinois call that River Iansu-chian, Chian signifying the greatest River; other Rivers they call Cho.

That River of Nanquin which I called (Yansu or) Iansu, the sonne of the Sea, goeth Northward to Nanquin, and then returning somewhat Southward, runneth into the Sea with great force; fortie myles from which it passeth by Nanquin. And that from hence to Pegum there might bee passage by Rivers, the Kings of China haue deriued a large Channell from this to another River, called the Yellow River, such being the colour of that troubled water. This is the other famous River of that Kingdome, in greatnesse and note, which ariseth without the Kingdome to the West, out of the Hill Cunlun, conjectured to bee the same whence Ganges ariseth, or one neere to it. Where it first breakes forth, it maketh a Lake which they call of the Constellations: thence it pierceth into the borders of China in Sciensi, the most Westerly Prouince, and goeth out againe out of the Northerne walls into the Tartars Countries: after which it returneth to the South, and that Prouince whence it had come, and washeth another Prouince named Sciensi, and another named Honan: then turneth into the East and entreth the Easterne Ocean, not faire from the Sonne of the Sea. This River against their lawes for Strangers, entreth China from Barbarous Regions, and as in reuenge of their malice to Strangers, often over-floweth great part of the Kingdome, and shifteth his Channell being full of Sands which it moueth. Certayne Officers or Magistrates designed doe sacrifice thereto, or to the Spirit of it (for they set Spirits ouer diuers things) with many rites: and they sayne that it cleeres the troubled waters, but once in one thousand yeeres, whence it is prouerbiall of a fild-seene thing, When the yellow River shall bee cleered. They that sayle therein, must therefore keepe the water many dayes till it setleth, the third part prouing myre and sand. Before the ingresse and egress of this River, are Channells which giue passage to Ships that carry prouision to Pegum. Those Ships are sayd to bee ten thousand, sent onely out of five Prouinces, Chiansi, Ceshian, Nanchin, Uquam, and Sciantium. For these Prouinces pay their yearly tribute in Rice and Corne, the other ten in Siluer. Besides these, there passe innumerable Ships of Magistrates and of private Merchants: but private men are forbidden to goe out of the Hiansu into those lesse Rivers (those onely passe which dwell

dwelt within such Rivers to the North) lest the multitude of Ships should hinder the passage, or bee able to doe harme to *Pequin*. Yet is there such store of Ships notwithstanding, that they are forced to stay sometimes diuers dayes, one hindring another, especially at some seasons when water is scarce, for remedie whereof, they haue lockes and flood-gates, which opened make way from one to another of them, with great labour and tedious lingring. The crosseesse of windes and labours of drawing with ropes, I need not mention. Some ships are ouerwhelmed at the opening of those lockes. They haue wooden Engines on the bankes to draw the ships of Magistrates, at the Kings cost, against the streame all the way. And in fitting this River to Navigation, a million is spent yeerely; the feare of the Sea and Pyrats, haue made them take this course rather then that by Sea.

In all this way, many Cities most worthy note appeare, of the Prouinces *Nanquin*, *Sciantium*, *Pequin*, and besides the Cities there are so many Townes, Villages, Houses on the bankes, that all the way may be sayd to bee inhabited; so that the Saylers no where want to furnish themselves with Corne, Rice, Fish, Flesh, Fruits, Hearbs, Wine, and the like, at a very cheape rate. By the same River, Wood, Timber, Boards, Pillars (for the *Chinois* make reckoning onely of those of wood) are carryed for the Kings workes: especially, then when the Kings Palace had bene on fire, which consumed two parts of three thereof. In all the Iourney, ours found great rankes of Timber-trees tyed together, and of other wood, which many thousands of men drew with huge toyle, and scarcely could get forwards five or sixe myles in a day, and from the Prouince *Susuen*, which is furthest from the Court, such Timber-trees were in going vp, two or sometimes three yeeres space: whence euery pillar made of them prodigiously arose each to three thousand pieces of Gold: and of those Timber-rankes they encountred one, seeming longer then the rest, which was esteemed to reach two myles in length. The Bricks also (which the *Chinois* preferre before Stone) for the Kings Palace, were carryed this way fifteen hundred myles, and many Ships had no other vse, so many as might seeme sufficient, not for a Palace but a great Citie. Out of the Southerne Prouinces, are yearely sent those things which in the more barren Prouinces of *Pequin* are wanting; as Fruits, Fish, Rice, Silkes, Cloathes and other things: and a day is set them, at which if they bee not there, they incurre grievous penalties. Of the Ships called *Horses*, the Kings Eunuches haue command. By this River they layle almost onely when the Rivers swell ouer their bankes, peraduenture by the melting of the Snowes from the Hills whence they spring. By the heate in that Iourney of a moneth, and sometimes two moneths, the viands which they carrie, are often corrupted before they come to *Pequin*, for which cause they coole them with Ice, and in all those wayes much Ice is preferred for that purpose, and distributed to the passengers, and so all things are carryed fresh to the Court.

The Eunuches of those Ships, sell emptie roomes to the Passengers for their gayne: for the *Chinois* thinke it a glory to send that which goeth to the King in many ships, & not to giue them their full lading, which is also profitable for that sterilitie of *Pequin*, Merchants by these conuenient freights making nothing to want there where nothing growes. Ours hyred a roomie in like manner for their ease. By reason of the great heat they all fell sicke, yet by Gods helpe recovered. When they were to passe out of the River, in the Prouince of *Sciantium*, they met with a hand-made River, which runnes out neere *Pequin*, to the Tower *Tienfin*. Another River from *Pequin* or rather from *Tartaria*, meetes it, and runnes together with it into the Sea, or into that Bay, betwixt *Corai* and *China*, after they haue runne together one day. In this Tower there was a new Vice-roy extraordinary, by reason of that inuasion of *Corai* from *Iapon*. Hee prouided a huge Fleet for defence of *Corai*, by which meanes that whole River was full of Ships of warre and militarie tumult. Ours went thorow the thickest of them without let, and at length came to the Port or Banke rather of *Pequin*, which banke is a dayes Iourney from the walls of *Pequin*. And although by Art they haue made a huge Channell to the walls, yet lest it should bee filled with multitude of Ships, they suffer none but the Kings burthens to goe that way, the others being carryed by Carts, Beasts, and Porters. They came to *Pequin* on a festiuall day, the Euen of the Virgins Natiuitie.

The chiefe Mart Townes in this way were *Iamcheu* in *Nanquin* Prouince, in thirtie two degrees thirtie minutes. *Hoaingan* in thirtie foure not all so much; *Sincen* in thirtie foure degrees thirtie minutes. In *Sciantium* Prouince *Zinim* in thirtie five degrees fortie minutes. *Lincin* in thirtie seuen degrees fortie minutes. In *Pequin* Prouince *Tiencin* in thirtie nine degrees thirtie minutes. *Pequin* in fortie large. They are deceiued which eleuate it to fiftie. Now from *Canton* (which is two dayes from *Amacao*) are of *China* furlongs (five of which make a mile, and fiftene a league) by River to *Nanbin*, one thousand one hundred and seuentie. Thence to *Nan-* Length of the way.
cin eleuen hundred and twentie. From that to *Nanquin*, one thousand foure hundred and fortie. And thence to *Pequin* three thousand three hundred thirtie five, in all seuen thousand sixtie five: which makes of miles, one thousand foure hundred and thirteene.

Pequin is situated in the Northerne border about one hundred miles from the wall against the Tartars. Nanquin exceeds it in greatnesse, composition of the Streets, hugeness of Buildings, and Munitions: but Pequín exceedeth it in multitude of Inhabitants, and of Magistrates. To the South it is compassed with two walls high and strong, so broad that twelue Horses may easily runne abreast oin the breadth without hindering one the other. They are made of Bricks, saue that on the foot it stands all on huge stones, the middle of the wall is filled with Earth: the height farre exceeds thole in Europe. To the North is but one wall. On these walls by night is kept as vigilant watch as if it were time of warre: in the day Eunuches guard the gates, or rather exact Tributes, which is not done in other Cities.

The Kings Palace riseth within the inner Southerne wall, neere the City gates and extends to the Northerne walls, seeming to take vp the whole Citie: the rest of the Citie running forth on both sides: It is some-what narrower then the Palace of Nanquin, but more goodly and glorious; that seeming by the Kings absence, as a carkasse without soule. Few of the Streets are paved with Bricke or Stone, so that in Winter dirt, and dust in Summer, are very offensive: and because it raineth there seldome, the ground is all crumbled into dust, and if any wind blow, it enters euery Roome. To preuent which they haue brought in a custome, that no man of whatsoever ranke goeth on foot or rideth without a Veile or Bonnet hanging to his brest, of that subtiltie that he may see, and yet the dust not annoy him: which also hath another commoditie that he may goe any whither vnseene, so freed from innumerable tedious salutations, and also he spares attendance and cost. For to ride is not magnificent enough with the Chinois, and to bee carried in their Seats is costly, with Attendants especially; and in that time of Warre it fitted with ours to passe vnknowne, being Strangers.

Mullesters stood at the Palace, and City gates, and in euery Street to let Mules, themselves also attending the Hirers whether they would in the City; which leading the beasts by the bridle, in that frequencie made way, being also skilfull of the wayes, knowing most of the great mens Houses: all at a reasonable rate. There is a Booke also which truly relateth all the Streets, Lanes, Regions of the City: Porters also with Seats to carrie Men, and Horses are euery-where found, but dearer then at Nanquin, or other places.

All things are to bee had in abundaace, but brought thither and therefore dearer. Wood is scarce, but supplied with Mine-coles (we call them Sea-cole) necessary to that Region, cold beyond what the Climate usually exacteth: their Beds are so made with Brick-workes, that they by a new kind of Stoues admit the heate of those Coles: a thing vsuall in all those Northerne Regions. These Northerne Chinois are some-what more dull, but better Souldiers then the other. Here they learned that this Kingdome is *Cataio*, and the King of China the great *Can*, and *Pequin Cambalu*.

For the nine Kingdomes (of *Mangi*) are those Southerly Prouinces which are vnder the great Riuer *Ianfuchian*, and lixe vpon it make vp the fifteene, so great that some one of them is as great as all Italy. Anno 1608. whiles we write, it is fortie yeares since two *Turkes* or *Moorers* out of Arabia brought to China a Lion (a beast seldome here seene) by Land, which had an Office given by the King to them and theirs, to keepe the Lion, and that they should carry no Tales thence. They in conference called this Kingdome great *Catay*, and this City *Cambala* the like we heard of others which had come from Persia. The Chinois also haue heard of that name, and still call the Tartars *Lu*, and the North parts *Pa* and *Pe*: to which *Can* the Tartarian Title added easily makes *Campalu* or *Cambalu* with others; for the Chinois seldome vse B. and *Marco Polo* comming in with the Tartars called it by their name. And at this time without the walls of China is found no *Catay*. The Portugals called it *China*, borrowing the name as may be supposed from the *Siamites*, and hence Cosmographers made them two Kingdomes. But *Gomez*, his Iourney by Land to *Catay* hath taken away all scruple.

To returne to ours now come to *Pequin*, the President gaue them entertainment, and procured an Eunuch to vndertake the businesse for the Presents, which were a Clocke, two Pictures, two Trigone-glasses and a Bell: all pleased the Eunuch, but his minde ranne more on making Siluer of Quick-siluer, which he had heard they could doe, and which would bee more gratefull to the King. And when he saw that would not be vndertaken, neither would he vndertake to acquaint the King, in this time of *Corayan* Warres; and ours also were taken for *Iaponians*, or neere vnto them, they not knowing how by true names to distinguish Nations. The President also began to be fearefull and purposed to carry them backe with him to Nanquin. Yet they staid a moneth after him (he being at a certaine day by Law to depart) and when they had tryed all wayes in vaine, none daring to acknowledge Strangers, they returned to Nanquin. They had a Bill of Exchange from *Amacao* to take vp money at *Pequin*, but the Merchant had plaid the Merchant and *Chineses* too, none such there to be found. They hired a ship at an easie rate for their returne (because they goe empty) but not easie in this respect that the Owners pouertie made the Iourney tedious for what of helpe. This benefit they made of this Iourney to learne the Language better, making a Dictionary, obseruing their Accents with Points deuised; (that speech consisting wholly of Monosyllables, the want of skill in those Accents had caused that they neither did

did, nor were vnderstood) *Cataneu* skill in Musicke helping to distinguish those sounds. What course *Riccius* and he instituted, that the Company still obserue in their Writing.

All the Rivers in *China* vse to be frozen in the beginning of Winter, that ships cannot passe by water, and Carts by Land are safer. They agreed that Father *Matthew* should goe by Land with two Seruants, to try if he could settle at *Nanquin*, the rest and the burthens to stay till the River were thawed. He purposed also to goe to *Suceu* whither *Chintaisu* had often invited him, being his Countrey. Passing thorow *Sciantum*, he visited *Suceu* and *Yamceu* famous Marts, and passing the River *Yamceu*, at *Chinchiamfu*, the chiefe City of that Province hee entred into a hand made River, by which is sailed to *Suceu* and to the chiefe Citie of *Cechian Hamceu*. This River being Southerly and neere frozen ouer, is so narrow that multitudes of shippes cloy it so sometimes that they cannot passe forward or backward. He was forced therefore to go by another way, which is a Coach or Wagon of one wheele, so builded that one sitting in the midst, and two on the sides, the Coach-man behind with wooden Leauers or Barres driues it forwards both surely and swiftly; that in short time he came to *Suceu*.

This Noble Mart is one of them whereof is the Prouerbe, *That which is in Heauen the Seat of the Blessed, that in Earth is named Suceu, and Hamceu*: in splendour, wealth, frequencie remarkable. It is built in a calme fresh-water River, and quite thorow one may goe, as in *Venice*, by Land or Water, but herein it excelleth *Venice* that the water is fresh. The streets and buildings stand vpon piles of Timber, the Wares from *Amacao* and other parts are most sold here. It hath one gate to the Land, the other are water-ways. The Bridges are innumerable, & Magnificent, Ancient, but of one Arch in those narrow Channells. Butter and White-meates are plencie, Rice, and the best Wine, which thence is carryed to *Pequin* and other parts. It is scarcely two dayes from the Sea. It is well fortified, the chiefe City of the Region, which hath eight Cities: One of the Princes held this, when the *Tartars* were expelled, against this Royall Race; whereupon it still payeth a great Tribute, to wit, the halfe of all things growing, (so that some two whole Provinces pay lesse then this one Region to the King, against whom it had stood out) it is still also awed with a frequent Garrison. *Chintaisu* was then absent at *Tanian* a Neighbour City, who receiued him with great humanitie. He abode in a Monasterie, and resigned his bed to his Master, who tired by trauell fell sicke, and was likely there to haue dyed. Recovered by his care, he gaue him a Triangle Glasse, which he put in a Siluer case with Gold Chaines at the ends, and adorned it further with a Writing that it was a fragment of that matter whereof the Heauens consist. One was said to offer him five hundred pieces of Gold soone after for it, which till Father *Matthew* had presented his to the King hee would not sell: after that hee set a higher price and sold it.

At the beginning of the *China* yeare, all are busied in sending Presents to their friends, feasts and salutations. They went to *Cinchian* to the publike Solemnitie where *Chintaisu* was well knowne, and by his speech Father *Matthew* and from thence they went to *Nanquin*, in February, 1599. Before wee come thither wee will looke backe to our *Canton* Iesuits:

§. VI.

Letters from Father LONGOBARD and TAISO. RICCIUS
his entertaynement at Nanquin and Residence there.
The Chinois vnlearned Learning.

Father *Nicolas Longobard* wrote vnto *Claudius Aquaviva* the Iesuiticall Generall, the eighteenth of October, 1598. that in the Kingdome of *China* there were then seuen Iesuits distributed into two Residences and one Mission: at *Nancian*, Father *Iohn Seerius* and *Iohannes à Roccia*; himselfe and *Francis Martines* a *Chinese* at *Scianteum* in *Canton* Province, *Ricci* and *Cataxeus*, and *Sebastian Fernandez* a *Chinese*, were then gone to *Pequin*: that *China* condition and conditions agreed so well with him, that hee seemed to bee in the midst of *Italy*: that much respect had accrewed to them in conceit of the *Chinois* together, with that Habit of their Learned, which they had taken, the *Bonzi* and their Habit esteemed base alike. He also much commends *Thaiso* or *Taiso*, (*Chintaiso* before mentioned) who much euery-where commended the Iesuits and their Learning, as much exceeding what euer had bene taught in *China*. And truly, saith he, the *Chinois* Learning exceedeth not the Science of the *Romanes* in the time of *Cicero*.

They are much exercised in a kind of writing and speaking brieue and pithie Sentences: their Bookes expresse well *Ethickes* and *Politickes*, but are rude in Naturall Philosophie. When I had being the best of Heathen *Rome*; *Varro*, and *Cicero*, and *Virgil*, as the *Romane* *Trium-viri* for Learning, besides, *Salustius*, &c.

Letter of F. Nic. Lombard.

China Learning.

This comparison with that time of the *Romanes* seemeth perhaps not the best, that besides, *Salustius*.

* *Thaisos* Letter. To their superiours and equals they write not in the first person, but the name for the pronoun (I). This (as is fit at the feet, with the Iewes) signifieth to be a mans scholar: taken from their sitting at the side in Lectures. Succo. North of China the best. Scingin is the greatest title of honour amongst the Chinois, intimating a holy birth, greatest learning that he may be Master of all, as was their Confucius: such an one they think comes euery 500. yeere, and now Riccius. Probabilities for the Gospel.

China Monasteries.

Vniuersities in our sence with Professors and publik Schooles are not in China: but for taking degrees as in our Vniuersities, a mans priuate studies, and the Cities publike examinations haue some resemblance. Many things in which the Iesuites and Chinois con-
curre.

lately runne thorow two of their Bookes, which they esteeme as their Metaphysikes, or first Philosophie, one of their learned men gratulated my proficience; when as I found therein no more difficulty then in Tully, or Titus Linius. They say, none but the Chinois can vnderstand them, Father Ricci vseth to adde none better then the Europeans. A Letter of Taifo to Ricci hee addeth thus inscribed. *Thaiso* * younger Brother which stand at the * side to learne, doe submit my head to the ground, and exhibite honour and reuerence to the elder Brother, Master and Father Matthew Ricci, a famous Peere, and Master of the most choise flowers of the great Law, and cast downe my selfe at the feet of his Seat and Chaire. The Letter followeth.

After our departing (it being foure yeeres since sight of each other) there hath not beene a day in which I haue not set before mine eyes the excellent vertue of your Worship. I gave two yeeres since to Sciauchin, my Countreyman, a Merchant, Letters to your Worship, thereby to learne where and what it did. I know not whether they haue attayned that, to come to your magnificent hands, &c. When I went from your Worship I said it must goe into the North parts, if it would behold the splendour and magnificence of this Kingdome, that my Countrey had nothing singular, that Nanquin Court was troublesome, and mixed of all sorts: that Chiansi Prouince was fit onely for dwelling, because there were learned men in it of excellent vertue, and of a true and solid spirit to receiue the Law. This yeere gathering together those things which your Worship taught mee, I made a Booke, and exhibited it to the Society of learned men, of which there was none which did not admire and subscribe, saying, your Worship was Scingin, that is, a Saint of these times. Those things which I haue added haply may be erroneous, and I feare lest they contradict its sounder and higher learning: and therefore haue sent my seruant to bring it to your Worship to reade, which I most humbly entreat, and to correct, to approue the truth, to blot out the false, to illustrate the obscure, writing all in another Booke, and sending it by the same seruant in few dayes, because I would presently commit it to the Presse, that your Worships learning might be knowne thorow the World. In these places are of greatest reckoning the Bookes of Hothu, Cofcui, Pequaa, Queusciu, Thakuitu, and other like, which haue written of a Point, Line, Extremitie, and Thickness. All these learned make of a Line a Circle: but according to your Worships teaching, of a Line is made the termination of a Circle, and a Circle consists therein. From which principles the conclusions brought of Thakou, that is, of God, doe farre exceed the Commentaries of all our learned men. And they are enough to illustrate a thousand obscurities of antiquitie, which hitherto haue not beene pierced. This one thing afflicts mee, that my writing and stile is meane and abiect, and most vnfit to illustrate and enlarge the most excellent conceits of its mind. Aseane while I much long, and as it were on tiptoes looke about enery where, if haply I may see your face. From Succo the two and twentieth of the fourth Moone, and the foure and twentieth of the Raigne of Vanlia. Subscribed; *Thaiso* younger Brother againe bends his head to the ground, &c.

Lombard proceedeth in his Letter, and sheweth the commodiousnesse of one King which ruleth all, of one Mandarin Tongue, of the common industrie and cheapnesse of prouisions (not as in the pouertie of Iapon, where the worke-mens maintenance must come from other parts) all fitting to bring in the Gospell. There are, sayth he, almost infinite houses of Bonzi maintayned by the King, besides gifts which they receiue of others which yet repose no great confidence in Idols: what would these doe if they beleued to receiue a hundred for one, and eternall life? Their composition of bodie, complexion, condition, rites; no vse of weapons, not so much as a Knife carried (but by Souldiers in Garrison, not in the way or at home) their habite long, and anciently vsed, with their hands alway hidden in their long sleeues, except in vse of their fanne, which all, euen the meanest carrie with them, their quarrels, if any happen in the vulgar, ended in a few boxes or brawles; their seemely behaviour equall to the European; yea, in some things to the Religious there; their studiousnesse of learning the onely foundation of dignitie and greatnesse, as many Athens there as great Cities, each hauing a Schoole or Vniuersitie without mixture of other Regions) their politike and morall Rules and Lawes; all these might be furtherances to the Gospell. Their tenacitie also of their owne customes and ielousie of Strangers, might better secure them from Heresies. Hee commendeth also their workes of Piety, and Charity, Almes, Hospitals for poore, voluntary chastisements of the bodie to subdue the affections, as fastings (in which they abstaine from Flesh, Fish, Milke, and Egges, but eate other things as oft and as much as they will) liberties and gifts by Magistrates to Widowes which contayne themselves from second marriages; triall of a mans selfe in all his actions commended in their Bookes, especially of those things which other men cannot know; and hereupon the liking of a solitary and contemplatiue life in the Countrey, and restoring themselves to the first state, as they say, wherein the Heauen created them; for which purpose are congregations of learned men, together in Villages addicted to contemplation, and fleeing publike Offices (as the ancient Fathers had their conferences in woody and mountainous places) in which also their women are as forward as the men, many of them liuing in Nunneries, gouerned by an Abbess; and all China women liue so enclosed, as if their owne houses were Cloisters: These he commendeth in them, as also that of all vertues they giue the first place to Obedience to Parents as in which consists a mans perfection. And that no man may be ignorant of his duty, if they cannot reade (of which there are but few) they haue a short Summe (or Catechisme) for

for publishing whereof there is a man appointed at publike charge, every full and change, to publish the same in every street of the City, so that on the same day & houre, a little before Sun- rising the same doctrine is propounded in all the Cities of China, and thorow all their streets. This is five Articles or Principles, which are, *First*, Obey Father and Mother: *Secondly*, reverence Betters and Elders: *Thirdly*, make pence among Neighbors: *Fourthly*, teach Children and Nephews: *Fifthly*, let every man well discharge his office: *Sixthly*, commit no offence, that is, not to kill, steal, fornication, &c. which in manner comprehend the second Table of the Decalogue. As for the first Table, the Chinois, especially the learned are Atheists, little regarding Idols, whereof their Houses and Temples are full: little minding the rewards or punishments of the life to come, or the soules immortality, which yet are easily found in their bookes touching the punishments at least of *Holy Pao* (so they call God) in Hell. Of rewards of blessednesse there is not such evidence, as *Thaisa* affirmed. And although many difficulties happened to ours in the *Bonzi* habite, yet is it now farre otherwise. As for *Canton* Province, the *Mandarin*s which come this way, aske vs why we stay amongst these *Mangines*, that is, Rusticks and Barbarians: We must say they leave the Barke and pierce to the pith and marrow of the Kingdome, if we would see the China splendor and politie. He writes for Labourers, Bookes, Images, and Pictures, for consolation of new Conuerts: the Ethnicks worship that of the *Virgin*, and call her *Scin mu nian*, that is, holy Mother, and Queene of *Queenes*: and ends with imploring the patronage and intercession of all the heavenly Quire, specially of the blessed *Virgin*, the Apostles, the Angels guardians of China, to obtaine of the holy Trinitie happy successe to their endeouirs, &c. But wee will returne to our best acquainted in *China*, *Pekin*, whom we left newly arrived at *Nanquin*.

The case was now altered at *Nanquin*, they went on foot without impediment to their lodg- ing, which was in a huge Monastery, called *Cingensu*, in which is great resort of guests which there hire lodgings, being built in the centre of the City. The *Laponians* were now beaten from *Corai* and *Quabacandana* was dead, which had so terrified that vvarlike Nation. He heard that they had heard of his going to *Pekin*, and that the *Corai* warre was the frustrating of his de- signs in that vnseasonable time. The President was verie glad of his coming, and exhorted him to buy a house there, and sends two of his followers to looke out for one. Scarcly had he and *Chimaisa* gotten home to their lodging, when the President followeth to visit them, which hee did with the solemnest Rites. And when they were set in the Hall, the Abbot came to offer them the wonted potion, kneeling to all three (to the President hee was bound as supreme go- uernour of Temples) and the President invited the Father to spend two or three daies in his house, to see the Fire-workes, which that full Moone, the first of the yeere would bee to bee seene, which strange deuices of lights that and the following nights; which he did and beheld that which without wonder cannot be beholden, the *Nanquiners* herein exceeding as may be thought the whole world.

When it was reported that the President had visited him, all the Maiestie of Magistrates did the like, yea some whom he had not visited. The President of the Court of *Criminal Causes*, and the President of the *Treasury* (which is the second Tribunall) came with rites & gifts, as also did others; yea hee which a little after was the *High Colao* at *Pekin*, which all vrged him to buy a house; and he now went thorow all Streets and Palaces without gaine saying (which he knew from a vision hee before had had thereof); and procured a house which the President helped to furnish. So much admiration and respect had the opinion of *European* science acqui- red to him, these being to the *China* wits baits for the Gospels fishing. Now first did they heare that the Earth was round (for they conceited the Heauen round and the Earth square) that the Centre drew all heauie things to it, that the *Vniuers* was inhabited round, that there were *Antipodes*, that the Earths interposition caused the Moones eclipse (some saying that the Moon opposite to the Sunne was dazzled or amazed; others that there was a hole in the Sunne, against which the Moone opposed lost her light) that the Sunne was greater then the Earth; and that the *Starres* also, this was out of measure paradoxicall: the like was the soliditie of the Orbes, and their number; the fixed posture of the *Starres*, the Planets wandrings, the eleuation and depression of the Pole according to the various *Climates*; and likewise the inequality of the daies, without the *Tropikes* Geographicall Maps in *plano*, and Globes, Meridians, Parallels, Degrees, the Line, *Tropikes*, Poles, Zones, Spheres, *Sun-dials*, they had not at all vnderstood, with other points of *European* learning. A Doctor of theirs confessed himselfe ashamed; For, said hee, you may thinke of me as wee doe of the *Tartars* and barbarous out-lawes; for you begin where wee end (which hee spake of the studie of eloquence, which takes vp our childhood, their whole life.) They numbred five Elements, *Metal*, *Wood*, *Fire*, *Water*, *Earth*, one of which they said was procreated of the other; the Aire they did not acknowledge for one, because they see it not, placing a *vacuum* or emptinesse where wee place the aire: as incredible it was that the fierie Element was the highest, and that Comets and Exhalations were there with fired. Father *Matthew* writ a booke of the Elements in their language much applauded, and often by them reprinted. Diuers became his Schollars; one sent from his Master in *Hanlin* Colledge in

Wit of a Chinese. *Pequin* (the chiefe place for *China* learning, to be admitted into, which is a great dignitie.) Hee was very witty, and without any Master attained the first booke of *Euclide*, and exacted of Father *Matthew* Geometrical demonstrations. And when hee added some things of Christianitie, you need not, saith he, confute that Idolatrous Sect, it is enough to teach the Mathematicians. For these *Bonzi* would also be Philosophers and Mathematicians. They said the Sunne hid himselfe by night behinde a Hill called *Siumi*, rooted in the Sea foure and twentie miles deepe. And for the eclipses, they said that the God *Holochan* caused that of the Sun covering it with his right hand, and that of the Moone with his left.

Eclipses. Not at *Pequin* alone, but at *Nanquin* also is a Colledge of *China* Mathematicians of better building then Astrological Science. They do nothing but bring their Almanacks to the rules of the ancients, when they mis-reckoned, they ascribed it to irregularitie of nature, not theirs, deuising some prodigious euent to follow. These at first were affraide that Father *Matthew* would haue deprined them of their dignitie; and freed of that feare, they visited him friendly, and he them, where hee saw a strange sight. There is an high Mountaine, on the top whereof is an open Plaine or Floore fit to contemplate the Starres. In this open space one euery night is appointed to watch, and obserue if any Comets or other alterations be in the skie, thereof to giue the King notice, and what it portends. In this place, of cast mettall are Mathematicall Instruments, admirable for their greatnesse and neatnesse, the like whereof wee haue not seene in Europe. They haue continued there in all chance and change of weather neere two hundred and fiftie yeeres without damage. Of them were foure greater, the one a huge Globe distinguished by degrees with Meridians and Parallels, as great as three men can fadome: it stood on a huge Cube of brasle likewise, vpon his Axel-tree: in the Cube was a little doore, sufficient for it to passe when need was. On the vtter superficies was nothing grauen, neither Stars, nor Regions, whereby it appeares that it was either vnfinished, or purposely so left that it might serue both for a Celestiall and a Terrestriall Globe. The second was a huge Sphere, the Diameter whereof was a fadome; with Horizon and Poles, and in stead of Circles, certaine double chaines, the space betwixt them representing the Circles in our Spheres: all these were diuided into three hundred and sixtie degrees, and a few minutes. In the middest was a Globe of the Earth, but a certaine pipe hollowed like the barrell of a Peece, which might bee turned any way, and set in any degree and eleuation for triall of the Starres very artificially. The third was a Diall two fadoms high in a huge & long Marble set to the North, with a channell about the table to hold water, whereby to trie if it stood plaine or no: the stile placed perpendicular, both it and the stone distributed into degrees: it seemes, for exact triall of the shadowes of Solstices and Equinoxials. The fourth and greatest was an engine or instrument of three or foure huge Astrolabes set one by another, each containing a Geometrical pace in a Diameter, with their Fiduciall line, or *Halbilada*, and *Dioptra*: one of them represented the equator inclined to the South, another (which made a crosse with the former) to the North; another stood erected to the South, perhaps for knowledge of the Verticall Circle, but turned about to shew any Verticall: all had the degrees marked with iron knots standing forth, that they might bee knowne by feeling in the night. This Worke of *Astrolabes* was set in a plaine floore of Marble also, with channels about. In euery of these Instruments was expressed in *China* Characters what euery thing signified; the foure and twentie Constellations of the Zodiacke, answering in the number doubled to our twelue Signes. There was in them this one errour, that they were set in the fixe and thirtie degree of the Pole eleuated, whereas *Nanquin* stands without all doubt in two and thirtie and a quarter of a degree. They seeme to haue bene made to be placed somewhere else, and placed here by some vnskillfull Mathematician. Afterwards Father *Matthew* saw the like, or the same Instruments rather at *Pequin*, cast with the same hand, at that time when the *Tartars* ruled ouer the *Chinois*, by some expert of our sciences.

The like Instruments at *Pequin*. The greatest Magistrate desired Father *Matthew* to reuise the Vniuersall Map, which he had made in *Canton* Prouince, and make larger Commentaries, and hee would print it at publike cost, which he did, and with an elegant Proeme commended the Author of the worke. This was published and carried into all parts, and in other places reprinted. The Vice-Roy of *Cuicen* Prouince printed it with another methode, making to euery Kingdome a proper Commentarie in a booke, adorning the Author also with his praises. Besides, the Presidents of the fixe Tribunalls (equall except for the Kings presence, in the gouernement of their Prouince, to these of *Pequin*) hee had three other friends, yet vnmentioned. There is a certaine hereditarie dignitie deuied to the eldest sonnes, from those Captaines which expelled the *Tartars*: they are called *Quocum*; their posteritie are honoured by the King, most of all the eldest, which in processe of time haue growne into a numerous Family; and although they beare no publike office, except some militarie commands, yet haue they great dignitie and wealth: and these onely doe truly resemble the Nobilitie of Europe. One head of this Family is at *Nanquin*, liuing in great pompe, with Palace, Furniture, Gardens, all like a King. He one day invited Father *Matthew*, and entertained him in the best Garden in the Citie: in which, besides other pleasing rarities, he saw an artificiall Mount or Rocke of diuers vnpolished Marbles, hollowed into

into Caues; it contained Chambers, Halls, Staires, Fish-ponds, Trees, and other things, Art wantonising with Nature to engender pleasure; especially in time of heate to coole themselves in their studies or feasts with this Caue-retiring; which although it comprehended no great space of ground, yet would it aske the space of two or three houres time to visit all the parts, the egress being by another gate. This Nobleman was yong, and desired to see some things of Europe.

Another which became familiar with Father *Matthew*, was the Commander of all the *Nanquin* Souldiers, which had also another great Office, called *Hen*, who often visited him, and became his great friend, whose friendship gaue vs security, to whom the watch and ward, and security of the Citie belongeth. Besides, I will name the chiefe Eunuch, which hath great authority ouer the *Nanquin* Eunuchs, whereof are numbred some thousands, who is Ruler ouer the Kings Palace, and hath command of all the Citie gates, and ouer the military Musters together with the former Captaine, with other parts of authority, and expresseth the same with great pompe. He was almost decrepit, and after the Eunuchs fashion there, not so gentle; and when *Ricinus* came to him, his Courtiers commanded him to giue him a title which answereth to *Hightnesse* with vs. I explaine it thus; when they speake to the King, they wish to him *ten thousand thousand yeeres of life* in these three syllables, *Van van sin*, which is all one with the title of *Maiestie*: to others in the Palace, the Queenes, or Children of the King, they with inferiour title pray, *one thousand yeeres*. Now the Eunuchs are so arrogant that they expect this *thousand yeeres wish*, and to bee saluted on the knee. Father *Matthew* could not doe this safely, lest hee should doe more to him then to the chiefe Magistrates; but hee had learned not to neglect in *China* their rites; and he being deafe, one that hollowed in his eare made vp what the Father wanted. Hee gaue him a great gift, which he refused, and denyed him the trigone Glasse: yet this caused the other Eunuchs to honour him.

At that time liued in *Nanquin* one which had obtayned the first place in the declaration of Doctors (which is a very great dignity) who liued here in this Countrey priuate, but in great esteeme of all. Hee had degenerated to become a Preacher of the three *China* Sects, and professed great knowledge of them. Hee had at his house a famous Votarie, or *Bonzi*-Monke, who renouncing the publike Offices which he had borne, had shaued his head, and (which is not vsuall in *China*) of a *Learned Man*, had become a Minister of the Idols. And because hee was both learned in the *China* Sciences, and growne seuentie yeeres old, he had acquired much fame and many Disciples, professors of that new Sect which he deuised. These visited Father *Matthew*, to the wonder of all; that Literate-apostata confessed the truth of our Law, and presented the Father with a Fanne with two elegant Epigrams therein. Two other visited him, one of which counterfeited himselfe to haue liued three hundred yeeres, whom the *China* Grandes much followed, as doting on the studie of long life, the precepts whereof he read to his Scholers. Hee also boasted of *Geomancy*. The other was a Physician, and companion to the other, each blazing the others Science: and whiles both preferred the Father, some suspected that hee had liued some Ages (which they vse to affirme of Strangers differing in countenance from them) and would not let it be knowne.

The *Chinois* haue one day solemne to *Confutius* the Prince of the *Learned*, in which they make a kind of Sacrifice to him, not as to their God, but their Master. They call it a Sacrifice, but in larger extent of the word. Musike was prepared against that day, at the triall whereof Father *Ricinus* was present. The Priests of the *Learned*, called *Tansu*, ordered the Musike; and in the Kings Hall (or Temple rather) dedicated to the Lord of *Heauen*, this triall was made. The Priests came forth in precious vestures, as if they would sacrifice, who after their wonted rites to the President, fell to their Musike: in which were small brasle Bells, Basons, other as it were Tabors, others of stone, stringed Instruments, Pipes, Organs blowed with the mouth, not with Bellows; others resembled Beasts out of the hollow bellie yeelding a sound: all these sounded together with such discording discord as you may imagine; the *Chinois* themselves confessing the concord and harmoniacall consent to bee lost, onely the Instruments remaying from their Ancestors.

That Temple was great and magnificent, built neere the Citie in a Pine-groue, compassed with walls twelue miles about. The wall of the Temple was of bricke, the other parts of timber: it is diuided into fise Iles; the Pillars were round of huge timbers as great as two men could fathome, the heighth proportionable to that thickenesse; the rooffe is excellently carued, and all gilded; and although it be two hundred yeeres since it was built, and the King resides not at *Nanquin*, nor sacrificeth there, yet is it little decayed from the first splendour. In the midst of the Temple is a more eminent place of most precious marble, in which is a double Throne, both of marble; the one for the King when he sitteth to sacrifice, the other is left for him to sit by, to whom the sacrifice is made. The Cloisters without are beautified with most elegant windings, and lest the Birds should defile all, the windowes are all netted with Iron wyers (which is vsuall thorow all the Palace:) all the gates of the Temple are couered with Brasle plates gilded, and wrought with neat Visages of the same metall. Without the Temple were many Altars of red marble, which represented the Sunne, Moone, Starres, and Hills of *China*, Lakes

Lakes and Seas, intimating that that God which is there worshipped made the rest, which are placed without, lest they might be worshipped for Deities. It is prohibited by grievous penalties, to cut the trees of that Grove, or any bough thereof, whence they are great and old. In the circuit of the Temple are many Cells, which are said to have been Baths for the Kings to wash in when they were to sacrifice.

Iesuits habit.

The Father used the Habit of the *Learned* (as is said) of those especially which professe themselves Preachers of the Law; the Habit modest, and the Cap not unlike ours in Crosse fashion also. He confuted both the Sects of Idolaters, and commended that of the *Learned*, praying *Confutius*, which was rather silent, then would deuse any thing touching the next life, and taught good Rules for the Life, Family, and Republike. A great man flourished at *Nanquin* then (which had some thousands of Disciples) in opinion of Vertue and Learning, and had set dayes in which to heare and to be heard every moneth. *Chintaiso* brought the Father, and this Father together, and in some reasoning *Riccus* wrung from him that some corruptions were in the Idoll Sects, which he followed not, holding that only (he sayd) which was good. It being a fashion

Societies of Learned.

that *Learned* men met in their Societies to conferre of Morall Vertues, in one of those meetings this man learnedly confuted *Confutius*, which another Magistrate tooke haynously, and cryed out, it was intolerable that the Sect of Idols brought out of other Countreyes should bee preferred before *Confutius*, whom the *Learned Riccus* also admireth, refelling the Idoll-follies. He answered, he had spoken with the man, but he was not yet well acquainted with *China* businesse, and he would instruct him better. Soone after he invited him to a Feast (for the *Chinois* usually

Conference or disputation twixt an Idol-Priest and Riccus.

in such meetings determine Controuersies) and there hee met *Sanhoi* a famous Idol-Priest, a Learned Philosopher, Orator, Poet, and well skilled in others Sects also. When they were set, this Priest and the Father together, the Priest began shewing his desire to conferre of Religion. *Riccus* first asked what he thought of the first beginning of Heauen and Earth, and the Creatour of things whom we call the *Lord of Heauen*. I deny not, sayd he, that there is such an one, but he hath no Majesty nor Deity, but I am equall to him, and so are all others. Canst thou (saith *Riccus*) make those things which he hath done? he granted. Make then such a Chafing-dish (one stood before him) this, sayd the other, was an vnworthy demand. Thou (sayth he) art an Astronomer, and makest new Sunnes in thy minde when thou reasonest thereof. That, sayth *Riccus*, is but an Image or likenesse which the minde from things seene conceiueth, as in reflexion of a Glasse whereon the Sunne shineth, yet doth not the Glasse create a Sunne. The Host for feare of further quarrell parted them. At Dinner the *Chinois* disputed of a Question of *humane nature*, how it came bad (they want Logicke and cannot well distinguish betwixt morall and naturall good, and neuer heard of originall sinne) they discoursed thereof a whole houre: after which *Riccus* repeating what had beene sayd, entred into dispute with *Sanhoi*, who laughed at his and their Reasons and answered all with a Tale of I know not what *Floud*, according to his Sect; but he straitned him with Arguments, so that he and this Disputation grew famous. They conceiue that God and the Creatures are all of one substance, and that God is as a great Soule of the Vniuerse; which opinion from the Idoll-sects hath infected the *Learned*. *Riccus* writ a summary of that point, which gaue men good satisfaction, and his Law seemed not so barbarous as they imagined.

Oppression. Mines of Gold and Silver stopped by ancient Kings & forbidden to be opened to prevent robberies.

The Kings Treasure was exhaust by the *Corayan* Warre, whereupon contrary to the Lawes he caused the ancient Mines which were sayd to be stopped, to bee sought, and opened, and imposed new Tributes, that in all Prouinces, Merchandizes should pay two of a hundredth: which had beene tolerable if gathered by Magistrates; but his Eunuches, sent to every Prouince, without shame or mercie exacted on the people, and rayled a worse combustion then that of *Coray*. So many Impostors, Counterfeits, Theeues were euery-where: if a man dwelt in a good House, they would digge it vp to search for a Myne, to force composition from the owner. Some whole Cities and Prouinces compounded with these Caterpillers to free themselves from their vexations; the money so gotten they gaue the King as taken out of their Mynes. This caused Dearth, and in some, Commotion. The Magistrates petitioned the King against these abuses, but sweetness of gaine had not only stopped that eare, but procured grievous penalties to those which withstood his Catch-poll-Eunuches, which by those punishments grew more insolent. Ours which wintered at *Lincin*, happily escaped these Harpy-clutches, who with their Presents arriving at *Nanquin* rejoyced to see a Residence so prepared there. These Presents intended for the King, bred such an amazement in the beholders that others were ready to offer force to see them. They still minding to present the King, (the weather now more cleare and peaceable) *Catanus* went to *Amacao*; where was much rejoycing for these hopes, but soone quenched with sorrow for losse of their ship which tradeth to *Iapon*, men and goods lost, on which ship all their Commerce dependeth. They found themselves therefore vnable to maintayne three Residences: the Iesuites Rector scraped all hee could for that purpose, and added a Watch and Image of the blessed Virgin, and Trigone Glasses, Houre-glasses and other Rarities to their Presents.

Didacus or Iacobus Pantoia.

Father *Diego Pantoia* a Spanish Priest also accompanied *Catanus* to *Nanquin*, and thence

went

went with *Ricius* to *Pequin*, with *Sebastian* and *Emanuel*. Father *John* was called from *Nancian* to reside with *Cataneus* at *Nanquin*. They went with an Eunuch then going to *Pequin* with six ships, who shewed them much kindnesse. In *Zimin* a City of the Prouince of *Sciantium* is a Vice-roy which is as High Admirall ouer all the ships, whether they carry prouision or other things, which gaue kind entertaynment to *Ricius*, telling him at parting, *Sithai* (that was *Ricius* his *China* name) I also desire to goe to *Paradise*, intimating that all his Heauen was not in earthly honours, but that he minded also what the other preached. Presently with great pompe and state hee followed him to his ship and there visited him with vsuall Rites of *Vrbanity* and a Present, and wondred much at the sight of those Presents they carryed for the King. He sent an Officer also to make him a readier way. One *Liciu* had made way to this Vice-royes friendship, who soone after killed himselfe, hearing that vpon some complaint of his Books, the King had commanded him to bee imprisoned and his Books to bee burned; preuenting so the study of his Aduersaries to put him to some shamefull death.

Zimin.

High Admirals

Liciu killeth himselfe.

Amongst those Eunuches which the King had sent to oppresse the people, was one *Mathan*, which dwelt at *Lincin*, whose exactions had rayfed the people and Souldiers into mutiny, which burnt his Palace and killed his Seruants, himselfe escaping disguised, but the Captiue and Slaue of Couetousnesse no lesse then before. Our Eunuch addressed himselfe to him, but could not till the third time be admitted, because his Gifts were not answerable to the others appetite. Hee to make way for himselfe betrayed Ours to this Harpy, they not knowing it, saying, that in one of his ships were strangers with precious Gifts for the King, which he shewed closely to his Officers: with these he might get the Kings fauour. The Gouvernour which in that and the Neighbour Cities had great command was his great friend, of whom *Ricius* asked counsell: he told him that now the Eunuches reigned, and they almost only were the Kings Counsellors, nor could the greatest Magistrates withstand their iniuries. Yet the countenance of this Magistrate was a great helpe to him, this being the man whom of all the Gouvernours he most feared; a man so well deseruing that his Citizens erected to him a Temple, Image, and Inscription; who now also both countenanced *Ricius* what he might, and gaue him the best aduice how to carry himselfe to this Eunuch, and perhaps but for him they had lost all and themselves to. This Capon had erected Palaces and Temples, and had built a huge ship in which the King himselfe might have layed; so many were the Cels, Chambers, Hals, and other commodious Buildings thereof; the Windowes, Galleries of yndecaying wood carryed with many Meanders, * all shining with Vernish and glittering with Gold. In this ship was hee carryed to ours, where *Ricius* met him. He viewed and liked all, and downe on his knees to the Virgins Picture, promised to procure her a place in the Palace. *Ricius* modestly refusing his seruice for them to the King, saying, many Magistrates of best ranke had vnderaken that kindnesse: he smiled, saying, none of them could doe so much as he with the King: the King answeres my Petitions the same day, to them or late, or nothing. The Eunuch which brought ours was sent away, and all the Presents put a-board his ship. Hee carryed the Iesuites with him to the Towre of *Thienfin*, whither hee went to send thence the six moneths Tribute to the King: he feasted them, Comedies, Rope-runners, Tumblers, Vaulters, and Mimicke Ape-men attending the cheare with such disports as they had neuer seene in *Europe*. One cast three great Knives into the Ayre one after another, and caught them againe in their sheathes: another lay on the ground, rayling his feete ouer his shoulders, with which hee tossed vp and tumbled too and fro an Earthen Pitcher in such sort, as hardly could bee done with the hands; the like hee did with a Drumme on a Table. A Comedie was acted only with gestures, of disguised Gyants in glorious habits; one from the Theatre pronouncing all their parts. A Boy danced admirably, and then as it were falling, layd his hands on the ground, and another Boy of Clay came forth, which vring his hands for feete, imitated all the pranks of the other, and fell to wrestle with the liuing Boy, as if both had beene aliue.

Mathan a great and base Eunuch.

Mentz 1607.

A Letter of Father DIEGO DE PANTOIA, * one of the Company
of IESVS, to Father LVYS DE GVZMAN, Prouinciall in the
Prouince of Toledo; written in Paquin, which is the Court
of the King of China, the ninth of March,
the yeere 1602.

§. II. III.

Difficulties of entring China, their dwelling at Nanquin, going from
thence to Paquin, with Presents for the King, troubles
in the way by an Eunuch.

Ight Reuerend Father in Christ, the peace of Christ bee with you. I thinke I doe not
satisfie the dutie which I owe vnto your Worship, for the loue which you haue
alway shewed vnto mee, and the Obligation wherein I am bound to so many
most dearely beloued Fathers and Brethren of this Prouince, if being as I am in
this great Kingdome of China, procuring the good of these Pagans, (whereunto
it pleased our Lord to choose mee) I should not giue you some brieffe Relation of
the things that concerne this our new Mission, and of some things also concerning the greatnesse
of this Kindome, the Customes, Gouernment and Policy thereof.

Colledge of
Iesuits.

Being come, as heretofore I wrote to your Worship, to Macao a City of the Portugals, ad-
joyning to the firme Land of China, where there is a Colledge of our Company: and there at-
tending till the Persecution, Tumults, and Warres of Iapon, would permit ten or twelue Fa-
thers of vs to passe thither, which stayed expecting fit oportunitie: when we were readie to de-
part, within few monethes, it pleased our God to change my Lot, and Enterprize which I had
before myne eyes, and to send mee to enter into China, whereinto I entred in the end of the
yeare of our Lord 1599. There were in this Mission at this time, only five Fathers diuided into
three Houses. For though it be twentie yeeres since they first began to enter, yet the entrance of
Strangers is so hard and so straitly forbidden, and their state and perseuerance is so difficult, that
in all this time there neuer passed aboue five or sixe Fathers, and those which succeeded since,
though by little and little, did discouer the Countrey; But their entrance, was by stealth and
secretly. Considering that all passages were shut vp, and that in all China there was no man that
could or durst presume to giue licence to preach the Gospell; we alwayes sought to get some ac-
cesse vnto the King, either by way of Embassage, or by way of Present, and Gifts, and to seeke
to obtayne this in part, or in the whole, to this end and purpose.

Entrance into
China difficult.

Meanes sought
to enter China.

Embassage.
Present.

The Fathers alwayes sought to obtayne some Ambassage of the Pope, or of the Catholike
King. But perceiuing they could not obtayne this, they procured it by way of giuing a Present,
not so much of precious things, for they had none of that kind, as of strange things neuer seene
before in China. And hauing procured this for many yeares space, without hauing any meanes
to obtayne it; the Diuine Prouidence ordayned one in the yeare of our Lord 1590. which was
this: The Fathers being in Xanbeo, (a Residencie of the Prouince of Canton) there passed that
way a great Mandarin, called by the King, to giue him an Office in the Court, which among vs
is like vnto a President of one of the chiefest Councils, which had known the Fathers long time;
and now seeing themselves with him, and signifying vnto him the desire which they had to goe
to Paquin, to giue a Present to the King, and that if hee would doe them the courtesie to carrie
them along with him vnder his shadow and protection, they would alwayes remayne thanke-
full, and exceedingly bound to serue him. After this and other motiues which they presented
vnto him, did that follow which wrought most effect, which was a good Present, with hope of
other things afterward, whereupon he shewed himselfe very tractable to grant their request, and
to take them with him to Paquin.

Being glad of this resolution, they prepared themselves for the Voyage, and tooke the things
which they desired to giue the King, which hereafter I will mention. It pleased God to bring
them to Paquin, in the company of so great a Mandarin, without the hinderance of any bodie.
Being come to Paquin they began secretly to negotiate their businesse: because they durst not,
neither was the Mandarin that brought them willing that they should shew themselves abroad.
But though they attempted all possible meanes, neither with gifts, nor any thing else, there was
not any man that would meddle with this businesse, because it was a matter that concerned
Strangers, considering what might hereof happen vnto them. After they had spent certayne
moneths,

moneths, and saw they profited nothing, and fearing some innouation, they determined to re-
turne to their Residencies from whence they came.

Having returned three hundred leagues, they came to the great Citie of *Nanquin*, which was
the ancient Seat and Court of the Kings of *China*: and now (though the King reside not there)
yet is it the most noble, great, strong, and beautifull of all this whole Kingdome, and retayneth
her being the Royall Court, with all the same Offices which the Citie hath where the King re-
sident. They desired greatly to get an entrance into this City, because, as I haue said, it is a fa-
mous place, and hath such store of graue persons in it, thereby to make themselves knowne, and
here to procure with more facilitie an entrance or acceffe vnto the King. But it seemed a thing
impossible, because it is a City straitly guarded, especially for Strangers, for whose guard and
Watch it hath ordinarily about one hundred thousand Souldiers. And if they went about to
get licence, it seemed impossible to obtayne the same of so many great *Mandarins*, as governed
the same. But our Lord (to whom euery thing is alike possible) vouchsafed to comfort the Fa-
thers for their travell and small fruit which they had reaped of their journey to *Pagun*: and by
the counsell of some friends which they had there, and with the protection of the *Mandarin*
without the contradiction of any *Mandarin*, although all of them knew thereof: howbeit, as
a very great man said, which afterward became our great friend, hee was readie to send to ap-
prehend the Fathers, vntill hee vnderstood that they were peaceable people, which had long
time abode in *China*.

After they were purposed to remayne there, there was another difficulty to get leaue to dwell
and haue an House within the wals. But the Diuine Prouidence gaue them a very sweet and
easie meane for all this, as here I will declare. The *Mandarins* line in this City in houses which
are not their owne, but belonging to the Offices which they beare: and when one hath ended
his Office, hee that succeedeth him, succeedeth him in his Houses, which are all builded at the
Kings cost. At this time a great *Mandarin* had builded one of these, wherein by his Office hee
was to dwell: But when he had finished it, it pleased God, that he enjoyed it not: and hee sent
many Devils to enter into it, as they did indeed, which with fearefull shapes did terrifie those
which dwelt in it, especially by night: and this continued so long a time, that all men left it,
and none would dwell in it. As Father *Matthew Riccio* (who was the party which negotiated
this businesse, as the Procurator of all this Mission) went about to seeke to buy an House, by way
of jest they asked him, whether he would buy an house full of Devils? The Father answered,
that hee tooke it not for a jest, but that if the house liked him, hee would not vary for that; for
he serued a God whom the Devils feared and dreaded, and that trusting in his helpe he was no-
thing at all afraid of them, but that they did rather much feare him, because he was the Seruant
of such a Lord. They went to see the House, which presently liked him: and as they sold
it good cheape because of the bad report that it had, in two words they agreed together: and
the *Mandarin* that sold it was so glad, that he gaue vs Patents to possesse it perpetually in *China*;
a thing which in no place could be obtayned of any other *Mandarin*. Forth-with they went to
it, and at their comming in they blessed it according to the Rite of the Holy Mother Church;
and by the grace of God there was neuer dreame of any euill thing that troubled the same. All
men looked what would become of this, and what successe they should haue with the Devils.
And when they saw the great quietnesse, without any shew of Spirits, they were greatly asto-
nied, saying, that without doubt this was a great God, and that hee sought to dwell in that
House, and that therefore he had commanded the Devils to dwell there, and not to suffer others
to enter therein; and that when he came they went their way.

To this so good beginning the progresse from thence forward was answerable: for the graue
Mandarins vnderstanding, together with the fame that they were Learned men, that they had
many Bookes, that they were men of a good life, and that they had some things of their Coun-
trei, which were neuer seene in *China* (as certayne Clocks with Wheels, and Images in Oyle,
and other pretie things) all of them setting feare apart, and other respects, came to visit the Fa-
thers in great estate, because they were the greatest *Mandarins* of all *China*, but with much hu-
manitie, respect and courtesie, with Presents of things to eate, and Banquets as they vse with
their equals. They were so well pleased with all that they saw and heard, that all of them be-
came their great Friends and Patrones: and gaue so good report of them, that all men sought to
doe the like: and for continuance of their amity they came oftentimes to visit them, and often-
times inuited them to their Palaces: and with this fame and honour of the grauest sort of people,
all the rest of the inferiour and baser sort vsed them with much reuerence, no man daring to doe,
or say vnto them any discourteous thing.

This was the state of things when it pleased God to choose me for this Mission, and when I
entred into it we had three Residences, one in the Prouince of *Canton*, another in the Prouince
of *Quianci*, which is somewhat more within the Land, another in the Citie of *Nanquin*, which
is in the midst of the Kingdome, and three hundred leagues from *Macao*. I entred secretly, as all
the rest did (I say without particular Licence of any *Mandarin*.) But my secrecie continued

Three Iesuits.

bat a while, as hereafter I will declare. I came at the first, without staying in any other House, to *Nanquin*, where three Fathers of vs were foure moneths; Father *Matthew Riccio* our Superiour, Father *Lazarus Catanio*, and my selfe, and a Brother a *Chinois*, one of the two which are receiued into this Mission, and euery thing goeth well. But as in matter of strangers the *Chinois* are exceeding scrupulous, more then your Worship can beleue, so there were many which spake of our abiding in *Nanquin*, considering that now wee had three Houses in *China*. Wee beganne with much more earnestnesse to procure another better foundation, and to returne to *Paquin* more openly, and seeke acceffe vnto the King. And because in *Nanquin* there bee *Mandarines* to whom this belongeth, and some of them were our Friends, wee beganne to speake of this point.

Leaue for *Paquin* granted.

But it was not needfull to spend many words; for straight way we met with a *Mandarin*, to whom by right this matter appertayned, who frankly and freely offered vs Patents, Dispatches, and whatsoeuer was needfull to accomplish this businesse.

The Riuer of *Nanquin* ouerfrozen all the Winter.

The promises of this *Mandarin* were not vaine: for when the time came that the Riuer was vnfrozen, (which all the Winter is frozen ouer) and Barkes began to goe for *Paquin*, he performed his word faithfully, giuing vs Patents and Passe-ports needfull for the money; and besides, hee sent vs a Barke of the Kings to carry our Present and our owne things. Beeing glad of these good newes and dispatch, we consulted how we should deale in certayne things which offered themselves in this businesse, and who should goe: There was no question but Father *Matthew Riccio* should be one, but who should be his companion: for whom they choose me, and the Brother. We set our things in order, particularly those which were of the Kings Present, which were two Clockes with Wheelles, one great one of Iron, in a very great Case made faire with a thousand ingraued workes, full of gilded Dragons, which are the Armes and Ensignes of this King, as the Eagle is the Emperours: another little Clocke very faire, aboue an handfull high, all of golden Metall, of the best Worke which is made in our Countrey, which our Father Generall had sent vs for this purpose; which was set in a gilded Case, as the other was: and in both of them in stead of our Letters were grauen the Letters of China, and an hand that came forth did point at them. Besides these there were three Images in Oyle, two great ones of an Elbigh, and one little one. The greatest was the figures and portraiture of Our Lady of the Poplar, of Saint Lucar: The second was of our Lady with the Babe Iesus, and Saint Iohn: the third, was a Picture of Christ, which was the least; all of them were of excellent Worke. Besides this, there were certayne Looking-glasses; two Triangle-glasses (which though among vs they be of no account, yet are they esteemed here among them) adorned with Chaines of Silver, and set in an excellent Case of Iapon, which was of twentie times more value then the Glasses, to them that know what Glasses are. A Booke of The Theatre of the World, and a *Breniarie* exceeding fairely bound, with an inscription, That that was the Doctrine of the True God, whose Images they did present him withall. A very faire Monocord, because it is an Instrument whereat the *Chinois* doe wonder much, and other pretie things of lesse importance.

The particulars of the Kings Present, Gilded Dragons or Serpents (so call them) the Kings Armes, Pinto saith a Lion, perhaps his coniecture for the frequentie mentioned also by Polo, sup. p. 89. &c. or perhaps this might then be, and Serpents since, the Royall Ensigne. Besides a Lion is the Armes of Canton Province, and perhaps of some others which might be mistaken for the Kings Armes. They began their journey from *Nanquin* 1600, the 20. of May, *Silou nouo*.

All which things beeing set in order, and imbarqued, we tooke our leaue of the Christians of *Nanquin*, (which at our departure came to our House with a Banquet with great joy) and of the *Mandarins* our friends, which with great sorrow, and shewes of loue tooke their leaues of vs, and sent vs Presents for our Iourney, and many Letters of fauour to the great *Mandarins* of *Paquin*.

We departed with this good dispatch from *Nanquin* in the yeare 1600. the twentieth day of May. And knowing not how the King, and the *Mandarins* of *Paquin*, and those of the Kings Court, would take this our Iourney, because wee were Strangers, wee sought to prepare our selues for that which might fall out: in great hope that we should find ayde eyther in all or in part to obtayne our desire, which we had for the establishment of our Company in this Kingdom, and to procure the opening of an entrance thereunto for the preaching of the holy Gospell.

300. leagues as it were one pathway of shipping.

We began to sayle vpa a very great Riuer, whereof hereafter I will speake somewhat; and when we had sayled certayne leagues, wee entred into another small Riuer made by hand aboue two hundred leagues, only to carry in Barges the Tribute which the Prouinces of the parts of *Nanquin* pay vnto the King, and other things which these Countries yeeld (which are the best, and most plentiful of all things which are in *China*) because it seemeth impossible to carry it by Land with Millions of people, being in Rice, Wheate, Silver, and a thousand other things very great: And the Vessels which are employed about this businesse are so many, that without doubt it is no Hyperbole to say that from *Nanquin* to *Paquin*, which is three hundred leagues, all the Summer time it seemeth to be a path way of the Kings Barges. We were all aswell *Mandarins* as particular men very well intreated all the way, whither many *Mandarins* came out of the Villages and Cities, desiring to see the Present which wee carried, and our selues; bringing vs many Presents for our Iourney. Hauing trauelled two hundred and thirty leagues in forty dayes, wee came to a very famous place and Mart Towne in *China*, which is in the Prouince of *Xantun*, which is next vnto the Territories of *Paquin*, called *Lincin*. Where, because of the great Trafficke of Vessels and Merchants, which goe and come from the Court, who pay

Lincin.

pay to the King a very great tribute, he hath placed one of his chiefeft Eunuchs, which serueth to gather vp his Customes: which liued there in great estate, and much attendance. Whensoeuer he goeth abroad he is alwaies carried in a Chaire, vpon eight mens shoulders, which is a very great honour in *China*, with great store of Horsemen before and behind, with certaine Basons of Copper, which make a great sound when they bee playd vpon, to signifie to the people that he commeth that way, that all may goe out of the way; as the custome is with all the great *Mandarines* in the Cities of their iurisdiction. Which Eunuch vnderstanding of vs, and of the things which wee brought for the King, and of many other things which they put in his head that wee brought, to wit, precious stones, and others of that kind: hee sent vs word, that hee knew what we had brought for the King, and that he desired much to see it, and that the same day or the next he would come, praying vs that we would make it ready.

He came at the appointed time, and hauing seene the things which wee brought for the King, and making account of them to be precious, and that the King would greatly delight in them, he sought meanes to cause them to be presented to the King by all meanes, as things that he had dealt with vs to bring, to please him, and thereby to obtayne some sute for himselfe: and besides this, with desire and hope that wee would giue him some precious stones (whereof the *Chinois* are very greedy) he determined wholly to meddle in this businesse. Hee sent vs a Present of things to eat, and a very courteous message, that wee should passe in one of his Barges, that shortly he would send vs to *Paquin*, with Souldiers of his house, a Petition made with his owne hand to the king; that we should consult together, and bethinke our selues what we desired to obtayne of the King, whether it were to bee *Mandarines*, or to haue lands or houses, or all together, because there should be no difficulty in any thing. The message came with all this courtesie. And we made answer with the like, returning him a Present for his answer with generall words. For though hee came with so great offers, yet wee knew that these Eunuchs, for the most part, are base and couetous people.

It happened at this time that the chiefeft *Mandarine* of this Citie, which was our great friend was come from *Nanquin*, from whence they had fetched him for that Office. Wee determined that Father *Matthæw Riccio* should visite him with a small Present, according to the vse of the Countrey, to relate vnto him this businesse, and to aske his counsell what wee were best to doe. Hee receiued the Father with much courtesie and loue; and kept him two dayes in his house: which, after he had heard the whole matter, answered, that he was very sorrie that we had met with this Eunuch, because we could looke for no goodnesse of his basenesse, couetousnesse, and bad meanes of proceeding; and that he could performe nothing that he had promised, and that his intent was nothing but couetousnesse; that hee would aduise vs to take as little as we could of him: but for all this, that wee should not refuse that which hee offered, but rather to make a vertue of necessitie, and to thanke him with a very good continuance for that which hee promised, because we were in his power, and he might and would hinder our passage, if wee did not so, and take away our Present from vs, and giue it himselfe with his owne hand to the King, without making any account of vs, without controlment of any man, because he was not subiect to any *Mandarine*.

This seemed vnto vs to be very sound counsell, and a forcible enduement to follow it. So we followed the same, and applied our selues vnto him in euery thing, answering the Eunuch according to his desire, and passed in a Barke of his. He desired much forthwith to carrie the Kings Present to his house, saying, that he would trimme them to giue them to the King, and this we courteously denyed him, saying, that we durst not depart with them till we had deliuered them to the King, neither that it seemed reasonable, that when wee did giue them, another should trimme them; especially, that these pieces were not such as had need of more trimming, since in themselves they were so precious: with which answer hee seemed to remayne satisfied. At the first he made vs great banquets, sport, and cheere: but as in very deed his purpose was nothing but to doe himselfe good, and to looke for his owne profit, and not for ours, hee beganne quickly to discouer himselfe: for hee stayed certaine dayes, looking that wee should giue him some precious stones, which some body had told him that we had brought with vs to please him, for some things that they looked for at his hands: and when he saw the dayes were passed, within which he thought we would haue giuen him them, he began to be out of hope, and to grow cold in our entertaynment: yet for all this, he came to visite vs with great pompe at our embarking: and after fifteene dayes he dispatched vs for our iourney to *Paquin* with men of his owne house, and with a Petition to the King, signifying vnto him how hee had met vs on the way, and what our intent was, and what things we brought.

Wee were very honourably entertayned in his iourney, and in all the Townes and Cities of his iurisdiction whereby we passed, he commanded them to giue vs without delay refreshing of Flesh-meate, Fish, much Fruit, and Wine. Wee trauelled eight dayes, and came to the last place of his iurisdiction: which is three dayes iourney from the Court of the King. We stayed there with company that did waite vpon vs, watching day and night about the Barke with their Centinels and Bells, as they are wont to doe with the great *Mandarines*, and especially because

Mathan the Kings Eunuch, his pompe.

Eunuchs base minded.

Not subiect to ordinary Magistrates.

Conceit of gemmes.

Hee dismisseth them.

there were there things belonging to the King, and the rest of the seruants of the Eunuch went to *Paquin*, to deliuer the Petition to the King, and to know his pleasure. They deliuered the Petition, and we looked for an answer thereof within three or foure dayes, as he had told vs. But God had disposed otherwise for the exercise of our patience and hope in him: and that was, that the King made no answer as we looked for: whereupon he was somewhat ashamed of the great brags that he had made to vs without performance of any thing: and hee and wee were all in suspense, when we saw the King returned no answer, which is wont to bee a token that he liketh not the Petition that is made vnto him.

Silence of deniall.

Eunuchs pompous Barge.

Glorious Varnish.

Abundance of all colours in *Iapon* and *China*.

Painted Figures.

Very great Oares and the excellent vse of them. Muske.

Manner of petitioning the King.

Eunuch estranged.

They stayed three months.

Fifteene dayes after wee arriued in this place, the Eunuch came thither; to send from thence to the King a third part of the tribute which he had gathered. He came accompanied with great store of Vessels, and that wherein he was, was such, as assuredly your Worship hath not seene the like in all your life. The forme is very much different from ours: for it is like vnto an high House, wholly diuided into chambers and halls very high, full of carued workes round about, with hangings of Silke, of many figures, and round about full of galleries to walke vp and downe without being driuen to enter in. And on the outside it was all couered ouer with a kind of Oyle like Varnish, which runneth out of certaine trees, which they make with tempering of all sorts of colours, (whereof in *Iapon* and here there is great abundance) and the *Portugals* call it *Charan*; it is a very faire, shining, and durable thing: and the things that are coloured with it, doe shine like Glasses, if it be of the finest: and besides, though it be not costly, yet it is as faire and fairer, because it is more naturall, and very neate and fine, wherewith they paint diuers figures, trees, and flowers; and if it be of the right, it doth not decay, and loseth no whit of his lustre. Herewith was the Barge trimmed without, with diuers figures painted on the hull of the Barge: from the hull vpward the windowes and the walls of the Halls and Chambers was full of carued workes, knots, and carued flowers, some gilded, others of diuers colours, agreeable to their natures, which made a very pleasant shew: within it was of the same worke with more excellency, and the most part was gilded, and the floore of boords was painted with very shining *Charan* or Oyle. It was as long as a good Gallie, little more or lesse, and somewhat broader, but farre higher, and in such sort, that when wind fayleth they vse very great Oares after the manner of *China*, which serue, and are managed as Fishes vse their taylor to swimme. And because they bee of this fashion they vse them with much facilitie in euery Vessell how high soeuer it be. This was the fashion of the Vessell wherein the Eunuch came with much Musike of Trumpets, Drummes, and Fifes, and other Instruments which I omit for breuities sake.

When he was come to this place, seeing the King sent no answer to his first petition, he sent another to put him in remembrance, and to sollicite an answer to the first: wherein hee answered nothing to this point, although he answered to other things. And though it bee true, that sometimes the King maketh no answer, through forgetfulnesse and confusion, because the petitions be infinite which are daily giuen him from all the Kingdome: yet most ordinarily when he giueth no answer it serueth for an answer, either that hee will not doe, or liketh not of that suit that is made vnto him. And therefore because there came no answer, the Eunuch was much grieved that he had meddled in this matter, out of which he could not withdraw his hand because he had giuen a Petition to the King, vntill he had seene some answer of his, fearing some damage, or displeasure of the King, that hereof might ensue: and hereupon hee beganne to estrange himselfe from vs, and sought not to see vs, nor to haue to doe with vs, and sent sixe men alwaies to stay in our Barge, ynder colour to serue vs, but in very truth to watch vs day and night.

In this suspense wee continued three moneths in the extreme heate in a Barge, not knowing what would become of vs. At the end thereof newes was brought vs, that the King had sent to the Eunuch, that he should see what things they were (for vntill then he had not written to him but in generall) and signifie it vnto him, and if he thought them worthie, he should send him a Petition touching that matter. Wee were somewhat more ioyfull with this message, which was so indeed. And Father *Matthew Riccio* went to the Eunuchs lodging to receiue the Kings answer, with such ceremonies and reuerences as they are wont to receiue the messages that come from the King. And to put this commandement in execution, he came to our Barge accompanied with many inferiour *Mandarines*, as witnesses, and in the Kings name hee tooke all these things into his hands: which he sent vnto his house. There he fell to reason with vs, perswading vs that wee should conceale none of the precious things that wee had brought (whereof his minde did so greatly runne) because the King would be greatly displeased, if hee knew that wee had any good things and would not giue them him. Wee told him plainly the truth, putting him in plaine words out of that imagination which we knew he had conceiued. And after many complements on both parts he returned to his lodging.

He wrote to the King what things they were which we had brought, looking that he would straight haue sent for them. But it fell out as it did at the first, that he returned no answer, and the cause thereof seemed to be, that they were things that he made none account of. Wee were now the second time in like case as wee were at the first, not being able to goe backe nor forward:

ward: for they would not suffer vs to goe to *Paquin*, nor to returne backe. The Eunuch being readie to returne to the Citie of *Lincin*, where we first met him, hauing need of the Barge where- in wee were, commanded vs to bee remoued vnto an house in the Citie, there to stay vntill some message came from the King, either good or bad. We remoued with great pleasure, for the desire that we had to say Masse, whereof wee were deprived many moneths. After we were come on shoare, we set vp our Altar whereon we said Masse every day, preparing our selues for that which might betide vs.

Lincin.

This was the thirteenth of October.

Couetousnesse iniurious.

This Eunuch could not bee dissuaded from that which couetousnesse had perswaded him, to wit, that we had brought some precious thing with vs. And seeing it seemed vnto him that he could not get vs by another way, to giue that which hee desired, and wee had not; hee became shamelesse, and two dayes before his departure, he came with a great companie to our house, as though it had beene to visite vs in friendship, we thinking nothing of any such thing: and when he was come in he began to speake vnto vs, and put vs in great feare, asking vs, how wee durst come so farre into the Kingdome without leaue of the King? and that other Eunuchs had aduertised him from the Court, that wee had many other things, and that wee would not shew them, nor giue them to the King. While he was thus talking and dealing, hee commanded his men to seize vpon all our stuffe, which we had in foure or fise Hampers, and to lay them all out vpon a banke, which with great celeritie aboue an hundred Officers which came with him performed, and in two words, they vndid and opened all, and with his owne hands he opened as many papers as he found, to seeke that which he desired: and seeing he could finde nothing that hee looked for, he tooke that which hee found, which was an Image of our Ladie, being one of the two small ones which wee had reserued, that which hee left was better without comparison, and very excellent, on which also hee had cast his eye: hee tooke also certaine Glasses, and other small things, of small importance, because there were no better: but that which grieved vs much was, that he tooke from vs a Crosse of very good and great Reliques, and a Case of Reliques likewise, and the Chalice wherein we said Masse, which because it was of Siluer and gilt (which that yeere they had sent vs of Almes from *Maaco*) did please him; and when we prayed him not to touch it, because it was a thing consecrated to God, which the Kings of our Countrey durst not presume to touch, hee made a iest of it; and the more it was told him that hee should not touch it, hee handled it the more with scorne, saying, that though wee told him he might not touch it, yet we saw he held it in his hands without any difficulty or danger.

Images.

A Crosse and Reliques.

A Chalice.

By the intercession of a *Mandarine* that fauoured vs, he gaue vs the Chalice againe; but wee could neuer get the Reliques againe out of his fingers, as wee desired, for of all things else hee would depart with none.

As he and those that ayded him so willingly were searching with much curiositie, and euery one caught what he could, because all things lay tumbled on the ground: at last they met with a Case wherein was a carued Crucifixe, which was mine. He began to looke vpon our Lord *Iesus Christ* being bloudy and wounded, being a very faire and pleasant sight to our eyes and heart, but very strange, foule and offenseue to his sight. He vsed certaine gestures not saying any word, vntill he was astonished, and turned his head, and asked what it was? Wee told him, that that was the true God which made Heauen and Earth, whom all the World ought to worship, who died for our sinnes, and to giue vs life, and afterward rose againe by his owne power, and ascended into Heauen. He would not heare many reasons; for it seemed vnto him that we were deceived in worshipping a God that in his eyes was dead: againe, he looked wistly vpon it; and the finall conclusion that hee made was, that that which hee suspected was true, that wee were very lewde fellowes, because wee had the shape of a man misused with so great inhumanitie, nayled on a Crosse, and all besprinkled with blood, as that was, and that it was nothing else but some witchcraft to kill the King; And though in this second point hee was deceived; yet in the first he had great reason, though hee knew not wherefore, since our sinnes and euill deeds made *Christ* to be vsed on that sort.

A Crucifixe.

Suspicion.

That which the Eunuch said in our house, he vttered also abroad: in so much that certaine graue *Mandarines* which fauoured vs, retired themselves from vs, and sent vs word, that from henceforth wee should leaue that crucified man, and that seeing now wee remayned in *China*, we should wholly conforme our selues vnto them, for as long as we kept it they durst not speake in fauour of vs, because the report went that it was a deuice to kill the King. But our *China* Boy which was a *Christian* before he brought vs the message, answered before the *Mandarine*, saying, That this was the true God: wherefore not onely wee, but himselfe that was a *Chinois* would rather die then denye him one jot: whereat the *Mandarine* was amazed, seeing him speake resolutely of dying; a thing so much abhorred of the *Chinois*, euen to speake of it: and so he sent vs a moderate message, bidding vs to hide that Figure, that no bodie should see it, for the report that went of it. The Eunuch gaue out many threatnings against vs, saying, that whether the King receiued the Present, or not, the least displeasure that hee would doe vs was, to thrust vs out of the Kingdome, as wicked fellowes, writing a Petition to the King against vs. Besides this we remayned thrust into an exceeding bad and naughty house in the greatest force of

Dying dreadfull.

The force of
Winter.

This was till
the beginning
of Ianuarie,
1601.

of the Winter, alwaies with many Souldiers within and without doores, the gates being shut with hanging Lockes, without suffering our Boy to goe forth to buy any thing, without two Souldiers to goe with him. In which kinde of living (though still with some remission of the rigour that we were kept in at the first) wee continued about two moneths and an halfe without any kinde of comfort or rest at any time of the day to say Masse.

At the end of which time, the Eunuch returned to the same place. Wee verily thought that our comming out of that place should not be such as it was, at the least we thought we should be thrust into a perpetuall Trunke or Prison, or in some worse place, as the same went, and the good will which the Eunuch shewed vs.

II.

The King sends for them, is delighted with their Clockes and Pictures; they are shut up, after take a house, are admired for learning; Christianitie of China.

As the cause of our trouble was the Kings not dispatching of our businesse, and our conceiuing that hee misliked of our comming, so all was ended by his remembring by chance to aske where the strangers were, which certaine moneths past they had told him had brought him certaine Images, and certaine small Bells which strike of themselves (for so they call Clockes) and wherefore they brought him not those things, and that they should fetch them quickly; and he gaue the charge of dispatching our businesse to a great Mandarin of Paquin, to whom it belongeth to deale with Strangers.

The King
sends for them

These newes were brought to the Eunuch and vs, who for the executing of the Kings commandement (whose Letter they obey without reply) sent vs word that wee must goe to Paquin, because the King sent for vs, and sent vs eft-soones all the Pieces which hee had in his possession, and the most part of those things which he had taken from vs, that wee our selues should put them in order, that they should receiue no hurt by the way, and gaue vs many men to carrie all our stuffe on their shoulders, and Horses for all our companie, and a Mandarin to accompanie vs. Wee were lodged all the way in the Palaces of the Mandarins very honourably. Hauing traueled foure dayes, we came to the walls of Paquin, and they lodged vs in an house without the walls. And because the King had referred the businesse to the Mandarin, which I spoke of, the Eunuch feared that hee should lose the thanks, which he thought to receiue of the King for that present, if another Mandarin should meddle with it. That day hee caused all things to be made readie of the Petition and remembrance, which therewithall he was to giue vnto the King, and early in the morning with other things and much Siluer of the reuenues which he presented, being all guarded with many Horse-men and Foot-men, hee carryed it to the Kings Palaces.

Their iourney

They came to
Paquin, in 4.
dayes trauell.

The present is
deliuered to
the King.

Clockes and
Pictures admi-
red.

They are sent
for to the
Court.

Who hauing the memoriall deliuered vnto him, commanded his men to receiue all things. They receiued the same: and when hee had seene all those strange things, the like whereof, or of so great excellencie, he had neuer seene before; they say that he rejoyced greatly, considering and viewing all things a very long while, with great shew of admiration, especially of the Pictures and Clockes. Hee commanded them to bring vs to his Palaces, and to enquire of vs what kinde of thing those Clockes were, and what thing was needfull, for to haue them to goe well. Wee answered to the point. And from the place where we were on horsebacke, by poise on two Horses which we mounted, and with the like speed we came to the Court. At the same of our comming, and for to see vs an infinite multitude of people assembled, (because Strangers are no ordinarie thing in China:) and when wee came to the Court, those which had the charge of vs, were enforced to make roome with staues. When we were come to a certayne place, a great Eunuch accompanied with about two hundred small ones, came downe to demand of vs what the King commanded him, and to see how wee did handle those Clockes: They saw how we vsed them; but wee answered to the question, that it was needfull to appoint some bodie of good capacitie to learne, which in two or three dayes would learne how to vse them.

Eunuches are
raught to vse
the Clockes.

The Pictures.

The King of
China his que-
stions.

When they had returned the answer, the King appointed foure Eunuches of his principall Mathematicians, to learne it, and command them to receiue vs in the meane while in his house within his owne Palace. They receiued vs with much respect and good entertaynment. A great multitude of Eunuches came to see vs, and euery one to enquire what came in his minde. But the King, which all those dayes was occupied in rejoycing for those new things, commanded the Images to bee placed in a principall Hall, whether, as the Eunuches told vs, the chiefe Queene went to doe them reuerence: and they told vs of the King, that hee durst not keepe them nere him, being afraid, because they seemed vnto him to bee aliuie. Often times he sent Eunuches vnto vs, to enquire diuers things concerning our Countrey, whether it had any King, what manner of Apparell he wore, and what kinde of Hat? (for in China they make great difference of the

the apparell of the King, from the foot to the head, and of other men) and if wee had any Picture of him that we should shew it. We had a picture wherein was the Pope with his triple Crowne, and the Emperour, and the King with their Ensignes, kneeling before the name of God, and we gaue them it for a show, declaring that those were three kinde of Kings, and that all of them did worship the true God, which made Heauen and Earth, whose Image we had giuen him. They carryed it vnto him, and because it seemed to bee small, he commanded them to draw another greater, in colours by it.

Three kinde
of Kings.

Afterward hee sent another to demand questions of the things of our Countrey, particularly of the Kings Houses. Wee had a Map of the *Escoriall*, newly cut in Copper, and a picture of the Place of Saint *Marke* in *Venice*, both which wee gaue them. Though we suspect that they deliuered but the second, saying, that they durst not giue the other, because straight in haste hee would command them to paint them great, and there was none that durst take it vpon him; though wee know not whither they deliuered it afterward. Hee willed them further to enquire; after what manner wee buried our Kings: because in the matter of Burials and Sepulchers, the *Chinois* are great South-sayers, and put a great part of their felicitie in a good manner and place of their Burials. At that time wee received a Map of the Death of his Majestie, (who liueth with God in glorie) and of the manner of his Funerall, and so we answered him, as it was in the Map, to wit, that they made him a Coffin within of Lead (which continueth long) and without of excellent Wood, and put these coffins in a Sepulcher of stone, and for this purpose, there was a Church builded of purpose. They enquired many things of vs of this kinde these few dayes, where vnto wee answered, aduancing the things that belonged to the seruice of our Lord God, as much as we might, and concerned our *Europe*, as farre as the truth would permit vs, because that we deemed it to bee conuenient for the seruice of our Lord. They told the King so many things, that it seemed hee greatly desired to see vs: But on the other part, he thought it would bee too great a courtesie, and much beyond his custome, who neuer suffereth himselfe to be seene of his owne people, but of his Eunuchs, and Wiues that serue him, and sometime very seldom of some one of the greatest *Mandarins*: yet, though he would not suffer himselfe altogether to bee overcome of this temptation, yet he suffered himselfe in part, and hee sent to take our Pictures: which two Painters did, each of them by themselves as well as they could. Yet in truth I neither knew my selfe nor my companion in that picture, but as it was they carryed it away. It was not after such figure and manner, as your Worship hath knowne mee, but with a Beard an handfull long, and a garment of a Learned honourable *Chinois*, though downe to the foote, and very modest: but from the head to the foot farre differing from our fashion.

The *Escoriall*
Saint *Markes*.

Sepulchers.
Death of King
Philip the 2.

The King ne-
uer suffereth
himselfe to be
seene of the
common peo-
ple.

Bad Picture-
drawers.

After the Eunuches had bene instructed three dayes, the King in haste sent for the Clockes, which they carryed, and set in order before him; whereat hee tooke such pleasure, that he increased their Dignitie, aduancing those foure which had learned this skill, to a greater place of their Order. The King asked them many questions of vs, what wee did eate, and how much, and many other trifles. Whereunto the Eunuches answered (as they told vs afterward) as wee could desire.

Eunuches pre-
ferred.

They gaue vs all the welcomes of humanitie which the King did shew vs, appointing vs all to bee *Mandarins* (which is the reward and felicitie of the *Chinois*) which wee alwayes refused, saying, that we came not for that purpose, but onely to dilate the Law of God, neither could wee take that office vpon vs: But we were so neere to bee made *Mandarins*, that they told vs the King would bestow Dignitie vpon vs, that wee were enforced to beseech the Eunuches, that when occasion was offered, that his Majestie did aske them any thing, they would tell him plainly that we sought no kinde of Dignitie, nor could become *Mandarins*: who told him so much; whereby our Lord God deliuered vs out of much trouble, which wee should haue endured in refusing the same, if the King had bestowed it vpon vs. Wee continued in these demands, questions and answers, goings and commings to the Kings Court: for now we had liued a whole moneth abroad: in which time euery day I at least was there, when wee could not goe both, because Father *Matthew Riccio* was occupied with other Ghests and visitations. They enquired and asked vs, what we would demand of the King: Wee told them, that we sought no profit at all; but if the King would giue vs vnder his hand, some certayne place and a House to dwell in, we would bee very glad; because wee had none other intent, but to stay in some certayne place, and to seeke to dilate the Law of God. For though it bee true, that our purpose did stretch it selfe further (as I haue sayd in the beginning) yet wee found things in so different a disposition from that which we imagined, that it seemed an exceeding great error, to make any motion to giue an entrance for more companie and Fathers: for it was certayne that we should doe no good, nor should finde any, which by any meanes durst presume to moue it to the King, and assuredly should lose all that we had done, and at last should cast our selues wholly out of the Kingdome: and therefore it was not conuenient that we should bee knowne, that we had any companions. And many of our friends gaue vs counsell, that wee should not seeme to seeke to dwell heere; for in that very point, they would haue vs in suspition. Yet neuer thelesse, we went as farre as we could, and as we thought might bee brought to passe, which

Iesuites offered
to be *Manda-
rins*.

A Moneth

was, that we might haue the Kings license, that no *Mandarin* might (if hee would) cast vs out.

*Mandarin of-
fended.*

The *Mandarin*, to whom the King at the first had referred our businesse, seeing the Eunuch had wholly medled in the same without him, being much offended therewith, did throwne altogether vpon vs, and made a warrant out, to take vs wherefoeuer they found vs, vttering certayne grieuous words against vs, because that being Strangers, and remayning in the Court, wee presented not our selues vnto him, to whom of right belonged all the businesse of Strangers. They were at the lodging where wee lay, and they shut vp our Boyes; for they neuer durst offer any discourtesie to Father *Matthew Riccio*, (which at that time was there.) At that time I was at the Kings Court, whither they sought to send me word to speake with the Eunuches, and that they, if they could, should aduertise the King thereof, that they had apprehended vs. But they hindred with exceeding great care and diligence the going forth of any bodie, and they stayed for me till I came home, (which came home thinking no harme at all) and when I was come in, they shut the doore without.

*They are shut
vp some three
moneths.*

*Mandarins Pe-
tition.*

Wee rode the next day very honourably on Horsebacke to the audience of the *Mandarin*, and signified vnto him, that in that we did not present our selues, was not our fault; hee vsed vs well, and honourably; but they put vs in an house with a Guard, where wee continued some three moneths, yet so that certayne *Mandarins* came to see vs. This *Mandarin* gaue the King a remembrance that hee held vs there: *But that as our purpose was good to serue him with that present, it was reason to giue vs some reward, setting downe that it would doe well to giue vs the Ensignes of the Mandarins, and to pay vs. for that which wee had giuen him Royally; but that it was fit to send vs away speedily into our Countrey, or to Canton (where untill then wee had dwelt:) for it seemed not well, that Strangers should dwell, and that in the Kings Court, entring into the Palace of the King euerie day, being a thing so vnusuall.* And in very deed hee had reason: for to suffer vs to enter into the Palace, or to stay and lye there, they did vs such a fauour, that of long time the King of *China* hath neuer done to any Stranger. Wee feared some trouble by this Petition. But our Lord which had giuen vs this bitter morsell, afterwards made it sweet to vs againe, because the King made none account of it. And albeit diuers times afterward, the said *Mandarin* deliuered foure Petitions concerning this point, hee made as small account of the last as of the first. And diuers times the Eunuches told vs, that the Kings meaning was of all likelihood, that wee should stay heere, *For feare lest wee should returne into our Countrey, to giue newes and knowledge of his Kingdome; as they delt with a Turke, which had bene heere aboue fortie yeeres.* True it is, that hee answered as little, in performing nothing that was in the Petition: But wee tooke it for good satisfaction, that hee did not yeeld to that, that we might not lose the other thing, which was the principall.

*A Turke kept
there.*

When three moneths almost were spent, seeing the businesse would bee prolonged, if wee attended the Kings answer, and being shut vp we could doe nothing, nor negotiate any thing that we intended, nor deale in Gods matters, as we desired; wee sought to get out of this place, and to get a license to take a House, and there to stay wayting till the King would giue some order: and wee handled the matter so well, by meanes of certayne *Mandarins* which fauoured vs, and principally by the grace of our Lord, that wee obtained our whole desire: And we tooke an house in the chiefe situation of this Citie: all that which they gaue vs at the Kings cost in that place, which was sufficient for our sustentation, after wee were gotten out they gaue vs the same allowance in like manner.

*They hyer an
House.*

*Visited by
Mandarins.*

Many *Mandarins* of this Court, heard great fame of vs and of our things: and vnderstanding that we were come out of that place, began to come in great numbers and concourse with much honour and respect, courtesie and presents to visite vs, and to enquire diuers things which they desired to know. For the same that went of vs, that wee knew all Countreies, and the things and customes of the World, and the materiall and spirituall things of Heauen, was great: and therefore euery one came to enquire that which hee desired. And though our knowledge be but little, in comparison of the knowledge which is in our Countrey: yet being compared with theirs of *China*, which knoweth nothing of the world, saue their owne Kingdome, which by a common name they call, *The World*: of God, and of the things of Heauen nothing, and of other things little, it was somewhat, and was sufficient to send them home amazed, and alwayes with a desire to returne.

*China igno-
rance of the
world.*

Vie of Maps.

*Ill Cosmogra-
phic.*

They saw a very faire and great Map of the world which wee brought with vs, and we shewed them how bigge the world was, which they thought to bee so little, that they imagined that there was not so much more in all the same, as their Kingdome: And they looked one vpon another, and sayd, wee are not so great as we imagined, seeing heere they shew vs, that our Kingdome, compared with the world, is like a grayne of Rice, in comparison of a great heape. They also thought, that there was no other Writing, nor no other Bookes in the world but theirs: and when they saw ours, which at the least they saw in outward appearance, to bee much better then their owne, they were astonied, and put out of their errour, doing vs alwayes more and more honour: and chiefly they were astonied, when wee shewed vnto them certayne things in the Mathematickes which they knew not, giuing Clockes to certayne persons, which for this

ther of arro-
gance.*

Mathematicks

end

end we made of purpose : and by these and other meanes, and principally by discourfing with them of Morall vertues, (whereof they write, speake, and haue many Bookes) and of Gods mat-
ters, there ranne so great a fame, that the greatest *Mandarins* of all this Kingdome (which are
the greatest persons next the King) sought to conuerse with vs, and to seeke our friendship : and
so many sent vs presents, and others came to visite vs, with great numbers of people : others
with much courtesie inuited vs to their houses : so that in foure moneths space, wee had gotten
the greatest *Mandarins* of *Pequin* to be our friends, and readie to fauour vs in all things : And he
which at this time particularly doth fauour and honour vs, is the *President of that Audience*,
which hath the charge of vs, and at the first approoued vs : so that wee remayne Inhabitants of
this Citie, with all libertie that wee can desire, to deale with all such as are willing to heare the
things that belong to our holy Law, and their saluation. And by this good successe, our Lord
hath made vs forget all that is past. And though it bee true, that hitherto wee haue gotten no
dispatch, nor resolution of the King, yet wee content our selues in that hee letteth vs stay heere,
although he neuer grant vs more. For albeit by this our Journey, we haue not obtayned all that
wee desired, yet we hope that this our firme abode heere, shall tend greatly to the seruice of our
Lord, and the good of this Mission.

Ethikes.

Foure months

They bee commonly of good vnderstandings, so that easily they fall into reason, and are capa-
ble : they haue not in the gouernment of this Kingdome, any thing that forbiddeth them to fol-
low what Law they list, nor any Law nor Obligation, which is contrarie to our holy Law.
They haue none which effectually and with authoritie doth exhort them vnto other Lawes, and
with-draw them from the truth. For the *Bonzi* (which are dedicated for this purpose to Idols)
are in the common conceit of all men, the most base, contemptible, and worst people in all *Chi-
na*, whose least care is, to exhort them to any thing more then to giue them somewhat : and
thus they doe not onely not exhort them to follow Idols, but also with their bad manner of li-
uing, perswade them (as wee haue often heard of men of good iudgement) that it is not good to
serue them, since their Ministers bee such. And so in this matter of worshipping of Idols,
though there be many that worship them, and haue many of them, and vse their Ministers for
their Funerals, and other things, yet with very small affection, and deuotion thereunto, we ea-
sily make them say that they are naught, and that it is not fit to worship them.

Hopes of
Christianitie.The basenesse
of the *Bonzi*.

Yet, though these things and others, which I omit, doe helpe them with ease to follow the
Law of God, the counterpois is great, and commonly it weigheth downe the ballance on that
side. For first because the matter of *Strangers* is so odious in *China*, and the dealing with them so
suspicious, one sort because they disdain it, as the Princes, who albeit they now conceiue bet-
ter of vs, yet to learne of *Strangers*, and to receiue a Law which is not of their owne meanes,
they hardly perswade themselves; others for feare, as the base people.

The second difficultie, and perhaps the greatest, is a naturall obliuion, that all this Nation
hath of another life, and of immortalitie, and of saluation or condemnation of the Soule : and
not onely an obliuion, but also an auersion from all these things, wherein wee haue likewise
found them to differ from all other Nations. And it is a thing to be noted, that since it is a thing
so naturall to Man to reuerence some God, either false or true, and to feare or loue him, and to
conceiue or imagine what shall follow after this life : Those *Chinois*, (which on the other side
are of so good capacities in humane things, and so wittie therein) bee as though they were de-
priued thereof; for they are almost all *Atheists*, not knowing nor worshipping neither false nor
true God, nor neuer thinking what shall follow after this life : And those which a man would
thinke are most bound hereunto, which are the Learned men, are they, which haue least know-
ledge hereof : yea, rather one of the chiefeest things that they commend, is, not to beleuee any
thing that concerneth another life, Hell, nor Paradise, which they wholly place in this life. The
Bookes which they studie from their Child-hood, doe them much hurt, which are of certayne
Philosophers about two thousand yeeres old, whom they esteeme little lesse, then if they were
their God, to whom euery yeere they offer Sacrifices : of whom they hold so great an opinion,
that they thinke not that any thing more may bee knowne, then They knew. And oftentimes
they haue asked vs, whether wee had not these Bookes in our Countrey ? What other Bookes
might we haue, that might compare with them ? And as these Philosophers, as Gentiles, spake
nothing of the other life, but onely of good Gouernment, and Morall vertues, they thought
they might attayne so farre, without beleueing that there could bee another life. By reason here-
of, and of the common vices which *Paganisme* draweth with it, which in this Countrey increase
exceedingly, by reason of the fatnesse, abundance, and fruitfullnesse thereof, they feelee great
difficulties to vndergoe the yoke of *Christ*, (though it be so sweet) so contrarie to their appetite,
which taketh from them the libertie which they haue, in keeping as many Wiues as they are a-
ble, and in a thousand other things.

Sacrifices to
Philosophers.

These later yeeres in the residencies of *Canton*, *Nanquin*, and heere in *Pequin*, were made some
true *Christians*, which ouercame all these difficulties, and goe on forward with great integritie,
constancie and feruour. In the Prouince of *Canton*, in a residencie which wee haue in *Xaubeo*, a
principall Citie, haue bene Baptised within this two yeeres, about three hundred persons, which
according

according to the Letters which euen now wee receiued, doe all continue with great example and zeale. And the *Mandarins* and grauer ſort of people, moued by the good example which they giue, doe fauour them much : and eſpecially, our Lord hath ſhewed many tokens of his fauour, in hauing ſhewed great plagues vpon ſuch men, as persecuted them for becomming *Chriſtians*. And aboue all, God hath ſhewed his ayde vpon the Women : who, beſides the men, are very hard to bee wonne to receiue our holy Law, which is, the great priuatenefſe which they vſe, be- cauſe it is not lawfull to ſee them, no not for their kinsfolkes. But as I ſay, herein the grace of our Lord God ſhewed it ſelfe very mightie, ſeeing it ouercame this difficultie, and ſo many of them were Baptiſed, after they had bene very well Catechiſed by the Fathers. On Sundayes and Holy-dayes, becauſe they cannot come to Maſſe with the Men, yet at leaſt in this beginning, they meeete in places appointed for that purpoſe, and there they Pray, and reaſon, and intreat of Diuine matters. The men for the exhortations that they make vnto them, haue dayes appointed of themſelues, and with their owne conſent, to conferre and repeate that which they haue told them : which going home they repeate to their Wiues and Daughters.

Euery day ſome bee Conuerted in *Nanquin* : graue and learned men doe enter. Heere in *Pa-quin* while wee haue bene heere, we haue Baptiſed ſome, and ſome great *Mandarins* come to heere. If our Lord doe helpe them, and ſhed his bloud vpon theſe *Chinois*, (as hee hath done in *Iapon*, and in other places) there will bee ſetled one of the moſt famous and learned foundations of *Chriſtianitie*, that is in all the world. For the greatneſſe of this Kingdome, their Lawes and Gouernment conformable to reaſon, their being ſo ſtudious as they are, and giuen to Learning, and to know ſo much as they know of Morall vertues, and their good capacities gentle, docile, and ingenious, and the great peace and quietneſſe which they enioy, without hauing any bodie to trouble them with warre, promiſe much and giue great hope, that the vantage which they haue ouer other Nations lately diſcouered, in the gifts of Nature (being aſſiſted by the grace of God) will helpe them in Gods matters.

And I aſſure your Worſhip, that if the doore were opened to Preach freely and to Baptiſe, I ſay not that the Fathers and Brethren of our Companie which might bee ſpared, but without any amplification at all, halfe the Religious men of all *Europe*, were needfull to attend ſo many Cities, Townes and places ; and ſo infinite numbers of people as there are : albeit when *Chriſtianitie* is once begun indeed, there is ſuch abundance of graue people and of much eſtimation, that many of them might bee made Priests, Preachers, and Biſhops, without feeling any want of thoſe of *Europe* : ſince as now they bee *Gentiles*, and their hope goeth no further then to this life, there be many very great *Mandarins*, whoſe chiefe delight is to diſcourſe of things concerning Vertue, and oftentimes they meeete together as it were in Fraternities to treat thereof ; And the grauer ſort doe make Orations, and Conferences together, perſwading one another, and deliuering the meanes to gouerne well, and to follow vertue. And without doubt, the more wee ſee of this, and the more zeale in theſe *Chriſtians*, ſo much the more our heart is readie to burſt to ſee them ſo deſtitute, and to haue ſo few meanes to obtayne neceſſarie remedie and helpe.

¶ III.

The deſcription of the Kingdome of China : of Catay and Muſk ; the diuiſion into Prouinces ; Cities and Townes deſcribed, Riuers, Shipping, Commodities, Diet, and feeding.

Now by the helpe of our Lord I will ſay ſomewhat that I remember, touching the Cuſtomes, Policie, and Gouernment of this Kingdome, but not in ſuch order as were requiſite, becauſe I haue no leaſure, and therefore I will onely write as things come vnto my minde, though things bee not lincked well together, becauſe I cannot firſt write one Copie, and afterward diſpoſe it in order, with ſuch diſtinction as were needfull ; reſeruing that (as I ſayd in the beginning) vntill our Lord grant me a better opportunitie.

China foure
ſquare. The
Deſcription.

This great Kingdome of *China*, is almoſt foure ſquare, as the *Chinois* themſelues deſcribe the ſame : it runneth North and South from the Prouince of *Canton*, which is the moſt Southerly part of it, beginning ſeuenteene or eightene degrees vnder the burnt Zone, vnto ſotrie two degrees, which is the moſt Northerly part of it : it containeth from *Canton* by water, aboue ſixe hundred leagues : but in a right line it is foure hundred and fiftie, on the Eaſt it confineth with *Corea*, which ioyneth with the ſame, and with *Iapon*, and with the Ocean Sea, by which they come from *Pern*, and *Nueva Eſpana*, to *Manilla* : On the Weſt with certayne ſmall Kingdomes, which lye betweene *Bengala*, the Lands of *Mogor* and *Persian* ; On the South, with the Iles called *Philippinas*, and the *Malucas*, and others, and more South-weſterly, it hath *Sion*, *Pegn*, and other Kingdomes. On the North part, it hath thoſe people which in our Countries wee commonly

commonly call *Tartars*, with whom they haue alwayes had Warre, and once they wanne all the Kingdome from the *Chinois*.

For the Readers better satisfaction I haue here presented him *Hondius his Map of China*, not to shew it, but the erroneous conceits which all European Geographers haue had of it: A more complete Map of China I shall present after, as by comparison will appeare.

HONDIVS his Map of China.

This Kingdome standeth in an excellent climate and situation; for besides the things which it hath in it selfe, it standeth very neere vnto *India*, and other Kingdomes, from whence cometh with great facilitie that which it desireth and wanteth. And before I passe any further, because I haue spoken of the situation and heighth of *China*, I will note for their sakes which would bee glad to learne, and also it may serue to mend two notable errors, which our newest Maps haue. The one is, That they make *China* a third part bigger then it is, placing this Citie of *Paquin* in fifty degrees, being in very deed but in forty onely, as we saw, which twice tooke the heighth thereof with a very good *Astrolabe*: And the limits and end of this Kingdome, which are three dayes journey or lesse distant from this City of *Paquin*, are at the most but two degrees more: And so those great walls so famous in our *Europe* are in two and forty degrees; and this is the greatest heighth of the Kingdome of *China*.

The second error is, that our Maps make a Kingdome about *China*, which they call *Catayo*, whereas indeed it is none other but this selfe same Kingdome of *China*: and the Citie of *Cambalu*, which they put for the head thereof, is this Citie of *Paquin* wherein wee are. Wee finde this here to be true very plainly by occasion of certaine newes which lately were spred ouer diuers parts by the way of *Mogor*, which gaue out many things, and great matters of *Catayo*, which seemed to be so peculiar and proper to this Kingdome of *China*, that they made vs doubt

Two notable errors of our newest Maps. *Paquin* in 40. degrees.

The Kingdom of China goeth nor past 42. degrees Northward. China and Catayo are all one. Cambalu and Paquin are all one.

that it was not a feuerall Kingdome. After wee were come to this Citie of *Paquin* wee met with two *Cafilas* or *Carauans*, one of *Moors* of certaine small Kingdomes bordering vpon *China*, another of *Turkes* with their *Turbants* of the Countries of *Mogor*, and of the great *Ismael Sophi*, (for with this very name they call him) and of other parts, which had knowledge by fame of *Spaine*, *Italie*, *Venice*, *India*, and *Portugall*.

Very Merchants.

It is so in *Moscorie*.

Iasper stone a great merchandise.

These *Turkes* and *Moors* are wont to come hither euery five yeeres by Land, in the name of their King, to acknowledge and pay Tribute to the King of *China*: for which purpose they counterfeit certaine Letters, wherewith they easily deceiue the *Chinois*, which thinke and hold that all the Kings of the World doe acknowledge obedience vnto theirs. But the trueth is, that they come to vse their trafficke and merchandise, and therefore the *Chinois* admit them willingly: howbeit many now doe know, that their paying of Tribute is a fayned thing: In which their trafficke they speed very well. For the King doth maintayne them very plentifully from the time that they come into his Kingdome, vntill their departure; and they tooke all their Chifts of them, whereof this yeere they brought a thousand. The King tooke of them at an easie price a great part of the merchandise which they brought, and afterward hee gaue them rewards. The thing of greatest bulke of merchandise are a kinde of stones, which themselves call *Iasper* stones; which is white, yet somewhat duskyish, so that it enclineth to grey (which seemeth to bee that *Iasper* which so often times in the holy Scriptures is called Precious stone.) It commeth in pieces vnshewen, but whole like peeble stones; which stone for many ornaments the *Chinois* esteeme much; especially the King: and they buy euery pound of the best at eightie Duckets: and of that which is worse, at fiftie or sixtie Duckets, whereby they gaine greatly. I haue seene these stones of other colours in our Countrey, but not of this which the *Chinois* esteeme.

When these men come to this Citie of *Paquin*, they put them into a great house, which there is for this purpose; (wherein wee were two moneths) and suffer them not to come forth. Wee asked these men certaine questions: and one was this of *Catayo*, enquiring of them, How they called this Kingdome of *China* in their Countrey? They answered, *Catayo*, and that in all the Countries of *Mogor*, *Persia*, and other parts, it had none other name, and that they knew none other Kingdome that was called so. Wee asked them how they called this Citie of *Paquin*? They said *Cambalu*, which, as I haue said, is that which our men set downe for the head Citie of *Catayo*. Whereby it appeareth, that there can no doubt bee made, but that wee are heere resident in the Countrey which must bee *Catayo*, if there were no fault in the Maps; and wee know that there is no such Countrey, nor Cities, but a few contemptible *Moors* and *Gentiles*.

China populous

Wee vnderstood also of their x *Ciuets* or *Muske*, whereof they brought some, which is, as it were the maw (or stomacke) of a Beast somewhat bigger then a Cat, which they kill to cut away this maw. They breed wilde in the field, and in a Countrey very neere to *China*, though not of this Kingdome. I had read when I departed out of *Spaine*, a Booke which is printed of the things of *China*, which writeth of this *Ciuet*, and of other things, which I haue seene with mine eyes: it reporteth many errours by halfe informations, which hee which wrote it should haue bene better informed in, although in many things hee tell the trueth. They brought also great store of very good *Rhubarbe*, which heere wee bought of them of the choice, at ten *Maraudis* the pound: it is a wilde root like vnto *Nauewes*, whereof, they say, the fields are full. These men say, That there is a Sea of sand (which our Maps doe place in *Arabia*) neere vnto *China*, which diuideth it from *Mogor*, and other Kingdomes: And this should seeme to bee the cause, why these Kings, which heere great fame of this Kingdome, of the greatnesse thereof, and of the weakenesse of the people, doe not seeke to inuade the same, being not very farre off; because it would bee very difficult to passe ouer the same sandie Sea, with a great Armie.

The *Chinois* diuide this Kingdome into thirteene Prouinces, and two Courts, which are, as it were, two Prouinces. Euery one of them haue their Metropolitane Citie; and euery Citie her diuision of so many Townes. It is knowne very particularly by *Chinise* Bookes which are written of this argument, how many Cities, Townes, and places there are in all the Kingdome, how many houses euery one hath, and commonly what numbers of people, what euery Countrey feuerally yeeldeth, and how much Tribute it payeth to the King, and many other things: but I doe not set it downe here: because I could not get those Bookes these few dayes past, to take a view thereof: At some other time, God granting mee life, I will doe it more at large. Onely I say in generall, that all the way which wee trauelled, wee met with so many Cities, Townes, and Villages, that to beleue their greatnesse, it was necessarie to see them. For your Worship will hardly beleue, that wee spent two or three houres in sayling still by the walls of one Citie. After which there still followed many Townes and Villages, one within sight of another. And after this manner all this way continueth, euen to *Paquin*. Yea, the Villages are very great, and full of people, and of much trafficke. For though wee giue them this name (which among vs signifieth some small matter) The *Chinois* doe not distinguish them

them by great or small, and so their Villages are bigger then others which wee call Townes.

All the Cities and Townes are very well enclosed with high walls. And because, as I said, I deferre this vntill another time, I will only speake of *Nanquin*, whereof I had some sight.

This Citie standeth in two and thirtie degrees and an halfe, eight or ten leagues from the Sea, vnto which it hath a mouth, and a mightie Riuer. It hath three walls of Bricke very high and faire, with very great and beautifull gates, which they shut vp very timely before night. This Citie, of old time, two hundred yeeres past, was the habitation of the Kings of *China*; and so it continueth in very good condition: The streets are very broad, and all paved with very great square stones, or set with bricke. It hath exceeding long streets of two leagues, and two leagues and an halfe, and in the midst of the Citie are the Kings Palaces, which are very great.

The *Chinois* declare the circuit of this Citie, that two Horsmen going in the morning both out of the same gate, and one going on the one side, and the other on the other, going all the day they meet at night in the gate opposite to that which they went out at. The very truth is, that it is at least eleven or twelue leagues in circuit, and seemeth to haue about two hundred thousand houses of people. It seemed to all of vs that were there, that *Nanquin* and this Citie of *Paquin*, each of them haue as many people or more, then foure of the most famous and populous Cities of all our *Europe*, as *Rome*, *Lisbon*, and others of the greater sort. For whereas these two whereof I speake are in themselves so great Cities, not one nor two streets, but the greater part of the Citie euery day doth swarme with people.

There are about this Citie many others within one or two dayes iourney, and very famous for greatnesse and trafficke; among which there are two, one named *Hancheo*, the other *Sucheo*; and this is very great and like to *Venice*, whose streets are halfe water and halfe land. The *Chinois* call these Cities * *Paradise*, to expresse the goodnesse, abundance, and cheapnesse of all things that are in this Kingdome, and come from other places. And *Sucheo* is so full of people, merchandise, and trafficke, that a Booke which is printed (wherein all things are set downe which the Prouinces and Cities pay to the King) saith, that this only payeth one yeere with another in Siluer, Gold, Rice, and Silke, and other things, wherewith it doth greatly abound, twelue millions: so that there be whole Prouinces that amount not to so much by a great deale: which though it seeme an incredible thing, yet they write it for a certaintie: and hee which knoweth what these Cities are, will beleue it.

Yet for all this, these Cities haue no notable things, neither sumptuous Temples nor buildings, which are wont to be those things which doe beautifie a Citie: for the houses are not beautifull outwardly; nor they vse no great Porches, as they doe in our Countrey. And he that hath seene the things of our Countrey, and is skilfull in architecture, shal find it here very little. For the houses are low, and without galleries, lofts, windowes, or sight into the street; yet they haue faire yards, and are very neate within, and painted with diuers colours, with that *Charan*, or liquid Gumme, whereof I made mention before. And that which I speake of *Nanquin* touching the abundance of people, trafficke, and manner of houses, is after the same manner in the other Cities which we saw. For the *Chinois* are so like, and so vniforme in all naturall and artificiall things, that he that hath seene one of the principall Cities, findeth no new thing to be seene in the others. And albeit that other Cities are not comparable to these in bignesse, yet in multitude of people proportionally there is little difference.

This Kingdome is commonly very fertile of all things that are necessarie for the vse of man: and a great cause of the fertilitie and abundance thereof proceedeth of the great number of exceeding great Riuer which it hath; which besides the profit that the Riuer yeeld by the fishing, and besides the profit in watering of the grounds, wherein they stand the *Chinois* in great stead, they are occasion of great trafficke and communication of one Prouince with another with great ease by water, which is an enriching to them that vse it, and of great plentie in euery Citie of all things that are in the Kingdome. From our departure from *Macao*, till within a little of *Paquin*, which is, as I said, fixe hundred leagues, wee trauelled not past one day by Land (because wee would not fetch too great a compasse about by water) wee trauelled a great part of this way vnto *Nanquin* by the greatest Riuer that euer I saw in my life: which in some parts is about three leagues broad, and very deepe: which the *Chinois*, for the greatnesse thereof doe call, *The little Sea*; and that with good reason. For though it were an hundred leagues from the Sea where I entred into it; yet there is great abundance of fish of those kindes which breed in the Sea; as Porposies, fishes with sharpe beakes, and others which I haue seene.

I saw in this Riuer neere the bankes thereof men fish with certaine Fowles as bigge as small Geese, like vnto *Rauens*, with a long beake, and bending downward like a crooked hooke, which the *Chinois* teach to fish: They haue a very long necke, which they binde in such sort that the fishes cannot goe downe into their stomacke, but they fill their throat with them, if they be small fishes, and when they come out of the water, they make them cast them out: and if the fish be great, hee fighteth with him, and beateth him with pecking, assaulting him

Villages as great as Townes.

Walls. *Nanquin* in 32. degrees and an halfe.

Three walls. Streets long. Palaces.

Circuit.

200000. houses

Hancheo and *Sucheo*. *Quin Jay*, *Cin Jay*, *tas coeli*.

Reuenue.

Building not beautifull, compared with *European*.

Vniformitie in *China* Cities.

Fertilitie.

Commodious Riuer.

In 600. leagues but one day by land.

This is more exactly measured by *Ricinus*, a more exact and mature obseruer of all things. *sup. §. 5. cap. 5.*

Mighty Riuer, perhaps *Quian* mentioned by *Polo*.

Fishing with a kinde of *Rauens* or *Cormorants*.

with his bill, vntill hee driue him vp that the Fisher may see him; which commeth quickly with a small Net like a Wheele vpon a staffe, and hee taketh him vnder the water. And after this sort wee saw this Fowle take Fishes sometimes of a pound, and a pound and halfe weight; and they say they take bigger. And because this fishing is so gainfull and so certaine, they pay a certaine Tribute to the King for euery one of these Rauens (or Cormorants.)

Muddy Riuer.

Wee met with another Riuer as great as this, which seemed to bee rather of mudde then water, because the water was alwaies mingled with earth, which whence it should come for so many yeeres, I wot not. They cannot drinke the water without they clarifie it, which they doe with Alume. Besides these two Riuers all the rest is made by hand for vessels to passe to *Paquin*.

Alume vsed in clarifying of water.
Shipping.

The Vessels which we saw in all the Cities which we passed, is one of the greatest things that belong to this Kingdome. For in euery Citie there are two sorts of them, one sort of vessels for burden, and another sort for houses. Some of them are very faire, and as fit to dwell in as houses themselves: and many of them also serue for houses for poore people, wherein they haue their whole houthold, and bring vp Hens and Hogs, and gayne their liuing in them. I remember that the same morning that wee entred into *Nanquin* there went 500. Vessels or more before our Barke, to enter at the same houre, with their sayles vp most pleasantly to behold; many of them being laden with diuers things, all for the prouision of that great Citie: and on this manner they continued all day long in going and comming.

Ship-houses.

Multitude of ships.

The excellent beauty of the *Mandarines* Barges.

The Barges of the *Mandarines* (which are all made at the Kings cost) are the most costly, and are most for the sight, and very great. They would much reioyce in our *Europe* to see them: because it seemeth that there is nothing comparable to these in beauty. Most commonly these haue Trumpets, and Drummes, which they play vpon when they passe by the Citie, and when they meet with others, that all may giue them place. They are commonly as long as Gallies, and as broad or more, but very high, so that to get vp into one of them is aboue a fathome high from the water, and therefore they carrie a great burthen.

Tributes in money and in kinde.

And because I spake before of those which carrie the Kings Tribute, I will here speake more particularly. Many Prouinces from whence they cannot carrie Rice and other like things with ease to *Paquin*, because they are farre off, pay their Tribute in Siluer: but those Prouinces from whence they may passe by water, pay a great part in Rice. For which occasion all the Cities haue great and strong Vessels made of purpose for this seruice. And when the time of their departure is come, euery Casila or Companie departeth from their Citie with a *Mandarine* that hath the charge of them.

10000. Vessels at *Nanquin* for Tribute of Vissuals, and 1000. for other Tributes: and others many for workes.
Path-way of ships.
Sluces or locks.

And they say that those Vessels which goe from this part of *Nanquin*, in all amount to ten thousand, though they goe not all euery yeere: yet they haue alwaies more for yeeres of greater plenty; and because many cannot returne in time, to goe backe againe the next yeere. I know not certainly how many they be; but this onely I know, that all this way from *Nanquin* to *Paquin*, seemed to be a path-way of these Vessels, whereby wee passed: for they went all along, and because they went so deeply loden, oftentimes they wanted water. To helpe this want of water (for because it is no naturall Riuer it neuer ouerfloweth) it hath floud-gates like Sluces, wherewith it keepeth in all the current three or foure or fixe houres: then opening the same, many doe passe with great ease, and they may goe very well vntill they come to such another place.

Silkes and perfumes.

Besides these Vessels of victuals, they carrie to the King euery yeere many others, which bring him particular things, and dainties, whereof this Countrey of *Nanquin* yeeldeth great store, and also for the seruice of the Kings house. Some Casilas or Carauans of these are of pieces of Silke for the Kings house, which may be some dozen of Vessels; others carrie many things to cate: and with one of these Casilas we passed. They were nine great and faire Vessels, which carried pieces of Silke, and other things which they are wont to burne in the Sacrifices which they make vnto the dead, and before their Idols. They say, that these Vessels for particular things are a thousand: and as soone as they come within the Kings house, the Eunuches take the charge of them. From *Nanquin* vnto the middest of the Kings Palaces, Vessels may passe by this Riuer: to come to the place which they goe vnto, they passe thorow the middest of the Palaces. In all these Riuers, when they want winde, the Mariners draw the Barkes with great facilitie, and fixe or seuen are sufficient easily and merrily to draw one of these Vessels laden.

Vessels for workes.

Wee met likewise vpon this way a very great number of Vessels which came from farre, laden with Bricks for the Kings workes, and greater store this yeere to build a great piece of an house which fire from Heauen had burned: for this purpose they carried great store of timber for beames, and boards, and other lesser timber which are carried from the parts of *Nanquin* vnto *Paquin*, some an hundred and two hundred paces long, and one log fastened vpon another, so that these rafts grow high and great: they carrie vpon them frames of dwelling houses ready made, wherewith there goeth an inferiour *Mandarine*, which hath the care of it, and sometimes the Mariners goe with all their houthold, and breed of Hogs, Hens and Duckes: for sometimes they

they stay about a Summer in going to *Paquin*. These seuen or eight yeeres this prouision of timber, Bricks, and lime, and other things hath continued.

The fertilitie of this Kingdome is great, of all things that seeme to be needfull for the vse of mans life. And if there bee any other Nation which liueth commodiously without needing trafficke with forraine Kingdomes, they are the *Chinois*. And though it bee true that some things come vnto them from forraine Countries, yet are they not the necessary things for the life, and which all men vse. The most that commeth out of forraine parts, and they desire, is Siluer: And that which all men carrie from thence is very much, and very good merchandise: as Silke, Gold, Muske, Porcelanes, pieces of wrought Silke, raw Silke, cloth of Cotton wooll, all kinde of worke in Copper, Iron, and Latten, Quicksiluer, Sugar, Honey, Waxe, Cinnamon, workes made of fine wood, and gilded, as Bedsteads, Ink-horns, Cabinets, and an infinite number of other things, whereof there is so great abundance, that although they send out many ships laden for *Japon*, *India*, *Manila*, and other parts: yet without doubt they might prouide ten times more: and if more would come to buy, they would alwaies haue the more to sell. All things are very cheape, without all comparison cheaper then in our Countrey. A pound of Sugar is worth eight or ten *Marauedis*, and sometimes sixe: and if they buy any quantitie at once, an hundred pounds weight are worth nine or ten *Rials* of Plate: And here at the Court (where all things are dearest) a pound is worth twenty, or foure and twenty *Marauedis*. There is great store of Waxe and that very good, which wee buy heere in *Paquin* for the seruice of our Altar, a pound for a *Riall* and a *Quartill*: and the pounds here are greater then ours; for euery one of them weigh sixteene Duckets of Siluer weight. Honey likewise is very good cheape. Of Copper and Latten there is exceeding great abundance: and Latten made and wrought into any worke that a man would haue, with the fashion and all is worth a *Riall* and a *Quartill* the pound. Needles an hundred a *quarto*, and if they buy many together, better cheape. And I haue set downe for example these small things to know the particular price, and of other things (though they bee not so cheape) after the same proportion. Howbeit those which come from forraine Countries to trafficke with them, had need to be very heedfull: for the *Chinois* lose not opportunities to raise the price of them, when they may.

The abundance of things for food is likewise great, to wit, of Oxen, Weathers, Sheepe, Goats, and more then of all others of Hogs, because they are the common food that they liue of, Deere, Hares, which they catch with Hawkes, whereof here and in other parts there are many. And when they are dearest here, one of them is worth foure or sixe *Quartos*: they be as great as they bee in our Countrey, and they are found at all times. Hens, Geese, Duckes, and sundry sorts of wilde Fowles, and all other flesh is exceeding good cheape. Wee came to a very great Citie, where Beeffe, Mutton, Hennes, all was of one price a pound, which was foure *Marauedis*. And in *Nanquin* (though the Court be there) a pound of Hens flesh was sold for three halfpence, Fishes after the same manner, or better cheape, because it stands vpon the Riuer. And I saw a Fish of ten pound weight sold for a *Riall* of Plate, and we bought great Trouts at three *Marauedis* a pound weight. Egges ten, twelue, sixteene, eightene for one *Conduren*, which in our Countrey is a penie halfpennie farthing. Fruits are of the like cheapnesse. In our journey, which was when *Abricockes* beganne to bee ripe, which are here very good, they gaue vs two hundred for ten *Marauedis*. They are very much giuen to eate fresh Herbs and Salads, and Pulse. At euery banquet and good feast, there is alwaies Flesh or Fish. There are many Nuts, Chestnuts, Filberds, and Pine-nuts though but few, Figs, though not of our kinde, and yet as good or better, and many. And although they haue all these things, yet euery Province and Countrey doth not yeeld them all: but that which one wanteth another supplyeth.

Their common food in stead of Bread is Rice sodden only in water, whereof wee all did feed, although at the first wee had much adoe with it. Commonly they haue euery yeere two Harvests, and in some places three. And the Land hath great Plaines with Riuer to water the grounds: for the fields of Rice doe much desire to be couered with water.

From our entrance into *Canton* vnto this Citie of *Paquin*, wee met with few Hills, and especially from *Nanquin* hither very few. Wee passed by a Plaine about an hundred leagues, farther then wee could kenne. I saw likewise much Wheat, whereof they make rolls without leauen, sodden in the reeke or vapour of seething water, and so without crust, good for old folkes that want their teeth. Although that it bee true that the fruitfulnessse of this Countrey is very great, yet without doubt other things, saue Rice would not be sufficient, if the *Chinois* were as great feeders as our people, and did not feed so sparingly as they doe. They all eate commonly thrice a day; once, betimes in the morning; the second time, at two in the afternoone; the third time, very moderately at night. And besides, the rich *Mandarines*, few others which are of good abilitie, doe commonly eate either Flesh or Fish, but Pulse, Salads, and Herbs which cost almost nothing, and their chiefeest food is Rice, or Miller, and hereof they fill their bellies.

They haue many Horses, Mares, and Mules, whose flesh they eate, though I haue not heard report that the greater sort doe feed vpon them. They haue much Wine of diuers sorts; all

Siluer in greatest request in China.

ces.

made of Rice: but herein they may not compare with the Wine of our Countrey: Whatsoever they drinke, be it Wine or Water they drinke it alwaies hot. They are neate in feeding, for they touch none of their meate with their hands, therefore they vse neither Table Napkins, nor Table-clothes. All their meat is serued to the Table finely minced. They vse to feed with two small stickes of Iuorie, Ebonie Wood, or such like, wherewith they take vp all their meate verie handsomely. And herein, I confesse, they haue a great aduantage of vs; because this manner of feeding is very commodious, and such as euery man that hath triall thereof will much delight in it: and therefore our *Fathers* and *Brethren* in *Iapon* and *Macao* vse it. Their alwaies drinking their drinke hot, and eating little fruit (for they are not so greedie of it as our men are) doth keepe them from many infirmities and sicknesses, and therefore they liue healthfully. They haue no Oliues, yet haue they abundance of Oile. The best is of a kind of Herbe, which they call in *Spaine*, *Alegria*, which signifieth Ioy or Mirth. I say not that it is as good as ours, but I say, I find no fault in it, nor I doe not desire it, nor much lesse the *Chinois*, which can eate nor smell no kind of Oile, because the smell thereof pleaseth them not, as sometimes wee prooued by a little of ours which we had: and they call their stinking Oile odoriferous, so great a force there is in custome. As the *Chinois* are diuerse in diuers Prouinces, so are their Fruits: and those which grow in the Prouince of *Canton*, are not in all these colder Prouinces. There are the best sweete Oranges which hitherto we haue knowne, which are eaten with the skinne.

§. IIII.

Their Moneyes, Apparell, Persons, Trades, Wealth, Learning, Marriages, Superstitions, Rites, and Opinions.

Timber plenty

Much Gold to
be bought in
China.Brasse money
vled in *China*.

Here is in this Kingdome great store of Timber; for prooffe whereof wee need no more but to see the multitude of Barges laden therewith so good cheape as it is. And therefore I thinke a man may build a ship with all things necessary thereunto, three parts of foure better cheape then in our Countrey. They vse not Gold, though there be much to be bought, but all is Siluer, which they doe not coyne in Money, but cast it in Barres, and when they would buy any thing, they cut it and weigh it in certayne fine Weights like the *Romane* Weights in our Countrey: and therefore euery body that will buy or sell, carryeth one of thole Weights with them. Great store of Siluer commeth out of forreine Countreyes. But the chiefe Masse of it is out of the Mynes of the Kingdome it selfe, as also the Gold. When they buy or sell, they try the Siluer of how many *Kilates* it is: and one is worth more, another lesse, according to the goodnesse thereof. It was very necessary for the *Chinois* to weigh and try their Siluer, and not to coyne it into money: for otherwise there would haue beene a thousand deceipts, wherein the *Chinois* are very cunning. They vse Brasse Money, wherein also they try that which is true or false: for in all sorts there is deceit and mixture. They haue the best Porcelane that hitherto hath beene found, which is exceeding good cheape, and in such plentie, that besides all the Kingdome of *China* doth turnish it selfe thereof, they send forth as many ships loadings as they will.

For their Apparell, though they haue great abundance and cheapnesse, yet in goodnesse they may not compare with our Countrey. There is much Silke and that very good, but they know not how to dresse it. They make good Damaskes, razed Veluets, Taffataes, and other sorts: but the colours, though at the first sight they seeme reasonable, are quickly lost and fade away. The ordinary apparell of the common people is of blacke cloth made of Cotton, or of certayne shags of Silke, which are very great, farre greater then a floske, which only serue for this purpose, and are very warme. Persons of Honour weare commonly an outward Garment of Silke which they vse in Visitations, and other like Actions: And there are many which alwayes goe abroad apparelled in Silke, but not in such great number as that Booke setteth downe, whereof I made mention before. All men, euen to the very Souldiers, weare their apparell long downe to the in-step of the foot, with very broad sleeues, open before, and fastened to the sides beneath the arme. They be so well contented and pleased with their manner of apparell, that they think there is none in the World comparable to theirs. And in very truth they bee graue and modest, and especially those of the *Mandarins*, which differeth from all others, sauing the *Bonzi*, which shaueth their Beards and Heads. All the men and women let their Hayre grow long, and the men trusse it vp, and wind it on a knot on the top of their crowne. They weare certayne Nets on their heads like Coyfes, made very cunningly of Horse-hayre: and in the Summer time many weare Caps and Hats of the same. There are many sorts of Caps or Hats (for I know not what their seuerall names are) according to the state of euery one. The basest sort which the common people vse ordinarily is round. Their shooes, are of the same stufte that their Garments are of,

of, very commonly of Silke made with many faire borders and knots. It is a discourtesie for a man to be seene (especially before any man of Worship) without a Cap on his head. They greatly esteeme for the most part things of our Countrey, and they are very deare. And some pieces of Silke which the *Portugall* Merchants brings, especially Veluets of three Piles, are far more dearer then their owne. All woollen cloth is much esteemed and very deare, likewise Chamblots, and fine Linnen-cloth, which they bring from *India* are very deare. Looking-glasses, and all things made of Glasse, and many other things, which in our Countrey are very good cheape, are here deare, and in great estimation.

The *Chineses* haue commonly little Beards, small Eyes, and Noses, and all of them haue black Eyes, so that they much maruelled at the colour of mine, which are of Gray or Iron colour (which they neuer saw) and they find many secrets in them, and very commonly they say, that these eyes of mine know where stones and precious things are, with a thousand other Mysteries, so that they thinke they haue Letters in them. To paint an euil-fauoured man, they paint him in short apparell, with a great Beard, Eyes, and Nose. They are commonly all white, yet not so white as those of *Europe*: and therefore to them we seeme very white. The Learned men are very graue, of very good capacitie, and appeare outwardly very modest and graue.

There are Artificers of all Arts that are in our Countrey, and very many with the selfe-same manner forme of Instruments. Euery man is free to follow what Trade he will, without being bound to follow his Fathers Trades, as diuers times I haue heard it spoken when I was in *Europe*: and those which will may study, forsake, or change that course of life. They worke very good cheape: but in cunning and excellencie ours most commonly excell them much, though in some things they be very skilfull.

The seruice of young men and maydes is easie and good cheape, because there is great store of people, so that a yeares wages is not about two Duckets, and meate and drinke, without apparell. As there are many poore people that haue many Sonnes and Daughters, it is a very ordinary thing to sell them, and this the cheapest thing in *China*. For a youth of twelue or fifteene yeares without any naturall blemish will cost not past twelue or fifteene Rials of Plate, and in time of Dearth much lesse, and it is a common thing to buy them for seruice; though they vse them well, and marry them at their time.

Although the abundance and riches of this Kingdome be very great, as the people also is: yet there is no body that is very rich, neyther in any state of people may they compare in this point with our Countrey. You shall not find in *China*, which is able to spend twenty thousand Duckets of Rent, how neere of Kinne soeuer he be to the King, and very few, and those easie to be numbred that can spend ten thousand Duckets, and the ordinary is no more which they possesse then that which their Lands and Offices yeeld them, which is not great. But though it bee true that those of our Countrey possesse much more Siluer, considering the cheapnesse of things in their Countrey, all commeth to one account.

There are very few of the poore people idle, because all of them commonly take paines, and earne their liuing. Though the multitude of the Nation be so many, and the Kingdome so great, yet the surnames of all the Kingdome are not about three hundred, and all of one syllable.

There are some, though very few, which may be called Knights, which for seruice to the Kings in some necessities haue giuen them Offices in succession: but the common vse is not to haue any Nobilitie by Descent in *China*; neyther can any man say, I am of a better House then you. But the honour and Nobilitie dependeth wholly vpon Learning, and to obtayne degrees and Offices of *Mandarins*. And therefore an House which now is in Office, and his Father bee one, if he haue a Sonne a Doctor, which is made a *Mandarin*, he is honourable, and the honour continueth as long as the Learned men and *Mandarins* doe liue. There is no man, neyther Kinsman nor not Kinsman of the King which hath euer a Village of his owne that payeth him Tribute: but all men pay it to the King; and hee giueth stipends and wages to the *Mandarins*, so that they receiue nothing of particular men by right, though they extort much continually by oppression.

Commonly the *Chinois* doe marry from fifteene to eightene and twentie yeares, and all of them doe marrie one Wife that is chiefe; and this is their lawfull Marriage. On the day of their Marriage, when the Bride doth passe to the House of her Husband, shee carrieth openly before her through the streets all the things which she bringeth with her, and all her house-hold stufes. But besides her they may marrie (I say they may keepe and doe keepe as many as they are able) as many Wiues as they will, which for the most part they buy: and afterward when they will, sell them away againe. They may not only not marrie with any Kinswomen of their Wiues, but with none of that surname, though they haue no shew of Alliance. The sonnes of the Concubines doe likewise inherit, and there is little or no difference in their state and honour, to be the Sonne of the lawfull Wife or of the other, neyther make they any question of it.

The thing wherein the *Chinois* are most obseruant, Ceremonious and Superstitious, is in their Burials, Funerals, and Mournings: for herein they shew their obedience and loue to their Parents, whereof their bookes are full. It is a very ordinary thing to haue great respect to their Father

ther and Mother, and the disobedient are grievously punished. Many graue men and *Mandarins* begge leaue of the King to leaue their Offices which they haue, and to goe home to keepe their Father and Mother company, yeelding for a reason that they be old, and that they would goe to serue them. And it is a Petition in the sight of all men so iust, that they grant it very vsually. When the Father or the Mother dieth, all the Sonnes and Daughters (from the King to the meanest Peasant) doe mourne for three yeares. The mourning colour, which among vs is blacke Bayes, among them is white Linnen, whereof they make all their apparell euen to the Cap. The first monethes they weare a very rough Sack-cloth, girded with a Coard, like the bare-footed Friers. And though he be neuer so great a *Mandarin*, without any exception (saue only the *Mandarins* of the Warre) as soone as hee heareth newes of the death of any of his Parents, he is to leaue his Office and Dignitie, and all other Employment whatsoever of Gouernment and Examinations of obtayning his degree, and is to goe home for three yeares to burie his Father or Mother (and to mourne and bewaile them. The graue men which haue an house for this purpose, doe not straitway burie their dead, but keepe them two or three yeares in the house, in a Chamber which they keepe for this Office, and it is not the worst in the house: and very vsually or euery day they go thither to make them a thousand Ceremonies and Reuerences, and to burne Incense, and other sweet saouours, and to set ouer the place where they be laid, meate to eate; and at severall times, many of those *Bonzi* doe meet, and with great Ceremonies begin their Service and Prayers, and their Sonnes, Kinsfolkes and Wiues make lamentation. The *Mandarins* do not only leaue their Offices, and change their Weeds, but also all the things which they did vse. Many sit not in Chaires, but vpon low Stooles: they visit, or suffer themselves to be seene very seldome: they change euen the very Paper wherein they write, wherein they haue a piece of another colour, in token of mourning: when they name themselves in their Letters, they vse not the name which they did at other times, but others proper to the partie, as when he nameth himselfe, hee calleth himselfe *disobedient*, signifying, that by his disobedience to his Parents he did not preferue them aliue.

They vse no kind of Musike, and many change their ordinarie Diet into courser food. Vpon the Funerall day they prouide great company: many Kinsfolkes and Friends meete together, all clad in white, with many *Bonzi*, (according to euery mans abilitie) which sing with dolefull Instruments. And by their apparell which they weare, and their time in singing, hee that knew them not, would take them for Clerkes reuested, singing plaine Song; for they much resemble them. They make many Beeres with men of Paper or of white Silke, many Banners and other Ensignes. The place whither the Corps goeth is adorned with many figures: the Corps is put into a very great Coffin. This Nation holdeth a great part of their felicitie, for them and their Successours to consist in these things of their Funerals, especially in two, the Coffin or Chist wherein the Corps is to be layed, and the place of their buriall. The stuffe to make the Coffin of, wherein themselves are to bee buried, and the making of the Coffin, they leaue not to others to doe after their deathes, neither then may the body looke for much cost to make one of these Coffins, neither in this (as a thing of great importance) will they trust, no not their owne Sons: but they themselves at leisure seeke some kind of Wood that is least corruptible, and Plankes which are commonly foure, fixe, or eight fingers thicke: which because they bee so thicke, and the Chists or Coffins very closely shut they can keepe their Corps in their Houses without any euill smell. Some spend in making their Coffin seuentie, eighty, and an hundred Duckets. They hold it for a felicity to be able to get one of these that is good; on the contrary for a great disgrace, not to haue a Coffin to burie himselfe in, and they are very few which faile in that one point.

The Sepulchre and place thereof is the thing for choosing whereof they vse great Sorcerie or casting of Lots, and doe it with great heedfulness, and with the helpe of some that are skilfull in this Art. For they hold opinion, that in making a good choice of the place dependeth a great part of their owne good fortune and of their Posteritie. And oftentimes they are a yeare in resolving whether it shall looke toward the North, or to any other part. And therefore, the greatest and most contentious Sutes which are in *China*, are about places of Burials. These places of Burials are alwayes without the wals in the fields, or Mountaynes wherein they build Vaults very well made and strong of Bricke, stone, or other matter, wherein they lay the Coffin, and then close it vp very surely: And afterward now and then they come thither to performe certain Ceremonies, & to bring things to eat. They hold it very vnluckie to burie a dead man in the Citie: and if they know it, though he were the greatest man that is in *China*, they will not suffer him to bewaile his dead Friends much, especially those which are women. There are many which beleue the passing of the soules from one bodie into another: and therefore after the death of their Father and Mother, they will neuer kill any liuing beast, yeelding for a reason why they will not doe so, lest some of them should bee their Mother or Father, or some other person. And likewise many of them fast, because, that whereas some of them bee poore; they desire afterward to be borne againe in a rich and honourable Family.

Although it bee true that the most part of them beleue not in Idols, and it offendeth them

not to speake euill of them, yet commonly all of them at a certaine time of the yeare doe them some reuerence, because it is the custome, though in no sort they worship them as Gods: and those which put most confidence in them, burne Paper, Incense, and sweet smells vnto them, and kill beasts before them. Their Bookes of these Idols speake of Hell, and in many places, or in a manner in all the Cities there is set vp a portraiture of Hell made with bodily shapcs, and many Devils, as vglie as wee paint them. It is very well set forth, but badly beleeued: for it serueth only there for a bugbeare. And if any belecue that which the Idols say of Hell, that it is a place of torments, they say, that after so many yeeres be passed, all men come out againe, and are transformed into some beast. Those which beleue in the Idols, come before them to cast lots to know what things shall come to passe: howbeit I haue not heard in all *China*, that there was any answer of a Diuell in an Idoll, as is in other parts, in regard of the small beliefe that they haue in them, and the lewdnesse of the *Bonzi* that serue them. Their houses wherein they set them, whereof as yet I neuer saw any good one, are commonly verie filthy and stinking.

Idolatrie.

Of Hell.

See in *Pinto*.

Lots.

Wicked *Bonzi*.

And besides this consulting of Idols, the *Chinois* are much giuen to Diuinations to know things to come, and whether they shall haue good or bad fortune; whether they shall haue that which they desire or no: and there bee an infinite number of these South-sayers, and all of them prattlers, mumblers, and cooseners, whereby they deceiue many. And though the *Chinois* be of good vnderstanding, and know that these fellowes know nothing, and euery foot doe take them in lyes: yet for all this, there are verie few that when any occasion is offered, doe not consult with them. And though they seeme to bee but few, yet some of them are in league with the Deuill, as oftentimes wee gather by certaine things.

Diuiners and diuinations.

Many of these graue men of *China*, haue commonly two follies, wherein they doe erre more then in other things. The first is, that they perswade themselves that they can much prolong their *Liues*; and for this purpose they vse a thousand inuentions, and take many medicines, which indeed rather doe shorten their dayes. There are many Masters and Bookes of this follie, which vsuallie are graue and rich men. There are many that make themselves very old folks, whom the people follow like Saints to learne some rule of life of them, wherein they put all their felicitie. Many doe not beleue that we are so old, as we say we be, and that we doe dissemble: but that indeed we bee an hundred yeeres old, and that we know this rule to liue for euer, and that we doe not Marrie because wee would liue long. The other follie is, that they perswade themselves that they are able, and goe about to make Siluer, whereof likewise there are many Bookes. They vse for this purpose many Hearbs, and Quick-siluer, wherein they spend that little Siluer which they haue, and remaine beggers, but not perswaded but that it is fecible, but that it was not their good lucke, and good fortune: and to obtaine this, many of them fast many yeeres.

Studies to prolong life.

Bookes of Alchimie.

§. V.

Their bad Souldierie and Artillerie; Degrees, Priuiledges, Honours and promotions of Learning. Their Authors and Bookes, and Printing.
The Mandarins commended.

Here are many Souldiers in many Prouinces of this Kingdome: and though they haue had Peace these many yeeres, yet they still entertaine them: but because they bee louers of peace and quietnesse, the most contemptible state, except the state of the *Bonzi*, is the Souldier. And indeed it is a most base people, which hath no valour nor worthinesse, much lesse any fortitude in them. Many of them are Porters, which beare on their shoulders, the Chaires wherein the *Mandarins* and honourable persons are carried. And at the time of Musters, which are made from time to time, they repaire thither, to obtaine wages, and thus they haue no worth, nor jot of honour in them. The punishment wherewith their Captaines punish them, is the same wherewith they punish all other people: they whip them as wee doe Children in Schooles. According to the worthinesse and valour of the Souldiers, the beautie of their Armour, offensiue and defensiue is answerable, which is fitter to bee laughed at, then to be reported. They haue no Harquebusses that are worth any thing: and all those which I saw (and I saw many Souldiers with them) had their barrells but a spanne long: so that it seemeth that they beare it and the rest of their Armour for fashions sake. And I maruell not: for by reason of the exceeding great Peace which they haue so long enjoyed, they haue none occasion to become valiant: but they are able men when occasion serueth, and it seemeth they will easilie become valiant.

Souldiers many and few.

Basenesse, Armour and Armes. The barrells of their Pieces but a span long.

The causes of bad Souldiers, disrespect, disuse, and their choise from the tongue.

The *Mandarins* of Souldiers, is also a thing of small estimation, and they are nothing comparable with those which they call the *Mandarins* of Learning, which are those, which take Degrees. The *Mandarins* or Captaines of Souldiers, obtaine not the same for Heroicall arts or prowesse, but they make a Discourse or an Oration, vpon some matter concerning warre, and they

make

- Exercises Militarie. No Ordnance make choise of certaine of those which had done it best. Likewise they shoote two or three Arrowes, to see if they bee skilfull in shooting. They haue no vse of great Ordnance. Albeit I saw in the Gates of some Cities, certaine small short Pieces, as broad at the mouth as at the nether end, which I know not whether they shot off sometimes or no: I saw about fixe or eight of them vpon the Walls. The defence of their Walls is their height, without any other Artillerie. The greatest force and number of Souldiers, resideth in the confines of the *Tartars*.
- Tartarian conquest. It is foure hundred yeeres since a King of the *Tartars* wonne all *China*, (whereof *Paulus Venetus* writeth, which was in that Countrey) and they did also possesse it two hundred yeeres: at the end whereof, a *Bonzo* a very prudent and valiant man rebelled, and cast the *Tartar* out, and remayned King, whose issue continueth vntill this day. They alwayes keepe great Watch and ward vpon this frontier. Many youtnes of these *Tartars* remayned in *China*, and namely in these parts of *Paquin*, there are many which keepe and maintayne their Law of *Mahomet*, and haue *Mezquitas* or *Turkish* Temples, and are much different in shapes and countenances from the *Chinois*. Except the Souldiers, there is none that keepe Weapons in their houses: not because it is forbidden, but because there is no need of them: but rather the Learned and graue people, count it a dishonest thing to keepe Armour: there is no vse of them but in the time of warre. For you shall neuer see them fight with weapons one with another as wee doe. But their fighting is to buffet one another, to pull them by the hayre of the head, and to draw them by the collar, and in two words to become friends againe. Our men make no great matter of giuing buffets and such like, for they kill one another.
- Feare of Tartars. The *Chinois* are greatly giuen to Learning and studie; for all their honour and riches dependeth thereupon. They haue about fortie thousand sundry Letters: though many of them bee made one of another. They haue no A, B, C, nor any thing like thereunto, as among vs. But to signifie euerie thing they haue one Letter, and all diuerse. Their words are of one syllable, and no more, though their Letters bee so many. Those which are commonly vsed every day, are eight or ten thousand. They begin to learne to write and reade commonly, when they be seuen yeeres old: they write with Pensils. They haue many little Bookes which encourage Children to studie, exhorting them to take paines, with the reward that they shall grow to bee *Mandarines*. They know not, nor studie any Science, neither Mathematickes, nor Philosophie, nor any such thing, but onely Rhetoricke: for all the substance of their knowledge and fame of Learned men, consisteth in nothing else, but to know how to make a very elegant Discourse and Oration vpon a theame, like as in our *Europe* the Oratours vsed anciently. And as the *Chinois* haue good wits, and by hope of reward are verie appliable hereunto, they doe it with great excellencie, and occupie themselves with nothing else, and haue no other knowledge to distract them from it.
- Mahometans. No weapons in houses. Not bloudie. Studios. Many Characters. Monosyllable language. Pensil-writing. Rhetorike sole Art. Here followed of their Degrees which is more exact in *Trigantius*, and therefore here omitted. Glory of Doctors. Every Doctor (after hee hath obtained his degree) setteth vp in his Countrey before the doores of his House a Title of verie great letters, which saith: *This is the House of a Doctor*: which all men haue in regard. And before the doore, they set vp many high Poles like masts, which euerie *Mandarin* of that Citie where hee dwelleth sendeth him, with a Banner hanged vp, and alwaies they remaine there. They make a verie excellent Arch triumphall, to him that hath the first degree, at the gate of his House. The *Chinois* esteeme more then we doe, the skill to bee able to write well, and Print euerie yeere a great number of Bookes, whereof there is no examination nor choise, and euerie man Printeth what hee list, good or bad, and so they make a booke of nothing. The best which come forth are of no Science: for as I haue said, they know none: but they are onely of Morall sentences, to the aduancement of good Customes and Government. Their manner of Printing is not like ours: for they joyne not their Letters, but for euerie leafe they make a table which hath letters on both sides, it would seeme to bee very hard, but with the custome which they haue gotten, they doe it with great ease, speed and cheapnesse. I will send you some Booke well printed, that your Worship may see it. They also print Letters in white, I say white letters, and the ground blacke. And though in the former they come not neare vs, yet in this they goe far beyond vs. They vsually print these letters in Stones, and the letters stand not in the Stone vpward to touch the Paper directly, but in the paper and the stone they stand all one way: and this is the order whereby they doe this: They wet the Paper, and laying it vpon the toppe of the Stone, they gently beate it with some verie gentle thing, wherby the Paper which lyeth vpon the Stone sinketh into the hollownesse of the Letter, and resteth lower then the other, then with a kind of Inke which they haue for this purpose, they finely lay it ouer, whereby the Letters remaine white, because they bee deeper, and the rest remaineth blacke. I send you with this Letter certaine papers thereof, that your Worship may reioyce in beholding the excellencie wherewith it is done. One of our Bookes of equall volume with one of theirs, containeth much more: for our letter is lesser then theirs. Though in *China* it be harder to learne to reade and write, then in our Country, yet there be few but know ordinarie Letters to deale betweene man and man.
- They Print yeerely great store of bookes in *China*. Easie Printing. Printing white. Most can write and reade. Poetrie. Likewise they make great account of Poetrie, and also the grauer sort giue themselves much vnto it. It is verie ordinarie with them to send vs some Poesie in praise of vs, when wee enter into

into friendship with any. Also they make much account of Paintings, and playing vpon Instru- Painting and
ments. And albeit they know but little in the first, because they haue no Art, nor paint the Musicke.
things with shadowes, and know not how to paint in Oile : yet in the second they are verie
readie on their Instruments, and play grauely and leasurely. I heard certaine sorts of Musicke, e-
specially in the Palace of the King : to welcome me, the Eunuches his Musicians played vnto
me awhile, and they pleased me : although in this, little it seemeth vnto me they may compare
with our Countrey, yet it is certaine, that they thinke they doe farre excell vs. They haue not
about one kinde of Instrument, which the grauer sort vse and make much account of, which is
like vnto our Harpe, although the fashion and manner of playing vpon it, differeth from ours, and
from all our other Instruments.

As in *China* there is no sort of people more honourable then the Learned men, and Doctors : Noble Spirit
so there is no people of better condition, and of more Honourable and more Noble manner of of the Manda-
proceeding. And albeit before they were Doctors and *Mandarins*, they were verie poore and rini.
base people, and many of their Fathers officers of vile Offices, (as it is verie ordinarie) neuerthe-
lesse, after they haue obtayned the Degrees, they put vpon themselues a more honourable spirit.
And therefore albeit in *China*, wee indured much trouble at the base peoples hand, yet the *Man-
darins* did alwaies vse vs honourably and with much respect : especially now, for which cause
now no man dare trouble vs. And if there bee any, which in title are like our Lords, Knights, and
Courtiers, they are these. There are among them, men of much excellencie and sinceritie in their
Office, which doe seeke the common good : And without doubt they make vs wonder, that see- Sinceritie of
ing they bee but *Gentiles*, which doe nothing for the zeale of Gods honour, nor for his sake, they some.
be of such sinceritie, which they shewed of late more then at other times, in hauing to doe with
this wicked, vicious, and couetous King, which they now haue : who though hee be so absolute
a Lord, that with the same libertie, and in a manner with the same facilitie, hee doth what he
list with the greatest *Mandarins* of his Kingdome, as well as with the basest people thereof.
Yet for all this, of late yeeres there were many, who with great libertie and courage reprehend-
ed his faults by writing (which is the manner of speaking most publikely with him) that all
men might read it. And though they might feare some grieuous punishment (besides the losing of
their Offices, for that was certayn) neuerthelesse, there were many men of courage which wrote
vnto him : among whom there was one very renowned : The letter which he wrote to the King,
began thus. *That although hee were assured, that he were to be hanged, and that the Fire were kindled
to burne him, yet hee would reprehend his vices and lewdnesses, and the euill example that hee gaue to all
his Kingdome :* And so hee did, and spake verie freely, and put him in great feare. And it see-
meth that for his sinceritie and courage, the King had some regard of him, and though hee puni-
shed him, yet it was verie moderatly.

There fell out another accident in this kinde within these few yeeres, which because it is no- Kings Wiues
table I will heere set it downe. This King hath many women besides his lawfull wife, which and Children.
among themselues keepe the order of first and second. Hee hath no Sonnes by his lawfull Wife,
but he hath one which is the eldest of the third or fourth, and others youger of the second. The
Eldest by the custome or lawes of the Kingdome, is the lawfull inheritor, although he bee of
the fourth wife : but hee bare more affection to the other and to her Sonne, and desired, by her
perswasion, to aduance him to bee Prince, and would not haue aduanced the lawfull Heire. The
time being passed to performe the same, many *Mandarins* lost their Offices, for reprehending
him of this disorder, and for seeking to make him aduance the Eldest. But the principall *Man-
darins* of the Court perceiuing that hee proceeded on, and would not doe that which they re-
quested, and which was reason, consulted together, and published a Proclamation, which com-
manded all the *Mandarins* which are in the Court (which are about some thousands) that vn-
der paine of losing their Office, they should all meete at such a day, and such an houre, in such a
place of the Kings Palaces. When they were all assembled at the day appointed, with their
Ensignes of *Mandarins*, they put vp a Petition vnto the King, saying, *That since so often they
had aduised him of a thing so Iust, and that hee made none account of them, not seeking to aduance
the true Prince, that hee should seeke those that would serue him, that all of them would there giue
ouer their Ensignes of Mandarins, and would no longer serue.* It seemeth the King was afraid of so
great a resolution of the chiefe men of his Kingdome : And so hee commanded an Eunuch to
goe forth vnto them, and answer them, that they should resume their Offices in Gods name,
and that hee would fulfill their request. Finally, they did effect so much, that they caused him to
doe that which was reason ; and so this yeere 1602. hee aduanced the true Prince, of whom
hereafter I will speake somewhat.

p. VI.

Of the Government of China : Of the Mandarins ; the China Complements and manifold nicities.

OW I haue touched the state of the *Mandarins*, it offereth it selfe to speake of the manner of Government in particular ; But I confesse vnto your Worship, that the multitude of Offices which they haue is so great a frame, that I was not able to vnderstand it, to reduce it into order. Onely I will say in generall, that they haue many

Gouernment
good if well
executed.
Lawes lawlesse

good things belonging vnto Government, but not the execution : finally, it is a Government of *Gentiles*, with a thousand faults. There are no great store of Lawes, but commonly they decide Controuersies of their owne heads, and make Lawes in their Iurisdiction after their pleasure, euery one diuerse. And heere your Worship may imagine, that the Government in the practise cannot bee very iust, since euery one that can tell how to make a good theame or exercise, are not sufficient to bee Law-makers : And it is very ordinarie among them to direct all things to their owne profit, whereby of necessitie, they commit many absurdities and wrongs, and take all that they can get: Bribes are vsuall, and men vse these more then any thing else : And though one of them know this fault in another, they all dissemble as being in the same fault, that others may winke at them. And though they seeke to hide it one from another, yet it is like the secret of *Anchuelus*.

Bribes.

Dance in a
Net naked,

The *Mandarins* are many in all Cities, but very extraordinarie in the Courts of *Nanquin*, and *Paquin*. For in this Citie of *Paquin*, besides the *Mandarins* of Armes, whereof no great account is made, and are more in number then the rest ; and besides those which alwayes repaire thither,

Court *Manda-*
mins.

vpon the busineses of all the Prouinces : Those that properly belong to this Citie and Court, are about two thousand and five hundred : who all, or the most part heare Causes ordinarily twice a day ; so that wee cannot imagine what busineses occupie so many *Mandarins*, nor what is the Iurisdiction of euerie one. The most principall which are in all the Kingdome and heere, are sixe, Presidents of sixe Councels, being the chiefe of the Kingdome. There is one, which is the greatest, to whom belongeth the government of all the *Mandarins* of the Kingdome, to aduance

Chiefe *Man-*
darin, or of
Heauen.

them to higher Offices that doe deserue it, and as much as they deserue, to chastise and to degrade those which badly performe their Office : which because it is a place so great and honourable, the *Chinois* call him, *The Mandarin of Heauen* : who proposeth all these things to the King, as to promote, to aduance, to disgrade the *Mandarins*, and the King confirmeth them : So that all the *Mandarins* how small soeuer they bee, that are in all the Kingdome, are appointed by the King. The second hath the charge of all things belonging vnto Ceremonies, as well humane of Courties, and ceremonies in all royall Acts, as in making the King, the Prince, and in marrying of them, &c. And all that which belongeth to the worship of the Sacrifices of the Dead, and others which the Kings offer to Heauen and Earth. There is another chiefe of the Councell of Warre : another of the Kings Treasure, which taketh the account of the Kings

The third, &c.

rents : another Councell is of the Workes, as of the Kings houses, prouision for all things necessarie, for the Walls of the Cities, &c. There is another of Chastisement, whereunto causes criminall and sentences of Death doe belong. About these (sixe) there is onely one Degree, which are absolutely the greatest, before whom whatsoeuer the King doth in any thing is consulted of. Although it bee true, that these be rich and opulent in the conceit of the *Chinois*, yet none of them in any thing may compare with any of the meanest Lord of title, of our Countrey. The wages which they haue of the King is small : the attendance which they haue, is of base people, and of small countenance, yet they are much respected and obeyed : And the common people kneeleth vnto them, as to the *Mandarins*. The common chastisement which all the *Mandarins* doe giue, is to whip them with peeces of Canes, of foure or sixe fingers broad and thicke, where-

Colai.

Their wealth
and wages
meane.

with oftentimes they dye, when it is layd on soundly. Whipping is as common as it is to whip Children in the Schoole : And sometimes for nothing they giue a dozen stripes, as well to the Plaintiffe as to the Defendant, and therewith they end the Suites, and they stay to giue none other sentence, but say : *Giue him twentie stripes*.

Whipping.

State and
pompe.

Vsuallly when the *Mandarins* of any State goe through the streets, men goe before them crying, or making a noise with Instruments, for the people to giue place. And in particular Cities, when a great *Mandarin* passeth through the streets, all men hide themselves and goe into houses, and the Handicrafts-men cease from their worke, and that in such sort, that I saw once in a Citie in a street of great trafficke, a *Mandarin* appeare, and in a moment euery bodie got away, euen the very Dogges, with exceeding great silence : so greatly they bee reuerenced of all men. And many carrie Chaires trayling them before them, and other Instruments. But in the Courts (though the *Mandarins* bee greater) the people runne not away, they doe no more but giue way that thy may passe. In the Courts many *Mandarins*, though they be great, ride on Horsebacke, and others in Chaires : but besides them, all goe in Chaires carried on mens shoulders, which according to their Offices are two, or foure, or eight.

Euery

Every Prouince hath a Visitor, which publickly visiteth the same every yeere, and taketh information of the *Mandarines*. There are secret and priuie Visitors. Sometime one is sent: But it is no vsuall thing, and as I haue heard, it is long since it was left off. I speake this, because I alwaies heard when I was in *Spaine*, that the *Chinois* vsed this manner of Visitation.

The Visitor onely may giue sentence of death. They be not cruell in punishments by death. Onely the King vseth some cruell execution: and namely this King that now reigneth, which is a very wicked man. One of them is that which lately hee caused here to be executed vpon eight men, by the great frosts of Winter, for no great offence for so cruell a punishment, and as they say, falsly imputed; And this it was: Hee caused their neckes to be put through a thicke planke, which taketh a great part of the head, and they set the planks to stand vpon Formes, so that the man standeth vpon his feet day and night in the midst of the street, with men to watch him. Hee condemned them to this punishment for three moneths: but they died before fiftene dayes, with their legs all rotted, and burst with standing alwaies on foot: I my selfe saw them stand on this fashion, which pitied me extremely. I neuer saw nor heard of any other cruell punishments; though, as I haue said, often times the *Mandarines* kill them with whipping, which is a very cruell thing.

The *Chinois* are very curious in writing of newes, which vsually they set out in Print, and in a very short space disperse them through all the Prouinces. There are alwaies Bookes wherein all the *Mandarines* of the Kingdome are written, as well their names as their Countries: And because they be changed euery foot from one place to another, they blot out and put in the names as soone as they know them, with great facilitie.

One thing among the rest is (wherein they be very dutifull and prolix) in their manifold courtesies, which are of many sorts, according to the estate of him with whom they haue to doe. The vsuall fashion is when they visite one another, the stranger is set on the most honourable hand (which in some places is the right hand, and in the *Northerne Prouinces* the left) and putting one hand in the sleue of the contrarie arme, which is very long and wide, they lift vp their hands so fastned together, then bending their (head and) body downe to the ground, saying, *Zin zin*, which is of no signification but an interiection of urbanitie, their bowing veneration they call, *Zo ye*: they change places to repay courtesies. After this the Guest sitteth downe in the Chaire of the Master of the house, and the Master of the house another besides that which the Guest hath, and each of them setteth them in their due place, which is the strangers Chaire in the highest place, distant from the wall, and the Chaire of the Master of the house is set in the midst of the lowest place, one ouer against another. After this (when they haue ended their salutations) they straightway cause a drinke to be brought, which they call *Cha*, which is water boyled with a certaine herbe, which they much esteeme, for this is a want of ciuilitie and courtesie: and at the least they must drinke of it twice or thrice. He bringeth forth some Fruit or Sweet-meat, and a Spooone to take it vp. If the Guest stay any time, straight without faile they will bring out some thing to eate, but with some preparation, answerable to the occasion and person: whereon they eate very little, vnlesse it be at the ordinary houres of feeding, and then they eate somewhat more.

When they visite one another (vnlesse they be very great friends and familiars) a Boy goeth alway before, which carrieth a Libell or Booke of visitation, which they call *Paytre*, which is as much as, *A Paper of visitation*: And this name neuer faileth, for alwaies they vse it: wherein his name with modest epithets (as many perhaps as *Visitors*) are written, according as the quality is of them that visite, and those that are visited; so is the manner most different whereafter they write the same: to wit, with more humility, either as our better, or as an equall, or as an inferior, as a scholer, or as a master: for as the relations are many and particular, so the fashions and manners which they vse are diuers. Of these things, and of all that hereafter I shall say touching this point, I will send you the examples in their owne papers of visitations, which great *Mandarins*, and ordinary men brought vnto vs, setting down in our tongue vpon euery letter the declaration thereof. And I doubt not but your Worship, our most deare Fathers, and Brethren, and as many others as shall see the same will reioyce thereat. And when that Paper is brought, they carrie newes into the house to him that is visited, which prepareth himselfe to receiue his Guest, which cometh within a while after. When they be not people which they see euery day, they vse not ordinary apparell in their visitations, but they haue garments proper for this purpose, of a farre different fashion. And if by chance one come so apparelled, and another be not, he sayth, that he durst not salute him, nor receiue him before he had put on his apparell, so he getteth him away in great haste to put on his apparell, and then they begin to performe their complements.

When the Guest departeth, hee alwaies goeth before, and at their going out of the doores they vse salutations, and offers of courtesie; according to the qualitie of the Guest, and the Master of the house, so he bringeth him more or lesse way, or vnto the street: or if he goe so farre, he stayeth till he take his Chaire, or his Horse, and then lifting vp their armes and sleues vnto their heads they take their leaues and depart one from the other. When they are departed, the Visitor and hee that is visited, each of them send a Boy to giue one another thanks, one for his visitation, the other for his good entertainment and friendly vsage. If hee that is visited be not

at home, they leaue the *Paytre* at his house, which is a token that hee came to visite him. Hee that is visited is bound to requite his visitation presently, or the next day, if he bee a man of Worship, or if they bee equals, within three or foure dayes: which payment is performed after the selfe same manner: and if hee finde him not at home, it sufficeth to leaue the *Paytre* there. If hee that requiteth the visitation bee a farre greater person then the first which visited him, (as if he be some great *Mandarin*) hee which first visited him, returneth the next day in person with a paper, wherein hee giueth him thanks that he came to his house: and if they see one another, he giueth him thanks by word of mouth. When the man which visiteth is of great Worship hee sendeth word a good space before with a *Paytre*: and the Master of the house commeth forth to receiue him, and to bring him into the house. All their Houses and Lodgings, haue alwayes an head and more honourable place (which is the highest part) where alwayes they place the Guest. Likewise in their writing they vse a great difference, according to the estates, Dignitie and Age: and in their Letter, the greater the *Mandarin* is, they vse the greater Letter: those that are equall, or inferiour vse a very small letter: likewise they obserue the same order in speaking to euery one according to his qualitie. When they meet in the streets, the ordinary courtesie, is, to put their hands into their sleeues, & closing them together to hold them vp, & to vse a common speech, which they haue for this purpose. When a couple enter into new acquaintance, they doe yet more, and that is, they kneele downe, and touch the ground with their head so often, and with so great ceremonies, that I dare not speake of them, lest I should neuer make an end.

When they send Presents, they write downe all things which they send in a paper, as they doe their speeches, with words of Honour: whereof I send likewise examples to see, of very graue persons which sent vs Presents. And whether the partie receiue the Present or not, or only a part, he alwayes sendeth backe another paper with certaine red lines (as herewith is to be scene) with a Letter which sayth: *I thanke you much*: And when he receiueth the Present, hee alwayes giueth some money to the youths that bring it: and hereby he remayneth bound to answer him, with another Present as great at the least: And herein they be very precise, especially persons that are not of the greatest account. A thing which I finde very strange, and which doth put vs to much trouble, to be driuen equally to answer those Presents which the greater *Mandarins* doe send vs, for they alwayes desire some thing of our Countrey, and here we are very poore.

They send vs somtimes from *Macao* some Clockes of sand, or Houre-glasses, some Knives, some cases of tooles for Surgeons, and other things: for they much esteeme all things that come from our parts: and with these things, which in our Countries are little or nothing worth, heere wee procure friends, which stand vs in exceeding great stead to conferre with them of our holy Faith, and of the saluation of our Soules.

Besides their Presents and visitations, they haue Gossippings and Banquets, whereunto very vsually they inuite one another. When these be very solempne, they set euery Guest two tables for him selfe, one of Flesh and Fish, &c. another of Fruits and sweet Meats. When they be not so solempne, one table for euery man, or two at euery Table: they provide for these Guests great diuersitie of meates well dressed and seasoned, which they bring soft and fayre one after another, that they may be hot. When they inuite one to a Banquet, they send sixe or seuen dayes before a paper, wherein they inuite him against such a day. If hee cannot come, he sendeth another paper, wherein he saith, *I excuse my selfe*: If he excuse not him selfe, he is resolu'd to come. This paper is sent with many words of courtesie, & with much honour. On the day appointed in the morning, hee sendeth another to inuite him againe for the selfe same day: and at the appointed house, hee sendeth another to pray him to come: and then hee goeth: If any of these messages should fayle hee would not goe. When he is gone to the Banquet, they vse many other ceremonies: But the most adoe is, about their places, so that it is long before you can place them, and allot out the roomes how they shall sit, because they euer seeke, or at least make shew that they seeke to giue the chiefeest roome to others. They feed not as men vse to doe in our Countrey: neither seemeth it that the Feast is made to feed, but onely they taste of some small thing for fashion sake; and they drinke very sippingly in small Cups of Porcelane, each of which will containe sixe or fixe Thimbels-full of Wine; and heerein and in deuising, they spend sixe or sixe houres at a Banquet, and goe home an hungred. And thus it happeneth vnto vs; although wee seeke to excuse our selues from them as much as we can, because wee lose much time, vnlesse it bee some great *Mandarin*, who we feare would take it euill, if wee should deny his request. When the Banquet is ended, the next day euery one of the Guests sends his Boy with a paper, wherein hee thanketh his Host for his good cheare.

Heere your Worship may see, wherein the *Chinois* spend the one halfe of their life. For the greatest businesse they haue, and that wasteth most of their time, is in Visitations, Banquets, and sending of Presents. And the time wherein they most of all vse the same, is their New-yeere, which lasteth fifteene dayes: their Birth day, which all of them keepe with great solempnitie: or when they goe forth, or come home on a Iourney. And to end the whole yeere, I send you some Papers of visitation of all these things (whereof they haue sent many vnto vs) that your Worship may see (though you vnderstand not the outward Letter) the manner and fashion of this

this people, how farre different Salutations, manners and fashions, we send you from the plainnesse of our *Europe*, and especially of our *Companie*. But for the present, wee all thinke it necessarie to eate after this fashion, and to vse their customes, to obtayne more free access vnto them, and to winne them to *Christ*.

There is a *Turke* heere, a dweller in this Citie, which aboute fortie yeeres agoe, brought one or two Lions to the Father of this King: who, partly because hee knoweth no Learning nor Sciences, and partly because hee sought not to apply himselfe to the habite, customes, and manner of *China*, there is none that will deale with him, nor come neere his house: And through the grace which God hath giuen vs, and because they see vs apply our selues to their Apparell, Fashion, and Courtesies, all the grauest *Mandarins* come home to our house to visite vs, and doe vs the fauour, to hold vs publikely for their Friends: which they vse not to doe, to their owne Countrey-men, of our qualitie and condition: praysed bee our Lord alwayes, *Amen*.

I will not omit to declare the great pleasure, wherewith these learned *Chinois* heare the great consent of the things and ceremonies, of our holy Faith in *Europe*, and that wee haue Bishops, and, as we call them heere, *Mandarins*, and superiours in Spirituall things: and aboute all, they reioyce exceedingly to heare of our Pope, that being so great a personage they preferre a Learned and Holy man by way of Election, and not by Succession; and likewise the obedience and subjection which other Kings doe yeeld vnto him; and that there haue bene many (as wee told them) who being chosen Popes, refuse it in good earnest, and by no meanes will accept the same: and that we haue all things which concerne the Law of God and good manners, set downe in writing, with all other Bookes concerning him, or his Ministers.

And although that which I haue spoken hitherto of our high Priest, is a thing very apparent and true, and wee deliuered it for such, and they so vnderstand it: yet oftentimes they haue giuen vs occasions of laughter. The first was, That when wee told them, that some refused so great an Office: straight-way they aske, where you say that they refuse it, is it not euident that their excuse will not bee accepted? As who should say, if they would accept of it, who is there that would make an excuse? And thus they say, because they doe so themselves: for when great Offices are bestowed vpon them, eftsoone they offer vp a Petition, making a thousand excuses to the King not to receiue them: and they desire nothing lesse, neither can any thing happen so grieuous vnto them, as to accept their excuse. But usually they be not admitted: though sometimes they bee, to their great grieve of heart, as I my selfe haue seene: But to excuse themselves, or to refuse with some danger, is the vse so common, that they will not sayle to doe so: for if they should not doe so, it were more certayne that they should goe without the Office. The second thing that made vs more to laugh, is, that many of them tell vs, that if wee would returne into our Countrey, without doubt they would make vs Popes: The reason (though not openly) which they yeeld, is, that wee haue a great aduantage aboute other men of our Countrey, to wit, that wee haue seene, and studied, and vnderstand their Bookes; because that they onely, in their opinion, can make a man perfect, and generally seene in all things. Such is the high conceit and reputation which they hold of their Bookes.

A *Turke* disrespected.

The Hierarchy applauded by *Chinois*.

Ridiculous excuses.

§. VII.

Of their Women: Of the Tartars Conquest, Acts and Expulsion. The greatnesse of the King, and neighbouring States. Of the Quenes Eunuchs.

Will conclude this Letter with two points: the one concerning the Women, whereof I haue little to say: and the last is of the King, and of his Palaces and Seruices.

Euery man (as I said before) may keepe as many Wiues as hee will, and so they doe: which is the cause of many tumults, quarrels, and disorders in their houses among their wiues, and among the Sonnes of diuers Mothers: and therefore when wee tell them, that in our Countrey no man marryeth but one Wife, they neuer are satisfied in praising it in words, though neuerthelesse they doe not follow it, nor put it in practise. And the discontentment which the Women haue among themselves, and with their Husbands for this occasion, is like to prooue a great encouragement vnto them, to make them desirous to receiue our holy Faith, and to perswade their Husbands to embrace the same, seeing that it doth not permit any more but one lawfull Wife onely.

Of their other Conuersation, Customes, and other things, wee know nothing, neither is any thing to bee learned: for they keepe house all their life time, and goe out of doores exceeding seldome to visite either their Mother or Sisters, or nearest kinswomen, for they goe not to any else, no not in thought: And therefore as they haue no conuersation, (but alwayes to keepe home) I can speake nothing of their behauiour. Their Apparell seemeth vnto mee honest and comely: (for sometimes I haue seene the Wiues of Officers, and of the poore people, for many of them doe goe abroad.) In some parts of the Countrey wee haue met many women vpon the high way, in short garments, like to the men of our Countrey, without any difference, save on

Palace.

Polygamie religious.

Clofeness of Women.

Apparell.

- their heads, and their feete : for all the rest is all one kinde of Apparell ; but these are the common people onely : One of the greatest ornaments that the Women haue, is, to haue verie little feete, and they are so little, that they goe verie badly, and alway they seeme to goe as though they would fall. I could not know the cause, nor the *Chinois* themselves know not the originall occasion, why this is counted for a beautie : albeit some say, it began not for a comelinesse, but onely with a purpose to cut off all occasion from them of going abroad.
- Small feet.**
- Histories of their Kings.** The *Chinois* haue beene very carefull in their Histories, and therefore they haue histories of their Kings of about foure thousand yeeres. And if credit bee to be giuen to that which their Bookes report, touching those times, and is gathered by diuers of their Histories ; There are many more yeeres from the Flood to our dayes (whereof they also haue some knowledge in their Bookes) then the most followed and allowed Calculation among vs, which treat of that matter, doe allow of : for they say, it is sixe thousand yeeres at the least. They say that they haue continued Histories. But I leaue this, because I haue not well conferred the truth and foundation of the *Chinisch* histories. At the least it is certaine, that they haue knowledge of their matters, and certaine Kings within a little after the Flood, whensoever it was. They had many ancient Kings, which were verie good men, which it may bee were saued in the law of Nature, because the heroicall workes of Vertue, which they report of them were great, and there is no record that they worshipped Idols, but some, that they worshipped the Lord of Heauen and Earth. There were some that sought not to leaue their lawfull Sonnes to bee their Heires, because they thought them not fit for Gouvernment, but choose the wisest and best man, that they could finde, and left the Kingdome vnto him.
- Knowledge of the Flood.**
- Moralitie made a King, and Nature made a Mandarin contrary to innumerable Scripture, &c.**
- This Kingdome in old time was diuided into many small Kingdomes, vntill by little and little it was vnited. It is some foure hundred yeeres (as I said before) since a *Tartar* King possessed it whollie, and two hundred, since a *Bonzo* or Religious man of *China* recovered it. This *Mahometan Tartar* King, left some tokens of himselfe in things that he did. Hee left in *Nankin*, certaine Mathematicall instruments of Copper, the like whereof for goodnesse peraduenture are not in all *Europe*, at least not better.
- Mathematicall Instruments.**
- The China vindex.**
- New Lords, new Lawes.**
- The *Chinese Bonzo* which expelled him out of the Kingdome, was a very valiant and wise man, and there bee many Histories of his wisdom, and sententious sayings, and iudgement in hard matters : and the manner and forme of Gouvernment, which hee ordayned in this Kingdome, which continueth inuolable, doth greatly declare the same. Hee made new Offices and gaue new Names to all of them : An vsuall thing when one house beginneth to Raigne, to change all, euen the name of the King, as also of all Offices, and also of many Cities. I omit the diuision of the Gouvernment into so many heads, and so good distribution, that it seemeth (and so the *Chinois* say) it is like to continue thousands of yeeres, so that no man of the same Kingdome is able, nor hath any power to make any Rebellion of importance. For those which in former time reuolted, were the Vice-royes of the Prouinces, and other great *Mandarins*, in whole power were the Gouvernment, the Souldiers, and the treasure. But hee diuided it in such sort, that those which had power ouer the Souldiers, should haue no money at all, neither should the pay of the Souldiers depend vpon them : and those which keepe the Treasure must haue no superintendencie and dominion ouer the Souldiers. Others which were mightie and rich, hee impouerished and diuided their Authoritie and Reuenues among many ; and so there is no man that can call himselfe Great. I remember that I had read in a Booke, set out in the *Spanish* tongue, of the great power of certayne Captaynes, and because the King did not trust them, hee sent one of his house to will them to come vnto him.
- Rebellion prevented by the policie.**
- All which relation, with many other things which hee reporteth of the prouidence of the King, how hee diuideth his Authoritie among diuers Princes, is not so in truth, neither in truth, neither is there any apparence thereof, neither haue the Captaynes much authoritie, neither are they very rich : for though they haue many people, yet the government of them is diuided into diuers heads, so that they can hardly assemble to raise any Rebellion, especially, because they remaine alwayes in the Kingdome, and neere about the King.
- Reuenue.**
- The Reuenue of this King, without doubt, is exceeding great, and vntill wee haue gotten it out of their Bookes (wherein euery thing is set downe very particularly) I will not presume to publish the same, not as though I knew not that it is so, since whilest a man knoweth more of this Kingdome, he doubteth lesse : Yet because I feare for all this that it will bee hard to make one beleue the same, which knoweth it not of a certainty; making the Accounts not very large, his Reuenues are one yeare with another an hundred Millions in Silver, Gold, Rice, and an infinite number of other things : although the greatest part is Silver. And he that considereth the greatnesse of the Kingdome, and that euery man payeth Tribute to the King of their Persons, Lands, Trees, and other things (without carrying any Tribute out of the same) that which I speake will not seeme excessiue. But as his Reuenue is very great, so his Expences are many. For those which in this Kingdome doe liue at the Kings charge are many, to wit, all the *Mandarins* to whom the King giueth Wages, all the Souldiers, all the Kinsfolkes of the King, his Eunuches, and an infinite number of people, whereby his charges are exceeding great, although alwayes there remaineth
- 100. Millions, others say, 150.**
- Expences.**

mayneth a good deale for him to lay vp : and there is no doubt but hee hath it in store in exceeding great quantitie.

Many small Kingdomes round about acknowledge the King of *China*, and pay him Tribute, as *Corea*, and others, whose names I know not, on this Northerne part : and on the side of *Malaca* and *Macao*, many others. And sometimes on these Northerne parts they trouble him somewhat, in robbing and killing of people. It may be that your Worship, or some bodie else may demand, why the King of *China* being so great, subdueth not these small Kingdomes that lye about him to deliuer himselfe of trouble ? I answered, that he wanteth no abilitie : but I will say one sure thing, a Paradoxe to the people of our *Europe*, which is, That neither the *Chinois*, nor their King doe seeke, nor dreame of dilating their Empire more then it is. And this their resolution is such, that although they would giue them all these Kingdomes, they would not take them, & much lesse if they were farther off. For they hold it for one of the greatest miseries (especially the *Mandarins* & graue sort of people) to go out of their Kingdome to any other part.

There is one of the best Examples hereof that may be giuen: which fell out of late, and that was, that as by the danger which might grow to his Kingdome, if the people of *Iapon* should winne the Kingdome of *Corea*, which is joyned to *China* by the mayne Land, as they began to doe; the *Chinois* ayded the *Coreans* with many men : and the people of *Iapon* by the death of their King called *Quabacondono*, did wholly abandon it. The Kingdome remayned in the power of the *Chinois*, and so continued two or three yeares. After which they wholly gaue it ouer, without any other greater respect, then that there were none that were willing to goe thither to gouerne it, nor that the King had any need to annexe it vnto his Estate. And without doubt, it seemeth that he would doe the like with any other, although they would put it into his hands. And touching those Kingdomes which pay him Tribute, there is no great account made, whether they come or no : and their continuall comming, is more for the profit of those which come, then that the King doth desire it. And therefore the *Philippine* Islands which in former times paid Tribute to the Kings of *China*, were made none account of when they ceased to pay it.

This King hath one lawfull Wife (as other men haue) in choice whereof they haue regard to nothing else but to her good qualities and externall beautie, for there is no Nobilitie to be sought for. Besides her hee hath a great number of Concubines chosen after the same manner, whose Sonnes (if the lawfull Wiues Children faile) inherit the Kingdome, which commonly falleth out, and such is he which now is King, and he which is to succeed him. When any of these women be once entred into the Kings Palace to bee his Wife, there is no name which may bee compared vnto her in being kept close; for they may not only not goe abroad, no nor bee seene of their Father, Mother, or Brethren. They haue little or none authoritie, but such as they obtaine of the King. Also the seruice of the King, of the Queene, and of his Concubines, is all by Eunuches, a seruice doubtlesse vnworthy of a King. All these Eunuches (without any exception) are of the most base people which are in all the Kingdome, whose Fathers (because they cannot keepe them when they were young) doe make them Eunuches, in hope that one day they shall get into the Court to serue the King : the manner is farre different from some which are in *Europe* : for these bee like those which the *Turkes* vse. Because their Fathers doe this for po- uertie, it followeth that they haue no excellencie, for they haue no meanes to learne it, and they are little or nothing Learned.

They elect and choose these Eunuches from time to time to supply such as die, and this first yeare that I was here, they chose aboue three thousand, for which purpose there assembled aboue twentie thousand (as they say) out of which number they made their choice. The Electors were a verie great *Mandarin* (to whom, as I said before, the Kings priuate businesse belongs) and another Eunuch of the eldest and most priuate. The Examination and Election consisteth in two things, which are a good Countenance and a good Tongue : for prooffe whereof, they make them pronounce two words, wherein those that haue not a readie Tongue doe stumble. When they are chosen, and gone to the Court, they diuide them in diuers Offices : yet at their first comming, they are appointed to waite vpon the old Eunuches as Boyes, which make good triall of their patience, and obedience : and he that after certaine yeares sheweth himselfe to- wardly, they begin to employ in greater matters.

Of these Eunuches, the King hath his Musicians and Mathematicians, who, to bee briefe, I say, haue no sound vnderstanding in these things at all, but only for complement or superficially : yet some of them are bound to watch all night, and to looke whether any Comet doe appeare, or any such like thing in the Skie, to enforme the King thereof : and to performe other like Of- fices. They are vsually verie couetous, and as they are base, if they rise to bee priuate with the King, some of them be proud and vncourteous. They serue the King as slaues, obeying his will which way soeuer he inclineth. The King chastiseth them verie sharply for euery light offence: especially the King that now is, which is a very wicked man. He hath caused many to be whip- ped to death, for some small matter wherein they haue offended him. Yet there are some of them good and discreet, which the King vseth for dispatching of his businesse, and other matters

of weight. Though the ordinarie wages which they haue of the King bee small, yet it serueth them well to liue of, and therefore they goe verie well apparelled in many Robes of Silke verie finely wrought of diuers colours, and the manner of their Cap and Apparell differeth from all other peoples. There are of them in number, as they say, aboute sixteene thousand of them in the Kings palaces. Hereby your Worship may see what Examples and Education the King of *China* obserueth, which spendeth all his time with these and with women.

Although it be the custome of these Kings, to shew themselves from time to time to certaine of the greatest *Mandarins*: yet they neuer suffer the rest of the people to see them, nor to speake with them; and when he speaketh with any bodie, they enter not into the place where hee is; but the King commeth forth to a certaine place. If there be any Nation among whom the Law of Nations hath no place in many things it is this: for as they haue no commerce with other Nations, so they haue not the Law which is common to all men. And therefore they admit no Ambassadour in *China*, vnlesse it be by the way of giuing some Present, the King not acknowledging any; neither doe they thinke that there is any in the World, which is able to deale with their King by way of an Embassadour. And if they bring any Message (as the *Japans* brought within these few yeares, who came to intreate of certaine agreements, by no meanes they are admitted to the sight of the King; neither doth he giue them audience: but some *Mandarin* doth accompany them: and the entertaynment which they giue them, and honour which they shew to all strangers which come vnto them is verie small. But as for the most part they haue no great conceit of strangers, so their entertaynment is like to their conceit. Whosoever he be that commeth into their Countrey, they shut him vp in a verie homely house, not suffering him to goe abroad.

Royall Palace.

The Kings Palaces are verie great; and albeit in the excellencie of Architecture they bee not comparable to those of our *Europe*, yet they much exceed in the hugeness of Building. They haue three wals foure square, the circuit of the first may be as bigge as the wall of a good Citie. Betweene the first and the second wall, there is a wall which enuironeth the greatest part of the House, and here are many Houses of the Eunuches of the lowest sort, which exercise Mechanicall Arts, or the like, as Porters, &c.

Betweene the second and the third wall there are many pieces of the Kings House, which is not joyned altogether, but in diuers parts there be diuers Roomes, built for diuers purposes, one answering to another. These parcels of Buildings which are here (which are euerie one as long as the Carre of an Horse, and very high) haue no vnder Roome, but a great Building raised vp with foundations of great Bricks, as broad and long as all the Building, wherein there are Gates of Marble stone very wel wrought to passe from one place to another. This house or Foundation is about eight fathomes high little more or lesse. About these are gilded Galleries, Terraces, Halls, and Chambers, which on the out-side shew verie gallant (which is as much as can be seene; for no man can get in to see them.) The greatest part of them is of Timber, with many gilded Embossments, and many other pleasant Pictures. The Roofes are verie well made. The Tiles are of a farre better fashion, in mine opinion, then ours, and so euen ioyned together that that they seeme to be all one piece: they are all anneled with yellow, which is the Kings Colour. To conclude, I say, that it seemed vnto me in multitude of Houses and greatnesse a stately thing. Also betweene these wals the Riuer runneth which I spake of: and to passe from one to another there are many faire Bridges of Marble made of very great stones: betweene these wals was one of the two fourth parts of the House, on which the fire from Heauen fell downe within these few yeares, and consumed it: and with the blowes of the stones which fell downe many verie great Houses were broken downe to the ground (as sometimes I beheld my selfe) and they remayned with many signes of fire on them. They say, that when this fire fell from Heauen, the King commanded his Sonne to kneele downe, and beseech *The Heauen to be mercifull vnto him, for he himselfe was too wicked, and that the Heauen would not beare him.* Within these wals are many Lodgings of the grauest Eunuches, who like Fellowes of Colledges liue many in one House, euerie one hauing his priuate Chamber. Heere betweene these wals are Mounts and Groues and other recreations whither the King repaireth to recreate himselfe. And the space of these wals is very great, for when I went to the Palace to teach the Eunuches which were in that place to trimme the Clocke, I passed before I came to their Lodging eight great Palaces, and on the other side there were many more. The Lodgings of the Eunuches vsually are low and bad, for the Kings Seruants, yet very necessarie.

Yellow is the Kings Colour.

Riuer and Bridges.

Fire from Heauen.

No peace to the wicked.

Mounts and Groues.

Third partition.

Next after this followeth the third wal, where the King dwelleth, with his Wiues and Children, and those which where his neereft seruants, whereinto no man entred but they. And therefore albeit I haue heard that it is a very beautiful thing & very much worth the seeing, as in very deed it sheweth to be: yet I cannot giue any Relation of any thing concerning the same in particular. Only this I say, that when I was in the House of the Eunuches that were the Mathematicians, I went sometimes vp into a Towre, from whence I might see the tops of the Houses, the Groues, and Orchards, and me thought that I neuer in my life saw so great a frame of Building, although I haue scene many in mine owne Countrey. And therefore there are alwaies a great

a great number of Officers of all Offices, some making new Buildings, and others repaying the old. The King neuer goeth abroad, especially this King, and his Ancestors some one time and no more, vnto a Temple which they haue builded to *The Heauen, and the Earth*, where euerie yeare they offer Sacrifice. And therefore I know not with what pompe hee goeth abroad: But like as in his seruice he hath no men of qualitie, it cannot bee such as our Kings vse in their going to Church:

King a home Prisoner. Temple of Heauen and Earth.

There is a barbarous custome among the Kings, that when the Prince is aduanced to the Kingdome, within a short time after, all the rest of the old Kings Sonnes are to depart out of the House to certaine places appointed for them, which vnto the third Generation are serued like Kings, but they neuer come more in the presence of their Father, Mother, nor elder Brother: and therefore there is great lamentations of their Mothers at their departure. The Posteritie of these doe alwaies remayne as Kinsmen, and with the name of the Kings Kinsmen. To all these (which are very many) the King giueth sufficient mayntenance, which is no great matter. They neuer beare Office; and deale with other people, and marrie with them, without doing themselves much good or none at all in being the Kings Kinsmen, nor purchase any speciall authoritie thereby. Other Kinsfolkes of the King, married with the Sisters, Daughters, or Cousins of the King, or Queene, although they haue sufficient to liue vpon, yet haue they exceeding small authoritie, and haughtinesse. And herein, nor in any thing may they compare with the *Mandarins*.

Barbarous v. sage of the Kings Children.

Here came to visit vs one married with the Sister of this King that is now, in a Chaire with three or foure Boyes to wait on him. Another came oftentimes married with the Sister of the Wife of the Prince that is to inherit, on Horse-backe with one Boy only attending on him; and hee entred into the Examinations that hee may proceed Doctor and become a *Mandarin*: So little is the benefit that groweth vnto them by the Consanguinity or Affinity of the King which are joynd vnto him thereby.

Here the time faileth me, though neither matter, nor desire to giue contentment to your Worship, and the rest of my most deare Fathers and Brethren, neither doth nor shall euer faile me. And therefore if I shall vnderstand, that they take this in good worth, I will giue Relation of that which shall fall out here by the helpe and grace of our Lord, to whom I humbly beseech all of them to commend mee.

King's Affinitie and Consanguinitie, little worth.

I send here withall two Maps of this Kingdome of *China*, which came to my hand after I had written this Letter, and Relation. I sought to translate all that which is contayned in the *China* Letters; which is all the Rent which euerie one of these Prouinces payeth to the King of *China*; and to make a description of all the Houses which euerie Prouince hath, and how many people, and many things else: But your Worship may beleeue that by no meanes I had leysure: and therefore I send you only the figure, and another yeare (if it please our Lord God) I will send you the same with the declaration thereof.

Maps of China.

All the rundles and squares which are therein are Cities, or Fortresses of many Inhabitants, both of them walled about. There is no Towne here set downe that it is not walled: the others are many more.

The Rivers are well distinguished. The great lines are the limits of the Prouinces: the other small lines, and of little circuit are the Iurisdicktions of some one principall Citie.

We print here another Map of all the World of our manner with *Chinise* Letters, which because wee want time to declare the Letters, I send not till the next yeare, which then we will send if our Lord grant vs life.

I send you many other Papers, that your Worships may see the fashion of the Letters of these people of *China*, and what Characters wee committed to memorie. From *Paquin*, beeing the Court and Royall Citie of the King of *China*, the ninth of March, 1602.

CHAP. VII.

A Discourse of the Kingdome of China, taken out of RICIVS and TRIGAVTIVS, containyng the Countrey, People, Gouvernment, Religion, Rites, Sects, Characters, Studies, Arts, Acts; and a Map of China added, drawne out of one there made with Annotations for the understanding thereof.

§. I.

Of the Name, Scite, and Greatnesse; the Tributaries, Commoditie, Arts, Printing, Scales, Inke, Pencill-pennes and Fannes.

The temperate
Climate.

His vtmost Empire in the East, hath beene made knowne to Europe by diuers appellations, as that of *Ptolemy, Sina*; that later of *Marcus Paulus the Venetian, Cathay*; and that most vsuall receiued from the *Portugals*, which call it *China*. I doubt not also that this is the Region of the *Hippophagi*, or *Horse-eaters*, a meat there as common as *Beefe* here: as also that this is the Region *Serica* or *Silken*; forasmuch as there is no Kingdome of the East where *Silke* is found in that quantitie; and the *Portugals* ship it thence for *Iapon*, and all *India*; the *Spaniards* also of the *Philippina* Islands, freight their ships therewith for all the *American* World. Moreouer, I find in the *China* Chronicles that this *Silke*-worke was there two thousand six hundred thirtie six yeares before the Birth of *Christ*: whence it passed to the rest of *Asia*, to our *Europe* and to *Africa*. But in this varietie nothing seemes so strange to me, as that all these names are so strange to them, not knowne or once heard of, although the change of names be not strange to that Countrey. For as often as the Empire passeth from one Family to another, according to the vicissitude of humane Affaires: He which attayneth the Throne, imposeth a name at his pleasure. So hath it beene sometimes called *Than* (which signifieth exceedingly large) another while *Tu*, that is, *Rest*; after that successiuey *Hia*, or *Great*; *Sciam*, *Adorned*; *Chen*, *Perfect*; *Han*, *The Milkie way in Heauen*, &c. And since this Family, called *Cin*, which now holdeth the Souereignty, hath reigned, it is called *Min*, which intimateth *Splendour*, and by vsuall addition of one syllable *Ta-min*, that is, the Kingdome of *Great Splendour*, *Brightnesse* or *Glory*. Yet doe few of their Neighbour Nations obserue these changes of Names, whereby each of them almost, stile it by seuerall appellations. Those of *Cocin*, *Cauchin-china*, and the *Siamites* call it *Cin*; the *Iapanders*, *Than*; the *Tartars*, *Han*; the *Westerne Saracens*, *Catay*. Also amongst the *Chinois* themselues, besides that arbitrary name so imposed by their Kings, it hath some common to all Ages. Such are *Ciumquo*, that is, the Kingdome; and *Chiumboa*, which signifieth a Garden, a name arising from their Geography, beleeuing indeed the roundnesse of the Heauen, but a squarenesse of the Earth, and their Kingdome in the midst thereof, a conceit growne out of conceit now, by better instruction of the Iesuits.

Their King is called *Lord of the World*, and they supposed accordingly that their Kingdome containd the principall part thereof; not deeming the Neighbour Kingdomes worthy to be called *Kingdomes*, which yet before their Commerce with *Europeans* were all they knew. And not vnworthily is the name *Great* prefixed to their Kingdomes appellation, beeing the greatest Kingdome in the World, which at this day carrieth One Name, or hath done in former times. For Southward it beginneth in the nineteenth degree, at the Ile which they call *Hainan*, that is, the *South-Sea*; and runneth into the North to the two & fortieth, euen to those wals which diuide the *Chinois* from the *Tartars*. The longitude beginneth from the one hundred and twelfth (reckoning from the *Canaries*) in the Prouince *Tunan*, and extends East-ward to the Sea in one hundred thirtie two. These Dimensions wee haue obserued in diuers places of the Kingdome where we haue passed, by *Astrolabes* and other Mathematicall Instruments; adding also the obseruation of *Eclipses* in their Almanacks, where the Moones Change and Full are iustly described, and specially by authoritie of *Cosmographicall* Plaines. Yet if others which shall come after vs shall more exactly obserue the longitude (which I dare say will be no great matter) I shall not vnwillingly yeeld. Hence may be obserued that this ample Kingdome is for the most part within the temperate Zone; neither doth it extend so farre North-ward as some Maps haue described by many degrees. And lest any should thinke that some great parts of so large a Domi-

nion

nion be desert, I will here translate out of a China booke entituled, *The Description of that Kingdome*, there printed, 1579. that which followeth.

In the Kingdome (of China) there are two Provinces Royall, Nanquin the Southerne Court, and Pequim the Northerne, and thirteene others. In these fiftene Provinces (you might call them Kingdomes) by another division are numbred one hundred fiftie eight Regions or lesse Provinces, called by them *Fu*; the most of which haue twelue or fiftene Cities of reasonable quantitie, besides Villages, Hamlets, Castles and Townes. In these Provinces are two hundred fortie seven greater Cities, called *Cheu* (howbeit sometimes distinguished from other Cities rather in dignitie then largenesse) of vulgar Cities, which they call *Hien*, 1152. Of men growne to ripe age, which pay tribute or poll money to the King, were then fiftie and eight millions, sine hundred fiftie thousand, 801. In all which the female sexe is not reckoned: and of the Masculine are omitted, Boyes, Youths, Eunuchs, Souldiers, the Royall kindred, Magistrates, Students, and very many others. And of the Souldiers, although there be a Supine peace (except some Tartarian assault sometimes) there are maintained in the Kings pay, and in perpetuall Armes, about ten hundred thousand. For the three Northern Provinces are almost halfe in pay. In that booke are numbred Kingdomes adioyning to that of China and tributarie; to the East three, to the West fiftie three, to the South fiftie six, to the North three. Yet I obserue that nothing so many doe in these dayes pay tribute, and those which doe, carry more from China, then they bring thither: and therefore the Chinois care not much whether they continue loyall or no.

To the worth of this Kingdome, may bee added, the fortification by Nature or Art round about it. To the South and East, the Sea washeth it, and so many Ilands guard it, that hardly can a Fleet of Ships approach the Continent. To the North, steepe precipices are ioyned together, with a continued Tract of 405. leagues, and exclude the Tartars assaults. To the North-west is a sandy desert of many dayes journey, which prohibite passage of an Armie, or minace their burials. The South-west hath great Mountaines and little Kingdomes to preuent feare on that side.

From this largenesse of Territories proceeds such diuersified varietie of things growing in that Kingdome, some in the torrid, others in the colder or in the temperate Zones: whatsoever is required to the necessitie or delicacie of food or raiment being there naturall; nothing being here in Europe but either is there, or a better supply: Wheat, Barley, Panike, and other Corne; Rice, Pulse (in some Provinces two or three harvests yeerely) fruits and Apples of the best (Nurs and Almonds excepted) Figs and others vnkowne in our world, as the *Lycias* and the *Longanas* in Canton Province onely; the *Sucusina* or China Figge, or Apple so called, because they may dry it as they do Figs, & liker to a Peach red, without hoarinesse or stone: in Oranges, Citrons, Limons they exceed all places. So doe they in goodnesse and varietie of Gardens, Herbs, as being there much vsed, some for religion, others for pouertie easing nothing else. Flowers haue there taken vp their bowers, admirably varied, more respected for sight then sent; the Art of distilling sweet-waters being there vheard of. In the foure Southerne Provinces grow *Betre* or *Betele* leafe, and the tree *Arequa* or *Arequiera*, so much vsed in India, and chewed all day long for their stomacke and teeth. *Sesame* Oile is both odoriferous and plentiful. Wine is not there so good as in Europe (the Grape being neither pleasant nor frequent) made of Rice and other things.

Hogs-flesh is common food: they haue Buffalls, Muttons, Goats-flesh; Hennes, Duckes, Geese, innumerable: Horses also, Asses, Mules, and Dogs-flesh are food, and shamble commodities. In some places superstition abtaineth from Beefe and Buffalls, Venison, especially red Deere, Hare, and diuers domestick creatures are common; all cheape. Their Horses and Beasts of labour are not so goodly as in Europe, but more in number, and therefore in cheapnesse. The whole Kingdome is very commodious for passage by Riuers both naturall and hand-made: whence the number and kindes of shipping is incredible; insomuch that a moderne Writer hath auerred, that there are as many which keepe on the waters as on the land; an Hyperbole, yet not so exceeding the truth to such as saile these Riuers, as may bee seene to others. I am of opinion, that there are as many Ships in this Kingdome, as are in all the world beside in fresh waters: for their Sea-shipping is fewer and not comparable with ours. But to returne to their Horses, the Chinois know not how to manage and breake them but by gelding; so that their Horses for seruice are innumerable, but so vnseruiceable, that they will not indure the neighing of the Tartarian Horse without flight. They shoote them not with Iron, so that in rockie and hard wayes they faile.

Besides the Seas plentie of Fish and Riuers, they are stored also in Lakes, seeming for their depths and largenesse petie Seas. They haue more store of Fish-ponds also, then in these parts, whence the Market is daily furnished. Their Woods haue no Lions, but store of Tigers, Beares, Woolues, Foxes. Elephants there are not, but for pompe some kept at the Court in Pequim, brought from other places. Flaxe they haue not, but are supplied with abundance of Cotton, the seed whereof was brought thither foure hundred yeeres since, and hath so liked the soyle, that the whole world, as may seeme thence might haue sufficient. Of Silke-workes wee say no more. Of Hempe, and of some other Herbs, they make many clothes, especially for Summer

*Some say many more see the Map and notes.

chap. 3.
The commodities of China.

Fruits of all sorts.

Flesh for food.

Passages by water.

Store of shipping and water dwellers.

Horses.

Fish.

Wilde beasts.

Cotton.

Sale of cloth.

vse

vse. They milke not their Sheepe; they sheare them, yet make no cloth of the Wooll (notwithstanding, woollen-clothes brought thither by Merchants is well sold) but light Summer clothes for blankets and other sleight vses. The North parts, though neerer the Sunne then some Regions in *Europe*, are colder, the great rivers and lakes frozen ouer, of which we can giue no reason, but the neighbouring Mountaines of *Tartaria*: against which they are furnished with choice Fures.

Metalls.

All sorts of metalls are there found. They make besides Brasse and Copper, another shining like Silver, as cheape as the yellow Brasse. Of molten Iron they make Kettles, Caldrons, Bells, Mortars, Ordnance, and other things. Their Gold is cheaper then with vs. Silver they vse for money, distinguished not by stampe but weight, in all bargaining vsing the ballance, which is made the more incommodious for the differing goodnesse of the Silver, and frequent allay and fraud. In some places are Brasse farthings. Plate and Gold vessells are vsed by the greater, but nothing so much as in these parts. The women spend much Gold and Silver in their head-tires.

Porcellane.

The vulgar vse earthen dishes, called, I now not why, *porcellane*; the best whereof is made in the *Kiamsin* Prouince of a yellow earth. It endureth without riuing hot meates, yea as wooden dishes here with a wyre, they sowe the rifts and make them hold liquor. They make Glasse, but therein are short of the *Europeans*.

Glasse.

Buildings.

Their houses are of Timber commonly, euen the Kings Palaces, the walls which serue for partitions of roomes being sometimes of Bricke, but the roofe sustained by Timbers: which together with their shipping argues their plentie of trees. Oakes are rare, but supplied with a hard and euerlasting wood with them vsed for coffins, in which their curiositie will sometimes spend a thousand Duckets. There is also store of a kinde of reed, which the *Portugalls* call *Bambu*, of almost Iron hardnesse, the roundnesse scarcely compassed with both hands, and serues for smaller posts; the lesser of them for Launces and other vses. For fire they vse Wood, Coles, Reeds, Straw, and a bituminous substance called *Mni* (a kinde of Mine-cole or Sea-cole) which is most and best in the North, digged out of the earth.

Hard Timber and Reeds.

Sea-cole.

Rhubarb, China, Muske.

Of medicinable herbs they haue diuers, specially Rhubarbe, sold for tenne halfe pence the pound: *China* Wood, or holy Wood growing in desarts naturally, and thence taken for no other price but the labour: Muske; Salt both made of Sea-waters, and of others easily in the Continent; Sugar more common there then Hony, though both plentifull: Waxe both of Bees, and another whiter and burning better made by certaine wormes, which therefore are nourished in trees; another also made of a certaine fruit: Their paper is not so during as ours, nor can endure the presse on both sides.

Salt, Sugar, Home-waxe.

Paper.

Their drinke Chia, Chia, or Cia.

I omit their parti-coloured Marbles, their gems, colours for paintings, odoriferous Woods, &c. I cannot passe by some rarities; as their shrub whence they make their drinke *Cia*. They gather the leaues in the Spring, and dry them in the shadow, and keepe it for daily decoction, vsing it at meates, and as often as any guest comes to their house, yea twice or thrice, if hee make any tarrying. They sup it hot, bitterish to the palate, but wholesome: not of ancient vse, for they haue no ancient Character in their bookes for it. The *Japanders* pay deare for it, ten or twelue Duckets a pound for the best, and vse it otherwise, putting the poulder of the leafe to hot water, as much as two or three spoonefulls: the *Chinois* put the leaues themselves into the hot water, which they drinke, leauing the leaues behinde. They haue also a bituminous substance like milke, strained out of the barke of a tree, of pitchy cleauing, whence they make *Sandaracha*, a varnish for their houses and household, ships, and other things: yeelding a smooth touch to the hand and glasse splendour to the eye with long continuance. Thus can they more then counterfeit the colours of any wood, and hereby are provided against prouisions of Naperie, this seruing for Table linnen; they recouering any greasie contagion with a little rinsing of water. They haue an Oyle also pressed from an apple not vnlike it in vse, but not so resplendent.

Sandaracha, a rich Varnish.

Spices:

They haue Cinamon and Ginger growing, Pepper and other Spices are brought from other parts. They haue store of Gun-powder, not so much for Artillerie (which they can vse but meanely) as for Fire-workes in pompous spectacles, thereby representing, Trees, Fruits, Battels, and other things with great Art and cost. We saw at *Nanquin*, in the first moneth of the yeere, as much this way spent as would haue serued a continued fight two yeeres.

Chap. 4. Of their Arts in China.

This is not to be vnderstood of Temples, &c. as may appeare by *Nanquin* Temple, &c.

Printing. Antiquitie and manner of it.

For Mechanicall Arts, they are not comparable to our mens Architecture, whether yee regard the beautie or continuance of their buildings, they not so much as conceiuing or crediting the stately magnificence or long durance of some in these parts. They either make no foundation, or verie sleight, and thinke a mans age to be age enough for a house, and that scarcely without reparations: their houses being also of Timber, and where the walls are Stone, they haue Timbers to beare vp the roofe, that the wall may easily be repaired or renewed without meddling with the supporters.

Printing is ancienter there then here; some thinke before the Incarnation, and most certaine about five hundred yeeres old: much differing from ours because of the multitude of their Characters. They graue or cut these Characters in a table of Peare-tree, Apple-tree or *Zizyphus*. In this

this Table they lightly glue on a whole leafe written, and then cunningly shaue the drie paper, that they make very little transparence; after which they cut the wood, that onely the prints or lineaments of the Characters are eminent: which done, with great facilitie and celeritie they print off leaues at pleasure, one Printer often 1500. in one day; so ready also in cutting, that to mee Ours seeme to spend as much time in *composing and correcting*. This course is more accommodated to their great Characters then to ours, whose little letters are not easily cut in wooden Tables. They haue this commoditie also, that keeping these Tables by them, they may with little labour adde or take away words or sentences: and need not at once print off any more Copies then present vse or sale requireth. Wee doe this with Bookes of our Religion or *European Sciences*, printing them at home by our *China* seruants. They haue another way of printing Characters or Pictures printed before in Marble or Wood, laying on a leafe of Paper moist, and on that a woollen Cloth, whereon they beate with a Hammer till the Paper insinuates it selfe into the voide spaces and lineaments of the Characters or Picture: after which they lightly colour that leafe with Inke, or other colour, those delineations onely remayning white, and retayning the Prototype-figure. But this is for grosser Pourtraitures,

They are much addicted to pictures, but nothing so cunning in painting, founding, grauing, as *Europeans*. They make magnificent Arches with figures of men and beasts, and adorne their Temples with Idols and Bells, but their Genius otherwise generous and ingenious enough, for want of commerce with other Nations, is herein rudely artificiall. Shadowes and Oyle in picturing are to them vnknowne, and their Pictures therefore haue no more life of Art then Nature. In Statues, themselves seeme Statues for all rules of Symmetry any further then by the eye, and yet will be doing in huge (indeed) Monsters of this kinde, in Earth, Brasse, and Marble. Their Bells haue all wooden Hammers, which yeeld a wooden sound, not comparable to ours, nor seeming capable of those of Iron. They haue variety and plenty of Muscalle Instruments, yet want Organs and all that haue Keyes. Their Strings are made of raw Silke, and know not that any can be made of Guts. The Symetrie of their Instruments is answerable to ours. All their Musike is simple and single-toned, vtterly ignorant of comfort in discord-concord: yet much applaud they themselves in their owne Harmonie, howsoeuer dissonant to our eares. But this pride seemes to grow (as usually it doth) from ignorance, and it is likely they would preferre ours if they knew it.

They haue scarcely any Instruments for measuring of (that which measures all things) Time; such as they haue, measure by water or fire, but very imperfectly, as is also their Sun-diall, which they know not to fit to differing places. They are much addicted to Comedies, and therein exceed ours; some practising the same in principall Townes, others traouelling thorow the Kingdome (or roguing, if you will) beidg the dregs of the Kingdome, buying Boyes whom they frame to this faining facultie. Their Comedies are commonly antient, whether Histories or deuices, and few new written. They are vsed in publike and in priuate Solemnities; as also in Feasts, whereto being called, they offer to the Inuiter a Booke, in which to take his choise, the Guests looking, eating, drinking together; and sometimes after ten houres feasting, they will spend as much succeeding time in a succession of Interludes one after another. Their pronunciation is with singing accent, and not with the vulgar tone. Seales are of great vse with them, not onely for Letters, but for their Poems also, Pictures, Bookes, and many other things. These contayne the name, sur-name, dignitie, and degree: neither content they themselves with one, but haue many, inscribing sometimes the beginning and end of their workes; not imprinting them in Waxe, or such like substance, but onely colour them red. The chiefe men haue on the Table a Boxe full of Seales, which containe their diuers names (for euery *Chinese* hath many names) and those of Wood, Marble, Iuorie, Brasse, Crystall, Corall, and better stones. There are many workemen of that *Seale-occupation*, their Characters differing from the vulgar, and fauouring of Antiquitie and Learning.

There is another Art not vnlike, of making Inke for all writing, made into little Cakes or Balls of the smoke of Oyle. For their estimation of exact writing makes the making of Inke also to be holden an Art not illiberall. They vse it on a Marble smooth stone; with a few drops of water rubbing those Balls, and colouring the stone, thence taking it with a Pensill of Hares haire wherewith they write.

Fannes also are in much vse by both Sexes for the causing of winde to coole them in Summer. No man may goe abroad without a Fanne, although the weather be cold, and the winde already bee importunate: the vse being rather for ornament then necessitie. They are made of Reeds, Wood, Iuorie, Ebonie, together with Paper or Silke, and a certaine odoriferous Straw, in round, ouall, or square forme. The chiefe men vse them of Paper gilded with plaits to be let in or out, and therein inscribe some pithie sentencce or Poeme. These are the most common gifts or presents (as Gloues in *Europe*) and we haue a Chist full of them sent vs by our friends. In other things the *Chinois* are liker ours, vsing Tables, Stooles, and Beds (which the adioyning Nations doe not, but sit on Carpets on the floore) to eat or sleepe.

§. II.

Of their Characters and writing downward: their studies, Ethikes, Astrologie, Physike, Authentike Authors, Degrees how taken both Philosophicall and Militarie.

Phaenomena.

NOW, for their more liberall Arts, and Literate-degrees, this Kingdome differs from all others: in which their Learned beare principall sway. The *China* words are Monosyllables, not one otherwise, howsoever two or three *Vowels* sometimes are conioyned into one *Diphthong*, to speake after our manner; for they haue not *Consonants* nor *Vowels*, but diuers Characters for so many things, and as many of them, as there are Words, so that a Word, Syllable, Letter, are the same; and when we ioyne diuers Syllables to make one Word, it is after our fashion, because they signifie the same thing; with them each Syllable is a feuerall word. And although the number of things and Characters seeme the same, yet doe they so compound them together, that they exceed not seuentie or eighty thousand: and hee which knoweth ten thousand of them, hath the most necessary: to know all is in manner for any one man impossible. Of these Characters the sound is often the same, the figure and signification differing: so that no Language is so equiuocall; nor can any Speech bee written from the Speakers mouth by the Hearer, nor can a Booke bee read to the Hearers vnderstanding, except they haue the Booke before them, by their eyes to distinguish the equiuocations which their eares cannot. Yea, in speaking accurately, the Hearer often vnderstands not without repetition and writing either with Inke, or water on the Table, or forming the Characters in the aire; and this most happens in the most elegant and polite discourses (the stile of Bookes and Inkhorne-dialect of their learned, wholly differing from the vulgar Idiome.) This equiuocation and paucity of sounds is in some sort eased be *Accents*, which are five, and not ealie to distinguish; by which of one Syllable (as wee account it) they make it with differing tones five fold in differing signification: and there is no Word which is not pronounced with one of these Accents. Hence is the Language so difficult as none else in the World for Strangers to learne to speake and vnderstand; which importunate labour of ours hath yet attained. The reason I conceiue to be that they alway haue laboured to adorne their writing more then their speech, their eloquence still consisting in writing and not in pronounciation, as *Isocrates* is commended amongst the *Greekes*.

This multitude of Characters, as it is burthensome to the memory, so it hath this commodity, the commerce with diuers Nations of different Languages by community of writing; *Iapon*, *Corai*, *Cauchinchina*, the *Leubices*, vnderstanding and reading the Characters, each into his owne Language, which the other vnderstand nothing at all. Each Prouince also hath its owne, and all haue one common Tongue besides, which they call *Quonhoa*, or the Court Language (the Magistrates being all forrainers, and none bearing Office in his Countrey Prouince) vfed in their Courts, and by the Learned: this onely did ours learne, nor is the other vfed by the ciuill or learner in conference, except priuaty by Countrey-men: yea, children and women learne this Court-speech. I heare that the *Iaponians* haue an Alphabet also of Letters after our fashion, besides these Characters; but in *China* they haue none, so that from their Cradle to the extremest age they are learning their Characters, as many as professe Learning: which howsoever it takes vp time from better Sciences, it doth it also from idle youthfull vanities. Hence also riseth a kinde of writing with them, in few Characters expressing that which would cost vs long discourses. Their course of writing is from the right hand, the line downward, ours contrary from the left and side-ways.

Of all the noblest Sciences they are best skilled in morall Philosophie (naturall, they haue rather obscured) and being ignorant of Logicke, they deliuer those Ethicke precepts in confused sentences and discourses without order by meere naturall wit. Their greatest Philosopher is called *Confutius*, whom I finde to haue bene borne 551. yeeres before the comming of *Christ*, and to haue liued about 70. yeeres, by example as well as precept exciting to vertue, accounted a very holy man. And if wee marke his sayings and doings, wee must confesse few of our Ethnike Philosophers before him, and many behinde. But with the *Chinois*, his word is authoritie, and no speech of his is called in question; the Learned, yea the Kings also, euer since worshipping him, not as a God, but as a Man; and his posteritie are much esteemed, the head of that familie inheriting by grant of Kings a title of great honour, with immunities and reuenues answerable.

They haue some knowledge also of Astrologie, and the Mathematikes: In Arithmetike and Geometry antiently more excellent, but in learning and teaching confused. They reckon foure hundred Starres more then our Astrologers haue mentioned, numbring certaine smaller which doe not alway appeare. Of the heauenly Apparances they haue no rules: they are much busied about foretelling Eclipses, and the courses of Planets, but therein very erroneous; and all their

skill

skill of Starres is in manner that which wee call Iudiciall Astrology, imagining these things below to depend on the Starres. Somewhat they haue receiued of the Westerne *Saracens*, but they confirme nothing by Demonstration, only haue left to them *Tables*, by which they reckon the Eclipses and Motions:

The first of this Royall Family forbad any to learne this Iudiciall Astrologie, but those which by Hereditary right are thereto designed, to preuent Innouations. But he which now reigneth mayntayneth diuers Mathematicians, both Eunuches within the Palace, and Magistrates without, of which there are in *Pequin* two Tribunals, one of *Chinois*, which follow their owne Authors, another of *Saracens* which reforme the same by their Rules, and by conference together. Both haue in a small Hill a Plaine for Contemplation where are the huge Mathematicall Instruments of Brasse before mentioned: One of the Colledge nightly watcheth thereon as is before obserued. That of *Nanquin* exceeds this of *Pequin*, as being then the Seat Royall. When the *Pequin* Astrologers foretell Eclipses, the Magistrates and Idoll Ministers are commanded to assemble in their Officiary Habits to helpe the labouring Planets, which they think they do with beating brazen Bels, and often kneelings, all the time that they thinke the Eclipse lasteth, lest they should then bee deuoured (as I haue heard) by I know not what *Serpent*.

Their Physicke Rules differ much from ours; they examine the Pulse alike. They succeed well in their Prescriptions, which vsually are Simples, Herbs, Rootes, and the like. They haue for it no publike Schoole, but each learnes it of his owne Master, yet in the two Royall Cities Degrees of this Art are giuen after Examination, but cursorily and without any respect acquired by his Degree, because all may practise which will. Neyther doth any study Mathematickes or Physicke, which is in any hope of the Etlike glory, but such as want of wit or meanes hath deterred from studies more sublime. Contrariwise, that Etlike Science is the Ladder of *China* felicity. *Confutius* brought into order the Bookes of foure former Philosophers, and wrote a fift himselfe, which fise Bookes hee called *Doltrines*: in which are containd Morall and Politike Rules, Examples of the Ancients, Rites and Sacrifices, diuers Poems also and the like. Besides these fise Volumes, out of *Confutius* and his Disciples are brought into one Volume, diuers Precepts without order, Similes, Sentences Etlike, Oeconomike, Politike: this Booke for the foure parts is called the *Foure Bookes*. These nine are the ancientest *China* Bookes, whence the others most what are taken, and contayne most of their Characters. And the ancient Kings enacted that they which professe Learning, should take the foundations of their Learning from these Bookes, not only to learne the proper sense of the Text, but to bee able on the sudden to write fitly of any sentence, for which cause that *Tetrabiblion* is learned without Booke. Neyther is there any *Vniuersitie* or publike Schoole (as some of ours haue affirmed, the Masters or Professors whereof haue vndertaken to read and expound those Bookes; but euery one gets a Master at home at his owne choice and cost (of which there is a huge multitude.) In this Science are three Degrees bestowed on them which offer themselues to be examined and are iudged meete. That Examination is almost wholly in Writing. The first Degree is conferred in euery City in that place which is called the Schoole, by some learned man designed to that Office by the King, who is by that place called *Tibio*; the Degree is termed *Siencai*. A threefold Examination is premised. First, at his comming to any City of his Prouince, all that stand for that degree in that City, and the confining limits thereof resort thither and are examined by those Masters which are set ouer the Bachelours till they haue attained further Degree, mayntayned by the Kings stipend. In this Examination euery one is admitted, perhaps foure or 5000. assembled to that purpose. The second is by the foure Gouvernours of the City (for none are admitted to Government but the Learned) which present out of all that number 200. of the better Writers to the *Tibio*, and he in a third Examination chuseth 20. or 30. of the best, which he entitleth *Bachelors*: their Ensignes are a long Gowne, a Cap, and Boots, which none else may weare, & in all places they are much respected as in a ranke aboue the vulgar Citizens, and enjoy also diuers Priuiledges, being in manner subiect only to the Masters aforesaid and the *Tibio*, other Magistrates scarcely meddling with them. This *Tibio* not only hath authority ouer these new created Bachelors, but ouer those which were made before to re-examine them: and these according to their writing hee diuideth into fise ranks; the first he rewardeth with some publike Office in the City, the second with some inferior honour, the third he neyther rewards nor punisheth, the fourth he causeth to be publicly whipped, the last he degradeth and maketh againe Plebeians. The second Degree is called *Kingin*, and may be compared with our *Licentiates*, and is conferred but once in three yeares, and that in the Metropolitane City about the eight Moone with greater Majesty. And the degree is not conferred to all, but to a certayne number of the worthiest, according to the dignity of each Prouince: *Pequin* and *Nanquin* haue each 150. *Cequian*, *Quamsi*, and *Fuquian* 95. others fewer. Only Bachelors, but not all, are admitted to this Examination, the *Tibio* sending out of each City or Schoole 30. or at most 40. of the best, which number yet ariseth in some Prouince to 4000. of those Examinates or Probationers for this second degree. A little before the eighth Moone (which often fells in September, the *Pequin* Magistrates present to the King 100. of the most esteemed Philosophers in the Kingdome, who thence pricketh or nameth thirty, for each Prouince two, to

Examiners.

Palace of examination.

take charge of the Examination of these Candidates. One of these two must bee of the *Hanlin Colledge*, the Collegians whereof are most famous thorow the Kingdome. The King doth not name them till that nicke of time when they must presently packe to their Prouince, diligently guarded also that they speake with none of that Prouince till the *Act* or *Commencement* be past. In the same Prouince also are chosen the best Philosophers to assist these two Examiners. In euery *Mother City* is a huge Palace built for this purpose, compassed with high wals, with many stations for the Examiners separate from noyse; and foure thousand Cels or Studies besides in the midst of the Palace, wherein is a stoole and table for one man, that none may see or confer with any other.

Dayes of Examination.

When the Examiners sent by the King, and those of the Prouince are come thither, they are presently shut vp in their stations before they can speake with other men, or with each other, during all the Examination time. Night and day, meane-whiles the Magistrates and Souldiers guard the Palace from Colloquies. Three dayes (the same thorow the Kingdome) the ninth, twelfth and fifteenth of the eighth Moone, from morning to night are appointed for their writing, the doores being shut. A light refection provided the day before is given to the Writers at publike cost. When the Bachelors come to the Palace, they are thorowly searched whether they haue any Booke or Writing with them, and are admitted only with the Pensils which they vse in writing, their Plate, Paper and Inke; these also and their Garments searched to preuent all fraud, which found causeth the twofold punishment both of losse and sence. When they are admitted, the doores shut and sealed, the two Royall Examiners out of the *Tetrabibulum* propound

Theames giuen.

Seuen writings

three Sentences for so many Theames to euery of them; and foure out of the five Bookes of *Doctrines* for so many other Theames. These seuen Writings must bee made for elegance of words and weight of Sentences according to the Precepts of *China* Rhetoricke; neyther must any Writing contayne aboue 500. Characters. Two dayes being passed for the Examination of these; the next day out of the Chronicles, or other three Cases of Politie are propounded, wherein each which three Theames or Writing expresse their minde, or Libel-wise admonish the King what were fittest to be done. The third day three Law Cases, such as happen in the Magistrates, Offices are propounded, for each thereof to expresse his Sentence. These in great silence, each in his appointed Cell, hauing written their Theames, subscribed with their owne, their Fathers, Grand-fathers and great Grand-fathers names, and sealed so that none but men appointed may reade them, offer them to certayne Officers, which before the Examiners see them; cause them to bee transcribed by certayne thereto appointed: which Copies to be distinguished from the Originals are written in Red Inke, without the Authors names (the Originals laid vp safely) that none might by the hand or name know the Authour. In this Examination the Assistants first reiect the worst & present vnto the two Examiners twice so many as are to be chosen Licentiate; as if one hundred and fifty are to bee chosen, three hundred are tendered to passe their last scrutinie: who first lay by the best, so many as are to bee elected (and thence take the first, second, and third, and set them accurately in order, and then conferre them with the Originals, thence taking the names which they cause to bee written in great Cubitall Letters, in a huge Table, which they expose about the end of the eighth Moone in great concourse of Magistrates, and applause of the new Elects Friends and Kindred. The Priuiledges and Ornaments of this Degree are more then of the former, and if they intend to proceed no further, they are hereby capable of very good Magistracies. After the *Act*, the Kings Examiners publish a Booke of their proceedings, the names of the Graduates and their principall Writings, especially his which is as the *Elder Brother* (they call him *Quinyuen*), and whose Theames were best liked. The Bachelors of other Prouinces may not here be admitted; some only except of the Kings Schoole in *Pequin* and *Nanquin*.

Care to auoid corruption.

Creation and Priuiledges.

Third degree as of Doctors called *Cin-su*.

The third Degree is like our Doctorship, called *Cin-su*, which is conferred euery third yeare also, but only at *Pequin*, and alway is the next yeare after that Commencement of Licentiate. Only three hundred chosen ou of the whole Kingdome obtayne it, although the Licentiate of euery Prouince are admitted to the Examination.

Colai.

This *Act* is in the second Moone on the same dayes that the former and in like forme, sauing that the diligence is greater, as for a greater degree, and the *Colai*, the chiefe Magistrates of the Kingdome are Examiners. The Doctors being pronounced in the same Palace, where the Licentiate vse to bee; all of them in the Kings Palace, before the chiefe Magistrates of the Court (yea anciently the King was wont to bee present) make a Theame, according to the iudgement whereof, the order of the Magistracies which they are to beare, is declared, being distributed in three Rankes.

First and second place glorious.

Hee that in Examination of Doctors had the first place, hath in this second Examination the third place without question: but hee which hath the first or second enioyeth a great dignitie during his life, besides the greatest Offices in the Common-wealth; and might (compared with ours) bee as a Duke or Marquessie, if it were Hereditary. These Doctours presently haue their peculiar *Vest*, *Cap*, *Bootes*, and other Ensignes of Magistrates, and are preferred to the best Offices, such as the Licentiate may not attayne, and are as the prime men of the Kingdome.

Those

Those Licentiates which are rejected from the Doctorship, if they meane to proceed no further, are preferred to Magistracie; but if they list still to stand for that degree they betake themselves home to their Bookes afresh, till the third-year-examination returns, so that some stand ten times, continuing so long private to become more publike. A Booke is also published of them and of their successe. Another is yearly set forth containyng the Names, Countrey, Parents, Offices of all the Doctors; and where they governe, whereby a man may know how any hath risen or descended all his life, as is there vsuall after their merits. It is remarkable also how the Licentiates and Doctors of the same yeare respect one the other as Brethren euer after, and loue the Friends also of their Colleagues, and honour their Examiners as Fathers.

They vse to grant at the same times and places the same Titles (in the Moone following) to Military Professors, but with lesse pompe, because Souldierie is of no such reckoning with them, and few stand for them. This Military tryall is three-fold, in the first they shoot nine Arrowes on Horse-backe running; in the second they shoot as many at the same marke standing: and hee which hath hit the Marke with foure on Horke-backe and two Arrowes on foot, is admitted to the third tryall wherein they haue some Theame of Military matters propounded, and the Judges examining this Triple tryall out of the whole number pronounce about fifty Licentiates in euery Prouince. And when the Doctorall Act is at *Pequin*, one hundred of the choice of these after a Triple Examination are made Military Doctors. These Doctors are more easily admitted to Military Prefectures (but scarcely without Bribes) then the Licentiates. Both the Philosophicall and Military, ouer their doores, set vp in great Letters this their new attayned dignity. All the Examiners, whether of Mathematicall, or Military, or Philosophicall degrees, are of those Philosophers, without assistance of any Captaine, Mathematician, or Physician, as if thereby they were inabled to all things.

Ambition will be highest or nothing.

Military degrees.

Threefold tryall.

§. III.

Of the Tartarian Conquest; Of H v m v v the Establisser of the present Government. The Reuenues. Magistrates in the Courts Royall, Provinces, Cities, Orders, Exaltations, Visitations, Deprivations.

The Government of China is Monarchicall. In times past, there haue bene Lords of Title, as are Dukes, Marqueses, and Earles in Europe, but taken away eightene hundred yeares since. It was neuer subdued by any Forreiners before the Tartarian Conquest. The Iesuites thinke that that Conquerour was *Tamberlane*: for the *Chinois* call him *Tiemor*, and say that he had before subdued *Persia* and *Tartaria*. Hee (whosoever hee was) conquered all the *Chinois* and left them to his Posterity till the yeare 1368. At that time the *Tartarians* growing weaker, diuers Captaynes arose in diuers parts of the Kingdome which shooke off that yoke. Amongst them all the most famous was of the Family *Cin*, whom afterwards the *Chinois* called *Humou*, a famous Captayne, or rather a *Flood of Armes*. He of a common Souldier grew to such greatnesse, that hee first expelled the *Tartars*, and then repelled the Rebels thorow all the Kingdome, and possessed that Souerignrie which still continueth in his Line. For the Crowne there goeth by Inheritance: only two or three of the Ancient Kings haue commended it to others, their owne Sonnes seeming vnworthy; and the people haue by Rebellion sometimes raysed a new Family, diuers yet losing their liues rather then acknowledging that Faction, this being Prouerbiall in their Philosophie, *An honest Woman hath but one Husband, and a faithfull Seruant but one Lord.*

There are no ancient Lawes, but the first Founder of any Royall family makes new Lawes, which his Posteritie are not easily permitted to transgresse. So the present Lawes of China are no ancienter then *Humou*, who either made new, or confirmed the old. Out of ignorance of other parts of the world, they thinke their King *Lord of the World*, and call him *Thienou*, the *Sonne of Heauen*, or (which is all one in their Theologie) of *God*. His vsuall title yet is *Hoamsi*, that is, *supreme Monarch*: whereas they stile other Kings *Guam*, an inferiour title. To prevent Rebellions and Factions. *Humou* ordayned that none of the Royall blood should intermeddle with Government. Those Captaynes which had ayded him in expulsion of the *Tartars*, hee gaue militarie Commands with reuenues and titles, to descend to their Heires. The Royall race hee gaue the titles of *Guam*, as pettie Kings, with large reuenues to bee yeerely payed out of the Exchequer, and commanded all Magistrates to reuerence them. Their Posteritie hee honoured with inferiour Honours and reuenues, so much lesse as further from the originall, and after certaine generations to haue no more then might well maintayne them without labour. The like in Marriages and Titles were prouided for the Royall Daughters. Those assisting Captaynes hee honoured with a plate of Iron like a Charger, in which are engrauen those their exploits for de-

Chap. 5. Polo hath related the Conquest of *Mangsi* by *Cublai Can*, whose successor (and perfecter haply of that Conquest) was *Temur* or *Tamur*, sup. 83. & 126. about 100. yeares before *Tamerlane*, yet it seemes they were not fully subiect (for *Manducile* seru- ued in the wars of *Ecbiant* Can against *Mangi*, sup. 135.) till *Tamerlane*, of whom, see sup. 154. But to ascribe it to *Tamerlane*, and to end the *Tartars* Reigne at 1368. argues small skill in History of the *Tartars*, *Tamerlane* then being but young, if so soone borne. The time (howeuer) is here mil-reckoned.

liuerance of the Kingdome; which being shewne to the King, is priuiledged with pardon of any penaltie, though mortall, three times, except for Treason which forfeiteth presently all Priuiledges. Euery time it obtaynes any pardon, it is engrauen in the Plate. The Sonnes in Law, and Fathers in Law of the King, and some which haue extraordinarily merited of the State, enjoy like Honours and Reuenues with the same diminution of time, as before.

Magistrates.

Quonfu and
Lau Ye or *Lau*
Sie.
Mandarin a
Portugal name.

He also ordained that all Magistracie and Gouernment should belong to those Licentiates and Doctors, whereto neyther the fauour of the King or other Magistrates are necessary, but their owne merits, except where corruption frustrates Law. All Magistrates are called *Quonfu*, and for honours sake they are stiled *Lau ye* or *Lau sie*, that is, *Lord*, or *Father*. The *Portugals* call them *Mandarins*. These haue some representation of *Aristocratie*, in that Gouernment: for though they doe nothing but first petitioning the King, hee also determines nothing without their sollicitation. And if a priuate man petitions (which is seldome, because Officers are appointed to examine Petitions before the King sees them) the King, if hee will grant it, sends it to the Tribunall proper for that businesse, to aduise him what is fit to bee done. I haue found for certaine, that the King cannot giue Money or Magistracie to any, except hee bee solicited by some Magistrate: I meane this of publike Reuenues; which doubtlesse doe exceed one hundred and fiftie Millions yearely, & are not brought into the Palace Treasurie, nor may the King spend them at his pleasure: but all whether Money or Rice and other things in kinde, are layed vp in the publike Treasuries and Store-houses, in all the Kingdome. Thence the expenses of the King his Wiues, Children, Eunuches, Family, and of all his Kindred are in Royall sort disbursed, but according to the ancient Lawes, neither more nor lesse. Thence the Stipends of Magistrates and Souldiers and all Officers thorow the Kingdome are paid: the publike Buildings, the Kings Palace, Cities, Walls, Towres, Fortresses and all prouision of War are thence sustayned, which cause new Tributes sometimes to be imposed, this huge Reuenue notwithstanding.

Kings Reuenues 150. Millions.

How dispensed

Bookes of
Officers.

Of Magistrates are two sorts, one of the Court which rule there, and thence rule the Kingdome; and other Prouinciall, which gouerne particular Cities or Prouinces. Of both sorts are fise or six Bookes to be sold euery where, printed twice each moneth at *Pekin*, as by their course of printing (you haue seene) is easie; contayning nothing else but the name, Countrey, and degree of the Magistrates; and therefore printed so often because of the exaltings, shiftings, setting lower, death of Parents (which suspends three yeares to mourning in priuate) their owne deaths or deprivations.

1. *Li pu*, or
Court of Ma-
gistrates.

2. *Ho-pu*.

3. *Li-pu*.

4. *Pimpu*.

5. *Cumpu*.

6. *Himpu*.

Of the Court Tribunals are reckoned sixe; the first, *Li pu* (*Pu* is as much as *Tribunall* or *Court*, and *Li*, as *Magistrates*) to which it belongeth to name the chiefe Magistrates of the Kingdome, bringing vp from the lower to the higher according to the Lawes prescribed, or if they deserue it, abasing or quite depriving them. For those Licentiates and Doctors continually ascend, except their owne faults deject them, wherein a deprivation makes for euer vncapable. The second is called *Ho-pu*, that is, the Exchequer Court, or that of the Treasurie; which exacts and disburseth the Kings Reuenues. The third is the *Li-pu*, or Court of Rites, which ordereth the publike Sacrifices, Temples, Priests, Kings, Marriages, Schooles, Examinations, Festiuall Dayes, common Gratulations to the King, Titles giuen to the wel-deseruing, Physicians, Colledges of Mathematicians, entertayning and sending Embassages, with their Rites, Presents, Letters; the King holding it abasing to his Majesty to write to any. The fourth, is the *Pimpu*, or Military Court, which rewards the meriting, and takes from the sluggish Souldier; ordereth their Musters and giues Military degrees. The fifth is *Cumpu*, which hath care of the publike Buildings, Palaces for the King or his Kindred, and the Magistrates; Shippes for publike burthens or Armadas, Bridges, Walls of Cities and all like prouisions. The sixth Court is *Himpu*, which inquireth into Criminall Causes and sentenceth them; also all the publike Prisons are subject hereto.

The President
or *Ciam Ciu*.
Cilam.

Colai, or Coun-
sell of State.

Choli and *Zauli*
Magistrates
extraordinary.

All the affaires of the Kingdom depend on these Courts, which therefore haue Magistrates and Notaries in euery City and Prouince, to admonish them faithfully of all things, the multitude and order facilitating this so weighty a Designe. For first, in euery Court is a Lord Chiefe Iustice or President called *Ciam Ciu*, who hath two Assistants, one sitting at his right hand, the other at his left, called *Cilam*: their dignity in the Royall Cities is accounted principall. After these euery Tribunall hath diuers Offices, each of which hath diuers Colleagues, besides Notaries, Courtiers, Apparitors, and other Seruants. Besides these Tribunals there is another the greatest in the Court and Kingdome; they call them *Colaos*, which are three or foure, sometimes sixe Priuy-Counsell in all Affaires. These are daily admitted into the Kings Palace, and there abide whole dayes, and answer as they see cause to the Petitions which are put vp to the King (who was wont to define matters with these *Colai* in publike) and shewing their answer to the King, hee alters or approoueth the same, and sets his hand thereto for the execution.

Besides these Orders of Magistrates and others not mentioned (as like to our owne) there are two sorts not vsuall with vs, the one *Choli*, the other called *Zauli*. In each of these Orders are about sixty choice Philosophers, men approued for their wisdom and courage before experienced.

ced. These two Rankes are vsed by the King in Court or Prouince busineses of greater weight, with great and Royall power, which causeth to them great respect and veneration. These by Libell admonish the King if any thing be done contrary to the Lawes in any parts of the Kingdome, not sparing any of the Magistrates, nor the Kings Houle, nor the King himselfe; to the wonder of other Nations. And although the King sometimes bee touched to the quicke, and toucheth them to the quicke againe, yet cease they not still to rip the sore till it be cured. Other Magistrates may doe it, yea any priuate man; but these mens Libels or Petitions are of most worth, as proceeding from their peculiar Office. The Copies of them and of the Kings answers are printed by many, so that the Court and State Affaires flye thorow the Kingdome, and are by some written in Bookes, and those of most moment transcribed into the Annals of the Kingdome. Of late when the King would for loue of a second Sonne haue excluded the eldest, so many by Libels reprehended the King, that he in anger deprivied or abased one hundred of the Magistrates. They yet ceased not but one day went together into the Kings Palace, and offered vp their Magistracies if he persisted to breake the Law. Lately also when the chiefe of the Colai did not obserue the Law, in two moneths space about one hundred Libels were put vp, notwithstanding they knew him a great Favourite; and hee dyed within a while after, as was thought, of griefe.

See Pantoia.

There are also besides Magistrates, not a few Colledges instituted for diuers purposes, but the most eminent is that called *Han lin Yuen*, into which none are chosen but choice Doctors after due Examinations. They which liue in that Royall Colledge, meddle not with Gouvernment, yet are of higher dignitie then the Gouvernours. Their Office is to order the Kings Writing, to make Annals of the Kingdome, to write Lawes and Statutes. Of these are chosen the Masters of the Kings and Princes. They wholly addict themselves to their studies, and in the Colledge haue their degrees of honours, which they attayne by writing. Thence they are preferred to great dignities but not out of the Court. Neither is any chosen to bee a *Colao*, but out of this Colledge. They gaine much also by Writings for their Friends, Epitaphs, Inscriptions and the like; which all seeke to haue of them, their name giuing credit and reputation of Elegance. These are the chiefe for Examinations of Licentiates and Doctors, who hold them for Masters and send them Presents.

Colledges.

Han lin Yuen.

All these *Pequin* Magistrates are found also at *Nanquin*, but obscured by the Kings absence. *Hum-um* had fixed his Seat at *Nanquin*, but after his death *Yun lo* one of his Nephewes, who in the Northerne Prouinces defended with an Armie thole Borders against the *Tartars*, perceiuing *Hum-um* Sonne but weake, thought to deprivie him of the Kingdome, which hee effected by helpe of the Northerne Prouinces, and with force, fraud and largesse obtayned his Vncles Throne. And because he was strongest in the North parts, and most feare was from the *Tartars* there, he there fixed his Residence, where the *Tartar* Kings had wonted to abide and called that Citie *Pequin*, that is, the Northerne Court, as *Nanquin* signifieth the Southerne, leauing to this the former Offices and Immunities.

Cause of the remouing the Seat Royall from *Nanquin* to *Pequin*.

The Gouvernment of the other thirteene Prouinces depends on two Magistrates, the one *Pucinsu*, the other *Naganzasu*: the former judging Ciuill Causes, the later Criminall; both residing with great Pompe in the Mother Citie of the Prouince. In both Courts are diuers Colleagues and they also chiefe Magistrates called *Tauli*, which gouerning other Cities often reside in them. The Prouinces are all distributed into diuers Regions, which they call *Fu*, each of which hath a peculiar Gouvernour called *Cifu*. These Regions are subdiuided into *Cen*, and *Hien*, that is the greater or more eminent Townes, and those which are more vulgar, which are not lesse then our Cities, if you except our greatest. These haue their speciall Gouvernours called *Cicem* and *Cibien*. The Gouvernours of Cities and Regions haue their foure Assistants and Colleagues as Auditors, and Iudges to helpe them. As for the opinion of some that thinke those only to bee Cities, which are called *Fu*, and *Cen*, and *Hien* to bee Townes, it is an error: for the City wherein the Gouvernour of the Region resides, is also called *Hien*, and hath its peculiar Gouvernour called *Cibien*, and Assistants; and the *Cifu* hath no more power there then in other places of his Iurisdiction; which is the first Appeale to him as Superiour from the *Cibien* or *Cicem*. The second Appeale is to the *Pucinsu* and *Naganzasu* and their Colleagues in the Metropolitane Cities, which Cities likewise haue their *Cibien* and *Cifu*, aswell as the Subordinate; all in incredible Symmetrie.

Prouinciall Gouvernment. *Pucinsu*. *Naganzasu*. *Tauli*. Diuision of Prouinces. Regions or Shires. *Cen* and *Hien*.

Title sum mistaken. *Cifu*, *Cibien* and *Cicem*. Appeals.

And because the whole Prouinciall Gouvernment hath reference to *Pequin*, therefore in euery Prouince besides these, are other two superiour to them sent from the Royall Citie, the one fixing his Residence in the Prouince, called *Tutam*, which may bee compared to our *Vice-roy*, hauing command ouer other Magistrates, and in Martiall affaires: the other is yeerely sent from the Court, and is called *Cia-yuen*, as a Commissioner or Visitor, which reuiues all the Causes of the Prouince, the Cities also and Castles, inquireth of the Magistrates, and punisheth some of the meaner sort, acquainting the King touching the rest, how euery one demeaneth himselfe; and he onely executeth Capitall punishments. Besides these, are many others in Cities, Townes and Villages: and beside them, many which haue command of Souldiers, especially in the Con-

Tutam. *Cia-yuen* or *Chuen*.

- finer and on the Coasts in supine Peace, watching and warding in Ports, Walls, Bridges, Castles, as in the hottest Warres, with Musters and Martiall exercises. All the Magistrates of the Kingdome, are reduced to nine Orders, whether you respect the Philosophicall or Militarie Senate: to all which out of the Treasury is proportionably distributed monethly pay, Money or Rice; yet little answerable to that their Magnificence (the highest Order not hauing one thousand Duckets yeerely) and equall to all of the same ranke, the supreme in matters of Warre hauing as much as the supreme in the literate Order, if you looke to that which the Law alloweth. But much more accrueth extraordinarie then this fee or stipend, besides what any mans industrie, couetise, fortune, bribing addeth, by which they oft attayne to great wealth.
- All the Magistrates vse the same Caps, both Mercuriall and Martiall, of blacke Cloath with two Eares or wings, of Ouall figure, which may easily fall off, which being a disgrace, causeth the more modestie and steadinesse in carriage of their heads. They all weare like *Vest*, and like blacke leather *Bootes* of peculiar fashion; also a *Girdle* wider then the body, about foure fingers broad, adorned with circular and square Figures: On the breast and backe, they weare two square Cloathes Embroidered: in which and the Girdles is great varietie, according to their diuers Degrees; by which the skilfull know their ranke and place. The cloathes intimate it by the figures of Flowers, Fowles, Beasts; the girdles by the matter, of Wood, Horne, Sweet wood, Gold or Siluer; and the best of all of that *Iasper* before mentioned, called *Tu ce*, brought from *Cascar*. Their shadowes or *Sumbreros*, by their Colours and numbers intimate like difference. They haue other *Ornaments*, *Banners*, *Chaynes*, *Censors*, *Guards* with Cryes to make way, that in most frequent streetes no man appeareth, more or lesse, according to the Magistrates Dignitie.
- The *Chinois* hauing plentie of all things, care not for subduing the neighbour-Nations, better keeping their owne, lesse caring for others Countries, then our *Europeans*: their Chronicles of foure thousand yeeres not mentioning any care of enlarging their Empire. And if any *China* impressions or foot-prints bee, it is from men voluntarily going to other Countries, not from the Kings ambition sending them. It is also remarkable that Philosophers beare all the sway, the Souldiers and Captaynes being subject to them, and sometimes beaten of them as Schoole-boyes by their Master: euen in Militarie matters, the King more vsing the aduise of Philosophers then Captaynes; whereupon enery haughtie spirit rather affects meane places in the *Literate* Order, then great in the *Martiall*. Yea these *Literate* are more magnanimous, and more contemne their liues in zeale of the publike then the Souldierie. No lesse admirable is the Symmetrie and Order of Magistrates in their subordinate Orders, in Obedience, Reuerence, Visitations and Presents; the Inferiour giuing honourable Titles to the Superiour and kneeling to them. None beares any Office about three yeeres, except the King confirme it. And the chiefe Magistrates of Prouinces, Cities and Regions, euery third yeere must appeare at *Pequin*, and doe their Rites to the King, at which time seuerie inquirie is made of the Magistrates, and they thereupon rewarded or punished. I haue also obserued, that the King dares not alter any of those things, which in this publike Disquisition are ordered by the Iudges. Anno 1607. we reade foure thousand Magistrates condemned, that being the Search-yeere; and a Booke published thereof.
- These Condemned are of five sorts; First, Couetous which haue taken Bribes to peruert Iustice, or haue vsurped the publike or priuate mens fortunes: these are wholly depriued of all Offices for euer. The second are the Cruell, which haue too seuerely punished, which are also depriued of their Places and Ensignes: The third are the Old and sickly, and the Remisse and negligent; these are depriued, but permitted the Immunities and Ensignes. The fourth sort, are the rash, headdie, and vnaduised, which are put in lower Offices, or sent to more easie places of Government. The last are such, as haue not gouerned themselves or theirs, worthy of that place of Government; these are wholly depriued. The like Inquisition is made euery fifth yeere of the Court Magistrates, and the same time also, of Militarie Commanders.
- None may beare Office in his native Prouince, except Militarie. The Sonnes also or Domestike seruants of Magistrates, may not goe out of the house lest they should bee Factors for bribes: but all seruices without doores is done by Officers, designed to his place: and when hee goeth out of his House hee sealeth the doores, whether priuate or publike, that none of his Seruants may goe out vnwitting to him.
- They permit no Stranger to liue with them that mindes to returne to his Countrey, or is knowne to haue Commerce with forraigne Nations: and no Stranger although of a friendly Nation and Tributarie, may haue access to the inward parts of the Kingdome; a thing whereof I haue seene no Law, but Custome: neither haue I euer seene any of *Corai* in *China*, except some Slaues which a Captayne brought thence, although a tributarie Nation which vseth in manner the *China* Lawes. And if a Stranger steale into the Countrey, they punish him not with Death nor Slauerie, but permit him not to returne. They most seuerely punish those, which without the Kings leaue haue commerce with Strangers: and hardly can any bee perswaded to be sent abroad with Mandates; and such are rewarded with some Dignitie at their returne. None beare Weapon in Cities, not the Souldiers or Captaynes, but in their Traynings; nor haue any men weapons
- Militarie commands.
- Magistrates fees.

- Care to prevent rebellions, factions, and bribes.
- Strangers.

weapons in their Houses, except some rustie blade which they vse when they trauell for feare of Theeues. Their greatest Brawles goe no further, then scratching or pulling by the hayre; hee which flees or abstaines from wrong is esteemed both Wise and Valiant. When the King dyeth, none of his Sonnes are permitted to remayne in the Royall Citie, but the Heyre; and it is Capitall for them, being dispersed in diuers Cities to stirre thence. Some principall amongst them, compounds their strifes and rules them; in Cases with others, they are subject to the Magistrates.

Weapons.
Brawles.
Succession and royall kindred.

Q. IIII.

Their manifold rites in Salutations, Entertaynments, and other Ciuitie : to the King and Magistrates : Of Buryals and Marriages, Birth-daves; their Men, Women, Names and Games, Habites.

Courtesie or Ciuitie, is reckoned one of their five *Cardinall vertues*, much commended in their Bookes. (*Their common Rites yee haue had largely in Pantoia.*) When greater respect is vsed, as after long absence, or on a Solemne day, after the common bowing, both fall on their knees with the forehead to the ground, and then rise and downe againe in like sort three or foure times. When they doe this reuerence to a Superiour, hee stands at the head of the Hall, or sits, and at all those prostrations ioyning his hands, bowes a little and sometime for greater modestie hee goeth to the side of the Hall, whose head is Northwards as the doore is Southwards. The same rites they performe to their Idols; and sometimes as the Seruants to their Master, or the meanest of the people to honourable persons, which is presently to kneele and knock the ground thrice with their forehead: they stand at his side when their Master speakes, and kneele at euery answer. When one speakes to another, they vse not the second person, nor the first person when they mention themselves, except to their inferiour, and haue as many formes of depreessing themselves, as of exalting others, the lowliest of which is to call a mans selfe by his proper name, in stead of (I.) When they speake any thing of another mans, they vse a more honourable forme; Of their owne, or theirs, a more modest: which a man must learne both for manners sake, and to vnderstand their meaning.

Cap. 7.
Courtesie in mutuall veneration and circumspet behaviour to others.

Side-reuerence.

Respect of persons.
See *Thaofos Epistle*. sup. 344

The Visitors send their Libels or papers of visitation, so many that the Porter is faine to keepe a note of their names, and where they dwell, lest wee should forget; and if the partie to bee visited be not at home or at leasure, that libell is left with the Porter for a testimonie. The more honourable the Visitor, the larger hee writes his name. In sending Presents they vse like libelling; setting downe also each gift in a line by it selfe, part of which may bee sent backe without offence, which is done with a like libell of thanks. They often send money or pieces of Gold for presents. They haue Garments proper for visitations. The chiefe place in both Royall Courts, is giuen to Strangers, most remote especially, which made vs commonly to bee preferred. The seruant, when they are set, brings as many little Cups of *Cia* as are Guests. When they part, neere the Hall doore, they reiterate their bowings, then at the Doore, and at the passing out, and after they are in their Chayre or on Horsebacke, againe without doores; and lastly, a Seruant is sent after in his Masters name, to salute them, and they send their seruants likewise to resalute.

Visiting one another.

Tedious courtesie.

Their Banquets are not so much commestations as *Compotations*; for although their Cups be as little as Nut-shells, yet they drinke often. Their Ciuill and Religious affayres are therein handled, besides the demonstration of kindnesse. In eating they haue neither Forkes, nor Spooones, nor Knives; but vse small smooth sticke, a palme and a halfe long, wherewith they put all meats to their mouthes, without touching them with their fingers. They bring all things to the Table cut in little pieces, except it bee of softer condition, as Egges, Fish, and such things as their sticke will diuide. They vse to drinke hot, euen in hottest weather, whether their *Cia*-decoction, or Wine, or Water: which it seemeth is profitable to the Stomacke; for they liue long, and are strong at seuentie or eightie yeeres: Neither is any of them troubled with the Stone, which I suppose is occasioned by our cold drinke. When any is Inuited, a Libell is sent a day or more dayes (if it bee to a solemne Banquet) before, signifying, that the Inuiter *hath prepared a Banquet of Hearbs, and hath washed his Cups, that at such a day and houre (which commonly is neare night) hee may heare and learne somewhat of him*: At the day they send another like Libell (on the out-side of these Libels, there is a red paper added with the more honourable Name of the inuited, which the *Chinois* vse besides their proper name) in the morning to each Guest, and

China banquetting.

Feeding.

Hot drinke.

The Stone vnknewne in *China*, which so tormenteth Europeans, both in the Kidney, Vreters, Bladder: this last deprived me of

my honorable Patron and best friend, B. King, Anno 1621. and Anno 1622. Master Bifield my neighbour, the painefull Minister at *Thi-fleworth* dyed of a Stone, which I weighed, and found (a miracle in Nature) much about 32 Ounces, whiles these our *China* relations are in the Presse; therefore here mentioned. My selfe also hauing stone passions, am therefore not stonie in compassion.

third

third at the houre. Their furniture is not Hangings (whereof they haue no vse) but Pictures, Flowers, Vessels; to each Guest his Table, and sometimes two to one, the one before the other. These Tables are some Cubits long and broad, but more in length, and couered with a cloath as our Altars. The Seats shine with their Varnish, adorned also with Pictures and Gold. The first entertainment is with *Cia* in the Hall: and thence they goe to the Feasting-roume. Before they sit downe, the Inuiter salutes the principall Guest with a low courtesie, and holding a cup of Wine: then goeth to the doore or porch, and first making a low courtesie, turning his face to the South, powres out that cup on the ground, offering it to the *Lord of Heauen*, and bowing downe againe, returneth, and filling another cup goeth to that principall Guest, and bowing salutes him in the place in which the rites of salutation are vsed: and then they goe together to the Table where the chiefe Guest must sit. The midst of it is the chiefe place; there with both his hands he sets a dish with great veneration, and taking the two stickes (which vsually are of Ebonie, or Iuorie tipped with Gold or Silver, where they touch the meate) layes them by, and taking a seat, brusheth it with his sleeues lightly, and sets it in the midst; after which both goe backe and bow themselues in the midst of the Roome. Thus hee doth to euery one, placing the second on the left hand, the third on the right. Lastly, hee which shall haue the chiefe roome receiueth of his seruant the Inuiters Dish and Cup, and bids Wine to be filled, and together with the other Guests and the Inuiter, boweth downe and placeth the Dish on his Table (which is placed in the lower part of the Hall, with his backe to the South, and face to the chiefe Table) with the stickes and seat, as he had done before to him; and then all goe againe to their place, with great ceremonie, to sit them better with both hands, he to whome the rite is done, standing by the side of the doer with his hands in his sleeues, and modestly bowing with thanks. They wash neither before nor after. After all this, they performe the last rite of inclination to the Inuiter together, and then each to other, and then sit downe. When they drinke, the Inuiter with both hands takes the Cup in the Dish, and lightly lifting it vp, and then letting it downe inuites them to drinke, all turning to him at the same time, and beginning to drinke, or to sip rather, foure or fise times setting it to his mouth, not as we vse with one continued draught. After the first Cup the Dishes are brought in, of which the Inuiter beginning, all with their stickes apply a bit or two to their mouthes, diligently obseruing, not to lay downe their stickes before the principall Guest hath layd downe his: and then the seruants fill his, and after euery mans Cup, with hot Wine: and the same rite is againe and againe repeated, but more sipping then eating. Mean-while some discourse, or Comedie, or Musike continue. The grace of their Feast is variety, a little of each, Flesh also and Fish mixed, taking off nothing, but setting one Dish on another like Castles and Towers. Bread, and Rice (which there supplies our Bread) comes not in solemne Banquets. They haue games also, in which the loser is fined to drinke, with others disport. None is compelled to drinke about his strength. Their drinke is tipple, boyled like our Beere. Their solemne Banquets last all night, the remainders giuen to the Guests seruants. Neere the end of the Feast they change Cups. In eating they are more moderate.

like.
Dragons.

The Palace
and gates.

The King is obserued with more Rites then any other in the World. None speakes to him but his Eunuches, and those which liue in his Palace, Sonnes and daughters. None of the Magistrates without the Palace (the Eunuches also haue their degrees) speake to the King but by Petition, and those with so many formes of veneration that none can make them, which is not well exercised, though he be learned. Euery new yeere which beginnes with that New Moone which next precedeth or followeth the Nones of February, out of euery Prouince a Legate is sent to visite the King, which is done more solemnelly euery third yeere. Also in euery Citie on euery Change day, all the Magistrates assemble to one place in their Citie, where the Kings Throne and Dragon-ensignes are carued and gilded, often bowing and kneeling before it with peculiar composition of the body to veneration, and with ten thousand yeeres of life to the King. The like is done on his Birth-day yeerely, the *Pequin* Magistrates and Prouinciall Legates, and the Kings kindred make their appearance there and presents. All also which are named to any Office by the King goe to giue thanks to the Throne (for the King is not there) with rites prescribed with habite peculiar to that purpose, with an Iuorie Table couering their mouth as oft as they speake before the King: the King was wont to come forth to a window, with such a Table in his hand, and another on his head, ouer his Crowne hanged, about with threads of gemmes, his face hidden in presence from the beholders.

The Kings colour is yellow (forbidden to others) of which his garment is wrought with many golden Dragons, which are carued or painted in all the Palace, and Vessell, and furniture; in the rooffe also, whence some haue thought the Tiles to be of Gold or Brasse, being of a yellow Earth, each nayled to the Timber: with Nayles gilded on the heads, that all may appeare yellow. It were treason for another to arrogate that colour or Armes, except he bee of the Royall linage.

The Palace gates are foure, to the foure corners of the World. They which passe by, descend from their Horses or Seats, and goe on foot till they be past, the greatest soonest alight, and that at *Nanquin* also, where no King hath of long time resided. The gates to the South both inner and

and outward are three, the King only going in and out at the middle (which otherwise is shut) others at the other gates on the right and left hand. Their computation of time is onely by the Kings Raigne. Sometimes the King bestoweth a Title on the Parents of the principall Magistrates by a certaine writing, made by the Kings Philosophers in the Kings name; esteemed wonderfully, acquired with any cost, and kept in the familie as a thing sacred. The like opinion is of other Titles given to Widowes, expressed in two or three Characters, given to Widowes which to their old age haue refused second marriages; or to old Men which haue liued an hundred yeeres, and in like cases. They set these Titles ouer their doores. Magistrates also doe the like to their friends. To good Magistrates Arches are erected at publike cost, of Marble: by Citizens also to some of their Citizens which haue attayned any notable dignitie. The most precious Artifices thorow all the Kingdome are yeerly sent to the King to *Pequin* with great costs. The Magistrates of the Kings Citie goe abroad with lesse pompe, on horsebacke; and few of the principall in Seats, and those carried but by foure Porters: all in reuerence of the King. Foure times in the yeere, once a quarter, all the Court Magistrates assemble at the Sepulchres of the antient Kings and Queenes, and make there their offerings: giuing the principall honour to *Hammou*. They prepare to this solemnitie certaine dayes fasting at home and surceasing of suits.

Funerals of
Kings.

Next to the King they honour their Magistrates, both in formes of words and visitations, to which none aspire but Magistrates; and they which haue beene depriv'd lose not all honour in this kind, but sometimes come forth in their habits, and are respected by their Citie Magistrates. If one bee preferred to another dignity, which hath well executed his Office, they honour him with publike gifts, and reserue his Boots in a publike Chist, with Verses in his praise. To some they erect Temples also, and Altars with Images, and some are deputed to keepe lights there burning, and odours, at publike Rent charge perpetually, with huge Censers of Bell-metall, as they doe to their Idols. Yet doe they distinguish betwixt this and Diuine worship, of their Gods asking many things, whereas these Rites are onely memorials, though many of the vulgar * confound them together. Cities are full of such Temples, by friends often erected to vnworthie men, to which at certaine times they goe and performe kneeling and bowing. Rites, and offer Meats. Their Bookes are full of precepts for obseruing Parents with due honour, and in outward shew no Nation performs so much. They will not sit ouer against them but on the side, speake to them with great reuerence, they sustaine their poorer Parents with their labour in best manner they are able, and in nothing are more curious then their funerals.

Honour of

and mour-
nings.

Mourning by
bookes.

The mourning colour is white, and all their habite from the Shooes to the Cap of a strange and miserable fashion. The cause of three yeeres mourning for Parents, is because so long they carried them in armes with so much labour of education: for others as they please, a yeere, or three moneths, as they are in neere ness: For the King they mourne three yeeres thorow all the Kingdome, and for the *Lawfull Queene*. Their funerall Rites are written in a Booke which they consult on that occasion, all the parcels of the habite there pictured. When a man of ranke is dead, the Sonne or next Kinsman sends Libels to the friends within three or foure dayes: all the Roome is white, with an Altar in the midst, on which they place the Coffin and Image of the dead. Thither all the friends come in mourning one after another, & offer Odors and two Wax-candles on the Altar; whiles they burne, making foure bendings and kneelings, hauing first censured against the Image. The Sonnes stand at the side, and the women behinde, couered with a Curtaine, mourning the while: the Priests also burne Papers and Silkes, with certaine rites to minister Clothes to the deceased. They abstayne from wonted Beds (sleeping on Straw-beds on the ground neere the Corps) from flesh and other daintier food, Wine, Bathes, companie with their Wiues, Bankers, not going out for certaine moneths, remitting by degrees as the three yeeres expire. On the funerall day the friends are by another Libell invited, to which they goe in Procession forme, in mourning; many Statues of Men, Women, Elephants, Tigres, Lions, of Paper all going before, diuersified in colour and gilding, which are all burnt before the Graue: a long ranke of Idoll Priests, Prayers, and Players on diuers Instruments obseruing diuers rites in the way; huge Bell-censers also carried on mens shoulders; after which followes the Herse vnder a huge carued Canopie adorned with Silkes, carried with forty or fifty men. Next the children on foot with staues, and then the women enclosed within a white gestatory Curtaine, that they may not be seene: followed by women of the kindred in mourning Seats. The Graues are all in the Suburbs. If the Sonnes bee absent, the Funerall pompe is deferred till their comming. They bring (if it may bee) the deceased in another Countrey to lie by his friends. The Graues are adorned with Epitaphs in Marble magnificently. Thither on certaine dayes yeerly the kindred resort to cense and offer, and make a funerall banquet.

Buriall.

Marriages.

Their Marriages and Spousals are with many rites, done in their youth; the Contracts compounded by the Parents without their consent; they obserue equalitie in yeeres and degree in the lawfull Wife. In their Concubines, lust, beauty, price beare sway. The poorer also buy their Wiues, and when they list sell them. The King and his kindred respect onely beauty, Magistrates appointed to make the choise. One is his lawfull Wife; the King and his Heire hauing

- nine other Wiues a little inferiour, and after them sixe and thirty, which are also called Wiues: his Concubines are more. Those which bring forth Sonnes are more gracious, especially the Mother of the eldest. This is also familiar to other families thorow the Kingdome. Their first Wife sits at Table; others (except in the Royall families) are as Hand-maids, and may not sit, but stand in presence of either of them: their Children also calling that lawfull Wife their Mother, and for her (though not the true Parent) obserue trienniall mourning. In Marriages they are curious not to take any of the same sur-name, of which sur-names there are not a thousand in all that vast Kingdome. Nor may any man frame a new sur-name, but must haue one antient of the Fathers side, except he be adopted into another familie. They respect no affinity or consanguinity in a differing sur-name, and so marrie with the Mothers kindred almost in any degree. The Wife brings no portion, and although when shee first goeth to her Husbands house the street-full of household attends her, yet is all prouided by his costs which sends money some moneths before as a gift to her for that purpose.
- Sur-names.** few. In England antiently were few or none. See *Cam. Remaines.* Affinitie and consanguinity. Portion.
- Birth-day.** Euery mans Birth-day is festiuall celebrated with Presents, Banquets and iollity: especially after the fiftieth yeere explete (at which time they are reckoned amongst old men) and then euery tenth yeere. The Children then procure Emblemes of their friends, and Epigrams, and some write Bookes. That day is also festiuall in which they are of age to take the *Mans cap*, which is about twenty yeeres, till that time wearing their haire loose. But the first New and Full Moone of the yeere is most generally festiuall; each man then hauing ingeniously deuised Lights or Lamps made of Paper, Glasse, or other matter, the house seeming by the diuersified Lights to bee on a light fire. They runne vp and downe also with great stirres in the night with Dragon-fashioned Lights, and make great shewes of Powder-fire-workes.
- Virilis pilus.** The *Chinois* are white (but neerer the South more browne) with thinne beards (some ha-
Candlemas. uing none) with staring haire, and late growing; their haire wholly blacke; eyes narrow, of Egge forme, blacke and standing out: the nose very little, and scarcely standing forth; eares meane: in some Prouinces they are square faced. Many of *Canton* and *Quamsi* Prouinces on their little toes haue two nailes, as they haue generally in *Cabin-china*. Their women are all low, and account great beauty in little feet, for which cause from their infancy they bind them straight with clothes, that one would iudge them stump-footed: this, as is thought, deuised to make them house-wiues. The men and women both alike let their haire grow without cutting: but Boyes and Girles till they are fifteene yeere old, are cut round, leauing a locke onely on the crowne: after which they let it grow loose ouer their shoulders till twenty. The most of the Priests haue head and beard euery eighth day. When they are men they binde vp their haire in a Cap or Coife made of horse or mans haire, or in a silken Cawle; and in Winter of woollen: on the top it hath a hole, where the haire comes forth, and is tyed in a neate knot. The women weare not this Cap, but binde vp their haire in a knot, and make it vp with a dresse of Gold, Siluer, Stones, and Flowers. They weare Rings on their eares, but not on their fingers.
- Fire-workes.** The men and women weare long garments. The men double them on their breast, and fasten them vnder both the arme-holes; the women on the midst of the breast. They weare wide long sleeues; but the womens wider, the mans straighter, at the wrists. Their Caps are artificially wrought. Their Shooes are much differing from ours; the men weare them of Silke with diuers workes and flowers, exceeding the elegance of our Matrons. Shooes of Leather none but the meaner sort weare; and scarcely admit they Leather soles, but of Cloth. The Caps of their Learned are square, of others, round. Euery one spends halfe an houre at least in combing and trimming his haire. They winde also long clouts about their feet and legs, and therefore weare their Breeches loose. They weare no Shirts, but a white Coat next the skinne, and wash often. They haue a seruant to carrie a Shadow or great *Sumbrero* ouer their heads against the raine and Sunne; the poore carrie one for themselves.
- cap. 8.** *Chinois* persons described.
- Women.** For *Names*, besides the sur-name of which is spoken, the Father giues one to the Sonne (for females haue no name but the Fathers sur-name, and called as they are borne, *first, second, third,* in order of the Sisters:) by this name they are called by the Father and Elders; others call them likewise from that order amongst the Brethren, as is said of Sisters. They in their writings call themselves by that which their Father gaue them; but if others either equall or superiour should so call them, it were both vniuall and iniurious. When a Boy goeth to Schoole his Master giueth him another name, which is called his *Schoole-name*, whereby onely his Master and Schoole-fellowes may stile him. When he hath his *Mans cap* put on, and marrieth a Wife, some more honourable person giueth him a more honourable name, which they call, the *Letter*: by this any man may call him, but those which are subiect to him. And when he is now at the full growth, he receiueth of some graue person his most honourable name, which they call *Great*, whereby any may call him present or absent: but his Parents and Elders still vse the *Letter-name*. If any professe a new Sect, his Instructor calls him by a new name, which they call, of *Religion*. And when one visiteth another, he will aske what is his *Honourable name*, to stile him thereby: and we were therefore fayne to take a *Greater name* then that which we receiued in Baptisme, for them to call vs by.
- Haire.** **Rings.** **Apparell.** **Name-ceremonies.** **Women haue none.** **Fathers name:** **Schoole-name.** **Letter-name.** **Great name.** **Religious name.** **Greater then Christian name.**

They are studious of Antiquities : much value old Triuets of Bell metall, Pictures in blacke and white Characters and writings, sealed with the Authors seale (for there are many Counter-
eaters.) The Officers haue all a Seale proper to their place giuen by *Humon*, which they vse on-
ly sealing with red colour : and if they lose the Seale they lose the Office, and are besides severely
punished ; and therefore they carry it with them, in a sealed and locked Boxe, and neuer leaue it
out of sight, at night keeping it vnder their Pillow. Graue men goe not on foote thorow the
streets, but are carryed in a seate closed, except they list to open the fore-part, whereas Magi-
strates seates are euery way open. Matrons seates are altogether closed, but easily knowne from
mens by the fashion. The Law forbids Coaches and Litters. Some Cities are in the midst of Ri-
uers and Lakes, in which they haue very neate Boates to passe the streets. And because they goe
more by water then ours, therefore there Shipping is more conuenient and elegant. But the
Magistrates, built by publike cost are as commodious as Houses, with diuers Lodgings, a Hall,
Kitchen, Cells, so neate as seeming Great mens houses, rather then Ships ; and therefore they
make their solempne Banquets a Ship-board, passing along the Rivers and Lakes for further plea-
sure. All within shines with *Ciaram* or shining Vernish in diuers colours, and the Carued
workes gilded in places, with combined sweetes to the Eyes and Nose. They honour their
Masters more then with vs, so that if a man haue beene anothers Scholler but one day in a-
ny Art, hee calls him Master euer after, and neuer sits in any meeting but at his side, and doth
him all honour.

Dice-play and Cards are common with them : Chesse also with the grauer persons, not alto-
gether vnlike ours : but their King neuer remoues but to the foure next roomes, and the Bishops
haue their Queenes. They haue also which they call *Poulder paunes*, which goe before the
Knights and follow the Paunes. They haue a graue Game in a table of three hundred roomes
with two hundred men white and blacke, in which Magistrates spend much time, and the cun-
ning skill whereof gets much credit to a man, although hee can doe nothing else : and some
chuse such their Masters with wonted rites. Theft is not punished with Death : the second fault
therein, is branded with an hot Iron and Inke in the Arme, with two Characters, the third time
in the Face, after with their terrible Whipping or condemning to the Gallies, for a time limited
: so that there are abundance of Theeves. Euery night in Cities, many Watchmen at cer-
taine times beate Basons as they walke the streets, the streets also enclosed and shut, yet many
chefts are committed, the Foxe being the Gooseherd, and the Watch partners with the Theefe.
The Cities in greatest Peace in the midst of the Kingdome, are shut euery Night, and the Keyes
carryed to the Gouvernour.

§. V. Of their Superstitions, Cruelties, feares of Magistrates, of the Kings kindred,

of Strangers and Souldiers. Their Deities and three Sects :

Priests, Nunnes, Monasteries, Le-
gends, Lyes.

NO superstition is so generall in the Kingdome, as the obseruation of luckie and vnluckie
Dayes and Houres, for which purpose yeerely is Printed a two-fold Table of dayes by
the Kings Astrologers, in such plentie that euery house is full of them. In them is
written on euery day, what may bee done or not, or to what houre yee must forbear
businessse, which may in that yeere happen. There are others more dangerous Masters, which
make a liuing by this Wizardly profession of selling lyes, or prescribing fit houres : wherby many
differre the beginning of Building, or Iourneying till their appointed day or houre come : & then
how vnfitting soeuer that prooueth with crosse weather, they set on neuertheless, though it be
but a little little onser, that the worke might thence appeare to take beginning. The like super-
stitious obseruation they haue of the moment of the Natiuitie, which they precisely set downe,
diuers professing by Astrologie, or by superstitious numbers, or by Physiognomie, or Palmestrie,
or Dreames, or words in Speech, or posture of the body & by innumerable other wayes to fore-
tell future Fortunes ; many *Gipsie*-jugglers vsed to such impostures, as by a stalking Knaue which
shall professe his Fortunes exactly told him by the professor, or by learning out of printed Bookes
which describe euery Citie, Street and Familie, what hath hapned as an argument of the truth
of that which they say shall happen. Yea, their credulitie breeds such strong imagination, that
some being foretold of a Sicknesse such a day, will then fall sicke of conceit.

Many also consult with Devils and familiar Spirits, and receiue Oracles from the mouth of
Infants, or of Beasts, not without fraud. They are superstitious in chusing a plot of ground, to e-
rect a dwelling House, or Sepulcher, conferring it with the head, tayle and feete of diuers Dra-
gons, which liue (forsooth) vnder our earth, whence depends all good or bad Fortune. Diu-

- Geologers.** Learned men busie their wits in this abstruse Science, and are consulted when any publike Buildings are rayled. And as Astrologers by the Starres, so these *Geologers* by inspection of Riuer, Fields, Mountaines and scite of Regions, foretell Destinies; dreaming by setting a Doore or Window this or that way, conueying the rayne to the right or left hand, by a higher or lower rooffe, honour and wealth shall accrue to the House. Of these Impostors the Streets, Cities, Courts, Shops, Markets are full, which sell that which themselves want, good Fortune to all Foole-fortunate buyers: yea, Women and blinde folkes professe it, and some find such Chapmen of the Learned, Noble, King and all, that they grow to great riches by others little wits. All disasters publike or priuate are attributed to *Fate*, and ill scite of some Citie, House or Palace. The noise of Birds, the first meeting in the Morning, Shadowes caused by the Sunne in the house, are their Fortune-guides.
- Augurie.** For other vices, some will make themselves Seruants to rich men, to haue one of the hand-maydes become his Wife, so multiplying issue to bondage. Others buy a Wife, but finding their family become too numerous sell their Sonnes and Daughters as Beasts, for two or three pieces of Gold (although no dearth prouoke him) to euermore separation and bondage, some to the *Portugals*. Hence is the Kingdome full of Slaues, not captiued in warre, but of their owne free-borne. Yet is seruice there more tollerable then else-where; for euery man may redeeme himselfe at the price payd for him, when hee is able; and there are many poore which with hard labour sustayne themselves. A worse euill in some Prouinces is theirs, which finding themselves poore, smother their new-borne Babes, specially Females, by an impious pietie and pittilesse pitie preventing that sale to Slauerie, by taking away that life which euen now they had giuen. They pretend hereunto also their *Metempsychosis*, dreaming that the Soule of that Infant shall the sooner passe into some more fortunate body: and are not therefore ashamed to doe this in others presence, yea not the meanest of the communaltie. Many more inhumanely kill themselves, either wearie of a miserable life, or willing after death to bee reuenged of some enemy, whiles to the Enemy of mankind many thousands yeerely Sacrifice themselves, by Halter, Drowning, and Poyson.
- Cruell vices and vnnaturall Chinois.** Another immanitie in the Northerne Prouinces is vsed vpon Male Infants, whom for hope of Palace preferments their Parents make Eunuches; of which in the Kings house are ten thousand, a dull and blockish kinde of vnkind vnmanly men. Their Whippings also take away more liues, then the executions of sentences to Death; their Reedes slit two ells long, a finger thicke and foure broad, at the first blow breaking the skinned and flesh on the hinder part of the thighes: to preuent which many bribe the Magistrates, of whose domineering fullnesse of power they liue in perpetuall feare, where calumnies and lyes are so rife: which *China* perfidiousnesse made the Kings come so guarded abroad and vnknowne, and now not to come forth at all.
- Child-selling.** The Kings kindred are now growne to sixtie thousand, and daily increasing become a burthen to the publike, and daily increase in idlenesse, impotence, numbers, the King being very jealous of them, and setting Guards, besides their perpetuall exile from *Pequin* and *Nanquin*. No maruell if Strangers be no better trusted in *China*, where the Natiues and Bloud are suspected: out of whose Bookes they scorne to learne, and repute them little better then Beasts: and the Characters whereby they expresse them are taken from Beasts. How Legats are held as prisoners in publike houses is else-where deliuered. Commanders of Souldiers, which guard places are guarded and watched, and not trusted with the pay of their Companies: neither is there any more base then the Souldiery, most Slaues or condemned persons, for their owne or their Ancestors euils: and when they are free from exercises of warre, they become Muletters, Porters, and of other base Offices. The Captaynes onely haue some authoritie. Their armes are worthlesse for offence or defence, and onely make a shew, the Captaynes being also subject to the Magistrates whippings. Their Alchymistickall vanitie, and study of long Life, with precepts and huge bookes of both, I omit. The founders forsooth of these Sciences haue gone body and soule to Heauen. The making of Siluer hath made many spend their siluer, wits and credit, cheated by professing Artists; and the great Magistrates (few in *Pequin* free) are taken vp with the other Study; some shortning their life to make it longer. They write of one of their Kings which had procured such a potion of immortalitie, whom a friend of his was not able to dissuade from that conceit, enraged, by his sudden snatching & drinking his prepared potion: which he seeking by death to reuenge, the other answered, how can I be killed, if this draught cause immortalitie? and if I may, then haue I freed thee of this errour.
- Child-killing.** Touching the *China* Sects, I read in their Bookes, that the *Chinois* from the beginning worshipped one God, which they call the King of Heauen, or by another Name *Heauen and Earth*. Beneath this Deitie, they worshipped diuers tutelare Spirits of Mountaynes, Riuer, and of the foure parts of the world. In all actions they held Reason to bee obeyed, which light of Reason they confessed they had from Heauen. Of that supream Deitie and his administering Spirits, they neuer had such monstrous conceits as the *Romans*, *Greekes*, *Egyptians*, whence the *Iesuites* hope that many of them in the law of Nature were saued. Their Sects are reckoned three: The first of the Learned, the second of *Sciequia*, the third *Lauch*. One of these is professed by all

which vs their Characters. That of the *Learned*, is most proper to *China* and most ancient, and all their *Learned* learn it in the course of their studies. *Confutius* is the Prince thereof. This Sect hath no Idols, worships one God, beleeuing all things to bee conserved by his providence. They worship in inferiour sort the Spirits. The best of them teach nothing of the Creation : rewards and punishments, they confine in this life to a mans selfe or his posteritie. Of the immortalitie of the Soule they seeme to make no doubt, for they speake of the deceased living in Heauen, but of Hell they make no mention. The later *Learned* deny both, with the soules immortalitie : yet some say, that the soules of good men are corroborated with vertue and made able to hold out, others dying with the body.

The principall opinion seemeth borrowed of the Idoll Sect, five hundred yeeres agoe ; which holds that this whole Vniuerse consists of one matter, and that the Creatures are as so many members of this huge body, so that euery one may attayne to the similitude of God being one with him ; which we confute out of their owne ancient Authors. Though the *Literate* acknowledge one supream Deitie, yet they erect no Temple to him, nor any other place proper to his Worship, nor any Priests, persons or rites peculiar, nor haue precepts thereof, nor any which prescribe, or punisheth defect of Holies ; nor any which priuately or publikely recite or sing ought to him. Yea they affirme, that the Office of Sacrificing to the King of Heauen and his worship belongs to the King : and if any should take on him that Office, hee should vsurpe the Kings, and be thereby a Traytor. For this purpose, the King hath two stately Temples in both Royall Cities, one dedicated to the *Heauen*, the other to the *Earth* : in which sometime hee vsed to Sacrifice, but now in his place certayne Magistrates haue succeeded, which there sacrifice many Oxen and Sheepe, with many Rites. To the *Spirits* of Mountaynes, Riuer, and of the foure Regions of the world, onely the chiefe Magistrates Sacrifice, nor are the people admitted thereto. The precepts of this Law are containd in the *Tetrabiblion* and five Bookes of *Doctrines* ; nor are any other Bookes allowed, but onely some Commentaries thereon. Nothing in this Sect is more of note then their yeerely *Obits*, or parentations to their deceased Parents, common to all from the King to the meanest, obseruing their dead Ancestrie as if they were living. Neither yet doe they suppose that they eate of the meate which is set them, or need it, but they haue no better meane to expresse their loue.

The *Literate* haue a costly Temple to *Confutius* in euery Citie, by Law appointed, in that place where the *Schoole* is, and adjoyning to the Magistrates Palace, which is set ouer the Bachelors or Graduates of the first degree. In a principall place of that Temple his Image is erected, or else his Name in golden Cubitall letters, written in a curious Table. Hither the Magistrates assemble euery New-moone, and Full, also the Bachelors, with wonted kneelings, Odours and Wax-lights, to acknowledge their Master. On his Birth-day and on other set times, they offer festiuall Dishes, thankfully confessing his learned workes, whence they haue attained their Degrees and Offices, but pray not to him nor looke for ought from him ; but as is obserued of their dead Parents. Other Temples also are, seene of the same Sect to the *Tutelare Spirits* of each Citie, and to the Magistracie of each Tribunall, wherein they solemnly binde themselves by solempne Oathes, to obserue Law and Iustice, when they first enter into their Office. In these they offer Dishes and Odours, but in differing Worship : for in these they acknowledge, there is a Diuine power to punish the perjurious, and reward the good. The scope of this *Literate Sect*, is the peace and good of the Common-wealth, and of Families, and of each persons ; their precepts agreeing with Nature and Christianitie. Five Relations or Societies are obserued by them, comprehending all duties of humanitie ; of Father and Child, of Husband and Wife, of Master and Seruant, of elder and younger Brethren, of Fellowes and Equals. They condemne Single life, permit Polygamie, and in their Bookes largely explaine that precept of *Charitie*, to doe to another as a man would be done to. They deny this to bee a Sect, but a certayne Academie instituted for the government of the Common-wealth ; and because it prescribes not, nor prohibiteth any thing touching the Life to come, many adjoyne the other two Sects to this.

The second Sect is called *Siequia* or *Omitese*, and by the *Iaponians*, *Sciacca* and *Amidaby*. Both haue the same Characters, and the same *Totoqui* or Law. It came to the *Chinois* from the West, brought from the Kingdome of *Thienscio* or *Scinto*, now called *Indostan*, betwixt *Indus* and *Ganges*, about the yeere of Christ 65. It is written that the King of *China*, warned in a Dreame, sent Legats thither, which brought Bookes and Interpreters from thence, the Authors of them being dead. And therefore I see not how truly the *Iaponians* affirme that *Sciacca* and *Amidaba* pierced thither, and were Native of *Siam*. The Authors of this Sect, haue taken some things out of our Philosophers. For they hold foure Elements, and manifold Worlds, and transmigration of Soules, and other things. Somewhat it seemes to acknowledge the *Trinitie* fabling of three Gods becomming one ; it acknowledgeth iust rewards to the good in Heauen, to the bad in Hell. It extols Single life, so as it may seeme to reject Marriage. They leaue house, and friends and trauell into diuers places Begging. The Rites of this prophane Sect, haue great affinitie with our (*Romish*) Ecclesiasticall : the Singings of men saying their seruice may seeme nothing to differ from our *Gregorian* ; they haue Images also in their Churches ; their Priests Garments are alto-

gether like ours, which with an Ecclesiasticall terme wee call, *Plunialia*. In their Service they often recite the name *Tolome*, which themselves confesse to be ignorant of. But they denie eternitie in their Heauen and Hell, ascribing a new birth after I know not what revolutions of time, in some other of their conceited Worlds, then and there to be penitentially purged; with other fooleries. They prohibite to eate of liuing creatures, but few impose on themselves this abstinence, and they finde easie absolution from this and other sinnes, if they giue to the Priests, who professe to deliuer from Hell by their Prayers or Recitations, whom they will.

This Sect came in at first with great applause, as clearly professing the Soules immortalitie: but nothing more disgraced it, then that that King and these Princes which first embraced it (which the *Literate* often object) died miserably with violent death, and publike losse and misfortune followed. By writing of many Bookes they haue entangled it in inextricable Labyrinths. The notes of Antiquity appeare in the multitude of their Temples, and most of them sumptuous: in which huge Monsters of Idols of Brasse, Marble, Wood, and Earth are seene; with Steeples adioyned of Stone or Bricke, and in them huge Bells, and other ornaments of great price.

Many and costly Temples, Steeples, Bells, Images. Their Priests many and miserable.

The Priests of this Sect are called *Osciami*, they shaued their head and beard, against the fashion of the Countrey: some trauell, as is said, some leade a very austere life in Mountaines and Caves, but the greatest part which amount to two or three millions, liue in Monasteries, sustayned with their antiently-giuen Reuenues, and Almes, and also by their owne industry. These Priests are accounted, and iustly, the most vile and vicious in the whole Kingdome, sprung of the basest plebeians, sold in their childhood to the elder *Osciami*, and of Slaues made Disciples, succeed their Masters in Office and Benefice, a course which they haue found for their propagation. For, few are found which voluntarily by desire of sanctitie doe adioyne themselves to those Monkes. Ignorance also and illiberall education makes them liker their Masters, few of them learning Letters or ciuill rites; and daily growing worse. And although they haue no wiues, they are much addicted to women, and cannot but by grievous penalties be kept from them.

Monasteries, Innes. Redemption of wilde creatures. See Pin: is Riner faire. Fasters.

The Colledges of the *Osciami* are diuided into diuers Stations, in euery of which is one perpetuall Administrator, to whom his seruants or as many as he brings vp, succede. They acknowledge no Superior in those Cells, but euery one in his owne Station builds as many Lodgings as he can (most of all places, in the Court) which after they let to strangers, so that they are rather Innes then Monasteries, as full of tumults as empty of deuotion. Although they bee of base esteeme, yet are they employed to Funerals and other Rites, by which wilde beasts, and fowles, and filhes are set at liberty, by the professors of this Sect with opinion of great merit. In this our age this Sect hath much reuiued, and many Temples are built and repaired, by Eunuches, Women, and the rude vulgar, and especially by the *Ciaicum*, or *Fasters*, which all their liues abstayne from Flesh, Fish, (Egges, and Milke) and worship a multitude of Idols with set prayers at home, and are by hire to be called to any other mans. Nunnes also obserue the same Monastical rules, being single and shaued; they call them Nunnes, nothing so many as the Monkes.

Nich, or Nuns. Third Sect. Lye of Lauzu.

The third Sect is called, *Lauzu*, deriued from a Philosopher which liued at the same time with *Confucius*, whom they fable to haue bene carried 80. yeeres in his parents wombe before he was borne, and therefore called, *Lauzu*, that is, the *Old Philosopher*. He left no Bookes of his Opinion, nor seemes to haue intended any new Sect, but certaine Sectaries, called *Tausa*, made him the head of their Sect after his death, and wrote diuers elegant Bookes gathered out of diuers Sects. These also liue single in their Monasteries, and buy disciples, base and wicked as the former. They weare their haire as the Lay-men, differing herein, that where they weare their haire tyed on a knot, these haue a Cap on the crowne of Wood. Some also are married, and say ouer their Holies in their owne houses. They say, that with other Idols they worship also the *Lord of Heauen*, whom yet they imagine Corporeall; and to haue suffered many things. They tell, that the King of Heauen which now reigneth, is called *Ciam*, and he which before ruled was named *Leu*. This *Leu* came one day to the Earth riding on a white Dragon, and *Ciam* a Wizard enter-tayned him with a Feast, where whiles *Leu* was eating, *Ciam* gat vp on the white Dragon, and was carried to Heauen, and excluded *Leu* from that souerainty; only he obtayned of this new King, that he might rule ouer a certaine Mountaine in his Kingdome, where they say he still liueth: thus confessing (as the *Greekes* of *Ioue*) themselves to worship an Usurper and Traitor. Besides this Deity of *Heauen*, they acknowledge three others, one of which they say, *Lauzu* is, hauing some dreame also, as the former of the Trinitie.

Leu Legend.

See before of Leu Hill, neere the great Lake.

They also speake of places of rewards and punishments, but differing from the former: for they promise a Paradise for soule and body together, and haue Images of some in their Temples which haue so gone thither. To obtayne this, they prescribe certaine exercises of sitting in diuers postures, set Prayers, Medicines by which the life is lengthned, if not made immortall. Their Priests exorcise Deuils, and driue them out of houses, by painting horrible shapes of them in yellow Paper on the walls, and making horrible cries as if themselves were become Deuils. They arrogate also to bring downe or to stay Raines, and other publike and priuate fortunes, most impudent impostors, either Lyars or Magicians. They assist the Kings sacrifices in those Temples of *Heauen* and *Earth* (thereby acquiring much authority) being Masters of the Musike therein: and

Way to fooles Paradise.

and are called to Funerals, to which they goe in precious vestments with diuers muscull Instruments, making a pompous-procession shoue thorow the streets. The like pompes they vse at the streets ends on certaine times, hired by the dwellers.

They haue a Prelate called *Ciam*; which dignity he transmitted to his posterity 1000. yeeres since by hereditary successions, and seemeth to haue taken beginning from a Magician which liued in a Caue of *Quiam* Prouince, where his posterity still continueth. Their Prelate liueth most commonly at *Pequin*, obserued by the King, and admitted into the inmost Palace to consecrate and hallow the Roomes suspected to bee haunted by ill spirits. Hee is carried in an open Chaire, and with other pompe competent to the chiefe Magistrates, and is allowed by the King a great Reuenue. But I haue learned of a Conuert that these Prelates now are so ignorant that they know not their owne Charmes and Rites. Hee hath no power ouer the people, but the *Tan* (Priests) and their Monasteries, many of which are also Alchimyists. These three Sects haue diuersified themselves into 300. in seeming, daily encreasing and growing worse and worse. *Humou* ordained that these three Lawes should be kept for the good of the Kingdome, onely the *Literate* to rule; whence it comes that they seeke not to ruine each other. The Kings make vse of them all for their purposes, often repairing the old, and building new Temples. The Kings wiues are more prone to the Idoll Sect, and maintayne whole Monasteries without the Palace, and buy their Prayers with Almes. The Idols are not onely in Temples in this Kingdome, but in priuate houses in peculiar places, in streets, ships, Palaces, they are the first things you see, and yet put they little confidence in them. Their wisest men seeke to mixe all three Sects together, and to whiles they embrace all, are of none, and proue *Atheists*.

Ciam Prelate.

Multiplication of Sects.

§. V I.

Of Strangers, and forraigne Religions in China.

Now inhospitall the *Chinois* are to Strangers, we haue in part heard, neither permitting egress to the Natiues, nor ingresse to Aliens except in three respects. The first, such as come to pay their annuall Tributes. The second, such as pretending honour and tribute, come (as wee haue heard) from the West with seeming tribute, a colour to their gaine by merchandise. The third, such as in admiration of the *Chinian* vertues and learning, come thither (as the Queene of *Sheba* to *Salomon*) to learne the same, which is the *Iesuites* pretence: but these must here fixe their habitation, nor may be suffered to returne; such is their ialousie, of discouering their mysteries to others. And this made the *Iesuites*, after so long stay, free from feare of expulsion, which yet since complaine of persecution. But it may not be known, that they haue any intelligence or commerce with strangers: & therefore the *Iesuites*, which haue obtayned two so great priuiledges, the Eunuches Palace for their residence, and the imployment in correcting the *China* Kalender, both by Royall approbation; yet could not obtayne leaue to goe into the Prouince of *Canton*, though with Mathematicall pretexts for that Kalender-busines, to obserue longitudes and latitudes of places, because they were said to be Countrymen to those of *Macao*. Yea, a *Colao*, or Counsellor of State, was deprived, for sending a message to a bordering King; a tempest of libelling complaints thundring and showing against him therefore. In the bordering Prouinces they set narrow watch at Custom-houses, Bridges, and in the very Riues, by ships of warre thereto appointed. But if they be once gotten into the inner parts of the Kingdome, there are no such Officers, nor searches. Neither may any stranger passe out of the Kingdome, after once entring, without the Kings licence. The *Iesuites* steale their ingresse and egress by meanes of the *Portugals*, which had the Towne of *Macao* assigned them by the *Chinois*, for trafficke. These come vsually twice a yeere to the chiefe Citie of the Prouince of *Canton*, which is not called *Quantum*, or *Canton*, (the name of the Prouince) but *Quam cen*. All the day time they haue free entrance in the Citie about their merchandise, but must lie on shipboord at night. In the midst of the Riuer there is a little Iland, and therein a Temple, in which they are allowed their Catholike deuotions. There by Boat did they prouide to steale in or out of the Countrey. The *Mahumetans* that come in by land, if they stay nine yeeres (as is obserued) may neuer return home againe. Of these there are now many thousand Families in *China*, dispersed into the most of the Prouinces and chiefe Cities. They haue there their Temples very sumptuous, and their Circumcision. But as farre as I could euer learne, they neither teach, nor care to teach, others their deuotions, but are vnskilfull of the *Saracens* Tenents, and are contemned of the *Chinois*. It seems, that their comming in was in the time that the *Tartars* reigned here, which since haue increased, and after so long continuance, are not held in suspicion, as other strangers. Some say, after the fourth generation they are reputed as Natiues: yea, they are admitted to the studies of Learning, Degrees, and Magistracy, as well as the *Chinois*. But most of these, thus dignified, relinquish their former superstition, retayning nothing thereof, but abstinence from Swines flesh, which rather by Nature, then for Religion, they abhorre.

This is also testified by *Monf.* de *Monfart*.

Many *Mahumetans* in *China*

Christians.

Touching *Christians* in *China*, there is not so great certainty. Certaine *Mogores* told *Riccius* of some in the *Xensian* Prouince, in the North parts of *China*, at a place called *Xucheo*, which were white, bearded, vied Bells, worshipped *Isa*, that is, *Iesus*, and *Marie*, and honoured the Crucifixe; their Priests married, which cured diseases without medicines. A *Iew* at *Pequin* gaue more full intelligence, that at *Caisumfu*, and at *Linco*, in the Prouince of *Sciantium*, and in the Prouince of *Sciensi*, there liued certaine Strangers, whose Ancestours had come out of forraigne parts, which worshipped the Crosse which the *Chinois* expresse by the Character of Ten) and made the signe thereof with the finger on their meate and drinke. They also made the same signe with Inke on the foreheads of their children, to preserue them from misfortunes. A *Iesuite* also saw, in the hands of an Antiquarie, a Bell, with a Church and Crosse thereon grauen, circumscribed with *Greeke* letters. The *Iew* also reported that those Crosse-worshippers had the same doctrine in their prayers which the *Iewes* held: this the *Iesuites* interpreted of the *Psalter* common to them both. Hee affirmed that there were many of them in the Northerne Prouinces, which so flourished in Letters and Armes, that they grew suspicious to the *Chinois*, which hee thought was caused by the *Saracens* some sixty yeeres before. The Magistrates were so incensed hereby, that they for feare were dispersed, some turning *Iewes*; some *Saracens*; others *Idolaters*: and their Temples were also conuerted into Idolatrous Temples, one of which he mentioned in his Countrey. Euer since they hide their profession, and when the *Iesuites* sent one of their Conuerts to make enquire, he could learne of none: which they thought proceeded from their feare, taking him for a Spie sent from the Magistrates.

Siam.

Chaisamfu.
Iew at Pequin
his report:

Israelites dispersion.

Iewes at Hamcheu.

Pentateuch.
Want of prickes

Decay of Iudaisme.

All these Sects the *Chinois* call, *Hoei*, the *Iewes* distinguished by their refusing to eate the new or leg; the *Saracens*, Swines flesh; the *Christians*, by refusing to feed on round-hoofed beasts, Asses, Horses, Mules which all both *Chinois*, *Saracens*, and *Iewes* doe there feed on. The *Saracens* called the *Christians* also *Isai*, as before; and *Terzai*, which is a name giuen in *Persia* to the *Armenian Christians* (as an *Armenian* affirmed to *Riccius*) whence hee coniectured, that these *Christians* came out of *Armenia*. And by the report of *Haiton* the *Armenian*, which sayth, their King came to the Great *Can* of *Cathay* (which wee haue before obserued, at least the best parts thereof, to be the North parts of *China*) to perswade him and his to become *Christians*; which in great part also hee affected, besides other *Christians* there reported to bee, by *Paulus*; and those of *Sarnau*, subiect to the Great *Can*, mentioned by *Vertomannus*, which seeme to be neere these in *China*. The *Malabar Christians* haue *Chaldee* memorials of *China*, conuerted by Saint *Thomas*; and their Metropolitan hath his style of all *India* and *China*.

A certaine *Iew* at *Pequin* hearing of the *Iesuites* there, came to them to see and conferre with them, imagining them to be *Iewes*. This *Iew* was borne at *Chaisamfu*, the Mother-citie of the Prouince *Honan*, his name was *Ngai*, his countenance not resembling the *Chinois*; hee neglecting *Iudaisme*, had addicted himselfe to the *China* studies, and now came to *Pequin* to the examination, in hope of proceeding Doctor. There did hee enter the *Iesuites* Houle, professing that he was of their Law and Religion. *Ricci* leads him into the Chappell, where on the Altar stood the Image of the Virgin, *Iesus*, and *Iohn Baptist*, kneeling; which he taking to be the Images of *Rebecca* and her Twins, did worship vnto them, contrary (he said) to their custome. The Images of the Euangelists he supposed to be so many of *Iacobs* sonnes. But vpon further questioning, the *Iesuite* perceiued that he was a professor of the Law of *Moses*: he confessed himselfe an *Israelite*, and knew not the name of *Iew*; so that it seemed, the dispersion of the ten Tribes had pierced thus farre. Seeing the *Hebrew* Bible, hee knew the Letters, but could not reade them. He told them that in *Chaisamfu* were ten or twelue Families of *Israelites*, and a faire Synagogue, which had lately cost them ten thousand Crownes; therein the *Pentateuch* in Rolls, which had bin with great veneration preserued siue or six hundred yeeres. In *Hamcheu* the chiefe Citie of *Chequian*, hee affirmed, were many more Families with their Synagogue; many also in other places but without Synagogues, and by degrees wearing out: his pronounciation of *Hebrew* names differed from ours, as *Herusoloim*, *Moscia*; for *Messia*, *Ierusalem*. His Brother, hee said, was skilfull in the *Hebrew*; which he in affection to the *China* preferment had neglected; and therefore was hardly censured by the Ruler of the Synagogue.

To this Citie did *Ricci* send one of his to enquire, who found those reports true, which also copied the beginnings and endings of their Bookes, which they compared, and found to agree with their owne *Pentateuch*, sauing that they wanted prickes or points. He wrote also in *China* Characters to the Ruler of their Synagogue, that hee had the rest of the Bookes of the Old Testament, and other Bookes of the New, which contayned the acts of the *Messias*, being already come. The Ruler doubted, saying, that he would not come till ten thousand yeeres were expired. Hee also promised, that because hee had heard much good of him, if hee would come thither, and abstaine from Swines flesh, they would make him Ruler of their Synagogue. After this, three *Iewes* came from thence to *Pequin*, and were almost perswaded to become *Christians*. These complained, that through ignorance of the *Hebrew*, their Religion decayed, and that they were likely all of them in a short time to become *Saracens* or *Ethnikes*. The old Archisynagogue, was now dead, his sonne a young man succeeded in place, but ignorant of their Law

Law. And that their *Jewish* Religion was indeed languishing, appeared by this, that they both worshipped the Popish Images, and complained that in their Synagogue and priuate houses they had none. They were offended that they were forbidden the eating of any creature, which themselves had not killed, which had they obserued in this Iourney had cost them their liues. Their wiues and neighbours esteemed Circumcision of their Infants on the eighth day a cruell thing, which they could be willing to alter, with acceptation of the *Christian* Law, nor would much stand about Swines flesh.

As for the *Christian* Religion thither carried by the *Iesuites*, you haue heard the whole substance of their owne large Histories; I meane not of Miracles, and other like stufte and stuffings, but the meanes of conuaying the Gospel to the *Chinois*, which are merchandise, money, & gifts, Mathematiks, Memorative-art, Morality, which to *China* Couetousnes and Curiosity with their conforming to *Confutius* Ethikes, and *China* Literature, Habite, Names and officious Rites, were good Orators, and made way with much adoe to that little which is done; a mutuall exchange in many things, of *Romish* for *Chinois* Beades, Shauing, Vests, Songs, Mumimus, Tapers, Censers, Images, Legends, Monkes, Nunnes, Processions, Pilgrimages, Monasteries, Altars, hee and shee Saints, and other things innumerable pertayning rather to *bodily exercise* which *1.Tim.4.8.* profiteth little, then to *Godlinesse*, or *God-likenesse*, who being a Spirit, requireth men to worship *10.4.23,24.* him in spirit and truth; and by foolishnesse of preaching saue them that beleue, not by wisdom of words, in elegant writings, and those more of Arts then Christianity. The great Doctor of the *1.Cor.1.21,27.* Gentiles tooke another course, not with excellency of words, sayth he, or wisdom; yea, hee esteemed to know nothing among the learned Corinthians but Iesus Christ and him crucified: neither stood *1.Cor.2.1,2,3.* his word in the enticing speech of mans wisdom, but in playne euidence of the Spirit; not the wisdom of the World, but the wisdom of God in a myserie, &c. Which I speake not as denying the seruice of Arts to Diuinity, but of Diuinity in manner to Arts, where the profession is not as of a Tent-maker to liue that he may preach, but as of an *European* Philosopher, where *Hagar* domineereth, and *Sara* at some times whispers a little, and except in Images and Shewes scarcely shewes her selfe, as more fully appeareth in the fore-going History. But would God any Arts or any Preachers may occasion the opening of their eyes, which were wont to bragge of two eyes, and say *Europeans* had but one, when as they haue but this one naturall eye, and in spirituall things are blinde: and would God the *Chinois* might as generally acknowledge themselves thankfull to *Iesuiticall* labours in professing the Gospell, as I doe here my selfe for this Historicall light of *China*. *Haiton, c.1.*

§. VII.

The Map of China, taken out of a China Map, printed with China Characters, illustrated with Notes, for the vnderstanding thereof.

THe originall Map, whence this present was taken and contracted, was by Captaine *Saris* (whose industrie and acts haue both heere and elswhere enriched this worke) gotten at *Bantam* of a *Chinesse*, in taking a distresse for debts owing to the *English* Merchants; who seeing him carefull to conuay away a Boxe, was the more carefull to apprehend it, and therein found this Map, which another *Chinesse* lodged at his house, lately come from *China*, had brought with him. The greatnesse of the danger at home (if knowne) made him earnestly begge for that which was on the other side as earnestly desired and kept. Master *Hakluyt* procured it of the Captaine, professing his intent to giue it to Prince *Henry* of glorious memory, who being suddenly aduanced to a higher view in Heauen, and Master *Hakluyt* following, this Map came to my hand, who sought to expresse my loue to the publike in communicating what I could thereof. For it being in *China* Characters (which I thinke none in *England*, if any in *Europe*, vnderstands) I could not wholly giue it, when I giue it; no man being able to receiue, what he can no way conceiue. *Tom.1. l.4. c.1. c.2. c.3.*

And as in greatest things our little vnderstandings easier apprehend negations then affirmations, and can better tell what they are not, then what they are; so this Map easily tells at first, euen without Commentaries, the comments and conceits of our Geographers, *Ortelius*, *Mer-cator*, *Hondius*, and whatsoeuer other our Authors of Maps, and Globes, who all haue heerein fayled, giuing nothing lesse then *China* in their *China*; whether wee regard the generall figure and shape thereof, or the particular Riuers, Hills, Prouinces, Wall, Latitude, and if wee beleue the *Iesuites* Longitude also. They present it in forme somewhat like a Harpe, whereas it is almost foure square; they make Hills, Riuers, Lakes, Ilands, (*Coray* also for one, which is part of the Continent) Cities, Prouinces, euery thing out of due place. Whose industry I commend; but industry guided by fanisie, and without light, is but the blind leading the blind, or like a feeled vnmanaged Horse, the more spurred, the more ready to carrie his Rider into precipices, or out of the way at least. Our Geographers haue indeed payd the *Chinois* in their owne Coine: *Benefit of this Map in contrasting others.*

for they, as before yee haue read, knew nothing in manner of the other parts of the World, and expresse them as fansifully in their Maps; and wee likewise knowing nothing of them, haue entertayned, and beene entertayned with *Fansi-maps*, in stead of those of *China*. As therefore by Sir *Thomas Roes* honourable industry wee haue giuen you *Indus* and *India* before, which no Geographer before had done (they all bringing *Indus* thorow *Cambaia*, and some seeking for *Ganges* at *Canton* in *China*) so here we giue you a true *China*, the *Chinois* themselves being our Guides, and the *Iesuites* their both Examiners and Interpreters.

The Originall is about foure foot one way, and almost fife foot the other, whereof a yard and some foure inches square is the Map it selfe; the rest are *China* Discourses touching the sayd Map in their Characters and Lines (running downward, and beginning at the right hand to bee read, after their manner) which are heere omitted, as not vnderstood. Yet haue wee some vnderstanding (as where wee see a man farre off, whom we know to bee a man, and can obserue his habit, gesture, motion, though wee see not the proper complexion of his face) by that which *Pantoia* hath told vs before; namely, that those *China* Characters contayne all the Tributes of each Prouince, yea the number of Houses and perions in the same. And in the Map (of which wee haue giuen an extract) hee sayth the *Rounds* and *Squares* are Cities and Townes of principall note all walled; adding that the Riuer is distinctly delineated; and the great Lines are boundaries of Prouinces, (wee haue heere expresse them after our manner in little prickes,) the lesser expresse the chiefe Cities Iurisdiction. Ours hath no such lesse Lines, but those mentioned *Rounds* and *Squares*, which perhaps hee meaneth; for therein are many others in Characters, without such lines round or square, and therefore as I suppose without Iurisdiction; and in this extract wee haue left them out, because we exactly knew not their meaning, and perhaps sometimes are Cities, sometimes Castles or Townes, or Hills, or some other thing: and silence seemed better, then labour to expresse an vknowne Character, or boldnesse to expresse our owne folly or to occasion others, deceiuing and being deceiued. These *Rounds* and *Squares* also haue their Characters in them, and those greater *Squares* with Crosses, haue, some three others foure Characters.

Besides *Pantogia*, another hath helped further to the particular vnderstanding, namely our famous Countryman Master *Candish*, who in his voyage about the Globe, brought home certayne references taken out of the Map of *China*, neere which hee sayled, and it seemes by some skilfull of the Languages both of *China* and *Portugall*, had the same interpreted to him. That the Prouinces beare other names then in our Map or discourse is no wonder; for both the *Chinois* themselves in diuers Prouinces speake diuers languages, and in all haue the Court language besides the peculiar: and the *China* Characters are the same to many Nations, each of which reads them into his owne language, dialect and appellation. Thus what one Prouince calleth *Languyn* (wanting the *N*.) by diueritie of Dialect, is else-where called *Nanquin*; *Pequin*, *Paquin*, and *Puckin*; yea, by other language *Taybin*, and *Cambalu*, and *Suntien*, or *Citie of Heaven*. I durst not interpret all, chu sing rather to giue an vncertayne truth, then to hazard a certayne error. Master *Candishes* Notes are these.

* Perhaps this is *Seiansi*.
n These leagues seeme doubtful.
Pequin.

o This note of degrees is false, if the *Iesuits* be true: and I thinke rather the guesse of the *Portugall* Interpreter, then that there was any such note in the Map. For the *Chinois* were scarcely to good Cosmographers to obserue degrees.

r Or *Quichew*.
Nannuin.

1 The Prouince of *Cansas* * hath 4. great Cities, and 20. small Cities, and 77. Townes and Castles: it contayeth in length 55. leagues: it hath 362000. Houses of great men that pay Tribute and 13900. men of Warre, and hath 47000. Horses which are the Kings, kept for his defence.

2 The great City of *Paquin* where the King doth lye, hath belonging to it 8. great Cities, and 18. small Cities, with 118. Townes and Castles, it hath 418789. Houses of great men which pay Tribute: it hath Horsemen for the War, 258100. this City is in the latitude of 35. degrees to the North-wards, being there as cold as it is vially in *Flanders*.

3 The Prouince of *Soyebin* hath 7. great Cities, and 16. small, with 12. Townes and Castles, and one great Citie, to which many repayre to fight against the *Tartars*: it hath () leagues in length, and hath 164118. great Houses which pay Tribute, and 96000. men of War.

4 The Prouince of *Santo p* hath 6. great Cities, and 14. small, with 90. Townes and Castles; it is 82. leagues long, and hath 77555. great Houses which pay Tribute: 63808. horsemen, and 31000. footmen of War.

5 The Prouince of *Oyman* q hath 7. great Cities, and 14. small, with 90. Townes and Castles; being 470. leagues long, and 132958. great Houses that pay Tribute, 82800. men of Warre. Out of this Prouince commeth Copper, Quick-silver, and Black-lead.

6 The Prouince of *Cutchew* hath 8. great Cities, and 12. small; and 83. Townes which make Armour to fight with the *Iewes* which do inhabit beyond *Cauchin-china*: it is 100. leagues broad, and hath 32920. Horsemen and Footmen with 405670. great Houses which pay Tribute 60 whereof the men of War are payed.

7 The Prouince of *Languyn* hath 14. great Cities, and 17. small, and 95. Townes and Castles: it is 120. leagues ouer, and hath 962818. great Houses which pay Tribute: it hath in it 208900. men of Warre. Whereof there are 52500. *Tartar* Horsemen that take wages.

8 The Prouince of *Vquam* hath 14. great Cities and 19. small, 150. Townes and Castles, and is 210. leagues broad; and 53161. Houses that pay Tribute: and 71600. men of Warre.

9 The Prouince of *Som* hath 7. great Cities, and 11. small, and 105. Townes and Castles; and is 200. leagues broad: and hath Houses that pay Tribute 139567. and men of Warre 345632.

10 The Prouince of *Essiram* hath 11. great Cities, and 75. small, and 80. Townes and Castles, and is 440. leagues broad, and hath great Houses that doe pay Tribute 1242135. and 339000. men of Warre.

11 This Lake lyeth behind *Siam*, and before *Champa*, and doth joyne with the *Lappians*, and from thence commeth all the water that serueth the Kingdome of *China*: and the *Indians* and the *Chinians* doe report this Lake to be the whole World, and so they paint the Sea, the Moone and the Stars within it.

12 The Prouince of *Lansay*, hath 13. Cities and a chiefe Citie, and 73. Townes and Castles, and is 260. leagues broad, and hath great Houses that pay Tribute 1393629. and 12700. men of Warre.

13 The Prouince *Cuansa* hath 12. great Cities, 45. small, and 51. Townes and Castles, it is 260. leagues broad, and hath great Houses that pay Tribute 1306390. and men of Warre, both Horsemen and Footmen 100100.

14 The Prouince of *Vanam* hath 14. great Cities, and 36. small, and 34. Townes and Castles, and is 88. leagues broad, and hath great Houses that pay Tribute, 589296. and 15100. men of Warre.

15 The Prouince of *Fuguien* hath eight great Cities, and one principall Citie, and 54. Townes and Castles, and two great Cities of Garrison to keepe watch vpon the *Japons*, and is 200. leagues broad, and hath 5009532. great Houses that pay Tribute, and 4003225. men of the Kings Guard.

16 The Prouince of *Canton* hath 40. great Cities, and seuen small, and 77. Townes and Castles; and a Citie that putteth forth hundreds of ships for the keeping of *Canchin-china*, and is 380. leagues in breadth, and hath 483383. great Houses which pay Tribute, and 39400. men of Warre.

17 The Prouince of *Enam* hath seuen great Cities and 13. small, and 90. Townes and Castles: and is 88. leagues broad, and hath 589296. great Houses that pay Tribute, and 15100. Souldiers.

The *Spanish* Friers of the *Philippinas*, as *Mendoza* recordeth, thus out of the *China* Bookes relate the names of the Prouinces, *Pagnia*, *Foquien*, *Olam*, *Sinsay*, *Sisuan*, *Tolanchia*, *Cansay*, *Oquiam*, *Ancheo*, *Honan*, *Xanton*, *Quichen*, *Chequean*, *Susuan* and *Saxi*; tenne of which are seated on the Sea-coast. He also addes that *Pagnia* or *Pequin* hath forty seuen Cities (stiled *Fu*) and one hundred and fiftie others termed *Chen*. *Canton* hath thirtie seuen of the one, and one hundred and ninetie of the other, and so proceedeth with somewhat differing account, reckoning in all five hundred ninety one Cities entituled *Fu*, and 1593. of the *Chen* Cities, which he makes Townes: whereas the Iesuits haue taught vs that *Fu* is the Title of a Region or Shire, in each Prouince, which are sub-diuided into *Cen* and *Hien*, those the more, these the lesse principall, but yet equall to our Cities, as before is obserued.

Againe, in a Dialogue printed at *Macao*, in the Confines of *China*, 1590. by the *Portugals*, these Prouinces are thus reckoned, Sixe vpon the Sea, *Coantum*, *Foquien*, *Chequiam*, *Nanquin*, *Xantum*, *Paguin*; the other nine In-land Prouinces, *Quiansi*, *Huquam*, *Honam*, *Xiens*, *Xansi*, *Su-chuon*, *Queichen*, *Iunan*, *Coansi*. *Perera* reckons them thus, *Fuquien* in which *Cinceo* is the best knowne City; *Cantan*, *Chequeam*, *Xutiansu*, *Chelim*, *Quianci*, *Quicin*, *Quanci*, *Confu*, *Vrnan*, *Sichina*, &c. all which diuersity proceedeth partly from ignorance, partly from different Language and Dialect in the expounding these Characters. And it must needs be so, the *Chinois* wanting vse of, and Characters to expresse *b. d. r.* and all their Characters being of things not Letters; in proper names is very great difficulty to expresse ours in their Characters, or theirs in our Letters; insomuch that one Iesuite doth not perfectly agree with another, nay, often differs from himselfe, as in *Iansen*, *Tamcen*, *Hiancen*, for their great Riuer which *Polo* calls *Quian*; and *Chi*, and *Ci*, and *Qui* I find often confounded in their syllables, as also *x* and *sci*, as *Xauchin*, *Sciachin*, and the like. Yea, such is the difficulty, that the Iesuits can scarcely deuise to expresse in *China* Characters, the forme of Baptisme, to put the *Latine* words thereof, into *China* Characters, that Baptisme might vniformely bee administred after the *Romish* Rite, as themselves confesse.

Touching their Souldiers, I thought good, to adde this note for their Peeces whose Barrels *Pantoia* sayth, are but a span long, that Captayne *Saris* beeing asked told mee, hee saw many of them, and they were as long as Pistols, but the Cocke such as makes them of little seruice.

I haue added these Pictures of a Man and Woman of *China*, not by ghesse, but out of certayne in *China* Pictures made also in *China* in very good Colours, but with Arte meane enough, fine cloth inserted in strong *Indian* Paper; of which Captayne *Saris* communicated many to me.

Their little Eyes and Noses, long Hayre bound vp in knots, womens feete wrapped vp, long wide-sleeued Garments, Fannes, &c. I haue (taking diuers parts out of diuers) presented to thee. A taste of the *China* Characters thou hast in the Title. That of *Ricinus* I haue added from the Iesuits, in thanks for his great paines, and to shew the habit of the head, &c.

The names of the Prouinces I haue hunted out of the Iesuites Iourneyes and other Relations. In the most I am sure I am right, in the other * you haue my coniecture; for neyther know we their Characters, nor haue any giuen vs a particular Geography or Chorography, but only the names of the Prouinces. I haue added names also to some Cities and Riuer of principall note. As for the truth of the Map I finde well to agree with the Iesuites Iourneyes; but it hath not *European* Art, it being neyther graduated, nor Hills, nor Woods, or other differing places presented to the view; only hauing Characters, Lines, Lakes, and Riuer. I haue aduentured to adde Degrees to helpe such Readers as cannot doe it better themselves, following the Iesuits prescripts in generall, although I cannot but maruell at that longitude, so farre differing from the generall opinion, and could almost doubt, that herein these *Portugals* are minding that diuision agreed on betwixt the *Spaniards* and them, which hath anciently caused such contentions, and wherein you haue read some Offices of the Iesuits in these *China* Discourses. But I will not contend, where themselves speake faintly.

Now for *Quian* which *Polo* hath mentioned, as the greatest Riuer in the world (it is here called *Iansu*, or *Hiansu*, or *Yansu*, that is, the *Sonne of the Sea*, and *Iansuchian*) and another called *Caramoran* (*Cara* signifieth blacke, and this great Northerne Riuer is alway thicke and troubled) and their Marriage by Art, is here viewed; and more then two hundred Cities (one of *Polos* Wonders) communicating their Merchandizes by that *Quian*, or *Chian*, as they now terme it *Iansuchian*, *chian* signifying the chiefe Riuer. For the name *Cathay* to bee giuen by the *Tartars* to *China*, *Goez* his Iourney hath made it out of doubt; also that *Pequin* is *Cambalu*, that is, the *Citie of the King*. I doe conceiue that *Polos* *Mangi* was the nine Southerne Prouinces of *China*; the Northerly before conquered was knowne by the name of *Cathay*; a name by the *Tartars* giuen to diuers Countreyes, as *Cara Catay* and *Catay Calay* and Great *Catay*. This Great *Catay* is *China*.

Polo and other Authors speake of *Cathay* and *Mangi* as two; perhaps the *Tartars* so accounting them; the one, to wit, the North parts being formerly subject to them, and called by their ancient name, the other called *Mangi* in contempt; as the *Romanes* called the subiect *Britaines* of this Iland by their former name, and the others *Picts* and *Barbarians*; and as our Ancestors called those *Britons* which withstood them *Walsh* or *Welch* in a kind of disgrace. Nay still the Northerne *Chinois* call the Southerne *Mangies*, that is, *rude* or *barbarous*, as the Iesuites haue taught vs. But neither *Cathay*, nor *Mangi*, was then the name which they assumed, but was giuen them by the *Tartars*, as *China* is a name vknowne to them now. If any will find no other *Cambalu*, nor *Cathay* but *Pequin* and *China*, I will not contend, though my Reasons elsewhere giuen out of *Polo*, and *Chaggi Memet*, and others, with the former Relations of *Pinto* and *Albacen*, make me scrupulous, and still to beleue some greater Prince or *Can* with his *Cambalu* or Court in the more Northerly parts of *Asia*, then the Iesuits could learne of; which the *China* ieaousie, admitting no entercourse of Strangers, and the many quarrelling *Tartar* Princes in the way haue concealed from vs hitherto.

The great blacke space on the North-west hath in the Originall certayne Characters in it which expresse it: whether it intendeth Mountayns which their Art could no better expresse, and the Riuer thence running may import; or that sandy Desert on the North-west, I cannot so well determine. The Iesuits say, that *ab occasu qui Aquiloni vicinior est, conterminus visitur arena sitientis ager, qui multorum dierum penuria aduenarum exercitus ab Sinarum Regno aut deterret, aut sepelit*. I rather thinke that it is *Cara Catay* or *Blacke Catay*, before often mentioned, both Mountaynous, and Desert, and perhaps coloured blackish, as the name intimates, by black sands, or as health grounds with vs: it was the first *Tartarian* Conquest, and beginning of the greatest greatnesse which this World hath yeelded; the Countrey before of *Presbyter Ioannes Asiaticus*.

The wall is in this forme in the original, not in the Picture made vp of Mountaynes, wherein I thinke they had not art to imitate Nature; the Art in the whole Map much resembling our old Maps, of wooden prints, saue that I see not one Mountaine presented in swelling fashion to the Eye. The Ilands are very many with their Characters, but poorely delineated, their names he re omitted for their vncertainties; so little (and yet how much more then any other) doe wee giue you of *China*, till Time giue vs more. The degrees are not so perfectly accommodated to the Map, by reason that we must at once follow the *Chinian* Map which had no degrees (nor could their Art without degrees giue euery place his iust longitude or latitude) and the Iesuits Rules: yet we haue comne somewhat neere, as may be seene. Other things appeare in the History.

CHAP. VIII.

A continuation of the Jesuits Acts and Observations in China till Ricci's
his death and some yeares after. Of Hanceu or Quinsay.

An Extract of MONEARTS

travell.

Hus having with Pantogias eyes taken some view of the Kings Palace, and with Ricci's of their whole Gouvernement; I hold it fit not to leave this China Apostle (so Ricci is called) till wee have seene some fruits of his labours vntill and after his death. He tels vs that three dayes after they had bene shut vp in the Palace of Strangers as yee haue read, they were brought forth into the Kings Palace to performe the wonted Rites to the Kings Throne. This is done in a large and glorious Court or Porch, where 30000. men might be containd; at the end whereof is a high Chamber, vnder which by five great doores is a passage to the Kings Lodgings; in that Chamber is the Kings Throne, where anciently he sate to heare and dispatch busineses and Embassages, and to receiue the Rites of Magistrates, rendring thanks for their Preferments. But in the present solitarinesse of the King, those Rites are done to the Empty Throne, many there gratulating the King every day. In this Court, enuironed with stately Workes, 3000. Souldiers watch euery night, besides others watching in Towres without, a stones cast from one another. In each of the five Gates is an Elephant, which with the Souldiers goe forth when it is day: and those are admitted which come to gratulate the King. These come in a peculiar Habit of Red, with an Iuory Table in their hand to couer * their mouth, and exhibit their kneelings and bowings to the Throne, as they are taught by Officers of Rites or Masters of Ceremonies: one crying out to that purpose at the performance of each gesture. The Gouvernour of Strangers having shut them vp, first petitioned the King sharply against Mathan the Eunuch and them, but seeing no answer, he petitioned more gently but would haue them sent from Pequim; which the King liked not, yet without Petition from the Magistrates would not detain them. The Eunuches also laboured their stay for feare the Clockes should miscarry beyond their skill. The Kings Mother hearing of a selfe-striking bell sent for it, and the King sent it, but to prevent her asking it, caused the Wheelles to be loosed, so that not seeing the vse, she sent it againe.

When the Ritvall Magistrates could get no answer to their Petitions, for not touching their stay at Pequim; the Praefect sent to Ricci that he would make a Petition to giue him leaue to stay there in pretence of Sicknesse and Physicke, which hee did, and the other presently answered, giuing him libertie to hyre a House; continuing also his former allowance, with foure seruants to bring it euery fifth day, (Flesh, Salt, Rice, Wine, Hearbs, Wood,) and another seruant in continuall attendance: so that now they recouered libertie and credit. The Eunuches also told them of the Kings approbation of their stay; and they had out of the Treasurie eight Crownes a moneth, which their goeth much further then heere: and the Captayne of Strangers by open Sentence gaue them full libertie. One of the Colai, and then the onely, became their great friend, with his Sonne, after some European Presents, which hee bountifully rewarded: likewise the supreme President of the Court of Magistrates, and other of the Grands, besides the Eunuches of the Palace, and some of the Queenes and Royall family. Amongst others was Fumochan a great man, who for withstanding the Eunuches capacitie in Vquam Prouince, was depriued, whipped, and three yeeres Imprisoned; but by others honored with Temples, Odours, Images, and Bookes in prayse of him, as a Saint, and the King wearied by multitude of Petitions for him, granted him againe his libertie. Also Lingoson a great Magistrate and Mathematician as they accounted, became Ricci's Scholler, and was baptised Leo, borne at Hanceu, the chiefe Citie of Cechian, 50 of which afterward.

Yet had Ricci a great enemy of a great Learned man of Hanlin Colledge, who in zeale of the Idol-sect had put away his Wife, and professed himselfe one of their Votaries or Shauelings; drew many Disciples after him, and writ many Bookes against the Literate Sect; and writ also against Ricci's bookes. One of the Kings Admonishers accused him to the King by Petition, and the King rescribng seuerely, hee slue himselfe: yea, the King ordayned, that if the Magistrates would become Apostata shauelings, they should leaue their Robes and get them to the Deserts; many accordingly chusing rather to leaue their Offices, then their Idols. One Thacon was so famous, that the chiefe Queene daily worshipped his habit, (hauing no other meane of entertainment) and so proud that hee sent to Ricci to come and visite him, with the rites of kneeling. 60 But on occasion of search for a Libell against the King, hee was found guiltie of writing ill of the King, for not professing Idols, and of ill vsage to the Kings Mother, for which he was Whipped so, that before they could adde bonds, hee dyed. One which by torments confessed himselfe author of the Libell, had 1600. gobbets plucked from his flesh and then beheaded, a Death most (for the diuision of the body) abominable to the Chinois.

In the *Xaucan* Residence some stirre happened, whiles they brought to the *Iesuits* house their Idoll *Hoaquan*, made with three Eyes, one in his forehead (for though the *Chinois* haue no Idols representing any formes but humane, yet they admit Monsters) as their God of Eye-sight, for whom they intended to build him a Temple, and carryed him from house to house a begging to that purpose; the *Iesuits* refusing to giue them. Rumours also of *Mathans* detayning the Pre-
sents were soone apprehended; as likewise certayne Stage-players which comming from *Amacao*, set forth in Pictures those things which the *Chinois* hated in the *Portugals*, as their short Garments (seeming to them ridiculous) praying on Beads by men in Temples, with Swords girded to them, kneeling on one knee; their quarrels one with another and combats, Women going with Men in company, and the like; a Magistrate also accused the *Iesuits* to the *Taulis*, who spake for them and visited them. It happened also that by occasion of a great Drought, Processions and Fasts were commanded, and the Shambles shut vp, the Gouvernour and people in diuers places appointed thereto, begging rayne with their bowings; and when this preuayled not, they brought an Idoll out of the Suburbs, called *Locu*, which was carryed about, adored, offered too, with no better successe. Hereupon they consulted a Witch, which sayd the *Quoayn* or Goddesse was angry, that her backe was daily scorched (spoken of the Conuerts burning their Idols) which caused some conspiracie, quenched with the *Taulis* fauour and the rayne following. At *Nanquin* one borne at *Scianhai*, and first pronounced Licentiat in the examination 1597. was Baptised by the name of *Paulus*, who conuerted his whole Family. Anno 1604. hee was made Doctor, amongst three hundred and eight, of which number foure and twentie were chosen of *Hanlin* Colledge; after the *China* course of best Writing, of which hee was the fourth: this Choise of foure and twentie is but for probationers, for at the most after long try-
als by the *Colai*, but twelue or fiftene are set in possession, in which examinations hee was still a principall.

I thought to adde this by the way, that *Ligotfun* a learned friend of the *Iesuits*, had beene put from his great place into I know not what pettie Office, for too light demeanour and too fre-
quent Chesse-play, which continued three yeeres. The *Hollanders* much impouerished the *Por-
tugals* by taking the *Iapan* Ship of *Amacao*, the fewell of the *Iesuits* beneficence. At *Nancian* they Conuerted three of the Blood royall, Baptised by the names of *Melchior*, *Gasper*, *Baltba-
sar*, and their Mother a woman much addicted to Idols, and obseruing the *China* Fast; who sent them a Charter, called the Directorie of Hell, which the Shaueling Impostors had sold her, written to the Infernall King, to giue her good entertaynement, and remit her punishment. The *Iesuits* exchanged their Images for her Idols, and their Ecclesiasticall Fast for that *Pegan*.

At *Nanquin*, *Chiutaiso* was baptised by the name of *Ignatius*, striking the ground foure times first with his forehead, and reciting the profession of his Faith, which hee deliuered in writing to the Fathers; the contents of which and of *Paulus*, are expressed in our Author. The *Hollanders* sought entrance into *China*, to bee admitted Trade in *Fuquien* Prouince, but were denyed not-
withstanding both promises and threats. Feare of them made the *Portugals* at *Amacao* begin to build a Tower and to fortifie. But a quarrell falling betwixt a Regular, and a Secular Priest, one fleeing to the *Iesuits* Rector for refuge, there grew such a combustion that the *Chinois* fled to their Countrey, perswaded that *Catanens* then there intended to get the Kingdome, whereof hee had such expence; at *Canton* was such terrour, that aboue one thousand Houses without the walls were pulled downe, the Gates toward *Amacao* filled vp with Lime and Stones, all commerce with *Amacaons* prohibited, great Watch kept; *Francis Martinez* betrayed by a false brother a Conuert, as a Spie, was twice so Whipped that hee dyed soone after the stripes, as hee was en-
tering the Prison. At *Nanquin* three thousand were found, Anno 1606. to haue conspired the Death of the Magistrates, and to invade the ancient Treasuries. Those which were taken were put in those Pillorie boards, which force them to stand till their Legges rot, some of them hol-
ding out a Fortnight, as was thought by bribing the Executioners: the suspicion hereof was by some cast on the *Iesuits*. Two Guides or Fraternities were erected of *China* Conuerts.

Ziu Paulus the learned Conuert, being to leaue his place for three yeeres, to mourne for his Father at *Scianhai* his natie Towne, he obtayned *Catanens* to bee sent thither with him, where hee stayed two yeeres. This is one of the meanest sorts of Cities which they call *Hien*, one hundred fortie and foure *Italian* myles from *Nanquin*, and in that Prouince, in twentie nine Degrees, ouer against *Corai* and the *Iaponian* Ilands, within a little of the Easterne Sea. The name *Scianhai*, signifieth on the Sea; and it is fortified with Garrisons and a Fleet against the *Ia-
ponians*, being a passage with a good winde of foure and twentie houres sayle. The walls are two myles compasse, the Suburbs contayne as many Houses as the Citie; so that there are numbred fortie thousand Households (by this you may measure the frequencie of great Cities,) the Territorie is an euen Playne, and so cultivated that they seeme a Citie of Gardens, full also of Villages, Hamlets, Towers, contayning twentie thousand Families in this Townes iurisdiction, there be-
ing in that Circuit 300000. men. This Iurisdiction alone, payeth to the King the yeerely value of 150000. Golden Crownes, in the weight of Silver, and asmuch in Rice, in all 300000. (whence the incredible reuenues of this Crowne appeare also credible) the Ground being fertile of
Cotton

Cotton, whereof there are reckoned 200000. Weauers, *Pequin* and other parts being hence furnished with Cloathes. There are many good wits and Students, a good Ayre, and they lue long, eightie, ninetie, and a hundred yeeres.

Wee are now come to the Death of Father *Riccius* (the Author of our Iesuiticall Discourse of *China* hitherto; occasioned by multitude of businell that yeere, five thousand Magistrates coming to visite the King, and five thousand others standing for their Doctorship, of which about three hundred onely are chosen. Wearyed with his Ecclesiasticall Fastis also and labour of building a Church, hee fell sicke and dyed, May 11. 1610. hauing much propagated the Gospell by his writings, and furthered it by his Mathematickes. For all Sects haue beene there more encreased by Writing then Preaching. Hee dyed leauing much sorrow to his friends and care also in that *China* scrupulositie, how and where to interre him. It was the counsell of their friends, to put vp a Petition to the King, whereupon they resolued, and *Pantogia* by Doctor *Leos* helpe, thus Petitioned in behalfe of *Riccius* his Corps. *I* James Pantogia, subiect of the Kingdomes of the great West, Offer a Supplication in behalfe of another Forrainger now deceased. *I* humbly beseech your great Clemencie for a place of Buriall, that your Royall beneficence may extend to all, euen Strangers of remotest Regions. *I* James Pantogia am a Stranger of a most remote Kingdome, but mooued with the vertue and fame of your most Noble Kingdome, haue in three yeeres sayle, with much trouble, passed hither aboue sixe thousand leagues. In the eight and twentieth yeere of Vanlie, (for so, as wee, they account their yeeres by the Kings raigne) in the twelfth Moone, *I*, with Matthew *Riccius*, came into your Court; where wee presented some gifts, and haue since beene sustayned at the Kings charge. The nine and twentieth yeere of Vanlie, in the first Moone, we Petitioned your Maiestie for a place of residence, and haue many yeeres enioyed the Royall bountie. In the eight and thirtieth yeere of Vanlie, the eighteenth day of the third Moone, *Riccius* dyed. *I*, a Client of the Kingdome of the great West, remaine a fit subiect of pitie. The returne into our Countrey is long, &c. And *I* now, after so many yeares stay, suppose that wee may bee numbred to the people which followeth your Royall Chariot, that your Clemencie, like that of *Yao*, may not contayne it selfe in the Kingdome of *China* alone, &c. So proceeds he to set forth the good parts of *Riccius*, and with a long supplication to begge a place of Buryall, some Field, or part of a Temple; and hee, with his fellowes, should obserue their wonted Prayers to the Lord of Heauen, for thousands of yeeres to him and his Mother. This Libell was written with peculiar forme, Characters, Seales; many Rites herein necessarily obserued. Before any bee offered to the King, it must bee viewed of some Magistrate; and they got this to bee allowed by one which is Master of Requests, which sent it presently to the King. They must also haue many Copies thereof, to shew to those Magistrates, to whom it appertaines; which they did: one of them affirming, That *Riccius* deserued a Temple also, with his Image to bee there set vp. This message hee sent them by another: for when they fauour a cause, they shew great strangeness. The King commonly answers the third day (except hee mislike, for then he suppresseth) and sends it to the Magistrate that had presented it, who shewes which of the fixe is the peculiar Court, which iudgeth of these things: This being sent to the *Ritnall Tribunal*. Their answer is sent to the King within a Moneth (which there is a short space) and repeating the Petition *verbatim*, and the Kings command to the peculiar Office, answers what the Law sayth in that case, and concludes the Petition to bee agreeing to Iustice, and earnestly pleades and sues for confirmation. The King sends this answers to the *Colao*, which subscribed his approbation; which being sent againe to the King, hee subscribed with his owne hand *Xi*, that is *Fiat*, or bee it done, which the third day after was deliuered them.

The *Iesuites* hauing so speedie and prosperous successe, bethought of gratifying their friends, which had furthered this designe with Dyals, especially to the *Colao*, which vsed *Pantogia* very kindly and writ to the Gouvernour of *Pequin* to looke out a place fitting. Three or foure were offered to their choyse, one of which much pleased them.

It was aboue a quarter of a myle from one of the Citie gates, built by an Eunuch, who now was condemned for some crime; and left his Palace which hee had heere builded, with the expence of aboue foureteene thousand Duckats (which in *China* is a great summe, in that cheapnesse of all things, farre beyond *European* computation) should fall into the hands of spoylers (the goods of Eunuches in this Kingdome, vially becoming his which first can catch them) hee consecrated his Palace, and made it a Temple, maintayning therein one Priest. Such Palaces many of the Magistrates haue neere to the Cities, as retyring places and *Tusculanes* for their Muses. The portraiture of this whole House, with the Garden, and other appurtenances, *Trigantius* hath set forth in Picture; being after the *China* building, with the doore Southwards, and so running a great length into the North, with foure great Halls one beyond another; in the middle parts, and on each side, Chambers and other Roomes; beyond all the Garden, the pillars of Timber bearing vp the rooffe; the walls and pauement of Bricke. The outmost of these Halls was conuerted into a Temple or Idoll-Chappell, in which was a great Altar of Stone and Bricke cunningly fretted, paynted red (a colour forbidden to priuate Houses) and vpon the middest thereof sate a huge Monster of Earth, gilded from top to toe, of massie quantitie. The *Chinois* call it *Ti cam*, the God (as they fable) of the Earth & Treasures, as *Pluto* in the Poets.

He was a King of old, accounted a Saint.

Place assigned to the *Iesuites*.

Spoylers spoiled.

Chappell of *Ti cam* the *Chinois* *Pluto*.

Stix.
Elysian fields.

In his hand was a Scepter, on his head a Crowne, not vnlike those vsed by our Kings. On each side stood foure ministers of the same matter: on both sides of the Roome two great Tables, and on each of them five Kings, or great Officers of Hell. On both the wals were painted the same Officers, or Iudges, sitting on their seuerall Tribunals, giuing sentence on wicked men, euery one according to the condition of his Court. Before them stood many Devils, more terribly formed then with vs. The paines of Hell also were so deciphered, that could not but strike terror to the beholders; some rosted in yron Beds, some fryed in scalding Oyle, some cut in pieces, or diuided in the middle or torne of Dogges, or otherwise tortured. The first of those Iudges examined the faults, which they said hee saw in a certayne Glasse. Those which hee found guiltie, were sent to the other Iudges, according to the qualitie of the crimes. One of these was Iudge in Cases of *Transmigration*, which sent the soules of cruell men into Tygres; of vncleane persons, into Swine, and the like: or if their crimes were smaller, into the poorer sort. There was a great Ballance; in one of the Scales, a man laden with sinnes; in the other, one of their Hypocriticall Prayer-bookes, which counterpoysed the other Scale, and freed the Sinner. There ranne through the midst of Hell a discoloured Riuer, which carried away many. For ouer it were two Bridges, one of Gold, the other of Siluer; by which, those passed ouer, which had beene deuout Idolaters, carrying in their hands Ensignes of the same: these were guided by the Priests, which led them through the midst of Hell to faire and pleasant Groues and Gardens. In another part were painted the Dungeons of Hell, with horrible Serpents, Flames, Devils. To the Brazen Gates thereof there comes an Idolatrous Priest, which in despite of all the Devils deliueis his Mother from those flames. There was no infernall punishment painted, but had such an Inscription: *He which shall pray to such an Idoll a thousand times, shall bee free from this punishment.* The Iesuites beat the Earthen Idols to dust, and burnt those of wood, wherein the *Chinese* Conuerts were the forwarder, because the Countrey custome is to fill the hollow bellies of these Images with deuoted Money or Jewels. They demolished the Altar and playstred ouer the Pictures, and in place thereof erected the Image of Christ. No priuate man may erect a Temple by Law, which yet the mighty Eunuchs transgresse.

* The Iesuites
say, that the

taine their I-
dolatries, say-
ing they wor-
ship not the
Idoll, but God
thereby repre-
sented, &c.
Trigant.

A little before this exchange of Idols into Images (after their distinction, and a * silly one it is) some tooke their last leaue of *Ticam*: one kneeling and bidding it fare-well; another chafing, said; *Thou masse of Dung and Earth, if thou hast no power to maintayne thy Temple and thy selfe, what helpe may I looke for at thy hand? Neither art thou worthy of any honour at mine.* Others said, that this had sometime borne the name of some other Idoll, and therefore was auenged for that change.

Prince and his
Mother disre-
spectful.

Long life-stu-
dy cruel short-
ner of life.
Dry winters.

Ricinus, hauing thus taken possession of *China* by his dead bodie, and liuing name, wee shall briefly out of the Iesuits Epistles adde some later accidents, and so leaue our *China* Discourses, which if they haue seemed tedious and troublesome, remember that *China* is both excessiue-ly rituall, and also inhospitall to Strangers; and I haue but imitated my subject, in long and wearisome entertaynement. These tell vs of the Kings vnkindnesse to his Heire, proclaymed, as yee haue seene against his will, fearfully allowing him necessary sustenance, nor permitting his Mother at her death to be mourned for with wonted Rites. He is indeuout, his Mother egregiously Superstitious, mayntayning many Priests, erecting or repaying Temples, that it is a Prouerbe, *In the Court the Priests, in the Prouinces are Magistrates obserued.* In that their studie of long life One had beene so mad, that he being a Licentiate, bought children whom secretly he killed, of their blood making compositions for that purpose; which comming to light by one of his Concubines, he was put to a deserued death, three thousand pieces of flesh first cut from him.

In their Winter is greatest scarcity of water in the Rivers, and many shelues then cause many shipwrackes. As they want *b. d. r.* so they end no word in any other Consonant but *m.* and *n.* The *China* Conuerts are very zealous in selfe-whipping penance, and fasting, altered from their forme to the Ecclesiasticall, which is hard to them accustomed to eate thrice a day: Their Priests vse Beads, mumbling thereby their Deuotions and many things alike. They built a Church at *Nanquin*, Anno 1611.

Chequian some-
times the Im-
periall Pro-
uince.

The Prouince of *Chequian* yeelds only to the two Royall, *Nanquin* and *Pequin*, beeing more excellent then any of the rest. Neither hath it lost other Prouinciall Ornaments howsoeuer it hath lost the seat of the *China* Empire, but is still the best of thirteene. On the East it is washed with the Sea, which the winds fauouring admit passage to *Japan* in foure and twentie houres: on the West it confineth with the Prouinces of *Nanquin* and *Kiamsi* (or *Chiansi*) on the South with *Fuquian*: to the North is *Xanto* (or *Sciantum*.) It hath twelue Cities of principall note, which are the heads of sixtie three lesse; besides innumerable Townes, Castles, Villages. The soile is the most fertile of the Kingdome pleasantly interlaced with Riuers, many of them produced by Art in imitation of Nature, in commodiounesse no whit inferiour, yeelding a spectacle of amaze-ment to the amused Posteritic, how humane force could effect such wonders. These Riuers for further commoditie are towred with innumerable Bridges of huge massie stones arising into diuers Arches, like to the *European* workmanship. You haue alreadye *Almeidas* Epistle of his and *Rogers* going into this Prouince, to *Xao Him*, whence soone after they returned. The *Chinois* haue a Pro-

a Prouerbe of *Hamceu* the Metropolis, and of *Suceu*, *thien xam*, *thien tham*, *ti xam Su ham*, that which in *Heauen* is the *Hall of Heauen* (*laetea via*, as he else-where interprets it) that on *Earth* *Suceu* and *Hamceu*. The Countrey so aboundeth with Mulberry-trees and Silke-wormes, that *China*, *Iapon* and *India* are thence furnished. Ten Vests of Silke are there cheaper, then in our Countrey one of cloth. *Hamceu* stands from *Nanquin* South-eastward nine dayes Journey, almost in thirtie degrees elevation: about three dayes Journey from *Scianbai*, where *Catanetus* was, who with *Trigantius* our Author were sent thither by *Leos* procurement. They went from *Nanquin* by the River *Iansu* first, and then into hand-made Rivers, Cities, Townes, Villages, so frequent in the way, that nothing seemes in the whole Kingdome more populous. Mid-way, where *Nanquin* and *Chequian* Prouinces joynes is that famous *Suceu*, seated in the Continent, and seeming yet the Daughter of the Sea, like another *Venice*, but more happie with her fresh waters: the Ports so frequent, and ships so many, as if the whole shipping of the Kingdome were thither comne to some Faires, which yet are in succession perpetuall. When the Fathers were comne hither, the *Chinois* by I know not what rumour were conceited that their *Foe* or Gods were comne thither in Visitation. And a Magistrate sent to *Leo* about it, to know if, and how, hee might visit them.

See sup. p. 343.

But to leaue their Fooleries, let vs take view of their Citie. *Hamceu* is the chiefe Citie of this Prouince: yea, in all this Kingdome, lesse perhaps somewhat in compasse of walles then *Nanquin*, but better peopled: no place in the Citie emptie, nor occupied with Gardens, but all builded, and all the Buildings almost with diuers Stories, which in other Cities of *China* is not vsuall. The Inhabitants are so many, and the Tribute so much, that the Iesuites durst not relate that which hereof they had heard by graue testimonie, for the incredibilitie: the description would aske a whole Volume. The chiefe street is almost halfe a dayes Journey in length, and cannot be lesse then admirable. For whereas the *Chinois* vse to erect triumphall Arches, as Monuments, to wel-deseruing Magistrates, and Ornaments to their Cities; this one street hath at least three hundred such (besides very many others in other parts of the Citie) of massie stones and exceeding curious Workmanship, that if the Houses on both sides yeelded the like splendor, the World could not shew such a spectacle. But they occupie it all with shops, and build the most magnificence of their Houses inwards, and yet those not like the *European* Palaces.

Hamceu, *Ham-chen*, or *Hancen*.

There is also a Lake close to the Citie, which the eye can scarcely measure, which sliding into a Valley encompassing, embossed with diuers Hillocks, hath giuen occasion to Art to shew her vtmost in the adorning the same, beautifying all those spacious bankes with Houses, Gardens, Groues; a very Labyrinth to the bewitched eyes, not knowing whereat most in this Maze to bee most amazed, wherein most to delight. And in delights doe they spend their dayes, filling the Lake with Vessels, furnished with Feasts, Spectacles and Playes on the water. There is a pleasant Hill in the middle of the Citie, whereon is a faire Towre or Steeple, where they measure their houres by a strange deuice. Out of huge Vessels water droppeth from one to another, the lowest being very large, in the middle whereof is perpendicularly rayfed a Rule, distinguished with houre-spaces, which by the ascent or descent of the water, diuide the rising and declining day, and declare the houres: euery halfe houre some men appointed by Tables with Cubitall Letters, to giue notice of the time to all men. From this Hill is a prospect ouer all the Citie. All the streets being set with Trees, make shew of pleasant Gardens. It is so full of Rivers, Lakes, Rils, Ponds, both in the Citie and Subnrbs, as if a man would frame a *Platonick* Idea of elegancie to his minde. The Idoll Temples are many and stately, which Idolatry where it is wanting in *China*, hath a worse Successor, Atheisme.

The Lake.
See the Map.

Let vs stay awhile and gaze (for where haue you such an Object?) Is not *Quinsay* (whilome the Royall Seat of the Kings of *Mangi*, as *Venetius* recorderh, supposed by our Moderne Geographers to be swallowed vp with some Earth-quake, or in *Bellona's* all-consuming belly) here rayfed vp from the Graue? The Lake situate on the one side, (so *Paulus* reports of *Quinsay*) the Name *Quinsay* signifying the Citie of Heauen, and this called a Heauenly Paradise by the *Chinois*; and *Han* signifies *Laetea via*, in Heauen; and *Cen*, perfect: yea, *Quinsay*, or as *O-doricus* calls it *Canasia*, and *Han* or *Chancu*, not so disagreeing in sound, as different Dialects are wont: the excellencie being chiefe Citie in the Kingdom, and this Prouince sometimes Royal, as *Pequin* now and *Nanquin* are: the situation, South-east from *Cinczianfu*, five and twentie miles from the Sea: the high Houses, and Shops vnderneath: the exceeding Trade, Reuenue, Passimes by water, multitudes, fairenesse, and length of the streets; all so conspiring to prooue this *Han* or *Hamceu* to be that *Quinsay*, of *Paulus*. True it is, that *Quinsay* was then greater, beeing as *Venetius* saith, one hundred miles about: But the euerting of that *Farsur* and his Family, then reigning, the diuerting of the Court to *Cambalu* by the *Tartars*, and after to *Nanquin* by *Ham-ven*, and neuer returning hither, might lessen the same. And might not warres, in that long siege by the *Tartars*, in the recovery thereof by the *Chinois*, easily circumscribe her superfluitie? Besides, who knoweth whether all this huge Lake might bee containd in that account of *Paulus*, still compassed about with Buildings? Or before those Warres, the Lake it selfe might (as *Suceu* now is) be builded on; which Time and Warre hath consumed; nor since the remooue of the Court

Quinsay, *ciuitas cali*.

See it described, sup. 98.

b *Hada una bandavna lago*, &c.

c That which is before said almost 2. daies journey, is to be vnderstood of the *Chinois* iourneies, which make a slow passage, sometime but 6. myles a day.

were so necessarie. *Mandeuill* mentions Warres at *Quinsay* in his time; *Nicolo di Conti* (which was heere about the yeere 1440.) sayth, *Quinsay* was in his time new built, of thirtie miles compasse.

Thien sin sup.
314. *Thien* lig-
nifieth *Heauen*.
* See pag. 338.

But that *Quinsay* of *Conti* and *Abacen*, is perhaps *Thien sin*, being (as they lay it) neerer *Cambalu*. I confesse, much may bee sayd for *Nanquin* to finde *Quinsay* there, and I have given such a note * vpon it, to incite industrious search, because it was the Ancient royall Chamber: Neither could I finde any other Royall Citie but *Pequin*, in *Ricinus* or other Writers, till *Trigantius* later Epistles intimated, that the *Chequian* Province hath beene sometimes Imperiall; which I conceiue to bee that time of *Farfur* mentioned by *Polo*, and *Hancen* his *Quinsay*.

Anno 1618. *Trigantius* writes of Persecution in *China*, raised by an Idolotrous Magistrate in *Nanquin*, and effected by bribes, which hath caused the *Iesuites* to bee sent thence: but because our intelligence is little, wee will leaue them heere (as much as lyeth in our power) and visite some of the other Northerne people; hauing first given you a brieue view of a *Frenchmans* trauell, *Monsieur de Monfart*, who hauing trauelled thorow the *Indies*, saluted *Canton* in *China*, and *Cauchinchina*; whose knowledge therefore could not bee so solid, as the *Iesuites*, nor yet is so contemptible that it should vtterly bee forgotten. Wee will therefore present his Seruice as a *French Page*, and one attending the *Iesuites* Grauitie, and thus as it were bearing their trayne.

Macao.

From *Malaca* I went to *Macao*, (neere a moneths trauell) which is a Citie scituat on the Sea coast, at the foote of a great Mountayne, where in times past the *Portugals* had a great Fort, and to this day, there bee yet many that dwell there. This is the entrance into *China*, but the place is of no great importance; they are *Gentiles*, and there the Inhabitants begin to bee faire complexioned.

Cauchinchina.

Thence I trauelled two moneths to the *Cochinchines*, finding nothing by the way worthy of note; no not so much as necessaries, so that wee were fayne to carrie our Victuals with vs, the greatest part of the way. They are Subiects to the King of *China*, but sometimes they rebell and make Warre against him; And there is great number of *Christians* among them.

Christians.
Calamba for
Beades.

Their Kings treasure consisteth in a certayne kinde of Wood, called *Calamba*: for which the *Portugals* pay one hundred Crownes a pound, to make *Pater-nosters* with. It is of a mixt colour, with blacke and yellow veynes; the better sort of it is moyst, so that being cut it expellerh a kinde of fat oylie liquour. It groweth out of a certayne Tree, which they fell and let it lye a while a putrifying: then they bruiſe it, and within the same, they finde this kinde of Wood, like many hard knots. They are a very white people, because there it begins to bee cold, low of Stature, flat Nosed, and little Eyed, with a very few hayres on their Chins, and Mustachoes: none at all on their Cheekes; the hayre of the Head they weare long like Women, tyed vp with a blacke silke hayre-lace, and weare a flat Cap vpon them. They weare Cloath breeches made very leuell, and a short Robe about them, like a Master of the chamber of Accounts.

Huge Serpents

There are found a kinde of Serpents that will swallow vp a whole Stagge; two Friers assured me that traelling in that Countrey, together with sixteene other men, through a Fennie-marsh, about the dawning of the day, they met to their seeming, a great Tree lying along the ground, the boughes being lopped off, vpon which they all began to sit downe and rest themselves: but no sooner were they sate, but that which they tooke for a Tree, fiercely rowled it selfe from vnder them, and left them all to picke strawes on the ground; for indeed this was one of those Serpents.

Wild Beasts:
this of Lions
is doubtfull.

Their custome is (as they say) to put themselves in ambush among the boughes of a Tree, and when they espie their prey to draw neere, bee it Man or Beast, they fall vpon him with open mouth and deuoure it. There are also store of *Lions*, *Leopards*, and *Tigers*: and there the Fruits begin to resemble those of these parts: but the Fruit, which aboue all others aboundeth there, is the *Mirabolan*.

Canton in *China*.

This is not the
principall Ci-
tie, except, of
that Province,
and for trauel-
ling further, he
speakes true
of ordinarie
courses; but o-
ther accidents
and the Art Li-
berall of the
Fathers haue
some of Ours

Thence I sent forwards to *Canton*, the principall Citie of all *China*, (some three Moneths trauell distant) beyond which there is no passage, say any body what hee will to the contrary; for neuer any man proceeded further, except (as they say) sixe *Iesuites*, who dwelled twentie yeeres at *Canton*, as well to learne the Language perfectly, as to let their hayre to grow long; after the Countrey manner, of whom there was neuer since heard any newes; nor is their hope euer to see their returne. That people is very white, and apparelled as is abouesayd; they are likewise *Gentiles*, and worship the same Image with three heads. Their Women of the better sort, and qualitie which are able to liue of their owne without working, neuer goe out of their houses but as they are carried in a Chayre. And to that effect, from their Infancie, they put their feete into certayne wooden Slippers, to make them stump-footed and impotent; in so much that they haue found admittance, as in the former Relations is seene. This testimonie touching *Iesuites* is worth the noting: For which vpon great offers could not finde meane to enter *China*, haue held that none haue bene there, much

much as they are not able to goe : the reason they alleadge for it, is, that Women were made to no other end, then to keepe at home.

The *Christians* are not permitted to lye within the Citie, but as soone as Night approaches they must retire themselves to their Ships, being lawfull for them to Traffique wheresoeuer they please by Day-light. And for their traffique, what rarities soeuer there bee throughout all *China*, are to bee had in this Citie; which are diligently brought thither, to wit, great store of cloath of Gold and Silke, Cabinets, wrought Vessels, Venus shells, Masse gold, and many other things. They will exchange or barter Gold for twice as much waight in Siluer; for they haue no coyned money, for when they would buy any thing, they carrie with them a piece of Gold, and will cut off as much as they intend to bestow on what they take. They make carued Images of Siluer, which they erect heere and there through the Streets, and no body dares touch them.

The Citie is gouerned by foure Rulers, and each one hath his Gouernment, or Circuit apart, seclused from each other : those of one quarter dare not goe and labour in another, and those which cause themselves to bee carryed, from one part to another, must change their Bearers when they come to the Gate of the next circuit : those Gates are opened eury morning, and shut eury night, vnlesse there bee any complaint made of some misdemeanour, committed within the Circuit : for then they shut them suddenly, or if they bee shut, they open them not, till the offender be found. The King bestowes these commands on those who are best Learned. This is a most faire Citie, and well built, very neare as bigge as *Paris*, but there the Houses are arched, and nothing neare so high. There is so much Sugar in that Countrey, that it is by them very little set by, yet is Silke in farre more great abundance, but withall more course then ours, by reason of their store, being so great as they are constrained to make it abroad in the Fields, on the very Trees, in this wise; when the Wormes are hatched, (whereof the Egges are farre greater then ours.) They obserue what quantitie of Wormes each Tree will bee able to feede, then they lay so many on it, leauing them there without any more adoe, except it bee to gather the cods, when they are ready to bee spunne, which is done as they gather Apricocks : for indeed a farre off they appeare to bee so, and is a very fine sight to behold : they vse a strange kinde of Fishing with Cormorants. They tie their neckes a little aboue their stomackes, lest

Silkes and
Silke-wormes.

See Polo, Pere-
ra, &c. of this
Fishing.

they should deuour the Fish they take : then comming to their Master, hee pulleth it alive, out of their throates : Likewise for water Fowle, they make vse of great Bottles with two holes, which they leaue floating vp and downe the water a good while, to acquaint the Fowles therewith : then some fellowes will wade vp to the necke in the water, thrusting their heads into those Bottles, and hauling a bagge vnderneath, come as neere the Fowle as they will, taking them with their hands, without the rest being afraid of it.

VOYAGES AND DISCOVERIES OF THE NORTH PARTS OF THE WORLD, BY LAND AND SEA, IN ASIA, EUROPE, THE POLARE REGIONS, AND IN THE NORTH-WEST OF AMERICA.

THE THIRD BOOKE.

CHAP. I.

A Treatise of Russia and the adjoining Regions, written by Doctor GILES FLITCHER * Lord Ambassadour from the late Queene, Ever-glorious ELIZABETH, to THEODORE then Emperour of Russia A. D. 1588.

* I haue in some places contracted, in others mollified the biting or more bitter stile, which the Author vseth of the Russian Government; that I might doe good at home, without harme abroad.

Chap. I.

The description of the Countrey of Russia, with the breadth, length, and Names of the Shires.

Strabo in his 7. booke of Geogr.

The Countrey of Russia was sometimes called *Sarmatia*. It changed the Name (as some doe suppose) for that it was parted into diuers small, and yet absolute Governments, not depending, nor being subject the one to the other. For *Russe* in that tongue doth signifie, as much as to *Part*, or *Divide*. The *Russe* reporteth that foure Brethren, *Trubor*, *Rurico*, *Sinees*, and *Varinus*, diuided among them the North parts of the Countrey. Likewise that the South parts were possessed by foure other, *Kio*, *Scieko*, *Choranus*, their and sister *Libeda*: each calling his Territorie after his owne Name. Of this partition it was called *Russia*, about the yeere from Christ 860. As for the conjecture which I finde in some Cosmographers, that the *Russe* Nation borrowed the name of the people called *Roxellani*, and were the very same Nation with them, it is without all good probabilitie, both in respect of the Etymologie of the word (which is very farre fetcht) and especially for the seate and dwelling of that people, which was betwixt the two Rivers of *Tanais* and *Boristhenes*, as *Strabo* reporteth, quite another way from the Countrey of *Russia*.

When it bare the name of *Sarmatia*, it was diuided into two chiefe parts: the *White*, and the *Blacke*. The *White Sarmatia*, was all that part that lyeth towards the North, and on the side of *Liesland*: as the Prouinces now called *Dunya*, *Vagha*, *Vstik*, *Vologda*, *Cargapolia*, *Nonogradia*, &c. whereof *Nonograd velica* was the Metropolitane, or chiefe Citie. *Blacke Sarmatia* was all that Countrey that lyeth Southward, towards the *Euxin* or *Black Sea*: as the Dukedome of *Volodemer*, of *Mosko*, *Rezan*, &c. Some haue thought that the name of *Sarmatia* was first taken from one *Sarmates*, whom *Moses* and *Iosephus* call *Asarmathes*, Sonne to *Ioktan*, and nephew to *Heber*, of the posteritie of *Sem*. But this seemeth to bee nothing but a conjecture taken out of the likenesse

of the name *Asarmathes*. For the dwelling of all *Ioktans* posteritie is described by *Moses*, to have bene betwixt *Mescha* or *Masius*, (an Hill of the *Amonites*) and *Sephace*, neare to the River *Euphrates*. Which maketh it very unlikely, that *Asarmathes* should plant any Colonies so farre off, int the North and North-west Countries. It is bounded Northward by the *Lappes*, and the North Ocean. On the South-side by the *Tartars*, called *Chrimis*. Eastward they haue the *Naigai-an Tartar*, that possesseth all the Countrey on the East side of *Volgha*, towards the *Caspian Sea*. On the West and South-west border, lie *Lituania*, *Liuonia* and *Polonia*.

The whole Countrey being now reduced vnder the Government of one, containeth these chiefe Prouinces or Shires. *Volodemer* (which beareth the first place in the Emperours stile, because their House came of the Dukes of that Countrey,) *Mosko*, *Nisnogrod*, *Plesko*, *Smolensko*, *Novogrod velica* (or *Novogrod* of the low Countrey) *Rostone*, *Tarnslane*, *Bealozer*, *Bezan*, *Dnyna*, *Corgapolia*, *Meschora*, *Vagha*, *Vstugha*, *Ghaletsa*. These are the naturall Shires pertaining to *Russia*, but farre greater and larger then the Shires of *England*, though not so well peopled. The other Countries or Prouinces, which the *Russe* Emperours haue gotten perforce added of late to their other Dominion, are these which follow, *Twerra*, *Toughoria*, *Permia*, *Vadska*, *Boulghoria*, *Chernigo*, *Ondoria*, *Obdoria*, *Condora*, with a great part of *Siberia*: where the people though they bee not naturall *Russes*, yet obey the Emperour of *Russia*, and are ruled by the Lawes of his Countrey, paying customes and taxes, as his owne people doe. Besides these hee hath vnder him the Kingdomes of *Cazan* and *Astracan*, gotten by Conquest not long since. As for all his possessions in *Lituania*, (to the number of thirtie great Townes and more,) with *Narne* and *Dorp* in *Liuonia*, they are quite gone, being surprised of late yeeres by the Kings of *Poland* and *Sweden*. These Shires and Prouinces are reduced all into foure *Iurisdictions*, which they call *Chetfyds* (that is) *Tetrarchies*, or *Fourth-parts*. Whereof wee are to speake in the Title or Chapter, concerning the Prouinces, and their manner of Government.

The whole Countrey is of great length and breadth. From the North to the South (if you measure from *Cola* to *Astracan* which bendeth somewhat Eastward) it reacheth in length about foure thousand two hundred and sixtie verst, or myles. Notwithstanding, the Emperour of *Russia* hath more territorie Northward, farre beyond *Cola* vnto the River of *Tromschua*, that runneth a thousand verst, well nigh beyond *Pechinga*, neere to *Wardhouse*, but not intire nor clearly limited, by reason of the Kings of *Sweden* and *Denmarke*, that haue diuers Townes there, as well as the *Russe*, plotted together the one with the other: euery one of them clayming the whole of those North parts, as his owne right. The breadth (if you goe from that part of his Territorie that lyeth farthest Westward on the *Narne* side, to the parts of *Siberia* Eastward, where the Emperour hath his Garrisons) is foure thousand and foure hundred verst, or thereabouts. A Verst (by their reckoning) is one thousand paces, yet lesse by one quarter then an *Englishe* myle. If the whole dominion of the *Russe* Emperour were all habitable, and peopled in all places, as it is in some, hee would either hardly hold it all within one Regiment, or bee ouer mightie for all his neighbour Princes,

The Soyle of the Countrey for the most part is of a sleight sandie mold, yet very much different one place from another, for they yeld of such things as grow out of the earth. The Country Northwards, towards the parts of Saint *Nicholas* & *Cola*, and North-east towards *Siberia*, is all very barren, and full of desert Woods by reason of the Clymate, and extremitie of the cold in Winter time. So likewise along the River *Volgha*, betwixt the Countries of *Cazan*, and *Astracan*; where (notwithstanding the Soyle is very fruitfull) it is all vnhabited, sauing that vpon the River *Volgha* on the West side, the Emperour hath some few Castles with Garrisons in them. This hapneth by meanes of the *Chrim Tartar*, that will neither himselfe plant Townes to dwell there, (liuing a wilde and vagrant life) nor suffer the *Russe* (that is farre off with the strength of his Countrey) to people those parts. From *Volagda* (which lyeth almost one thousand seuen hundred verst from the Port of Saint *Nicholas*) downe towards *Mosko*, and so towards the South part that bordereth vpon the *Chrim*, (which containeth the like space of one thousand seuen hundred verst, or thereabouts) is a very fruitfull and pleasant Countrey, yeelding Pasture, and Corne, with Woods and water in very great plentie. The like is betwixt *Rezan* (that lyeth South-east from *Mosko*) to *Novograd* and *Volsko*, that reach farthest towards the North-west. So betwixt *Mosko*, and *Smolensko* (that lyeth South-west towards *Lituania*) is a very fruitfull and pleasant soyle. The whole Countrey differeth very much from it selfe, by reason of the yeere: so that a man would maruaile to see the great alteration and difference betwixt the Winter and the Summer in *Russia*. The whole Countrey in the Winter lyeth vnder Snow, which falleth continually, and is sometime of a yard or two thicke, but greater towards the North. The Rivers and other waters are all frozen vp, a yard or more thicke, how swift or broad fouer they bee: and this continueth commonly fise Moneths, viz. from the beginning of Nouember, till towards the end of March, what time the Snow beginneth to melt. So that it would breed a frost in a man to looke abroad at that time, and see the winter face of that Countrey. The sharpnesse of the ayre you may judge of by this: for that water dropped downe or cast

cast vp into the ayre, congealeth into Ice before it come to the ground. In the extremitie of Winter, if you hold a Pewter dish or pot in your hand, or any other metall (except in some chamber where their warme Stoues bee) your fingers will freeze fast vnto it, and draw of the skinn at the parting. When you passe out of a warme roome into a cold, you shall sensibly feele your breath to waxe starke, and euen stifeling with the cold, as you draw it in and out. Diuers not onely that trauell abroad, but in the very Markets, and streets of their Townes, are mortally pinched and killed withall: so that you shall see many drop downe in the Streets, many Trauelers brought into the Townes sitting dead and stiffe in their Sleds. Diuers lose their Noses, the tippes of their Eares, and the balls of their Cheekes, their Toes, Feete, &c. Many times when (the winter is very hard and extreame) the Beares and Wolves issue by troupes out of the woods driuen by hunger, and enter the Villages, tearing and rauening all they can finde: so that the Inhabitants are faine to flee for safegard of their liues. And yet in the Summer time you shall see such a new hew and face of a Countrey, the Woods (for the most part which are all of Firre and Birch) so fresh and so sweet, the Pastures and Meadowes so greene and well growne, (and that vpon the sudden) such varietie of Flowers, such noyse of Birds, (specially of Nightingales, that seeme to be more loud and of a more variable note then in other Countries) that a man shall not lightly trauell in a more pleasant Countrey.

And this fresh and speedy growth of the Spring there, seemeth to proceed from the benefit of the Snow: which all the Winter time being spred ouer the whole Countrey as a white robe, and keeping it warme from the rigour of the Frost, in the Spring time (when the Sunne waxeth warme, and dissolueth it into water) doth so thoroughly drench and soake the ground, that is somewhat of a sleight and sandie mold, and then shineth so hotly vpon it againe, that it draweth the Hearbs and Plants forth in great plentie and varietie, in a very short time. As the Winter exceedeth in cold, so the Summer inclineth to ouermuch heate, specially in the moneths of Iune, Iuly, and August, being much warmer then the summer ayre in England.

The Countrey throughout, is very well watred with Springs, Rivers, and Oзераes or Lakes. Wherein the prouidence of God is to bee noted, for that much of the Countrey being so farre inland, as that some part lyeth a thousand myles and more euery way from any Sea, yet it is serued with faire Rivers, and that in very great number, that emptying themselues one into another, runne all into the Sea. Their Lakes are many and large, some of sixtie, eightie, a hundred, and two hundred myles long, with breadth proportionate.

The chiefe Rivers are these, 1. *Volgha*, that hath his head or spring at the roote of an Alder-tree, about two hundred verst above *Taruslane*, and groweth so bigge by the increafe of other Rivers by that time it commeth thither, that it is broad an *English* myle and more, and so runneth into the *Caspian* Sea, about two thousand and eight hundred verst or myles of length.

The next is *Boristhenes* (now called *Neper*) that diuideth the Countrey from *Lituania*, and falleth into the *Euxin* Sea.

The third *Tanaïs* or *Don*, (the ancient bounder betwixt *Europe* and *Asia*) that taketh his head out of *Rezan* *Ozera*, and so running through the Countrey of the *Chrim Tartars*, falleth into the great Sea lake, or meare, (called *Maoris*) by the Citie of *Azon*. By this River (as the *Russe* reporteth) you may passe from their Citie *Mosko* to *Constantinople*, and so into all those parts of the world by water, drawing your Boate (as their manner is) ouer a little *Isthmus* or narrow flippe of land, a few versts ouerthwart. Which was prooued not long since by an Ambassadour sent to *Constantinople*, who passed the River of *Moskua*, and so into another called *Ocka*, whence he drew his Boate ouer into *Tanaïs*, and thence passed the whole way by water.

The fourth is called *Dunya*, many hundred myles long, that falleth Northward into the Bay of Saint *Nicholas*, and hath great Alabastrer rockes on the bankes towards the Sea side.

The fifth *Duna*, that emptyeth into the *Baltick* Sea by the Towne *Riga*.

The sixt *Onega*, that falleth into the Bay at *Solouetsko* ninety Verst from the Port of *S. Nicholas*. This River below the Towne *Cargopolia* meeteth with the River *Volock*, that falleth into the *Finland* Sea by the Towne *Tama*. So that from the Port of *S. Nicholas* into the *Finland* Sea, and so into the Sound, you may passe all by water, as hath beene cryed by the *Russes*.

The seuenth *Suchana*, that floweth into *Dunya*, and so into the North-sea.

The eighth *Ocka*, that fetcheth his Head from the Borders of the *Chrim*, and streameth into *Volgha*.

The ninth *Moskua*, that runneth thorow the Citie *Mosko*, and giueth it the name.

There is *Wichida* also a very large and long River that riseth out of *Permia*, and falleth into *Volgha*. All these are Rivers of very large streames, the least to bee compared to the *Thames* in bignesse, and in length far more, besides diuers other. The Pole at *Mosko*, is fiftie five degrees ten minutes. At the Port of Saint *Nicholas* towards the North sixty three degrees and fifty minutes.

For kinds of fruits, they haue Apples, Peares, Plummes, Cheries, Red and Blacke, (but the Black wild) a Deene like a Muske Milian, but more sweet & pleasant, Cucumbers and Goords (which they call *Arboufe*) Raspes, Strawberries, and Hurtiberries, with many other Berries in

M. Cole Minister to Sir Ierome Bowes told me of a lickorish fellow, which taking a Pewter dish of some sweet sawce from his Masters Table in the next room, licked it, and payd the skin of his tongue for that sweet taste: a sower sawce to sweet sawcincle.

The case altered.

Chap. 3.
The Native Commodities of the Countrey.

great quantitie in euery Wood and Hedge. Their kinds of Graine are Wheate, Rie, Barley, Oates, Pease, Buckway, Psnytha, that in taste is somewhat like to Rice. Of all these Graines the Countrey yeeldeth very sufficient with an ouer-plus quantitie, so that Wheate is sold sometime for two Alteens or tenne pence sterling the *Chefsird* which maketh almost three English Bushels.

Rye. Their Rye is sowed before the Winter, all their other Graine in the Spring-time, and for the most part in May. The *Permians* and some other that dwell farre North, and in Desart places, are serued from the parts that lye more South-ward, and are forced to make Bread sometimes of a kind of Roote called *Vaghnoy* and of the middle rine of the Firre-tree. If there bee any Dearth (as they accounted this last yeere, Anno 1588. Wheat and Rye being at thirteene Alteens, or five shillings five pence sterling the *Chefsird*) the fault is rather in the practice of their Nobilitie that vse to engrosse it, then in the Countrey it selfe. The Natiue Commodities of the Countrey (wherewith they serue both their owne turnes, and send much abroad to the great enriching of the Emperour, and his people) are many and substantiall. First, Furses of all sorts. Where in the prouidence of God is to bee noted, that prouideth a naturall remedy for them, to helpe the naturall inconuenience of their Countrey by the cold of the Climate. Their chiefe Furs are these, Blaque Fox, Sables, Lufernes, Dunne Fox, Martrones, Gurnestalles or Armins, Lasets or Miniuer, Beuer, Wuluerins, the Skin of a great Water Rat that smelleth naturally like Muske, Calaber or Gray Squirrell, Red Squirrell, Red and White Foxe. Besides the great quantitie spent within the Countrey (the people being clad all in Furs the whole Winter) there are transported out of the Countrey some yeares by the Merchants of *Turkie*, *Persia*, *Bougharia*, *Georgia*, *Armenia*, and some other of Christendome to the value of foure or five hundred thousand Rubels, as I haue heard of the Merchants. The best Sable Fur groweth in the Countrey of *Pechora*, *Mongorskoj* and *Obdorskoj*, the worser sort in *Siberia*, *Perm*, and other places. The Blaque Fox and Red come out of *Siberia*, White and Dunne from *Pechora*, whence also come the white Wolfe, and white Beare Skin. The best Wuluerin also thence and from *Perm*. The best Martrons are from *Siberia*, *Cadam*, *Morum*, *Perm*, and *Cazan*. Lyfens, Mineuer, and Armins, the best are out of *Gallets*, and *Onglites*, many from *Novogrod*, and *Perm*. The Beauer of the best sort breedeth in *Murmanskey* by *Cola*. Other common Furses, and most of these kinds grow in many, and some in all parts of the Countrey.

2. Waxe. The second Commodity is of Waxe, whereof hath beene shipped in forraine Countreyes (as I haue heard it reported by those that best know it) the summe of fiftie thousand Pood yearely, euery Pood contayning fortie pound, but now about tenne thousand Pood a yeare.

3. Honey. The third is their Honey, whereof besides an exceeding great quantitie spent in their ordinary Drinckes (which is *Mead* of all sorts) and their other vles, some good quantitie is carried out of the Countrey. The chiefe increafe of Honey is in *Mordua* and *Cadam* neere to the *Chermissen Tartar*: much out of *Senerskoj*, *Bezan*, *Morum*, *Cazan*, *Dorogobose*, and *Vasma*.

4. Tallow. Fourthly, of Tallow they asoord a great weight for transportation: not only for that their Countrey hath very much good ground apt for Pasturage of cattell, but also by reason of their many Lents and other Fastes: and partly, because their greater men vse much Waxe for their Lights, the poorer and meaner sort Birch dried in their Stoues, and cut into long shiuers, which they call *Luchineos*. Of Tallow there hath beene shipped out of the Realme a few yeares since about one hundred thousand Pood yearely, now not past thirty thousand or thereabouts. The best yeeld of Tallow is in the parts and Territories of *Smolensko*, *Taruslane*, *Onglits*, *Novogrod*, and *Vologda*, *Olser*, and *Gorodetskey*.

5. Hide. Another principall Commodity is their Losh and Cow-hide. Their Losh or Buffe-hide is very faire and large. Their Bull and Cow-hide (for Oxen they make none, neither yet Weather) is of a small size. There hath beene transported by Merchants strangers some yeeres, one hundred thousand Hides. Now it is decreased to thirty thousand or thereabouts. Besides great store of Goats Skins, whereof great numbers are shipped out of the Countrey. The largest kind of Losh or Buffe breedeth about *Rostoue*, *Wichida*, *Novogrod*, *Morum*, and *Perm*. The lesler sort within the Kingdome of *Cazan*.

6. Trane Oyle. An other very great and principall Commodity is their Trane-oyle, drawne out of the Seal-fish. Where it will not be impertinent to shew the manner of their hunting the Seale, which they make this Oyle of: which is in this sort. Towards the end of Summer (before the Frost beginne) they goe downe with their Boats into the Bay of Saint *Nicholas*, to a Cape called *Cusconesse* or *Foxnose*, where they leaue their Boats till the next Spring-tyde. When the Sunne waxeth warme toward the Spring, and yet the Ice not melted within the Bay, they returne thither againe. Then drawing their Boats ouer the Sea Ice, they vse them for Houses to rest and lodge in. There are commonly about seuentene or eightene Fleete of them, of great large Boats, which diuide themselues into diuers companies, five or sixe Boats in a consort.

They that first find the haunt, fire a Beacon, which they carrie with them for the nonce. Which being espied by the other companies, by such among them as are appointed of purpose, they

The chiefe commodities of the Countrey.
1. Furre.
2. Waxe.

4. Tallow.
5. Hide.
6. Trane Oyle.
The manner of hunting the Seale-fish.

they come all together and compasse the Seales round about in a Ring, that lye Sunning themselves together vpon the Ice, commonly foure or fve thousand in a shoale, and so they inuade them euery man with his Club in his hand. If they hit them on the Nose, they are soone killed. If on the sides or backe they beare out the blow, and many times so catch and hold downe the Club with their Teeth by mayne force, that the partie is forced to call for helpe to his fellowes.

The manner of the Seales is, when they see themselves beset, to gather all close together in a throng or plumbe, to sway downe the Ice, and to breake it (if they can) which so bendeth the Ice, that many times it taketh the Sea-water vpon it, and maketh the Hunters to wade a foot or more deepe. After the slaughter, when they haue killed what they can they fall to sharing euery Boat his part in equall portions: and so they flay them, taking from the body the Skin, and the Lard or Fat with all that cleaueth to the Skin. This they take with them, leauing the bodies behind, and so goe to shoare. Where they digge Pits in the ground of a fathome and an halfe deepe, or there about, and so taking the Fat or Lard off from the Skin, they throw it into the Pit, and cast in among it hot burning stones to melt it withall. The vppermost and purest is sold and vsed to oyle Wooll for Cloth, the grosser (that is of a red colour) they sell to make Sope.

Likewise Ickary or Cauery, a great quantity is made vpon the Riuer of *Volgha*, out of the fish called *Bellougina*, the *Sturgeon*, the *Seueriga* and the *Sterledey*. Whereof the most part is shipped by *French* and *Netherlandish* Merchants for *Italy* and *Spaine*, some by *English* Merchants.

The next is of *Flaxe* and *Hempe*, whereof there hath bene shipped (as I haue heard Merchants lay) at the Port of *Narue* a great part of one hundred ships small and great yeerely. Now not past fve. The reason of this abating and decrease of this and other Commodities, that were wont to bee transported in a greater quantitie, is the shutting vp of the Port of the *Narue* towards the *Finland* Sea, which now is in the hands and possession of the *Sweaden*. Likewise the stopping of the passage ouer-land by the way of *Smolensko*, and *Plotsko*, by reason of their Warres with the *Polonian*, which causeth the people to bee lesse prouident in mayntayning and gathering these and the like Commodities, for that they lacke Sales. Partly also for that the Merchants and *Mousicks* (for so they call the common sort of people) are very much discouraged by many heauy and intollerable exactions, that of late time haue bene imposed vpon them: no man accounting that which he hath to be sure his owne. And therefore regard not to lay vp any thing, or to haue it before hand, for that it causeth them many times to be fleeced and spoyled, not only of their goods, but also of their liues. For the growth of *Flaxe* the Prouince of *Volska*, and the Countrey about is the chiefe and only place. For *Hempe* *Smolensko*, *Dorogobose* and *Vasna*.

The Countrey besides maketh great store of Salt. Their best Salt is made at *Stararouse* in very great quantitie, where they haue great store of Salt-wells, about two hundred and fiftie verst from the Sea. At *Astracan* Salt is made naturally by the Sea-water, that casteth it vp into great Hills, and so it is digged downe, and carryed away by the Merchants and other that will fetch it from thence. They pay to the Emperour for acknowledgement or custome three pence *Russe* vpon euery hundred weight. Besides these two, they make Sale in many other places of the Realme, as in *Perm*, *Wichida*, *Totma*, *Kenitsma*, *Solouetske*, *Ocona*, *Bombassey*, and *Nonecks* all out of Salt-pits, saue at *Solouetskey*, which lyeth nere to the Sea.

Likewise of Tarre they make a great quantitie out of their Fiere-trees in the Countrey of *Dunya* and *Smolensko*, whereof much is sent abroad. Besides these (which are all good and substantiall Commodities) they haue diuers other of smaller account, that are naturall and proper to that Countrey: as the fish tooth (which they call *Ribazuba* which is vsed both among themselves and the *Persians* and *Bongharians*, that fetch it from thence for Beads, Knives, and Sword-hafts of Noblemen, and Gentlemen, and for diuers other vses. Some vse the powder of it against poyson, as the *Vnicorne* Horne. The fish that weareth it is called a *Morie*, and is caught about *Pechora*. These fish teeth some of them, are almost two foot of length, and weigh eleuen or twelue pound a-piece.

In the Prouince of *Corelia*, and about the Riuer *Dunya* towards the North Sea, there groweth a soft Roocke which they call *Slude*. This they cut into pieces, and so teare it into thin flakes, which naturall it is apt for and so vse it for Glasse-lan thornes and such like. It giueth both inwards and outwards a cleerer light then Glasse, and for this respect is better then eyther Glasse or Horne: for that it neyther breaketh like Glasse, nor yet will burne like the Lanthorne. Salt-peeter they make in many places, as at *Onglives*, *Taruslaue* and *Vstug*, and some small store of Brimstone vpon the Riuer *Volgha*, but want skill to refine it.

Their Iron is somewhat brittle, but a great weight of it is made in *Corelia*, *Cargapolia*, and *Vstug* *Thotesna*. Other Myne they haue none growing within the Realme.

Their beasts of strange kinds are the Losh, the Ollen, the wilde Horse, the Beare, the Wolue-ring or wood Dogge, the Lyferne, the Beauer, the Sable, the Matron, the blacke and dunne Foxe, the white Beare towards the Sea coast of *Pechora*, the Gurnstale, the Laser, or Minener.

10. Tarre.

11. Ribazuba.

12. Slude.

13. Salt peeter and Brimstone.

14. Iron.

The strange beasts, fish, foule, &c. that breed in *Russia*.

They haue a kind of Squirrell that hath growing on the pinion of the shoulder bone, a long tuft of haire, much like vnto feathers, with a far broader tayle then haue any other Squirrels, which they moue and shake as they leape from tree to tree, much like vnto a wing. They skife a large space, and seeme for to flie withall, and therefore they call them *Letach Vechshe*, that is, the flying Squirrels. Their Hares and Squirrels in Summer are of the same colour with ours, in Winter the Hare changeth her coate into milke white, the Squirrell into gray, whereof commeth the *Calabar*.

Deare Horses: They haue fallow Deere, the Roe Bucke, and Goats very great store. Their Horses are but small, but very swift and hard, they trauell them vnshod both Winter and Summer, without all regard of pace. Their Sheepe are but small, and beare course and harsh wooll. Of Fowle, they haue diuers of the principall kinds: First, great store of Hawkes; the Eagle, the Gerfaulcon, the Slightfaulcon, the Goshawke, the Tassell, the Sparhawke, &c. But the principall Hawke that breedeth in the Countrey, is counted the Gerfaulcon.

Sheepe. I haue seene some of them in England breed twice a yeere; the Ram hath foure hornes, &c.

Of other Fowles their principall kinds are the Swanne tame and wilde, (whereof they haue great store) the Storke, the Crane, the Tedder, of the colour of a Feasant, but farre bigger and liueth in the Firre woods. Of Feasant and Partridge they haue very great plenty. An Owle there is of a very great bignesse, more vgly to behold then the Owles of this Countrey, with a broad face, and eares much like vnto a man.

Fresh-water fish.

For fresh water Fish, besides the common sorts (as Carpe, Pike, Pearch, Tench, Roach, &c.) they haue diuers kinds very good and delicate: as the Bellouga, or Bellougina of foure or fiew elnes long, the Ostrina or Sturgeon, the Seueriga, and Sterledy somewhat in fashion and taste like to the Sturgeon, but not so thicke or long. These foure kinds of fish breed in the *Volgha*, and are caught in great plenty, and serued thence into the whole Realme for a great food. Of the Roes of these foure kinds they make very great store of Icary or Caueary, as was said before. They haue besides these that breed in the *Volgha*, a fish called the *Ribabela*, or white Salmon, which they account more delicate then they doe the red Salmon, whereof also they haue exceeding great plenty in the Riuer Northward, as in *Dunya* the Riuer of *Cola*, &c. In the *Ozera* or Lake neere a Towne called *Perislaue*, not farre from the *Mosko*, they haue a small fish which they call the fresh Herring, of the fashion, and somewhat of the taste of a Sea-herring. Their chiefe Townes for fish are, *Taruslaue*, *Bealoxera*, *Nonograd*, *Astracan*, and *Cazan*: which all yeeld a large Custome to the Emperour every yeere for their trades of fishing, which they practise in Summer, but send it frozen in the Winter time into all parts of the Realme.

Chap. 4.
The chiefe Cities of Russia.

Mosko.

Berosus, a suspected author, or rather that which now beareth his name.

The chiefe Cities of Russia are, *Mosko*, *Nonograd*, *Rostoue*, *Volodomer*, *Plesco*, *Smolensko*, *Iaruslaue*, *Perislaue*, *Nonograd*, *Vologda*, *Ustinck*, *Golmigrœ*, *Cazan*, *Astracan*, *Cargapolin*, *Columna*.

The Citie of *Mosko* is supposed to bee of great antiquitie, though the first Founder bee vnknewne to the *Russe*. It seemeth to haue taken the name from the Riuer that runneth on the one side of the Towne. *Berosus* the *Chaldean* in his fifth Booke telleth that *Nimrod* (whom other profane Stories call *Saturne*) sent *Assyrium*, *Medus*, *Moscos*, and *Magog* into *Asia* to plant Colonies there, and that *Moscos* planted both in *Asia* and *Europe*. Which may make some probability, that the Citie, or rather the Riuer whereon it is built, tooke the denomination from this *Moscos*: the rather because of the climate or situation, which is in the very farthest part and list of *Europe*, bordering vpon *Asia*. The Citie was much enlarged by one *Euan* or *Iohn*, sonne to *Daniel*, that first changed his title of Duke into King: though that honour continued not to his posteritie: the rather because he was inuested into it by the Popes Legate, who at that time was *Innocentius* the fourth, about the yeere 1246. which was very much misliked by the *Russe* people, being then a part of the Eastern or *Greeke* Church. Since that time the name of this Citie hath growne more famous, and better knowne to the World: insomuch that not only the Province, but the whole Countrey of *Russia* is termed by some by the name of *Mosconia*, the Metropolitane Citie. The forme of this Citie is in a manner round, with three strong walls, circulating the one within the other, and streets lying betweene, whereof the inmost wall, and the buildings closed within it (lying safest as the heart within the bodie, fenced and watred with the Riuer *Moskua*, that runneth close by it) is all accounted the Emperours Castle. The number of houses (as I haue heard) through the whole Citie (being reckoned by the Emperour a little before it was fired by the *Chrim*) was 41500, in all. Since the *Tartar* besieged and fired the Towne (which was in the yeere 1571.) there lieth waste of it a great bredth of ground, which before was well set and planted with buildings, specially that part on the South side of *Moskua*, built not long before by *Basilus* the Emperour for his Garrison of Souldiers, to whom he gaue priuiledge to drinke Mede, and Beere at the drie or prohibited times, when other *Russes* may drinke nothing but water, and for that cause called this new Citie by the name of *Naloi*, that is, *Skinke* or *powre in*. So that now the Citie of *Mosko* is not much bigger then the Citie of *London*. The next in greatnesse, and in a manner as large, is the Citie *Nonograde*: where was committed (as the *Russe* sayth) the memorable warre so much spoken of in Stories of the *Scythian*.

Mosko fired.

Nonograd.

thian seruants, that tooke Armes against their masters: which they report in this sort: *vz.* That the *Boiars* or Gentlemen of *Novograde* and the Territorie about (which onely are Souldiers after the discipline of those Countries) had warre with the *Tartars*: Which being well performed and ended by them, they returned homewards. Where they vnderstood by the way, that their *Cholopys* or Bondslaves whom they left at home, had in their absence possessed their Townes, Lands, Houses, Wiues, and all. At which newes being somewhat amazed, and yet disdayning the villanie of their seruants, they made the more speed home: and so not farre from *Novograde* met them in warlike manner marching against them. Whereupon aduising what was best to be done, they agreed all to set vpon them with no other shew of weapon but with their Horse whips (which as their manner is, euery man rideth withall) to put them in remembrance of their seruile condition, thereby to terrifie them, and abate their courage. And so marching on, and lashing altogether with their whips in their hands they gaue the onser. Which seemed so terrible in the eares of their villaines, and stroke such a sense into them of the smart of the whip which they had felt before, that they fled altogether like Sheeppe before the Driners. In memory of this victory the *Novogradians* euery since haue stamped their Coine (which they call a *dingoe Novogrodskoy*, currant thorow all *Russia*) with the figure of a Horse-man shaking a whip aloft in his hand. These two Cities exceed the rest in greatnesse. For strength their chiefe Townes are, *Volsko*, *Smolensko*, *Cazan*, and *Astracan*, as lying vpon the borders. But for situation *Iarusslaue* farre exceedeth the rest. For besides the commodities that the soyle yeeldeth of Pasture and Corne, it lieth vpon the famous Riuer *Volga*, and looketh ouer it from a high banke very faire and stately to behold: whereof the Towne taketh the name. For *Iarusslaue* in that Tongue signifieth as much as a faire or famous Banke. In this Towne (as may be ghesed by the name) dwelt the *Russe King Vladimir*, surnamed *Iarusslaue*, that married the daughter of *Harald King of England*, by mediation of *Sueno the Dane*, as is noted in the *Danish Storie* about the yeere 1067.

The other Townes haue nothing that is greatly memorable, save many ruines within their walls. Which sheweth the decrease of the *Russe* People, vnder this gouernment. The streets of their Cities and Townes in stead of paving, are planked with Firre trees, plained and layd uen close the one to the other. Their houses are of wood without any lime or stone, built very close and warme with Firre trees plained and piled one vpon another. They are fastned together with dents or notches at euery corner, and so clasped fast together. Betwixt the trees or timber they thrust in mosse (whereof they gather plenty in their Woods, to keepe out the aire. Euery house hath a paire of staires that lead vp into the chambers out of the yard or street after the *Scottish* manner. This building seemeth farre better for their Countrey, then that of stone and bricke: as being colder and more dampish then their wooden houses, specially of Firre, that is a dry and warme wood. Whereof the prouidence of God hath giuen them such store, as that you may build a faire house for twentie or thirtie Rubbels, or little more, where wood is most scant. The greatest inconuenience of their wooden building is the aptnesse for firing, which happeneth very oft, and in very fearefull sort, by reason of the driness and fatnesse of the Firre, that being once fired, burneth like a Torch, and is hardly quenched till all bee burnt vp.

The sur-name of the Imperiall house of *Russia*, is called *Beala*. It tooke the originall (as is supposed) from the Kings of *Hungarie*. Which may seeme the more probable, for that the *Hungarian* Kings many yeeres agoe haue borne that name: as appeareth by *Bonsinius* and other Stories written of that Countrey. For about the yeere 1059. mention is made of one *Beala* that succeeded his brother *Andreas*, who reduced the *Hungarians* to the *Christian* Faith from whence they were fallen by *Atheisme* and *Turkish* perswasion before. The second of that name was called *Beala the blind*, after whom succeeded diuers of the same name.

That their Ancestry came not of the *Russe* Nation, *Iuan vasilowich* father to this Emperour, would many times boast, disdayning (as should seeme) to haue his progenie deriued from the *Russe* blood. As namely to an *Englishman* his Gold-smith, that had receiued Bullion of him to make certaine Plate: whom the Emperour commanded to looke well to his weight. For my *Russes* (said he) are theenes all. Whereat the Workeman looking vpon the Emperour, began to smile. The Emperour being of quick conceit, charged him to tell him what hee smiled at. If your Maiestie will pardon mee (quoth the Gold-smith) I will tell you. Your Highnesse said, that the *Russes* were all theenes, and forgot in the meane while that your selfe was a *Russe*. I thought so (quoth the Emperour) but thou art deceived. For I am no *Russe*, my Ancestors were *Germanes*. (for so they account of the *Hungarians* to bee part of the *Germane* Nation, though indeed they come of the *Hunnes*. That inuaded those Countries, and rested in those parts of *Pannonia*, now called *Hungarie*.)

meanes to recouer themselves, and perhaps either by *Hungarian* affinitie with their Princes, or taking a Prince from *Hungarie* then assisted with *Germanes*, they began to recouer of that *Tartarian* disease, whereof still some Symtomes remayne.

Chap. 6.
Of the manner of crowning or inauguration of the Russe Emperours.

How they aspired to the Dukedome of *Volodemer* (which was their first degree, and ingrafting into *Russia*) and whether it were by Conquest, or by Marriage, or by what other meanes, I could not learne any certainty among them. That from these beginnings of a small Dukedome (that bare notwithstanding an absolute gouernment with it, as at that time did also the other Shires or Prouinces of *Russia*) this house of *Beala* spred it selfe forth, and aspired by degrees to the Monarchie of the whole Countrey, is a thing well knowne, and of very late memorie. The chiefe of that House that advanced the Stocke, and enlarged their Dominions, were the three last that raigned before this Emperour, to wit, *Iuan Basileu*, and *Iuan* father to the other that raigneth at this time. Whereof the first that tooke vnto him the name and title of Emperour, was *Basileu* father to *Iuan*, and grandfather to this man. For before that time they were contented to be called great Dukes of *Mosko*. What hath beene done by either of these three, and how much they haue added to their first estate by Conquest or otherwise, may bee seene in the Chapter of their Colonies, or Purchases perforce. For the continuance of the race, this House of *Beala* at this present * is in like case as are many of the greatest Houses of *Christendome*, *vz.* the whole Stocke and Race concluded in one, two, or some few of the Bloud. For besides the Emperour that now is, who hath no child (neither is like euer to haue, for ought that may bee conjectured by the constitution of his body, and the barrenesse of his wife after so many yeeres marriage) there is but one more, *vz.* a child of sixe or seuen yeeres old, in whom resteth all the hope of the succession, and the posteritie of that House. As for the other brother that was eldest of the three, and of the best towardnesse, he died of a blow giuen him by his father vpon the head in his furie with his walking staffe, or (as some say) of a thrust with the prong of it driuen deepe into his head. That he meant him no such mortall harme when hee gaue him the blow, may appeare by his mourning and passion after his sonnes death, which neuer left him till it brought him to the graue. Wherein may be marked the iustice of God, that punished his delight in shedding of bloud with this murder of his sonne by his owne hand, and so ended his dayes and tyrannie together, with the murthering of himselfe by extreme griefe, for this his vn-happie and vnnaturall fact.

The Emperours younger brother of sixe or seuen yeeres old (as was said before) is kept in a remote place from the *Mosko*, vnder the tuition of his mother and her kindred, of the House of the *Nagaies*: yet not safe (as I haue heard) from attempts of making away by practice of some that aspire to the succession, if this Emperour die without any issue. The Nurle that tasted before him of certaine meat (as I haue heard) died presently. That hee is naturall sonne to *Iuan Vasilowich*, the *Russe* People warrant it, by the fathers qualitie that beginneth to appeare already in his tender yeeres. Hee is delighted (they say) to see Sheepe and other cattell killed, and to looke on their throats while they are bleeding (which commonly children are afraid to behold) and to beate Geese and Hennes with a staffe till he see them lie dead. Besides these of the male kind, there is a Widow, that hath right in the succession, Sister to the old Emperour, and Aunt to this man, sometime Wife to *Magnus* Duke of *Holst*, Brother to the King of *Denmarke*, by whom she had one daughter. This woman since the death of her Husband hath beene allured againe into *Russia*, by some that loue the succession better then her selfe, which appeareth by the sequele. For her selfe with her daughter, so soone as they were returned into *Russia*, were thrust into a Nunnerie, where her daughter died this last yeere while I was in the Countrey, of no naturall disease as was supposed. The mother remayneth still in the Nunnerie, where (as I haue heard) she bewayleth her selfe, and curseth the time when she returned into *Russia*, enticed with the hope of marriage, and other faire promises in the Emperours name. Thus it standeth with the Imperiall Stocke of *Russia*, of the House of *Beala*, which is like to determine in those that now are, and to make a conuersion of the *Russe* estate. If it be into a gouernment of some better temper, and milder constitution, it will be happie for the poore people that are now oppressed with intolerable seruitude.

The solemnities vsed at the *Russe* Emperours Coronation, are on this manner. In the great Church of *Precheffe* (or our Ladie) within the Emperours Castle is erected a Stage, whereon standeth a Serine that beareth vpon it the Imperiall Cap and Robe of very rich stuffe. When the day of the Inauguration is come, there resort thither, first the Patriarch with the Metropolitans, Arch-bishops, Bishops, Abbots, and Priors, all richly clad in their Pontificalibus. Then enter the Deacons with the Quier of Singers. Who so soone as the Emperour setteth foot into the Church, beginne to sing: *Many yeeres may liue noble Theodore Iuanowich, &c.* Whereunto the Patriarch and Metropolitane with the rest of the Clergie, answer with a certaine Hymne, in forme of a Prayer, singing it all together with a great noise. The Hymne being ended, the Patriarch with the Emperour mount vp the Stage, where standeth a Seat ready for the Emperour. Whereupon the Patriarch willet him to sit downe, and then placing himselfe by him vpon another Seate provided for that purpose, boweth downe his head towards the ground, and sayeth this Prayer: *Oh Lord God King of Kings, Lord of Lords, which by thy Prophet Samuel didst choose thy seruant Dauid, and anoynt him for King ouer thy People Israel, heare now our Prayers, and looke from*

from thy Sanctuaries upon this thy Servant Theodore, whom thou hast chosen and exalted for King over these thy holy Nations; anoint him with the oyle of gladnesse, protect him by thy power, but upon his head a Crowne of Gold and precious Stones, give him length of dayes, place him in the Seat of Iustice, strengthen his arms, make subject unto him all the barbarous Nations. Let thy feare bee in his whole heart, turne him from all errour, and shew him the salvation of thy holy and universall Church, that hee may iudge thy people with Iustice; and protect the children of the poore, and finally attayne everlasting life. This Prayer he speaketh with a lowe voyce, and then pronounceth a lowd: All prayse and power to God the Father, the Sonne, and the Holy Ghost. The Prayer being ended, he commandeth certayne Abbots to reach the Imperiall Robe and Cap: which is done very decently, and with great Solemnitie, the Patriarch withall pronouncing aloud: Peace be unto all. And so he beginneth another Prayer to this effect: Bow your selves together with us, and pray to him that reigneth over all. Preserve him (oh Lord) under thy holy protection, keepe him that hee may doe good and holy things, let Iustice shine forth in his dayes, that we may live quietly without strife and malice. This is pronounced somewhat softly by the Patriarch, whereto hee addeth againe aloud: Thou art the King of the whole World, and the Saviour of our soules, to thee the Father, Sonne, and Holy Ghost, bee all prayse for ever and ever. Amen. Then putting on the Robe and the Cap, hee blesseth the Emperour with the signe of the Crosse: saying withall, in the Name of the Father, the Sonne, and the Holy Ghost.

The like is done by the Metropolitans, Archbishops, and Bishops: who all in their order come to the Chaire, and one after another blesse the Emperour with their two fore-fingers. Then is said by the Patriarch another Prayer, that beginneth: O most holy Virgin Mother of God, &c. After which a Deacon pronounceth with an high lowd voyce: Many yeeres to Noble Theodore, good, honourable, belov'd of God, great Duke of Volodemer of Mosko, Emperour, and Monarch of all Russia, &c. Whereto the other Priests and Deacons that stand somewhat farre off by the Altar or Table, answer singing, Many yeeres, many yeeres, to the Noble Theodore. The same Note is taken vp by the Priests and Deacons, that are placed at the right and left side of the Church, and then altogether, they chaunt and thunder out, singing: Many yeeres to the Noble Theodore, good, honourable, belov'd of God, great Duke of Volodemer, Mosko, Emperour of all Russia, &c. These Solemnities being ended, first cometh the Patriarch with the Metropolitans, Archbishops, and Bishops, then the Nobilitie, and the whole Companie in their order, to doe homage to the Emperour, bending downe their heads, and knocking them at his feet to the very ground.

The Soile wherewith hee is invested at his Coronation, runneth after this manner. Theodore Iuanowich, by the grace of God, great Lord and Emperour of all Russia, great Duke of Volodemer, Mosko, and Nouograd, King of Cazan, King of Astracan, Lord of Plesko, and great Duke of Smolensko, of Twerria, Ioughoria, Permia, Vadska, Bulghoria, and others, Lord and great Duke of Nouograd, of the Low Countrey, of Chernigo, Rezin, Polotskoy, Rostoue, Yaroslaukey, Bealozera, Liefland, Oudoria, Obdoria, and Condensa, Commander of all Siberia, and of the North parts, and Lord of many other Countreyes, &c.

This stile containeth in it all the Emperours Prouinces, and setteth forth his greatness. And therefore they haue a great delight and pride in it, forcing not onely there owne people but also Strangers (that haue any matter to deliuer to the Emperour by Speech or writing) to repeat the whole forme from the beginning to the end. Which breedeth much canill, and sometimes quarrell betwixt them and the Tartar, and Poland Ambassadors: who refuse to call him Czar, that is Emperour, and to repeat the other parts of his long Stile. My selfe, when I had audience of the Emperour, thought good to salute him onely with thus much, viz. Emperour of all Russia, great Duke of Volodemer, Mosko, and Nouograd, King of Cazan, King of Astracan. The rest I omitted of purpose, because I knew they gloried, to haue their Stile appear to be of a larger Volume then the Queenes of England. But this was taken in so ill part, that the Chancellor (who then attended the Emperour, with the rest of the Nobilitie) with a lowd chafing voyce called still vpon me to say out the rest. Whereto I answered, that the Emperours Stile was very long, and could not so well be remembered by Strangers, that I had repeated so much of it, as might shew that I gaue honour to the rest, &c. But all would not serue till I commanded my Interpreter to say it all out.

The manner of their Government is much after the Turkish fashion: which they seeme to imitate as neere as the Countrey, and reach of their capacities in Politike Affaires will giue them leaue to doe.

The State and forme of their Government seemeth to apply all to the behoofe of the Prince, and that after a most open manner: as may appeare by the Sophismata, or secrets of their Government afterwards set downe, as well for the keeping of the Nobilitie and Commons in an vnder proportion, and farre vneuen ballance in their feuerall degrees, as also in their Impositions and Exactions, without any regard of Nobilitie or People: farther then it giueth the Nobilitie a kind of libertie, to exact vpon the Commons and baser sort of People in all parts

Chap. 7.
The State or
forme of their
Government.
The Russe Go-
uernment ty-
rannicall.

giue-all-kind
tenure.
Absolute So-
uerieigntie.

of the Realme wherefoeuer they come, specially in the place where their Lands lye, or where they are appointed by the Emperour to gouerne vnder him: Also to the Commons some small contentment, in that they passe ouer their Lands by discent of Inheritance to whether Sonne they will: which commonly they doe after our *Gauill kind*, and dispose of their goods by gift or Testament without any controllment.

Concerning the principall points and matters of State, wherein the Souereignetic consisteth (as the making and annulling of publike Lawes, the making of Magistrates, power to make Warre or League with any Forreine State, to execute or to pardon life, with the right of Appale in all matters, both Ciuill and Criminal) they doe so wholly and absolutely pertayne to the Emperour, and his Councell vnder him, as that he may be said to be both the Souereigne Commander, and the Executioner of all these. For as touching any Law or publike Order of the Realme, it is euer determined of before any publike Assembly or Parliament be summoned. Where besides his Councell, hee hath none other to consult with him of such matters as are concluded before hand, but onely a few Bishops, Abbots, and Friers: to make aduantage of the peoples Superstitions, euen against themselves, which thinke all to be holy and just, that passeth with content of their Bishops and Clergie men, whatsoeuer it be. For which purpose the Emperours are content to make much of the corrupt state of the Church, as now it is among them, and to nourish the same by extraordinary fauours, and Immunities to the Bishops Seas, Abbeyes and Frieries: as knowing Superstition and false Religion best to agree with a Tyrannicall State, and to be a speciall meanes to vphold and maintayne the same.

Magistracies.

Secondly, as touching the publike Offices and Magistracies of the Realme, there is none hereditarie, neyther any so great nor so little in that Countrey, but the bestowing of it is done immediately by the Emperour himselfe. Inso much that the very *Diacks*, or Clerkes in euery head Towne, are for the most part assigned by himselfe. Notwithstanding, the Emperour that now is (the better to entend his Deuotions) referreth all such matters pertayning to the State, wholly to the ordering of his Wiues Brother, the Lord *Borris Federowich Godonoe*.

He succeeded
him.
Jurisdiction.

Thirdly, the like is to be said of the Jurisdiction concerning matters Iudiciall, specially such as concerne life and death. Wherein there is none that hath any authoritie or publike Jurisdiction that goeth by Discent, or is held by Charter, but all at the appointment and pleasure of the Emperour, and the same practised by the Iudges with such awe and restraint, as that they dare not determine vpon any speciall matter, but must referre the same wholly, vp to the *Moske* to the Emperours Councell. To shew his Souereignie over the liues of his Subjects, the late Emperour *Iuan Vasilowich* in his walkes or progresse, if he had misliked the face or person of any man whom he met by the way, or that looked vpon him, would command his head to be strooke off. Which was presently done, and the head cast before him.

Iuan Vasilowich
cruell.

Appales and
Pardons.

Fourthly, for the Souereigne Appale, and giuing of Pardons in Criminall Matters to such as are conuicted, it is wholly at the pleasure and grace of the Emperour. Wherein also the Emperesse that now is, being a woman of great Clemencie, and withall delighting to deale in publike Affaires of the Realme, (the rather to supply the defect of her Husband) doth behaue her selfe after an absolute manner, giuing out pardon (specially on her birth day and other solemne times) in her owne name, by open Proclamation, without any mention at all of the Emperour. Some there haue beene of late of the ancient Nobilitie, that haue held diuers Prouinces by right of Inheritance, with an absolute Authoritie and Jurisdiction ouer them, to order and determine all matters within their owne Precinct without all Appale, or controllment of the Emperour. But this was all annulled and wrung cleane from them by *Iuan Vasilowich* Father to this Emperour.

Ancient No-
bilitie.

Chap. 8.
The manner
of holding
the Parlia-
ments.
The States of
Parliament.

Their highest Court of publike consultation for matter of State, is called the *Zabore*, that is, the *Publike Assembly*. The states and degrees of persons, that are present at their Parliaments, are these in order. 1. The Emperour himselfe. 2. Some of his Nobilitie about the number of twenty being all of his Councell. 3. Certayne of the Clergie-men, &c. about the same number. As for Burghers or other to represent the Comminaltie, they haue no place there: the people beeing of no better account with them then as seruants or bond-slaves that are to obey, not to make Lawes, nor to know any thing of publike matters before they are concluded.

The order of
the summons
or assembling.

The Court of Parliament (called *Zabore*) is held in this manner. The Emperour causeth to be summoned such of his Nobilitie as himselfe thinketh meete, being (as was said) all of his Councell: together with the Patriarch, who calleth his Clergie, to wit, the two Metropolitans, the two Archbishops, with such Bishops, Abbots, and Friers as are of best account and reputation among them. When they are all assembled at the Emperours Court, the day is intimated when the Session shall beginne. Which commonly is vpon some Friday, for the Religion of that day.

Friday respect.

When the day is come, the Clergie-men assemble before at the time and place appointed, which is called the *Stollie*. And when the Emperour commeth attended by his Nobilitie, they arise all, and meete him in an out-roome, following their Patriarch, who blesseth the Emperour with

with his two fore-fingers, laying them on his fore-head, and the sides of his face, and then kisseth him on the right side of his brest. So they passe on into their Parliament House, where they sit in this order. The Emperour is enthronized on the one side of the Chamber. In the next place not farre from him at a small square Table (that giueth roome to twelue persons or thereabouts) sitteth the Patriarch with the Metropolitans and Bishops, and certayne of the principall Nobilitie of the Emperours Councell, together with two *Diacks* or Secretaries. (called *Dumoy dyakey*) that enact that which passeth. The rest place themselves on benches round about the Roome, euery man in his ranke after his degree. Then is there propounded by one of the Secretaries (who representeth the *Speaker*) the cause of their Assembly, and the principall matters that they are to consider of. For to propound Bills what euery man thinketh good for the publike benefit (as the manner is in *England*) the *Russe* Parliament alloweth no such custome, nor liberty to subjects.

The points being opened, the Patriarch with his Clergie-men haue the Prerogative to be first asked their vote, or opinion, what they thinke of the points propounded by the Secretaries. Whereto they answere in order, according to their degrees, but all in one forme without any Discourse: as hauing learned their Lesson before, that serueth their turnes at all Parliaments alike, whatsoeuer is propounded. Commonly it is to this effect. *That the Emperour and his Councell are of great wisdom and experience, touching the Policies and publike Affaires of the Realme, and furre better able to iudge what is profitable for the Common-wealth, then they are, which attend upon the service of God only, and matters of Religion. And therefore it may please them to proceed. That instead of their aduise, they will aide them with their Prayers, as their duties and vocations doe require, &c.* To this or like effect hauing made their Answers euery man in his course, vp standeth some Abbot or Frier more bold then the rest (yet appointed before-hand as a matter of forme) and desireth the Emperour it would please his Majestie to command to be deliuered vnto them what his Majesties own iudgement and determinate pleasure is, as touching those matters propounded by his *Deiack*.

Whereto is replied by the said Secretarie in the Emperours name. *That his Highnesse with those of his Noble Councell, upon good and sound aduise haue found the matters proposed to be very good and necessary for the Common-wealth of his Realme. Notwithstanding, forasmuch as they are Religious men, and know what is right, his Majestie requirerh their godly Opinions, yea, and their Censures too, for the approuing or correcting of the said Propositions. And therefore desireth them again to speake their minds freely. And if they shall like to giue their consents, that then the matters may passe to a full conclusion.*

Hereunto when the Clergie-men haue giuen their consents (which they vse to doe without any great pausing) they take their leaues with blessing of the Emperour: who bringeth the Patriarch on his way to farre as the next Roome, and so returneth to his Seat, till all be made ready for his returne homeward. The Acts that thus are passed by the *Zabore* or Parliament, the *Deiackes* or Secretaries draw into a forme of Proclamation, which they send abroad into euery Province, and head Towne of the Realme, to be published there by the Dukes and *Diackes*, or Secretaries of those places. The Session of Parliament being fully ended, the Emperour inuitteth the Clergie-men to a solemne Dinner. And so they depart euery man to his home.

The degrees of persons or Estates of *Russia* (besides the Soueraigne State or Emperour himselfe) are these in their order. 1. The Nobility which is of foure sorts. Whereof the chiefe for Birth, Authority, and Reuennue are called the *Vdelney Knazey*, that is, *The exempt or priuiledged Dukes*. These held sometime a feuerall iurisdiction, and absolute Authoritie within their Precincts, much like vnto the States or Nobles of *Germany*. But afterwards (reseruing their Rights vpon composition) they yielded themselves to this House of *Beula*, when it beganne to waxe mightie, and to enlarge it selfe by ouer-matching their Neighbours. Onely they were bound to serue the Emperour in his Warres with a certayne number of Horse. But the late Emperour *Ivan Vasilowich* Father to this Prince, being a man of high spirit, and suball in his kind meaning to reduce his Gouvernement into a more strict forme, began by degrees to clip off their greatnesse, and to bring it downe to a lesser proportion: till in the end he made them not onely his Vassals, but his *Kolophey*, that is, his very Villaines or Bond-slaves. For so they terme and write themselves in any publike Instrument or priuate Petition which they make to the Emperour. So that now they hold their Authorities, Lands, Liues, and all at the Emperours pleasure as the rest do.

The meanes and practice whereby hee wrought this to effect against those, and other of the Nobility (so well as I could note out of the report of his doings) were these, and such like. First, he cast priuate emulations among them about prerogative of their Titles and Dignities. Wherein hee vsed to set on the inferiours, to prefer or equall themselves to those that were accounted to be of the Nobler Houses. Where hee made his aduantage of their malice and contentions, the one against the other, by receiuing deified matter, and accusations of secret practice and Conspiracies to bee intended against his Person and State. And so hauing singled out the greatest of them, and cut them off with the good liking of the rest, hee fell at last to open practice, by forcing of the other to yeeld their Rights vnto him.

Their discourse
at Parliament,

Chap. 9.

Of the Nobilitie, and by what meanes it is kept in an vnder proportion agreeable to that State. The *Vdelney Knazey* chiefe of the Nobilitie.

Names of the Nobles of the *Russe* Nobilitie.

The faction of
Oppressini and
Zemsky deui-
sed by the Em-
perour.

2. Hee diuided his subiects into two parts or factions by a generall Schisme. The one part he called the *Oppressini* or *Select men*. These were such of the Nobility and Gentry as he took to his owne part, to protect and maintayne them as his faithfull subiects. The other he called *Zemsky*, or the *Commons*. The *Zemsky* contayned the base and vulgar sort, with such Noblemen and Gentlemen as he meant to cut off, as suspected to mislike his Gouvernement, and to haue a meaning to practise against him. Wherein he provided that the *Oppressini* for number and qualitie of Valure, Money, Armour, &c. farre exceeded the other of the *Zemsky* side, whom he put (as it were) from vnder his protection: so that if any of them were spoyled or killed by those of the *Oppressini*, (which he accounted of his owne part) there was no amends to bee sought for by way of publike Iustice, or by complaint to the Emperour.

The whole number of both parts was orderly registred and kept in a Booke: so that every man knew who was a *Zemsky* man, and who of the *Oppressini*. And this libertie of the one part to spoile and kill the other without any helpe of Magistrate, or Law (that continued seven yeeres) enriched that side, and the Emperours Treasury, and wrought that withall which hee intended by this practise, viz. to take out of the way such of the Nobilitie, as himselfe misliked; whereof were slaine within one weeke to the number of three hundred within the Citie of *Mosko*.

This mischieuous practice of making a generall Schisme, and publike diuision among the subiects of his whole Realme, proceeded (as should seeme) from an extreame doubt, and desperate feare, which he had conceined of most of his Nobilitie, and Gentlemen of his Realme, in his Wars with the *Polonian* and *Chrim Tartar*. What time he grew into a vehement suspicion (conceined of the ill successe of his Affaires) that they practised Treason with the *Polonian* and *Chrim*. Whereupon he executed some, and deuised this way to be rid of the rest.

Pomestnoy
tenure.

3. Hauiug thus pulled them and seased all their Inheritance, Lands, Priuiledges, &c. saue some very small part which hee left to their name, hee gaue them other Lands of the tenour of *Pomestnoy* (as they call it) that are held at the Emperours pleasure, lying far of in another Countrey, and so remooued them into other of his Prouinces, where they might haue neyther fauour, nor authority, not being Natiue nor well knowne there. So that now these of the chiefe Nobility (called *Vdelney Knazey*) are equalled with the rest: saue that in the opinion and fauour of the people they are of more account, and keepe still the Prerogative of their place in all their publike meetings.

Their practice to keepe downe these Houses from rising againe and recouering their dignities are these, and such like. First, many of their Heires are kept vnmarried perforce, that the stocke may dye with them. Some are sent into *Siberia*, *Cazan* and *Astracan*, vnder pretence of seruice, and there either made away, or else fast clapped vp. Some are put into Abbeyes, and sheare themselues Friars by pretence of a Vow to be made voluntary, and of their owne accord, but indeed forced vnto it by feare, vpon some pretenced crime objected against them. Where they are so guarded by some of speciall trust, and the Couent it selfe (vpon whose head it standeth that they make no escape) as that they haue no hope but to end their liues there. Of this kind there are many of very great Nobilitie. These and such like wayes begunne by the Emperour *Iuan Paskowich* are still practised by the *Godonoies*, who being aduanced by the Marriage of the Empreffe their Kinswoman, rule both the Emperour, and his Realme (specially *Borris Federowich Godonoe*, Brother to the Empreffe) and endeauour by all meanes to cut off, or keepe downe all of the best and ancientest Nobilitie. Whereof diuers already they haue taken away, whom they thought likeliest to make head against them and to hinder their purpose, as *Knez Andreas Guraken Bulgarkoe*, a man of great birth and authoritie in the Countrey. The like they haue done with *Peter Gollauini* (whom they put into a Dungeon where hee ended his life) with *Knez Vasilie Vrywich Golloohen*, with *Andrien Iuanowich Suskoy*, accounted among them for a man of a great wisdom. So this last yeere was killed in a Monastery (whither they had thrust him) one *Knez Iuan Petro-wich Suskoy* a man of great valour, and seruice in that Countrey: who about five or sixe yeeres since, bare out the siege of the Citie *Vosko*, made by *Stephan Batore* King of *Polonia*, with one hundred thousand men, and repulsed him very valiantly, with great honour to himselfe, and his Countrey, and disgrace to the *Polonian*. Also *Micheta Romanowich* Vncle to the Emperour by the Mothers side, was supposed to haue dyed of Poyson, or some like practice.

Names of the
greatest Hou-
ses of the Russe
Nobilitie.

The Names of these families of greatest Nobilitie are these in their order. The first is of *Knez Volodemer*, which resteth at this time in one Daughter a widow, and without Children (mentioned before) sometime wife to *Hartock Magnus* Brother to the King of *Denmarke*, now closed within a Nunnerie. The second *Knez Metheleskey*, thrust into a Frierie, and his onely Sonne kept from marriage, to decay the house. The third *Glimskoy*. But one left of his house, and hee without children saue one Daughter. The fourth *Suskoy*, whereof there are foure Brethren young men, and vnmarried all. The fifth *Huberskoy*. Of this House are foure liuing. The sixth *Bulgaloj*, now called *Guletschey* house, whereof are five liuing, but youths all. The seuenth *Vorallinskoy*. Two left of that stocke. The eighth *Odgoskey*, two. The ninth *Tellerskoy*, one. The tenth *Taytone*, three. These are the Names of the chiefe Families, called *Vdelney Knazj*: that in effect haue

haue lost all now, saue the very name it selfe, and fauour of the people, which is like one day to restore them againe, if any be left.

The second degree of Nobilitie is of the *Boiarents*. These are such as the Emperour honoureth (besides their Nobilitie) with the title of Counsellors. The reuenue of these two sorts of their Nobles that riseth out of their Land assigned them by the Emperour, and held at his pleasure (for of their owne Inheritance there is little left them, as was sayd before) is about a thousand Marcks a yeere: besides Pension which they receiue of the Emperour for their seruice in his Warres, to the summe of seuen hundred Rubbels a yeere, and none about that summe.

The second degree of Nobilitie.

But in this number the Lord *Borris Federowich Godenoe* is not to bee reckoned, that is like a *Transcendent*, and in no such predicament with the rest, being the Emperours Brother in law, his Protector for direction, for Command and authoritie Emperour of *Russia*. His yeerely reuenue in Land and Pension, amounteth to the summe of 93700. Rubbels and more, as appeareth by the particulars. Hee hath of inheritance (which himselfe hath augmented in *Vasma Dorogobose*, fixe thousand Rubbels a yeere. For his office of *Connick*, or Master of the Horle twelue thousand Rubbels or Marcks, raised out of the *Conasne Sloboday*, or the liberties pertayning to that Office, which are certayne Lands and Townes neere about the *Mosco*. Besides, all the meadow and pasture ground on both sides the banke of the Riuer *Mosko*, thirtie verst vp the streame, and fortie verst downwards. For his pension of the Emperour (besides the other for his Office) fiftene thousand Rubbels. Out of the Prouince or Shire of *Vagha*, there is giuen him for a peculiar exempted out of the *Chetfird* of *Posolskoy*, two and thirtie thousand Rubbels, besides a rent of Furses. Out of *Rezan* and *Sener*, (another peculiar) thirtie thousand Rubbels. Out of *Oster* and *Turiack* another exempt place eight thousand Rubbels. For rent of Bath-stoaves and Bathing-houses without the walls of *Mosko*, fiftene hundred Rubbels. Besides his *Pomest*, or Lands which hee holdeth at the Emperours pleasure, which farre exceedeth the proportion of land allotted to the rest of the Nobilitie.

Lord Borris after this Emperour.

One other there is, of the house of *Glinkoy*, that dispendeth in Land and Pension about fortie thousand Rubbels yeerely. Which hee is suffered to enioy, because he hath married *Borris* his wifes Sister, being himselfe very simple and almost a naturall. The ordering of him and his Lands are committed to *Borris*.

In the third ranke are the *Voyanodey*, or such Nobles as are, or haue bene Generals in the Emperours warres. Which deliuer the honour of their Title to their posterities also: who take their place above the other Dukes and Nobles, that are not of the two former sorts, viz. of the *Vdelney knazey*, nor of the *Boiarents*.

The third sort of Nobilitie.

These three degrees of their Nobilitie, (to wit) the *Vdelney knazey*, the *Boiarents*, and the *Voyanodey*, haue the addition of *Vich*, put vnto their surname, as *Borris Federowich*, &c. which is a note of Honour that the rest may not vsurpe. And in case it bee not added in the naming of them, they may sue the *Bestchest* or penaltie of dishonour vpon them, that otherwise shall tearme them.

Title Vich.

The fourth and lowest degree of Nobilitie with them, is of such as beare the name of *Knazey* or Dukes, but come of the younger Brothers of those chiefe Houses, through many discent, and haue no inheritance of their owne, saue the bare name or title of Duke onely. For their order is to deliuer their names and titles of their Dignities ouer to all their Children alike, whatsoever else they leaue them. So that the Sonnes of a *Voyanodey* or Generall in the field, are called *Voyanodey*, though they neuer saw the field, and the Sonnes of a *Knez* or Duke, are called *Knazey*, though they haue not one groat of inheritance or liuelyhood to maintayne themselves withall. Of this sort there are so many, that the plentie maketh them cheape: so that you shall see Dukes glad to serue a meane man for five or sixe Rubbels or Marcks a yeere, and yet they will stand highly vpon their *Bestchest* or reputation of their Honours. And these are their seuerall degrees of Nobilitie.

The second degree of persons, is of their *Sina Boiarskey*, or the sonnes of Gentlemen: which all are preferred, and hold that Name by their seruice in the Emperours warres, being Souldiers by their very stocke and birth. To which order are referred their *Dyacks* or Secretaries, that serue the Emperour in euery head Towne, being joyned in Commission with the Dukes of that place.

The second degree of persons.

The last are their Commons, whom they call *Mousicks*. In which number they reckon their Merchants, and their common Artificers. The very lowest and basest sort of this kinde (which are held in no degree) are their Countrey people, whom they call *Christianeis*. Of the *Sina Boiarskey* (which are all Souldiers) wee are to see in the description of their Forces, and Militarie provisions. Concerning their *Mousicks*, what their condition and behaviour is, in the Title or Chapter Of the Common people.

The third degree.

The whole Countrey of *Russia* (as was sayd before) is diuided into foure parts, which they call *Chetfirds*, or *Tetrarchies*. Euery *Chetfird* containeth diuers Shires, and is annexed to a seuerall Office, whereof it takes the name. The first *Chetfird* or *Tetrarchie*, beareth the name of

Chap. 10. Of the Government of their Prouinces and Shires.

The foure,
Chetfirds.

Pofoskoy Chetfird, or the Iurisdiction of the office of Ambassages, and at this time is vnder the chiefe Secretarie and officer of the Ambassages, called *Andreas Schalcalone*. The standing fee or stipend that hee receiueth yeerely of the Emperour for this seruice, is one hundred Rubbels or Marcks.

The second is called the *Roseradney Chetfird*, because it is proper to the *Roserade* or high Constable. At this time it pertayneth by vertue of Office to *Basilie Schalcalone*, Brother to the Chancellour, but it is executed by one *Zapon Abramone*. His pension is an hundred Rubbels yeerely.

The third is the *Chetfird of Pomestnoy*, as pertayning to that Office. This keepeth a Register of all Lands giuen by the Emperour for seruice to his Noblemen, Gentlemen and others, giueth out and taketh in all Assurances for them. The officer at this time is called *Eleazar Wellusgine*. His stipend is five hundred Rubbels a yeere.

The fourth is called *Cassauskoy Dworets*, as being appropriate to the Office that hath the iurisdiction of the Kingdomes of *Cazan* and *Astracan*, with the other Townes lying vpon the *Volgha*, now ordered by one *Druzhine Pemeleone*, a man of very speciall account among them, for his wisdom and promptnesse in matters of policie. His pension is one hundred and fiftie Rubbels a yeere.

From these *Chetfirds* or *Tetrarchies* is exempted the Emperours inheritance or *Pochin* (as they call it) for that it pertayned from ancient time to the House of *Beala*, which is the surname of the Imperiall blood. This standeth of sixe and thirtie Townes with their bounds or Territories. Besides diuers peculiar Iurisdctions, which are likewise deducted out of those *Chetfirds*, as the Shire of *Vagha* (belonging to the Lord *Borrisse Federonich Godonoe*) and such like.

These are the chiefe Gouvernours or Officers of the Prouinces, not resident at their charge abroad, but attending the Emperour whither soeuer hee goeth, and carrying their Offices about with them, which for the most part they hold at *Mosko*, as the Emperours chiefe seate.

The parts and practice of these foure Offices, is to receiue all Complaints and Actions whatsoever, that are brought out of their seuerall *Chetfirds* and Quarters, and to informe them to the Emperours Councell. Likewise to send direction againe to those that are vnder them, in their sayd Prouinces, for all matters giuen in charge by the Emperour and his Councell, to bee done or put in execution within their Precincts.

For the ordering of euery particular Prouince of these foure *Chetfirds*, there is appointed one of these Dukes, which were reckoned before in the lowest degree of their Nobilitie, which are resident in the head Townes of the sayd Prouinces. Whereof euery one hath joynd with him in Commission a *Djack* or Secretarie to assist him or rather to direct him. For in the executing of their Commission, the *Djack* doth all.

The Commis-
sion of the
Dukes or Pre-
sidents of
Shires.

The parts of their Commission are these in effect. First, to heare and determine in all ciuill matters within their Precinct. To which purpose they haue vnder them certayne Officers, as *Gubnoy Starets* or Coronets, who besides the tryall of selfe Murders, are to attach Fellons: and the *Soudia* or vnder Iustices, who themselues also may heare and determine in all matters of the same nature, among the Countrey people of their owne Wards or Bayliwickes: but so that in case either partie dissent, they may appeale, and goe further to the Duke and *Djack* that reside within the head Towne. From whom also they may remooue the matter to the higher Court at *Mosko*, of the Emperours Councell, where lye all appeales. They haue vnder them also *Sotskoy Starets*, that is Aldermen, or Bayliffes of the Hundreds.

Secondly, in all criminall matters, as Theft, Murder, Treason, &c. they haue authoritie to apprehend, to examine and to imprison the malefactor, and so hauing receiued perfect euidence and information of the cause, they are to send it ready drawne and orderly digested vp to the *Mosko*, to the Officer of the *Chetfird*, whereunto that Prouince is annexed: by whom it is referred and propounded to the Emperours Councell. But to determine in any matter criminall, or to doe execution vpon the partie offending, is more then their Commission will allow them to doe.

Thirdly, if there bee any publike seruice to be done within that Prouince, (as the publishing of any Law, or common order, by way of Proclamation, collecting of taxes and impositions for the Emperour, mustering of Souldiers, and sending them forth at the day, and to the place assigned by the Emperour or his Councell) all these and such like pertayne to their charge.

Dukes and Dy-
acks: many of
them vniust
oppressors, and
Spunges pres-
sed againe.

These Dukes and *Djacks* are appointed to their place by the Emperour himselfe, and are changed ordinarily at euery yeeres end, except vpon some speciall liking or sute, the time bee prorogued for a yeere or two more. They are men of themselues of no credit, nor fauour with the people where they gouerne, being neither borne, nor brought vp among them, nor yet hauing inheritance of their owne there, or else where. Onely of the Emperour they haue for that seruice an hundred Marcks a yeere, hee that hath most, some fiftie, some but thirtie. Which maketh them more suspected and odious to the people, because being so bare, and comming fresh and hungry vpon them lightly euery yeere, they racke and spoyle them without due regard of Iustice or Conscience. Which is easily tollerated by the chiefe Officers of the *Chetfirds*, to the end they may spoyle them againe, and haue a better bootie when they call them to account: which

which commonly they doe at the end of their seruice, making an aduantage of their iniustice and oppression ouer the poore people. There are few of them but they come to the *Pudkey* or Whip when their time is ended, which themselves for the most part doe make account of. And therefore they furnish themselves with all the spoyle they can for the time of their Government, that they may haue for both turnes, as well for the Emperour and Lord of the *Chetfird*, as to reserve some good part for themselves.

They that are appointed to gouerne abroad, are men of this qualitie: saue that in the foure border Townes that are of greatest importance, are set men of more speciall valour and trust, two in euery Towne. Whereof one is euer of the Emperours priue Counsell. These foure border Townes are, *Smolensko*, *Volsko*, *Novogrod*, and *Cazan*, whereof three lie towards the *Polonian* and *Sweden*, one bordereth farre off vpon the *Chrim Tartar*. These haue larger commission then the other Dukes of the Prouinces that I spake of before, and may doe execution in criminall matters. Which is thought behoofull for the Common-wealth: for incident occasions that may happen vpon the borders that are farre off, and may not stay for direction, about euery occurrent and particular matter from the Emperour and his Counsell. They are changed euery yeere (except as before) and haue for their stipend 700. Rubbels a yeere he that hath most: some haue but 400. Many of these places that are of greatest importance, and almost the whole Countrey is managed at this time, by the *Godonoos* and their Clients.

The Cite of *Mosko* (that is the Emperours Seat) is gouerned altogether by the Emperours Counsell. All matters there both ciuill and criminall, are heard and determined in the seuerall Courts, held by some of the said Counsell, that reside there all the yeere long.

Onely for their ordinary matters (as Buildings, Reparations, keeping of their Streets decent and cleane, Collections, leuying of Taxes, Impositions and such like) are appointed, two Gentlemen, and two *Dyacks* or Secretaries, who hold a Court together for the ordering of such matters. This is called the *Zemsky* house. If any Townes-man suspect his seruant of theft or like matter, hither he may bring him to haue him examined vpon the *Pudkey*, or other torture. Besides these two Gentlemen, and Secretaries that order the whole Cite, there are *Starusts* or Aldermen for euery seuerall Companie. The Alderman hath his *Sorskey* or Constable, and the Constable hath certaine *Decetskeys* or Decurions vnder him, which haue the ouersight of ten households a piece, whereby euery disorder is sooner spied, and the common seruice hath the quicker dispatch. The whole number of Citizens poore and rich are reduced into Companies. The chiefe Officers (as the *Dyacks* and Gentlemen) are appointed by the Emperour himselfe, the *Starust* by the Gentlemen and *Dyacks*, the *Sorskey* by the *Starust* or Alderman, and the *Decetskeys* by the Constables.

This manner of gouernment of their Prouinces and Townes, if it were as well set for the giuing of iustice indifferently to all sorts, as it is to preuent innovations, by keeping of the Nobility within order, and the Commons in subiection, it might seeme in that kind to be no bad nor vnpolitike way, for the contayning of so large a Common-wealth, of that breadth and length as is the Kingdome of *Russia*. But the oppression and slavery is so open, and so great, that a man would maruell, how the Nobilitie and People should suffer themselves to be brought vnder it, while they had any meanes to auoide and repulse it: or being so strengthened as it is at this present, how the Emperours themselves can be content to practise the same, with so open iniustice and oppression of their Subiects, being themselves of a *Christian* profession: By this it appeareth how hard a matter it were to alter the state of the *Russe* Government, as now it standeth.

The gouernment of Mosko.

An hard matter to alter the State of Russia.

The Emperours of *Russia* giue the name of Counsellour to diuers of their chiefe Nobilitie, rather for honours sake, then for any vse they make of them about their matters of State. These are called *Boiaren*s without any addition, and may be called, *Counsellours at large*. For they are seldome or neuer called to any publike consultation. They which are of his speciall and priue Counsell indeed (whom he vseth daily and ordinarily for all publike matters pertaining to the State) haue the addition of *Dumnoy*, and are named *Dumnoy boiaren*, or *Lords of the Counsell*, their Office or Sitting *Boastua dumna*.

Chap. II. Of the Emperours Counsell.

Their names at this present are these in their order. First, *Knez Feoder Ioanowich Metchisslofskey*. 2. *Knez Iuan Michailowich Glnskoy*. 3. *Knez Vasilie Iuanowich Suskoy Scopin*. (These three are accounted to be of greater birth then wisdom, taken in (as may seeme) for that end, rather to furnish the place with their honours and presence, then with their aduice or counsell.) 4. *Knez Vasilie Iuanowich Suskoy*, thought to be more wise then the other of hisname. 5. *Knez Feoder Michailowich*. 6. *Knez Michoia Romanowich Trowbetskoy*. 7. *Knez Timophy Romanowich Trowbetskoy*. 8. *Knez Andriew Gregorowich Curakine*. 9. *Knez Demetrie Iuanowich Forestine*. 10. *Knez Feoder Iuanowich Forestine*. 11. *Bodan Iuanowich Sabarone*. 12. *Knez Iuan Vasilowich*. 13. *Knez Feoder Demetritowich Shestinoue*. 14. *Knez Feoder Michailowich Troyconione*. 15. *Iuan Buterlyney*. 16. *Demetrie Iuanowich Godonoe*. 17. *Borrise Federowich Godonoe*, brother to the Emperesse. 18. *Stephan Vasilowich Godonoe*. 19. *Gregorie Vasilowich Godonoe*. 20. *Iuan Vasilowich*.

The number and names of the Counsellours of State.

Vasilowich Godonoe. 21. Feoder Sheremiton. 22. Andriew Petrowich Clefhenina. 23. Ignatio Petrowich Tatistone. 24. Romain Michailowich Pena. 25. Demenshoy Iuanowich Cheremissen. 26. Romain Vasilowich Alferione. 27. Andriew Shalcalone. 28. Vasilie Shalcalone. 29. Eleazar Wellusgin. 30. Drezheen Penteleoue. 31. Zapon Abramoue.

Four Secretaries.

The foure last of these are called *Dumny deiakey* or *Lord-Secretaries*. These are all of the Emperours priuie Counsell, though but few of them are called to any consultation, for that all matters are aduised and determined vpon by *Borris Federowich Godonoe* brother to the Emperesse, with some five or sixe more whom it pleaseth him to call. If they come, they are rather to heare, then to giue counsell, and doe so demeane themselves. The matters occurrent which are of State done within the Realme, are informed them at their sittings by the Lords of the foure *Chetfirds*, or *Tetrarchies*. Whereof mention is made in the Chapter concerning the Government of their Prouinces. Who bring in all such Letters as they receiue from the *Dukes*, *Dyacks*, *Captaines*, and other Officers of the Citie and Castles pertayning to their seuerall Quarter or *Chetfird*, with other aduertisements, and informe the Counsell of them.

The like is done by the chiefe Officer of euery seuerall Office of Record: who may come into the Counsell-chamber, and informe them, as occasion incident to his Office doth require. Besides matters of State, they consider of many priuate Causes, informed by way of supplication in very great numbers. Whereof some they entertayne and determine, as the Cause or meanes can procure fauour. Some they send to the Offices whereto they pertayne by common course of Law. Their ordinary dayes for their sitting are, Mondayes, Wednesdayes, and Fridayes. Their time of meeting is commonly seuen of the clocke in the morning. If there bee any extraordinary occasion that requireth consultation on some other day, they haue warning by the Clerke of the Counsell, called *Dorofey Bushew*, who receiueth order from the *Roserad*, or High Conftable of the Realme, to call them together at the time appointed.

Chap. 12.
Of the Emperours Customs and other Reuenues.
The Offices of Receit.
The Steward Receiuer of the Crowne-land Rents.

FOR the receiuing of Customes, and other Rents belonging to the Crowne, there are appointed diuers Vnder-officers, which deliuer ouer the same into the head Treasurie. The first is, the Office of *Dmoertsona* or *Steward of the household*. The second is, the Office of the *Chetfirds*, which I comprehend vnder one, though it be diuided into foure seuerall parts, as was said before. The third is called, *Busha Prechode*, or the great Income.

As touching the first, which is the Office of the *Steward*, it receiue all the Rents of the Emperours Inheritance, or *Crowne-land*, which they call, *Vochin*. The *Vochin* or *Crown-land* containeth in it sixe and thirtie Townes with the Territories or Hundreds belonging vnto them. Whereof the chiefe that yeeld the greatest Rents are these: *Alexandrisca*, *Corelska*, *Ofer*, *Slobodey*, *Danielska*, *Moisalskoy*, *Chara*, *Sametska*, *Strataraufe*, *Bransone*, &c. The Inhabitants or Tenants of these and the other Townes, pay some Rent money, some other Rent duties (called *Obrokey*) as certaine *Chetfirds* or measures of Graine, Wheat, Rye, Barley, Oats, &c. or of other victuall, as Oxen, Sheepe, Swannes, Geese, Hares, Hennes, wilde Fowle, Fish, Hay, Wood, Hony, &c. Some are bound to sowe for the Emperours prouision certaine acres of ground, and to make the Corne ready for his vse: hauing for it an allowance of certaine acres of ground for their owne proper vse.

This prouision for the household, specially of Graine serued in by the Tenants, is a great deale more then is spent in his house, or in other allowance serued out in liuery, or for the Emperours honour, called *Schalouaney*: for which vse there is bestowed very much, both in Graine and other Victuall. This surplus of prouision is sold by the Steward to the best hand, and runneth into the Emperours Treasurie.

In the time of *Iuan Vasilowich* father to this Emperour (who kept a more Princely and bountifull house then the Emperour now doth) this ouerplus of Graine, and other incomes into the Stewards Office, yeelded to his Treasurie not past 60000. Rubbels yeerely, but riseth now by good husbanding of the Steward *Gregory Vasilowich Godonoe*, to 230000. Rubbels a yeere. And thus by the meanes of the Emperesse, and her kindred, specially (*Borris Federowich Godonoe*) that account it all their owne that runneth into the Emperours Treasurie. Much of this surplusage that riseth out of the Rent prouision, is employed to the payment of the wages of his household Officers, which are very many attending at home, and purueying abroad.

The Office of Chetfird.
Tagla and Podat.

The second Office of Receit, called the *Chetfirds*, (being diuided into foure seuerall parts, as before was said) hath foure head Officers: which besides the ordering and government of the Shires containd within their seuerall *Chetfirds*, haue this also as a part of their Office, to receiue the *Tagla* and *Podat* belonging to the Emperour, that riseth out of the foure *Chetfirds* or Quarters. The *Tagla* is a yearly Rent or Imposition raised vpon euery *Wite* or measure of Graine, that groweth within the Land, gathered by sworne men, and brought into the Office. The *Wite* containeth sixtie *Chetfirds*. Euery *Chetfird* is three Bushels *English*, or little lesse. The *Podat* is an ordinary Rent of money imposed vpon euery Soake, or Hundred within the whole Realme.

This *Tagla* and *Podat* bring in yeerely to the Offices of the *Chetfirds* a great summe of money:

as may appeare by the particulars heere set downe. The Towne and Pronince of *Volsko* pay yeerely for *Tagla* and *Podat* about 18000. Rubbels. *Novogrod* 35000. Rubbels. *Torshocke* and *Oster* 8000. Rubbels. *Razan* 30000. Rubbels. *Morum* 12000. Rubbels. *Colmigroe* and *Dny-na* 8000. Rubbels. *Vologda* 12000. Rubbels. *Cazan* 18000. Rubbels. *Vsting* 30000. Rubbels. *Rostone* 30000. Rubbels. The Citie of *Mosko* 40000. Rubbels. *Sibierskoy* 20000. Rubbels. *Castrone* 12000. Rubbels. The totall amounteth to 400000. Rubbels, or Markes 2 yeere, which is brought in yeerely the first of September, that is reckoned by them the first day of the yeere:

The third (that is called the *Bulsha Prechod*, or great Income) receiveth all the Customes that are gathered out of all the principall Townes and Cities within the whole Realme. Besides the fees and other duties which rise out of diuers smaller Offices, which are all brought into this Office of *Bulsha Prechod*. The Townes of most trade, that doe yeeld greatest Custome, are these here set downe. *Mosko*, *Smolensko*, *Volsko*, *Novogrod Velica*, *Strararouse*, *Torshocke*, *Oster*, *Yaruslane*, *Castrone*, *Nesna Novogrod*, *Cazan*, *Vologda*. This Custome out of the great Townes is therefore more certaine, and easie to bee reckoned, because it is set and rated precisely what they shall pay for the Custome of the yeere. Which needs must bee paid into the said Office, though they receive not so much. If it fall out to be more, it runneth all into the Emperours aduantage.

The Custome at *Mosko* for euery yeere, is 12000. Rubbels. The Custome of *Smolensko* 8000. *Volsko* 12000. Rubbels. *Novogrod velica* 6000. Rubbels. *Strararouse* by Salt and other commodities 18000. Rubbels. *Torshock* 800. Rubbels. *Oster* 700. Rubbels. *Yaruslane* 1200. Rubbels. *Castrone* 1800. Rubbels. *Nesna Novogrod* 7000. Rubbels. *Cazan* 11000. Rubbels. *Vologda* 2000. Rubbels. The Custome of the rest that are Townes of trade, is sometimes more, sometimes lesse, as their trafficke and dealings with commodities to and fro, falleth out for the yeere.

This may bee said for certaine, that the three Tables of Receipts belonging to this Office of *Bulsha Prechod*, when they receive least, account for thus much, *vz.* The first table, 160000. Rubbels. The second table, 90000. Rubbels. The third 70000. Rubbels. So that there cometh into the Office of *Bulsha Prechod*, at the least reckoning (as appeareth by their Bookes of Customes) out of these and other Townes, and maketh the summe of 340000. Rubbles a yeere. Besides this Custome out of the Townes of trade, there is received by this Office of *Bulsha Prechod*, the yeerely Rent of the common Bath-stoues, and Cabacks or drinking houses, which payntayne to the Emperour. Which (though it be vncertaine for the iust summe, yet because it is certaine, and an ordinary matter, that the *Russe* will bathe himselfe as well within as without) yeeldeth a large Rent to the Emperours Treasurie.

There is besides, a certaine Mulf or Penaltie that groweth to the Emperour out of euery Iudgement or Sentence, that passeth in any of this Courts of Record in all Ciuill matters. This Penaltie or Mulf is twentie *Dingoes* or Pence vpon euery Rubbel or Marke, and so ten in the hundred. Which is paid by the partie that is conuict by Law. He hath besides for euery name contayned in the Writs that passe out of these Courts, five *Alteens*. An *Alteene* is five pence sterling, or thereabouts. This is made good out of the Office, whence the Writ is taken forth. Thence it goeth to the Office that keepeth the lesser Seale, where it payeth as much more to the Emperours use. This riseth commonly to three thousand Rubbels a yeere, or thereabouts. Farther also out of the Office of *Roisbonia*, where all felonies are tryed, is received for the Emperour the halfe part of Felons goods, the other halfe goeth the one part to the Informer, the other to the Officers.

All this is brought into the Office of *Bulsha Prechod*, or *Great income*. Besides the ouerplus or remainder that is saued out of the Land-rents allotted to diuers other Offices: as namely, to the Office called *Roserade*, which hath Lands and Rents assigned vnto it to pay the yeerely salaries of the Souldiers, or Horsemen, that are kept still in pay. Which in time of peace, when they rest at home not employed in any seruice, is commonly cut off and paid them by halfe, sometimes not the halfe: so that the remainder out of the *Roserade* Office that is layd into the Emperours treasurie, commeth for the most part euery yeere to 250000. Rubbels.

In like sort (though not so much) is brought in the surplus out of the *Strelletskey* Offices which hath proper Lands for the payment of the *Strelsey* men or Gunners, as well those at *Mosko*, that are of the Emperours Guard (12000. in ordinary) as on the borders, and other garrison Towns and Castles. Likewise out of the Office of *Prechase*, *Shisnoy Nemshoy*, which hath set allowance of Lands to mainrayne the forraigne mercenary Souldiers, as *Poles*, *Sweadens*, *Dutches*, *Scots*, &c. So out of the Office of *Pusharskoy*, (which hath Lands and Rents allowed for the prouision of munition, great Ordnance, Powder, Shot, Saltpeter, Brimstone, Lead, and such like) there is left somewhat at the yeeres end, that runneth into the Treasurie. All these bring into the Office of *Bulsha Prechod* that which remayneth in their hand at the yeeres end. Whence it is deliuered into the Emperours Treasurie. So that the whole summe that groweth to this Office of *Bulsha Prechod*, or the great Income (as appeareth by the Bookes of the said Office) amounteth to 800000. Rubbels a yeere, or thereabouts.

Yeere begins with September.

The Office of *Bulsha Prechod* or great Income.

The Emperours Custome.

The whole receipt of the *Bulsha Prechod* or great Income.

Rents out of the Iudiciall Offices. Mulf or fines.

The Emperours
treasure house
within his Ca-
stle of Mosko.

All these Offices, to wit, the Office of the Steward, the foure *Chetfirds*, and the *Bulsha Prechod* deliuer in their receipts to the head treasure, that lyeth within the Emperours house or Castle at the *Mosko*. Where lye all his Moneys, Jewels, Crownes, Scepters, Plate, and such like, the Chests, Hutches, and Bags being signed by the Emperours, themselves with their owne seale. Though at this time the *L. Borris Federowich Godonoe*, his seale and ouer-sight supplieth for the Emperour, as in all other things. The vnder Officer at this time is one *Stepan Vasilowich Godonoe*, Cousin germane to the said *Borris*, who hath two Clerkes allowed to serue vnder him in the Office.

The sum of the
Emperours rent
money.

The sum that
groweth to the
Emperours Treas-
ury in money
onely, for euery
yeere.

1. Out of the Stewards Office about the expence of his
house 23000. Rubbels.
2. Out of the foure Chetfirds for Soake and Head
money, 400000. Rubbels.
3. Out of the Bulsha Prechod Office, or great Income,
for Custome and other Rents, 800000. Rubbels.

Sum 1430000. Rub-
bels cleere, besides all
charges for his house
and ordinary falleries
of his Souldiers other-
wise discharged.

But besides this reuenue that is paid all in money to the Emperours treasure, he receiveth yeerely in Furres, and other duties to a great value out of *Siberia*, *Pechora*, *Permia*, and other places, which are sold or batted away for other forraigne commodities to the *Turkish*, *Persian*, *Armenian*, *Georgian* and *Bougharian* Merchants, that trade within his Countries, besides others of *Christendome*. What it maketh in the whole (though the value cannot bee set downe precisely, as being a thing casuall as the commoditie may be got) it may be ghesse'd by that which was gathered the last yeere out of *Siberia* for the Emperours Custome, *vz.* 466. Timber of Sables, fine Timber of Martrones, 180. blacke Foxes, besides other commodities.

To these may be added their seizures, and confiscations vpon such as are in displeasure, which riseth to a great summe, besides other their extraordinary Impositions, and exactions done vpon their Officers, Monasteries, &c. not for any apparant necessitie, or vse of the Prince, or Commonwealth, but of will and custome: yet with some pretence of policie. To this purpose this by-word was vsed by the late Emperour *Iuan Vasilowich*: That his people were like to his beard. The finer shauen, the thicker it would grow. Or like sheepe, that must needs bee shorne once a yeere at the least: to keepe them from being ouer-laden with their wooll.

Vnderstand
these politike
courses of the
times when the
Author writ.
Gods chastise-
ment hath since
beene heavy to
sweep such illa
from among
them.

MEanes seruing to which purpose were to preuent no extortions, exactions, or briberies whatsoeuer, done vpon the Commons by their Dukes, *Diacks*, or other Officers in their Prouinces: but to suffer them to goe on till their time be expired, and to sucke themselves full. Then to call them to the *Praueush* (or whip) for their behauiour, and to beat out of them all, or the most part of the bootie, (as the Honey from the Bee) which they haue wrung from the Commons, and to turne it into the Emperours Treasury, but neuer any thing backe againe to the right owners, how great or euident soeuer the iniurie be. To this end the needie Dukes, and *Diacks*, that are sent into their Prouinces, serue the turne very well; being changed so often (to wit) once a yeere: where in respect of their owne, and the qualitie of the people (as before was said) they might be continued for some longertime, without all feare of innoation. For com-
ming still fresh vpon the Commons, they sucke more eagerly: like *Tiberius* the Emperours Flies, that came new fill vpon an old sore. To whom he was wont to compare his *Prators*, and other Prouinciall Officers.

2. Yet they did make of these Officers (that haue robbed their people) sometimes a publike example, if any be more notorious then the rest: the Emperour thus seeming to mislike the oppressions done to his people, and transferring the fault to his ill Officers. As among diuers other, was done by the late Emperour *Iuan Vasilowich* to a *Diack* in one of his Prouinces: that (besides many other extortions and briberies) had taken a goose readie dressed full of money. The man was brought to the Market-place in *Mosko*. The Emperour himselfe present made an Oration. *These, good people, are they that would eat you vp like bread, &c.* Then asked he his *Po-
lachies* or Executioners, who could cut vp a Goose, and commanded one of them first to cut off his legs about the midst of the shin, then the armes about his elbowes (asking him still if *Goose-
flesh were good meat*) in the end to chop off his head: that hee might haue the right fashion of a Goose readie dressed.

3. They make an open shew of want, when any great Taxe or Imposition is towards. As was done by this Emperour *Theodore Iuanowich*, by the aduice of some about him at the begin-
ning of his raigne: when being left very rich (as was thought) by his father, he sold most of his Plate, and stamped some into Coyne: that he might seeme to want money. Whereupon present-
ly out came a Taxation.

4. They suffer their subiects to giue freely to the Monasteries (which for their superstition
very many doe, specially in their last Wills) and to lay vp their money and substance in them, to keepe it more safe. Which all is permitted them without any restraint or prouiso, as was and
is in some Countries of *Christendome*. Whereby their Monasteries grow to exceeding great
wealth. This they doe to haue the money of the Realme better stored together, and more rea-
dic

die for their hand, when they list to take it. Which many times is done without any noyse: the Friars being content rather to part from somewhat (as the increase groweth) then to lose all at once. Which they were made to doubt of in the other Emperours dayes.

To this end *Iuan Vasilowich* late Emperour vsed a very strange practise, that few Princes would haue done in their greatest extremities. Hee resigned his Kingdome to one *Velica Knez Simeon*, the Emperours sonne of *Cazan*: as though hee meant to draw himselfe from all publike doings to a quiet priuate life. Towards the end of the yeere, he caused this new King to call in all Charters granted to Bishopricks, and Monasteries, which they had enioyed many hundred yeeres before. Which were all cancelled. This done (as in dislike of the fact & of the mis-gouernment of the new King) hee resumed his Scepter, and so was content (as in fauour to the Church and Religious men) that they should renew their Charters, and take them of himselfe: reseruing and annexing to the Crowne so much of their lands, as himselfe thought good.

By this practise he wrung from the Bishopricks and Monasteries (besides the lands which he annexed to the Crowne) an huge masse of money. From some fortie, from some fiftie, from some an hundred thousand Rubbels. And this as well for the increase of his Treasury; as to abate the ill opinion of his hard gouernment, by a shew of worse in another man. Wherein his strange spirit is to be noted: that being hated of his subiects (as himselfe knew well enough) yet should venture such a practise to set another in his saddle, that might haue rid away with his horse, while himselfe walked by on foot.

5. They send their Messengers into the Prouinces or Shires, where the speciall commodities of their Countrey grow, as Furrer, Wax, Honey, &c. There to forestall and ingrosse sometime one whole commoditie, sometime two or more, taking them at small prices what themselves list, and selling them againe at an excessive rate to their owne Merchants, and to Merchants strangers. If they refuse to buy them, then to force them vnto it. The like is done when any commoditie either natiue or forraine (as Cloth of Gold, Broad-cloth, &c.) thus engrossed by the Emperour, and receiued into his treasury happeneth to decay, or marre by long lying, or some other casualtie. Which is forced vpon the Merchants to be bought by them at the Emperours price, whether they will or no. This last yeere of 1589. was engrossed all the Wax of the Countrey: so that none might deale with that commoditie, but the Emperour onely.

6. To take vp and engrosse in like sort sometime forraine commodities (as Silkes, Cloth, Lead, Pearle, &c. brought into his Realme by *Turkish* Merchants, *Armenians*, *Bogharians*, *Poles*, *English*, and other. And then to force his Merchants to buy them of his Officers at his owne price.

7. They make a Monopoly for the time of such commodities as are paid him for Rent, or Custome, and to inhaunce the price of them, as Furrer, Corne, Wood, &c. What time none must sell of the same kinde of commoditie, till the Emperours be all sold. By this meanes he maketh of his Rent, Corne, and other prouision of victuall (as before was said) about 200000. Rubbels or Markes a yeere. Of his Rent, Wood, Hay, &c. 30000. Rubbels, or thereabouts.

8. In euery great Towne of his Realme hee hath a *Caback* or other drinking house, where is sold *Aqua-vita* (which they call *Russe Wine*) Mead, Beere, &c. Out of these hee receiueth Rent that amounteth to a great summe of money. Some yeeld 800. some 900. some a 1000. some 2000. or 3000. Rubbels a yeere. Wherein besides the base and dishonourable meanes to encrease his treasury, many foule faults are committed. The poore Labouring man, and Artificer, many times spendeth all from his wife and children. Some vse to lay in twentie, thirtie, fortie Rubbels, or more into the *Caback*, and vow themselves to the pot, till all that be spent. And this (as he will say) for the honour of *Hospodare*, or the Emperour. You shall haue many there that haue drunke all away to the very skin, and so walke naked (whom they call *Naga*.) While they are in the *Caback*, none may call them forth whatsoeuer cause there be, because he hindereth the Emperours reuenue.

9. Some of his *Boiars*, or Nobles of his Court, (whom he vseth vpon trust) that haue houses in the *Mosko*, faine themselves robbed: Then they send for the *Zemsky* men, or Aldermen of the Citie, and command them to finde out the robbery: In default of not finding it, praeue or cease the Citie for their misgouernment in 8000. 9000. or 10000. Rubbels at a time. This is many times practised.

10. In these exactions to shew their Soueraigntie, sometime they haue beene vsed very plaine, and yet strange cauillations. As was that of *Iuan Vasilowich*, father to this Emperour, after this sort. He sent into *Permia* for certaine loads of Cedar wood, wherof he knew that none grew in that Countrey. The inhabitants returned answer they could finde none there. Whereupon hee seized their Countrey in 12000. Rubbels, as if they concealed the commoditie of purpose. Againe, he sent to the Citie of *Mosko* to prouide for him a *Colpack*, or measure full of liue Fleas for a medicine. They returned answer that the thing was impossible. And if they could get them, yet they could not measure them, for leaping out. Whereupon hee praeued, or beat out of their shins 7000. Rubbels for a Mulet. By like cauillation hee extorted for his Nobilitie 30000. Rubbels, because he missed of his game, when hee went a hunting for the Hare:

A strange practise to get money.

These times in the Countrey.

Of the Countrey.

The Countrey.

The Countrey.

25

as if their hunting and murthering of Hares had beene the cause of it. Which the Nobilitie (as the manner is) *Praued* presently againe vpon the *Mousicks*, or common people of the Countrey.

Chap. 13.
Of the state of
the Common-
naltie, or vul-
gar sort of the
people in the
Countrey of
Russia.
The servile
and miserable
estate of the
Russe people.

Miserie of
those times,
manners and
men.

THE condition of the Commons and vulgar sort of people, may partly bee vnderstood by that which already hath beene sayd concerning the manner of their Gouernment, and the state of the Nobilitie, with the ordering of their Prouinces, and chiefe Townes of the Land. And first touching their libertie how it standeth with them, it may appeare by this: that they are reckoned in no degree at all, nor haue any suffrage nor place in their *Zabore*, or high Court of Parliament, where their Lawes and publike Orders are concluded vpon. Again into what servile condition their libertie is brought, not onely to the Prince, but to the Nobles, and Gentlemen of the Countrey (who themselves also are but servile, specially of late yeeres) it may further appeare by their owne acknowledgments in their supplications, and other writings to any of the Nobles or chiefe Officers of the Emperours. Wherein they name and subscribe themselves *Kolophay*, that is, their Villaines, or Bond-slaves: as they of the Nobilitie doe vnto the Emperour. This may truly bee sayd of them, that there is no servant nor bond-slave more awed by his Master, nor kept downe in a more servile subjection, then the poore people are, and that vniuersally, not onely by the Emperour, but by his Nobilitie chiefe Officers and Souldiers. So that when a poore *Mousick* meeteth with any of them vpon the high way, hee must turne himselfe about, as not daring to looke him on the face, and fall downe with knocking of his head to the very ground, as he doth vnto his Idoll.

Secondly, concerning the Lands, goods, and other possessions of the Commons, they answer the Name and lye *Common* indeed, without any fence against the rapine and spoyle, not onely of the highest, but of his Nobilitie, Officers, and Souldiers. Besides the Taxes, Customs, Seazures, and other publike exactions done vpon them by the Emperour, they are so racked and pulled by the Nobles, Officers, and Messengers, sent abroad by the Emperour in his publike affayres, specially in the *Tammes* (as they call them) and thorow faire Townes, that you shall haue many Villages and Townes of halfe a mile, and a mile long, stand all vnhabited: the people being fled all into other places, by reason of the extreame viage, and exactions done vpon them. So that in the way towards *Mosko*, betwixt *Vologda* and *Taruslaneley* (which is two nineties after their reckoning, little more then an hundred miles *Englysh*) there are in sight fiftie *Dariemes* or Villages at the least, some halfe a mile, some a mile long (that stand vacant) and desolate without any inhabitant. The like is in all other places of the Realme, as is sayd by those that haue better travelled the Countrey then my selfe had time, or occasion to doe.

The great oppression ouer the poore Commons, made them to haue no courage in following their Trades: for the more they haue, the more danger they are in, not onely of their goods, but of their liues also. And if they haue any thing, they conceale it all they can, sometimes conueying it into Monasteries, sometimes hiding it vnder the ground, and in Woods, as men are wont to doe where they are in feare of forraigne inuasion. Insomuch that many times you shall see them afraid to bee knowne to any *Boiuren* or Gentleman, of such commodities as they haue to sell. I haue seene them sometimes when they haue layd open their Commodities for a liking (as their principall Furrers and such like) to looke still behinde them, and towards euery doore: as men in some feare, that looked to bee set vpon, and surprised by some Enemie. Whereof asking the cause, I found it to bee this, that they haue doubted least some Nobleman or *Sinaboiarskey* of the Emperour had beene in company, and so layd a trayne for them to pray vpon their Commodities perforce.

This made the people (though otherwise hardened to beare any toyle) to giue themselves much to Idleness and Drinking: as passing for no more, then from hand to mouth. And hereof it cometh that the Commodities of *Russia* (as was sayd before) as Waxe, Tallow, Hides, Flax, Hempe, &c. grow and goe abroad in farre lesse plentie then they were wont to doe: because the people being oppressed and spoyled of their gettings, are discouraged from their labours. Yet this one thing is much to bee noted, that in all this oppression there were three brethren Merchants, of late that traded together with one Stocke in common, that were found to bee worth 300000. Rubbels in money, besides Lands, Cattels, and other Commodities. Which may partly be imputed to their dwellings farre off from the eye of the Court, viz. in *Wichida*, one thousand miles from *Mosko* and more. The same are sayd by those that knew them, to haue set on worke all the yeere long ten thousand men in making of Salt, carriages by Cart, and Boat, hewing of Wood and such like: besides fife thousand Bond-slaves at the least, to inhabite and till their Land. They had also their Physicians, Surgeons, Apothecaries, and all manner of Artificers of *Douches* and others, belonging vnto them. They are sayd to haue payed to the Emperour for Customs, to the summe of three and twentie thousand Rubbels a yeere, (for which cause they were suffered to enioy their Trade) besides the maintayning of certayne Garrisons on the borders of *Siberia*, which were neare vnto them. Wherein the Emperour was content to vse their purse, till such time as they had got ground in *Siberia*, and made it habitable, by burning and cutting downe Woods, from *Wichida* to *Perm*, about one thousand verst, and then tooke it all away from them.

Rich Russian
Merchants.

them perforce. But this in the end being enuyed and disdayned, as a matter not standing with their policie, to haue any so great, specially a *Monsick*, the Emperour began first to pull from them by pieces, sometimes twentie thousand Rubbels at a time, sometime more: till in the end their Sonnes that now are, are well eased of their Stocke, and haue but small part of their Fathers substance: the rest being drawne all into the Emperours treasure. Their names were *Iacone*, *Gregorie*, and *Simon*, the Sonnes of *Onyka*.

For the qualitie of their people otherwise, though there seemeth to bee in them some aptnesse to receiue any Art (as appeareth by the naturall wits in the men, and very children) yet they excell in no kinde of common Art, much lesse in any learning, or literall kinde of knowledge: which they are kept from of purpose, as they are also from all military practice: that they may bee fitter for the seruile condition, wherein now they are, and haue neither reason, nor valour to attempt innouation. For this purpose also they are kept from travelling, that they may learne nothing, nor see the fashions of other Countries abroad. You shall seldome see a *Russe* a traveller, except hee bee with some Embassadour, or that hee make an escape out of his Countrey. Which hardly he can doe, by reason of the borders that are watched so narrowly, and the punishment for any such attempt, which is death, if hee bee taken, and all his goods confiscate. Onely they learne to write, and to read, and that very few of them. Neither doe they suffer any stranger willingly to come into their Realme out of any ciuill Countrey, for the same cause, farther then necessitie of vttering their commodities, and taking in of foraine doth enforce them to doe.

And therefore this yeere 1589. they consulted about the remouing of all Merchants strangers to the border Townes, to abide and haue their residence there, and to bee more wary in admitting other strangers heereafter into the Inland parts of the Realme. For the same purpose also they are kept within the bounds of their degree by the Lawes of their Countrey: so that the sonne of a *Monsick*, Artificer, or Husbandman, is euer a *Monsick*, Artificer, &c. and hath no meanes to aspire any higher: except, hauing learned to write and reade, hee attayne to the preferment of a Priest, or *Dyack*. Their Language is all one with the *Slauonian*, which is thought to haue bene deriued from the *Russe* Tongue, rather then the *Russe* from the *Slauonian*. For the People called *Sclani*, are knowne to haue had their beginning out of *Sarmatia*, and to haue learned themselves of their Conquest *Sclanos*, (that is) Famous or Glorious, of the word *Sclana*, which in the *Russe* and *Slauonian* Tongue signifieth as much as *Glorie*, or *Fame*. Though afterwards being subdued and trod vpon by diuers Nations, the *Italians*, their Neighbours, haue turned the word to a contrary signification, and terme every Seruant or Peasant by the name of *Sclane*, as did the *Romans* by the *Getes* and *Syrians*, for the same reason. The *Russe* Character or Letter is no other then the *Greeke*, somewhat distorted.

Concerning their Trades, Diet, apparell, and such like, it is to be noted in a seuerall Chapter of their priuate behauiour. This order that bindeth every man to keepe his ranke, and seuerall degree, wherein his fore-fathers liued before him, is more meet to keepe the Subiects in a seruile subiection, and so apt for this and like Commonwealths, then to aduance any vertue, or to breed any rare or excellent qualitie in Nobilitie or Commons: as hauing no further reward nor preferment, whereunto they may bend their endeauours, and employ themselves to aduance their estate, but rather procuring more danger to themselves, the more they excell in any noble or principall qualitie.

Their Courts of Ciuill Iustice for matters of Contract, and other of like sort, are of three kinds, the one being subiect vnto the other by way of appeale. The lowest Court (that seemeth to be appointed for some ease to the Subiects) is the Office of the *Gubnoy Starust*, that signifieth an Alderman, and of the *Sotskoy Starust*, or Bayliffe of the Soake or Hundred, whereof I spake before in the ordering of the Prouinces. These may end matters among their neighbours within their Soake, or seuerall Hundred, where they are appointed vnder the Dukes and *Dyacks* of the Prouinces, to whom the parties may remoue their matter, if they cannot be agreed by the said *Gubnoy*, or *Sotskoy Starust*.

The second is kept in the head Townes of euery Prouince or Shire, by the said Dukes and *Dyacks*, that are Deputies to the foure Lords of the *Chetsfirds* (as before was said.) From these Courts they may appeale, and remoue their Suits to the chiefe Court, that is kept at the *Mosko*, where are resident the Officers of the foure *Chetsfirds*. These are the chiefe Iustices or Iudges, euery of them in all Ciuill matters that grow within their seuerall *Chetsfird* or Quarter, and may be either commenced originally before them, or prosecuted out of the inferiour Courts of the Shires by way of appeale.

Their commencing, and proceeding in Ciuill actions is on this manner. First, the Plaintiff putteth vp his Supplication, wherein he declareth the effect of his Cause, or wrong done vnto him. Whereupon is granted vnto him a *Wepis*, or Warrant, which he deliuereth to the *Prastane*, or Sergeant, to doe the arrest vpon the partie whom hee meaneth to implead. Who vpon the

Russes not permitted to travel.

Their manner of proceeding in Ciuill matters.

arrest, is to put in Sureties to answer the day appointed, or else standeth at the Sergeants deuotion, to be kept safe by such meanes as he thinketh good.

The Segeants are many, and excell for their hard and cruell dealing towards their prisoners; commonly they clap Irons vpon them, as many as they can beare, to wring out of them some larger fees. Though it be but for fixe pence, you shall see them goe with Chaines on their legs armes, and necke. When they come before the Iudge, the Plaintiffe beginneth to declare his matter after the contents of his Supplication. As for Attorneys, Counsellors, Procurators, and Advocates, to plead their Cause for them, they haue no such order, but euery man is to tell his owne tale, and plead for himselfe as well as he can.

Ending of
controuersies
by kissing the
Crosse.

If they haue any witnesse or other euidence, they produce it before the Iudge. If they haue none, or if the truth of the Cause cannot so well bee discerned by the plea, or euidence on both parts: then the Iudge asketh either partie (which hee thinketh good, Plaintiffe or Defendant) whether hee will *kisse the Crosse*, vpon that which hee auoucheth, or denyeth. Hee that taketh the Crosse (being so offered by the Iudge) is accounted cleare, and carrieth away the matter. This Ceremonie is not done within the Court, or Office, but the partie is carried to the Church by an Officer, and there the Ceremonie is done: the money in the meane while hanging vpon a naile, or else lying at the Idols feet, ready to be deliuered to the partie, as soone as he hath kissed the Crosse before the said Idoll.

Iudgement
by lot.

This kissing of the Crosse (called *Creusina chelonania*) is as their corporall Oath, and accounted with them a very holy thing, which no man will dare to violate, or prophane with a false allegation. If both parties offer to kisse the Crosse in a contradictorie matter, then they draw Lots. The better Lot is supposed to haue the right, and beareth away the matter. So the partie conuicted is adiudged to pay the debt or penaltie whatsoeuer, and withall to pay the Emperours fees, which is twentie pence vpon euery Marke, as before hath beene noted.

Shin-beating.

When the matter is thus ended, the partie conuicted is deliuered to the Sergeant, who hath a Writ for his warrant out of the Office, to carrie him to the *Pranenst* or *Righter of Iustice*, if presently he pay not the money, or content not the partie. This *Pranenst* or *Righter*, is a place neere to the Office: where such as haue sentence passed against them, and refuse to pay that which is adiudged, are beaten with great cudgels on the shinnes, and calues of their legs. Euery fore-noone from eight to eleuen, they are set on the *Pranenst*, and beate in this sort till the money bee payd. The after-noone and night time, they are kept in chaines by the Sergeant: except they put in sufficient Sureties for their appearance at the *Pranenst* at the houre appointed. You shall see fortie or fiftie stand together on the *Pranenst* all on a rew, and their shinnes thus becudgelled, and beasted euery morning with a piteous crye. If after a yeeres standing on the *Pranenst*, the partie will not, or lacke wherewithall to satisfie his creditor, it is lawfull for him to sell his wife, and children, either outright, or for a certaine terme of yeeres. And if the price of them doe not amount to the full payment, the Creditor may take them to be his bond-slaves, for yeeres, or for euer, according as the value of the debt requireth.

Terrible terms

Such kind of Suits as lacke direct euidence, or stand vpon coniectures and circumstances to be weighed by the Iudge, draw of great length, and yeeld great aduantage to the Iudge, and Officers. If the Suit be vpon a Bond, or Bill, they haue for the most part good and speedy iustice. Their Bonds or Bills are drawne in a very plaine sort, after this tenour. *I Iuan Vasiole haue borrowed of Alphonsse Dementio, the summe of one hundred Rubbels of going money of Mosko, from the Kresheua (or hallowing of the water) untill the Saburney Voskresheua (or Counsell Sunday) without interest. And if this money rest unpaid after that day, then hee shall giue interest vpon the said money, after the common rate, as it goeth among the people, vz. for euery five the sixt Rubbell. Vpon this there are Witnesses, Micheta Sydronesky, &c. Subscribed. This Bill haue I written Gabriel Iacouelefni, in the yeere 7096. The Witnesses, and Debter (if hee can write) endorse their names on the backside of the Bill. Other signing, or sealing haue they none.*

The forme of
Russe Bills or
Bonds.

Proceeding in
Criminall
matters.

When any is taken for a matter of Crime (as Treason, Murder, Theft, and such like) he is first brought to the Duke and *Diack*, that are for the Prouince where the partie is attached, by whom hee is examined. The manner of examination in such cases, is all by torture, as scourging with whips made of sinowes, or whitleather (called the *Pudkey*) as big as a mans finger, which giueth a sore lash, and entreth into the flesh; or by tying to a Spit and roasting at the fire; sometimes by breaking and wresting one of their ribs with a paire of hot Tongs, or cutting their flesh vnder the nayles, and such like.

Pudkey whip-
ping.

Roasting.

The examination thus taken with all the proofes, and euidences that can bee alleaged against the partie, it is sent vp to the *Mosko*, to the Lord of the *Chetfird* or Fourth part, vnder whom the Prouince is, and by him is presented to the Counsell-table, to be read and sentenced there, where onely Iudgement is giuen in matter of life and death, and that by euidence vpon information, though they neuer saw nor heard the partie who is kept still in prison where the fact was committed, and neuer lent vp to the place where hee is tryed. If they finde the partie guilty,

guilty, they giue Sentence of death according to the qualitie of the fact : which is sent downe by the Lord of the *Chetfird*, to the Duke and *Diack* to bee put in execution. The Prisoner is carried to the place of execution with his hands bound, and a Waxe candle burning held betwixt his fingers.

Their Capitall punishments are hanging, heading, knocking on the head, drowning, putting vnder the Ice, setting on a stake, and such like. But for the most part, the Prisoners that are condemned in Summer, are kept for the Winter, to be knockt in the head, and put vnder the Ice. This is to bee vnderstood of common persons. For theft, and murder, If they bee committed vpon a poore *Mousick* by one of Nobilitie are not lightly punished, nor yet is hee called to any account for it. Their reason is, because they are accounted their *Kolophy*, or Bond-slaves. If by some *Sinaboiarskey*, or Gentleman Souldier, a murder or theft bee committed, peradventure hee shall bee imprisoned at the Emperours pleasure. If the manner of the fact be very notorious, hee is whipped perchance, and this is commonly all the punishment that is inflicted vpon them.

If a man kill his owne seruant, little or nothing is said vnto him, for the same reason : because hee is accounted to be his *Kolophy*, or Bond-slave, and so to haue right ouer his very head. The most is some small mulct to the Emperour, if the partie bee rich : and so the quarrell is made rather against the purse, then against the iniustice. They haue no written Law, saue onely a small Booke that contayneth the time and manner of their sitting, order in proceeding, and such other Iudiciall formes and circumstances, but nothing to direct them to giue Sentence vpon right or wrong. Their onely Law is their *Speaking Law*, that is, the pleasure of the Prince, and of his Magistrates and Officers.

The Souldiers of *Russia* are called *Sinaboiarskey*, or the Sonnes of Gentlemen : because they are all of that degree, by vertue of their military profession. For euery Souldier in *Russia* is a Gentleman, and none are Gentlemen but onely the Souldiers, that take it by discent from their Ancestors : so that the sonne of a Gentleman (which is borne a Souldier) is euer a Gentleman, and a Souldier withall, and professeth nothing else but military matters. When they are of yeeres able to beare Armes, they come to the Office of *Roserade*, or *Great Constable*, and there present themselves : who entretch their names, and alloteth them certaine Lands to maintaine their charges, for the most part of the same that their fathers enioyed. For the Lands assigned to maintayne the Armie, are euer certaine, annexed to this Office without improuing, or detra-cting one foot. But that if the Emperour haue sufficient in wages, the roomes being full so farre as the Land doeth extend already, they are many times deferred, and haue nothing allowed them, except some one portion of the Land be diuided into two. Which is a cause of great disorder within that Countrey : When a Souldier that hath many children, shall haue sometimes but one entertayned in the Emperours pay. So that the rest hauing nothing, are forced to liue by vniust and wicked shifts, that tend to the hurt and oppression of the *Mousicke*, or common sort of people. This inconuenience groweth by maintayning his forces in a continuall succession. The whole number of his Souldiers in continuall pay, is this : First, he hath of his *Dworaney*, that is, Pensioners, or Guard of his person, to the number of 15000. Horsemen, with their Captaines and other Officers, that are alwaies in a readinesse.

Of these fiftene thousand Horsemen, there are three sorts or degrees, which differ as well in estimation, as in wages, one degree from another. The first sort of them is called, *Dworaney Bulshey*, or the companie of head Pensioners, that haue, some 100. some 80. Rubbels a yeere, and none vnder 70. The second sort are called, *Seredney Dworaney*, or the middle ranke of Pensioners : these haue 60. or 50. Rubbels by the yeere, none vnder 40. The third and lowest sort are, the *Dyta Boiarskey*, that is, the lowe Pensioners : their salarie is 30. Rubbels a yeere, for him that hath most ; some haue but 25. some 20. none vnder 12. Whereof the halfe part is payd them at the *Mosko*, the other halfe in the field by the General, when they haue any warres, and are employed in seruice. When they receiue their whole pay, it amounteth to 55000. Rubb. by the yeere.

And this is their wages, besides lands allotted to euery one of them, both to the greater and the lesse, according to their degrees. Whereof he that hath least, hath to yeeld him 20. Rubbels or Markes by the yeere. Besides these 15000. Horsemen, that are of better choise (as being the Emperours owne Guard when himselfe goeth to the warres, not vnlike the *Roman* Souldiers called *Pretorians*) are 110. men of speciall account for their Nobilitie, and trust, which are chosen by the Emperour, and haue their names registred, that find among them for the Emperours warres, to the number of 65000. Horsemen, with all necessaries meet for the warres of the *Russe* manner.

To this end they haue yeerely allowance made by the Emperour for themselves, and their Companies, to the summe of 40000. Rubbels. And these 65000. are to repaire to the field euery yeere on the borders towards the *Chrim Tartar*, (except they bee appointed for some other seruice) whether there bee warres with the *Tartars*, or not. This might seeme peradventure

Horsemen in
continuall pay
80000.

somewhat dangerous for some State, to haue so great forces vnder the command of Noblemen, to assemble euery yeere to one certaine place. But the matter is so vsed, as that no danger can grow to the Emperour, or his State by this meanes. First, Because these Noblemen are many, to wit, 110. in all, and changed by the Emperour so oft as hee thinketh good. Secondly, Because they haue their liuings of the Emperour, being otherwise but of very small Reuenue, and receiue this yeerely pay of 40000. Rubbels, when it is presently to be paid forth againe to the Souldiers that are vnder them. Thirdly, Because for the most part they are about the Emperours person, being of his Counsell, either speciall, or at large. Fourthly, They are rather as Pay-masters, then Captaines to their Companies, themselues not going forth ordinarily to the warres, saue when some of them are appointed by speciall order from the Emperour himselfe. So the whole number of Horsemen that are euer in a readinesse, and in continuall pay, are 80000. a few more or lesse.

Footmen in
continuall pay
12000.

If he haue need of a greater number (which seldome falleth out) then hee entertayneth of those *Sinaboiarskey*, that are out of pay, so many as he needeth: and if yet he want of his number, hee giueth charge to his Noblemen, that hold Lands of him, to bring into the field euery man a proportionable number of his seruants (called *Kolophey*, such as till his Lands) with their furniture, according to the iust number that hee intendeth to make. Which, the seruice being done, presently lay in their weapons, and returne to their seruite occupations againe.

Strangers
mercenaries
in pay 4300.

Of Footmen that are in continuall pay, he hath to the number of 12000. all Gunners, called *Strelsey*. Whereof 5000. are to attend about the Citie of *Mosko*, or any other place where the Emperour shall abide, and 2000. (which are called *Stremaney*, *Strelsey*, or Gunners at the Stirrop) about his owne person at the very Court or house where himselfe lodgeth. The rest are placed in his garrison Townes, till there be occasion to haue them in the field, and receiue for their salarie or stipend euery man seuen Rubbels a yeere, besides twelue measures, a peece of Rye, and Oats. Of mercenary Souldiers, that are strangers (whom they call *Nimfscoy*) they haue at this time 4300. of *Polonians*: of *Chirchasses* (that are vnder the *Polonians*) about 4000. whereof 3500. are abroad in his Garrisons: of *Dutches* and *Scots*, about 150: of *Greekes*, *Turkes*, *Danes*, and *Sweadens*, all in one band, 100. or thereabouts. But these they vse only vpon the *Tartar* side, and against the *Siberians*: as they doe the *Tartar* Souldiers (whom they hire sometimes, but onely for the present) on the other side against the *Polonian* and *Sweaden*: thinking it best policy so to vse their seruice vpon the contrary border.

The chiefe
Captaines or
Leaders.
1. The *Voianod*
or Generall.

The chiefe Captaines or Leaders of these forces, according to their names and degrees, are these which follow. First, the *Voyanodey Bulshaia*, that is, the *Great Captaine*, or *Lieutenant generall* vnder the Emperour. This commonly is one of the foure houses of the chiefe Nobilitie of the Land: but so chosen otherwise, as that he is of small valour or practice in Martiall matters, being thought to serue that turne so much the better, if he bring no other parts with him saue the countenance of his Nobilitie, to bee liked of by the Souldiers for that, and nothing else. For in this point they are very warie, that these two, to wit, Nobilitie and Power, meet not both in one, specially if they see wisdom withall, or aptnesse for policie.

2. Lieutenant
generall.

Their great *Voianod* or Generall at this present in their warres, is commonly one of these foure, *Knez Feoder Iuanowich Methistoskey*, *Knez Iuan Michailowich Glinkoy*, *Cherechaskoy*, and *Trowbetskoy*, all of great Nobilitie, but of very simple qualitie otherwise: though in *Glinkoy* (as they say) there is somewhat more then in the rest. To make vp this defect in the *Voianod* or Generall, there is some other ioyned with him as Lieutenant generall, of farre lesse Nobilitie, but of more valour and experience in the warres then he, who ordereth all things that the other countenanceth. At this time their principall man, and most vsed in their warres, is one *Knez Demetrie Iuanowich Forestine*, an antient and expert Captaine, and one that hath done great seruice (as they say) against the *Tartar*, and *Polonian*. Next vnder the *Voianod* and his Lieutenant generall, are foure other, that haue the marshalling of the whole Armie diuided among them, and may be called the Marshalls of the field.

3. Marshalls of
the field, foure.

4. Marshalls
Deputies 8.

Euery man hath his quarter, or fourth part vnder him: whereof the first is called, the *Prana Polskoy*, or Right wing. The second is, the *Lenoy Polskoy*, or Left wing. The third is, *Rusnoy Polskoy*, or The broken band, because out of this there are chosen to send abroad vpon any sudden exploit, or to make a rescue or supply, as occasion doth require. The fourth, *Storeshonoy Polskoy*, or The warding band. Euery one of these foure Marshalls haue two other vnder them (eight in all) that twice euery weeke at the least must muster and traine their seuerall wings or bands, and hold and giue iustice for all faults and disorders committed in the Campe.

5. Coronels
Vnder-captaines.

6. Masters of
the Artillerie.

And these eight are commonly chosen out of the hundred and ten (which I spake of before) that receiue and deliuer the pay to the Souldiers. Vnder these eight are diuers other Captaines, as the *Gul anoy*, Captaines of thousands, five hundreds, and hundreds. The *Petyde Seiskoy*, or Captaines of fifties; and the *Decetskies*, or Captaines of tennes.

Besides the *Voianoda*, or Generall of the Armie, (spoken of before) they haue two other that beare the name of *Voianoda*: whereof one is the Master of the great Ordnance (called *Naradna Voianoda*) who hath diuers Vnder-officers, necessary for that seruice. The other is called, the

Voianoda

Voianoda Gulanoy, or the *Walking Captayne*, that hath allowed him 1000: good Horsemen of principall choice, to range and lpye abroad, and hath the charge of the running Castle, which we are to speake of in the Chapter following. All these Captaynes, and men of charge must once every day resort to the *Bulsha Voianoda*, or *Generall of the Armie*, to know his pleasure, and to informe him if there be any requisite matter pertayning to their Office.

The walking
Captayne.

When Wars are towards (which they faile not of lightly every yeere with the *Tartar*, and many times with the *Polonian* and *Sweden*, (the foure Lords of the *Chetfids* send forth their Summons in the Emperours name, to all the Dukes and *Dyacks* of the Prouinces, to be proclaymed in the head Townes of euery Shire: that all the *Sinaboiarskey*, or Sonnes of Gentlemen make their repayre to such a border where the Seruice is to be done, at such a place, and by such a day, and there present themselves to such and such Captaynes. When they come to the place assigned them in the Summons or Proclamation, their names are taken by certayne Officers that haue Commission for that purpose from the *Roserade*, or *High Constable*, as Clerkes of the Bands.

chap. 16.
Of their mustering, and leuying of forces, manner of Armour, and prouision of victuall for the Warres.
Their order for mustering.

If any make default and faile at the day, he is mulcted, and punished very seuerely. As for the Generall and other chiefe Captaynes, they are sent thither from the Emperours owne hand, with such Commission and charge as he thinketh behoofefull for the present seruice. When the Souldiers are assembled, they are reduced into their Bands, and Companies, vnder their seuerall Captaynes of tens, fifties, hundreds, thousands, &c. and these Bands into foure *Polskeis* or *Legions* (but of farre greater numbers then the *Romane* Legions were) vnder their foure great Leaders, which also haue the authoritie of Marshals of the field (as was laid before.)

Concerning their Armour they are but slightly appointed. The common Horse-man hath nothing else but his Bow in his Case vnder his right arme, and his Quiver and Sword hanging on the left side: except some few that beare a Case of Dagges, or a Iaueling, or short Staffe along their Horse side. The vnder Captaynes will haue commonly some piece of Armour besides, as a shirt of Male, or such like. The Generall with the other chiefe Captaynes and men of Nobility, will haue their Horse very richly furnished, their Saddles of Cloth of Gold, their Bridles faire bossed and tasselled with Gold, and Silke frindge, bestudded with Pearle and Precious Stones, themselves in very faire Armour, which they call *Bullatnoy*, made of faire shining Steele, yet couered commonly with Cloth of Gold, and edged round about with Armine Furre, his Steele Helmet on his head of a very great price, his Sword, Bow, and Arrowes at his side, his Speare in his hand, with another Helmet, and his *Shesta pera*, or Horse-mans Scepter carried before him. Their Swords, Bowes, and Arrowes are of the *Turkish* fashion. They practise like the *Tartar* to shoot forwards and backwards, as they flye and retyre.

The Horse-
mans Furni-
ture.

The *Strelsey* or Footman hath nothing but his Peece in his hand, his striking Hatchet at his backe, and his Sword by his side. The stocke of his Peece is not made Calecuier wise, but with a plaine and strait stocke (some-what like a Fowling-peece) the Barrell is rudely and vnartificially made, very heauie, yet shooteth but a very small Bullet. As for their prouision of victuall, all, the Emperour alloweth none, either for Captayne, or Souldier, neyther prouideth any for them except peraduenture some Corne for their Money. Every man is to bring sufficient for himselfe to serue his tarne for foure moneths, and if need require to giue order for more to be brought vnto him to the Campe from his Tenant that tilleth his Land, or some other place. One great helpe they haue, that for Lodging and Dyet every *Russe* is prepared to be a Souldier before-hand. Though the cheife Captaynes and others of account carry Tents with them after the fashion of ours with some better prouision of victuall then the rest. They bring with them commonly into the Campe for victuall a kind of dryed Bread (which they call *Sucharie*) with some store of Meale, which they temper with water, and so make it into a Ball, or small lumpe of dowe, called *Tollockno*. And this they eate raw in stead of Bread. Their Meate is Bacon, or some other flesh or fish dryed, after the *Dutch* manner. If the *Russe* Souldier were as hardie to execute an Enterprize, as he is hard to beare out toyle and trauell, or were otherwise as apt and well trayned for the Warres, as he is indifferent for his Lodging and Dyet, hee would farre exceed the Souldiers of our parts. Whereas now he is farre meaner of courage and execution in any Warlike seruice. Which commeth partly of his seruile condition, that will not suffer any great courage or valour to grow in him: Partly for lacke of due honour and reward, which hee hath no great hope of whatsoeuer seruice or execution hee doe.

Shooting for-
ward and
backward.
The footmans

Prouisions.

Honos aliz attesi

The *Russe* trusteth rather to his number, then to the valour of his Souldiers, or good ordering of his Forces. Their marching or leading is without all order, save that the fore *Polskey* or *Legions*, (whereinto their Armie is diuided) keepe themselves seuerall vnder their Ensignes, and so thrust all on together in a hurrie, as they are directed by their Generall. Their Ensigne is the Image of Saint George. The *Bulsha Dworaney* or chiefe Horse-men, haue every man a small Drumme of Braffe at his Saddle-bow, which hee striketh when hee giueth the charge, or onser.

Chap. 17.
Of their marching, charging, and other Martiall Discipline.
George-ensigne.
Horse-mens Drummes.

The horsemans
manner of
charging.

They haue Drummes besides of a huge bignesse, which they carrie with them vpon a board layd on foure Horses, that are sparred together with Chaines, euery Drumme hauing eight strikers, or Drummers, besides Trumpets and Shawmes, which they sound after a wild manner, much different from ours. When they giue any charge or make any inuasion, they make a great hallow or shoute altogether, as loude as they can, which with the sound of their Trumpets, Shawmes, and Drummes, maketh a confused and horrible noyse. So they set on first discharging their Arrowes, then dealing with their Swords, which they vse in a brauery to shake, and brandish ouer their heads, before they come to strokes.

The footmans
charge.

Their Footmen (because otherise they want order in leading) are commonly placed in some ambush or place of aduantage, where they may most annoy the enemy, with least hurt to themselves. If it be a set battell, or if any great inuasion be made vpon the Russe borders by the Tartar, they are set with in the running or mouing Castle (called *Beza*, or *Gulay gorod*) which is carried about with them by the *Voianoda gulauoy* (or the walking Generall) whom I spake of before. This walking or mouing Castle is so framed, that it may be set vp in length (as occasion doth require) the space of one, two, three, foure, fve, sixe, or seuen miles: for so long it will reach. It is nothing elie but a double wall of wood to defend them on both sides behind and before, with a space of three yards or thereabouts betwixt the two sides: so that they may stand within it, and haue roome enough to charge and discharge their pieces, and to vse their other weapons. It is closed at both ends, and made with loope-holes on either side, to lay out the nose of their Peece, or to push forth any other weapon. It is carryed with the Armie wheresoeuer it goeth, being taken into pieces, and so layed on Carts sparred together, and drawne by Horse that are not seene, by reason that they are couered with their carriage as with a shelve or pent-house. When it is brought to the place where it is to be vsed (which is deuised and chosen out before by the walking *Voianoda*) it is planted so much as the present vse requireth, sometime a mile long, sometimes two, sometimes three, or more: which is soone done without the helpe of any Carpenter, or Instrument: because the Timber is so framed to claspe together one piece within another: as is easily vnderstood by those that know the manner of the Russe building.

The walking
Castle.

In this Castle standeth their shot well fenced for aduantage, specially against the Tartar, that bringeth no Ordnance, nor other weapon into the field with him, saue his Sword, and Bow and Arrowes. They haue also within it diuers field Peeces, which they vse as occasion doth require. Of Peeces for the field they carrie no great store, when they warre against the Tartar: but when they deale with the *Polonian* (of whose forces they make more account) they goe better furnished with all kind of Munition, and other necessarie prouisions. It is thought that no Prince of Christendome hath better store of Munition, then the Russe Emperour. And it may partly appeare by the Artillerie House at *Mosko*, where are of all sorts of great Ordnance, all Brasse Peeces, very faire, to an exceeding great number.

Store of Mu-
nition.

The Russe Souldier is thought to be better at his defence within some Castle, or Towne, then he is abroad at a set pitched field. Which is euery noted in the practice of his Wars, and namely, at the siege of *Uolsko*, about eight yeares since: where he repulsed the *Polonian King Stepan Batore*, with his whole Armie of 100000. men, and forced him in the end to giue ouer his siege, with the losse of many of his best Captaynes and Souldiers. But in a set field the Russe is noted to haue euery the worse of the *Polonian*, and *Sweden*.

Reward for
valour.

If any behaue himselfe more valiantly then the rest, or doe any speciall piece of seruice, the Emperour sendeth him a piece of Gold, stamped with the Image of Saint George on Horseback. Which they hang on their sleeues, and set in their Caps. And this is accounted the greatest honour they can receiue, for any seruice they doe.

Chap. 18.
Of their Colo-
nies, an main-
rayning of
their conquests
or purchases
by force.

The Russe Emperours of late yeeres haue very much enlarged their Dominions and Territories. Their first Conquest after the Dukedome of *Mosko*, (for before that time they were but Dukes of *Volodomer*, as before was said) was the Citie, and Dukedome of *Novograd* on the West, and North-west side: which was no small enlargement of their Dominion, and strengthening to them for the winning of the rest. This was done by *Iuan* great Grand-father to *Theodore* now Emperour, about the yeere 1480. The same began likewise to encroach vpon the Countreyes of *Lituania*, and *Lithonia*, but the Conquest onely intended, and attempted by him vpon some part of those Countreyes, was pursued and performed by his Sonne *Basileus*, who first won the Citie and Dukedome of *Plesko*, afterwards the Citie and Dukedome of *Smolensko*, and many other faire Townes, with a large Territory belonging vnto them, about the yeere 1514. These Victories against the *Lettoes* or *Lithuanians* in the time of *Alexander* their Duke, hee atchieued rather by aduantage of ciuill Dissentions and Treasons among themselves, then by any great policie, or force of his owne. But all this was lost againe by his Sonne *Iuan Vasilowich*, about eight or nine yeeres past, vpon composition with the *Polonian King Stepan Batore*: whereunto he was forced by the aduantages which the Pole had then of him, by reason of the foyle hee had giuen him before, and the disquietnesse of his owne State at home. Onely the Russe Emperour, at this time hath left him on that side his Countrey, the Citie of *Smolensko*, *Vitobsko*, *Cheringo*, and *Beala gorod* in *Lithuania*. In *Lithonia*, not a Towne, nor one foot of ground. When

When *Basileus* first conquered those Countreyes, he suffered the Natives to keepe their Possessions, and to inhabit all their Townes, onely paying him a Tribute, vnder the Government of his *Russe* Captaynes. But by their Conspiracies and Attempts not long after, hee was taught to deale more surely with them. And so comming vpon them the second time, hee killed and carryed away with him, three parts of foure, which hee gaue or sold to the *Tartars* that serued him in those Wars, and in stead of them placed there his *Russes*, so many as might ouer-match the rest, with certayne Garrisons of strength besides, wherein notwithstanding this ouer-sight was committed, for that (taking away with him the Vp-land, or Countrey people that should haue tilled the ground, and might easily haue bene kept in order without any danger, by other good policies) he was driuen afterwards many yeeres together to victual the Countrey (especially the great Towne) out of his owne Countrey of *Russia*, the soyle lying there in the meane-while waste, and vntilled.

The like fell out at the Port of *Narue* in *Liesland*, where his Sonne *Iuan Vasilowich* deuised to build a Towne, and a Castle on the other side the Riuer (called *Inangorod*) to keepe the Towne and Countrey in subjection. The Castle hee caused to bee so built, and fortified, that it was thought to be inuincible. And when it was finished, for reward to the Architect (that was a *Polonian*) he put out both his eyes, to make him vnable to build the like againe. But hauing left the Natives all within their owne Countrey, without abating their number or strength, the Towne and Castle not long after was betrayed, and surrendered againe to the King of *Sweden*.

On the South-east side they haue got the Kingdomes of *Cazan* and *Astracan*. These were wonne from the *Tartar*, by the late Emperour *Iuan Vasilowich*, Father to the Emperour that now is: the one about thirty five, the other about thirty three yeeres agoe. North-ward out of the Countrey of *Siberia*, he hath layed vnto his Realme a great breadth and length of ground, from *Wichida* to the Riuer of *Obba*, about 1000. miles space: so that he is bold to write himselfe now, *The great Commander of Siberia*.

The Countreyes likewise of *Permia*, and *Pechora*, are a diuers People and Language from the *Russe*, ouercome not long since, and that rather by threatning, and shaking of the Sword, then by any actuall force: as being a weake and naked people, without meanes to resist.

30 Their Neighbours with whom they haue greatest dealings and intercourse, both in Peace and Warre, are first the *Tartar*: Secondly, the *Polonian* whom the *Russe* calleth *Laches*, noting the first Author or Founder of the Nation, who was called *Laches* or *Leches*, whereunto is added *Pol*, which signifieth *People*, and so is made *Polaches*, that is, the *People or Posteritie of Laches*: which the *Latines* after their manner of writing call *Polanos*. The third are the *Swedes*. The *Polonians* and *Swedes* are better knowne to these parts of *Europe*, then are the *Tartars* that are farther off from vs (as being of *Asia*) and diuided into many Tribes, different both in name, and gouernment one from another. The greatest and mightiest of them is the *Chrim Tartar*, (whom some call the *Great Cham*) that lyeth South, and South-east ward from *Russia*, and doth most annoy the Countrey by often Inuasions, commonly once euery yeere, sometimes 40 entering very farre within the In-land parts.

In the yeere 1571. he came as farre as the Citie of *Mosko*, with an Armie of 200000. men, without any battell, or resistance at all, for that the *Russe* Emperour (then *Iuan Vasilowich*) leading forth his Armie to encounter with him, marched a wrong way: but as it was thought of very purpose, as not daring to aduenture the field, by reason that he doubted his Nobilitie, and chiefe Captaynes, of a meaning to betray him to the *Tartar*.

The Citie he tooke not, but fired the Suburbs, which by reason of the buildings (which is all of Wood without any Stone, Bricke, or Lime, saue certayne out Roomes) kindled so quickly, and went on with such rage, as that it consumed the greatest part of the Citie almost within the space of foure houres, being of thirty miles or more of compasse. Then might you haue seene 50 a lamentable Spectacle: besides the huge and mightie flame of the Citie all on light fire, the people burning in their houses and streets, but most of all of such as laboured to passe out of the Gates farthest from the Enemy, where meeting together in a mighty throng, and so pressing euery man to preuent another, wedged themselves so fast within the Gate, and streets neere vnto it, as that three Rankes walked one vpon the others head, the vppermost treading downe those that were lower: so that there perished at that time (as was said) by the fire and the presse, the number of 80000. people, or more.

The *Chrim* thus hauing fired the Citie, and fed his eyes with the sight of it all of a light flame, returned with his Armie, and sent to the *Russe* Emperour a Knife (as was sayd) to sticke himselfe withall: obrayding this losse, and his desperate case, as not daring either to meete his Enemy in the field, nor to trust his Friends or Subjects at home. The principall cause of this continuall quarrell, betwixt the *Russe* and the *Chrim*, is for the right of certayne border parts claimed by the *Tartar*, but possessed by the *Russe*. The *Tartar* alleadgeth, that besides *Astracan* and *Cazan*, (that are the ancient possession of the East *Tartar*) the whole Countrey from his bounds North and Westward, so farre as the Citie of *Mosko*, and *Mosko* it selfe, pertayneth to his right.

Chap. 19.
Of the Tartars and other borderers to the countrey of Russia, with whom they haue most to doe in war and peace.
The Polonians called Laches by the Russe.
The Chrim Tartar.
The firing of Mosko by the Chrim Tartars in the yeere 1571.

Homage done
by the Russe to
the Chrim Tar-
tar.
See the first
booke of Ba-
thay and of the
Tartars Con-
quests.

Which seemeth to haue beene true by the report of the *Russes* themselves, that tell of a certayne homage that was done by the *Russe* Emperour every yeere, to the great *Chrim* or *Cham*, the *Russe* Emperour standing on foote and feeding the *Chrim*s Horse, (himselfe sitting on his backe) with Oates out of his owne Cap, in stead of a Boll or Manger, and that within the Castle of *Mosko*. And this homage (they say) was done till the time of *Basileus* Grandfather to this man. Who surprizing the *Chrim* Emperour by a stratagem, done by one of his Nobilitie (called *Iuan Demetrowich Belschey*) was content with this Ransome, viz. with the changing of this homage into a Tribute of Furies: which afterwards also was denyed to bee payed by this Emperours Father.

Hereupon they continue the quarrell, the *Russe* defending his Countrey, and that which hee hath wonne, the *Chrim Tartar* inuading him once or twice every yeere, sometime about Whitson-tide, but oftner in Haruest. What time if the Great *Cham* or *Chrim* come in his owne person, hee bringeth with him a great Armie of 100000. or 200000. men. Otherwise they make short and sudden roads into the Countrey with lesser numbers, running about the list of the border as wilde Geese flie, inuading and retiring where they see aduantage.

The manner of
the Tartars
fight, and Ar-
mour.

Their common practice (being very populous) is to make diuers Armies, and so drawing the *Russe* to one, or two places of the frontiers, to inuade at some other place, that is left without defence. Their manner of Fight, or ordering of their forces, is much after the *Russe* manner, (spoken of before) saue that they are all Horse-men, and carrie nothing else but a Bow, a sheafe of Arrowes, & a falcon Sword after the *Turkish* fashion. They are very expert horse-men, and vse to shoote as readily backward as forward. Some will haue a horse-mans staffe like to a bore Speare, besides their other weapons. The common Souldier, hath no other Armour then his ordinary Apparell, viz. a blacke Sheepes skinne with the wooll-side outward in the day time, and inward in the night time, with a Cap of the same. But their *Morseys* or Noblemen imitate the *Turke*, both in Apparell and Armour. When they are to passe ouer a Riuer with their Armie, they tie three or foure Horses together, and taking long poles or pieces of wood, binde them fast to the tayles of their Horse: so sitting on the Poles they driue their Horse ouer. At handie strokes (when they come to joyne battell) they are accounted farre better men then the *Russe* people, fierce by nature, but more hardie and bloudie, by continuall practice of Warre: as men knowing no Arts of Peace, nor any ciuill practice.

Apparell.

Morseys or
Morseis.

The subtiltie
of the Tartar.

Yet their subtiltie is more then may seeme to agree with their barbarous condition. By reason they are practised to inuade continually, and to rob their neighbours that border about them, they are very pregnant, and ready witted to deuise Stratagems vpon the sudden, for their better aduantage. As in their warre against *Beala* the fourth King of *Hungarie*, whom they inuaded with fife hundred thousand men, and obtayned against him a great victorie. Where among other, hauing slaine his Chancellor, called *Nicholas Schinick*, they found about him the Kings priuie Seale. Whereupon they deuised presently to countefeit Letters in the Kings name, to the Cities and Townes next about the place, where the Field was fought: with charge that in no case they should conuay themselves, and their goods out of their dwellings, where they might abide safely without all feare of danger, and not leaue the Countrey desolate to the possession of so vile and barbarous an Enemie, as was the *Tartar* Nation, tearming themselves in all reproachfull manner. For notwithstanding he had lost his carriages, with some few straglers that had marched disorderly, yet he doubted not but to recouer that losse, with the acceffe of a notable victory, if the sauage *Tartar* durst abide him in the field. To this purpose hauing written their Letters in the *Polish* Character, by certayne young men whom they tooke in the Field, and signed them with the Kings Seale, they dispatched them forth to all the Quarters of *Hungarie*, that lay neere about the place. Whereupon the *Ungarians*, that were now flying away with their goods, Wiues, and Children, vpon the rumour of the Kings ouerthrow, taking comfort of these counterfeited Letters, stayed at home. And so were made a prey, being surprized on the sudden by this huge number of these *Tartars*, that had compassed them about before they were aware.

When they besiege a Towne or Fort, they offer much Parley, and send many flattering messages to perswade a surrendrie: promising all things that the Inhabitants will require: but being once possessed of the place, they vse all manner of hostilitie and crueltie. This they doe vpon a rule they haue, viz. That Iustice is to bee practised but towards their owne. They encounter not lightly, but they haue some ambush, whereunto (hauing once shewed themselves, and made some short conflict) they retire, as repulsed for feare, and so draw the Enemie into it if they can. But the *Russe* being well acquainted with their practise, is more warie of them. When they come a Rousing with some small number, they set on Horsebacke counterfeited shapes of men, that their number may seeme greater.

Tartars resolu-
tion.

When they make any onset, their manner is to make a great showte, crying all out together, *Olla Billa, Olla Billa, God helpe vs, God helpe vs*. They contemne death so much, as that they choole rather to dye, then to yeeld to their Enemie, and are seene when they are slaine to bite the very weapon, when they are past striking, or helping of themselves. Wherein appeareth how different the *Tartar* is in his desperate courage from the *Russe* and *Turke*. For the *Russe* Souldier

Souldier if hee begin once to retire putteth all his safetie in his speedie flight. And if once he be taken by his enemy, hee neither defendeth himselfe, nor intreateth for his life, as reckoning straight to dye. The *Turke* commonly when hee is past hope of escaping, falleth to intreatie, and casteth away his weapon, offereth both his hands, and holdeth them vp, as it were to bee tyed: hoping to saue his life, by offering himselfe Bond-slave.

The chiefe bootie the *Tartars* seeke for in all their warres, is to get store of Captiues, specially young Boyes and Girles, whom they sell to the *Turkes*, or other their neighbours. To this purpose they take with them great Baskets made like Bakers panniers, to carrie them tenderly, and if any of them happen to tyre, or to bee sicke on the way, they dash him against the ground, or some Tree, and so leaue him dead: The Souldiers are not troubled with keeping the Captiues and other bootie, for hindering the execution of their warres, but they haue certayne bands that intend nothing else, appointed of purpose to receiue and keepe the Captiues and the other prey.

The *Russe* borders (being vsed to their inuasions, lightly euery yeere in the Summer) keepe few other Cattell on the border parts, saue Swine onely, which the *Tartar* will not touch, nor drue away with him: for that he is of the *Turkish* Religion, & will eate no Swines-flesh. Of Christ our Sauour they confesse as much as doth the *Turke* in his Alcaron, viz. That he came of the Angell *Gabriel*, and the Virgin *Marie*, that hee was a great Prophet, and shall bee the Iudge of the world at the last day. In other matters likewise, they are much ordered after the manner and direction of the *Turke*: hauing felt the *Turkish* forces when hee wonne from them *Azon* and *Cassa*, with some other Townes about the *Euxine*, or *Blacke Sea*, that were before tributaries to the *Chrim Tartar*. So that now the Emperour of the *Chrim* for the most part is chosen some one of the Nobilitie whom the *Turke* doth commend: whereby it is brought now to that passe, that the *Chrim Tartar* giueth to the *Turke* the tenth part of the spoyle, which hee getteth in his warres against the *Christians*.

Herein they differ from the *Turkish* Religion, for that they haue certayne Idoll puppets made of Silke or like stuffe, of the fashion of a man, which they fasten to the doore of their walking houses, to bee as *Ianusses*, or keepers of their house. And these Idols are made not by all, but by certayne Religious women, which they haue among them for that and like vses. They haue besides, the Image of their King or great *Cham* of an huge bignesse, which they erect at euerie stage, when the Armie marcheth: and this euery one must bend or bow vnto as hee passeth by it, bee he *Tartar*, or Stranger. They are much giuen to Witchcraft and ominous conjectures, vpon euery accident which they heare or see.

In making of Marriages, they haue no regard of alliance or consanguinitie. Only with his Mother, Sister, and Daughter, a man may not marrie, and though he take the woman into his house and accompanie with her, yet he accounteth her not for his Wife, till hee haue a Child by her. Then he beginneth to take a dowrie of her friends of Horse, Sheepe, Kine, &c. If shee be barren, after a certayne time hee turneth her home againe.

Vnder the Emperour they haue certayne Dukes, whom they call *Morseis* or *Dyuomorseis*: that rule ouer a certayne number of 10000. 20000. or 40000. a peece, which they call *Hoords*. When the Emperour hath any vse of them to serue in his warres, they are bound to come, and to bring with them their Souldiers to a certayne number, euery man with his two Horse at the least, the one to ride on, the other to kill, when it cometh to his turne to haue his Horse eate. For their chiefe victuall is Horse-flesh, which they eate without Bread, or any other thing with it. So that if a *Tartar* bee taken by a *Russe*, hee shall be sure lightly to finde a Horse-legge, or some other part of him at his saddle bow.

This last yeere when I was at the *Mosko*, came in one *Kiriach Morsey*, nephew to the Emperour of the *Chrim* that now is (whose Father was Emperour before) accompanied with three hundred *Tartars*, and his two Wives, whereof one was his Brothers widow. Where being entertained in very good sort after the *Russe* manner, hee had sent vnto his lodging for his welcome, to bee made ready for his Supper and his companies, two very large and fat Horses, ready flayed in a Sled. They preferre it before other flesh, because the meate is stronger (as they say) then Beefe, Mutton, and such like. And yet (which is maruell) though they serue all as Horse-men in the warres, and eate all of Horse-flesh, there are brought yeerely to the *Mosko* to bee exchanged for other Commodities, thirtie or fortie thousand *Tartar* Horse, which they call *Cones*. They keepe also great herds of Kine, and flockes of blacke Sheepe, rather for the Skinnies and Milke (which they carry with them in great bottles) then for the vse of the flesh, though sometimes they eate of it. Some vse they haue of Rice, Figges, and other fruits. They drinke Milke or warme Bloud, and for the most part card them both together. They vse sometimes as they trauell by the way, to let their Horse bloud in a veyne, and to drinke it warme, as it cometh from his body.

Townes they plant none, nor other standing buildings, but haue walking Houses which the *Latines* call *Veij*, built vpon wheelles like a Shepherds Cottage. These they draw with them whithersoouer they goe, driuing their Cattell with them. And when they come to their Stage or standing

Moueable Ci-
tie and Court.

standing place, they plant their Cart-houses very orderly in a ranke : and so make the forme of streets, and of a large Towne. And this is the manner of the Emperour himselfe, who hath no other seate of his Empire but an *Agora*, or Towne of wood, that moueth with him whitherfoeuer hee goeth. As for the fixed and standing building vsed in other Countries, they say they are vnwholsome and vnpleasant.

They begin to moue their Houses and Cattell in the Spring time, from the South part of their Countrey towards the North parts. And so driuing on till they haue grased all vp to the furthest part Northward, they returne backe againe towards their South Countrey (where they continue all the Winter) by ten or twelue miles a stage : in the meane while the grasse being sprung vp againe, to serue for their Cattell as they returne. From the border of the *Shalcan* towards the *Caspian* Sea, to the *Russe* frontiers, they haue a goodly Countrey, specially on the South and South-east parts, but lost for lacke of tillage.

Of money they haue no vse at all, and therefore preferre Brasse and Steele before other metals, specially Bullate, which they vse for Swords, Kniues, and other necessities. As for Gold and Siluer they neglect it of very purpose, (as they doe all tillage of their ground) to be more free for their wandring kinde of life, and to keepe their Countrey lesse subject to inuasions. Which giueth them great aduantage against all their neighbours, euer inuading, and neuer being inuaded.

Tartars per-
sons described.

For Person and Complexion, they haue broad and flat visages, of a tanned colour yellow and blacke, fierce and cruell lookes, thinne hayred vpon the vpper Lip, and a pit on the Chin, light and nimble Bodied, with short Legges, as if they were made naturally for Horse-men : whereto they practise themselues from their Child-hood, seldome going a foot about any businesse. Their Speech is very sudden and loude, speaking as it were out of a deepe hollow throat. When they Sing you would thinke a Cow lowed, or some great Bandogge howled. Their greatest exercise is Shooting, wherein they trayne vp their Children from their very infancie, not suffering them to eate, till they haue shot neere the marke within a certaine scantling.

Speech.
Song.
Shooting.

Diuers kindes
of Tartars.

The Nagay
Tartar the cru-
ellest.
The Chircasce
the ciuillest
Tartars.
The Cheremif-
sen Tartar.

There are diuers other Tartars that border vpon *Russia*, as the *Nagaies*, the *Cheremissens*, the *Morduites*, the *Chircasses*, and the *Shalcans*, which all differ in Name more then in Regiment, or other condition, from the *Chrim Tartar*, except the *Chircasses*, that border South-west towards *Lituania*, and are farre more ciuill then the rest of the Tartars, of a comely person, and of a stately behauiour, as applying themselues to the fashion of the *Polonian*. Some of them haue subjected themselues to the Kings of *Poland*, and professe *Christianitie*. The *Nagay* lyeth Eastward, and is reckoned for the best man of warre among all the Tartars, but very sauage and cruell about all the rest. The *Cheremisin Tartar*, that lyeth betwixt the *Russe* and the *Nagay*, are of two sorts, the *Luganoy* (that is of the valley) and the *Nagornay*, or of the hilly Countrey. These haue much troubled the Emperours of *Russia*. And therefore they are content now to buy Peace of them, vnder pretence of giuing a yeerely pension of *Russe* Commodities, to their *Morseis* or *Dy-uoymorseis*, that are chiefe of their Tribes. For which also they are bound to serue them in their warres, vnder certayne conditions. They are sayd to bee iust and true in their dealings : and for that cause they hate the *Russe* people, whom they account to bee double, and false in all their dealing. And therefore the common sort are very vnwilling to keepe agreement with them, but that they are kept in by their *Morseis*, or Dukes for their pensions sake.

The Morduit
Tartar the
most barba-
rous of the
rest.

The most rude and barbarous is counted the *Morduite Tartar*, that hath many selfe fashions, and strange kindes of behauiour, differing from the rest. For his Religion, though hee acknowledge one God, yet his manner is to worship for God, that liuing thing, that hee first meeteth in the morning, and to sweare by it all that whole day, whether it bee Horse, Dog, Cat, or whatsoever else it bee. When his friend dyeth, hee killeth his best Horse, and hauing flayed off the skinn, he carryeth it on high vpon a long pole, before the Corps to the place of Buriall. This he doth (as the *Russe* sayth) that his friend may haue a good horse to carrie him to Heauen : but it is likelier to declare his loue towards his dead friend, in that hee will haue to dye with him the best thing that hee hath.

Shalcan.

Derbent.

Next to the Kingdome of *Astracan*, that is the furthest part South-eastward of the *Russe* Dominion, lyeth the *Shalcan*, and the Countrey of *Media* : whither the *Russe* Merchants trade for raw Silkes, Syndon, Saphyon, Skinn, and other commodities. The chiefe Townes of *Media* where the *Russe* tradeth, are *Derbent* (built by *Alexander* the great, as the Inhabitants say) and *Zamachie*, where the staple is kept for raw Silkes. Their manner is, in the Spring time to reuiue the Silke-wormes (that lye dead all the Winter) by laying them in the warme Sunne, and (to hasten their quickning, that they may sooner goe to worke) to put them into bagges, and so to hang them vnder their Childrens armes. As for the Worme called *Chrimisin* (as wee call it *Chrimson*) that maketh coloured Silke, it is bred not in *Media*, but in *Affyria*. This trade to *Derbent* and *Samachie* for raw Silkes, and other commodities of that Countrey, as also in *Persia*, and *Bougharia*, downe the Riuer *Volgha*, and through the *Caspian* Sea, is permitted as well to the *Englishe*, as to the *Russe* Merchants, by the Emperours last Grant at my being there. Which hee accounteth for a very speciall fauour, and might proue indeed very beneficiall to our *Englishe* Merchants, if the Trade were well and orderly vsed.

The

The whole Nation of the *Tartars* are utterly void of all Learning, and without written Law. Yet certayne rules they haue which they hold by tradition, common to all the *Hoords* for the practice of their life. Which are of this sort. First, To obey their Emperour and other Magistrates, whatsoener they command about the publike Service. Secondly, Except for the publike behoofe, every man to bee free and out of Contralement. Thirdly, No private man to possesse any Lands, but the whole Countrey to bee as a Common. Fourthly, To neglect all daintinesse and varietie of Meates, and to content themselves with that which commeth next to hand, for more hardnesse, and readinesse in the executing of their Affaires. Fifthly, To weare any base Attire, and to patch their Cloathes, whether there bee any need or not: that when there is need, it bee no shame to weare a patcht Coate. Sixthly, To take or steal from any Stranger whatsoener they can get, as being Enemies to all men, save to such as will submit themselves to them. Seventhly, Towards their owne Hoord and Nation, to bee true in word and deed. Eighthly, To suffer no Stranger to come within the Realme, if any doe, the same to bee Bond-slave to him that first taketh him, except such Merchants and other, as haue the Tartar Bull or Passport about them.

Tartars general Rules.

The *Permians* and *Samoits* that lye from *Russia*, North and North-east, are thought likewise to haue taken their beginning from the *Tartar* kinde. And it may partly be ghesied by the fashion of their Countenance, as hauing all broad and flat faces, as the *Tartars* haue, except the *Chircasses*. The *Permians* are accounted for a very ancient people. They are now subject to the *Russe*. They liue by Hunting and trading with their Furtres, as doth also the *Samoys*, that dwelleth more towards the North Sea. The *Samoys* hath his name (as the *Russe* saith) of Eating himselfe: as if in times past, they liued as the *Cannibals*, eating one another. Which they make more probable, because at this time they eate all kinde of raw flesh, whatsoeuer it bee, euen the very Carrion that lyeth in the ditch. But as the *Samoits* themselves will say, they were called *Samoie*, that is, of themselves, as though they were *Indigine*, or people bred vpon that very soyle, that neuer changed their seate from one place to another, as most Nations haue done. They are subject at this time to the Emperour of *Russia*.

Chap. 20. Of the Permians, Samoits, and Lappes. The Permians.

I talked with certaine of them, and finde that they acknowledge one God: but represent him by such things as they haue most vse and good by. And therefore they worship the Sunne, the Moon, the Loth, and such like. As for the *Stora Baba*, or the *Golden hagge*, (which I haue read in some Maps, and descriptions of these Countreys, to bee an Idoll after the forme of an old Woman), that being demanded by the Priest, giueth them certaine Oracles, concerning the successe and euent of things, I found it to bee but a very fable. Onely in the Prouince of *Obdoria* vpon the Sea side, neere to the mouth of the great Riuer *Obba*, there is a Rocke, which naturally (being somewhat helped by imagination) may seeme to beare the shape of a ragged Woman with a Child in her armes, (as the Rocke by the North cape the shape of a Frier) where the *Obdorian Samoits* vse much to resort, by reason of the comoditie of the place for Fishing: and there sometime (as their manner is) conceiue, and practice their Sorceries, and ominous conjecturings about the good, or bad speed of their Iourneyes, Fishings, Huntings, and such like.

The Samoits Religion. Stora Baba of the Golden Hag.

They are clad in Seale-skinnes, with the hayrie side outwards downe as low as the knees, with their Breeches and Netherstocks of the same, both men and women. They are all Blacke hayred, naturally bearded. And therefore the Men are hardly discerned from the Women by their looks: save that the Women weare a locke of hayre downe along both their eares. They liue in a manner a wilde and a sauage life, roving still from one place of the Countrey to another, without any propertie of House or Land more to one then to another. Their leader or director in euery Companie, is their *Papa* or Priest.

The Samoits habite and behauiour.

On the North side of *Russia* next to *Corelia*, lyeth the Countrey of *Lappia*, which reacheth in length from the furthest point Northward, (towards the North cape) to the furthest part South-east (which the *Russe* calleth *Sweetnesse* or Holy nose, the *English* men *Cape-grace*) about three hundred and fortie five verst or miles. From *Sweetnesse* to *Candelox*, by the way of *Versaga* (which measureth the breadth of that Countrey) is ninetie miles or thereabouts. The whole Countrey in a manner is either Lakes or Mountaines, which towards the Sea side are called *Tondra*, because they are all of hard and craggie Rocke, but the inland parts are well furnished with Woods, that grow on the hills sides, the lakes lying betweene. Their dyet is very bare and simple. Bread they haue none, but feed onely vpon Fish and Fowle. They are subject to the Emperour of *Russia*, and the two Kings of *Sweden* and *Denmarke*: which all exact Tribute and Customs of them (as was sayd before) but the Emperour of *Russia* beareth the greatest hand ouer them, and exact of them farre more then the rest. The opinion is that they were first termed *Lappes*, of their brieue and short speach. The *Russe* diuideth the whole Nation of the *Lappes* into two sorts. The one they call *Nowremanskoy Lapy*, that is, the *Norwegian Lappes*: because they bee of the *Danish* Religion. For the *Danes* and *Norwegians*, they account for one people. The other that haue no Religion at all, but liue as brute and Heathenish people, without God in the world, they call *Dikoy Lopy*, or the wilde *Lappes*.

The Lappes.

No Bread.

Wilde Lappes.

The whole Nation is utterly vnlearned, hauing not so much as the vse of any Alphabet, or Letter

Witches.

Letter among them. For practice of Witch-craft and Sorcerie, they passe all Nations in the the World. Though for the inchanting of ships that sayle along their Coast (as I haue heard it reported) and their giuing of winds good to their friends, and contrary to other, whom they meane to hurt by tying of certayne knots vpon a Rope (somewhat like to the Tale of *Aolus* his wind-bag) is a very Fable, deuised (as may seeme) by themselves, to terrifie Saylers for coming neere their Coast. Their Weapons are the Long-bow, and Hand-gunne, wherein they excell, as well for quicknesse to charge and discharge, as for neernesse at the Marke, by reason of their continuall practice (whereto they are forced) of shooting at wild-fowle. Their manner is in Summer time to come downe in great companies to the Sea-side, to *Wardbuse*, *Cola*, *Kegor*, and the Bay of *Vedagoba*, and there to fish for Cod, Salmon, and But-fish, which they sell to the *Russes*, *Danes*, and *Norwegians*, and now of late to the *English* men that trade thither with Cloth, which they exchange with the *Lappes* and *Corelians*, for their Fish, Oyle, and Furres, whereof also they haue some store. They hold their Mart at *Cola*, on Saint *Peter's* day, what time the Captayne of *Wardbuse* (that is Resiant there for the King of *Denmarke*) must be present, or at least send his Deputie to set prices vpon their Stock-fish, Trane-oyle, Furres, and other Commodities: as also the *Russe* Emperours Customer, or Tribute taker, to receiue his Custome, which is euer payed before any thing can be bought, or sold. When their fishing is done, their manner is to draw their Carbasses, or Boats on shoare, and there to leaue them with the Keele turned vpwards, till the next Spring-tyde. Their trauell too and fro is vpon Sleds, drawne by the *Olen* Deere: which they vse to turne a grazing all the Summertime, in an Iland called *Kilden* (of a very good Soyle compared with other parts of that Countrey) and towards the Winter time, when the Snow beginneth to fall, they fetch them home againe, for the vse of their Sled.

Chap. 21.
Of their Ec-
clesiasticall
state, with
their Church
Officers.

Concerning the Government of their Church, it is framed altogether after the manner of the *Greeke*: as being a part of that Church, and neuer acknowledging the Iurisdiction of the *Latine* Church, vsurped by the Pope. That I may keepe a better measure in describing their Ceremonies, then they in the vsing them (wherein they are infinite) I will note briefly: First, what Ecclesiasticall Degrees, or Offices they haue with the Iurisdiction, and practice of them. Secondly, what Doctrine they hold in matter of Religion. Thirdly, what Lyturgie, or forme of Service they vse in their Churches, with the manner of their administering the Sacraments. Fourthly, what other strange Ceremonies, and Superstitious Deuotions are vsed among them.

The Church
Officers.

Their Offices, or Degrees of Church-men, are as many in number, and the same in a manner both in name and degree, that were in the *Westerne* Churches. First, they haue their *Patriarch*, then their *Metropolitans*, their *Archbishops*, their *Vladikes*, or *Bishops*, their *Protropes* or *Arch-priests*, their *Deacons*, *Priers*, *Monks*, *Nunnes*, and *Eremites*.

The Patriarch.

Patriarch of
Sio, or Chio.

Their *Patriarch*, or chiefe Director in matter of Religion vntill this last yeere, was of the Citie of *Constantinople* (whom they called the *Patriarch* of *Sio*) because being driuen by the *Turke* out of *Constantinople* (the Seate of his Empire) he remoued to the Ile *Sio*, sometimes called *Chio*, and there placed his Patriarchiall See. So that the Emperours, and Clergie of *Russia*, were wont yeerely to send Gifts thither, and to acknowledge a Spirituall kind of homage, and subiection due to him, and to that Church. Which custome they haue held (as it seemeth) euer since they professed the Christian Religion. Which how long it hath bin I could not wel learne, for that they haue no Story or Monument of Antiquitie (that I could heare of) to shew what hath beene done in times past within their Countrey, concerning either Church, or Common-wealth matters. Onely I heare a report among them, that about three hundred yeers since, there was a Marriage betwixt the Emperour of *Constantinople*, and the Kings Daughter of that Countrey: who at the first denyed to joyne his Daughter in Mariage with the *Greeke* Emperour, because he was of the Christian Religion. Which agreeth well with that I find in the Story of *Laonicus Chalcondylas* concerning *Turkish* Affaires in his fourth Booke: where hee speaketh of such a Marriage betwixt *John* the *Greeke* Emperour, and the Kings Daughter of *Sarmatia*. And this argueth out of their owne report, that at that time they had not receiued the Christian Religion: as also that they were converted to the Faith, and withall peruered at the very same time, receiuing the Doctrine of the Gospell, corrupted with Superstitions euen at the first when they tooke it from the *Greeke* Church, which it selfe then was degenerate, and corrupted with many Superstitions, and foule Errours, both in Doctrine and Discipline: as may appeare by the Story of *Nicephorus Gregoras*, in his eighth and ninth Bookes. But as touching the time of their Conuersion to the Christian Faith, I suppose rather that it is mistaken by the *Russe*, for that which I find in the *Polonian* Story, the second Booke the third Chapter: where is said that about the yeere 990, *Vladomirus* Duke of *Russia*, married one *Anne* Sister to *Basilus*, and *Constantinus* Brothers, and Emperours of *Constantinople*. Whereupon the *Russe* receiued the Faith and Profession of Christ. Which though it be somewhat more ancient then the time noted before out of the *Russe* Report, yet it falleth out all to one reckoning, touching this point, viz. in what truth and

fin.

sinceritie of Doctrine the *Russe* received the first stampe of Religion : for asmuch as the *Greeke* Church at that time also was many wayes infected with error and superstition.

At my being there, the yeere 1588. came vnto the *Mosko* the Patriarch of *Constantinople*, or *Sio* (called *Hieronimo* being banished as some sayd) by the *Turke*, as some other reported by the *Greeke* Clergie deprivied. The Emperour being giuen altogether to superstitious deuotions, gaue him great entertaynement. Before his comming to *Mosko*, hee had beene in *Italy* with the Pope, as was reported there by some of his company. His arrand was to consult with the Emperour concerning these points. First, about a League to passe betwixt him and the King of *Spaine*, as the meetest Prince to joyne with him in opposition against the *Turke*. To which purpose also Ambassages had passed betwixt the *Russe* and the *Persian*. Likewise from the *Georgians* to the Emperour of *Russia*, to joyne league together, for the inuading of the *Turke* on all sides of his Dominion : taking the aduantage of the simple qualitie of the *Turke* that now is. This treatie was helped forward by the Emperours Ambasadour of *Almayne*, sent at the same time to sollicite an inuasion vpon the parts of *Polonia*, that lye towards *Rusland*, and to borrow money of the *Russe* Emperour, to pursue the warre for his Brother *Maximilian*, against the *Swedens* sonne, now King of *Poland*. But this consultation concerning a league betwixt the *Russe* and the *Spaniard*, (which was in some forwardnesse at my comming to *Mosko*, and already one appointed for Ambassage into *Spaine*) was marred by meanes of the ouerthrow giuen to the *Spanish* King by her Majestie, the Queene of *England*, this last yeere. Which made the *Russe* Emperour and his Councell, to giue a sadder countenance to the *English* Ambasadour at that time : for that they were disappointed of so good a policie, as was this conjunction supposed to bee betwixt them and the *Spanish*.

His second purpose (whereto the first serued as an introduction) was in reuenge of the *Turke* and the *Greeke* Clergie, that had thrust him from his seate, to treat with them about the reducing of the *Russe* Church vnder the Pope of *Rome*. Wherein it may seeme that comming lately from *Rome*, hee was set on by the Pope, who hath attempted the same many times before, though all in vaine : and namely the time of the late Emperour *Inan Vasilowich*, by one *Anthony* his Legate. But thought this belike a farre better meane to obtayne his purpose by treatie and mediation of their owne Patriarch. But this not succeeding, the Patriarch fell to a third point of treatie, concerning the resignation of his Patriarchship, and translation of the Sea from *Constantinople* or *Sio*, to the Citie of *Mosko*. Which was so well liked, and entertayned by the Emperour (as a matter of high Religion and policie) that no other treatie (specially of forraigne Ambassages) could bee heard or regarded, till that matter was concluded.

The reason wherewith the Patriarch perswaded the translating of his Sea to the Citie of *Mosko*, were these in effect. First, for that the Sea of the Patriarch was vnder the *Turke*, that is enemie to the Faith. And therefore to bee remooued into some other Countrey of *Christian* profession. Secondly, because the *Russe* Church was the onely naturall daughter of the *Greeke* at this time, and holdeth the same Doctrine and Ceremonies with it : the rest being all subject to the *Turke*, and fallen away from the right profession. Wherein the subtil *Greeke* to make the better market of his broken ware, aduanced the honour that would grow to the Emperour, and his Countrey : to haue the Patriarchs Seat translated into the chiefe Citie, and seate of his Empire. As for the right of translating the Sea, and appointing his Successour, hee made no doubt of it, but that it pertayned wholly to himselfe.

So the Emperour and his Councell, with the principall of his Clergie, being assembled at the *Mosko*, it was determined that the Metropolit of *Mosko*, should become Patriarch of the whole *Greeke* Church, and haue the same full Authoritie and Iurisdiction that pertayned before to the Patriarch of *Constantinople*, or *Sio*. And that it might bee done with more order and solemnitie, the five and twentieth of Ianuarie, 1588. the *Greeke* Patriarch accompanied with the *Russe* Clergie, went to the great Church of *Precheste*, or our Ladie, within the Emperours Castle (hauing first wandred thorow the whole Citie in manner of a Procession, and blessing the people with his two fingers) where hee made an Oration, and deliuered his resignation in an Instrument of writing, and so layed downe his Patriarchicall staffe. Which was presently received by the Metropolit of *Mosko*, and diuers other ceremonies vsed about the Inauguration of this new Patriarch.

The day was holden very solempne by the people of the Citie, who were commanded to forbear their workes, and to attend this solemnitie. The great Patriarch that day was honoured with rich Presents sent him from the Emperour and Empreffe, of Plate, cloath of Gold, Furres, &c. carried with great pompe thorow the streets of *Mosko*, and at his departing received many gifts more, both from the Emperour, Nobilitie, and Clergie. Thus the Patriarchship of *Constantinople*, or *Sio*, (which hath continued since the Councell of *Nice*) is now translated to *Mosko*, or they made beleue that they haue a Patriarch with the same right and Authoritie that the other had. Wherein the subtil *Greeke* hath made good aduantage of their Superstition, and is now gone away with a rich bootie into *Poland*, whither their Patriarchship be currant or not.

The matter is not vnlike to make some Schisme betwixt the *Greeke* and *Russe* Church, if the

reuenue.

Russe hold his Patriarchship that hee hath so well payed for, and the *Greekes* Elect another withall, as * likely they will, whether this man were banished by the *Turke*, or depriued by order of his owne Clergie. Which might happen to giue aduantage to the Pope, and to bring ouer the *Russe* Church to the Sea of *Rome*, (to which end peradventure hee deuised this Stratagem, and cast in this matter of Schisme among them) but that the Emperours of *Russia* know well enough, by the example of other *Christian* Princes, what inconuenience would grow to their State and Countrey, by subjecting themselves to the *Romish* Sea. To which end the late Emperour *Iuan Vasilowich*, was very inquisitiue of the Popes authoritie ouer the Princes of *Christendome*, and sent one of very purpose to *Rome*, to behold the order and behauiour of his Court.

With this Patriarch *Hieronymo*, was driuen out at the same time by the great *Turke*, one *Demetrio* Archbishop of *Larissa*: who is now in *England*, and pretendeth the same cause of their banishment by the *Turke*, (to wit) their not admitting of the Popes new Kalender, for the alteration of the yeere. Which how vnllikely it is, may appeare by these Circumstances. First, because there is no such affection, nor friendly respect betwixt the Pope and the *Turke*, as that hee should banish a Subject for not obeying the Popes ordinance, specially in a matter of some sequel for the alteration of Times within his owne Countries. Secondly, for that hee maketh no such scruple in deducting of times, and keeping of a iust and precise account from the Incarnation of *Christ*: whom hee doth not acknowledge otherwise then I noted before. Thirdly, for that the sayd Patriarch is now at *Naples* in *Italy*, where it may be ghesed he would not haue gone within the Popes reach, and so neere to his nose, if hee had beene banished for opposing himselfe against the Popes Decree.

This office of Patriarchship now translated to *Mosko*, beareth a superiour Authoritie ouer all the Churches, not onely of *Russia*, and other the Emperours Dominions, but thorow out all the Churches of *Christendome*, that were before vnder the Patriarch of *Constantinople*, or *Sio*: or at least the *Russe* Patriarch imagineth himselfe to haue the same authoritie. Hee hath vnder him as his proper Diocese the Prouince of *Mosko*, besides other peculiars. His Court or Office is kept at the *Mosko*.

Before the creation of this new Patriarch, they had but one *Metropolit*, that was called the *Metropolit* of *Mosko*. Now for more state to their Church, and new Patriarch, they haue two *Metropolitans*, the one of *Nonogrod uelica*, the other of *Rostone*. Their office is to receiue of the Patriarch such Ecclesiasticall orders, as hee thinketh good, and to deliuer the charge of them ouer to the Archbishops: besides the ordering of their owne Diocese.

Their Archbishops are foure: of *Smolensko*, *Cazen*, *Volsko*, and *Vologda*. The parts of their office is all one with the *Metropolitans*: saue that they haue an vnder Iurisdiction, as Suffraganes to the *Metropolitans*, & Superiors to the Bishops. The next are the *Vladiks* or Bishops, that are but fixe in all: of *Crutitska*, of *Rezan*, of *Oiser* and *Torshock*, of *Collomenska*, of *Volodemer*, of *Susdalla*. These haue euery one a very large Diocese: as diuiding the rest of the whole Countrey among them.

The matters pertayning to the Ecclesiasticall iurisdiction of the *Metropolitans*, Archbishops, and Bishops, are the same in a manner that are vsed by the Clergie in other parts of *Christendome*. For besides their authoritie ouer the Clergie, and ordering such matters as are meere Ecclesiasticall, their iurisdiction extendeth to all Testamentarie causes, matters of Marriage, and Diuorcements, some Pleas of iniuries, &c. To which purpose also they haue their Officials, or Commissaries (which they call *Boiaren Vladuskey*) that are Lay-men of the degree of Dukes, or Gentlemen, that keepe their Courts and execute their Iurisdiction. Which besides their other oppressions ouer the common people, raigne ouer the Priests: as the Dukes and *Djacks* doe ouer the poore people, within their Precincts. As for the Archbishop or Bishop himselfe, hee beareth no sway in deciding those causes, that are brought into his Court. But if hee would moderate any matter, he must doe it by intreatie with his Gentleman Officiall. The reason is, because these *Boiarskey*, or Gentlemen officials, are not appointed by the Bishops, but by the Emperour himselfe, or his Councell, and are to giue account of their doings to none but to them. If the Bishop can intreat at his admission to haue the choice of his owne Officiall, it is accounted for a speciall great fauour. But to speake it as it is, the Clergie of *Russia*, aswell concerning their Lands and reuenues, as their Authoritie and Iurisdiction, are altogether ordered and ouer-ruled by the Emperour and his Councell, and haue so much, and no more of both as their pleasure doth permit them. They haue also there Assistants or seuerall Counsels (as they call them) of certayne Priests that are of that Diocese, residing within their Cathedrall Cities, to the number of foure and twentie a peece. These aduise with them, about the speciall and necessarie matters belonging to their charge.

Concerning their Rents and Reuenues to maintayne their dignities, it is somewhat large. The Patriarchs yeerely rents out of his Lands (besides other fees) is about 3000. Rubbels or Marcks. The *Metropolitans* and Archbishops, about 2500. The Bishops, some 1000. some 800. some 500. &c. They haue had some of them (as I haue heard say) ten or twelue thousand Rubbels a yeere: as had the *Metropolit* of *Nonogrod*.

Their

Their Habit or Apparell (when they shew themselves in their Pontificalibus after their solemnest manner is a Mitre on their heads after the Popish fashion, set with Pearle and Precious Stone, a Coape on their backs, commonly of Cloth of Gold, embroydered with Pearle, and a Crosiers Staffe in their hands, layed ouer all with Plate of Siluer double gilt, with a Crosse or Shepherds Crooke at the vpper end of it. Their ordinary habit otherwise when they ride or goe abroad, is a Hood on their heads of blacke colour, that hangeth downe their backs, and standeth out like a Bon-grace before. Their vpper Garment (which they call *Reis*) is a Gowne or Mantell of blacke Damaske, with many Lifts or Gards of white Sattin layed vpon it, euery Gard about two fingers broad, and their Crosiers staffe carried before them. Themselues follow after, blessing the people with their two fore-fingers, with a maruelous grace.

The Election, and appointing of the Bishops and the rest, pertayneth wholly to the Emperour himselfe. They are chosen euer out of the Monasteries: so that there is no Bishop, Arch-bishop, nor Metropolitane, but hath bene a Monke, or Frier before. And by that reason they are, and must all bee vnmarried men, for their Vow of Chastitie when they were first shorne. When the Emperour hath appointed whom he thinketh good, hee is inuested in the Cathedrall Church of his Diocese, with many Ceremonies, much after the manner of the Popish Inauguration. They haue also their Deanes, and their Arch-deacons.

As for preaching the Word of God, or any teaching, or exhorting such as are vnder them, they neither vse it, nor haue any skill of it: the whole Clergie being vtterly vnlarned both for other knowledge, and in the Word of God. Onely their manner is twice euery yeere, viz. the first of September (which is the first day of their yeere) and on Saint *John Baptists* day, to make an ordinary speech to the people, euery Metropolitane, Arch-bishop, and Bishop, in his Catherall Church, to this or like effect: That if any bee in malice towards his Neighbour, hee shall leaue off his malice: if any haue thought of Treason or Rebellion against his Prince, hee beware of such practice: if hee haue not kept his Fasts, and Vowes, nor done his other Duties to the holy Church, hee shall amend that fault, &c. And this is a matter of forme with them, vttered in as many words, and no more, in a manner, then I haue heere set downe. Yet the matter is done with that Grace and Solemnitie, in a Pulpit of purpose set vp for this one Act, as if hee were to discourse at large of the whole substance of Diuinitie. At the *Mosko* the Emperour himselfe is euer present at this Solemne Exhortation.

As themselues are void of all manner of Learning, so are they wary to keepe out all meanes that might bring any in: as fearing to haue their ignorance and vngodlinesse discovered. To that purpose they haue perswaded the Emperors, that it would breed Innoation, and sow danger to their State, to haue any nouelty of Learning come within the Realme. Wherein they say but truth, for that a man of spirit and vnderstanding, helped by Learning and liberall Education, can hardly indure a tyrannicall Government. Some yeeres past in the other Emperours time, there came a Presse and Letters out of *Polonia*, to the Citie of *Mosko*, where a Printing House was set vp, with great liking and allowance of the Emperour himselfe. But not long after, the house was set on fire in the night time, and the Presse and Letters quite burnt vp, as was thought by the procurement of the Clergie-men.

Their Priests (whom they call *Papae*) are made by the Bishops, without any great tryall for worthinesse of gifts, before they admit them, or Ceremonies in their admission: saue that their heads are shorne (not shauen, for that they like not) about an hand breadth or more in the crowne, and that place anointed with Oyle by the Bishop: who in his admission putteth vpon the Priest, first his Surplesse, and then setteth a white Crosse on his brest of Silke, or some other matter, which he is to weare eight dayes, and no more: and so giueth him authoritie to say and sing in the Church, and to administer the Sacraments.

They are men vtterly vnlarned, which is no maruell, for as much as their Makers, the Bishops themselues (as before was said) are cleere of that qualitie, and make no farther vse at all of any kind of Learning, no not of the Scriptures themselues, saue to reade and to sing them. Their ordinary charge and function is to say the Lyturgie, to administer the Sacraments after their manner, to keepe and decke their Idols, and to doe the other Ceremonies vsuall in their Churches. Their number is great because their Townes are parted into many small Parishes, without any discretion for diuiding them into competent numbers of Households, and people for a iust Congregation: as the manner in all places where the meanes is neglected, for increasing of knowledge, and instruction towards God. Which cannot well be had, where by meanes of an vnequall partition of the people, and Parishes, there followeth a want and vnequalitie of stipend for a sufficient Ministry.

For their Priests, it is lawfull to marry for the first time. But if the first Wife dye, a second he cannot take, but he must lose his Priest-hood, and his living withall. The reason they make out of that place of Saint *Paul* to *Timothy* 1.3.2. not well vnderstood, thinking that to bee spoken of diuers Wiues successufully, that the Apostle speaketh of at one and the same time. If hee

The Election of Bishops.

The learning and exercise of the Russe Clergie.

Priests.

The Russe Priests can marry but once.

will needs marrie againe after his first wife is dead, he is no longer called *Papa*, but *Rospapa*, or *Priest quondam*. This maketh the Priests to make much of their Wiues, who are accounted as the Matrones, and of best reputation among the women of the Parish.

For the stipend of the Priest, their manner is not to pay him any tenths of Corne, or ought else: but he must stand at the deuotion of the people of his Parish, and make vp the Incommes towards his maintenance, so well as hee can, by Offerings, Shrifts, Mariages, Burials, Dirges, and Prayers for the dead and the liuing (which they call *Molinta*.) For besides their publike Seruice within their Churches, their manner is for euery priuate man to haue a Prayer said for him by the Priest, vpon any occasion of businesse whatsoeuer, whether he ride, goe, faile, plough, or whatsoeuer else he doth. Which is not framed according to the occasion of his businesse, but at randome, being some of their ordinary and vsuall Church-prayers. And this is thought to bee more holy, and effectuell, if it be repeated by the Priests mouth, rather then by his owne. They haue a custome, besides to solemnize the Saints day, that is, Patrone to their Church once euery yeere. What time all their Neighbours of their Countrey and Parishes about, come in to haue Prayers said to that Saint for themselues, and their friends: and so make an Offering to the Priest for his paines. This Offering may yeeld them some ten pounds a yeere, more or lesse, as the Patrone or Saint of that Church is of credit and estimation among them: The manner is on this day (which they keepe Anniversarie for the Priest, to hire diuers of his Neighbour Priests to helpe him: as hauing more Dishes to dresse for the Saint, then he can well turne his hand vnto. They vse besides to visit their Parishioners houses, with Holy Water, and Perfume, commonly once a quarter: and so hauing sprinkled, and bencensed the goodman and his Wife, with the rest of their household, and household-stuffe, they receiue some Deuotion or lesse, as the man is of abilitie. This and the rest layd altogether, may make vp for the Priest towards his mayntenance, about thirty or forty Rubbels a yeere: whereof he payeth the tenth part to the Bishop of the Diocesse.

The Priests
maintenance.

Their Priests
attyre.

The *Papa* or Priest is knowne by his long Tufts of Haire, hanging downe by his Eares, his Gowne with a broad Cape, and a walking staffe in his hand. For the rest of his Habit, hee is apparelled like the common sort. When he sayth the *Lyturgie* or Seruice, within the Church, hee hath on him his Surplesse, and sometimes his Coape, if the day bee more Solemne. They haue besides their *Papae* or Priests, their *Chernapapae* (as they call them) that is, *Black Priests*: that may keepe their Benefices, though they be admitted Friers withall within some Monastrie. They seeme to be the very same that were called Regular Priests in the Popish Church. Vnder the Priest, is a Deacon in euery Church, that doth nothing but the Office of a Parish Clerke. As for their *Protopapae*, or Arch-priests, and their Arch-deacons (that are next in election to be their *Protopapas*) they serue onely in the Cathedrall Churches.

Friers.

Of Friers they haue an infinite rabble farre greater then in any other Countrey, where Popery is professed. Euery Citie, and good part of the Countrey, swarmeth full of them. For they haue wrought (as the Popish Friers did by their Superstition and Hypocrisie) that if any part of the Realme be better and sweeter then other, there standeth a Friery or a Monastery dedicated to some Saint.

The number of them is so much the greater, not onely for that it is augmented by the Superstition of the Countrey, but because the Friers life is the safest from the Oppressions, and Exactions, that fall vpon the Commons. Which causeth many to put on the Friers Weed, as the best Armour to beare off such blowes. Besides such as are voluntary, there are diuers that are forced to shire themselues Friers, vpon some displeasure. These are for the most part of the chiefe Nobility: Diuers take the Monasteries as a place of Sanctuary, and there become Friers, to auoyde some punishment, that they had deserued by the Lawes of the Realme. For if hee get a Monastery ouer his head, and there put on a Coole before hee bee attached, it is a protection to him for euer against any Law, for what crime soeuer: except it be for Treason. But this *Promise* goeth withall, that no man commeth there, (except such as are commanded by the Emperour to be receiued) but he giueth them Lands, or bringeth his stocke with him, and putteth it into the common Treasury. Some bring 1000. Rubbels, and some more. None is admitted vnder three or foure hundred.

Their manner
of shiring
Friers.

The manner of their Admission is after this sort. First, the Abbot strippeth him of all his Secular or ordinary Apparell. Then he putteth vpon him next to his skinne, a white flannell shirt, with a long Garment ouer it downe to the ground, girded vnto him with a broad Leather Belt. His vpper-most Garment is a Weed of *Garras*, or *Say*, for colour and fashion, much like to the vpper Weed of a Chimney-sweeper. Then is his crowne shorne a hand breadth, or more close to the very skinne, and these, or like words pronounced by the Abbot, whiles hee clippeth his haire: *As these haire are clipped of, and taken from thy head; so now we take thee, and separate thee cleane from the World, and worldly things, &c.* This done, hee anointeth his crowne with Oyle, and putteth on his Coole: and so taketh him in among the Fraternitie. They vow perpetuall Chastitie, and Abstinence from flesh.

Besides, their Lands (that are very great) they are the greatest Merchants in the whole Coun-

Countrey, and deale for all manner of Commodities. Some of their Monasteries dispend in Lands, one thousand, or two thousand Rubbels a yeere. There is one Abbey called *Troits*, that hath in Lands and Fees, the summe of 100000. Rubbels, or Markes a yeere. It is built in manner of a Castle, walled round about, with great Ordnance planted on the wall, and containeth within it a large breadth of ground, and great varietie of building. There are of Friers within it, (besides their Officers, and other Seruants) about seuen hundred. The Empreffe that now is, hath many Vowes to Saint *Sergius*, that is Patrone there: to intreate him to make her fruitfull, as hauing no children by the Emperour her Husband. Lightly euery yeere thee goeth on Pilgrimage to him from the *Mosko*, on foot, about eighty *English* miles, with fve or fixe thousand women attending vpon her, all in blue Liveries, and foure thousand Souldiers for her Guard. But Saint *Sergius* hath not yet heard her Prayers, though (they say) hee hath a speciall gift and facultie that way.

What Learning there is among their Friers, may be knowne by their Bishops, that are the choice men out of all their Monasteries. I talked with one of them at the Citie of *Vologda*, where (to try his skill) I offered him a *Russe* Testament, and turned him to the first Chapter of Saint *Matthews* Gospell. Where hee beganne to reade in very good order. I asked him first what part of Scripture it was, that he had read? he answered, that he could not well tell. How many Euangelists there were in the New Testament? He said he knew not. How many Apostles there were? He thought there were twelue. How he should be saued? Whereunto he answered me with a piece of *Russe* Doctrine, that he knew not whether he should be saued, or no: but if God would *Poshallouate* him, or gratifie him so much, as to saue him, so it was, he would bee glad of it: if not, what remedy. I asked him, why hee shoare himselfe a Frier? Hee answered, because he would eate his Bread with peace. This is the Learning of the Friers of *Russia*, which though it be not to be measured by one, yet partly it may bee ghesed by the ignorance of this man, what is in the rest.

They haue also many Nunneries, whereof some may admit none but Noblemens Widowes, and Daughters, when the Emperour meaneth to keepe them vnmarried, from continuing the bloud or stocke, which if he would haue extinguished. To speake of the life of their Friers, and Nunnes, it needs not, to those that know the hypocrisie, and vncleannesse of that Cloyster-brood. The *Russe* himselfe (though otherwise addicted to all Superstition) speaketh so fouly of it, that it must needs gaine silence of any modest man.

Besides these, they haue certayne *Eremites*, (whom they call *Holy men*) that are like to those *Gymnosophists*, for their life and behauiour: though farre vnlike for their Knowledge, and Learning. They vse to goe starke naked, saue a clout about their middle, with their haire hanging long, and wildly about their shoulders, and many of them with an Iron collar, or chaine about their neckes, or midst, even in the very extremitie of Winter. These they take as Prophets, and men of great Holinesse, giuing them a liberty to speake what they list, without any controlment, though it bee of the very highest himselfe. So that if hee reprooue any openly, in what sort soeuer, they answere nothing, but that it is *Pro gratum*, that is, for their sinnes. And if any of them take some piece of sale ware from any mans shop, as he passeth by, to giue where he list, hee thinketh himselfe much beloued of God, and much beholding to the holy Man, for taking it in that sort.

Of this kind there are not many, because it is a very hard and cold Profession, to goe naked in *Russia*, specially in Winter. Among other at this time, they haue one at *Mosko*, that walketh naked about the streets, and inueigheth commonly against the State, and Gouvernement, especially against the *Godones*, that are thought at this time to be great Oppressors of that Commonwealth. Another there was, that dyed not many yeeres agoe (whom they called *Basileo*) that would take vpon him to reprove the old Emperour, for all his crueltie, and oppressions, done towards his people. His body they haue translated of late into a sumptuous Church, neere the Emperours House in *Mosko*, and haue canonized him for a Saint. Many Miracles he doth there (for so the Friers make the people to beleue) and many Offerings are made vnto him, not only by the people, but by the chiefe Nobilitie, and the Emperour, and Empreffe themselves, which visit that Church with great Deuotion. But this last yeere, at my being at *Mosko*, this Saint had ill lucke in working his Miracles. For a lame man that had his limmes restored (as it was pretended by him) was charged by a woman that was familiar with him (beeing then fallen out) that he halted but in the day time, and could leape merrily when hee came home at night. And that he had intended this matter fixe yeeres before. Now hee is put into a Monastery, and there rayleth vpon the Friers, that hired him to haue this counterfeit Miracle practised vpon him. Besides this disgrace, a little before my comming from thence, there were eight slaine within his Church by fire in a Thunder. Which caused his Bels (that were tingling before all day and night long as in triumph of the Miracles wrought by *Basileo* their Saint) to ring somewhat softer, and hath wrought no little discredit to this Miracle-worker. There was another of great account at *Plesko*, (called *Nichola* of *Plesko*) that did much good, when this Emperours Father came to sacke the Towne, vpon suspicion of their reuolting and Rebellion against him. perous,

perour, after he had saluted the Eremite, at his lodging, sent him a reward. And the Holy man to requite the Emperour, sent him a piece of raw Flesh, being then their Lent time. Which the Emperour seeing, bid one to tell him, that he marvelled that the Holy man would offer him flesh to eate in the Lent, when it was forbidden by order of holy Church. And doth *Enasko* (which is as much to say, as Iacke) thinke (quoth *Nicola*) that it is vnlawfull to eate a piece of beasts flesh in Lent and not to eate vp so much mans flesh, as he hath done already. So threatening the Emperour with a prophecy of some hard aduenture to come vpon him, except he left murdring of his people, and departed the Towne: he saued a great many mens liues at that time.

This maketh the people to like very well of them, because they are as Pasquils, to note their great mens faults, that no man else dare speake of. Yet it falleth out sometime, that for this rude libertie, which they take vpon them, after a counterfeite manner, by imitation of Prophets, they are made away in secret: as was one or two of them, in the last Emperours time, for being ouer-bold in speaking against his government.

Chap. 22.
Of their Ly-
turgie, or form
of Church-
seruice, and
their manner
of admini-
string the Sa-
craments.
Their morn-
ing Seruice.

THeir morning Seruice they call, *Zaotrana*, that is, *Mattins*. It is done in this order. The Priest entred into the Church with his Deacon following him. And when he is come to the middle of the Church, he beginneth to say with a loude voyce: *Blaſaney Vladika* (that is) *Blesse vs heauenly Pastor*: meaning of *Christ*. Then hee addeth, *In the name of the Father, and of the Sonne, and of the holy Ghost, one very God in Trinitie*: and *Aspody pomelui*, or, *Lord haue mercy vpon vs*, *Lord haue mercy vpon vs*, *Lord haue mercy vpon vs*: repeated three times. This done, he marcheth on towards the Chancell, or *Sanctum Sanctorum*, (as they vse to call it) and so entred into the *Scharſuey Dwere*, or the *Heauenly Doore*: which no man may enter into, but the Priest onely. Where standing at the Altar, or Table (set neere to the vpper wall of the Chancell) he sayeth the Lords Prayer, and then againe *Aspody pomelui*, or, *Lord haue mercy vpon vs*, *Lord haue mercy vpon vs*, &c. pronounced twelue times. Then praised be the *Trinitie*, the *Father*, the *Sonne*, and *holy Ghost*, for ever and ever. Whereto the Deacons, and People say, *Amen*. Next after, the Priest addeth the Psalmes for that day, and beginneth with, *O come let vs worship, and fall downe before the Lord*, &c. and therewithall himselfe, with the Deacons, and People, all turne themselues towards their Idols, or Images, that hang on the wall, and crossing themselues, bow downe three times, knocking their heads to the very ground. After this, he readeth the *Ten Commandements*, and *Athanasius Creed*, out of the *Seruice Booke*.

Legend.

This being done, the Deacon that standeth without the *Heauenly Doore*, or Chancell, readeth a piece of a Legend, out of a written Booke, (for they haue it not in Print) of some Saints life, miracles, &c. This is diuided into many parts, for every day in the yeere, and is read by them with a plaine singing note, not vnlike to the Popish tune, when they sung their Gospels. After all this (which reacheth to an houre and an halfe, or two houres of length) he addeth certaine set Collects, or Prayers vpon that which he hath read out of the Legend before: and so endeth his Seruice. All this while stand burning before their Idols, a great many of Waxe candles, (whereof some are of the bignesse of a mans waste) vowed, or enioyned by penance, vpon the people of the Parish.

Candles.

Compline.

About nine of the clocke in the morning, they haue another Seruice, called *Obeidna*, (or *Compline*) much after the order of the Popish Seruice, that bare that name: If it be some High or Festiuall day, they furnish their Seruice beside, with *Blessed bee the Lord God of Israel*, &c. and *Wee praise thee, O God*, &c. sung with a more solemne and curious note.

Their euening Seruice.

Their euening Seruice, is called *Vecherna*, where the Priest beginneth with *Blaſaney Vladika*, as he did in the morning, and with the Psalmes appointed for the *Vecherna*. Which being read, he singeth, *My soule doeth magnifie the Lord*, &c. And then the Priest, Deacons, and People, all with one voice, sing, *Aspody pomelui*, or, *Lord haue mercy vpon vs*, thirty times together. Whereunto the Boyes that are in the Church, answere all with one voice, rolling it vp so fast, as their lips can goe: *Verij, Verij, Verij, Verij*, or, *Praise, Praise, Praise*, &c. thirty times together, with a very strange noise. Then is read by the Priest, and vpon the Holidayes sung, the first Psalme: *Blessed is the man*, &c. And in the end of it, is added, *Alleluia*, repeated ten times. The next in order is some part of the Gospell read by the Priest, which hee endeth with *Alleluia* repeated three times. And so hauing said a Collect in remembrance of the Saint of that day, hee endeth his euening Seruice. All this while the Priest standeth aboue at the Altar, or high Table, within the Chancell, or *Sanctum Sanctorum*, whence hee neuer moueth all the Seruice time. The Deacon, or Deacons (which are many in their Cathedrall Churches) stand without the Chancell by the *Scharſuey Dwere*, or *Heauenly Doore*: for within they may not be seene all the Seruice time, though otherwise their Office is to sweepe and keepe it, and to set vp the Waxe candles before their Idols. The people stand together the whole Seruice time in the body of the Church, and some in the Church Porch, for Piew, or Seat they haue none within their Churches.

The manner
of the Russe
Baptisme.

The Sacrament of Baptisme they administer after this manner. The child is brought vnto the Church (and this is done within eight dayes after it is borne) if it bee the child of some Noble-

Nobleman, it is brought with great pompe in a rich Sled or Wagon, with Chaires and Cushions of cloth of Gold, and such like sumptuous shew of their best furniture. When they are come to the Church, the Priest standeth ready to receiue the child within the Church Porch, with his Tub of water by him. And then beginneth to declare vnto them, that they haue brought a little Infidell to be made a Christian, &c. This ended, he teacheth the Witneses (that are two or three) in a certaine set forme out of his Booke, what their dutie is in bringing vp the child after he is baptised, *vz.* That he must be taught to know God, and Christ the Sauour. And because God is of great maiestie, and wee must not presume to come vnto him without Mediators (as the manner is when we make any suit to an Emperour, or great Prince) therefore they must teach him what Saints are the best, and chiefe Mediators, &c. This done, he commandeth the Deuill in the name of God after a coniuring manner, to come out of the water: and so after certaine Prayers he plungeth the child thrise ouer head and eares. For this they hold to bee a point necessary, that no part of the child be vndipped in the water.

The words that beare with them the forme of Baptisme vttered by the Priest, when he dip-
peth in the child, are the very same that are prescribed in the Gospell, and vsed by vs, *vz.* In the name of the Father, and of the Sonne, and of the holy Ghost. For that they should alter the forme of the words, and say, *by the holy Ghost*, (as I haue heard that they did) following certaine Heretikes of the Greeke Church, I found to be vnttrue, as well by report of them that haue beene often at their Baptismes, as by their Booke of *Lyturgie* it selfe, wherein the order of Baptisme is precisely set downe.

When the childe is baptised, the Priest layeth Oyle and Salt tempered together vpon the forehead, and both sides of his face, and then vpon his mouth, drawing it along with his finger ouer the childs lips (as did the Popish Priests) saying withall certaine Prayers to this effect: that God will make him a good Christian, &c. all this is done in the Church Porch. Then is the child (as being now made a Christian, and meet to be receiued within the Church Doore) carried into the Church, the Priest going before, and there he is presented to the chiefe Idoll of the Church, being layd on a Cushion before the feet of the Image, by it (as by the Mediator) to be commended vnto God. If the child be sicke, or weake (specially in the Winter) they vse to make the water luke warme. After Baptisme the manner is to cut off the haire from the childs head, and hauing wrapped it within a piece of Waxe to lay it vp as a Relique or Monument in a secret place of the Church.

This is the manner of their Baptisme, which they account to be the best and perfecte forme. As they doe all other parts of their Religion, receiued (as they say) by tradition from the best Church, meaning the Greeke. And therefore they will take great paines to make a Profelyte, or Conuert, either of an Infidell, or of a forreine Christian, by rebaptising him after the *Russe* manner. When they take any *Tartar* prisoner, commonly they will offer him life, with condition to be baptised. And yet they perswade very few of them to redeeme their life so: because of the naturall hatred the *Tartar* beareth to the *Russe*, and the opinion he hath of his fashood, and iniustice. The yeere after *Mosko* was fired by the *Chrim Tartar*, there was taken a *Diuoymorsey*, one of the chiefe in that exploit with three hundred *Tartars* more: who had all their liues offered them if they would be baptised after the *Russe* manner. Which they refused all to doe, with many reproches against those that perswaded them. And so being carried to the Riuer *Mosko* (that runneth through the Citie) they were all baptised after a violent manner: being thrust downe with a knock on the head into the water, through an hole made in the Ice for that purpose. Of *Lieslanders* that are captiues, there are many that take on them this second *Russe* Baptisme to get more libertie, and somewhat besides towards their liuing, which the Emperour ordinarily vseth to giue them.

Of *Englishmen* since they frequented the Countrey there was neuer any found, that so much forgot God, his Faith, and Countrey, as that he would be content to be baptised *Russe*, for any respect of feare, preferment, or other meanes whatsoeuer: saue onely *Richard Relph*, that following before an vngodly trade, by keeping a *Caback* (against the order of the Countrey) and being put off from that trade, and spoiled by the Emperours Officers of that which he had, entered himselfe this last yeere into the *Russe* Profession: and so was rebaptised, liuing now as much an Idolater, as before he was a Rioter, and vnthrifty person.

Such as thus receiue the *Russe* Baptisme, are first carried into some Monasterie to bee instructed there in the doctrine and ceremonies of the Church. Where they vse these ceremonies. First, they put him into a new and fresh sute of apparell, made after the *Russe* fashion, and set a Coronet, or (in Summer) a Garland vpon his head. Then they anoint his head with Oyle, and put a Waxe candle light into his hand: and so pray ouer him foure times a day, the space of seuen dayes. All this while he is to abstaine from flesh, and white meats. The seuen dayes being ended, he is purified and washed in a Bath-stoue, and so the eight day hee is brought into the Church, where he is taught by the Friers how to behaue himselfe in presence of their Idols, by ducking downe, knocking of the head, crossing himselfe, and such like gestures, which are the greatest part of the *Russe* Religion.

Confession.

Communion
in both kinds.

The Sacrament of the Lords Supper they receiue but once a yeere, in their great Lent time, a little before Easter. Three at the most are admitted at one time, and neuer aboue. The manner of their communicating, is thus. First, they confesse themselves of all their sinnes to the Priest (whom they call) their ghostly Father. Then they come to the Church, and are called vp to the Communion Table, that standeth like an Altar, a little remoued from the vpper end of the Church, after the *Dutch* manner. Heere first they are asked of the Priest, *whether they bee cleane or no*, that is, whether they haue neuer a sinne behind that they left vnconfessed. If they answer, *No*, they are taken to the Table. Where the Priest beginneth with certayne vsuall Prayers, the Communicants standing in the meane while with their armes folded one within another, like *Penitentiaries* or Mourners. When these prayers are ended, the Priest taketh a Spooone and filleth it full of claret Wine. Then hee putteth into it a small piece of Bread, and tempereth them both together: and so deliuereth them in the spooone to the Communicants, that stand in order, speaking the vsuall words of the Sacrament. *Eate this, &c. Drink this, &c.* both at one time without any pause.

After that hee deliuereth them againe Bread by it selfe, and then Wine carded together with a little warme water, to represent Bloud more rightly (as they thinke) and the water withall, that flowed out of the side of Christ. Whiles this is in doing the Communicants vnfold their armes. And then folding them againe, follow the Priest thrice round about the Communion table, and so returne to their places againe. Where hauing sayd certayne other prayers, hee dismisseth the Communicants, with charge to bee merrie, and to cheere vp themselves for the seuen dayes next following. Which being ended, hee enioyneth them to fast for it as long time after. Which they vse to obserue with very great deuotion, eating nothing else but Bread and Salt, except a little Cabbage, and some other Herbe or Root, with water or quasse Mead for their drinke.

This is their manner of administering the Sacraments. Wherein what they differ from the institution of Christ, and what Ceremonies they haue added of their owne, or rather borrowed of the *Greekes*, may easily bee noted.

Chap. 23.
Of the Do-
ctrine of the
Russe Church,
& what errors
it holdeth.
1. Their disal-
lowing of cer-
taine parts of
the Canonical
Scriptures.

THEIR chiefest errors in matter of Faith I finde to bee these. First, concerning the Word of God it selfe they will not read publicly certayne Bookes of the Canonall Scripture, as the bookes of *Moses*: specially the foure last, *Exodus*, *Leuiticus*, *Numeri*, and *Deuteronomie*, which they say are all made disauthenticque, and put out of vse by the comming of Christ: as not able to discerne the difference betwixt the *Morall* and the *Ceremoniall Law*. The bookes of the *Prophets* they allow of, but reade them not publicly in their Churches, for the same reason: because they were but directers vnto Christ, and proper (as they say) to the Nation of the *Iewes*. Onely the Booke of *Psalmes* they haue in great estimation, and sing and say them daily in their Churches. Of the New Testament they allow and reade all, except the *Revelation*: which therefore they reade not (though they allow it) because they vnderstand it not, neither haue the like occasion, to know the fulfilling of the Prophecies contayned within it, concerning especially the Apostacie of the *Antichristian Church*, as haue the Westerne Churches. Notwithstanding, they haue had their *Antichrists* of the *Greeke Church*, and may finde their owne falling off, and the punishments for it by the *Turkish* inuasion in the Prophecies of that Booke.

2. Traditions
equall to the
holy Scripture.

Secondly, (which is the fountayne of the rest of all their corruptions both in Doctrine and Ceremonies) they hold with the Papists, that their Church *Traditions* are of equall authoritie with the written Word of God. Wherein they preferre themselves before other Churches: affirming that they haue the true and right Traditions, deliuered by the Apostles to the *Greeke Church*, and so vnto them.

3. The Church
to haue soue-
raigne autho-
ritie in inter-
preting the
Scriptures.

Thirdly, that the Church (meaning the *Greeke*, and specially the Patriarch and his Synod, as the head of the rest) hauing a soueraine Authoritie to interpret the Scriptures, and that all are bound to hold that Interpretation, as sound and authenticque.

4. The holy
Ghost to pro-
ceed from the
Father onely.
5. Christ not
sole Mediator
of intercession
Saint Nicolas
his 300. Angels

Fourthly, concerning the Diuine nature and the three Persons, in the one substance of God, that the holy Ghost proceedeth from the Father onely, and not from the Sonne.

Images.

Fifthly, about the office of Christ, they hold many foule errors, and the same almost as doth the *Popish Church*: namely, that hee is the sole Mediatour of redemption, but not of intercession. Their chiefe reason (if they bee talked withall) for defence of this error, is that vnapt and foolish comparison, betwixt God, and a Monarch or Prince of this world, that must bee sued vnto by Mediatours about him: wherein they giue speciall preferment to some aboue others, as to the blessed *Virgin* whom they call *Procheste*, or vndeiled, and Saint *Nicolas*, whom they call *Scora pomosnick*, or the *Speedy helper*, and say, that hee hath three hundred Angels of the chiefest appointed by God to attend vpon him. This hath brought them to an horrible excesse of Idolatrie, after the grossest and prophanest manner, giuing vnto their Images all religious worship of Prayer, Thankesgiuing, Offerings and Adoration, with prostrating and knocking their heads to the ground before them, as to God himselfe. Which because they doe to the Picture, not to the portraiture of the Saint, they say they worship not an Idoll, but the Saint in his Image, and so of-
fend

send not God : forgetting the Commandement of God, that forbiddeth to make the Image or likenesse of any thing, for any Religious worship, or vse whatsoeuer. Their Church walls are verie full of them, richly hanged and set foorth with Pearle and Stone, vpon the smooth Table. Though some also they haue embossed, that sticke from the board almost an inch outwards. They call them *Cbudonodites*, or their *Miracle workers* : and when they prouide them to set vp in their Churches, in no case they may say, that they haue *bought* the Image, but *Exchanged money for it*.

Sixtly, for the meanes of Iustification, they agree with the *Papists*, that it is not by Faith onely apprehending Christ, but by their Workes also. And that *Opus operatum*, or the worke for the worke sake, must needs please God. And therefore they are all in their *numbers* of Prayers, Fasts, Vowes, and Offerings to Saints, Almes deeds, Crossings and such like, and carrie their numbring Beads about with them continually, as well the Emperour and his Nobilitie, as the common people, not onely in the Church, but in all other publike places, specially at any set or solemne meeting, as in their Fasts, law Courts, common Consultations, entertaynment of Ambassadors, and such like.

Seuenthly, they say with the *Papists*, that no man can bee assured of his saluation, till the sentence be passed at the day of Iudgement.

Eightly, they vse auricular Confession, and thinke they are purged by the very action from so many sinnes, as they confesse by name, and in particular to the Priest.

Ninthly, they hold three Sacraments, of *Baptisme*, the *Lords Supper*, and the *last Anointing* or *Unction*. Yet concerning their Sacrament of extreame Vnction, they hold it not so necessarie to saluation as they doe Baptisme, but thinke it a great curse and punishment of God, if any dye without it.

Tenthly, they thinke there is a necessitie of Baptisme, and that all are condemned that dye without it.

Eleuenth, they rebaptise as many *Christians* (not being of the *Greeke Church*) as they conuert to their *Russe* profession : because they are diuided from the true Church, which is the *Greeke*, as they say.

Twelfth, they make a difference of Meates and Drinkes, accounting the vse of one to be more holy then of another. And therefore in their set Fasts they forbear to eate flesh, and white meates (as wee call them) after the manner of the Popish superstition : which they obserue so strictly, and with such blinde deuotion, as that they will rather die, then eate one bit of Flesh, Egges or such like, for the health of their bodies in their extreame sicknesse.

Thirteenth, they hold Marriage to bee vnlawfull for all the Clergie men, except the Priests onely, and for them also after the first Wife, as was sayd before. Neither doe they well allow of it in Lay-men after the second marriage. Which is a pretence now vsed against the Emperours onely Brother, a childe of fixe yeeres old : who therefore is not Prayed for in their Churches, (as their manner is otherwise for the Princes blood) because hee was borne of the fixt marriage, and so not legitimate. This charge was giuen to the Priests by the Emperour himselfe, by procurement of the *Godones* : who make him beleue, that it is a good policie to turne away the liking of the people from the next successour.

Many other false opinions they haue in matter of Religion. But these are the chiefe, which they hold, partly by meanes of their traditions (which they haue receiued from the *Greeke Church*) but specially by ignorance of the holy Scriptures. Which notwithstanding they haue in the *Polonian* tongue, (that is all one with theirs some few words excepted) yet few of them reade them with that godly care which they ought to doe : neither haue they (if they would) Bookes sufficient of the old and new Testament for the common people, but of their *Lyturgie* onely, or Booke of common seruice, whereof there are great numbers. Which notwithstanding it is not to bee doubted, but that hauing the Word of God in some sort (though without the ordinarie meanes to attaine to a true sense and vnderstanding of it) God hath also his number among them. As may partly appeare by that which a *Russe* at *Mosko* sayd in secret to one of my Seruants, speaking against their Images and other superstitions : That God had giuen vnto *England* light to day, and might giue it to morrow (if hee pleased) to them.

As for any Inquisition or proceeding against men for matter of Religion, I could heare of none : saue a few yeeres since against one man and his wife, who were kept in a close Prison the space of eight and twentie yeeres, till they were ouer-growne into a deformed fashion, for their hayre, nayles, colour of countenance, and such like, and in the end were burned at *Mosko*, in a small House set on fire. The cause was kept secret, but like it was for some part of truth in matter of Religion : though the people were made to beleue by the Priests and Friars, that they held some great and damnable Heresie.

The manner of making and solemnizing their Marriages, is different from the manner of other Countries. The man (though hee neuer saw the woman before) is not permitted to haue any sight of her all the time of his wooing : which hee doth not by himselfe, but by his Mother

6. Iustification by workes.

Chap. 24. Of the manner of solemnizing their Marriages.

Mother or some other ancient woman of his kinne or acquaintance. When the liking is taken (as well by the Parents as by the parties themselves, for without the knowledge and consent of the Parents, the contract is not lawfull) the Fathers on both sides, or such as are to them in stead of Fathers, with their other chiefe friends, haue a meeting and conference about the dowrie, which is commonly very large after the abilitie of the parents: so that you shall haue a *Market man* (as they call them) giue a thousand Rubbels, or more with his Daughter.

The manner
of indowment
for Wiues.

As for the man it is neuer required of him, nor standeth with their custome to make any joyn-ter in recompence of the dowrie. But in case hee haue a Child by his Wife, shee enioyeth a third deale after his deceale. If he haue two Children by her or more, she is to haue a courtesie more, at the discretion of the husband. If the husband depart without issue by his wife, shee is returned home to her friends without any thing at all, saue onely her dowrie: if the husband leaue so much behind him in goods. When the agreement is made concerning the dowrie, they signe Bonds one to the other, as well for the payment of the dowrie, as the performing of the Marriage by a certayne day. If the woman were neuer married before, her Father and friends are bound besides to assure her a Maiden. Which breedeth many brabbles and quarrels at Law, if the man take any conceit concerning the behaviour and honestie of his wife.

Thus the contract being made, the parties begin to send tokens the one to the other, the Woman first, then afterwards the Man, but yet see not one another till the Marriage bee solemnized. On the Eue before the marriage day, the Bride is carryed in a *Collimago*, or Coach, or in a Sled (if it bee winter) to the Bridegroomes house, with her marriage Apparell and Bedstead with her, which they are to lye in. For this is euer provided by the Bride, and is commonly verie faire, with much cost bestowed vpon it. Heere she is accompanied all that night by her Mother and other women: but not welcommed, nor once seene by the Bridegroome himselfe.

Ceremonies
in Marriages.

When the time is come to haue the marriage solemnized, the Bride hath put vpon her a kinde of Hood, made of fine Knit-worke or Lawne, that couereth her head, and all her body downe to the middle. And so accompanied with her friends, and the Bridegroome with his, they goe to Church all on Horsebacke, though the Church be neare hand, and themselves but of very meane degree. The words of contract and other ceremonies in solemnizing the Marriage, are much after the order, and with the same words that are vsed with vs: with a Ring also giuen to the Bride. Which being put on, and the words of contract pronounced: the Brides hand is deliuered into the hand of the Bridegroome, which standeth all this while on the one side of the Altar or Table, and the Bride on the other. So the marriage knot being knit by the Priest, the Bride commeth to the Bridegroome (standing at the end of the altar or table) and falleth downe at his feet, knocking her Head vpon his Shooe, in token of her subjection and obedience. And the Bridegroome againe, casteth the lappe of his Gowne or vpper garment ouer the Bride, in token of his dutie to protect and cherish her.

Ring.

Then the Bridegroome and Bride, standing both together at the Tables end, commeth first the Father and the other friends of the Bride, and bow themselves downe low to the Bridegroome: and so likewise his friends bow themselves to the Bride, in token of affinitie and loue euer after betwixt the two kindreds. And withall, the Father of the Bridegroome offereth to the Priest a loafe of Bread, who deliuereth it straight againe to the Father and other friends of the Bride, with attestation before God and their Idols, that hee deliuer the dowrie wholly and truly at the day appointed, and hold loue euer after, one kindred with another. Whereupon they breake the Loafe into pieces, and eate of it, to testifie their true and sincere meanings, for performing of that charge, and thenceforth to become as graines of one Loafe, or men of one Table.

Loafe.

These ceremonies being ended, the Bridegroome taketh the Bride by the hand, and so they goe on together with their friends after them towards the Church porch. Where meet them certaine with pots and cups in their hands, with Mead and *Russe* Wine. Whereof the Bridegroome taketh first a Charke, or little cup full in his hand, and drinketh to the Bride: who opening her Hood or Vale below, and putting the Cup to her mouth vnderneath it (for being seene of the Bridegroome) pledgeth him againe. Thus returning all together from the Church, the Bridegroome goeth not home to his owne, but to his Fathers house, and shee likewise to hers, where either entertayne their friends apart. At the entring into the House, they vse to fling Corne out of the windowes vpon the Bridegroome and Bride, in token of plentie and fruitfulnessse to bee with them euer after.

Corne.

When the Eueuing is come, the Bride is brought to the Bridegroomes Fathers house, and there lodgeth that night, with her Vayle or couer still ouer her head. All that night she may not speake one word (for that charge shee receiueth by tradition from her Mother, and other Matrons her friends) that the Bridegroome must neither heare, nor see her, till the day after the marriage. Neither three dayes after, may she bee heard to speake, saue certaine few words at the Table in a set forme, with great manners and reuerence to the Bridegroome. If shee behaue herselfe otherwise, it is a great prejudice to her credit and life euer after: and will highly bee disliked of the Bridegroome himselfe.

Silence.

After

After the third day, they depart to their owne, and make a Feast to both their friends together. The marriage day, and the whole time of their festiuall, the Bridegroom hath the honour to be called *Moloday Knez*, or young Duke, and the Bride *Moloday Knezay*, or young Dutchesse.

In living with their wiues, they shew themselves to be but of a barbarous condition: vsing them as seruants, rather then wiues. Except the Noble-women, which are, or seeme to bee of more estimation with their husbands, then the rest of meaner sort. They haue this foule abuse, contrary to good order, and the Word of God it selfe, that vpon dislike of his wife, or other cause whatsoeuer, the man may goe into a Monastrie and shire himselfe a Frier, by presence of deuotion: and so leaue his wife to shift for her selfe so well as shee can.

THe other Ceremonies of their Church, are many in number: especially, the abuse about the signe of the Crosse, which they set vp in their high wayes, in the tops of their Churches, and in euery doore of their houses, signing themselves continually with it on their foreheads & breasts with great deuotion, as they will seeme by their outward gesture. Which were lesse offence, if they gaue not withall that religious reuerence and worship vnto it, which is due to God onely, and vsed the dumbe shew, and signing of it instead of thanksgiuing, and of all other duties which they owe vnto God. When they rise in the morning, they goe commonly in the sight of some steeple that hath a Crosse on the top; and so bowing themselves towards the Crosse, signe themselves withall on their foreheads and breasts. And this is their thanksgiuing to God for their nights rest, without any word speaking, except peradventure they say, *Aspody Pomeluy*, or *Lord haue mercie vpon vs*. When they sit downe to meate, and rise againe from it, the thanksgiuing to God, is the crossing of their foreheads and breasts. Except it be some few that adde peradventure a word or two of some ordinary prayer, impertinent to that purpose. When they are to giue an oath for the deciding of any controuersie at Law, they doe it by swearing by the Crosse, and kissing the feet of it, making it as God, whose name onely is to be vsed in such triall of Iustice. When they enter into any house (where euer there is an Idoll hanging on the wall) they signe themselves with the Crosse, and bow themselves to it. When they begin any worke, bee it little or much, they arme themselves first with the signe of the Crosse. And this commonly is all their prayer to God, for good speed of their businesse. And thus they serue God with crosses, after a crosse and vaine manner: notwithstanding what the Crosse of Christ is, nor the power of it. And yet they thinke all strangers Christians, to be no better then Turkes in comparison of themselves (and so they will say) because they bow not themselves when they meet with the Crosse, nor signe themselves with it, as the *Russe* manner is.

They haue Holy-water in like vse, and estimation, as the Popish Church hath. But heerein they exceed them, in that they doe not onely hollow their Holy-water stockes, and tubs full of water, but all the Riuer of the Countrey once euery yeere. At *Mosko* it is done with great pompe and solemnitie: the Emperour himselfe being present at it with all his Nobilitie, marching through the streets towards the Riuer of *Moskua*, in manner of Procession, in this order as followeth. First goe two Deacons, with banners in their hands, the one of *Precheste* (or our Lady) the other of Saint *Michael* fighting with his Dragon. Then follow after the rest of the Deacons, and the Priests of *Mosko*, two and two in a ranke, with Coaps on their backs, and their Idols at their breasts, carried with girdles or slings, made fast about their necks. Next the Priests come their Bishops in their Pontificalibus: then the Friers, Monkes, and Abbots: and after the Patriarches in very rich attire, with a Ball or Sphere on the top of his Myter, to signifie his vniuersalitie ouer that Church. Last commeth the Emperour with all his Nobilitie. The whole traine is of a mile long, or more. When they are come to the Riuer, a great hole is made in the Ice, where the Market is kept of a road and a halfe broad, with a Stage round about it to keepe off the presse. Then beginneth the Patriarch to say certaine prayers, and coniureth the Deuill to come out of the water: and so casting in Salt, and censing it with Frankincense, maketh the whole Riuer to become Holy-water. The morning before, all the people of *Mosko* vse to make crosses of chaulke ouer euery doore and window of their houses; least the Deuill being coniured out of the water, should flye into their houses.

When the Ceremonies are ended you shal see the black Guard of the Emperours house, & then the rest of the Towne, with their pailles and buckers to take off the hallowed water for drinke, and other vses. You shall also see the women dip in their children ouer head and eares, and many men and women leape into it, some naked, some with their clothes on, when some man would thinke his finger would freeze off, if he should but dip it into the water. When the men haue done, they bring their horse to the Riuer to drinke of the sanctified water, and so make them as holy as a horse. Their set day for the solempne action of hallowing their Riuer, is that we call *Twelfth-day*. The like is done by other Bishops in all parts of the Realme.

Their manner is also to giue it to their sicke in their greatest extremitie: thinking that it will either recouer them, or sanctifie them to God. Whereby they kill many, through their vnreasonable superstition, as did the Lord *Borris* his onely sonne, at my being at the *Mosko*: whom

stition.

he killed (as was said by the Physitians) by powring into him cold Holy-water, and presen-
ting him naked into the Church, to their Saint *Basileo*, in the cold of Winter in an extremitie of
sickenesse.

They haue an Image of Christ, which they call *Neruchi*, (which signifieth as much as *Made
without hands*) for so their Priests, and superstition withall perswadeth them it was. This in their
Processions they carry about with them on high vpon a pole, enclosed within a Pixe, made like a
Lanthorne, and doe reuerence to it as to a great myserie.

Brewing with
Holy-water.

At euery brewing their manner is likewise to bring a dish of their woort to the Priest with-
in the Church: which being hollowed by him, is powred into the brewing, and so giueth it
such a vertue, as when they drinke of it they are seldome sober. The like they doe with the first
fruits of their Corne in Haruest.

Palm-sunday.

They haue another Ceremony on Palm-sunday, of ancient tradition: what time the Pa-
triarch rideth through the *Mosko*, the Emperour himselfe holding his horse bridle, and the peo-
ple crying *Hosanna*, and spreading their vpper garments vnder his horse feet. The Emperour
hath of the Patriarch for his good seruice of that day two hundred Rubbels of standing pen-
sion. Another pageant they haue much like to this, the weeke before the Natiuitie of Christ:
when euery Bishop in his Cathedrall Church, setteth forth a shew of the three children in the
Ouen. Where the Angell is made to come flying from the roose of the Church, with great ad-
miracion of the lookers on, and many terrible flashes of fire are made with rosen, and gun-pow-
der, by the *Chaldeans* (as they call them) that run about the Towne all the twelue dayes, dis-
guised in their players coats, and make much good sport for the honor of the Bishops pageant.
At the *Mosko*, the Emperour himselfe, and the Empreffe neuer faile to be at it, though it be but
the same matter plaid euery yeere, without any new inuention at all.

Fasts.

Besides their fasts on Wednesdaies, and Fridaies throughout the whole yeere, (the one be-
cause they say Christ was sold on the Wednesday, the other because he suffered on the Friday)
they haue foure great Fasts or Lents euery yeere. The first, (which they call their great Lent)
is at the same time with ours. The second, about Mid-summer. The third, in Haruest time. The
fourth, about Hallontide: which they keepe not of pollicie, but of meere superstition. In their
great Lent, for the first weeke, they eat nothing but bread and salt, and drinke nothing but wa-
ter, neither meddle with any matter of their vocation, but intend their shriuing and fasting on-
ly. They haue also three *Vigils*, or *Wakes* in their great Lent, which they call *Stoiania* and the
last Friday their great *Vigil*, as they call it. What time the whole Parish must be present in the
Church, and watch from nine a clocke in the Euening, till sixe in the morning, all the while
standing, saue when they fall downe and knocke their heads to their Idols, which must bee an
hundred and seuentie times iust through the whole night.

Vigils.

Burialls.

About their burialls also, they haue many superstitious and prophane Ceremonies: as put-
ting within the finger of the corps, a letter to Saint *Nicolas*: whom they make their chiefe me-
diatour, and as it were the porter of heauen gates, as the Papists doe their *Peter*.

In Winter time, when all is couered with snow, and the ground so hard frozen, as that no spade
nor pick-axe can enter their manner is not to bury their dead, but to keepe the bodies (so ma-
ny as die all the Winter time) in an house, in the suburbs, or out-parts of the Towne, which
they call *Bobsedom*, that is, *Gods house*: where the dead bodies are pyled vp together, like bil-
lets on a woodstacke, as hard with the frost as a verie stone, till the Spring-tide come, and re-
solueth the frost: what time euerie man taketh his dead friend, and committeth him to the
ground.

Months minds

They haue besides their yeeres and moneths mindes for their friends departed. What time
they haue prayers said ouer the graue by the Priest: who hath a peny ordinary for his paines.
When any dieth, they haue ordinary women mourners, that come to lament for the dead par-
tie: and stand howling ouer the body after a prophane and heathenish manner (sometimes in
the house, sometimes bringing the body into the back-side, asking him what he wanted, and
what he meant to die. They bury their dead, as the party vied to goe, with coat, hose, bootes,
hat, and the rest of his apparell.

Many other vaine and superstitious Ceremonies they haue, which were long and tedious to
report. By these it may appeare how farre they are fallen from the true knowledge, and prac-
tice of Christian Religion, hauing exchanged the Word of God for their vaine Traditions, and
brought all to externall and ridiculous Ceremonies, without any regard of Spirit and Truth,
which God requireth in his true worship.

Chap. 26.
Of the Empe-
rours dome-
sticke, or pri-
uate behauior.

THE Emperours priuate behauior, so much as may be, or is meet to bee knowne, is after
this manner. Hee riseth commonly about foure a clock in the morning. After his appar-
relling and washing, in commeth his ghostly Father, or Priest of his chamber, which is named
in their tongue, *Oretz Dubouna*, with his Crosse in his hand, wherewith he blesteth him, laying
it first on his forehead, then vpon his cheekes, or sides of his face, and then offereth him the end
of it to kisse. This done, the Clerke of the Crosse (called *Chresby Deyack Profery*) bringeth
into

into his Chamber, a painted Image, representing the Saint for that day; for euery day with them hath his *seuerall Saint*, as it were the Patrone for that day. This hee placeth among the rest of his Image Gods, wherewithall his Chamber is decked, as thicke almost as the wall can beare, with Lampes and Waxe-candles burning before them. They are very costly and gorgeously decked with Pearle and Precious Stone. This Image being placed before him, the Emperour beginneth to crosse himselfe after the *Russe* manner; first, on the fore-head, then on both sides of his brest, with *Aspody Pomelay*, *Pomelay mena hospody*, *sacroy mena gresnick Syhodesna*: which is as much to say, as, *Helpe me, O Lord my God, Lord comfort me, defend and keepe me a Sinner from doing euill, &c.* This he directeth towards the Image, or Saint for that day, whom hee nameth in his Prayer, together with our Lady (whom they call *Precheste*) Saint *Nicholas*, or some other, to whom he beareth most deuotion, bowing himselfe prostrate vnto them, with knocking his head to the very ground. Thus he continueth the space of a quarter of an houre or thereabouts.

His priuate Prayer.

Then commeth againe the Ghostly Father or Chamber Priest, with a Siluer Bowle full of *Holy-water*, which they call in *Russe*, *Suera Uoda*, and a sprinkle of Basill (as they call it) in his hand: and so all to besprinkle first the Image Gods, and then the Emperour. This Holy-water is brought fresh euery day from the Monasteries, farre and neere sent to the Emperour from the Abbot or Prior, in the name of the Saint, that is Patrone of that Monastery, as a speciall token of good will from him.

These Deuotions being ended, he sendeth into the Empreffe, to aske whether she hath rested in health, &c. And after a little pawfes goeth himselfe to salute her in a middle Roome betwixt both their chambers. The Empreffe lyeth a-part from him, and keepeth not one chamber, nor Table with the Emperour ordinarily, saue vpon the Eue of their Lents, or common Fast: what time she is his ordinary Ghest at Bed and Boord. After their meeting in the morning, they goe together to their priuate Church or Chappell, where is said or sung a morning Seruice (called *Zaurna*) of an houre long or thereabouts. From the Church hee returneth home, and sitteth him downe in a great chamber, to be seene and saluted by his Nobilitie, such as are in fauour about the Court. If he haue to say to any of them, or they to him, then is the time. And this is ordinary, except his health, or some other occasion alter the custome.

The Emperour giueth precedence euery morning.

About nine in the morning, he goeth to another Church within his Castle: where is sung by Priests, and Choristers, the high Seruice (called *Obeadna*, or *Complin*) which commonly lasteth two houres: the Emperour in the meane-time talking commonly with some of his Councell, Nobilitie, or Captaynes, which haue to say to him, or he to them. And the Councell likewise conferre together among themselves, as if they were in their Councel-houle. This ended, he returneth home, and recreateth himselfe vntill it be Dinner time.

He is serued at his Table on this manner. First, euery Dish (as it is deliuered at the Dresser) is tasted by the Cooke, in the presence of the high Steward, or his Deputie. And so is receiued by the Gentlemen-wayters (called *Shilshy*) and by them carryed vp to the Emperours Table, the high Steward or his Deputie going before. There it is receiued by the Sewer (called *Erastnoy*) who giueth a taste of euery Dish to the Taster, and so placeth it before the Emperour. The number of his Dishes for his ordinary Seruice, is about seuentie: dressed somewhat grossly, with much Garlike, and Salt, much after the *Dutch* manner. When hee exceedeth vpon some occasion of the day, or entertainment of some Ambassadour, hee hath many more Dishes. The Seruice is sent vp by two Dishes at a time, or three at the most, that he may eate it warme, first the baked, then the Roast meats, and last the Broths. In his dining chamber is another Table: where sit the chiefe of his Nobility that are about his Court, and his Ghostly Father, or Chapleine. On the one side of the chamber standeth a Cubboord, or Table of Plate, very faire and rich, with a great Cisterne of Copper by it, full of Ice and Snow, wherein stand the Pots that serue for that meale. The Taster holdeth the cup that he drinketh in all Dinner time, and deliuereth it vnto him with a say, when he calleth for it. The manner is to make many Dishes out of the Seruice after it is set on the Table, and to send them to such Noblemen and Officers as the Emperour liketh best. And this is counted a great fauour and honour.

The Emperours Seruice at his Table.

After dinner he layeth him down to rest, where commonly he taketh three houres sleep, except he employ one of the houres to bathing, or boxing: And this custome for sleeping after Dinner, is an ordinary matter with him, as withall the *Russes*. After his sleep, he goeth to Euen-song (called *Vechirna*) and thence returning, for the most part recreateth himselfe with the Empreffe till Supper time, with Iesters and Dwarfes, men and women, that tumble before him, and sing many Songs after the *Russe* manner. This is his common recreation betwixt meales that he most delights in. One other speciall recreation, is the fight with wild Beares, which are caught in Pits or Nets, and are kept in barred Cages for that purpose, against the Emperour bee disposed to see the pastime. The fight with the Beare is on this sort. The man is turned into a Circle walled round about, where hee is to quite himselfe so well as hee can: for there is no way to flye out. When the Beare is turned loose, he commeth vpon him with open mouth; if at the first push he misse his ayme, so that the Beare come within him, hee is in great danger. But the wilde Beare

Beare bayting.

being very scarce, hath this quality, that giueth aduantage to the Hunter. His manner is, when he assayleth a man, to rise vp right on his two hinder-legs, and so to come roaring with open-mouth vpon him. And if the Hunter then can push right into the very brest of him betwixt his fore-legs (as commonly he will not misse) resting the other end of their Boare-speare at the side of his foot, and so keeping the Pike still towards the face of the Beare, hee speedeth him commonly at one blow. But many times these Hunters come short, and are either slaine, or miserably torne with the Teeth and Talents of the fierce Beast. If the partie quite himselfe well in this fight with the Beare, he is carried to drinke at the Emperours Sellar doore: where he drin-keth himselfe drunke for the honour of *Hespodare*. And this is his Reward for aduenturing his life, for the Emperours pleasure. To maintayne this pastime, the Emperour hath certayne Hunt-men that are appointed for that purpose to take the wild Beare. This is his recreation commonly on the holy dayes. Sometimes hee spendeth his time in looking vpon his Gold-smithes, and Jewellers, Taylors, Embroyderers, Painters, and such like, and so goeth to his Supper. When it draweth towards Bed-time, his Priest saith certayne Prayers: and then the Emperour blesteth and crosseth himselfe, as in the morning for a quarter of an houre or thereabouts, and so goeth to his Bed.

Emperour
Theodore de-
scribed.

The Emperour that now is (called *Theodore Iuanowich*) is for his person of a meane stature, some-what low and grosse, of a fallow complexion, and inclining to the Dropie, Hawke-nosed, vnsteady in his pace, by reason of some weaknesse of his limmes, heavy and vnactiue, yet commonly smiling almost to a laughter. For qualitie otherwise, simple and slow witted, but very gentle, and of an easie nature, quiet, mercifull, of no martiall disposition, nor greatly apt for matter of Policie, very Superstitious, and infinite that way. Besides his priuate Deuotions at home, he goeth euery weeke commonly on Pilgrimage, to some Monasterie or other that is neere hand. He is of thirtie foure yeeres old, or thereabouts, and hath reigned almost the space of six yeeres.

Pilgrimage.

chap. 27.
Of the Empe-
rours priuate, or
household Of-
ficers.
Master of the
Horse.

The chiefe Officers of the Emperours household, are these which follow. The first, is the Office of the *Boiaren Conesheua*, or Master of the Horse. Which containeth no more then is expressed by the name, that is, to be Ouer-seer of the Horse, and not *Magister Equitum*, or Master of the Horsemen. For he appointeth other for that Seruice, as occasion doth require (as before was said.) He that beareth that Office at this time, is *Borris Federowich Godonoe*, Brother to the Empreffe. Of Horse for Seruice in his Warres (besides other for his ordinary vles) he hath to the number of 10000. which are kept about *Mosko*.

The Lord
Steward.
The Lord
Treasurer.
Comptroller.
Chamberlaine
Tasters.
Harbengers.

The next is the Lord Steward of his household at this time, one *Gregorie Vasilowich Godonoe*. The third, is his Treasurer, that keepeth all his Moneyes, Jewels, Plate, &c. now called *Stepan Vasilowich Godonoe*. The fourth, his Comptroller, now *Andreas Petrowich Clesinine*. The fift, his Chamberlaine. He that attendeth that Office at this time, is called *Esstoma Bisabroza Pastelnichay*. The sixt, his Tasters, now *Theodore Alexandrowich*, and *Iuan Vasilowich Godonoe*. The seuenth, his Harbengers, which are three Noblemen, and diuers other Gentlemen that do the Office vnder them. These are his ordinary Officers, and Offices of the chiefeft account.

Gentlemen of
the Chamber.
The Guard.

Of Gentlemen, beside that wait about his Chamber, and Person (called *Shilsey Strapsey*) there are two hundred, all Noblemens Sonnes. His ordinary Guard is two thousand *Flagbutters*, ready with their Peeces charged, and their Match lighted, with other necessary Furniture, continually day and night: which come not within the house, but waite without in the Court or Yard where the Emperour is abiding. In night time there lodgeth next to his Bed-chamber, the chiefe Chamberlaine, with one or two more of best trust about him. A second chamber off, there lodge six other of like account, for their trust and faithfulness. In the third chamber lye certayne young Gentlemen, of these two hundred, called *Shilsey Strapsey*, that take their turne by forties euery night. There are Groomes besides that watch in their course, and lye at euery gate and doore of the Court, called *Esstopnick*.

Groomes.

The *Hag-butters* or Gunners, whereof there are two thousand (as was said before) watch about the Emperours Lodging, or Bed-chamber, by course two hundred and fiftie euery night, and two hundred and fiftie more in the Court-yard, and about the Treasure-house. His Court or house at the *Mosko*, is made Castle-wise, walled about with great store of faire Ordnance planted vpon the wall, and containeth a great breadth of ground within it, with many dwelling houses. Which are appointed for such as are knowne to be sure, and trustie to the Emperour.

chap. 28.
Of the priuate
behaviour, or
qualitie of the
Russe people.
Constitution
of their bodies.

The priuate behaiour and qualitie of the *Russe* people, may partly be vnderstood by that which hath beene sayd, concerning the publike State and vsage of the Countrey. As touching the naturall habit of their bodies, they are for the most part of a large size, and of very fleshy bodies: accounting it a grace to be somewhat grosse and burley, and therefore they nourish and spread their Beards, to haue them long and broad. But for the most part they are very vnweldy, and vnactiue withall. Which may bee thought to come partly of the Climate, and the numbnesse which they get by the cold in Winter, and partly of their Dyet that standeth

most

most of Roots, Onions, Garlike, Cabbage, and such like things that breed grosse humours, which they vse to eat alone, and with their other meates.

Their Dyet is rather much, then curious. At their Meales they beginne commonly with a *Chark*, or small cup of *Aqua-vita* (which they call *Russe Wine*) and then drinke not till towards the end of their Meales, taking it in largely, and all together with kissing one another at every pledge. And therefore after Dinner there is no talking with them, but every man goeth to his bench to take his after-noonnes sleepe, which is as ordinary with them as their nights rest. When they exceed, and haue varietie of Dishes, the first are their baked meates (for roast meates they vse little) and then their Broaths or Pottage. To drinke drunke, is an ordinary matter with them euery day in the Weeke. Their common Drinke is *Mead*, the poorer sort vse water, and a thin Drinke called *Quasse*, which is nothing else (as wee say) but water turned out of his wits, with a little Bran meashed with it.

This Dyet would breed in them many Diseases, but that they vse Bath-stoues, or Hot-houses in stead of all Physicke, commonly twice or thrice euery Weeke. All the Winter time, and almost the whole Summer, they heate their *Peaches*, which are made like the *Germane Bath-stoues*, and their *Postads* like Ovens, that so warme the House, that a stranger at the first shall hardly like of it. These two extremities, specially in the Winter of heate within their Houses, and of extreame cold without, together with their Dyet, maketh them of a darke and fallow complexion, their skinnies being tanned and parched both with cold and with heat: specially the women, that for the greater part are of farre worse complexions then the men. Whereof the cause I take to be their keeping within the Hot-houses, and busying themselves about the heating, and vsing of their Bath-stoues and *Peaches*.

The *Russe* because that he is vsed to both these extremities of heate and of cold, can beare them both a great deale more patiently then strangers can doe. You shall see them sometimes (to season their bodies) come out of their Bath-stoues all on a froth, and fuming as hote almost as a Pigge at a Spit, and presently to leape into the Riuer starke naked, or to powre cold water all ouer their bodies, and that in the coldest of all the Winter time. The women to mend the bad hue of their skinnies, vse to paint their faces with white and redde colours, so visibly that euery man may perceiue it. Which is made no matter, because it is common, and liked well by their Husbands: who make their Wiues and Daughters an ordinary allowance to buy them colours to paint their faces withall, and delight themselves much to see them of foule women to become such faire Images. This parcheth the skinne, and helpeth to deforme them when their painting is of.

They apparell themselves after the *Greeke* manner. The Nobleman's attyre is on this fashion. First, a *Tassia*, or little night cap on his head, that couereth little more then his crowne, commonly very rich, wrought of Silke and Gold Thread, and set with Pearle and Precious Stone. His head he keepeth shaven close to the very skin, except he be in some displeasure with the Emperour. Then he suffereth his haire to grow and hang downe vpon his shoulders, couering his face as vgly and deformedly as he can. Ouer the *Tassia* he weareth a wide Cap of blacke Foxe (which they account for the best Furre) with a *Tiara*, or long Bonnet put within it, standing vp like a *Persian* or *Babylonian* Hat. About his necke (which is seene all bare) is a Coller set with Pearle and Precious Stone, about three or foure-fingers broad. Next ouer his shirt (which is curiously wrought, because hee strippeth himselfe into it in the Sommer-time, while hee is within the house) is a *Shepon*, or light Garment of Silke made downe to the knees, buttoned before; and then a *Casian* or a close Goat buttoned, and girt to him with a *Persian* Girdle, whereat he hangs his Knives and Spooone. This commonly is of Cloth of Gold, and hangeth downe as low as his ankles. Ouer that he weareth a loose Garment of some rich Silke, furred and faced about with some Gold Lace, called a *Ferris*. Another ouer that of Chamblet, or like Stuffle called an *Alkabon*, sleeued and hanging low, and the Cape commonly brooched, and set all with Pearle. When he goeth abroad, he casteth ouer all these (which are but sleight, though they seeme to be many) another Garment called an *Honorakey*, like to the *Alkabon*, saue that it is made without a Coller for the necke. And this is commonly of fine Cloth, or Camels haire. His Buskins (which hee weareth in stead of Hose, with Linnen Folles vnder them in stead of Boot-hose) are made of a *Persian* Leather called *Saphian*, Embroydered with Pearle. His vpper Stocks commonly are of Cloth of Gold. When he goeth abroad, hee mounteth on Horse-backe, though it bee but to the next doore: which is the manner also of the *Boiarskey*, or Gentlemen.

The *Boiarskey*, or Gentlemans attyre is of the same fashion, but differeth in Stuffle: and yet he will haue his *Casian* or Vnder-coat sometimes of Cloth of Gold, the rest of Cloth or Silke.

The Noble woman (called *Chyna Boiarshena*) weareth on her head, first a Caull of some soft Silke (which is commonly called Red) and ouer it a Fruntlet, called *Obrosa*, of white colour. Ouer that her Cap (made after the Coife-fashion of Cloth of Gold) called *Shapka Zempska*, edged with some rich Furre, and set with Pearle and Stone. Though they haue of late begun to disdaine Embroydering with Pearle about their Caps, because the *Diacks*, and some Merchants Wiues haue taken vp the fashion. In their eares they weare Earrings (which they call

Their Dyet.

Drinking and kissing. Sleeping.

Bath-stoues

Extremities

Women-dawbers.

The Nobleman's attyre.

The Gentlemans apparell. The Noblewoman's attire.

Sargee) of two Inches or more compasse, the matter of Gold set with Rubies, or Saphires, or some like Precious Stone. In Sommer they goe often with Kerchiefs of fine white Lawne, or Cambricke, fastned vnder the chinne, with two long Tassels pendent. The Kerchiefe spotted and set thicke with rich Pearle. When they ride or goe abroad in raynie weather, they weare white Hats with coloured bands (called *Stapa Zemskoy*.) About their neckes they weare Collers of three or foure-fingers broad, set with rich Pearle and Precious Stone. Their vpper Garment is a loose Gowne called *Oposhen*, commonly of Scarlet, with wide loose sleeues, hanging downe to the ground buttoned before with great Gold Buttons, or at least Siluer and gilt, nigh as bigge as a Wal-nut. Which hath hanging ouer it fastned vnder the Cap, a large broad Cape of some rich Fur, that hangeth downe almost to the midst of their backes. Next vnder the *Oposhen* or vpper Garment, they weare another called a *Leitnick* that is made close before with great wide sleeues, the cuffe or halfe sleeue vp to the elbowes, commonly of Cloth of Gold: and vnder that a *Ferris Zemskoy*, which hangeth loose buttoned throughout to the very foot. On the hand wrefts they weare very faire Bracelets, about two fingers broad of Pearle and Precious Stone. They goe all in Buskins of White, Yellow, Blue, or some other coloured Leather, embroydered with Pearle. This is the attyre of the Noble-woman of *Russia*, when shee maketh the best shew of herselfe. The Gentlewomans apparell may differ in the Stoffe, but is all one for the making or fashion.

The *Monsicks*
or common
mans attire.

As for the poore *Monsick* and his Wife they goe poorely clad. The man with his *Odnoratkey*, or loose Gowne to the small of the legge, tyed together with a Lace before, of course white or blue cloth, with some *Shube* or long Waist-coat of Fur, or of Sheep-skinne vnder it, and his furred Cap, and Buskins. The poorer sort of them haue their *Odnoratkey*, or vpper Garment, made of Cowes haire. This is their Winter Habit. In the Sommer time, commonly they weare nothing but their shirts on their backes, and Buskins on their legs. The woman goeth in a red or blue Gowne, when she maketh the best shew, and with some warme *Shube* of Fur vnder it in the Winter time. But in the Sommer, nothing but two shirts (for so they call them) one ouer the other, whether they be within doores, or without. On their heads, they weare Caps of some coloured Stoffe, many of Veluet, or of Cloth of Gold: but for the most part Kerchiefs. Without Earrings of Siluer or some other Metall, and her Crosse about her neck, you shall see no *Russe* woman, be shee Wife, or Maide.

Their wits and
capacities.

As touching their behauiour, and qualitie, otherwise, they are of reasonable capacities, if they had those meanes that some other Nations haue to trayne vp their wits in good Nuture, and Learning. Which they might borrow of the *Polonians*, and other their Neighbours, but that they refuse it of a very selfe-pride, as accounting their owne fashions to be farre the best. Partly also (as I said before) for that their manner of bringing vp (void of all good Learning, and Ciuill behauiour) is thought by their *Gouernours* most agreeable to that State, and their manner of *Gouernment*. This causeth the *Emperours* to bee very wary for excluding of all Peregrinitie, that might alter their fashions. Which were lesse to bee disliked, if it set not a print into the very minds of his people. For as themselves are very hardly and cruelly dealt with all by their chiefe Magistrates, and other Superiours, so are they as cruell one against another, specially ouer their inferiours, and such as are vnder them. So that the basest and wretchedest *Christianoe* (as they call him) that stoopeth and croucheth like a Dogge to the Gentleman, and licketh vp the dust that lyeth at his feet, is an intollerable Tyrant, where hee hath the aduantage. By this meanes the whole Countrey is filled with Rapine, and Murder. They make no account of the life of a man. You shall haue a man robbed sometime in the very streets of their Townes, if he goe late in the Euening; and yet no man to come forth out of his doores to rescue him, though he heare him cry out. I will not speake of the strangenesse of the Murders, and other cruelties committed among them, that would scarcely be beleued to be done among men, specially such as professe themselves *Christians*.

Crueltie of the
Russe people.

The number of their vagrant and begging poore is almost infinite: that are so pinched with Famine and extreame need, as that they begge after a violent and desperate manner, with *Giue me and cut me, Giue me and kill me*; and such like Phrases. And yet it may be doubted whether is the greater, the Crueltie or Intemperancie that is vsed in that Countrey. I will not speake of it, because it is so foule and not to be named. The whole Countrey ouerfloweth with all sinne of that kind. And no maruell, as hauing no Law to restraine Whoredomes, Adulteries, and like vncleannesse of life.

Intemperancy.

As for the truth of his word, as some say, the *Russe* neither beleueeth any thing that another man speaketh, nor speaketh any thing himselfe worthy to be beleued. These qualities make them very odious to all their Neighbours, specially to the *Tartars*, that account themselves to be honest and just, in comparison of the *Russe*. It is supposed by some that doe well consider of the State of both Countries, that the offence they take at the *Russe* *Gouernment*, and their manner of behauiour, hath bene a great cause to keepe the *Tartar* still Heathenish, and to mislike as he doth of the *Christian* profession.

To

To the Reader.

I thought good here to give an account of my course. Having spent much time in that other World, so little known to This (Tartaria and China) that the parts least known might be made best known: I have come neerer home, to Russia, and her neighbours, the neerer, or Chrim Tartars, the Samoyeds, and others; whereof Doctor Fletchers Story being so elaborate (where, though the centre bee Russia, yet his circumference is more generall) and by men iudicious which haue in those parts enjoyed most honourable employment, and exactest intelligence, commended; I haue given him the first place. And if some terme bee mollified, or some few things omitted, it is not to defraud Thee of the Historie (which for substance is whole, as by perusall is found) but not to defraud our industrious Countrymen in their merchandizing mysterie, wherein some perhaps would hence seeke occasion of undermining. For like cause I haue given the next place to Captaine Edge, (the one our gowned Generall by Land, the other in his generall Historie also by Sea) as deserved by his ten yeeres Voyages, and his other Merits. As for the question of Willoughbies Land, I list not to dispute it; but I thinke, neither Hollander (as is also confessed by the French Booke, called, *The Historie of Spitzberghe* ^a on the Dutch behalfe) nor any other haue found any such Lands as his Storie describes, but some part of those which now with a generall name wee call, Greenland (howsoever the makers of Maps and Globes may create Lands and Islands at pleasure, especially in unknowne places) and the first settled, ordinary, and orderly Voyages for the Whale-killing, and the most for discoverie in those parts haue beene made by the English, their gaynes awakening the Hollander to that enterprize, and that also (as elsewhere in the World) by English guides. That which I most grieue at in this contention, is the detention of further discoverie to the Pole and beyond (where it is not likely to be colder then here, and at the Arctike circle: as in the Red Sea, Ormus, and the Countrey about Balsara on this side the Tropike, is found greater heat then under the Line it selfe) the desire of gayne every where causing debate, and consequently losse of the best gaine both in Earth and Heauen. Merchants might get the World, and giue vs the World better, if Charitie were their Needle; Grace, their Compas; Heauen, their Hauen, and if they would take their height by obseruing the Sunne of Righteousnesse in the Scripture-astrolabe, and sounding their depth by a Leading Faith, and not by a Leaden bottomlesse Couetousnesse: that is, if they would seeke the Kingdome of Heauen first, all things should bee added; they should finde World enough in the Indian, and Polare Worlds, and wee and they should arrive at better knowledge of the Creator and Creatures. And of all men (that I may a little further answere that Historie of Spitzberghe) I would be glad to see agreement betwixt the English and Dutch, both because I honour that Nation, as hath appeared in this whole worke of Voyages, in which and of which the Dutch are so great a part: and because in Region, Religion, Originall Nation, ingenious and ingenuous disposition, and (that which here brings both on our Stage) the glory of Navigation, they are so neere vs, and worthie to be honored. It is true that every where the English hath beene the elder Brother, a Doctor, and Doctor, to the Hollanders, in their Martiall feats at home, and Neptunian exploits abroad, (that I mention not their permitted wealthie fishing on the English shoare) whom had they followed with as true and due respect, as with happie successe; quarrels had not so distracted and distorted both sides. I appeale to Dutch ingenuitie, if ever they did any thing wholly New (but giue names) in remotest Navigations, without English lights. Columbus an Italian had the honour of finding America, and the Spaniards the happinesse. But for the North America, and the whole Northern New World, Cabota ^b borne or bred at least in England, was either Actor or Author. For the Dutch, I haue shewed, for the compassing of the World, and for the East Indies before, that our Drake, Candish, Mellis, Davis, Adams, &c. were their Fore-runners, Pilots, and Guides: Yea, their New-found Land Voyages, and all the Northerne coast of America were discovered by Sebastian Cabota, and other Englishmen. I adde their New Straights Southwards from those of Magelane were discovered before by Drake, as in the Map of Sir Francis Drakes Voyage presented to Queene Elizabeth, still hanging in His Maiesties Gallerie at White Hall, neere the Prinic Chamber, and by that Map wherein is Cabotas Picture, the first and great Columbus for the Northerne World) may be seene. In which Map, the South of the Magelane Straits is not a Continent, but many Islands, and the very same which they haue stiled in their Straits. Barneuels Islands had long before beene named by the most auspicate of Earthly Names, (and let themselves be Indges, with which the other is as little worthie to be mentioned, as a kind Mother, and an unkind Traitor. The Name Elizabeth ^c is expressed in golden Letters, with a golden Crowne, Garter, and Armes affixed: The words ascribed thereunto are these, Cum omnes ferē hanc partem Australem Continentem esse putent, pro certo sciunt Insulas esse Nauigantibus peruias, earumq; australissimam ELIZABETHAM à D. Francisco Draco Inuentore dictam esse. The same height of 57. degrees, and South-easterly situation from the Magelan Westerue Mouth giue further euidence.

60 And my learned friend Master Briggs told me, that he hath seene this plot of Drakes Voyage cut in

^a H. G. A. in confutation of the English assertion for Willoughby, sayth, *Il est bien vray que nos Mariniers n'ont trouue au dit lieu de 72. degrees aucun Pays.* 72. in Sir Hugh Willoughbies Booke perhaps was mistaken for 77. their figure of 7. and that of 2. in old writing, being very like each other, so that the last 7. with a little touch of the running Pen might appeare. 2. His hand, I am sure, is of the old fashion of that time, as appears by a Will I haue with his hand, and perhaps all of his hand. Some English Maps haue made an Island in that height where none is: and the Dutch Willbord Iles (which they say are eight in 73.) haue small likelihood: perhaps Sir Hugh Willoughbie might misreckon, by not knowing the variation of the Compas and Sea rules: which I take to be most likely,

and H. G. A. confesseth also. ^b Sebastian Cabota the English Columbus, sonne of Iohn a Venetian, bred heere, and Discoverer for Henry the Seuenth, of America; and first Gouvernour of the Moscouie Companie. ^c Sir F. Drake first finder of the S. Sreights, called Maues. In the said Map is Queene Elizabeths Picture, with Neptune yeelding his Trident, and Triton sounding her Fame, with these Verses, *Te Deus æquoreus donat Regina Trident, Et Triton laudeseffat ubique tuas.*

Siluer by a Dutchman (Michael Mercator, Nephew to Gerardus) many yeeres before Scouten or Maire intended that Voyage. As for Noua Zemla by Stephen Burrough, and others, long before discovered, they also haue giuen new names, which I enuie not: onely I feare a vā soli, and hate ingratitude both ours and theirs. But too much of this. Next to this more generall Discourse shall follow the Dutch Northerne Voyages, and the English North-easterne: after which wee will take a more complementall leaue of that Continent, and from thence visite the Northerly and North-westerne Discoveries; at once hunting for a New World and a New passage to This.

CHAP. II.

A brieffe Discoverie of the Northerne Discoveries of Seas, Coasts, and Countries, deliuered in order as they were hopefully begunne, and haue euer since happily bene continued by the singular industrie and charge of the Worshipfull Society of Muscouia Merchants of London, with the ten seuerall Voyages of Captaine THOMAS EDGE the Authour.

§. I.

Greenland first discovered by Sir HUGH WILLOUGHBIE: the Voyages of FROBISHER, PET and JACKMAN, DAVIS, the Dutch; First Morse and Whale-killing, with further Discoveries.

W. Gomericensis de Ducib. Nor-man.

HANS Townes.

Cathay, See l. 2. cap. 1. of this whole Voyage. 212.

** An errour in the latitude, the Land stands in 77.*

He Northerne parts of the World haue euer bene held to be *Officina Gentium & velut Vagina Nationum*; Natures Shop and Store-house of Men, better furnished then any other part of the Earth, and from whence those notable Inundations came first of the *Cymbrians* and *Teutons*, in the time of the antient *Romans*; and secondly of the *Gothes* and *Vandals* vnder *Attila*, to the confusion of things both Diuine and Humane in all the Southerne parts of *Europe*, as farre as Barbarisme could preuaile against Ciuilitie and Religion. For remedie whereof the Townes alongst the *Baltick* Sea entred into a confederacy vnder the names of the *Hans Townes*, and vndertooke the keeping of those Northerne people, and the securing of these Southerne Kingdomes from any the like ouerflowings, vpon such Priuiledges and Immunities as were granted and agreed vnto them by all the Southerne Princes, and according to such Lawes as were made and provided for the maintenance and strength of the said *Hans Townes*, amongst which the supreme and fundamentall Lawe was that none of these Nations so secured should haue trade or commerce in any parts beyond the *Baltike* Seas, to the end the barbarous people might not bee enabled thereby to practise or moue against the *Hans Townes*: which was the cause together also with the extremitie of cold, that those Northerne Seas were neuer looked vnto vntill the yeere 1553. At which time the trade of this Kingdome waxing cold and in decay, and the Merchants incited with the fame of the great masse of riches which the *Portugals* and *Spaniards* brought home yeerely from both the *Indies*, entred into a resolution, notwithstanding the prohibition of the *Hans Law* to discover the Northerne Seas, which so long had bene frozen and shut vp; and to see whether they could not afford a passage to *Cathay* and the *East Indies*, and accordingly provided three ships, and sent them forth vnder the command of Sir *Hugh Willoughbie*, Knight, who imbarqued himselfe in a ship called, the *Bona Esperança*, Admirall of that Voyage, with *Richard Chancellor* Captaine of the *Edward Bonaventure*, together with a third ship, called the *Bona Confidentia*. These three ships falling downe from *Ratcliffe*, the tenth of May in the foresaid yeere went on their Voyage, and proceeding as farre as the Cape of *Norway*, they were seuered by a tempest. *Chancellor* after he had stayed at Ward-house seuen dayes, expecting the Admirall and the other ships, according to a former appointment vpon any such casualtie, and hearing nothing of them, went on, and discovered the Bay of *Saint Nicolas*, and setled a trade there, which hath continued to these times.

Sir *Hugh Willoughbie* was driuen to the height of 72. * where hee fell vpon an Iland, now knowne by the name of *Willoughbie Land*, and lieth from *Sinam* (vpon the Continent of *Norway* East and by North an hundred and sixtie leagues or thereabouts, from thence he went North and North-west, and within eight dayes after he fell vpon a Land which lay West South-west, and East North-east, betweene 74. and 75. degrees of latitude, and plying Westward along by the

the Land, he was driven by the wind to put to Sea againe, vntill the wind came about. Then they made towards the Land againe, and bare with it, but finding that place vnfit for landing, they haled out againe, running along the Land sixteene leagues North-west, where they found a faire Bay, went on Land and found the place inhabited. From thence they put to Sea againe, runne alongst the coast for fortie leagues together, till at length they came to an anchor within two leagues of the shoare, where they landed, and found two or three good Harbours.

Afterwards they entred into the Hauen which ranne vp into the Maine about two leagues, where they remained for the space of a weeke vpon the maine Land. They found Beares, great Deere, Foxes, and other beasts. They sent out three men three dayes journey to the South-west, and three others also full West, all which returned after diuers dayes traouelling, and found no people nor any likelihood of habitation. And this is that Land which now is called Greenland, or King Iames his New-land, and is knowne to the *Hollanders* by the name of *Spatbergen*. Sir *Hugh Willoughbie* returned into *Lapland*, where he and his companie were frozen to death, in the Hauen called *Arzina*, neere *Kegor*.

The *Muscovia* Merchants hauing thus settled a trade in *Russia*, and being incorporated by the name of, The Merchants of *England*, for the discouerie of new trades, pursued their first resolutions for finding a way to *Cathay* by the North-east, and in the yeere 1556. sent out *Stephen Burrough*, for discouerie of the Riuer *Obb*, who proceeding forwards in that Voyage discovered the Riuer *Pechora*, the Streights of *Vaigats* and *Nonazembla*; went on shoare vpon the Iland of *Vaigats*, and vpon the North Continent of *Russia*; met with the *Samoeds*, obserued their manner of life, their Religion, their Sacrifices to their rude and ill shaped Idols; and the yeere being spent, returned into *Russia*.

The Companie hauing sought for the North-east passage, and finding such difficulties as are mentioned in their particular Iournals, resolved to make triall, if the North-west part could not afford a passage to the *Indies*, which was the first and maine scope of their Northerne Discoueries. And in the yeere 1576. they sent forth Sir *Martin Frobisher* with two Barkes, who coming into the height of 62. or thereabouts, found a great Inlet, now knowne by the name of *Frobishers Streights*, into which he put himselfe, and sayled sixtie leagues with a mayne Land on each side, and so for that yeere returned.

* See Hackl. 1. tom. 1. pag. 274.

The next yeere following he made a second Voyage to that place, purposely to lade himselfe with a kind of Oare, which the yeere before he had found there, and gaue hope by the colour to yeeld Gold, and being laden with some quantitie, returned.

The yeere following, being 1578. hauing made tryall here of that Oare, and finding it not to fall out according to his expectation, hee was furnished out to proceed in the further discouerie of those Streights, and entring into the same, made way so farre as hee thought fit, and then returned backe, hauing first taken possession thereof in the name of *Queene Elizabeth* of famous memorie, who called the place *Meta incognita*: he brought home some of the Natiues, and left some of his men there.

In the yeere 1580. the Companie sent out a second Voyage for the discouerie of the Riuer *Obb*, and thence to goe on to *Cathay*; furnishing forth two ships vnder the command of *Arthur Pet*, and *Charles Lackman*, who following their instructions, arriued at *Vaigats*, passed those Streights with a particular obseruation of those Ilands and places therein, plyed along the East part of *Nonazembla*, and the North of *Russia*, and the *Samoeds* Countrey, so farre as the Ice would giue them leaue, and finding no possibilitie of passage by reason of the Ice, returned backe in the latter end of the yeere. By this time the Voyage of *Saint Nicolas* was knowne, and become a beaten trade. And the Companie sent out yeerely thither ten or twelue ships, which returned freighted with the commodities of that Countrey.

In the yeere 1583. by the leaue and admittance of the *Mosconia* Companie, Sir *Humphrey Gilbert* went out for the discouerie of the North part of *Terra Florida*, came into the great Riuer called, *Saint Laurence* in *Canada*, tooke possession of the Countrey, settled the gouernment of the fishing there which is so well knowne in these times.

In the yeere 1585. Master *John Danis* was furnished out at *Dartmouth* with two Barkes, for the discouerie of the North-west, came into the height of 66. plyed along the coast, obserued the probabilitie of a passage, and in the end of the yeere returned.

In the yeere following, being 1586. hee went on againe in the further discouerie thereof, found a great Inlet betweene 55. and 56. of latitude, which gaue him great hope of a passage, traded with the people there, and so returned.

In the yeere 1587. hee made a third Voyage to those places, followed his course to the North and North-west, to the Latitude of 67. degrees, hauing the Continent (which hee called *America*) on the West side and *Groineland*, which hee named *Desolation* on the East, and going on the height of 86. degrees, the passage enlarged so that hee could not see the Westerne shoare. Thus he continued in the Latitude of 73. degrees in a great Sea free from Ice, of an vnmeasurable depth, but by the occasion of the departure of two Ships which were in company with him, which

Greenland discovered by Sir *Hugh Willoughbie*. This Voyage was written by Sir *H. Will.* and found in his ship. In Iauarie after he was aliue, as appears by a Will of *Gab. Will.* his kinsman, subscribed by Sir *Hugh Willoughbie* which Will I now haue; and keepe as a Relike of that worthy discouerer and first finder of King Iames his New-land.

Fretum Danis.

which hee left Fishing at a place, he returned home. This passage continueth the Name and memorie of the first Discoverer, and is called *Fretum Danis*. And thus the Discoverie of the Northern Seas proceeded on from time to time, by the endeavour and charge of the *Musconia* Companie, vntill they had particularly discovered the Lands, Coasts, Ilands, Straights, Hauens, Bayes, Rivers and other places therein, and measured euery part thereof, by their often tracing to and fro: Together also with the obseruation of the Commodities and Aduantages, arising from euery part of the same, continuing euen vnto these times to haunt and frequent the parts which they had formerly found out; As by their yeerely Reportaries and Iournals may appeare, and that either without emulation or competition of any other Nation, that euer came into those parts or enterprised any Discoverie there vntill of late yeeres, as appeares by this that followeth.

Hak. Tom. 1.
pag. 297.

When *Richard Chancellor* had settled a trade with *Iehn Vasilowich* then Emperour of *Russia*, and his Ambassadors had bene here in *England*, to accomplish matters requisite for maintenance of the Amitie and Entercourse made and agreed vpon betwene these two Crownes; King *Philip*, Queene *Marie*, Dukes also at that time of *Burgundie*, and Soueraignes of all the *Netherlands*, made a grant of Priuiledge vnto the *Musconia* Merchants for the sole Trade of those Seas, prohibiting all others to haunt and frequent the same, without speciall Licence and consent of the sayd Companie: which grant of Priuiledge was accordingly enioyed without disturbance or interloping of the *Hollanders*, who out of obedience either to the Prohibition made by their Soueraigne, or for that they durst not aduenture into these Seas, did not any way attempt to bee seene or appeare there, either for Discoverie or trade of Merchandize, for the space of five and twentie yeeres, after the Port of *Saint Nicholas* was first Discovered and found out by the *English*. For the Company hauing as is aboue mentioned, made their first Discoverie in the yeere 1553. there was neuer heard of any *Netherlander* that frequented those Seas, vntill the yeere 1578. At which time they first began to come to *Cola*, and within a yeere or two after, one *John de Whale* a *Netherlander*, came to the Bay of *Saint Nicholas*, being drawne thither by the perswasion of some *English* for their better meane of Interloping, which was the first man of that Nation that euer was seene there. And this as is formerly noted was five and twentie yeeres after it was Discovered by the *Musconia* Merchants.

1594.
These Voiages
follow.

Afterwards the *Hollanders* crept in more and more, and in the yeere 1594. they made out foure Ships for Discoverie of the North-east passage to *China*, the Master Pylot whereof was *William Barrents*, these came vpon the Coast of *Novazembla* to the Latitude of 77. degrees, drew backe againe towards the Straights of *Vaigats*, and then returned giuing Names vnto some places and Promontories vpon that Land.

1595.

In the yeere 1595. They sent out a second Voyage, tracing the way through the Straights of *Vaigats* in the same steps, as *Pet* and *Iackman* had formerly passed, and so returned.

1596.

William Hudson
Discovereth
to 81. Degrees.
Whale Bay.
Hackluits
Headland.
Hudsons Touthes.

In the yeere 1596. They set out a third Voyage with two Ships, the one of which shaped her course from the Cape of *Norway*, to an Iland in the Latitude of 74. degrees, which wee call *Cherie Iland*, and they call *Beare Iland*, and from thence to *Greenland*, where Sir *Hugh Willoughbie* had bene two and fortie yeeres before, for so long time there is betwene the first Discoverie thereof and the yeere 1596. And from thence to the North-east part of *Novazembla*, in the Latitude of 76. degrees, where they Wintred and lost their Ship, and came home with much difficultie.

In the yeere 1603. *Stephen Bennet* was employed by the Companie, in a Ship called the *Grace*, to those parts Northwards of the Cape, and was at *Cherie Iland* and killed some Sea-horses, and brought home Lead Oare from thence.

1608. the said fellowship set forth a Ship called the *Hope-well*, whereof *William Hudson* was Master, to discover to the Pole, where it appeareth by his Iournall, that hee came to the height of 81. degrees, where he gaue Names to certayne places, vpon the Continent of *Greenland* formerly discovered, which continue to this day, namely, *Whale Bay*, and *Hackluit Headland*, and being hindred with Ice, returned home without any further vse made of the Countrey, and in ranging homewards, hee discovered an Iland lying in 71. degrees, which hee named *Hudsons Tutches*.

Heere it is to bee vnderstood, that the Companie hauing by often resort and employment to those parts, obserued the great number of Sea-horses at *Cherie Iland*, and likewise the multitude of Whales, that shewed themselves vpon the coast of *Greenland*; They first applyed themselves to the killing of the Morces, which they continued from yeere to yeere with a Ship or two yeerely; in which Ships the Companie appointed *Thomas Welden* Commander, and in the yeere 1609. the Companie employed one *Thomas Edge* their Apprentice, for their Northeren Voyage, and joyned him in Commission with the foresayd *Welden*. Now the often vsing of *Cherie Iland*, did make the Sea-horse grow scarce and decay, which made the Companie looke out for further Discoveries.

Thomas Welden.

the Author.

In the yeere 1610. the Companie set out two Ships, viz. the *Lionesse* for *Cherie Iland*, *Thomas Edge* Commander; and the *Amitie*, for a Northerne Discoverie, the Master of which Ship was *Jonas Poole*: who in the moneth of May fell with a Land, and called it *Greenland*, this is the Land

1610.
Jonas Poole first
Namer of
Greenland.

Land that was discovered by Sir *Hugh Willoughby* long before, which Ship *Amitie* continued vpon the coast of *Greenland*, discovering the Harbours and killing of Morces, vntill the moneth of August, and so returned for *England*, hauing gotten about some twelue Tunnes of goods, and an Unicorne's horne.

* See Bassins North-west Discouerie. Vnicorne, a Sea fishes Horne. 1611.

In the yeere 1611. the Companie set forth two Ships for *Greenland*, the *Marie Margaret* Admirall, burthen one hundred and sixtie tunnes, *Thomas Edge* Commander; and the *Elizabeth*, burthen sixtie tunnes, *Jonas Poole* Master, well manned and furnished with all necessarie Prouisions, they departed from *Blackmall* the twentieth of Aprill, and arrived at the Foreland in *Greenland* in the Latitude of 79. degrees, the twentieth of May following, the Admirall had in her 10 six Biskayners expert men for the killing of the Whale: this was the first yeere the Companie set out for the killing of Whales in *Greenland*, and about the twelfth of Iune the Biskayners killed a small Whale, which yeelded twelue Tunnes of Oyle, being the first Oyle that euer was made in *Greenland*. The Companies two Shallops looking about the Harbour for Whales, about the five and twentieth of Iune rowing into Sir *Thomas Smith's Bay*, on the East side of the Sound saw on the shoare great store of Sea-horses: after they had found the Morfes they presently rowed vnto the Ship, being in crosse Road seuen leagues off, and acquainted the Captayne what they had found. The Captayne vnderstanding of it, gaue order to the Master, *Stephen Bennet*, that he should take into his Ship fiftie tunnes of emptie Caske, and set sayle with the Ship to goe into *Foule Sound*. The Captayne went presently away in one Shallop with fixe men vnto the Sea- 20 morse, and tooke with him Lances, and comming to them they set on them and killed five hundred Morfes, and kept one thousand Morfes liuing on shoare, because it is not profitable to kill them all at one time. The next day the Ship being gone vnto the place & well mored where the Morse were killed, all the men belonging to the Ship went on shoare, to worke and make Oyle of the Morfes; and when they had wrought two or three dayes, it fortuneth that a small quantitie of Ice came out of *Foule Sound*, and put the Ship from her Moring. The Master and ten men being a board of the Ship, let fall their Sheat anchor which brought the Ship vp to ride; the Ice comming vpon her againe, brought her Anchor home and ranne the Ship ashore, where shee by the Masters weake Iudgement was cast away, and all their Bread spoyled not fit to eate. The Ship being cast away without hope of recouerie, the Commander *Thomas Edge* gaue order, that all the Morse liuing on shoare should be let goe into the Sea, and so gaue ouer making of Oyle, and presently haled vp ashore all his Shallops and Boates, being five, letting the Carpenter to trim them, the Saylers to make Sayles and Wastcloathes for the Boates, fit to serue them at Sea. Hauing fitted their Boates as well as they could with the small prouision they had, being in number foure small Shallops and the ships Boate, they diuided their men into them equally with what prouisions of victuals they could well carrie, and after they had sayd Prayers all together on Land; being fiftie men they departed from the place where they lost their Ship, on the fifteenth of Iuly with the winde Southerly, and rowed thirtie or fortie leagues to the Southward, and then they lost companie of one Shallop and their ships Boate of *Horne Sound*, which two Boates met with a Hull Ship, and acquainted him with the losse of the *London Ship*, and that shee 10 had left on land goods woorth fiftene hundred pounds: So our men carryed the Hull Ship into *Foule Sound*, to take in the Companies goods and to kill some Sea-horses for her selfe at that place. The Captayne and two other Shallops put from the Coast of *Greenland* in the height of 77. 1/2. Degrees, and set their course for *Cherie Iland*, which lyeth in 74. Degrees (—) sometimes Sayling and sometimes Rowing, and made *Cherie Iland* the nine and twentieth of Iuly, hauing beene in their Shallops at Sea fourteene dayes, and comming into the Iland with a great storme at North-west, with much difficultie they landed on the South side of the Iland.

First Whales killing. Biskayners vfed.

500. Morfes killed.

Hull Ship.

Cherie Iland.

Being on shoare, the Captayne sent three of his Saylers ouer land vnto the North roade, being three miles distant from that place, to see if the *Elizabeth* was there, and they saw a Ship riding in the North roade, and being ouer-joyed they returned backe vnto the Captayne to acquaint him, without staying to speake with any of the Ships companie, and by good hap the Master of the *Elizabeth* espyed men on the Shoare, being at that time weighing Anchor to set sayle for *England*, vpon which hee stayed and sent the Boate ashore to see what men they were, and when the men of the *Elizabeth* came ashore, they found them to be men of the *Mary Margaret*, and so went aboard vnto the Master to acquaint him; whereupon the Master caused Anchor to be weighed and went to the South side of the Iland, and there tooke in the Captayne, and hee being aboard vnderstanding what a poore Voyage the *Elizabeth* had made, gaue order to the Master to goe for *Greenland*, there to take in such Goods as the sayd *Edge* had left in *Foule Sound*. They departed from *Cherie Iland* the first of August, and arrived at *Foule Sound* the Fourteenth *Disco*: where they found two Boates which they had lost companie of before, and 60 all their men being come thither with a Hull Ship which they met with, and brought to that place; which Ship had spent all the yeere in *Horne Sound*, and got little goods. The *Elizabeth* being mored, the Captayne gaue order vnto the Master to deliuer out of his Ship, all the goods hee had got at *Cherie Iland*, which was Sea-horse hydes and Blubber, being of little woorth; And to take in the Oyle and Whale-fannes, which were gotten by the *Marie Margarets* companie,

Ship over-set. panie, the Master in unlading of his Ship brought her so light, that vnfortunatly hee over-set her, hauing goods in her worth seuen hundred pounds. This ill chance happening vnto the two London Ships, the Captayne of them agreed with *Thomas Marmaduke* Master of the *Hull* Ship, to take in the goods which was saued, at the rate of five pounds the Tunne, which was a great rate (notwithstanding they had bene a meane to get him goods worth five hundred pounds for the *Hull* Ship) and vpon the one and twentieth of August, 1611. they departed from *Greenland* in the *Hope-well*, being ninetie nine men in all, and arriued at *Hull* the sixth of September, where the sayd *Edge* tooke out the Companies goods, and Shipped them for *London* by order from the Companie. This yeere, *Edge* in coasting in the Shallops, discovered all the Harbours on the West side of *Greenland*.

§. II.

Dutch, Spanish, Danish disturbance; also by Hull men, and by a new Patent, with the succeeding Successes and further Discoveries till this present.

1612. **H**N the yeere 1612. the Companie set forth two Ships, viz. The *Whale*, burthen one hundred and sixtie Tunnes, and the *Sea-horse*, burthen one hundred and eightie tunnes, vnder the Command of *Iohn Russell*, and *Thomas Edge*, for discovering and killing of the *Whale*. They discovered that yeere nothing worth writing of, by reason of some falling out betwixt *Russell* and *Edge*; yet they killed that yeere seuentene *Whales*, and some *Sea-horses*, of which they made one hundred and eightie Tunnes of Oyle with much difficultie; as not being experimented in the businesse. This yeere the *Hollanders* (to keepe their wont in following of the *English* steps) came to *Greenland* with one Ship, being brought thither by an *English* man, and not out of any knowledge of their owne Discoveries, but by the direction of one *Allen Sallows*, a man imployed by the *Muscovia* Companie in the Northerne Seas for the space of twentie yeeres before; who leauing his Countrey for Debt, was entertayned by the *Hollanders*, and imployed by them to bring them to *Greenland* for their Pylot. At which time being met withall by the Companies Ships, they were commanded to depart, and forbidden to haunt or frequent those parts any more by mee *Thomas Edge*. There was also a *Spanish* Ship brought thither, by one *Nicholas Woodcocke* this yeere, a man formerly imployed by the sayd Companie; which *Spanish* Ship made a full Voyage in *Green-harbour*. But *Woodcocke* at his returne into *England*, being complained of by the Companie, was Imprisoned in the *Gatehouse* and *Tower*, sixteene Moneths, for carrying the *Spanish* Ship thither.
1613. In the yeere 1613, the Companie set out for *Greenland* seuen sayle of Ships, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, the Ships departed from *Gravesend* the six and twentieth of Aprill, and arriued in *Greenland* the fourteenth of May. This yeere the *English* had the Kings Patent vnder the broad Seale of *England*, to forbid all Strangers and others, but the *Muscovia* Companie to vse the Coast of *Greenland*. The *English* met with fifteene sayle of great Ships, two of them were *Dutch* Ships, the rest were *French*, *Spanish*, and of the Archdukes, besides foure *English* Interlopers. The Companies Ships forced them all from the Coast of *Greenland*, not suffering any of them to make a Voyage; they tooke from the two *Dutch* Ships certayne goods, but in going to take it, they neglected their owne voyage, which was dammified thereby to the value of three or foure thousand pounds. For their Ships came home dead Freight two or three hundred Tunnes by that meane. This yeere was *Hope* Island and other Ilands discovered, to the Eastward by the Companie.
1614. In the yeere following, which was 1614, the Companie set out for *Greenland*, thirteene great Ships and two Pinnasses, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, all which Ships were well appointed with all manner of Artillerie for defence, and other necessities for the making of their Voyage and for Discoverie. This yeere the *Hollanders* set out for *Greenland* eightene great Ships, whereof foure of them were of the States men of Warre, Ships with thirtie pieces of Ordnance a piece. This yeere the *Dutch* stayed and fished for the *Whale* perforce, they were farre stronger then the *English*, which was a cause that the *English* Ships came home halfe laden, and the *Dutch* with a poore Voyage. This yeere the Companie discovered vnto the Northwards of *Greenland*, as farre as 80. Degrees odde Minuts, in the Ship *Thomasen*, as by her daily Iournall doth appeare at large; in which Ship was imployed *Thomas Sherwin*, and *William Baffin*, being the second Voyage they were imployed into those parts. And some Ilands to the Eastwards of *Greenland*, were discovered by foure Ships imployed in that seruice, as by their Iournall more at large appeareth.
1615. In the yeere 1615. the Companie set out for *Greenland*, two sayle of great Ships and two Pinnasses, vnder the Command of *Beniamin Ioseph*, and *Thomas Edge*, who following their Instructions, arriued vpon the Coast of *Greenland* the sixth of Iune, which they found to bee much pestered

pestered with Ice, and being foggie weather, they runne into the Ice, so farre, that they were fast in it fourteene dayes before they could cleare themselves of it. This yeere also the *Hollanders* set out fourteene sayle of ships, whereof three of them were *States Men* of warre of great force; they killed Whales in *Horn-sound*, *Bel-sound*, and *Faire-hauen*, and stayed vpon the coast of *Greenland* perforce, as they did the former yeere; whereby the *English* came home halfe laden. This yeere also the King of *Denmarke* sent vnto *Greenland* three of his ships, Men of warre, to demand a toll of the *English*; but they had none payd them: for they fell with the *Fore-land* in 79. degrees, where Captaine *Edge* was, and he denyed payment of any toll, alledging that the Countrey of *Greenland* belonged to the King of *England*. These were the first *Danish* ships that euer came to *Greenland*, who had for their Pilot one *James Vaden*, an *Englishman* to bring them thither.

1616.

In the yeere 1616. the Company set out for *Greenland* eight Sayle of great ships, and two Pinnasses vnder the command of *Thomas Edge*, who following his course, arriued in *Greenland* about the fourth of Iune, hauing formerly appointed all his ships for their seuerall Harbours, for their making of their Voyage vpon the Whale, and hauing in euery Harbour a sufficient number of expert men, and all prouisions fitting for such a Voyage. This yeere it pleased God to blisse them by their labours, that they full laded all their ships with Oyle, and left an ouer-plus in the Countrey, which their ships could not take in. They employed this yeere a small Pinnasse vnto the East-ward, which discovered the East-ward part of *Greenland*, Namely, the Iland called now *Edges Iland*, and other Ilands lying to the North-wards as farre as seuentie eight degrees, this Pinnasse was some twentie tunnes, and had twelue men in her, who killed one thousand Sea-horses on *Edges Iland*, and brought all their Teeth home for *London*. This was the first yeere that euer the Company full laded all their ships sent to *Greenland*, and this yeere they made twelue or thirteene hundred tunnes of Oyle in *Greenland* by the fourteenth of August. All the ships arriued in safety in the Riuer of *Thames*, in the moneth of September. The *Hollanders* had this yeere in *Greenland* foure ships, and those kept together in odde places, not easily to be found, and made a poore Voyage.

Edges Iland.

In the yeere 1617. the Company set out for *Greenland* fourteene Sayle of ships, and their two Pinnasses furnished and manned with a sufficient number of men and all other prouisions fitting for that Voyage, vnder the command of *Thomas Edge*. They departed from *Grauesend*, about the foure and twentieth of Aprill, and arriued vpon the Coast of *Greenland*, the eight and twentieth of May all in safety.

1617.

At our first comming vpon the Coast this yeere, I met with a *Dutch* shippe of two hundred tunnes, which I commanded aboard, the Captaynes name was *Coske*, who told mee there were ten Sayle of *Dutch* vpon the Coast, and two men of Warre, and that he came to make a Voyage vpon the Whale. I shewed him the Kings Commission, and commanded him by vertue thereof to depart from the Coast, willing him to acquaint the rest of his Countrey-men with it. And further, I told him that if I met with him or any *Dutch* ships heereafter, I would take from them what they had gotten, and thus hauing enterayned him aboard with me courteously, I let him goe without taking any prouisions from him. At his departure from mee, hee promised hee would but stay to meet with two of his Consorts, which hee had lost company with the day before, and then hee would directly goe for *Flushing*, and acquaint his Merchants, that the *English* Captayne would not suffer him to stay vpon the Coast of *Greenland*; but it seemeth at his meeting with his Consorts, they agreed altogether to goe into *Horne-sound*, and there they killed some few Whales which they saued in Blubber. I vnderstanding of it, gaue order to my Vice-admirall when he was laden, that he should goe into *Horne-sound*, and put the *Flemmings* from thence, and take what they had gotten, which he did accordingly: but the goods he tooke from the *Dutch* ships, were not worth to the *English* twentie pounds, for it was but Blubber and Finnes, which they had no need of, in regard they had killed as many Whales as would lade their ships, and more then they could carry or saue. This yeere the *English* made nineteene hundred tunnes of Oyle in *Greenland*, and all their ships arriued at home in the moneths of August and September in safetie. They also employed a ship of sixtie tunnes, with twenty men in her, who discovered to the Eastward of *Greenland*, as faire to the North-wards as seuentie nine degrees, and an Iland which he named *Witches Iland*, and diuers other Ilands as by the Map appeareth, and killed store of Sea-horses there, and then came into *Bel-sound*: where hee found his lading of Oyle, left by the Captayne which he tooke in. This yeere the *Hull* men set a small ship or two to the East-wards of *Greenland*, for the *Hull* men still followed the steps of the *Londners*, and in a yeere or two called it their Discoverie, which is false and vnture, as by Oath in the Admiraltie doth appeare. The *Dutch* likewise practise the same course.

Witches Iland.

Hull men.

1618.

In the yeere 1618. some difference hauing passed betweene the *English* and some *Zelanders*, the yeere before, in King *James* his *Newland*, alias *Greenland* (which *Zelanders* were neuer in those parts before, and vpon promise of the present departure) were permitted to passe else-where with their prouisions which they had, and comming to *Cherrie Iland*, and meeting with one *English* Interloper of *Hull*; namely *Marmaduke*, he animated the said *Zelanders* to returne back

Zelanders.

Marmaduke.

for

for *Greenland*, alleaging vnto them, that the Companies ships were in each seuerall Harbour busied about their Voyage, and that none would stirre from his Harbours to molest them, and that they being three ships of force, might returne to a Harbour in that Countrey, called *Hornsound*, and there make a Voyage perforce, which the said *Zelanders* did attempt, and there manned out diuers Shallops, hauing many *Biskainers*, and killed store of Whales, setting those *English* at nought. Whereupon Captayne *Thomas Edge*, chiefe Commander of the *English* Fleet, hauing laden those ships that were in Harbour with him, and presently sent for *William Hely*, his Vice-admirall, giuing him order (who was not then full laden, but in good forwardnesse) to fit the ship he was in, and goe to *Horne-sound* afore-said, and put the said *Zelanders* from thence: which the said *Hely* presently put in execution. But before his comming thither, the *Zelanders* had notice by an *English* Surgeon, that if they did not depart, the *English* Vice-admirall would come presently and force them from thence. Whereupon the *Zelanders* laden all the goods they had in two ships, and sent them away before the comming of the *English* Vice-admirall, leauing one ship behind, with certaine caske of Blubber, and two Whales and an halfe vncut vp, in a brauado to trye if the *English* would meddle with them or not, which said ship and goods there left, were surprized by the said *English* Vice-admirall; the goods detayned to the Companies vse; and the ship restored there to the *Zelanders*; which ship hauing in her ten cast Peeces, and sixtie men, and hauing intelligence of one of the Companies ships, at that time laden in the Countrey with one hundred and eightie tunnes of Oyle, the *Zelander* gaue out he would lie in waite and take that ship of the Companies and her lading, and carrie her to *Zeland*. For preuention whereof, the said Vice-admirall tooke sixe Peeces of Ordnance, and some Powder from the ship of *Zeland*, which were in *England* restored to the owners.

Sir Iohn Cunningham.

East India Adventurers
ioyne;

In which said yeere 1618. the *Zelanders* sending ouer for restitution of the goods taken from them. A new Company commixt of *English*, *Scottish* and *Zelanders*, through the meanes of one Sir Iohn Cunningham Knight, procured a grant for setting forth of shipping to those parts, which might vtterly haue ouerthrowne and spoiled the trade of the first discoueries thereof: and to that end diuers of the chiefe men were hired by the new Company that had been seruants to the first discouerie, and much shipping and provisions agreed for. Whereupon there was an agreement, that the *East India* Adventurers should ioine stocke with the *Mosconia* Adventurers, and be one ioiyned Company for that trade of King *James* his *Newland*. The *Scottish* Companies Patent thereupon dissolued, to the *Mosconia* Companies great trouble and cost, in taking of all the provisions they had bespoken, and paying ready money for the same, hauing no vse thereof, but great part spoyled, and came to little good, and in ioyning vnfortunately with the *East India* Company, in which yeere, and the next yeere after, their Voyages proued very ill, and they were losers, and much vexed and crossed in their proceedings, to the great disheartning and detriment of the *Mosconia* Company: yet that yeere 1618. they set forth thirteene ships and two Pinnasses, vnder the command of the said Captaine *Thomas Edge*, who arriuing vpon the coast of King *James* his *Newland*, in the beginning of Iune separated themselves to seuerall Harbours for accomplishing of their Voyages, the most part being ships of no force. Presently after in all Harbours where the *English* were, arriued great store of ships of *Zeland*, in warlike manner, being ships of great force, who continued in the same Harbours amongst the *English*, setting two boats to the *English* one, with *Biskainers*, with a full purpose to driue the *English* from their Harbours, and to reuenge the iniurie (as they termed it) done them the yeere before: and for that the *Scottish* Patent was dissolued; wherein many *Flemmings* were to be interested. And to that purpose towards the latter end of Iuly, ten Saile of the said *Zelanders*, being at a Harbour called the *Foreland*, where the said *William Hely*, Vice-admirall of the *English* Fleet that yeere, was in the ship *Pleasure*, Master *Robert Salmon*, with one *English* ship and a Pinnasse there of no force, set vpon the said *English* Vice-admirall, threatening, if hee would not yeeld presently, to dispoyle him of ship and goods, not permitting to take his men aboard. And with two of their chiefe ships layd the *English* Vice-admirall aboard, there being but seuen *English* aboard the ship, which they detayned for foure and twentie houres, the *Zelanders* not daring to enter, making many brauadoes and attempts, thinking to make the *English* to yeeld, and stand to their mercy, which was refused. And thereupon five of those *Zelanders* ships; namely, the *Fortune* of *Camphire*, burthen foure hundred tunnes, with eightene cast Peeces, besides brasse Bases and Murderers, Captaine *Hubrecht Cornelisson*; the *Saint Peter* of *Flushing*, burthen three hundred tunnes, with eightene cast Peeces, Captaine *Cornelius Cooke*; the *Salamander* of *Flushing*, two hundred tunnes, fourteene cast Peeces, Captaine *Adrian Peeterson*; the *Cat* of *Delf* *Hanen*, with sixteene cast Peeces, *Abraham Leuerstick* being Captaine and Generall of the *Zelanders*, and *William Iohnson* of *Milliworth*, in a ship with fourteene cast Peeces: all which, after much conference passed betwixt the said *Zelanders* and *William Hely*: which said *Zelanders* gaue out many vnciuill speeches against the Kings Maiestie, not esteeming his Commission; alledging that there was good law in *Flanders* for what they did. And on Sunday the nineteenth of Iuly, 1618. did forcibly set vpon the said *English* Vice-admirall, five together plying their great Ordnance, small Shot, and Murderers, seeking what in them lay to kill and spoile all the

Dutch assault
the *English*.

English

English that were aboard: who resisted their force, and in spite of all their opposers set sayle, saluting them with their Ordnance, and maintayning fight against them till their Sayles were shot downe, some of their chiefe men slaine, others hurt, and their ship forced either to anchor, or run ashore. The *Zelanders* vsed the *English* very vnkindly, rifling their ship of all their goods, and taking away all their munition and artillery, not leauing any goods ashore, but burning vp the Caske, not permitting the *English* to take in fresh water, but shot their Boat thorow in going ashore, and minding, as they protested and swore vnto the said *William Heley*, that they would take and ransacke all the *English* ships in the Countrey, and carrie the *English* Captaine to *Zeland*: hauing as they said, that yeere in those parts 23. sayle of well appointed ships, onely to ouerthrow all the *English*, all which were to meet in *Scotland* outward bound. After the surprising of the said *English* Vice-admirall, all the rest of the *English* ships being disperfed farre asunder, could not ioine together, being in all places hindred by the *Flemmings*: and by that meanes the *English* Voyage vtterly ouerthrowne, to the extraordinary great losse and charge of the Companie, the most part of their ships returning home without any goods.

The next yeere 1619. the said *Mosconia* and *East India* Companies set out nine ships, and two Pinnasses, vnder the command of the said Captaine Edge, in which yeere, diuers *Hollanders* being in the Northermost Harbour in the Countrey, employing great quantitie of Boats in chasing the Whale there, off into the Sea, put them by their vsuall course, so that the Companies ships, being five of the nine, in the two Northermost Harbours, were disappointed of their Voyage in those Harbours; and thinking to better it in the other Harbours, the foresaid *William Heley* sending a Shallop with ten men in her, with Letters to the said Captaine Edge, of their ill successe to the Northwards, the said Shallop was cast away, and all the men lost: and the said Captaine being laden, sent a Pinnasse to the said *Heley* in August, aduertising him of his departure, thinking all the ships to the Northward had been laden, wishing them to haste home. By meanes of which Shallops casting away, the Voyage was greatly hindred to the Companies exceeding great losse; in that the *Hollanders* did as then bring ouer great quantitie of Whale-oyle, and sold it at vnder rates, so that the Companie was forced to keepe theirs on their hands twelue moneths, and sell it afterwards at a very small price, and lost one ship in her returne homewards neere *Tarmouth*: which did so much dishearten the said Companie, that they dissolued againe, and thought verily to haue aduentured no more thither (their successe those two yeeres past, in which the *East India* Companie ioined with them was so bad, that any that would buy their prouision might enioy the benefit of the Trade there.) At which time, the worthie and famous Merchants Aduenturers; namely, *Ralph Freeman*, *Benjamin Deicrowe*, *George Strowd*, with Captaine *Thomas Edge*, all brethren of the *Mosconia* Companie, pitying the down-fall of so worthie a Trafficke, in which yeerely so many poore Land-men receiued great comfort, and breeding of Mariners, at their owne charge compounded with the said Companies, and tooke that Trade into their hands. In which yeere 1620. they set out seuen sayle of ships, vnder the command of *William Goodlad*, and the said *William Heley*; in which said yeere, by reason of great store of *Flemmings* and *Danes* in the foresaid Northermost Harbours, their ships had ill successe to the Northwards, and were forced to passe from Harbour to Harbour to seeke to make a Voyage, but could not, and so returned home halfe laden, with seuen hundred tunnes of Oyle.

The next yeere 1621. the foresaid Aduenturers hired, and set forth eight ships, seuen for the Whale Voyage, and one to the South-eastwards vpon Discouerie, vnder the command aforesaid, which yeere in one of their chiefe Harbours their Voyage was ouerthrowne, by reason of the foresaid *Flemmings* and *Danes*, being to the Northward, as aforesaid, putting the Whale by her course, and in all places in the Countrey generally disheartned, and out of hope to haue made any Voyage that yeere, whereby to haue earned their bread. Yet it pleased God afterwards in some Harbours, Whales hitting in, a Voyage was performed, and 100. tunnes of Oyle brought home, to the great encouragement of the said Aduenturers: otherwise that Trade had bene vtterly ouerthrowne.

The yeere following 1622. the said Aduenturers at their owne charge set forth nine ships, vnder the command aforesaid, and therein employed diuers Land-men; many of which afterwards proue good Sea-men, and are fit for any Sea seruice. Eight of which ships were appointed to make their Voyage vpon the Whale, and one to goe on discouerie to the South-eastwards. But ill successe happening, one of their greatest ships of burthen, whereof *Iohn Masson* was Master, hauing in her two hundred tuns of Caske, Coppers, and diuers prouisions, was vnfortunatly cast away against a piece of Ice, vpon the coast of *King James Newland*, foure leagues from the shoare, in which ship perished nine and twentie men, and the remainder being three and twenty, were by the prouidence of the Almighty miraculously saued in a Shallop, coasting thirtie leagues afterwards to meet with some other ships to find some succour, hauing neither bread nor drinke, nor any meanes whereby to get any food: and so remayned three dayes in extreme cold weather, being in a small Boat ready to bee swallowed vp of euery waue, but that God prouided better for them. Many of which people their hands and feet rotted off, being frozen, and they

1619.

1621.

1622.

Shipwracke.

died in the Countrey. The rest of the ships returned home laden, bringing in them 1300. tuns of Oyle, yet the foresaid chiefe Harbour could not performe their full lading there, by reason of the *Flemmings* and *Danes* being to the Northwards, as aforesaid, which doth yeerely hinder the Companies ships from making a Voyage.

ant, and diuer-
sified.

You may see
this Story of
the Whale-kill-
ing presented
lively in the
Map, which
Captaine Edge
hath liberally
added to this
Relation.

THe Whale is a Fish or Sea-beast of a huge bignesse, about sixtie five foot long, and thirtie five foot thicke, his head is a third part of all his bodies quantitie, his spacious mouth containyng a very great tongue, and all his finnes, which we call Whale finnes.

These finnes are fastned or rooted in his vpper chap, and spread ouer his tongue on both sides his mouth, being in number about two hundred and fiftie on one side, and as many on the other side. The longest finnes are placed in the midst of his mouth, and the rest doe shorten by their proportionable degrees, backward and forwards, from ten or eleuen foot long to foure inches in length, his eyes are not much bigger then an Oxes eyes, his body is in fashion almost round forwards, growing on still narrower towards his tayle from his bellie, his tayle is about twentie foot broad, and of a tough solid substance, which we vse for blockes to chop the *Blubber* on (which yeelds Oyle) and of like nature are his two swimming finnes (and they grow forward on him.)

This creature commeth oftentimes aboue water, spouting eight or nine times before he goeth downe againe, whereby he may be descried two or three leagues off. Then our Whale-killers presently rowe forth from the place where they stand to watch for him, making what haste they can to meet him: but commonly before they come neere him, he will be gone downe againe, and continue a good while before he riseth; so that sometimes they rowe past him. Yet are they very circumspect, euer looking round where they may espie him risen, or discern his way vnder water, which they call his *Walke*. When he is vp and the Shallops neere him, they rowe towards him very resolutely, as if they would force the Shallop vpon him, if hee went downe vnder water: but the Harponyre, who standeth vp in the head of the Boat, darteth his Harping-iron at the Whale with both his hands, so soone as he commeth within his reach; wherewith the Whale being stricken, presently descendeth to the bottome, and therefore doe they reare out a rope of two hundred fathome, which is fastned to the Harping-iron, and lieth coyled in the Boat: And they let him haue as much of the rope as reacheth to the bottome, and when they perceiue him rising they hale in the rope to get neere him, and when the Whale commeth vp aboue water, then do the men lance him with their lances, either out of one Shallop or the other; for most commonly there bee two Shallops about the killing of one Whale. In lancing him they strike neere to the finnes he swimmeth withall, and as lowe vnder water neere his bellie as conueniently they can: but when he is lanced, he friskes and strikes with his tayle so forcibly, that many times when hee hitteth a Shallop hee splitteth her in pieces; so that the men are relieved and taken in by another Shallop: and sometimes he striketh so fully vpon them, that some of the men are either maymed, or killed with his stroke. Therefore they who vnder- take this businesse which is the principall thing in the Voyage, must not onely bee bold and resolute, but also discreet and wary; otherwise their rash forwardnesse may preuent them of their expected conquest; considering they haue no shield to withstand the offended beast their enemy, but onely by a heedfull warinesse, to auoide the receiuing of his dangerous stroke. Swimming is also requisite for a Whale-killer to be expert in, for it may be a meanes to saue his life, when he hath lost his Boat, and another is not neere presently to helpe him.

The Whale hauing received his deadly wound, then he spouteth bloud (whereas formerly he cast forth water) and his strength beginneth to fayle him; but before he dieth, hee will sometimes draw the Shallop three or foure miles from the place where he was first stricken: and as he is a dying, he turneth his bellie vpwards, which lieth vppermost being dead. Then they fasten a rope to his tayle, and with the Shallops, one made fast to another, they towe him towards the ship with his tayle foremost. Then doe they lay him erosse the sterne of the ship, where he is cut vp in this manner; two or three men in a Boat or Shallop come close to the side of the Whale, and hold the Boat fast there with a Boat-hooke; and another standing either in the Boat, or most commonly vpon the Whale, cutteth the fat (which we call *Blubber*) in square pieces with a cutting Knife, three or foure foot long. Then to race it from the flesh, there is a Crane or Cap- sten placed purposely vpon the poope of the ship, from whence there descendeth a rope with a hooke in it; this hooke is made to take hold on a piece of *Blubber*: and as the men winde the Capsten, so the cutter with his long knife looseth the fat from the flesh, euen as if the lard of a

Swine

Swine were to be cut off from the leane. When a piece is in order cut off, then let they lower the Crane, and let downe the Blubber to flote vpon the water, and make a hole in some part of it, putting a rope thorow it; and so they proceed to cut off more, fastning ten or twentie pieces together to bee towed a shoare at one time, being made fast to the sterne of a Boat or Shallop. These pieces being thus brought vnto the shoare side, they are drawne by one and one vpon the shoare with an high Crane, or carried vp by two men on a Barrow vnto a Stage, there to be cut into small pieces about a foot long, but thin: then it is carried vnto the choppers by two boyes, with two little hand-hookes, taking in each hand a piece, and so they put it into half-tubs which stand behind the choppers, out of which the choppers take it vp; who stand at the side of a boat which is raised of an equall height fit for the furnace. And the boat being fitted with all things necessarie for the choppers, they place the chopping blockes, which they make of the Whales tayle, and the Blubber is layd ready for them, as they vse it, in small pieces vpon the boord whereon they stand. Then the choppers take it vp with hand-hookes, and lay it on their blockes, and chop it in thin pieces (the thinner he cuts it, the better it is) and when it is chopped, they put it off the blocke downe into the Shallop, with a short Paddle made like a Cole-rake: and thus doe sixe or eight men stand chopping on the one side of the boat, and on the other side of the boat about two or three yards distant are the Furnaces and Coppers placed and heated. Then betweene the chopping boat and the Coppers, is layd a broad thicke planke, on which standeth a hoghead, which containeth as much as is put into the Copper, at one time for one boyling, and the tub being emptied, is made to slide vnto the chopping boat againe, being there filled with a copper ladle againe, and put into another Copper. When it is boyled enough, the small pieces of Blubber, which wee call *Fritters*, will looke browne as if they were fried. Then are they taken out with copper ladles, and some of the Oyle also with them, and put into a Barrow made close to dreyne the Oyle, which standeth ouer another Shallop, that is set on the back-side of the Furnace to receiue the Oyle in, and as soone as the Fritters are taken cleane out of the Copper, then presently is the tub of small Blubber emptied into the Copper againe to be also boyled.

The Boat into which the hot Oyle is put out of the Coppers, is euer kept halfe full of water, which doth not onely coole the Oyle before it runne into the Caske, but also is a cleanser of it from drosse, which descendeth to the bottome of the Boat. Out of the Oyle-boat doth the Oyle runne thirtie or fortie yards in Troughs or Gutters, and so into Buts or Hogheads, which being filled, is rolled off to coole, and another Caske layd to fill, and when there is any quantitie of Oyle made, it is carried aboard the ship in rafts. In this manner is the Oyle saued and prepared.

Now concerning the Whale Finnes, the Whales head being cut off from the body (as hee floteth at the sterne of the ship where hee is cut vp) is towed by a Boat as neere the shoare as it will come: but it is aground in twelue or thirteene foot water, then by crabes which are placed on land it is drawne on land, at seuerall times when the water is at highest, so neere the dry shoare, that men at a lowe water with their Boats on, cut off the Blubber and Finnes, which by the crabes are drawne on shoare, and the Finnes are with Axes, one seuered from another, and being made cleane, are packed vp by fiftie in a bundle, and so shipped.

There are eight seuerall kinds of Whales, and differing the one from the other in goodnesse, quantitie and qualitie.

Whale Finnes

Eight kinds of Whales known

1. Grand bay Whale.

2. Sarda.

3. Trumpa.

Spermacete.

4. Otta Sotta.

5. Gibarta.

The first sort of Whale is called the *Grand-bay*, taking his name from *Grand-bay* in *New-foundland*, as hauing there beene first killed: he is blacke of colour, with a smooth skinne, and white vnderneath the chaps. This Whale is the best for Oyle and Finnes of all the rest (and doth yeeld most the elder it growes.) This sort of Whale doth yeeld about an hundred hogheads of Oyle, and some five hundred Finnes.

The second sort of Whale is called *Sarda*, of the same colour as the former, but somewhat lesser, and the Finnes likewise lesser, and yeelds in Oyle according to his bignesse, sometimes seuentie hogheads, or eightie hogheads. This Whale hath naturally growing vpon his backe, white things like vnto Barnacles.

The third sort of Whale is called *Trumpa*, being as long as the first, but thicker forwards, of colour more gray then the former, hauing but one spoute in his head, and the rest haue all two; he hath in his mouth teeth about a span long, and as thicke as a mans wrist, but no finnes; his head is bigger then the two former, and in proportion farre bigger then his bodie. In the head of this Whale is the *Permessie*, which lieth there in a hole like a Well. This is the Whale that is supposed to yeeld the *Ambergreece*; There taken about fortie hogheads of Oyle besides the *Permessie*.

The fourth sort of Whale is called *Otta Sotta*, and is of the same colour of the *Trumpa*, hauing finnes in his mouth all white, but not aboue halfe a yard long, being thicker then the *Trumpa*, but not so long: he yeelds the best Oyle, but not aboue thirtie hogheads.

The fift sort of Whale is called *Gibarta*, of colour blacke like the two first, sauing that it hath standing vpon the top of his backe, a finne halfe a yard long. This Whale is as bigge

as the first; his fins little or nothing worth, being not above halfe a yard long: and hee yeeldeth about twelue hogheads of Oyle, all which his backe yeelds; as for his bellie it yeelds nothing at all.

6. *Sedena*.

The sixt sort is called *Sedena*, being of a whitly colour, and bigger then any of the former, the finnes not above one foot long, and he yeelds little or no Oyle.

7. *Sedena Negro*.

The seuenth is called *Sedena Negro*, of colour blacke, with a bume on his backe; this Whale yeelds neither Oyle, finnes, nor teeth, and yet he is of a great bignesse.

8. *Sewria*.

The eight sort is called *Sewria*, of colour as white as snow, of the bignesse of a Wherrie, he yeelds not above one hoghead or two of Oyle, nor any finnes, and is good meate to be eaten.

The description of Greenland.

Antiphrastical
appellation.
I haue found
this description
of Greenland,
with other
notes, written
by Ro. Fotherby.
Deere.

Greenland is a place in Nature nothing like vnto the Name: for certainly there is no place in the World, yet knowne and discovered that is lesse Greene then it. It is couered with snow, both the Mountaines and the lower Lands, till about the beginning of Iune, being very Mountainous, and beareth neither grasse nor tree, saue onely such as grow vpon the Moores and heathie grounds, in the North parts of England, which we call *Heath*, or *Ling*. This groweth when the snow melteth, and when the ground beginneth to be vncouered. And on this doe the Deere feed in the Summer time, and become very fat therewithall in a moneths space, but how they liue in the Winter time it is not easily to be imagined. For seeing at the end of May wee find the ground all couered with snow, it is very like, that in the time of Winter there is no part bare, where any thing can grow; especially during the time that the Sunne is altogether depressed vnder the horizon, which in the latitude of 77. degrees, continueth from the eighteenth of October till the fourth of Februarie. This Countrey by all probabilities hath neuer been inhabited by any people; notwithstanding, I thinke men might liue there, carrying thither good store of prouision of victuals, and other things necessary against the cold, which perhaps will be vehement in the Winter time, by the former reasons; namely, because the Sunne remayneth so long vnder the Horizon.

Neuerthelesse, there will not be any continuance of darknesse, because the Sunne in his greatest declination will be but 10. degrees vnder the Horizon, at this time of his being in the South of the Meridian in the former latitude of 77. degrees, which is once in foure and twentie houres; and therefore the time of their Noone will bee much lighter then our Night here in England, when the dayes are at the longest; for then is the Sunne 15. degrees vnder the Horizon at midnight, and yet the greatest darknesse is but like twi-light. And although it bee a generall saying, and a common receiued opinion, that the further North the greater cold, yet experience teacheth, that it is not alwaies true. For at *Mosco*, and thereabouts in the Winter time, there is extreme frosts and cold weather, insomuch that oftentimes men are brought home dead, being starued with cold; and many haue their noses and eares caused to fall off, through the extremity of the piercing aire: yet at *Edenborrow*, which is more Northerly by one degree and an halfe, and in all places neere vnto it the aire is temperate, and the cold tolerable, the snow neuer lying any long time on the ground after it is fallen. Notwithstanding, wee haue snow remaying all the yeere long in diuers places of England, but the reason of this is, because the aire is euer warmer vnto the Sea shoare, (as *Edenborrow* standeth) and contrariwise the cold is most vehement in places which are farthest remote from the Sea, as *Mosco* is situated.

Yes in China
euen neere the
Sea, and farre
neerer the
Sun, betwixt
30. and 40. the
Winters are
extreme.
R. Foib.

All the Creatures that appeare vnto vs vpon the Land, are Deere, Beares, and Foxes, and sundrie sorts of wilde Fowle, as Cuthbert Duckes, Willocks, Stints, Sea-pigeons, Sea-parrets, Gulls, Noddies, &c. The Author addes a discourse of sending condemned men to inhabit there, with diuers proiects for their seruice there, for the further discoverie how best to bee effected, for such things as are most necessary for this employment of Whale-killing, &c. but because experience hath giuen best instructions already, and destructions must otherwise be prevented, I haue forborne to detain the Reader in those (otherwise iudicious) speculations.

The Southermost part of Greenland stands in 76. degrees 30. minutes, which wee call, *Point Looke out*; and we haue discovered all the West side of the Land as farre vnto the Northwards as 80. degrees odde minutes: in which compasse wee haue already experience of fixe or eight good Harbours for the killing of the Whale; and on the East side we haue discovered as farre as 78. degrees, finding diuers Ilands, great and small, yeelding good Harbours, and store of Whales, and Sea-horses; and for a further discovery on the East side, I am perswaded it had bene farre greater, if the Dutch had not so disturbed vs in our proceedings, as also the *Hull-men*, who euer practised to follow our steps, after the discoverie within one yeere or two: as by our Masters Journall more at large may appeare. The best actions haue their hindrances and crosses, and so hath this had; for, the Dutch haue bene a bane to this Trade and Discoverie: The *Hull-men* haue done some bad seruice in this Action, for they were the first that carried the Dutch to the *Twitches*, as by *Whendens* Oath and Journall appeares, they were also a cause of that bad Voyage,

to vs in 1618. in that they animated the *Flemmings* to come backe to *Greenland* againe, as appeareth in this Iournall, in the yeere 1617. they haue done some other ill seruices against vs as well as the *Dutch*, but in regard they are our Countrey-men, I will omit and wish their amendment, and pray to God to send a good and further Discouery to bee made in these Northerne parts. Amen.

Reader, I present thee here three admirable Voyages of Discouery made by the Dutch, no whit enuying their due prayse, but honouring their worthy Acts and Arts. They haue formerly beene published in Dutch, and translated by W. Philip. I haue heere abbreviated them, as my use is with others, to auoid prolixitie. The Dutch themselves write that after the English Russian Trade, one Oliuer Bunell moued with hope of gaine, went from Enckhuysen to Pechora, where he lost all by shipwracke, hauing discovered *Cottinlarca* in *Noua Zemla*. These Navigations of the English, and that of Bunell, and the hopes of China and Cathay, caused the States Generall to send forth two shippes vnder the command of Hugo Linschoten, to the Streights of Wey-gates, and two others vnder William Bernards, by the perswasion of P. Plancius to goe right Northwards from *Noua Zemla*. Linschot went fiftie miles beyond the Streights, the Northerly winds, and late season forcing him backe. Bernards Iournall here followeth, of that and his two later Voyages, the two later written by one employed therein.

tect. edit. Am-
stelodami per
Hes. Gerard.
1611.

CHAP. III.

The first Navigation of WILLIAM BARENTS, alias BERNARDS into the North Seas; Written by GERAT DE VEER.

IT is a most certayne and an assured Assertion, that nothing doth more benefit and further the Common-wealth (specially these Countreyes) then the art and knowledge of Nauigation, in regard that such Countreyes and Nations as are strong and mightie at Sea, haue the meanes and ready way to draw, fetch, and bring vnto them for their mayntenance, all the principallest commodities and fruits of the Earth.

In these Navigations we must not be dismayed if some mislike, or if we cannot perfect a Discouery in the first, second, or third Voyage. *Alexander Magnus* (after he had wonne all *Grecia*, and from thence entred into little and great *Asia*; and comming to the farthest parts of *India*, there found some difficultie to passe) said, If wee had not gone forward, and persisted in our intent, which other men esteemed and held to be impossible, we had stil remayned and stayed in the entry of *Cicilia*, where as now we haue ouer-runne and past through all those large and spacious Countreyes: for nothing is found and effected all at one time, neyther is any thing that is put in practice, presently brought to an end. To the which end, *Cicero* wisely saith; God hath giuen vs some things, and not all things, that our Successors also might haue some-what to doe. Therefore we must not leaue off, nor stay our pretence in the middle of our proceedings, as long as there is any commoditie to be hoped, and in time to bee obtayned: for that the greatest and richest Treasures are hardliest to be found. I thought good to set downe, in regard that I haue vnderaken to describe the three Voyages made into the North Seas, in three yeeres, one after the other; behind *Norway*, and along and about *Musconia*, towards the Kingdome of *Cathaya*, and *China*: whereof, the two last, I my selfe holpe to effect; and yet brought them not to the desired end that we well hoped.

First, to shew our diligent, and most toyle some labour and paines taken, to find out the right course; which we could not bring to passe, as wee well hoped, wished, and desired, and possible might haue found it, by crossing the Seas, if we had taken the right course; if the Ice & the shortnesse of time, and bad crosse had not hindered vs. We haue assuredly found, that the onely and most hinderance to our Voyage, was the Ice that we found about *Noua Zembla*, vnder 73. 74. 75. and 76. degrees; and not so much vpon the Sea betweene both the Lands: whereby it appeareth, that not the neerenesse of the North-pole, but the Ice that comnieth in and out from the *Tartarian* Sea, about *Noua Zembla*, caused vs to feelee the greatest cold. Therefore in regard that the neerenesse of the Pole was not the cause of the great cold that wee felt, if wee had had the meanes to haue held our appointed and intended course into the North-east, we had peraduenture found some entrance: which course wee could not hold from *Noua Zembla*, because that there we entred amongst great store of Ice; and how it was about *Noua Zembla*, we could not tel, before we had sought it; and when we had sought it, we could not then alter our course, although also it is vncertayn, what we should haue done, if we had continued in our North-east course, because it is not yet found out. But it is true, that in the Countrey lying vnder 80. degrees, (which we esteeme to be *Greenland*) there is both Leaues and Grasse to be seene: Wherein, such Beasts

A thing not continued, cannot bee effected. All things are effected in conuenient time.

The first finding is hard, but the second attempt is easier.

as feed of Leaues and Grasse (as Harts, Hinds, and such like beasts live, whereas to the contrary in *Nova Zembla*, there groweth neyther Leaues nor Grasse, and there are no beasts therein but such as eat flesh, as Beares and Foxes, &c. Although *Nova Zembla* lyeth 4.5. and 6. degrees more Southerly from the Pole, then the other Land aforesaid. It is also manifest, that vpon the South and North-side of the Line of the Sunne on both sides, betweene both the Tropicks, vnder 23. degrees and an halfe, yet it is as hot, as it is right vnder the Line. What wonder then should it be, that about the North-pole also and as many degrees on both sides, it should not be colder then right vnder the Pole? It was not the Sea, nor the neerenesse vnto the Pole, but the Ice about the Land, that let and hindered vs (as I said before) for that asloone as we made from the Land, and put more into the Sea, although it was much further Northward, presently we felt more warmth, and in that opinion our Pilot *William Barents* dyed, who notwithstanding the tearefull and intolerable cold that he indured, yet he was not discouraged, but offered to lay wagers with diuers of vs, that by Gods helpe, hee would bring that pretended Voyage to an end, if he held his course North-east from the North Cape. But I will leaue that, and shew you of the three Voyages aforesaid, begunne and set forth by the permission and furtherance of the Generall States of the vnited Prouinces, and of Prince *Maurice*, as Admirall of the Sea, and the rich Towne of *Amsterdam*.

First, you must vnderstand, that in *Anno 1594.* there was foure ships set forth out of the vnited Prouinces, whereof two were of *Amsterdam*; one of *Zelandt*, and one of *Enckbuisen*, that were appointed to sayle into the North Seas, to discover the Kingdomes of *Cathaya*, and *China*; Northward from *Norway*, *Muscovia*, and about *Tartaria*, whereof *William Barents*, a notable skilfull and wise Pilot, was Commander ouer the ships of *Amsterdam*, and with them vpon Whit-sunday, departed from *Amsterdam*, and went to the *Texell*.

Vpon the fifth of Iune they sayled out of the *Texel*, and hauing a good wind and faire weather, vpon the three and twentieth of Iune, they arrived at *Riduin* in *Muscovia*, which for that it is a place well knowne and a common Voyage, I will make no further description thereof. The nine and twentieth of Iune, at foure of the clocke in the after-noone, they set sayle out of *Riduin*.

The fourth of Iuly they saw *Nova Zembla*, lying South-east and by East six or seuen miles from them, where they had blacke durrie ground at one hundred and fye fathome. *William Barents* tooke the height of the Sunne with his Crosse-staffe, when it was at the lowest, that is betweene North North-east, and East and by North, and found it to be eleuated aboue the Horizon six degrees and $\frac{1}{2}$. part, his declination being 12. degrees and 55. minutes, from whence subtracting the aforesaid height, there resteth sixteenth degrees and 35. minutes, which being subtracted from 90. degrees, there resteth 73. degrees and 25. minutes. Then they woond Eastward and sayled fye miles, East and by South, and East South-east, and past by a long point of Land that lay out into the Sea, which they named *Langenes*, and hard by that point Eastward, there was a great Bay, where they went a Land with their Boat, but found no people. From *Langenes* to Cape *Bapo*, East North-east it is foure miles. From Cape *Bapo* to the West point of *Lombsbay* North-east and by North are fye miles, and betweene them both there are two Creeks. *Lombsbay* is a great wide Bay, on the West-side thereof hauing a faire Hauen, six, seuen, or eight fathome deepe, blacke sand, there they went on shoare with their Boat, and vpon the shoare placed a Beacon, made of an old Mast which they found there; calling the Bay *Lombsbay*, because of a certayne kind of Beares so called, which they found there in great abundance. The East point of *Lombsbay*, is a long narrow point, and by it there lyeth an Iland, and from that long point to Sea-ward in, there is a great Creeke. This *Lombsbay* lyeth vnder 74. degrees and $\frac{1}{2}$. part. From *Lombsbay* to the point of the *Admirals Iland*, they sayled six or seuen miles, North-east and by North. The *Admirals Iland* is not very faire on the East-side, but a farre off very flat, so that you must shunne it long before you come at it, it is also very vneuen, for at one casting of the Lead they had ten fathome deepe, and presently at another casting of the Lead they had but six fathome, and presently after that againe ten, eleuen, and twelue fathome, the streame running hard against the Flats.

From the East-end of the *Admirals Iland*, to Cape *Negro*, that is the *Blacke point*, they sayled about fye or six miles, East North-east, and a mile without the *Blacke point* it is seuentie fathome deepe, the ground slimy, as vpon *Pamphius*, right East-ward of the *Blacke point*, there are two sharpe pointed Hills in the Creeke, that are easie to be knowne. The sixt of Iuly, the Sunne being North, they come right before the *Blacke point* with faire weather, this *Blacke point* lyeth vnder 75. degrees and 20. minutes. From the *Blacke point* to *Williams Iland*, they sayled seuen or eight miles, East North-east, and betweene them both about halfe a mile, there lay a small Iland.

The seuenth of Iuly they sayled from *Williams Iland*, and then *William Barents* tooke the height of the Sunne, with his Crosse-staffe, and found it to be eleuated aboue the Horizon in the South-west and by South 53. degrees and 6. minutes, his declination being 22. degrees and 45. minutes, which being added to 53. degrees and 6. minutes, make 75. degrees and 55. minutes. This is the right height of the Pole of the said Iland. In this Iland they found great store of
Drift.

Driftwood, and many Sea-horses being a kind of fish that keepeth in the Sea, having very great teeth, which at this day are vsed in stead of Iuory or Elephants Teeth, there also is a good Road for ships, at twelue and thirtene fathome deepe against all winds, except it bee West South-west, and West-winds, and there they found a piece of a *Russia* ship, and that day they had the wind East North-east, mistie weather.

Sea-horses, or
Morses.

The ninth of Iuly they entred into *Beeren-fort*, vpon the Road vnder *Williams* Iland, and there they found a white Beare, which they perceiuing, presently entred into their Boat, and shot her into the bodie with a Musket, but the Beare shewed most wonderfull strength, which almost is not to be found in any beast, for no man euer heard the like to bee done by any Lion or cruell beast whatsoeuer: for notwithstanding that she was shot into the bodie, yet she leapt vp, and swamme in the water, the men that were in the Boat rowing after her, cast a Rope about her necke, and by that meanes drew her at the sterne of the Boat, for that not hauing seene the like Beare before, they thought to haue carryed her alieue in the ship, and to haue shewed her for a strange wonder in *Holland*; but she vsed such force, that they were glad that they were rid of her, and contented themselves with her skinn only, for shee made such a noyse, and stroue in such sort, that it was admirable, wherewith they let her rest and gaue her more scope, with the Rope that they held her by, and so drew her in that sort after them, by that meanes to wearie her: meane-time, *William Barents* made neerer to her, but the Beare swamme to the Boat, and with her fore-feet got hold of the sterne thereof, which *William Barents* perceiuing, said, she will there rest her selfe, but she had another meaning, for she vsed such force, that at last she had gotten halfe her body into the Boat, wherewith the men were so abashed, that they ranne into the further end of the Boat, and thought verily to haue bene spoyled by her, but by a strange meanes they were deliuered from her, for that the Rope that was about her necke, caught hold vpon the hooke of the Ruther, whereby the Beare could get no further, but so was held backe, and hanging in that manner, one of the men boldly stept forth from the end of the Scute, and thrust her into the bodie with a halfe-pike; and therewith shee fell downe into the water, and so they rowed forward with her to the shippe, drawing her after them, till shee was in a manner dead, wherewith they killed her out-right, and hauing flayed her, brought the skin to *Amsterdam*.

Beeren-fort
white Beare,
terrible.

The twentieth of Iuly, they sayled out of *Beeren-fort* from *Williams* Iland, and the same day in the morning got to the Iland of *Crosses*, and there went on Land with their Pinnasse, and found the Iland to be barren, and full of Clifles and Rocks, in it there was a small Hauen, wherinto they rowed with their Boat. This Iland is about halfe a mile long, and reacheth East and West, on the West end it hath a banke, about a third part of a mile long, and at the East end also another banke, vpon this Iland there standeth two great Crosses, the Iland lyeth about two long miles from the firme Land, and vnder the East-end thereof there is a good Road, at fixe and twentie fathome soft ground; and somewhat closer to the Iland on the Strand, at nine fathome sandie ground.

Iland of Crosses

From the Iland of *Crosses* to the point of *Cape Nassaw*, they sayled East, and East and by North about eight miles: it is a long flat point which you must be carefull to shunne, for thereabouts at seuen fathome there were flats or shoales, very farre from the Land; it lyeth almost vnder 76. degrees and a halfe. From the West end of *Williams* Iland, to the Iland with the *Crosses* is three miles, the course North. From *Nassaw* point they sayled East and by South, and East South-east five miles, and then they thought that they saw Land in North-east, and by East, and sayled towards it five miles North-east to descrye it, thinking it to bee another Land, that lay Northward from *Noua Zembla*, but it began to blow so hard out of the West, that they were forced to take in their Marfaile, and yet the wind rose in such manner, that they were forced to take in all their Sayles, and the Sea went so hollow, that they were constrained to driue sixteene houres together, without sayle, eight or nine miles East North-east.

Cape Nassaw.

The eleuenth of Iuly their Boat was by a great waue of the Sea funke to the ground, and by that meanes they lost it, and after that they draue without sayles five miles, East and by South; at last the Sunne being almost South-east, the wind came about to the North-west, and then the weather began somewhat to cleere vp, but yet it was very mistie. Then they hoysed vp their sayles againe and sayled foure miles till night, that the Sunne was North and by East, and there they had sixtie fathome deepe, muddie ground, and then they saw certayne flakes of Ice, at which time vpon the twelfth of Iuly they woond West, and held North-west, and sayled about a mile with mistie weather, and a North-west wind, and sayled vp and downe West South-west three or foure miles, to see if they could find their Boat againe: after that they woond againe with the wind, and sayled foure miles South-east, till the Sunne was South-west, and then they were close by the Land of *Noua Zembla*, that lay East and by North, and West and by South; from thence they woond ouer againe till noone, and sayled three miles, North and by West, and then till the Sunne was North-west, they held North-west and by North three miles, then they woond East-ward and sayled foure or five miles North-east and by East.

The thirteenth of Iuly at night, they found great store of Ice, as much as they could descry out of the top, that lay as if it had bene a plaine field of Ice, then they woond Westward ouer from the Ice.

The

The seventeenth of July, *William Barents* took the height of the Sunne with his *Astrolabium*, and then they were vnder 77. degrees and a $\frac{1}{2}$. of the Pole, and sayled Southward six miles, and perceiued the firme Land, lying South from them. Then they sayled till the nineteenth of July in the morning, West South-west sixe or seuen miles, with a North-west winde, and mistie weather, and after that South-west and South-west and by West seuen miles, the Sunne being 77. degrees 5. minutes lesse. Then they sayled two miles South-west, and were close by the land of *Noua Zembla*, about *Cape Nassaw*.

The five and twentieth of July, they were so inclosed about with flakes of Ice, that out of the top they could not discerne any thing beyond it, and sought to get through the Ice, but they could not passe beyond it. At night, they took the height of the Sunne, when it was at the lowest betweene North and North-east, and North-east and by North, it being eleuated above the Horizon 6. degrees, and $\frac{1}{2}$. his Declination being 19. degrees 50. minutes, now take 6. degrees $\frac{1}{2}$. from 19. degrees and 50. minutes, and there resteth 13. degrees 5. minutes, which subtracted from 90. there resteth 77. degrees lesse 5. minutes.

Cape Trust.

The sixe and twentieth of July in the morning, they sayled sixe miles South South-east, till the Sunne was South-west, and then South-east sixe miles, and were within a mile of the land of *Noua Zembla*, and came againe to *Cape Trust*.

The eight and twentieth of July, the height of the Sun being taken at nocne with the *Astrolabium*, it was found to be eleuated above the Horizon 57. degrees and 6. minutes, her Declination being 19. degrees and 18. minutes, which in all is 76. degrees and 24. minutes, they being then about foure miles from the land of *Noua Zembla*, that lay all couered ouer with Snow, the weather being cleare, and the winde East.

Ice point.
Gold Stones.

The nine and twentieth of July, the height of the Sun being taken with the *Crosse-staffe*, *Astrolabium* & *Quadrant*, they found it to be eleuated above the Horizon 32. degrees, her declination being 19. degrees, which subtracted from 32. there resteth 13. degrees of the Equator, which being subtracted from 90. there rested 77. degrees, and then the nearest North point of *Noua Zembla*, called the *Ice point*, lay right East from them. There they found certaine Stones that glistered like gold, which for that cause they named *Gold-stones*, and there also they had a faire Bay with sandie ground.

Orange Islands.

Morfes described.

Vpon the same day they woond Southward againe, and sayled South-east two miles betweene the Land and the Ice, and after that from the *Ice point* East, and to the Southward sixe miles to the Islands of *Orange*; and there they laboured forward betweene the Land and the Ice, with faire still weather, and vpon the one and thirtieth of July got to the Islands of *Orange*. And there went to one of those Islands, where they found about two hundred Walrusen, or Sea-horses, lying vpon the shoare to baste themselves in the Sunne. This Sea-horse is a wonderfull strong Monster of the Sea, much bigger then an Oxe, which keepe continually in the Seas, hauing a skin like a Sea-calfe or Seale, with very short hayre, mouthed like a Lion, and many times they lye vpon the Ice; they are hardly killed vnlesse you strike them just vpon the forehead, it hath foure Feet, but no Eares, and commonly it hath one or two young ones at a time. And when the Fisher-men chance to finde them vpon a flake of Ice with their young ones, theee casteth her young ones before her into the water, and then takes them in her Armes, and so plungeth vp and downe with them, and when shee will reuenge her selfe vpon the Boates, or make resistance against them, then she casts her young ones from her againe, and with all her force goeth towards the Boate (whereby our men were once in no small danger, for that the Sea-horse had almost stricken her teeth into the sterne of their Boate) thinking to ouer-throw it, but by meanes of the great crie that the men made, she was afraid, and swomme away againe, and tooke her young ones againe in her armes. They haue two teeth sticking out of their mouthes, on each side one, each being about halfe an Ell long, and are esteemed to bee as good as any Iuorie or Elephants teeth, specially in *Musconia*, *Tartaria*, and thereabouts where they are knowne, for they are as white, hard, and euen as Iuorie.

The Sea-horses that lay bathing themselves vpon the Land, our men supposing that they could not defend themselves being out of the water, went on shoare to assaile them, and fought with them, to get their Teeth that are so rich, but they brake all their Hatchets, Cuttle-axes, and Pikes in pieces, and could not kill one of them, but stricke some of their Teeth out of their mouthes, which they tooke with them; and when they could get nothing against them by fighting, they agreed to goe aboard the Ship, to fetch some of their great Ordnance, to shoot at them therewith; but it began to blow so hard, that it rent the Ice into great pieces, so that they were forced not to doe it, and therewith they found a great white Beare that slept, which they shot into the bodie, but shee ranne away, and entred into the water; the men following her with their Boate, and killed her out-right, and then drew her vpon the Ice, and so sticking a halfe-pike vpright, bound her fast vnto it, thinking to fetch her when they came back againe, to shoot at the Sea-horses with their Ordnance, but for that it began more and more to blow, and the Ice therewith brake in peeces, they did nothing at all.

After that, *William Barents* finding that hee could hardly get through, to accomplish and end his

his pretended Voyage, his men also beginning to bee wearie, and would sayle no further, they all together agreed to returne backe againe, to meet with the other Ships that had taken their course to the *Wey-gates*, or the Straights of *Nassaw*, to know what Discoveries they had made there. The first of August they turned their course to sayle backe againe from the Ilands of *Orange*; There *William Barents* tooke the height of the Sunne, it being vnder 71. degrees and $\frac{1}{2}$. and there they found a great Creeke, which *William Barents* judged to bee the place where *Oliuer Brunel* had bene before, called *Cosfincarch*. From the *Blacke* Iland they sayled South, and South and by East to another small point three miles, on which point there stood a Crosse, and therefore they called it the *Crosse-point*, there also was a flat Bay and low water, five, six, or seven fadome deepe soft ground. From *Crosse-point* they sayled along by the land South South-east foure miles, and then came to another small point, which behind it had a great Creeke, that reached Eastward: This point they called the fifth point, or *Saint Laurence* point. From the fifth point they sayled to the *Sconce* point three miles, South South-east, and there lay a long blacke Rocke close by the land, whereon there stood a Crosse; then they entred into the Ice againe, and put inward to the Sea because of the Ice. Their intent was to sayle along the coast of *Noua Zembla* to the *Wey-gates*, but by reason that the Ice met them, they woond Westward, and from the ninth of August in the Eeuening, till the tenth of August in the Morning, sayled West and by North eleuen miles, and after that foure miles West North-west, and North-west and by West, the winde being North; in the Morning they woond Eastward againe, and sayled vntill Eeuening ten miles East, and East and by South; after that East, and East and by North foure miles, and there they saw land, and were against a great Creeke, where with their Boate they went on land, and there found a faire Hauen five fadome deepe, sandie ground. This Creeke on the North side hath three blacke points, and about the three points lyeth the road, but you must keepe somewhat from the third point, for it is stonie, and betweene the second and third point there is another faire Bay, for North-west, North, and North-east windes, blacke sandie ground. This Bay they called *Saint Laurence* Bay, and there they tooke the height of the Sunne, which was 70. degrees and $\frac{1}{2}$. From *Saint Laurence* Bay, South South-east two miles to *Sconce* point, there lay along blacke Rocke close by the land, whereon there stood a Crosse, there they went on Land with their Boat, and perceiued that some men had bene there, and that they were fled to saue themselves, for there they found fixe Sackes with Rye-meale buried in the ground, and a heape of stones by the Crosse, and a Bullet for a great Piece, and thereabouts also there stood another Crosse, with three Houses made of wood, after the North Countrey manner: and in the houses they found many barrells of Pike-staues, whereby they conjectured, that there they vsed to take Salmons, and by them stood five or six Coffins, by Graues, with dead mens bones, the Coffins standing vpon the ground all filled vp with stones; there also lay a broken *Russia* ship, the Keele thereof being fortie foure foot long, but they could see no man on the Land: it is a faire Hauen for all windes, which they called the *Meale-hauen*, because of the Meale that they found there. From the blacke Rocke or Cliffe with the Crosse, two miles South South-east, there lay a low Iland a little into the Sea; from whence they sayled nine or ten miles South South-east, there the height of the Sunne was 70. degrees and 50. minutes, when it was South South-west. From that Iland they sayled along by the Land foure miles South-east and by South, there they came to two Ilands, whereof the vttermoost lay a mile from the Land: those Ilands they called *Saint Clara*. Then they entred into the Ice againe, and woond inward to the Sea in the wind, and sayled from the Iland vntill Eeuening, West South-west foure miles, the wind being North-west; that Eeuening it was very mistie, and then they had eightie fadome deepe. Then againe they sayled South-west and by West, and West South-west three miles, there they had seuentie fadome deepe, and so sayled till the thirteenth of August in the morning, South-west and by West foure miles, two houres before they had ground at fiftie fixe fadome, and in the morning at fortie five fadome, soft muddie ground. Then they woond from the land and sayled North, and North and by East foure miles, from thence they woond to land againe, and sayled till the fourteene of August, five or sixe miles South-west, sayling close by the land, which (as they ghesse) was the Iland of *Colgoyen*. August the fifteenth, the Sun being South-west, *William Barents* tooke the height thereof, and found it to bee eleuated aboue the Horizon 35. degrees, his Declination being 14. degrees and $\frac{1}{2}$. so that as there wanted 55. degrees of 90. which 55. and 14. degrees $\frac{1}{2}$. being both added together, made 69. Degrees 15. Minutes, which was the height of the Pole in that place; the wind being North-west, then they sayled two miles more Eastward, and came to the Ilands called *Matfloe* and *Delgoy*, and there in the morning they met with the other Ships of their companie, being of *Zelande* and *Enck-huyzen*, that came out of *Wey-gates* the same day, there they shewed each other where they had bene, and how farre each of them had sayled and disconered. The Ship of *Enck-huyzen* had past the Straights of *Wey-gates*, and said, that at the end of *Wey-gates* hee had found a large Sea, and that they had sayled fiftie or sixtie miles further Eastward, and were of opinion that they had bene about the Riuer *Obi*, that commeth out of *Tartaria*, and that the Land of *Tartaria* reacheth North-eastward againe from thence, whereby they thought that

that they were not farre from Cape *Tabin*, which is the point of *Tartaria*, that reacheth towards the Kingdome of *Cathai*, North-east and then Southward, and so thinking that they had Discouered enough for that time, and that it was too late in the yeere to sayle any further, as also that their Commission was to discouer the scituation, and to come home againe before Winter, they turned againe towards the *Wey-gates*, and came to an Iland about fve miles great, lying South-east from *Wey-gates* on the *Tartarian* side, and called it the *States Iland*, there they found many Stones that were of Christall Mountayne, being a kind of Diamond.

When they were met together, as I sayd before, they made signes of joy, discharging some of their Ordnance, and were merrie, the other Ships thinking that *William Barents* had sayled round about *Nova Zembla*, and had come backe againe through the *Wey-gates*: and after they had shewed each other what they had done, and made signes of joy for their meeting, they set their course to turne backe againe for *Holland*, and vpon the sixteenth of August they went vnder the Ilands of *Marfloe* and *Delgoy*, and put into the road, because the wind was North-west, and lay till the eighteenth of August. Then they set sayle, and came to the *Texel* the sixteenth of September.

CHAP. IIII.

A briefe Declaration of BARENTS his second Navigation, made in Anno 1595. behinde Norway, Muscouia, and Tartaria, written by GERAT DE VEER.

He foure Ships aforesaid, being returned home about Haruest-time, in Anno 1594. they were in good hope that the Voyage aforesaid would bee done, by passing along the Straights of *Wey-gates*, and specially by the report made by the two Ships of *Zelandt*, and *Enck-huyfen*, wherein *Iohn Huyghen* of *Linschoten* was Committee, who declared the manner of their trauell in such sort, that the Generall States and Prince *Maurice* resolued, in the beginning of the next yeere to prepare certayne Ships, not onely (as they went before) to discouer the passage, but to send certayn Wares and Merchandizes thither, wherein the Merchants might lade what Wares they would, with certaine Factors to sell the said Wares, in such places as they should arriue, neither paying Freight nor Custome. *Peter Plantius* a learned Cosmographer, being a great furtherer and setter forward of this Voyage, and was their chiefe Instructor therein, setting downe the scituation of the Coasts of *Tartaria*, *Cathaia*, & *China*; but how they lye it is not yet sufficiently Discouered, for that the courses and rules by him set downe, were not fully effected, by meanes of some inconueniences that fell out, which by reason of the shortnesse of time could not bee holpen.

James Hemskerke famous for the Gibraltar exploit.

In Anno 1595. the Generall States of the vnited Prouinces, and Prince *Maurice*, caused seuen Ships to bee prepared to sayle through the *Wey-gates*, or the Straights of *Nassau*, to the Kingdome of *Cathaia* and *China*: two out of *Amsterdam*, two out of *Zelandt*, two out of *Enck-huyfen*, and one out of *Rotterdam*: sixe of them laden with diuers kindes of Wares, Merchandizes, and with Money and Factors, to sell the said Wares; the seuenth being a Pinnasse, that had Commission, when the other Ships were past about the Cape de *Tabin* (which is the furthest point of *Tartaria*) or so farre, that they might sayle forth Southward, without any let or hinderance of the Ice, to turne backe againe, and to bring newes thereof: and I being in *William Barents* Ship that was our chiefe Pilot, and *James Hemskerke* chiefe Factor, thought good to write downe the same in order, as it is hereafter declared, as I did the first Voyage, according to the course and stretching of the Land as it lyeth.

First, after we had beene mustered at *Amsterdam*, and euery man taken an Oath, that was then purposely ministred vnto vs; vpon the eightene of Iune wee sayled to the *Texel*, from thence to put to Sea, with other Ships that were appointed to meet vs at a certayne day; and so to begin our Voyage in the name of God. The second of Iuly wee set sayle out of the *Texel*. The fifth of August, the North Cape lay about two miles East from vs, and when the Sunne was North-west, the *Mother and her Daughters* lay Southward from vs foure miles.

The seuenteenth, wee saw great store of Ice, all along the Coast of *Nova Zembla*, and casting out the Lead, had 75. fathom soft ground. After that we held diuers courses because of the Ice, and sayled South-east and by East, & South South-east, for the space of eightene miles, till the eighteenth of August, when the Sunne was East, and then we cast out the lead againe, and found 30. fathome soft ground, and within two houres after that, fathome, red sand, with small shelles: three Glasses after that we had ground at twentie fathome, red sand, with blacke shels, as before: then wee saw two Ilands, which they of *Enck-huyfen* gaue the names of Prince *Maurice*, and his Brother, which lay from vs South-east three miles, being low Land, and then wee sayled eight miles, till the Sun was South. Then we sayled East, and oftentimes casting out the lead, we found

twentie,

twentie, nineteene, eightene, and seuentene fathome deep, good ground mixed with black shels, and saw the *Wey-gates* (the Sunne being West) which lay East North-east from vs about fife miles, and after that we sayled about eight miles.

Then we sayled vnder 70. degrees, vntill we came to the *Wey-gates*, most part through broken Ice, and when we got to *Wey-gates*, we cast out our Lead, and for a long time found thirteene and fourteene fathome, soft ground, mixed with blacke shels, not long after that we cast out the Lead and found ten fathome deepe, the wind being North, and we forced to hold stifly aloofe, in regard of the great quantitie of Ice, till about mid-night, then were forced to wind Northward, because of certaine Rocks that lay on the Southside of *Wey-gates*, right before vs, about a mile and a halfe, hauing ten fathome deepe: then we changed our course, and sayled West North-west for the space of foure Glasse, after that we woond about againe East, and East and by South; and so entred into *VVey-gates*, and as wee went in, wee cast out the Lead, and found seuen fathome deepe, little more or lesse, till the nineteenth of August, and then the Sunne being South-east, we entred into the *VVey-gates*, in the Road, the wind being North. The right Channell betweene the *Image point* and the *Samuters Land* was full of Ice, so that it was not well to bee past thoro-
row, and so we went into the Road (which we called the *Traen Bay*, because we found store of *Traen-oyle* there, this is a good Bay for the course of the Ice, and good almost for all winds, and we may sayle so farre into it as we will, at foure, fife, and three fathome, good Anchor-ground, on the East side it is deepe water.

The twentieth of August, the height of the Sunne being taken with the Crosse-staffe, wee found that it was eleuated aboue the Horizon 69. degrees 21. minutes, when it was South-west and by South, being at the highest, or before it beganne to descend. The one and twentieth of August, we went on Land within the *VVey-gates* with foure and fiftie men, to see the situation of the Countrey, and being two miles within the Land we found many *Vel-werck*, *Traen*, and such like Wares, and diuers foot-steps of men, and Deere; whereby wee perceiued that some men dwelt thereabouts, or else vsed to come thither. And to assure vs the more thereof, wee might perceiue it by the great number of Images, which we found there vpon the *Image* or *Beelthooke*, (so called by vs) in great abundance, whereof ten dayes after wee were better informed by the *Samuters* and the *Russians*, when wee spake with them. And when wee entred further into the Land, we vsed all the meanes we could, to see if we could find any houses or men, by whom we might be informed of the situation of the Sea thereabouts, whereof afterward we had better intelligence by the *Samuters*; that told vs, that there are certayne men dwelling on the *VVey-gates*, and vpon *Noma Zembla*, but we could neither find men, houses, nor any other things, so that to haue better information, wee went with some of our men further South-east into the Land; towards the Sea-side, and as we went, we found a path-way made with mens feet in the Mosse or Marsh-ground, about halfe knee deepe, for that going so deepe we felt hard ground vnder our feet, which at the deepest was no higher then our shooes, and as we went forward to the Sea-coast, we were exceeding glad, thinking that we had seene a passage open, where we might get through, because we saw so little Ice there: and in the Euening entring into our ship againe, we shewed them that newes. Meane-time, our Master had sent out a Boat to see if the *Tartarian Sea* was open, but it could not get into the Sea because of the Ice, yet they rowed to the *Crosse-point*, and there let the Boat lye, and went ouer the Land to the West point, and there perceiued that the Ice in the *Tartarian Sea*, lay full vpon the *Russian Coasts*, and in the mouth of *VVey-gates*.

The three and twentieth of August we found a *Lodgie*, or Boat of *Pitzore*, which was sewed together with Bast or Ropes, that had bene Northward to seeke for some Sea-horses Teeth, *Traen*, and Geese, which they fetcht with their Boat, to lade in certaine shippes that were to come out of *Russia* through *VVey-gates*. Which ships they said (when they spake with vs) were to sayle into the *Tartarian Sea*, by the Riuer of *Oby*, to a place called *Ugolita* in *Tartaria*, there to stay all Winter, as they vsed to doe euery yeere: and told vs that it would yet bee nine or ten Weekes ere it began to freeze in that place, and that when it once beganne to freeze, it would freeze so hard, that as then men might go ouer the Sea into *Tartaria* (along vpon the Ice) which they called *Mermare*.

The foure and twentieth of August in the morning betimes, we went on board of the *Lodgie*, to haue further information and instruction of the Sea, on the Eastside of *VVey-gates*, and they gaue vs good instruction, such as you haue heard.

The fife and twentieth of August we went againe to the *Lodgie*, and in friendly manner spake with them, we for our parts offering them friendship; and then they gaue vs eight fat Geese, that lay in the bottome of their Boat: we desired that one or two of them would goe with vs aboard our ship, and they willingly went with vs to the number of seuen; and being in our ship, they wondred much at the greatnesse and furniture of our ship: and after they had seene and looked into it in euery place, we set Fish, Butter and Cheese before them to eate, but they refused it; saying, that that day was a Fasting day with them, but at last when they saw some of our Pickled Herrings, they eate them both heads, rayles, skinnies, and guts, and hauing eaten thereof,

Images.

we gaue them a small Firkin of Herrings, for the which they gaue vs great thankes, knowing not what friendship they should doe vs to requite our courtesie, and wee brought them with our Pinnasse into the *Traen Bay*. About Noone we hoysed vp our Anchors with a West North-west wind; the course or stretching of *Wey-gates*, is East to *Cruis* point, and then North-east to the *Twist* point, and somewhat more Easterly: From thence the Land of *Wey-gates*, reacheth North North-east, and North and by East, and then North, and somewhat Westerly, wee sayled North-east and Eastward two miles, by the *Twist* point, but then we were compelled to saile backe againe, because of the great store of Ice, and tooke our course to our Road aforesaid: and sayling backe againe we found a good place by the *Crosse* point, to anchor in that night. The six and twentieth of August in the morning we hoysed Anchor, and put out our fork-saile, and so failed to our old Road, and there to stay for a more conuenient time.

They speake
with Samoyeds.

The eight and twentieth, nine and twentieth, and thirtieth of August till the one and thirtieth, the wind for the most part was South-west, and *William Barents* our Captaine sailed to the South-side of *Wey-gates*, and there went on Land, where we found certaine Wildmen (called *Samoyters*) and yet not altogether wilde, for they being twentieth in number, staid and spake with our men, being but nine together, about a mile within the Land, our men not thinking to find any men there (for that we had at other times beene on Land in the *Wey-gates*, and saw none) at last, it being mistie weather, they perceiued men, five and five in a company, and wee were hard by them before we knew it: then our Interpretour went alone towards them to speake with them; which they perceiuing, sent one towards vs, who comming almost to our men, tooke an Arrow out of his Quiver, offering to shoot at him; wherewith our Interpretor, being without Armes, was afraid, and cryed vnto him, saying (in *Russian* speech;) *Shoote not, we are friends*: which the other hearing, cast his Bow and Arrowes to the ground, therewith giuing him to vnderstand that he was well content to speake with our man: which done, our man called to him once againe, and said: *We are friends*: whereunto he made answere and said; then you are welcome: and saluting one the other, bended both their heads downe towards the ground, after the *Russian* manner: this done, our Interpretor questioned with him, about the situation and stretching of the Sea Eastward through the Streights of *Wey-gates*; whereof he gaue vs good instruction, saying: that when they should haue past a point of land about five daies sailing from thence, shewing North-eastward; that after that, there is a great Sea (shewing towards the South-east vpward,) saying, that he knew it very well, for that one had beene there that was sent thither by their King with certaine Souldiers, whereof he had beene Captaine.

Sea open.

Samoyeds ap-
parell.

The manner of their Apparell is, like as we vse to paint Wildmen, but they are not wilde; for they are of reasonable judgement: they are apparellled in Harts skinnnes from the head to the feet, vnlesse it be the principallest of them, which are apparellled, whether they be men or women, like vnto the rest, as aforesaid, vnlesse it be on their heads, which they couer with certaine coloured Cloth lined with Furre: the rest wear Caps of Harts or Bucks skinnnes, the rough side outwards, which stand close to their heads, and are very fit. They wear long Haire, which they pleate and fold, and let it hang downe vpon their backs. They are (for the most part all) short and low of stature, with broad flat faces, small eyes, short legs, their knees standing outwards; and are very quicke to goe and leape. They trust not Strangers; for although that wee shewed them all the courtesie and friendship that wee could, yet they trusted vs not much: which wee perceiued hereby, that as vpon the first of September wee went againe on Land to them, and that one of our men desired to see one of their Bowes: they refused it, making a signe that they would not doe it. Hee that they called their King, had Centinels standing abroad, to see what was done in the Countrey, and what was bought and sold: At last, one of our men went neerer to one of the Centinels, to speake with him, and offered him great friendship, according to their accustomed manner, withall giuing him a Bisket; which he with great thankes tooke, and presently eate it; and while hee eate it, hee still lookt diligently about him on all sides what was done.

Haire, person,
stature.

Their King.

Their Sleds.

Their Sleds stood alwayes readie with one or two Harts in them, that runne so swiftly with one or two men in them, that our Horses are not able to follow them. One of our men shot a Musket towards the Sea, wherewith they were in so great feare, that they ranne and leapt like mad men: yet at last, they satisfied themselues, when they perceiued that it was not maliciously done to hurt them: and we told them by our Interpretor, that we vsed our Peeeces in stead of Bowes; whereat they wondered, because of the great blow and noyse that it gaue and made: and to shew them what wee could doe therewith, one of our men tooke a flat stone about halfe a handfull broad, and set it vpon a Hill a good way off from him: which they perceiuing, and thinking that we meant some-what thereby, fiftie or sixtie of them gathered round about vs; and yet some-what farre off, wherewith hee that had the Peece, shot it off, and with the Bullet smote the stone in sunder: whereat they wondred much more then before.

Departure.

After that, wee tooke our leaues one of the other, with great friendship on both sides; and when we were in our Pinnasse, wee all put off our Hats, and bowed our heads vnto them, sounding our Trumpet: They (in their manner) saluting vs also, and then went to their Sleds againe.

And

And after they were gone from vs, and were somewhat within the Land, one of them came riding to the shoare, to fetch a rough-hewed Image, that our men had taken off the shoare, and carried into their Boate: and when hee was in our Boate, and perceiued the Image, he made vs a signe that wee had not done well to take away that Image: Which we beholding, gaue it to him againe: Which when hee had receiued, he placed it vpon a Hill right by the Sea side, and tooke it not with him, but sent a Sled to fetch it from thence: and as farre as wee could perceiue, they esteemed that Image to be their God; for that right ouer against that place in the *Wey-gates*, which wee called *Beelt-hooke*, we found certayne hundreds of such carued Images, all roughabout the Heads, being somewhat round, and in the middle, hauing a little hill in stead of a Nose; and about the Nose two cuts, in place of Eyes; and vnder the Nose a cut, in place of a Mouth. Before the Images, wee found great store of Alhes, and bones of Harts: whereby it is to bee supposed, that there they offered vnto them.

Image.

Hundreds of
ill shapen Images.

The second of September, a little before Sunne rising, wee put forth an Anchor to get out, for that the winde as then blew South South-west; it being good weather to get out, and ill weather to lye still: for wee lay vnder a low Banke. The Admirall and Vice-admirall seeing vs making out, began also to hoyle their Anchors, and to set sayle. When wee put out our Focke-sayle, the Sunne was East and by South: and then wee sayled to the *Crosse-point*, and there wee cast Anchor to stay for the Vice-admirals Pinnasse; which with much labour and paines, in time got out of the Ice, by often casting out of their Anchor: and in the Euening shee got to vs: in the Morning about two houres before Sunne rising we set sayle, and by Sunne rising, wee got within a mile Eastward of the *Twist-point*, and sayled Northward fixe miles, till the Sunne was South. Then wee were forced to wind about, because of the great quantitie of Ice, and the Myst that then fell, at which time the winde blew so vncertayne, that we could hold no course, but were forced continually to winde and turne about, by reason of the Ice, and the vnconstanthe of the winde, together with myst, so that our course was vncertayne, and wee supposed that we had sayled Southward vp towards the *Sameters* Countrey, and then held our courie South-west, till the watchers were North-west from vs; then we came to the point of the *States* Iland, lying Eastward about a Musket shot from the land, hauing 13. fathom deepe.

The fourth of September, wee hoysed Anchor because of the Ice, and sayled betweene the firme Land and the *States* Iland, where we lay close by the *States* Iland at foure and fixe fathom deepe, and made our Ship fast with a Cable cast on the shoare, and there wee were safe from the course of the Ice, and diuers times went on land to get Hares, whereof there were many in that Iland. The sixth of September, some of our men went on shoare vpon the firme land to seeke for Stones, which are a kinde of Diamond, whereof there are many also in the *States* Iland; and while they were seeking the Stones, two of our men lying together in one place, a great leane white Beare came suddenly stealing out, and caught one of them fast by the necke, who not knowing what it was that tooke him by the necke, cryed out and sayd; *Who is that that pulls mee so by the necke?* wherewith the other that lay not farre from him; lifted vp his head to see who it was, and perceiuing it to bee a monstrous Beare, cryed out and sayd, *Oh Mate! it is a Beare*, and therewith presently rose vp and ranne away.

States-Iland;

A Beare kills
two men.

The Beare at the first falling vpon the man, bit his head in sunder, and suckt out his blood, wherewith the rest of the men that were on the Land, being about twentie in number, ranne presently thither, either to saue the man, or else to driue the Beare from the dead body: and ha- uing charged their Pieces and bent their Pikes, set vpon her, that still was deuouring the man, but perceiuing them to come towards her, fiercely and cruelly ranne at them, and got another of them out from the Companie which shee tore in pieces, wherewith all the rest ranne away.

Her stoutnesse.

We perceiuing out of our Ship and Pinnasse, that our men ranne to the Sea-side to saue them- selues, with all speed entred into our Boates, and rowed as fast wee could to the shoare to relieue our men. Where being on Land, we beheld the cruell spectacle of our two dead men, that had beene so cruelly killed and torne in pieces by the Beare, wee seeing that, encouraged our men to goe backe againe with vs, and with Pieces, Curtelaxes, and Halfe-pikes, to set vpon the Beare, but they would not all agree thereunto: some of them saying, our men are already dead, and we shall get the Beare well enough, though we oppose not our selues into so open danger, if wee might saue our fellowes liues, then wee would make haste, but now we need not make sch speed, but take her at an aduantage, with most securitie for our selues, for we haue to doe with a cruell, fierce, and rauenous Beast. Whereupon three of our men went forward, the Beare still deuouring her prey, not once fearing the number of our men, and yet they were thirtie at the least: the three that went forward in that sort, were *Cornelius Iacobson*, Master of *William Barents* ship, *William Gysen*, Pylot of the Pinnasse, and *Hans van Nussen*, *William Barents*, Purser: and after that the sayd Master and Pylot had shot three times and mist, the Purser stepping somewhat further forward, and seeing the Beare to be within the length of a shot, presently leuelled his Piece, and discharging it at the Beare, shot her into the head betweene both the eyes, and yet she held the man still fast by the necke, and lifted vp her head with the man in her mouth, but shee began somewhat to stagger, wherewith the Purser and a *Scottish* man drew out their Curtelaxes,

T t

and

They kill the
Beare.

and strooke at her so hard, that their Cartelaxes burst, and yet she would not leaue the man, at last *William Geysen* went to them, and with all his might strooke the Beare vpon the snout with his Piece, at which time the Beare fell to the ground, making a great noyse, and *William Geysen* leaping vpon her cut her throat. The seuenth of September, wee buried the dead bodies of our men in the *States* Iland, and hauing flayed the Beare, carryed her Skin to *Amsterdam*.

The ninth of September, we set sayle from the *States* Iland, but the Ice came in so thicke and with such force, that we could not get through, so that at Eeuening we came backe againe to the *States* Iland, the winde being Westerly. There the Admirall and the Pinnasse of *Rotterdam*, fell on ground by certayne Rockes, but got off againe without any hurt.

Twist-point.

The tenth of September, we sayled againe from the *States* Iland towards the *Wey-gates*, and sent two Boates into the Sea, to certifie vs what store of Ice was abroad: and that Eeuening wee came all together into *Wey-gates*, and Anchored by the *Twist-point*. The eleuenth of September in the Morning, we sayled againe into the *Tartarian* Sea, but we fell into great store of Ice, so that we sayled backe againe to the *Wey-gates*, and Anchored by the *Crosse-point*, and about midnight we saw a *Russian* Lodgie, that sayled from the *Beelt-point* towards the *Samsters* Land. The thirteenth of September, the Sunne being South, there began a great storme to blow out of the South South-west, the weather being mistie, melancholy, and snowie, and the storme increasing more and more, we draue through.

Matfloe and
Delgoy.

The fourteenth of September, the weather began to bee somewhat clearer, the winde being North-west, and the storme blowing stiffe out of the *Tartarian* Sea, but at Eeuening it was faire weather, and then the wind blew North-east, the same day our men went on the other side of *Wey-gates*, on the firme land, to take the depth of the Channell, and entred into the Bough behind the Ilands, where there stood a little House made of wood, and a great fall of water into the land. The same Morning we hoysed vp our Anchor, thinking once againe to try what wee could doe to further our Voyage, but our Admirall being of another minde, lay still till the fifteenth of September. The same day in the Morning, the winde draue in from the East-end of the *Wey-gates*, whereby we were forced presently to hoysse Anchors, and the same day sayled out from the West-end of the *Wey-gates*, with all our Fleet, and made homewards againe, and that day past by the Ilands called *Matfloe* and *Delgoy*, and that night we sayled twelue miles, North-west and by West, till Saturday in the morning, and then the winde fell North-east, and it began to Snow. We saw the point of *Candynaes*, lying South-east from vs, and then wee had seuen and twentie fathom deepe, red sand with blacke shels.

The nine and twentieth of September, in the Eeuening entred into *Ward-houfe*, and there we stayed till the tenth of October. And that day we set sayle out of *Ward-houfe*, and vpon the eighteenth of Nouember, we arriued in the *Maes*.

CHAP. V.

The third Voyage Northward to the Kingdomes of Cathaia,
and China, in Anno 1596. Written by
GERAT DE VEER.

§. I.

What happened to them at Sea, before they came to build their House.

After that the seuen Ships (as I said before) were returned backe againe from their North Voyage, with lesse benefit then was expected, the Generall *States* of the Vnited Prouinces consulted together, to send certayne Ships thither againe, a third time, to see if they might bring the said Voyage to a good end, if it were possible to bee done: but after much Consultation had, they could not agree thereon; yet they were content to cause a Proclamation to be made, that if any, either Townes, or Merchants, were disposed to venture to make further search that way, at their owne charges, if the Voyage were accomplished, and that thereby it might be made apparant, that the sayd passage was to be sayled, they were content to giue them a good reward, in the Countries behalfe, naming a certayne summe of money. Whereupon in the beginning of this yeere, there was two Ships rigged and set forth by the Towne of *Amsterdam*, to sayle that Voyage, the men therein being taken vp vpon two Conditions: viz. What they should haue if the Voyage were not accomplished, and what they should haue if they got through, and brought the Voyage to an end, promising them a good reward if they could effect it, thereby to encourage the men, taking vp as many vnmarried men as they could, that they might not bee dissuaded by meanes of their Wiues and Children to leaue off the Voyage. Vpon these Conditions, those

two

two Ships were ready to set sayle in the beginning of May. In the one, *Jacob Heemskerke Hendrickson*, was Master and Factor for the Wares and Merchandizes; and *William Barents* chiefe Pylot. In the other, *John Cornelison Ryp*, was both Master and Factor for the goods that the Merchants had laden in her.

The fifth of May, all the men in both the Ships were Mustered; and vpon the tenth of May, they sayled from *Amsterdam*, and the thirteenth of May got to the *Vlie*. The thirtieth of May we had a good winde, and sayled North-east, and wee tooke the height of the Sunne with our Croffe-staffe, and found that it was eleuated aboue the Horizon 47. degrees and 42. minutes, his Declination was 21. degrees and 42. minutes, so that the height of the Pole was 69. degrees 10 and 24. minutes.

The first of Iune we had no night, and the second of Iune we had the winde contrarie, but vpon the fourth of Iune we had a good winde, out of the West North-west, and sayled North-east. And when the Sunne was about South South-east, wee saw a strange sight in the Element: for on each side of the Sunne there was another Sunne, and two Raine-bowes, that past cleane thorow the three Sunnes, and then two Raine-bowes more, the one compassing round about the Sunnes, and the other croffe thorow the great rundle; the great rundle standing with the vttermost point, eleuated aboue the Horizon 28. degrees: at noone the Sunne being at the highest, the height thereof was measured, and wee found by the *Astrolabium*, that it was eleuated aboue the Horizon 48. degrees and 43. minutes, his Declination was 22. degrees and 17. minutes, the which being added to 48. degrees 43. minutes, it was found that wee were vnder 71. degrees of the height of the Pole.

John Cornelis ship held aloofe from vs, and would not keepe with vs, and would hold no course but North North-east, for they alledged, that if wee went any more Easterly, that then we should enter into the *Wey-gates*, but wee being not able to perswade them, altered our course one point of the Compasse, to meet them, and sayled North-east and by North, and should otherwise haue sayled North-east, and somewhat more East.

The fifth, wee saw the first Ice, which we wondered at, at the first, thinking that it had beene white Swannes, for one of our men walking in the Fore-decke, on a sudden began to cry out with a loud voyce, and said; that hee saw white Swannes: which wee that were vnder Hatches hearing, presently came vp, and perceiued that it was Ice that came driuing from the great heape, showing like Swannes; it being then about Eeuening, at midnight we sayled through it, and the Sunne was about a degree eleuated aboue the Horizon in the North.

The sixth, about foure of the clocke in the after-noon, wee entred againe into the Ice, which was so strong that we could not passe through it, and sayled South-west and by West, till eight Glasses were runne out, after that we kept on our course North, North-east, and sayled along by the Ice.

The seuenth, we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 38. degrees and 38. minutes, his Declination being 22. degrees 38. minutes; which being taken from 38. degrees 38. minutes, wee found the Pole to bee 74. degrees; there we found so great store of Ice, that it was admirable: and we sayled along through it, as if we had past between two Lands. The water being as Greene as Grass, and we supposed that we were not farre from *Greenland*, and the longer we sayled, the more and thicker Ice we found. The eight of Iune, we came to so great a heape of Ice, that we could not sayle through it.

The ninth of Iune, we found the Iland that lay vnder 74. degrees and 30. minutes, and as we ghest, it was about fise miles long. The tenth, we put out our Boate, and therewith eight of our men went on Land, and as we past by *John Cornelisons* ship, eight of his men also came in to our Boat, whereof one was the Pilot. Then *William Barents* asked him, whether we were not too much Westward, but hee would not acknowledge it: whereupon there passed many words betweene them, for *William Barents* sayd, he would proue it to bee so, as in truth it was. The eleuenth, going on Land, we found great store of Sea-Mewes Egges vpon the shoare, and in that Iland we were in great danger of our liues: for that going vp a great Hill of Snow, when wee should come downe againe, we thought we should all haue broken our neckes, it was so slipperie, but we fate vpon the Snow and slid downe, which was very dangerous for vs, to breake both our armes and legges, for that at the foot of the Hill there was many Rockes, which we were likely to haue fallen vpon, yet by Gods helpe we got safely downe againe. Meane time *William Barents* fate in the Boate, and saw vs slide downe, and was in greater feare then we, to behold vs in that danger. In the said Iland, we found the varying of our Compasse, which was 13. degrees, so that it differed a whole point at the least: after that wee rowed aboard *John Cornelisons* ship, and there we ate our Egges.

The twelfth in the morning, we saw a white Beare, which wee rowed after with our Boate, thinking to cast a Rope about her necke; but when we were neere her, she was so great, that we durst not doe it, but rowed backe againe to our Ship to fetch more men and our Armes, and so made to her againe with Muskets, Harquebusses, Halberts, and Hatchets. *John Cornelisons* men comming also with their Boate to helpe vs: and so being well furnished of men and weapons,

Note.

we rowed with both our Boates vnto the Beare, and fought with her while foure Glasse were runne out, for our Weapons could doe her little hurt: and amongst the rest of the blowes that we gaue her, one of our men strooke her into the backe with an Axe, which stucke fast in her backe, and yet shee swamme away with it; but we rowed after her, and at last we cut her head in sunder with an Axe, wherewith she dyed: and then wee brought her into *John Cornelisons* ship, where we flayed her, and found her Skinne to bee twelue foot long: which done, we eate some of her flesh; but wee brookt it not well. This Iland we called the *Beare-Iland*.

The thirteenth we left the Iland, and sayled North, and somewhat Easterly, the winde being West, and South-west, and made good way: so that when the Sunne was North, wee ghest that we had sayled sixteene miles Northward from that Iland.

The fourteenth, when the Sunne was North, we cast out our Lead one hundred and thirteene fathome deepe, but found no ground, and so sayled forward till the fifteenth of Iune, when the Sunne was South-east, with mistie and drizzling weather, and sayled North, and North and by East: about Euening it cleared vp, and then we saw a great thing driuing in the Sea, which we thought had beene a Ship: but passing along by it, we perceiued it to bee a dead Whale, that stonke monstrously; and on it there sate a great number of Sea-mewes: At that time, wee had sayled twentie miles.

The sixteenth, with the like speed we sayled North and by East, with mistie weather; and as we sayled, we heard the Ice before we saw it: but after, when it cleared vp, we saw it, and then woond off from it, when as we ghest we had sayled thirtie miles. The senenteenth and eighteenth, we saw great store of Ice, and sayled along by it, vntill we came to the point, which we could not reach, for that the wind was South-east, which was right against vs, & the point of Ice lay Southward from vs: yet wee lauered a great while to get beyond it, but we could not doe it. The nineteenth, we saw Land againe, then we tooke the height of the Sun, and found that it was eleuated aboue the Horizon 33. degrees and 37. minutes: her Declination being 23. degrees and 26. minutes: which taken from the sayd 33. degrees and 37. minutes, wee found that we were vnder 80. degrees and 11. minutes: which was the height of the Pole there. This Land was very great, and we sayled Westward along by it, till we were vnder 79. degrees and a halfe, where we found a good road, and could not get neare to the Land, because the winde blew North-east, which was right off from the Land: the Bay reacheth right North and South into the Sea.

The twentie one, we cast out our Anchor, at eightene fathome before the Land; and then we and *John Cornelisons* men, rowed on the West-side of the Land, and there fetched Balast: and when we got on boord againe with our Balast, we saw a white Beare that swamme towards our ship; whereupon we left off our worke, and entering into the Boate with *John Cornelisons* men, rowed after her, and crossing her in the way, droue her from the Land, wherewith she swamme further into the Sea, and we followed her; and for that our Boate could not make good way after her, we manned our Scute also, the better to follow her: but shee swam a mile into the Sea; yet we followed her with the most part of all our men of both Ships in three Boats, and strooke oftentimes at her, cutting and hewing her, so that all our Armes were most broken in pieces. During our fight with her, shee strooke her Clawes so hard in our Boate, that the signes thereof were seene in it; but as hap was, it was in the fore-head of our Boate: for if it had beene in the middle thereof, she had (peraduenture) ouer-throwne it, they haue such force in their Clawes: At last, after we had fought long with her, and made her wearie with our three Boates that kept about her, we ouercame her and killed her: which done, we brought her into our ship, and flayed her: her Skinne being thirteene foot long. After that, we rowed with our Scute, about a mile inward to the Land, where there was a good Hauen, and good Anchor ground, on the East-side being sandie, there wee cast out our Lead, and found sixteene fathom deepe, and after that, ten, and twelue fathome, and rowing further, we found that on the East-side there was two Ilands, which shewed also like an Iland. Then we rowed to the Iland that lay in the middle, and there we found many Red Geese-egges, which we saw sitting vpon their Nests, and droue them from them, and they flying away, cryed, red, red, red: and as they sate we killed one Goose dead with a stone, which we drest and eate, and at least sixtie Egges, that wee tooke with vs aboard the ship, and vpon the two and twentieth of Iune, we went aboard our ship againe.

Those Geese were of a perfit Red colour, such as come into *Holland* about *Weirigen*, and euerie yeere are there taken in abundance, but till this time it was neuer knowne where they hatcht their Egges, so that some men haue taken vpon them to write, that they sit vpon Trees in *Scotland*, that hang ouer the Water, and such Egges as fall from them downe into the Water become young Geese, and swim there out of the water; but those that fall vpon the Land burst in sunder, and are lost: but this is now found to bee contrary, and it is not to be wondred at, that no man could tell where they breed their Egges, for that no man that euer wee knew, had euer beene vnder 80. Degrees: nor that Land vnder 80. degrees, was neuer set downe in any Card, much lesse the red Geese that breed therein.

It is heere also to bee noted, that although that in this land which we esteeme to be *Greenland*,

land, lying vnder 80. Degrees, and more, there groweth Leaues and Grasse, and that there are such Beasts therein as eate grasse, as Harts, Buckes, and such like beasts as liue thereon, yet in *Nova Zembla* vnder 76. Degrees, there groweth neither Leaues nor Grasse, nor any Beasts that eate grasse or leaues liue therein, but such Beasts as eate Flesh, as Beares and Foxes: and yet this Land lyeth full 4. Degrees from the North Pole, further then *Greenland* aforesayd doth.

The three and twentieth, wee hoysted Anchor againe, and sayled North-westward into the Sea; but could get no further, by reason of the Ice; and so we came to the same place againe where we had layne, and cast Anchor at eightene fathome: and at Eeuening being at Anchor, the Sunne being North-east, and somewhat more Eastward, wee tooke the height thereof, and found it to be eleuated aboue the Horizon 13. degrees and 10. minutes, his Declination being 23. degrees and 28. minutes: which subtracted from the height aforesaid, resteth 10. degrees and 18. minutes, which being subtracted from 90. degrees, then the height of the Pole there was 79. degrees and 42. minutes.

After that, we hoysted Anchor againe, and sayled along by the West side of the Land, and then our men went on Land, to see how much the Needle of the Compasse varied: Meane time there came a great white Beare swimming towards the Ship, and would haue climbed vp into it, if we had not made a noyse; and with that wee shot at her with a Piece, but she left the ship, and swam to the Land, where our men were: which we perceiuing, sayled with our ship towards the Land, and gaue a great shout; wherewith our men thought that wee had fallen on a Rocke with our Ship, which made them much abashed; and therewith the Beare also being afraid, swamme off againe from the Land, and left our men, which made vs glad: for our men had no Weapons about them. Touching the varying of the Compasse, for the which cause our men went on Land, to trie the certaintie thereof: it was found to differ 16. Degrees.

The five and twentieth of Iune, we hoysted Anchor againe, and sayled along by the Land, and went South, and South South-west, with a North North-east winde, vnder 79. degrees. There we found a great Creeke or Riuer, whereinto we sayled ten miles at the least, holding our course Southward; but we perceiued that there we could not get through: there we cast out our Lead, and for the most part found 10. fathom deepe, but we were constrained to laueré out againe, for the winde was Northerly, and almost full North, and we perceiued that it reached to the firme land, which we supposed to bee *Low-land*, for that wee could not see it any thing farre, and therefore we sayled so neere vnto it, till that we might see it, and then we were forced to laueré, and vpon the seuen and twentieth of Iune we got out againe.

The eight and twentieth, we got beyond the point that lay on the West side, where there was so great a number of Birds, that they flew against our Sayles, and wee sayled ten miles Southward, and after that West, to shun the Ice. The nine and twentieth, wee sayled South-east and somewhat more Easterly, along by the Land, till we were vnder 76. degrees and 50. minutes, for we were forced to put off from the Land, because of the Ice. The thirtieth of Iune, wee sayled South, and somewhat East, and then we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 38. degrees and 20. minutes, his Declination was 23. degrees and 20. minutes, which being taken from the former height, it was found that we were vnder 75. degrees.

The first of Iuly wee saw the *Beare-Iland* againe, and then *John Cornelison* and his Officers came aboard our ship, to speake with vs about altering our course, but wee being of a contrary opinion, it was agreed that we should follow on our course, and hee his: which was, that he (according to his desire) should sayle vnto 80. Degrees againe: for he was of opinion, that there he should finde a passage through, on the East side of the Land that lay vnder 80. Degrees. And vpon that agreement we left each other, they sayling Northward, and wee Southward, because of the Ice, the winde being East South-east.

The second, we sayled Eastward, and were vnder 74. degrees, hauing the wind North North-west, and then wee woond ouer another Bough, with an East North-east winde, and sayled Northward. In the Eeuening the Sunne being about North-west and by North, we woond about againe (because of the Ice) with an East winde, and sayled South South-east, and about East South-east, and then we woond about againe (because of the Ice) and the Sunne being South South-west, we woond about againe, and sayled North-east. The third, we were vnder 74. degrees, hauing a South-east and by East winde, and sayled North-east and by North: after that wee woond about againe with a South winde, and sayled East South-east, till the Sunne was North-west, then the winde began to be somewhat larger.

The eight, wee had a good North-west winde, and sayled East and by North, with an indifferent cold gale of wind, and got vnder 72. degrees and 15. minutes. The ninth of Iuly, we went East and by North, the wind being West. The tenth of Iuly, the Sunne being South South-west, we cast out our Lead, and had ground at one hundred and sixtie fathome, the wind being North-east and by North, and we sayled East and by South, vnder 72. degrees. The eleuenth, we found 70. fathom deepe, and saw no Ice, then wee ghest that we were right South and North from *Dandinaes*, that is the East-point of the White-sea, that lay Southward from vs, and had sandie ground, and the banke stretched Northward into the Sea, so that we were out of doubt that we

companie.

were vpon the banks of the White Sea, for wee had found no sandie ground all the Coast along, but onely that bakke. Then the wind being East and by South, we sailed South, and South and by East, vnder 72. degrees, and after that, we had a South South-east Wind, and sayled North-east to get ouer the Banke.

Willoughbies
Land concei-
ted from some
Maps.

The thirteenth of Iuly, we sayled East with a North North-east wind: then wee tooke the height of the Sunne, and found it to be eleuated aboue the Horizon 54. degrees and 38. minutes, his declination was 21. degrees and 34. minutes, which taken from the height aforesaid, the height of the Pole was found to bee 73. degrees, and then againe wee found Ice, but not very much, and we were of opinion, that we were by Willoughbies Land. The fourteenth, we sayled North-east, the wind being North North-west, and in that sort sayled about a dinner time, along through the Ice, and in the middle thereof we cast out our Lead, and had ninety fathome deepe, in the next quarter wee cast out our Lead againe, and had an hundred fathome deepe, and we sayled so farre into the Ice, that wee could goe no further: for wee could see no place where it opened, but were forced (with great labour and paine) to lauer out of it againe, the wind blowing West, and we were then vnder 74. degrees and 10. minutes.

admirals Iland

The fifteenth, we draue through the middle of the Ice with a calme, and casting out our Lead, had an hundred fathome deepe, at which time the wind being East, wee sayled West. The sixteenth, we got out of the Ice, and saw a great Beare lying vpon it, that leaped into the water when shee saw vs: Wee made towards her with our ship, which shee perceiuing got vp vpon the Ice againe, wherewith wee shot once at her. Then wee sayled East South-east, and saw no Ice, guessing that we were not farre from *Noua Zembla*, because we saw the Beare there vpon the Ice, at which time we cast out our Lead, and found an hundred fathome deepe.

of the North

Noua Zembla.

The seuenteenth, we tooke the height of the Sunne, and it was eleuated aboue the Horizon 37. degrees and 55. minutes, his declination was 21. degrees and 15. minutes, which taken from the height aforesaid, the height of the Pole was 74. degrees and 40. minutes: and when the Sunne was in the South, we saw the Land of *Noua Zembla*, which was about *Lomsbay*: I was the first that espied it. Then we altered our course, and sayled North-east and by North, and hoysed vp all our sayles, except the Fore-sayle and the Lesien. The eighteenth, wee saw the Land againe, being vnder 75. degrees, and sayled North-east and by North, with a North-west wind, and we gate aboue the point of the *Admirals Iland*, and sayled East North-east, with a West Wind, the Land reaching North-east and by North. The nineteenth, wee came to the *Crosse Iland*, and could get no further, by reason of the Ice, for there the Ice lay still close vpon the Land, at which time the wind was West, and blew right vpon the Land, and it lay vnder 76. degrees and 20. minutes. There stood two Crosse vpon the Land, whereof it had the Name.

Admirals Iland.

Crosse Iland in
76. degrees 20.
minutes.

The twentieth, we anchored vnder the Iland, for we could get no further for the Ice. There we put out our Boat, and with eight men rowed on Land, and went to one of the Crosse, where we rested vs a while to goe to the next Crosse, but being in the way wee saw two Beares by the other Crosse, at which time we had no weapons at all about vs. The Beares rose vp vpon their hinder feet to see vs (for they smell further then they see) and for that they smelt vs: therefore they rose vp right, and came towards vs, wherewith we were not a little abashed, in such sort that we had little lust to laugh, and in all haste went to our Boat againe, still looking behind vs, to see if they followed vs, thinking to get into the Boat, and so put off from the Land: but the Master stayed vs, saying, hee that first begins to runne away, I will thrust this Hake-staffe (which he then held in his hand) into his ribs; for it is better for vs (said hee) to stay all together, and see if we can make them afraid with whooping and hollowing; and so we went softly towards the Boat, and got away, glad that we had escaped their clawes, and that we had the leasure to tell our fellowes thereof.

Two Beares.

of the North

The one and twentieth we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 35. degrees and 15. minutes, his declination was 21. degrees, which being taken from the height aforesaid, there rested 14. degrees, which subtracted from 90. degrees, then the height of the Pole was found to be 76. degrees and 15. minutes, then we found the variation of the Compasse to bee 26. degrees. The same day two of our men went againe to the Crosse, and found no Beares to trouble vs, and wee followed them with our Armes, fearing least wee might meet any by chance, and when we came to the second Crosse, we found the foot-steps of two Beares, and saw how long they had followed vs, which was one hundred foot-steps at the least, that way that we had bene the day before. The two and twentieth being Munday, wee set vp another Crosse, and made our Marke thereon: and lay there before the *Crosse Iland*, till the fourth of August, meane time we washt and whited our Linnen on the shoare.

Variation 26.
degrees, per-
haps 16.

The thirtieth, the Sunne being North, there came a Beare so neere to our ship, that we might hit her with a stone, and we shot her into the foot with a Piece, wherewith shee ranne halting away. The one and thirtieth of Iuly, the Sunne being East North-east, seven of our men killed a Beare, and flayed her, and cast her bodie into the Sea. The same day at noone (by our Instrument) we found the variation of the Needle of the Compasse to be 17. degrees.

The

The first of August we saw a white Beare, but she ran away from vs. The fourth, we got out of August. the Ice, to the other side of the Iland, and anchored there: where, with great labour and much paine, we fetched a Boat full of stones from the Land. The fifth, wee set sayle againe towards Ice-point, with an East Wind, and sayled South South-east, and then North North-east, and saw no Ice by the Land, by the which we sauered. The sixth, we gate about the point of Nassaw. Point Nassaw. saw, and sayled forward East, and East and by South, along by the Land.

The seventh, we had a West South-west Wind, and sayled along by the Land, South-east, and South-east and by East, and saw but a little Ice, and then past by the Trust-point, which we had much longed for: at Eeuening we had an East Wind, with mistie Weather, so that we were forced to make our ship fast to a piece of Ice, that was at least thirtie fixe fathome deepe vnder the water, and more then sixteene fathome above the water: which in all was two and fifty fathome thick, for it lay fast vpon ground, the which was thirtie fixe fathome deepe. The eight in the morning, we had an East Wind, with mistie Weather. Ice 52. fathom deepe.

The ninth, lying still fast to the great piece of Ice, it snowed hard, and it was mistie weather, and when the Sunne was South, we went vpon the Hatches (for we alwayes held watch) where as the Master walked along the ship, he heard a beast snuffe with his nose, and looking ouer-board, he saw a great Beare hard by the ship, where hee cryed out, a Beare, a Beare; and with that all our men came vp from vnder Hatches, and saw a great Beare hard by our Boat, seeking to get in to it, but we giuing a great shout, she was afraid, and swamme away, but presently came backe againe, and went behind a great piece of Ice, whereunto we had made our ship fast, and climbed vpon it, and boldly came towards our ship to enter into it: but we had torne our Scute Sayle in the ship, and lay with foure Peeces before at the Boot-sprit, and shot her in the bodie: and with that, shee ranne away; but it snowed so fast that wee could not see whither shee went: but wee ghest that shee lay behind a high Hoouell; whereof there were many vpon the piece of Ice. Snow.

The tenth, being Saturday, the Ice began mightily to breake, and then wee first perceiued that the great piece of Ice whereunto we had made our ship fast, lay on the ground; for the rest of the Ice draue along by it, wherewith wee were in great feare that wee should bee compassed about with the Ice, and therefore we vied all the diligence and meanes that we could to get from thence, for we were in great doubt: and being vnder sayle, wee sayled vpon the Ice, because it was all broken vnder vs, and got to another piece of Ice; whereunto we made our ship fast againe with our Sheate Anchor, which we made fast vpon it; and there we lay till Eeuening: and when we had supped, in the first quarter, the said piece of Ice began on a sudden to burst and rend in pieces, so fearefully that it was admirable; for with one great cracke it burst into foure hundred pieces at the least: we lying fast to it, weighed our Cable, and got off from it, vnder the water it was ten fathome deepe, and lay vpon the ground, and two fathome above the Water; and it made a fearefull noyse both vnder and aboue the Water when it burst, and spread it selfe abroad on all sides. And being with great feare, gotten from that piece of Ice, wee came to another piece, that was six fathome deepe vnder the Water: to which wee made a Rope fast on both sides. Then wee saw another great piece of Ice, not farre from vs, lying fast in the Sea, that was as sharpe aboue, as it had bene a Tower; whereunto wee rowed: and casting out our Lead, we found that it lay twentie fathome deepe, fast on the ground vnder the Water, and twelue fathome aboue the Water. Ice thunder.

The eleuenth being Sunday, we rowed to another piece of Ice, and cast out our Lead, and found that it lay eighteene fathome deepe fast to the ground vnder the Water, and ten fathome aboue the water. The twelfth, wee sayled neere vnder the Land, the better to shunne the Ice, for the great flakes that draue in the Sea, were many fathome deepe vnder the Water, and we were better defended from them being at foure and fise fathome Water, and there ranne a great current of water from the Hill. There we made our ship fast againe to a piece of Ice, and called that point, The small Ice point.

The thirteenth in the morning, there came a Beare from the East point of the Land, close to our ship, and one of our men with a Peece shot at her, and brake one of her legs, but she crept vp the Hill with her three feet, and we following her, killed her, and hauing flayed her, brought the skinne aboard the ship. From thence wee set sayle, with a little gale of Winde, and were forced to lauer, but after, that it began to blow more out of the South, and South South-east. Beare killed.

The fifteenth, we came to the Iland of Orange, where we were inclosed with the Ice, hard by a great piece of Ice where we were in great danger to lose our ship, but with great labour and much paine, we got to the Iland, the Wind being South-east, whereby we were constrained to turne our ship, and while we were busied thereabouts, and made such noyse, a Beare that lay there and slept, awaked, and came towards vs to the ship, so that wee were forced to leaue our Worke about turning of the ship, and to defend our selues against the Beare, and shot her into the bodie, wherewith she ranne away to the other side of the Iland, and swamme into the water, and got vp vpon a piece of Ice, where she lay still, but we comming after her to the piece of Ice where she lay, when she saw vs, she leapt into the water, and swamme to the Land: but we got betweene her and the Land, and strooke her on the head with a Hatchet, but as often as wee strooke

strooke at her with the Hatchet, she duckt vnder the water, whereby wee had much to doe before we could kill her: after she was dead we flayed her on the Land, and tooke the skinne aboard with vs, and after that, turned our shippe to a great piece of Ice, and made it fast thereunto.

The sixteenth, ten of our men entring into one Boat, rowed to the firme Land of *Noua Zembla*, and drew the Boat vp vpon the Ice, which done, we went vp a high Hill, to see the situation of the Land, and found that it reached South-east, and South South-east, and then againe South, which wee disliked, for that it lay so much Southward: but when wee saw open water South-east, and East South-east, we were much comforted againe, thinking that we had wonne our Voyage and knew not how we should get soone enough a-board, to certifie *William Barents* thereof.

The eighteenth, we made preparation to set sayle, but it was all in vaine: for wee had almost lost our Sheat Anchor, and two new Ropes, and with much lost labour got to the place againe from whence wee came: for the streame ranne with a mightie current, and the Ice draue very strongly vpon the Cables, along by the ship, so that we were in feare that wee should lose all the Cable that was without the ship, which was two hundred fathome at the least, but God prouided well for vs, so that in the end, we got to the place againe from whence we put out.

Point Desire.

The nineteenth it was indifferent good weather, the Wind blowing South-west, the Ice still driuing, and wee set sayle with an indifferent gale of Wind, and past by the point of *Desire*, whereby we were once againe in good hope, and when we had gotten about the point, we sailed South-east into the Sea-ward, foure miles, but then againe wee entred into more Ice, whereby wee were constrained to turne backe againe, and sayled Northwest vntill wee came to the Land againe, which reacheth from the point of *Desire*, to the head point, South and by West six miles: from the head point to *Flushingers head*, it reacheth South-west, which are three miles one from the other: from the *Flushingers head*, it reacheth into the Sea, East South-east, and from *Flushingers head* to the point of the Iland, it reacheth South-west, and by South, and South-west three miles: and from the Iland point, to the point of the Ice Hauens, the Land reacheth West South-west foure miles: from the Ice Hauens point to the fall of Water, or the streame Bay, and the low Land, it reacheth West and by South, and East and by North seven miles: from thence the Land reacheth East and West.

Earth on the top of Azure Ice.

The one and twentieth, we sayled a great way into the Ice Hauens, and that night anchored therein: next day the streame going excreame hard Eastward, wee haled out againe from thence, and sayled againe to the Iland point, but for that it was misty Weather, comming to a piece of Ice, wee made the ship fast thereunto, because the Wind beganne to blow hard South-west and South South-west. There we went vp vpon the Ice, and wondred much thereat, it was such manner of Ice: For on the top it was full of Earth, and there wee found about fortie Egges, and it was not like other Ice, for it was of a perfect Azure colour like to the Skies, whereby there grew great contention in words amongst our men, some saying that it was Ice, others that it was frozen Land: for it lay vnreasonable high about the Water, it was at least eightene fathom vnder the water close to the ground, and ten fathome about the water: there wee stayed all that storme, the Wind being South-west and by West. The three and twentieth, wee sayled againe from the Ice, South-eastward into the Sea, but entred presently into it againe, and woond about to the Ice Hauens. The next day it blew hard North North-west, and the Ice came mightily driuing in, whereby we were in a manner compassed about therewith, and withall the Wind beganne more and more to rise, and the Ice still draue harder and harder, so that the pinne of the Rother, and the Rother were shorne in pieces, and our Boat was shorne in pieces betweene the ship and the Ice, we expecting nothing else, but that the ship also would be preft and cruft in pieces with the Ice.

Boat broken with Ice.

The five and twentieth, the Weather began to be better, and we tooke great paines, and bestowed much labour to get the Ice, wherewith we were so inclosed, to goe from vs, but what meanes soeuer we vsed it was all in vaine, but when the Sunne was South-west, the Ice began to driue out againe with the streame, and we thought to saile Southward about *Noua Zembla*, to the Straights of *Mergates*, seeing we could there find no passage. Wee hauing past *Noua Zembla*, were of opinion that our labour was all in vaine, and that we could not get through, and so agreed to goe that way home againe, but comming to the *Streame Bay*, wee were forced to goe backe againe, because of the Ice which lay so fast thereabouts, and the same night also it froze, that wee could hardly get through there, with the little wind that we had, the Wind then being North.

Inclosed with Ice.

The six and twentieth, there blew a reasonable gale of Wind, at which time wee determined to sayle backe to the point of *Desire*, and so home againe, seeing that wee could not get through the *Mergates*, although we vsed all the meanes and industry wee could to get forward, but when we had past by the *Ice Hauens*, the Ice began to driue with such force, that wee were inclosed round about therewith, and yet we sought all the meanes we could to get out, but it was all in vaine: and at that time we had like to haue lost three men that were vpon the Ice to make way for the ship, if the Ice had held the course it went, but as we draue backe againe, and that the

Ice

Ice also whereon our men stood, in like sort draue, they being nimble, as the ship draue by them, one of them caught hold of the beak head, another vpon the shrouds, and the third vpon the great braise that hung out behind, and so by great aduenture by the hold that they tooke, they got safe into the ship againe, for which they thanked God with all their hearts: for it was much likelier that they should rather haue bene carried away with the Ice, but God, by the nimblenesse of their hands, deliuered them out of that danger which was a pitifull thing to behold, although it fell out for the best, for if they had not bene nimble, they had surely dyed for it. The same day in the euening, wee got to the West-side of the *Ice Hauen*, where wee were forced in great cold, pouertie, miserie, and grieve, to stay all that Winter, the winde then beeing East North-east.

Escape of three men.

The seuen and twentieth, the Ice draue round about the ship, and yet it was good weather, at which time we went on Land, and being there it began to blow South-east, with a reasonable gale, and then the Ice came with great force before the bough, and draue the ship vp foure foot high before, and behind it seemed as if the keele lay on the ground, so that it seemed that the ship would be ouerthrowne in the place, whereupon they that were in the ship, put out the Boat, therewith to saue their liues, and withall put out a flagge to make a signe to vs, to come aboard: which we perceiuing, and beholding the ship to be lifted vp in that sort, made all the haste we could to get aboard, thinking that the ship was burst in pieces, but comming vnto it, we found it to be in better case then we thought it had bene.

Ship lifted vp, and beset with Ice.

The eight and twentieth, we got some of the Ice from it, and the ship beganne to sit vpright againe, but before it was fully vpright, as *William Barents* and the other Pilot went forward to the bough to see how the ship lay, and how much it was risen; and while they were busie vpon their knees and elbowes to measure how much it was, the ship burst out of the Ice with such a noise, and so great a cracke, that they thought verily that they were all cast away, knowing not how to saue themselves.

Another danger.

The nine and twentieth, the ship lying vpright againe, wee vsed all the meanes wee could, with Iron hookes and other instruments, to breake the flakes of Ice that lay one heaped vpon the other, but all in vaine; so that we determined to commit our selues to the mercy of God, and to attend aide from him, for that the Ice draue not away in any such sort that it could helpe

vs. The thirtieth, the Ice began to driue together one vpon the other with greater force then before, and bare against the ship with a boystrous South-west winde, and a great snow, so that all the whole ship was borne vp and enclosed, whereby all that was both about it and in it, began to cracke, so that it seemed to burst in an hundred pieces, which was most fearefull both to see and heare, and made all the haire of our heads to rise vpright with feare: and after that, the ship (by the Ice on both sides that ioyned and got vnder the same) was driuen so vpright, in such sort, as if it had bene lifted vp with a Wrench or Vice.

The one and thirtieth of August, by force of the Ice, the ship was driuen vp foure or five foot high at the beake head, and the hinder part thereof lay in a clift of Ice, whereby wee thought that the Rother would bee freed from the force of the flakes of Ice, but notwithstanding, it brake in pieces staffe and all: and if that the hinder part of the ship had bene in the Ice that draue, as well as the fore part was, then all the ship would haue bene driuen wholly vpon the Ice, or possibly haue runne on ground, and for that cause wee were in great feare, and set our Scutes and our Boat out vpon the Ice, if need were, to saue our selues, but within foure houres after, the Ice draue away of it selfe, wherewith wee were exceeding glad, as if wee had saued our liues, for that the ship was then on floe againe, and vpon that we made a new Rother and a Staffe, and hung the Rother out vpon the hookes, that if we chanced to bee borne vpon the Ice againe, as we had bene, it might so be freed from it.

Rother broken

The first of September being Sunday, while we were at prayer, the Ice began to gather together againe, so that the ship was lifted vp two foot at the least, but the Ice brake not. The same euening the Ice continued in that sort still driuing and gathering together, so that we made preparation to draw our Scute and the Boat over the Ice vpon the Land, the wind then blowing South-east. The second, it showed hard with a North-east wind, and the ship began to rise vp higher vpon the Ice, at which time the Ice burst and crackt with great force, so that wee were of opinion to carrie our Scute on Land in that foule weather, with thirteene barrells of Bread, and two hogsheads of Wine, to sustaine our selues if need were.

September.

The third, it blew hard but snowed not so much, the wind being North North-east, at which time we began to be loose from the Ice, whereunto wee lay fast, so that the Scheck broke from the Steuen, but the planks wherewith the ship was lined, held the Scheck fast, and made it hang on, but the Boutloofe and a new Cable (if we had fallen vpon the Ice) brake by forcible pressing of the Ice, but held fast againe in the Ice, and yet the ship was staunch; which was wonder, in regard that the Ice draue so hard, and in great heapes, as big as the Salt-hills that are in *Spaine*, and within a Harquebuss shot of the ship, betweene the which wee lay in great feare and anguish.

The fourth, the weather began to cleare vp, and we saw the Sunne, but it was very cold, the wind

wind being North-east we being forced to lie still. The fift, it was faire Sun-shine weather, and very calme, and at evening when we had supped, the Ice compassed about vs againe, and wee were hard enclosed therewith, the ship beginning to lie vpon the one side, and leaked sore, but by Gods grace it became staunch againe, wherewith we were wholly in feare to lose the ship, it was in so great danger: at which time wee tooke counsell together, and carried our old socke Sayle, with Powder, Lead, Peeces, Muskets, and other furniture on Land, to make a Tent about our Scute that we had drawne vpon the Land, and at that time we carried some Bread, and Wine on Land also, with some Timber, therewith to mend our Boat, that it might serue vs in time of need.

The sixt, it was indifferent faire Sea-weather, and Sun-shine, the wind being West, whereby we were somewhat comforted, hoping that the Ice would drie away, and that wee might get from thence againe. The seuenth, it was indifferent weather againe, but we perceiued no opening of the water, but to the contrary, it lay hard enclosed with Ice, and no water at all about the ship, no not so much as a bucket full. The same day, fise of our men went on Land, but two of them came backe againe, the other three went forward about two miles into the Land, and there found a Riuer of sweet water, where also they found great store of Wood that had benee driuen thither, and there they found the footsteps of Harts and Hinds, as they thought, for they were clouen footed, some greater footed then others, which made them iudge them to be so.

The eight, it blew hard East North-east, which was a right contrary wind to doe vs any good, touching the carrying away of the Ice, so that we were still faster in the Ice, which put vs in no small discomfort. The ninth, it blew North-east, with a little snow, whereby our ship was wholly enclosed with Ice, for the wind draue the Ice hard against it, so that we lay three or foure foot deepe in the Ice, and our Sheek in the after Steuen, brake in pieces, and the ship began to be somewhat loose before, but yet it was not much hurt. In the night time, two Beares came close to our ship side, but we sounded our Trumpet, and shot at them, but hit them not, because it was darke, and they ranne away. The tenth, the weather was somewhat better, because the wind blew not so hard, and yet all one wind.

The eleuenth, it was calme weather, and eight of vs went on Land, euery man armed, to see if that were true as our other three companions had said, that there lay Wood about the Riuer, for that seeing we had so long woond and turned about, sometime in the Ice, and then againe got out, and thereby were compelled to alter our course, and at last saw that we could not get out of the Ice, but rather became faster, and could not loose our ship, as at other times we had done, as also that it began to be Winter, we tooke counsell together what we were best to doe, according to the time, that we might winter there, and attend such aduantage as God would send vs: and after we had debated vpon the matter (to keepe and defend our selues both from the cold, and wilde beasts) we determined to build a house vpon the Land, to keepe vs therein as well as wee could, and so to commit our selues vnto the tuition of God, and to that end we went further into the Land, to find out the conuenientest place in our opinions, to raise our house vpon, and yet we had not much stufte to make it withall, in regard that there grew no trees, nor any other thing in that Countrey conuenient to build it withall: but wee leauing no occasion vnought, as our men went abroad to view the Countrey, and to see what good fortune might happen vnto vs, at last we found an vnexpected comfort in our need, which was, that we found certaine trees roots and all, (as our three companions had said before) which had benee driuen vpon the shoare, either from *Tartaria*, *Musconia*, or else where; for there was none growing vpon that Land, wherewith (as if God had purposely sent them vnto vs) we were much comforted, being in good hope that God would shew vs some further fauour; for that Wood serued vs not onely to build our house, but also to burne, and serue vs all the Winter long, otherwise without all doubt, we had died there miserably with extreme cold.

The twelfth, it was calme weather, and then our men went vnto the other side of the Land, to see if they could find any Wood neerer vnto vs, but there was none. The thirteenth, it was calme but very misty weather, so that we could doe nothing, because it was dangerous for vs to goe into the Land, in regard that we could not see the wilde Beares, and yet they could smell vs, for they smell better then they see. The fourteenth, it was cleare Sun-shine weather, but very cold, and then we went into the Land, and layed the Wood in heapes one vpon the other, that it might not bee covered ouer with the Snow, and from thence meant to carrie it to the place where we intended to build our house.

The fifteenth in the morning, as one of our men held watch, we saw three Beares, whereof the one lay still behind a piece of Ice, the other two came close to the ship; which wee perceiuing, made our Peeces ready to shoot at them, at which time there stood a Tub full of Beefe vpon the Ice, which lay in the water to be seasoned, for that close by the ship there was no water: one of the Beares went vnto it, and put in his head to take out a piece of the Beefe, but she feared therewith as the Dog did with the Pudding, for as she was snatching at the Beefe, shee was shot into the head, wherewith she fell downe dead, and neuer stirred: the other Beare stood still, and looked vpon her fellow, and when shee had stood a good while, shee smelt her fellow, and

Riuer of fresh
water, and
Wood.

Ship fastned
in Ice.

They deter-
mine to winter
there.

How God in
our extremest
need, when we
were forced to
lie all the Win-
ter, vpon the
Land, sent vs
Wood to make
vs a house, and
to serue vs to
burne in the
cold Winter.

Three Beares.

and perceiuing that she was dead, shee ran away, but wee tooke Halberts and other Armes with vs, and followed her, and at last she came againe towards vs, and we prepared our selues to withstand her, wherewith she rose vp vpon her hinder feet, thinking to ranpe at vs, but while shee reared her selfe vp, one of our men shot her into the bellie, and with that she fell vpon her fore-feet againe, and roaring as loud as she could, ran away. Then we tooke the dead Beare, and ript her bellie open; and taking out her guts, we set her vpon her fore-feet, that so she might freeze as shee stood, intending to carrie her with vs into *Holland*, if wee might get our ship loose, and when we had set the Beare vpon her foure feet, we began to make a Sled, thereon to draw the Wood to the place where we went to build our house, at that time it froze two fingers thicke in the salt water, and it was exceeding cold, the wind blowing North-east.

It freezeth in the salt water two fingers thicke in a night.

20 The sixteenth, the Sunne shone, but towards the euening it was misty, the wind being Easterly, at which time we went to fetch Wood with our Sleds, and then wee drew foure beames about a mile vpon the Ice and the Snow, that night againe it froze about two fingers thicke. The seuenteenth, thirteene of vs went where the Wood lay with our Sleds, and so drew fine and fine in a Sled, and the other three helped to lift the Wood behind, to make vs draw the better, and with more ease, and in that manner we drew Wood twice a day, and laid it on a heape by the place where we meant to build our house.

20 The three and twentieth, wee fetcht more Wood to build our house, which wee did twice a day, but it grew to be misty and still weather againe, the wind blowing East, and East North-east, that day our Carpenter being of *Parmecet* died, as wee came aboard about euening. The foure and twentieth, we buried him vnder the sedges, in the clift of a hill, hard by the water, for we could not dig vp the earth, by reason of the great frost and cold, and that day wee went twice with our Sleds to fetch Wood.

30 The five and twentieth, it was darke wether, the wind blowing West, & West South-west, and South-west, and the Ice began somewhat to open, and driue away; but it continued not long, for that hauing driuen about the length of the shot of a great Peece, it lay three fathoms deepe vpon the ground: and where we lay the Ice draue not, for we lay in the middle of the Ice; but if we had layne in the mayne Sea, we would haue hoysed sayle, although it was then late in the yeere. The same day we raysed vp the principles of our house, and began to worke hard thereon, but if the ship had beene loose, we would haue left our building, and haue made our after Steuen of our ship, that we might haue beene ready to sayle away if it had beene possible.

House builded.

40 The sixe and twentieth, wee had a West wind and an open Sea, but our ship lay fast, wherewith we were not a little griued, but it was Gods will, which we most patiently bare, and wee began to make vp our house, part of our men fetched Wood to burne, the rest played the Carpenters: and were busie about the house, as then we were sixteene men in all, for our Carpenter was dead, and of our sixteene men there was still one or other sicke. The seuen and twentieth, it blew hard North-east, and it froze so hard, that as we put a nayle into our mouthes (as when men worke Carpenters worke they vse to doe) there would Ice hang thereon when we tooke it out againe, and make the blood follow: the same day there came an old Beare and a young one towards vs, as we were going to our house, being all together (for we durst not goe alone) which we thought to shoot at, but she ran away, at which time the Ice came forcibly driuing in, and it was faire Sun-shine weather, but so extreme cold, that we could hardly worke, but extremity forced vs thereunto.

Hard and violent frost.

50 The eight and twentieth, it was faire weather, and the Sunne shone, the Wind being West and very calme, the Sea as then being open, but our ship lay fast in the Ice and stirred not; the same day there came a Beare to the ship, but when she espyed vs, she ranne away, and we made as much haste as wee could to build our House. The nine and twentieth in the morning, the Wind was West, and after-noon it blew Northerly, and then wee saw three Beares betweene vs and the House, an old one and two young; but we notwithstanding drew our goods from the ship to the House, and so got before the Beares, and yet they followed vs: neuerthelesse, we would not shun the way for them, but hollowed out as loud as we could, thinking that they would haue gone away, but they would not once goe out of their foot-path, but got before vs, wherewith we and they that were at the house, made a great noyse, which made the Beares run away, and we were not a little glad thereof. The thirtieth the Wind was East, and East South-east, and all that night and the next day it snowed so fast, that our men could fetch no Wood, it lay so close and high one vpon the other: then wee made a great fire without the House, therewith to thaw the ground, that so we might lay it about the House; that it might bee the closer; but it was all lost labour, for the Earth was so hard, and frozen so deepe into the ground, that wee could not thaw it, and it would haue cost vs too much Wood, and therefore wee were forced to 60 leaue off that labour.

Ground not to be thawed.

2. II.

*Their cold, comfortlesse, darke and dreadfull Winter : the Sunnes absence,
Moones light, Sunnes v unexpected returne with miraculous
Speed. Of Beares, Foxes, and many ma-
ny Wanders.*

May-pole of
Snow.

The first of October, the Wind blew stiffe North-east, and after-noon it blew North, with a great storme and drift of Snow, whereby wee could hardly goe in the Wind, and a man could hardly draw his breath, the Snow draue so hard in our faces, at which time we could not see two ships length from vs. The second before noone, the Sunne shone, and after noone it was cloudie againe, and it sned, but the vweather was still, the Wind being North, and then South, and vvee set vp our House, and vpon it wee placed a May-pole made of frozen Snow.

The third before noone, it was calme Sun-shine vweather, but so cold, that it was hard to bee indured, and after-noon it blew hard out of the West, vvith so great extreme cold, that if it had continued, we should haue beene forced to leaue our vvorke. The fourth, the Wind was West, and after-noon North, with great store of Snow, vvhereby vve could not vvorke : at that time vve brought our Anchor vpon the Ice to lye the faster, vvhen vvee lay but an Arrow shot from the Water, the Ice was so much driuen away.

Extreme Snow

The fifth, it blew hard North-west, and the Sea vv as very open and vvithout Ice, as farre as vve could discerne, but vvee lay still frozen as vve did before, and our ship lay two or three foot deepe in the Ice, and vvee could not perceiue otherwise, but that vvee lay fast vpon the ground, and then it vv as three fathome and a halfe deepe. The same day vve brake vp the lower deck of the fore-part of our ship, and vvith those Deales vve couered our Houses, and made it slope ouer head, that the Water might runne off, at vv which time it vv as very cold. The sixth, it blew hard West South-west, but towards Eeuening, West North-west, with a great Snow, that wee could hardly thrust our heads out of the doore, by reason of the great cold. The seventh, it was indifferent good weather, but yet very cold, and wee calkt our House, and brake the ground about it at the foot thereof : that day the Wind went round about the Compasse.

Hence it may
seeme, that the
course of the
Tides and Sea
is from the
North.

The eight, all the night before it blew so hard, and the same day also, and snowed so fast, that we should haue smothered, if we had gone out into the Ayre; and to speake truth, it had not beene possible for any man to haue gone one ships length, though his life had layen thereon : for it was not possible for vs to goe out of the House or ship. The ninth, the Wind still continued North, and blew, and snowed hard, all that day the Wind as then blowing from the Land, so that all that day we were forced to stay in the ship, the weather was so foule.

The tenth, the weather was somewhat fairer, and the Wind calmer, and blew South-west, and West, and South-west, and that time the Water flowed two foote higher then ordinary, which we ghest to proceede from the first North-west wind, which as then had blowne. The same day the weather began to be somewhat better, so that we began to go out of our ship againe : and as one of our men went out, he chanced to meet a Beare, and was almost at him before hee knew it, but presently he ranne backe againe towards the ship, and the Beare after him; but the Beare comming to the place where before we had killed another Beare, and set her vp right, and there let her freeze (which was couered ouer with Ice, and yet one of her pawes reached about it) shee stood still, whereby our man got before her, and climbed vp into the ship, in great feare, crying, *A Beare, a Beare*; which we hearing, came aboue Hatches to looke on her, and to shoot at her, but we could not see her, by meanes of the exceeding great smoke, that had so sore tormented vs (while we lay vnder Hatches) in the foule weather which we would not haue indured for any money, but by reason of the cold and snowie weather, wee were constrained to doe it, if wee would saue our liues, for aloft in the ship we must vndoubtedly haue died. The Beare stayed not long there, but ranne away, the Wind then being North-east. The same day about Eeuening, it was faire weather, and we went out of our ship to the House, and carried the greatest part of our Bread thither.

The eleuenth, it was calme weather, the Wind being South, and somewhat warme, and then we carried our Wine and other Victuals on Land : and as we were hoyfing the Wine ouer-boord, there came a Beare towards our ship, that had layen behind a piece of Ice, and it seemed that we had waked her with the noyse we made : for wee had seene her lye there, but wee thought her to be a piece of Ice; but as she came neere vs, we shot at her, and she ranne away, so we proceeded in our worke. The twelfth, it blew North, and somewhat Westerly, and then halfe of our men kept in the House, and that was the first time that we lay in it, but wee indured great cold, because our Cabins were not made; and besides that wee had not Clothes enough, and we could keepe no fire because our Chimney was not made, whereby it smoked exceedingly.

The thirteenth, the Wind was North and North-west, and it began againe to blow hard, and then

then three of vs went aboard the ship, and laded a Sled with Beere, but when wee had laden it, thinking to goe to our House with it, suddenly there rose such a Wind, and so great a storme and cold, that wee were forced to goe into the ship againe, because wee were not able to stay without, and wee could not get the Beere into the ship againe, but were forced to let it stand without vpon the Sled: being in the ship, wee indured extreame cold, because wee had but a few clothes in it.

The fourteenth, as wee came out of the ship, wee found the Barrell of Beere standing vpon the Sled, but it was fast frozen at the heads, yet by reason of the great cold, the Beere that purged out, froze as hard vpon the side of the Barrell as if it had bene glued thereon, and in that sort wee drew it to our House, and set the Barrell an end, and dranke it first vp, but wee were forced to melt the Beere, for there was scant any vnfrozen Beere in the Barrell, but in that thicke Yeast that was vnfrozen lay the strength of the Beere, so that it was too strong to drinke alone, and that which was frozen tasted like water, and being melted we mixt one with the other, and so dranke it, but it had neither strength nor taste.

The fifteenth, the Wind blew North and East, and East South-east, that day we made place to set vp our doore, and shoueled the Snow away. The eighteenth, the Wind blew hard East South-east, and then we fetched our Bread out of the Scute which wee had drawne vp vpon the Land, and the Wine also which as then was not much frozen, and yet it had layne fixe Weekes therein, and not withstanding that it had oftentimes frozen very hard. The same day wee saw another Beare, and then the Sea was so covered ouer with Ice, that wee could see no open water.

The nineteenth, the Wind blew North-east, and then there was but two men and a Boy in the ship, at which time there came a Beare that sought forcibly to get into the ship, although the two men shot at her with pieces of Wood, and yet she ventured vpon them, whereby they were in an extreame feare, each of them seeking to saue themselves, the two men leapt into the Ballast, and the Boy climbed into the foot Mast top, to saue their liues, meane time some of our men shot at her with a Musket, and then shee ranne away. The twentieth, it was calme Sunne-shine weather, and then againe wee saw the Sea open, at which time wee went on board to fetch the rest of our Beere out of the ship, where wee found some of the Barrels frozen in pieces, and the Iron hoops that were vpon the Iosam Barrels were also frozen in pieces.

The two and twentieth, the Winde blew coldly, and very stiffe North-east, with so great a Snow, that wee could not get out of our doores. The three and twentieth, it was calme weather, and the Winde blew North-east, then wee went aboard our ship, to see if the rest of our men would come home to the House; but wee feared that it would blow hard againe, and therefore durst not stirre with the sicke man, but let him lye still that day, for hee was very weake.

The foure and twentieth, the rest of our men beeing eight persons, came to the House, and drew the sicke man vpon a Sled, and then with great labour and paine, wee drew our Boat home to our House, and turned the bottome thereof vpwards, that when time serued vs (if God saued our liues in the Winter time) wee might vse it: and after that, perceiuing that the ship lay fast, and that there was nothing lesse to be expected then the opening of the water, wee put our Anchor into the ship againe, because it should not be covered ouer and lost in the Snow, that in the Spring time wee might vse it: for we alwayes trusted in God that hee would deliuer vs from thence towards Summer time, eyther one way or other. The Sunne, when we might see it best and highest, began to be very low, and we vsed all the speed we could to fetch all things with Sleds out of our ship into our House, not onely meate and drinke, but all other necessaries, at which time the Wind was North.

The five and twentieth, wee fetcht all things that were necessary for the furnishing of our Scute and our Boate: and when we had laden the last Sled, and stood readie to draw it to the House, our Master looked about him and saw three Beares behind the ship that were comming towards vs, whereupon hee cryed out aloud to feare them away, and wee presently leaped forth to defend our selues as well as we could: and, as good fortune was, there lay two Halberds vpon the Sled, whereof the Master tooke one, and I the other, and made resistance against them as well as we could; but the rest of our men ranne to saue themselves in the ship, and as they ranne, one of them fell into a Clift of Ice, which grieved vs much: for we thought verily that the Beares would haue ranne vnto him, to deuoure him, but God defended him: for the Beares still made towardes the ship after the men that ranne thither to saue themselves. Meane time, wee and the man that fell into the Clift of Ice, tooke our aduantage, and got into the ship on the other side, which the Beares perceiuing, they came fiercely towards vs, that had no other Armes to defend vs withall, but onely the two Halberds, which wee doubting would not bee sufficient, wee still gaue them worke to doe by throwing Billets and other things at them, and every time we threw, they ranne after them as a Dogge vseth to doe at a Stone that is cast at him. Meane time, wee sent a man

Beere melted.

Sea covered with Ice.

Beare assaults the ship.

Barrels and Iron hoops broken with Ice.

All come to the House.

Fight with Beares.

downe vnder Hatches to strike Fire, and another to fetch Pikes, but wee could get no Fire, and so wee had no meanes to shoote: at the last, as the Beares came fiercely vpon vs, wee strooke one of them with a Halberd vpon the Snowt, wherewith shee gaue backe, when shee felt her selfe hurt, and went away, which the other two that were not so great as shee, perceiuing, ranne away: and wee thanked God that wee were so well deliuered from them, and so drew our Sled quietly to our House, and there shewed our men what had happened vnto vs.

The fixe and twentieth, the Wind was North, and North North-west, with indifferent faire weather: then wee saw open Water hard by the Land, but wee perceiued the Ice to driue in the Sea, still towards the ship. The seuen and twentieth, the Wind blew North-east, and it snowed so fast, that wee could not worke without the doore. That day our men killed a White Foxe, which they flead: and after they had roasted it, ate thereof, which tasted like Conies flesh: the same day we set vp our Dyall, and made the Clocke strike, and wee hung vp a Lampe to burne in the night time, wherein we vsed the fat of the Beare which wee melt, and burnt in the Lampe.

White Foxe.

Beares fat for Lampe.

The nine and twentieth, the Wind still blew North-east, and then wee fetched Segges from the Sea-side, and layd them vpon the Sayle that was spread vpon our House, that it might bee so much the closer and warmer: for the Deales were not driuen close together, and the foule weather would not permit vs to doe it. The thirtieth, the Winde yet continued North-east, and the Sunne was full about the Earth, a little about the Horizon. The one and thirtieth, the Winde still blew North-east, with great store of Snow, whereby wee durst not looke out of doores.

November.

Sun & Moone.

The first of November, the Wind still continued North-east, and then wee saw the Moone rise in the East when it beganne to bee darke, and the Sunne was no higher about the Horizon then we could well see it, and yet that day we saw it not, because of the close weather, and the great Snow that fell, and it was extreame cold, so that we could not goe out of the House.

Sun riseth South South-east, and goeth downe South South-west, not full about the Earth. Foxes succed Beares.

The second, the Wind blew West, and somewhat South, but in the Euening it blew North, with calme weather, and that day we saw the Sunne rise South South-east, and it went downe South South-west, but it was not full about the Earth, but passed in the Horizon along by the Earth: and the same day one of our men killed a Fox with a Hatchet, which was flayed, roasted and eaten. Before the Sunne began to decline, wee saw no Foxes, and then the Beares vsed to goe from vs.

The third, the Wind blew North-west with calme weather, and the Sunne rose South and by East, and somewhat more Southerly, and went downe South and by West, and somewhat more Southerly: and then we could see nothing but the vpper part of the Sunne about the Horizon, and yet the Land where wee were, was as high as the Mast of our ship, then wee tooke the height of the Sunne, it being in the eleuenth degree, and fortie eight minutes of *Scorpio*, his Declination being fiftene degrees and twentie foure minutes on the South-side of the Equinoctiall Line.

They see the Sun no more after the third of November, *Stilonius*, or our Octob. 24.

The fourth, it was calme weather, but then wee saw the Sunne no more, for it was no longer about the Horizon, then our Chirurgeon made a Bath (to bathe vs in) of a Wine-pipe, wherein wee entred one after the other, and it did vs much good; and was a great meanes of our health. The same day wee tooke a White Foxe, that oftentimes came abroad, not as they vsed at other times: for that when the Beares left vs at the setting of the Sunne, and came not againe before it rose, the Foxe to the contrarie came abroad when they were gone.

Moone continually scene in the Sunnes absence.

The fifth, the Winde was North, and somewhat West, and then wee saw open water vpon the Sea, but our shippe lay still fast in the Ice, and when the Sunne had left vs, wee saw the Moone continuall both day and night, and neuer went downe when it was in the highest degree. The sixt, the Winde was North-west, still weather, and then our men fetcht a Sled full of Fire-wood, but by reason that the Sunne was not scene, it was very darke weather.

Darknesse.

The seuenth, it was darke weather, and very still, the Winde West, at which time wee could hardly discern the Day from the Night, specially because at that time our Clocke stood still, and by that meanes wee knew not when it was day, although it was day, and our men rose not out of their Cabins all that day; but onely to make water, and therefore they knew not whether the light they saw, was the light of the day or of the Moone; whereupon, they were of seuerall opinions, some saying, it was the light of the day, the others of the night: but as wee tooke good regard thereunto, wee found it to bee the light of the day about twelue of the clocke at noone.

Bread shared and Beere.

The eight, it was still weather, the Winde blowing South, and South-west. The same day our men fetcht another Sled of Fire-wood, and then also wee tooke a White Foxe, and saw open water in the Sea. The same day wee shared our Bread amongst vs, each man hauing foure pound and tenne ounces, for his allowance in eight dayes, so that then

we were eight dayes eating a Barrell of Bread, whereas before wee ate it vp in fve or six dayes: we had no need to share our flesh and fish, for we had more store thereof; but our drinke failed vs, Beere strength and therefore we were forced to share that also: but our best Beere was for the most part who- less with stoffs ly without any strength, so that it had no sauour at all: and besides all this, there was a great deale of it spilt. The ninth, the Wind blew North-east, and somewhat more Northerly, and then we had not much day light, but it was altogether darke. The tenth, it was calme weather, the Wind North-west, and then our men went into the ship to see how it lay, and wee Ship ballast saw that there was a great deale of water in it, so that the ballast was couered ouer with water, covered with but that it was frozen, and so might not bee pumpt out. The eleuenth, it was indifferent weather, the Wind North-west. The same day we made a round thing of Cable yarne, and like to a Net, to catch Foxes withall, that wee might get them into the House, and it was made like a Fox-trap. Trap, which fell vpon the Foxes as they came vnder it, and that day we caught one.

The twelfth, the Wind blew East, with a little light: that day wee began to share our Wine, Wine shared euery man had two Glasse a day, but commonly our Drinke was water, which we melted out Drinke water of Snow, which we gathered without the House. The thirteenth, it was foule weather, with great Snow, the Wind East. The fourteenth, it was faire cleere weather, with a cleere Skie full of Starres, and an East-wind. The fiftenth, it was darke weather, the Wind North-east, with a fading light. The sixteenth, it was weather with a temperate Ayre, and an East-wind. The seuententh, it was darke weather, and a close Ayre, the Wind East. The eighteenth, it was foule weather, the wind South-east: then the Master cut vp a packe of course Clothes, and diuided it amongst our men that needed it, therewith to defend vs better from the cold. The nineteenth, it was foule weather, with an East-wind, and then the Chist with Linnen was opened, and diuided amongst the men for shift, for they had need of them, for then our onely care was to find all the meanes we could to defend our bodie from the cold. The twentieth, it was faire still weather, the Wind Easterly, then wee waht our sheets, but it was so cold, that when wee had waht and wrung them, they presently froze so stiffe, that although wee layed them by a great fire, the side that lay next the fire thawed, but the other side was hard frozen, so that wee should sooner haue torne them in sunder then haue opened them, whereby wee were forced to put them into the seething water againe to thaw them, it was so exceeding cold. The one and twentieth, it was indifferent weather with a North-east wind, then we agreed that euery man should take his turne to cleaue Wood, thereby to ease our Cooke, that had more then worke enough to doe twice a day to dresse meate, and to melt Snow for our Drinke, but our Master and the Pilot were exempted from that Worke.

The two and twentieth, the Wind was South-east, it was faire weather, then wee had but seuentene Cheeles, whereof one we ate amongst vs, and the rest were diuided to euery man one for his portion, which they might ate when he list. The three and twentieth, it was indifferent good weather, the Wind South-east, and as we perceiued that the Fox used to come ofner, and more then they were wont, to take them, the better, wee made certaine Trappes of thicke Planckes, whereon wee laid stones, and round about them placed pieces of shards fast in the ground, that they might not digge vnder them, and so got some of the Foxes. The foure and twentieth, it was foule weather, and the Wind North-east, and then wee prepared our selues to goe into the Bath, for some of vs were not very well at ease, and so foure of vs went into it, and when we came out, our Surgeon gaue vs a Purgation, which did vs much good, and that day we tooke foure Foxes. The fve and twentieth, it was faire cleere weather, the Wind West; and that day we tooke two Foxes with Springs that we had purposely set vp.

The six and twentieth, it was foule weather, and a great storme with a South-west Wind, and great store of Snow, whereby wee were so closed vp in the House, that wee could not goe out, but were forced to ease our selues within the House. The seuen and twentieth, it was faire cleere weather, the Wind South-west, and then we made more Spinges to get Foxes, for it stood vs vpon to doe it, because they serued vs for meate, as if God had sent them purposely for vs, for we had not much meate. The eight and twentieth of Nouember, it was foule stormie weather, and the Winde blew hard out of the North, and it snowed hard, whereby wee were shut vp againe in our House, the Snow lay so closed before the doores.

The nine and twentieth, it was faire cleere weather, and a good Ayre: the Wind Northerly, and we found meanes to open our doore by shoueling away the Snow, whereby wee got one of our doores open, and going out, wee found all our Traps and Springes cleane couered ouer with Snow, which wee made cleane, and set them vp againe to take Foxes: and that day wee tooke one, which as then serued vs not onely for meate, but of the skinnes wee made Caps to weare vpon our heads, wherewith to keepe them warme from the extreame cold. The thirtieth, it was faire cleere weather, the Wind West, and six of vs went to the ship, all well prouided of Armes to see how it lay: and when wee went vnder the fore Decke, wee tooke a Foxe aliue in the ship.

The first of December, it was foule weather with a South-west Wind, and great store of Snow, whereby we were once againe stopt vp in the House, and by that meanes there was so

- Lye still in Cabins. great a smoake in the House, that we could hardly make fire, and so were forced to lye all day in our Cabins, but the Cooke was forced to make fire to dresse our meate. The second, it was still foule weather, whereby wee were forced to keepe still in the House, and yet wee could hardly sit by the fire, because of the smoake, and therefore stayed still in our Cabins, and then we heated stones, which we put in our Cabins to warme our feet, for that both the cold and the smoake were vnsupportable.
- Stones heated to heat them. Cold and Smoake. The third, we had the like weather, at which time as we lay in our Cabins, wee might heare the Ice cracke in the Sea, and yet it was at the least halfe a mile from vs, which made a huge noyse, and we were of opinion, that as then the great Hills of Ice which wee had seene in the Sea, in Summer time, brake one from the other, and for that during those two or three dayes, because of the extreame smoake, we made not so much fire as we commonly vsed to doe, it froze so fore within the House, that the Walls and the Roofe thereof were frozen two fingers thick with Ice, and also in our Cabins where we lay all those three dayes, while wee could not goe out: by reason of the foule weather, we set vp the Glasse of twelue houres, and when it was runne out, wee set it vp againe, still watching it lest wee should misse our time. For the cold was so great, that our Clocke was frozen, and might not goe, although we hung more waight on it then before.
- Ice in the House. Clock frozen. The fourth, it was faire cleere weather, the Wind North-east, and then we began euery man by turne to digge open our doores that were closed vp with Snow, for we saw that it would be often to doe, and therefore we agreed to worke by turnes, no man excepted but the Master and the Pilot. The fifth, it was faire weather with an East-wind, and then we made our Springes cleane againe to take Foxes. The sixth, it was foule weather againe, with an Easterly Wind, and extreame cold, almost not to bee indured, whereupon wee lookt pittifully one vpon the other, being in great feare, that if the extremitie of the cold grew to bee more and more, wee should all dye there with cold, for that what fire soeuer we made, it would not warme vs, yea, and our Sacke which is so hot, was frozen very hard, so that when wee were euery man to haue his part, we were forced to melt it in the fire, which wee shared euery second day about halfe a pint for a man, wherewith we were forced to sustayne our selues, and at other times wee dranke water, which agreed not well with the cold, and we needed not to coole it with Snow or Ice, but we were forced to melt it out of the Snow.
- Cold stronger then fire and Sacke. The seuenth, it was still foule weather, and we had a great storme with a North-east Wind, which brought an extreame cold with it, at which time wee knew not what to doe, and while we sate consulting together, what were best for vs to doe, one of our companions gaue vs counsell to burne some of the Sea-coales that we had brought out of the ship, which would cast a great heate and continue long, and so at Euening we made a great fire thereof, which cast a great heat: at which time wee were very carefull to keepe it in: for that the heate being so great a comfort vnto vs, we tooke care how to make it continue long: whereupon wee agreed to stop vp all the doores and the Chimney, thereby to keepe in the heate, and so went into our Cabins to sleepe, well comforted with the heate, and so lay a great while talking together; but at last we were taken with a great swoounding and dazeling in our heads, yet some more then other some, which we first perceiued by a sicke man, and therefore the lesse able to beare it, and found our selues to be very ill at ease, so that some of vs that were strongest, start out of their Cabins, and first opened the Chimney, and then the doores, but he that opened the doore fell downe in a swoound vpon the Snow, which I hearing, as lying in my Cabin next to the doore, start vp, and casting Vinegar in his face, recovered him againe, and so he rose vp: and when the doores were open, we all recovered our healths againe, by reason of the cold Ayre, and so the cold which before had bene so great an Enemy vnto vs, was then the onely reliefe that wee had, otherwise without doubt, we had dyed in a sudden swoound, after that the Master, when we were come to our selues againe, gaue euery one of vs a little Wine to comfort our hearts.
- Sea-coale fire. The eight, it was foule weather, the winde Northerly, very sharpe and cold, but we durst lay no more coales on, as wee did the day before, for that our misfortune had taught vs, that to shunne one danger we should not runne into another. The ninth, it was faire cleere weather, the skie full of Starres, then we set our doore wide open, which before was fast closed vp with Snow, and made our Springes ready to take Foxes. The tenth, it was still faire Star-light weather, the winde North-east: then wee tooke two Foxes, which were good meate for vs, for as then our victuals began to bee scant, and the cold still increased, whereunto their Skinnies serued vs for a good defence. The eleuenth, it was faire weather, and a cleere ayre but very cold, which wee that felt not would not belecue, for our Shooes froze as hard as hornes vpon our feete, and within they were white frozen, so that we could not weare our shooes, but were forced to make great Pattents, the vpper part being Sheepe-skinnes, which we put on ouer three or foure payre of Sockes, and so went in them to keepe our feet warme.
- Shooes on feet frozen within. They weare no shooes. The twelfth, it was faire cleere weather with a North-west winde, but extreame cold, so that our House walls and Cabbins were frozen a finger thicke; yea, and the Cloathes vpon our backs were white ouer with Frost, and although some of vs were of opinion, that wee should lay
- Clothes on their backs frozen.

lay more coles vpon the fire to warme vs, and that we should let the chimney stand open, yet we durst not doe it, fearing the like danger we had escaped. The thirteenth, it was faire cleere weather, with an East winde: then we tooke another Foxe, and tooke great paines about preparing and dressing of our Springes, with no small trouble, for that if wee stayed too long without the doores, there arose blisters vpon our Faces and our Eares. The fourteenth, it was faire weather, the winde North-east, and the skie full of starres, then we tooke the height of the right shoulder of the *Rens*, when it was South South-west, and somewhat more Westerly (and then it was at the highest in our Compasse) and it was eleuated about the Horizon 20. degrees and 28. minutes, his Declination being 6. degrees and 18. minutes, on the North-side of the line, which Declination being taken out of the height afore sayd, there rested 14. degrees, which being taken out of 90. degrees, then the height of the Pole was 76. degrees.

Cold blisters.

The fifteenth, it was still faire weather, the winde East: that day wee tooke two Foxes, and saw the Moone rise East South-east, when it was fixe and twentie dayes old, in the signe of *Scorpio*. The sixteenth, it was faire cleere weather, the winde East: at that time wee had no more Wood in the house, but had burnt it all: but round about our house there lay some couered ouer with Snow, which with great paine and labour we were forced to digge out, and so shouell away the Snow, and so brought it into the house, which wee did by turnes, two and two together, wherein we were forced to vse great speed, for wee could not long endure without the House, because of the extreame cold, although we wore the Foxes skinnes about our heads, and double apparell vpon our backs.

Extreame and terrible freezing.

The seuenteenth, the winde still held North-east, with faire weather and so great Frosts, that wee were of opinion, that if there stood a Barrell full of water without the doore, it would in one night freeze from the top to the bottome. The eighteenth, the winde still held North-east, with faire weather: then seven of vs went out vnto the Ship to see how it lay, and being vnder the decke, thinking to finde a Foxe there, we sought all the holes but we found none; but when we entred into the Cabbin and had stricken fire to see in what case the ship was, and whether the water rose higher in it, there wee found a Foxe, which we tooke and carryed it home, and eate it, and then we found that in eightene dayes absence (for it was so long since we had bene there) the water was risen about a finger high, but yet it was all Ice, for it froze as fast as it came in, and the vessels which wee had brought with vs full of fresh water out of *Holland*, were frozen to the ground.

The nineteenth, it was faire weather, the winde being South: then we put each other in good comfort, that the Sunne was then almost half ouer, and ready to come to vs againe, which wee sore longed for, it being a weary time for vs to bee without the Sunne, and to want the greatest comfort that God sendeth vnto man heere vpon the earth, and that which rejoyceth every liuing thing. The twentieth, before noone it was faire cleere weather, and then we had taken a Foxe, but towards Eeuening, there rose such a storme in the South-west, with so great a snow, that all the house was inclosed therewith. The one and twentieth, it was faire cleere weather, with a North-east winde, then we made our doore cleane againe, and made a way to goe out, and clenched our Traps for the Foxes, which did vs great pleasure when we tooke them, for they seemed as daintie as Venison vnto vs. The two and twentieth, it was foule weather, with great store of snow, the winde South-west, which stopt vp our doore againe, and wee were forced to digge it open againe, which was almost euery day to doe. The three and twentieth, it was foule weather, the wind South-west, with great store of snow, but wee were in good comfort that the Sunne would come againe to vs, for as we ghesse, that day hee was in *Tropicus Capricorni*, which is the furthest Signe that the Sunne passeth on the South-side of the line, and from thence it turneth Northward againe. The foure and twentieth, being Christmasse Eeuening, it was faire weather, then wee opened our doore againe, and saw much open water in the Sea: for we had heard the Ice cracke and drine: although it was not day, yet we could see so farre. Towards Eeuening it blew hard out of the North-east, with great store of Snow, so that all the passage that wee had made open before, was stopt vp againe. The five and twentieth, being Christmasse day, it was foule weather, with a North-west winde, and yet though it was foule weather, we heard the Foxes runne ouer our House, wherewith some of our men sayd, it was an ill signe; and while we sate disputing why it should bee an ill signe, some of our men made answer, that it was an ill signe because wee could not take them, to put them into the Pot or roast them, for that had bene a very good signe for vs.

Sunnes comfort.

House inclosed with snow.

Sun in *Tropicus Capricorni*. 24. Decem. Still now.

Cold Christmasse.

All signe indeed.

The fixe and twentieth, it was foule weather, the winde North-west, and it was so cold that we could not warme vs, although wee vsed all the meanes we could with great fires, good store of clothes, and with hot stones and billets, layd vpon our feete and vpon our bodies, as we lay in our Cabbins; but notwithstanding all this, in the morning our Cabbins were frozen, which made vs behold one the other with sad countenance, but yet wee comforted our selues againe as well as we could, that the Sunne was then as low as it could goe, and that it now began to come to vs againe, and we found it to bee true: for that the *Dayes beginning to lengthen, the Cold began to strengthen*, but hope put vs in good comfort, and eased our paine. The seven and twentieth, it

Cold inuincible.

Burne before,
freeze behind.

was still foule weather, with a North-west wind, so that as then wee had not beene out in three dayes together, nor durst not thrust our heads out of doores, and within the house it was so extreame cold, that as we sate before a great Fire, and seemed to burne on the fore-side, we froze behind at our backes, and were all white as the Countrey-men vse to bee, when they come in at the gates of the Towne in *Holland* with their Sleds, and haue gone all night.

Snow higher
then the house

The eight and twentieth, it was still foule weather with a West wind, but about Eeuening it began to cleere vp, at which time one of our men made a hole open at one of our doores, and went out to see what newes abroad, but found it so hard weather that hee stayed not long, and told vs that it had snowed so much, that the Snow lay higher then our house, and that if he had stayed out longer, his eares would vndoubtedly haue beene frozen off. The nine and twentieth,

Snow-steps.

it was, opened the doore, and digged a hole through the Snow, where we went out of the house vpon steps, as if it had beene out of a Celler, at least seuen or eight steps high, each step a foote from the other, and then we made cleane our Springes for the Foxes, whereof for certaine dayes we had not taken any: and as we made them cleane, one of our men found a dead Foxe in one of them, that was frozen as hard as a stone, which he brought into the house, and thawed it before the fire, and after slaying it, some of our men eate it. The thirtieth, it was foule weather againe, with a storme out of the West, and great store of Snow, so that all the labour and paine that we had taken the day before to make steps to goe out of our house, and to cense our Springes, was all in vaine, for it was all couered ouer with Snow againe, higher then it was before. The one and

Fire conque-
red, hear smelt
before felt.

thirtieth, it was still foule weather, with a storme out of the North-west, whereby we were so fast shut vp into the house, as if wee had beene prisoners, and it was so extreame cold, that the fire almost cast no heate: for as we put our feet to the fire, we burnt our hofe before we could feele the heate, so that we had worke enough to doe to patch our hofe: and which is more, if we had not sooner smelt, then felt them, we should haue burnt them ere we had knowne it.

An. Dom. 1597.

January.

After that with great cold, danger, and disease, wee had brought this yeere vnto an end, we entred into the yeere of our Lord God 1597. the beginning whereof, was in the same manner as the end of *Anno* 1596. had beene, for the weather continued as cold, foule, and Snowie, as it was before, so that vpon the first of January wee were inclosed in the House, the winde then being West: at the same time wee agreed to share our Wine euery man a small measure full, and that but once in two dayes: and as we were in great care and feare that it would bee long before we should get out from thence, (and we hauing but small hope therein) some of vs spared to drinke wine as long as we could, that if we should stay long there, we might drinke it at our need. The second, it blew hard with a West wind, and a great storme with both Snow and Frost, so that in foure or fise dayes, we durst not put our heads out of the doores, and as then by reason of the great cold, we had almost burnt all our Wood; notwithstanding, we durst not goe out to fetch more wood, because it froze so hard, and there was no being without the doore, but seeking about we found some peeces of wood that lay ouer the doore, which we cloue, and withall cloue the blockes whereon we vsed to beate our Stock-fish, and so holpe our selues so well as we could. The third, it was all one weather, and we had little wood to burne. The fourth, it was still foule stormie weather, with much Snow and great cold, the winde South-west, and we were forced to keepe in the house: and to know where the wind blew, we thrust a halfe-pike out at the Chimney with a little cloath or feather vpon it, but as soone as wee thrust it out, it was presently frozen as hard as a peece of wood, and could not goe about nor stirre with the wind.

Vane.

The fifth, it was somewhat still and calme weather: then wee digged our doore open againe, that we might goe out, and carrie out all the filth that had beene made, during the time of our being shut in the house; and made euery thing handsome, and fetched in Wood which we cleft, and it was all our dayes worke to further our selues as much as we could, fearing least we should be shut vp againe: and as there were three doores in our portall, and for that our house lay couered ouer in Snow, wee tooke the middle doore thereof away, and digged a great hole in the snow, that lay without the house, like to a side of a vault, wherein we might goe to ease our selues, and cast other filth into it: and when we had taken paines all day, we remembred our selues that it was Twelfth Euen, and then we prayed our Master that we might be merrie that night, and sayd, that we were content to spend some of the Wine that night which we had spared, and which was our share euery second day, and whereof for certayne dayes wee had not drunke, and so that night we made merrie, and drunke to the *three Kings*, and therewith we had two pound of Meale, whereof wee made pan-cakes with Oyle, and euery man a white Bisket, which we sopt in Wine: and so supposing that we were in our owne Countrey, and amongst our friends, it comforted vs as well as if we had made a great banquet in our owne house: and we also made tickets, and our Gunner was King of *Nona Zembla*, which is at least two hundred miles long, and lyeth betweene two Seas.

Three Kings
of Cullen.King of *Nona
Zembla*.

The sixt, it was faire weather, the wind North-east, then wee went out and cleansed our Traps to take Foxes, which were our Venison, and we digged a hole in the Snow, where our fire-wood

wood lay, and left it close above like a vault; and from thence fetched out our Wood as we needed it. The seventh, it was foule weather againe, with a North-west wind, and some Snow, and very cold, which put vs in great feare to be shut vp in the house againe. The eight, it was faire weather againe, the wind North: then wee made our Springes ready to get more Venison: which wee longed for, and then wee might see and marke day-light, which then began to encrease, that the Sunne as then began to come towards vs againe, which put vs in no little comfort.

The ninth, it was foule weather, with a North-west wind, but not so hard weather as it had beene before, so that we might goe out of the doore to make cleane our Springes. The tenth, it was faire weather with a North wind: then seven of vs went to our ship well armed, which we found in the same state wee left it in, and in it wee saw many footsteps of Beares, both great and small, whereby it seemed that there had beene more then one or two Beares therein; and as we went vnder hatches, we strooke fire, and lighted a Candle, and found that the water was risen a foot higher in the ship. The eleventh, it was faire weather, the wind North-east, and the cold began to be somewhat lesse, so that as then we were bold to goe out of the doores, and went about a quarter of a mile to a Hill, from thence we fetched certaine stones, which we layd in the fire, therewith to warme vs in our Cabins.

The twelfth, it was cleare weather, the wind North-west: that euening it was very cleare, and the skie full of Starres, then wee tooke the height of *Oculus Tauri*, which is a bright and well knowne Starre, and we found it to be elevated above the Horizon 29. degrees and 54. minutes, her declination being 15. degrees 54. minutes on the North side of the Line. This declination being subtracted from the height aforesaid, then there rested 14. degrees, which subtracted from 90. degrees, then the height of the Pole was 76. degrees, and so by measuring the height of that Starre, and some others, wee ghesse that the Sunne was in the like height, and that we were there vnder 76. degrees, and rather higher then lower.

The thirteenth, it was faire still weather, the wind Westerly, and then wee perceived that day-light began more and more to encrease, and we went out and cast Bullets at the bale of the Flag-staffe, which before we could not see when it turned about. The fourteenth, it was faire weather and a cleare light, the wind Westerly, and that day we tooke a Foxe. The fifteenth, it was faire cleere weather, with a West wind, and sixe of vs went aboard the ship, where wee found the Bolek-vanger (which the last time that we were in the ship, wee stucke in a hole in the fore decke, to take Foxes) pulled out of the hole, and lay in the middle of the ship, and all torne in pieces by the Beares, as we perceived by their footsteps.

The sixteenth, it was faire weather, the wind Northerly, and then we went now and then out of the house to stretch out our ioynts and our limbs with going and running, that we might not become lame, and about noone time we saw a certaine rednesse in the skie, as a shew or messenger of the Sunne that began to come towards vs. The seventeenth, it was cleare weather with a North wind, and then still more and more wee perceived that the Sunne began to come neerer vnto vs, for the day was somewhat warmer, so that when we had a good fire, there fell great pieces of Ice downe from the walls of our house, and the Ice melted in our Cabins, and the water dropped downe, which was not so before, how great soeuer our fire was; but that night it was cold againe.

The eighteenth, it was faire cleare weather, with a South-east wind, then our Wood began to consume, and so we agreed to burne some of our Sea-coles, and not to stop vp the Chimney, and then we should not need to feare any hurt, which we did, and found no disease thereby, but we thought it better for vs to keepe the Coles, and to burne our Wood more sparingly, for that the Coles would serue vs better when we should sayle home in our open Scute.

The one and twentieth, it was faire weather, with a West wind: at that time taking of Foxes began to fayle vs, which was a signe that the Beares would come againe, as not long after we found it to be true, for as long as the Beares stay away, the Foxes came abroad, and not much before the Beares come abroad, the Foxes were but little seene.

The two and twentieth, it was faire weather with a West wind: then we went out againe to cast the Bullet, and perceived that day-light began to appeare, whereby some of vs said, that the Sunne would soone appeare vnto vs, but *William Barents* to the contrary said, that it was yet two weekes too soone. The three and twentieth, it was faire calme weather, with a South-west wind: then foure of vs went to the ship, and comforted each other, giuing God thanks that the hardest time of the Winter was past, being in good hope that we should liue to talke of those things at home in our owne Countrey: and when we were in the ship, we found that the water rose higher and higher in it, and so each of vs taking a Bisket or two with vs, wee went home againe.

The foure and twentieth, it was faire cleare weather, with a West wind: then I, and *Iacob Heemskerke*, and another with vs went to the Sea-side, on the South side of *Nova Zembla*, where contrary to our expectation, I first saw the edge of the Sunne, wherewith wee went speedily home againe, to tell *William Barents*, and the rest of our companions that ioyfull newes: but

Sunne appea-
reth againe,
Jan. 24.

William Barents being a wise and well experienced Pilot, would not beleue it, esteeming it to be about fourteene dayes to soone for the Sunne to shine in that part of the World; but we earnestly affirmed the contrarie, and said, that we had seene the Sunne.

The five and twentieth, and sixe and twentieth, it was misty, and close weather, so that wee could not see any thing: then they that layed the contrary wager with vs, thought that they had won: but vpon the seven and twentieth day it was cleare weather, and then wee saw the Sunne in his full roundnesse aboue the Horizon, whereby it manifestly appeared that wee had seene it vpon the foure and twentieth day of Ianuary. And as we were of diuers opinions touching the same, and that wee said, it was cleane contrary to the opinions of all old and new Writers; yea, and contrary to the nature and roundnesse both of Heauen and Earth; some of vs said, that seeing in long time there had beene no day, that it might be that we had ouerslept our selues, whereof we were better assured: but concerning the thing in it selfe, seeing God is wonderfull in all his workes, we will referre that to his almightie power, and leaue it vnto others to dispute of, but for that no man shall thinke vs to be in doubt thereof, if wee should let this passe without discoursing vpon it, therefore we will make some declaration thereof, whereby we may assure our selues that we kept good reckoning.

Sun fully seen.

How the Sun which they had lost the 4. of Nouember did appeare to them againe vpon the 24. of Ianuary, which was very strange, and contrary to all learned mens opinions.

You must vnderstand, that when we first saw the Sun, it was in the fift degr. and 25. min. of *Aquarius*, and it should haue staid according to our first ghesing, till it had entred into the 16. deg. and 27. min. of *Aquarius*, before he should haue shewed there vnto vs, in the height of 76. deg. Which we struing and contending about it amongst our selues, could not be satisfied, but wondred thereat, and some amongst vs were of opinion, that we had mistaken our selues, which neuertheless we could not be perswaded vnto, for that euery day without fayle, wee noted what had past, and also had vsed our Clocke continually, and when that was frozen, wee vsed our Houre-glasse of twelue houres long, whereupon wee argued with our selues, in diuers wise, to know how we should finde out that difference, and leaue the trueth of the time, which to trie, wee agreed to looke into the *Ephemerides* made by *Iosephus Schala*, Printed in *Venice*, for the yeeres of our Lord 1589. till A. 1600. and we found therein, that vpon the foure and twentieth day of Ianuary, (when the Sun first appeared vnto vs) that at *Venice* the Clocke being one in the night time, the Moone and *Iupiter* were in coniunction, whereupon we sought to know when the same coniunction should be ouer or about the house where wee then were, and at last wee found that the foure and twentieth day of Ianuary was the same day whereon the coniunction aforesaid happened in *Venice*, at one of the clocke in the night, and with vs in the morning, when the Sunne was in the East: for we saw manifestly that the two Planets aforesaid approached neere vnto each other, vntill such time as the Moone and *Iupiter* stood one iust ouer the other, both in the signe of *Taurus*, and that was at sixe of the clocke in the morning, at which time the Moone and *Iupiter* were found by our Compasse, to be in coniunction ouer our house, in the North and by East point, and the South part of the Compasse was South South-west, and there we had it right South, the Moone being eight dayes old, whereby it appeareth, that the Sunne and the Moone were eight points different, and this was about sixe of the clocke in the morning: this place differeth from *Venice* five houres in longitude, whereby we may ghesse how much we were neerer East then the Citie of *Venice*, which was five houres, each houre being 15. degrees, which is in all 75. degrees, that we were more Easterly then *Venice*, by all which it is manifestly to be seene, that wee had not sayled in our account, and that also wee had found our right longitude, by the two Planets aforesaid, for the Towne of *Venice* lieth vnder 37. degrees and 25. minutes in longitude, and her declination is 46. degrees and 5. minutes, whereby it followeth that our place of *Noua Zembla*, lieth vnder 112. degrees and 25. minutes in longitude, and the height of the Pole 76. degrees, and so you haue the right longitude and latitude, but from the vttermost point of *Noua Zembla*, to the point of Cape de Tabin, the vttermost point of *Tartaria*, where it windeth Southward, the longitude differeth 60. degrees; but you must vnderstand, that the degrees are not so great as they are vnder the Equinoctiall Line, for right vnder the Line a degree is fifteene miles, but when you leaue the Line, either Northward or Southward, then the degrees in longitude doe lessen, so that the neerer that a man is to the North or South Pole, so much the degrees are lesse: so that vnder the 75. degrees Northward, where we wintred, the degrees are but three miles and two third parts; whereby it is to be marked, that we had but 60. degrees to saile to the said Cape de Tabin, which is, 220. miles, so the said Cape lieth in 172. degrees in longitude as it is thought: and being aboue it, it seemeth that we should be in the Streight of *Anian*, where we may sayle boldly into the South, as the Land reacheth. Now what further instructions are to be had to know, where wee lost the Sunne vnder the said 76. degrees vpon the fourth of Nouember, and saw it againe vpon the foure and twentieth of Ianuary: I leaue that to be described, by such as make profession thereof, it sufficeth vs to haue shewed, that it failed vs not to appeare at the ordinary time.

Difference of longitude betwixt *Venice* and their wint'ring place.

Note for deg. of longitude.

Beares returne with the Sun.

The five and twentieth of Ianuary, it was darke cloudy weather, the wind Westerly, so that the seeing of the Sunne the day before, was againe doubted of, and then many wagers were layd, and we still looked out to see if the Sunne appeared, the same day we saw a Beare, (which

our

as long as the Sunne appeared not vnto vs we saw not) comming out of the South-west towards our house; but when we shouted at her she came no neerer, but went away again. The six & twentieth, it was faire cleare weather, but in the Horizon there hung a white or darke cloude, whereby we could not see the Sunne, vwhereupon the rest of our companions, thought that we had mistaken our selues vpon the foure and twentieth day, and that the Sunne appeared not vnto vs, and mocked vs, but vve were resolute in our former affirmation, that vve had seene the Sunne, but not in the full roundnesse: That Eeuening the Sicke man that was amongst vs, was very vveake, and felt himselfe to bee extreame sicke, for he had layne long time, and vve comforted him as well as vve might, and gaue him the best admonition that vve could, but hee dyed not long after midnight.

Sicke man
dieth.

The twentieth seuen it was faire cleare weather, with a South-west wind, then in the morning we digged a hole in the snow hard by the house, but it was still so extreame cold, that we could not stay long at worke, and so wee digged by turnes, euery man a little while, and then went to the fire, and another went and supplied his place, till at last wee digged seuen foot depth where wee went to burie the dead man, after that when we had read certaine Chapters, and sung some Psalmes, wee all went out and buried the man, which done we went in and brake our fasts, and while we were at meate, and discoursed amongst our selues, touching the great quantitie of snow that continually fell in that place, wee said that if it fell out, that our house should bee closed vp againe with snow, wee would finde the meanes to climbe out at the chimney, whereupon our Master went to trie if hee could climbe vp through the chimney, and so get out, and while hee was climbing one of our men went forth of the doore, to see if the Master were out or not, who standing vpon the snow, saw the Sunne, and called vs all out, wherewith we all went forth, and saw the Sun in his full roundnesse, a little aboue the Horizon, and then it was without all doubt, that wee had seene the Sunne vpon the foure and twentieth of Ianuary, which made vs all glad, and we gaue God heartie thanks, for his grace shewed vnto vs, that that glorious light appeared vnto vs againe.

The Summer.

The eight and twentieth, it was faire weather, with a West wind, then we went out many times to exercise our selues, by going, running, casting of the ball, (for then we might see a good way from vs) and to refresh our ioynts, for wee had long time sitten dull, whereby many of vs were very loose. The nine and twentieth, it was foule weather, with great store of snow, the wind North-west, whereby the house was closed vp againe with snow. The thirtieth, it was darke weather, with an East wind; and we made a hole through the doore, but wee shoueled not the snow very farre from the portall, for that as soone as we saw what weather it was, wee had no desire to goe abroad. The one and thirtieth, it was faire calme weather, with an East wind, then we made the doore cleane, and shoueled away the snow, and threw it vpon the house, and went out, and wee saw the Sunne shine cleere, which comforted vs, meane time we saw a Beare, that came towards our house, but wee went softly in, and watched for her till shee came neerer, and as soone as she was hard by we shot at her, but she ran away againe.

Beare.

The first of February, being Candlemasse Eeue, it was boisterous weather, with a great storme, and good store of snow, whereby the house was closed vp againe with snow, and we were constrained to stay within doors, the wind then being north-west. The second it was foule weather, and as then the Sunne had not rid vs of all the foule weather, whereby wee were somewhat discomforted, for that being in good hope of better weather wee had not made so great prouision of wood as we did before. The third, it was faire weather, with an East wind, but very mystie, whereby wee could not see the Sunne, which made vs somewhat melancholy, to see so great a myst, and rather more then we had had in the Winter time, and then we digged our doore open againe, and fetched the wood that lay without about the doore into the house, which we were forced with great paine and labour to dig out of the snow. The fourth, it was foule weather, with great store of snow, the wind being South-west, and then wee were close vp againe with snow, but then wee tooke not so much paines as we did before, to dig open the doore, but when we had occasion to goe out we climbed out at the chimney, and eased our selues, and went in againe the same way.

February.

The fifth, it was still foule weather, the wind being East, with great store of snow, whereby wee were shut vp againe into the house, and had no other way to get out but by the chimney, and those that could not climbe out, were faine to helpe themselves within as well as they could. The sixth, it was still foule stormy weather, with store of snow, and we still went out at the chimney, (and troubled not our selues with the doore,) for some of vs made it an easie matter to climbe out at the chimney. The seuenth, it was still foule weather, with much snow, and a South-west wind, and we thereby forced to keep the house, which grieved vs more then when the Sun shined not, for that hauing seene it, and felt the heate thereof, yet wee were forced not to inioy it. The eighth, it began to be fairer weather, the wind being South-west, then wee saw the Sun rise South, South-east, and went downe South South-west, by the Compasse that we had made of Lead, and placed according to the Meridian of that place, but by our common Compasse it differed two points. The ninth, it was faire cleere weather, the wind South-west, but as then wee could not

They goe out
at the chimney.

see

Heat of the
Sunne.

See the Sunne, because it was close weather in the South, where the Sunne should goe downe. The tenth, it was faire cleare weather, so that wee could not tell where the wind blew, and then we began to feele some heat of the Sun, but in the Eeuening it began to blow somewhat cold out of the west.

Beare slaine.

100. Pound of
fat taken out
of a Beare, vs-
full for Lamps.

The eleuenth, it was faire weather, the wind South, that day about noone, there came a Beare towards our house, and wee watched her with our Muskets, but shee came not so neere as wee could reach her, the same night wee heard some Foxes stirring, which since the Beares began to come abroad againe we had not much seene. The twelfth, it was cleere weather and very calme, the winde South-west, then we made our Traps cleane againe, meane-time there came a great Beare towards our house, which made vs all goe in, and wee leuelled at her with our Muskets, and as shee came right before our doore, we shot her into the brest, cleane through the heart, the bullet passing through her body, and went out againe at her tayle, and was as flatte as a Counter, the Beare feeling the blow, leapt backwards, and ranne twentie or thirtie foot from the house, and there lay downe, wherewith wee leapt all out of the house, and ranne to her, and found her still aliue, and when she saw vs, shee reard vp her head, as if she would gladly haue done vs some mischief, but we trusted her not, for that we had tryed their strength sufficiently before, and therefore wee shot her twice into the body againe, and therewith shee dyed. Then we ript vp her belly, and taking out her guttes, drew her home to the House where we slayed her, and tooke at least one hundred pound of fat out of her belly, which wee molt and burned in our Lampe. This Grease did vs great good seruice, for by that meanes we still kept a Lampe burning all night long, which before wee could not doe, for want of Grease, and euery man had meanes to burne a Lampe in his Cabbin, for such necessities as hee had to doe. The Beares skinne vvas nine foot long, and seuen foot broad.

The thirteenth, it was faire cleere vweather with a hard West winde, at which time we had more light in our house by burning of Lampes, whereby we had meanes to passe the time away, by reading and other exercises, which before (when we could not distinguish Day from Night, by reason of the darknesse, and had not Lampes continually burning) vvee could not doe. The foureteenth, it was faire cleere weather, with a hard West wind before noone, but after noone, it was still weather, then five of vs went to the Ship to see how it lay, and found the water to increase in it, but not much. The fifteenth, it was foule weather, with a great storme out of the South-west, with great store of Snow, whereby the House was closed vp againe, that Night the Foxes came to deuoure the dead body of the Beare, vvheryby we were in great feare, that all the Beares thereabouts would come thither, and therefore wee agreed, as soone as we could to get out of the house to burie the dead Beare deepe vnder the Snow.

The sixteenth of February, it was foule weather, with great store of Snow and a South-west vvind, that day was Shroue-tuesday, then wee made our selues somewhat merrie in our great grieve and trouble, and euery one of vs dranke a draught of Wine.

The nineteenth, it vvas faire cleere vweather, vvith a South-west winde, then we tooke the height of the Sunne, vvich in long time before vvee could not doe, because the Horizon vvas not cleere; as also for that it mounted not so high, nor gaue not so much shadow, as vve vvere to haue in our *Astrolabium*, and therefore vve made an Instrument that was halfe round, at the one end hauing 90. degrees marked thereon, vvhercon we hung a thread vvith a Plumet of Lead, as the vvater Compasses haue, and therewith vve tooke the height of the Sunne, when it was at the highest, and found that it vvas 3. degrees eleuated about the Horizon, his Declination 11. degrees and 16. minutes, which being added to the height aforesayd, made 14. degrees and 16. minutes, vvich subtracted from 90. degrees, there rested 75. degrees and 44. minutes for the height of the Pole, but the aforesayd 3. degrees of height, being taken at the lowest side of the Sunne, the 16. minutes might well be added to the height of the Pole, and so it was iust 76. degrees, as we had measured it before. The twentieth, it was foule weather, with great store of Snow, the vvind South-west, vvherby vve vvere shut vp againe in the house.

The two and twentieth, it vvas cleere faire vweather, vvith a South-west vvind, then vve made ready a Slad to fetch more Wood, for need compelled vs thereunto; for as they say, hunger driueth the Wolfe out of his denne, and eleuen of vs went together, all well appointed with our Armes, but comming to the place where we should haue the Wood, we could not come by it, by reason it lay so deepe vnder the Snow, whereby of necessitie we were compelled to goe further, where with great labour and trouble we got some: but as vve returned backe againe therewith, it was so fore labour vnto vs, that we were almost out of comfort, for that by reason of the long cold and trouble that we had indured, vve vvere become so vveake and feeble, that vve had little strength, and we began to bee in doubt, that we should not recouer our strengths againe, and should not be able to fetch any more Wood, and so we should haue dyed with cold, but the present necessitie and the hope wee had of better weather, increased our forces, and made vs doe more then our strengths afforded, and when we came neere to our house, we saw much open vvater in the Sea, which in long time we had not seene, which also put vs in good comfort, that things would bee better.

The

The five and twentieth, it was foule weather againe, and much Snow, with a North winde, whereby we were closed vp with Snow againe, and could not get out of our House.

The eight and twentieth of February, it was still weather, with a South-west wind, then ten of vs went and fetched another Sled full of Wood, with no lesse paine and labour then wee did before, for one of our companions could not helpe vs, because that the first joynt of one of his great Toes was frozen off, and so hee could doe nothing.

The first of March, it was faire still weather, the wind West but very cold, and we were forced to spare our Wood, because it was so great labour for vs to fetch it, so that when it was day, we exercised our selues as much as we might, with running, going, and leaping, and to them that lay in their Cabins, wee gaue hot stones to warme them, and towards night we made a good fire, which we were forced to endure. The second, it was cold cleere weather, with a West wind, the same day we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 6. degrees and 48. minutes, and his Declination was 7. degrees and 12. minutes, which subtracted from 90. degrees, resteth 76. degrees for the height of the Pole. The third, it was faire weather with a West wind, at which time our Sicke men were somewhat better, and sate vpright in their Cabins, to doe some thing to passe the time away, but after they found that they were too ready to stirre before their times. The fourth, it was faire weather, with a West wind, the same day there came a Beare to our House, whom we watcht with our Pieces, as wee did before, and shot at her, and hit her, but shee runne away, at that time five of vs went to our Ship, where we found that the Beares had made worke, and had opened our Cookes cupbord, that was couered ouer with snow, thinking to finde some thing in it, and had drawne it out of the Ship where we found it.

The seuenth, it was still foule weather and as great a winde, so that wee were shut vp in our House, and they that would goe out, must climbe vp through the Chimney, which was a common thing with vs, and still we saw more open water in the Sea, and about the Land, whereby wee were in doubt that the Ship in that foule weather, and driuing of the Ice, would bee loose (for as then the Ice draue) while we were shut vp in our House, and wee should haue no meanes to helpe it. The eight, it was still foule vweather, with a South-west storme, and great store of Snow, whereby vve could see no Ice in the North-east, nor round about in the Sea, whereby vve were of opinion, that North-east from vs there was a great Sea. The ninth, it was foule vweather, but not so foule as the day before, and lesse snow, and then vve could see further from vs, and perceiue that the vwater vvas open in the North-east, but not from vs towards *Tartaria*, for three vve could still see Ice in the *Tartarian Sea*, otherwise called the Ice Sea, so that vve were of opinion, that there it was not very wide, for vwhen it was cleere vweather, vve thought many times that vve saw the Land and shewed it to our companions, South and South-east from our house, like a hilly Land, as land commonly sheweth it selfe, when we see it.

The eleuenth, it was cold, but faire Sun-shine vweather, the vvind North-east, then we tooke the height of the Sunne vvith our *Astrolabium*, and found it to bee eleuated aboue the Horizon 10. degrees and 19. minutes, his Declination was 3. degrees and 41. minutes, which being added to the height aforesayd, made 14. degrees, which subtracted from 90. degrees, there resteth 76. degrees for the height of the Pole. Then twelue of vs went to the place where wee vsed to goe, to fetch a Sled of Wood, but still vve had more paine and labour therewith, because we were vweaker, and when we came home vvith it, and were very vwearie, we prayed the Master to giue each of vs a draught of Wine, which hee did, vvherewith we were somewhat releued and comforted, and after that were the willinger to labour, vvich vvas vnsupportable for vs, if meere extremitie had not compelled vs thereunto, saying oftentimes one vnto the other, That if the Wood vvere to be boought for Money, we would giue all our Earnings or Wages for it.

The twelfth, it was foule weather, the Winde North-east, then the Ice came mightily driuing in, which the South-west Wind had beene driuen out, and it was then as cold, as it had bin before in the coldest time of Winter.

The fifteenth, it was faire vweather, the Wind North, that day wee opened our doore to goe out, but the cold rather increased then diminished, and was bitterer then before it had beene.

The sixteenth, it vvas faire cleere weather, but extreame cold with a North Wind, which put vs to great extremitie, for that vve had almost taken our leaues of the cold, and then it began to come againe. This continued till the one and twentieth.

The one and twentieth, it vvas faire weather, but still very cold, the Wind North, the same day the Sunne entred into *Aries* in the Equinoctiall Line, and at noone vvee tooke the height of the Sunne, and found it to be eleuated 14. degrees aboue the Horizon, but for that the Sunne was in the middle Line, and of the like distance from both the Tropickes, there was no declination, neither on the South nor North side, and so the 14. degrees aforesayd being subtracted, from 90. degrees, there resteth 76. degrees for the height of the Pole. The same day, we made shooes of Felt or Rugge, which we drew vpon our feete, for vve could not goe in our shooes, by reason of the great cold, for the shooes on our feet vvere as hard as hornes, and then vve fetcht a sled-full

March.

Note.

Sol in Aries.

Shooes of Felt and Rugge.

Sled full of Wood home to our house, with fore and extreame labour, and with extremitie of cold which we indured, as if March meant to bid vs farewell, for our hope and comfort was, that the cold could not still continue in that force, but that at length the strength thereof would bee broken.

The three and twentieth, it was very foule weather, with infernall bitter cold, the wind North-east, so that we were forced to make more fire, as we had beene at other times, for then it was as cold as euer it had beene, and it froze very hard in the floore and vpon the walls of our house. The foure and twentieth, it was alike cold, with great store of snow, and a North wind, whereby we were once againe shut vp into the house, and then the Coles serued vs well, which before by reason of our bad vsing of them, we disliked of. The fixe and twentieth, it was faire cleare weather, and very calme, then we digd our selues out of the house again, and went out, and then we fetcht another Sled of Wood, for the great cold had made vs burne vp all that we had.

The eight and twentieth, it was faire weather, the wind South-west, whereby the Ice draue away very fast. The same day, fixe of vs went aboard the ship to see how it lay, and found it still in one sort; but we perceiued that the Beares had kept an euill favoured house therein.

Aprill.

The second of Aprill, it was faire weather, the wind North-east and very calme, then wee tooke the height of the Sunne, and found it to be eleuated aboue the Horizon 18. degrees and 40. minutes, his declination being 4. degrees and 40. minutes, which being substracted from the height aforesaid, there rested 14. degrees, which taken from 90. degrees, the height of the Pole was 76. degrees.

Beare assault the house.

The sixt, it was still foule weather, with a stiffe North-west wind, that night there came a Beare to our house, and we did the best we could to shoot at her, but because it was moist weather, and the cocke foisty, our Peece would not giue fire, wherewith the Beare came boldly toward the house, and came downe the staires close to the doore, seeking to breake into the house, but our Master held the doore fast to, and being in great haste and feare, could not barre it with the piece of Wood that wee vsed thereunto; but the Beare seeing that the doore was shut, shee went backe againe, and within two houres after shee came againe, and went round about and vpon the top of the house, and made such a roaring, that it was fearefull to heare, and at last got to the chimney, and made such worke there, that wee thought shee would haue broken it downe, and tore the sayle that was made fast about it in many pieces, with a great and fearefull noise, but for that it was night, we made no resistance against her, because wee could not see her, at last she went away and left vs.

Beares Den.

The fourteenth, it was faire cleare weather, with a West wind, then we saw greater hills of Ice round about the ship, then euer we had seene before, which was a fearefull thing to behold, and much to be wondred at, that the ship was not smitten in pieces. The fifteenth, it was faire calme weather with a North wind, then seuen of vs went aboard the ship, to see in what case it was, and found it to be all in one sort, and as wee came backe againe, there came a great Beare toward vs, against whom we began to make defence, but shee perceiuing that, made away from vs, and we went to the place from whence shee came to see her Den, where we found a great hole made in the Ice, about a mans length in depth, the entrie thereof being very narrow, and within wide, there we thrust in our Pikes to feele if there was any thing within it, but perceiuing it was empty, one of our men crept into it, but not too faire, for it was fearefull to behold, after that we went along by the Sea-side, and there we saw, that in the end of March, and the beginning of Aprill, the Ice was in such wonderful manner risen and piled vp one vpon the other, that it was wonderfull, in such manner as if there had beene whole Townes made of Ice, with Towres and Bulwarkes round about them.

The sixteenth, it was foule weather, the wind North-west, whereby the Ice began somewhat to breake. The seuenteenth, it was faire cleare weather, with a South-west wind, and then seuen of vs went to the ship, and there we saw open water in the Sea, and then wee went ouer the Ice-hills as well as we could, to the water, for in fixe or seuen moneths we had not gone so neere vnto it, and when we got to the water, there we saw a little bird swimming therein, but as soone as it espied vs, it diued vnder the water, which we tooke for a signe, that there was more open water in the Sea then there had beene before, and that the time approached that the water would open.

The eighteenth of Aprill, it was faire weather, the wind South-west, then wee tooke the height of the Sunne, and it was eleuated aboue the Horizon 25. degrees and 10. minutes, his declination 11. degrees and 12. minutes, which being taken from the height aforesaid, there rested 13. degrees and 58. minutes, which substracted from 90. degrees, the height of the Pole was found to be 75. degrees 58. minutes; then eleuen of vs went with a Sled to fetch more Wood, and brought it to the house, in the night there came another Beare vpon our house, which we hearing, went all out with our Armes, but the Beare ran away.

The eight and twentieth, it was faire weather, with a North wind, then we tooke the height of the Sunne againe, and found it to be eleuated 28. degrees and 8. minutes, his declination 14. degrees and 8. minutes, which substracted from 90. degrees, there rested 76. degrees for the height

height of the Pole. The nine and twentieth, it was faire weather, with a South-west wind, then we played at Colte, both to the ship, and from thence againe homewards, to exercise our selues. The thirtieth, it was faire weather, the wind South-west, then in the night wee could see the Sunne in the North (when it was in the highest) iust about the Horizon, so that from that time wee saw the Sunne both night and day.

§. III.

Their preparation to goe from thence: they depart in a Boat and Scute both open, and come to Cola, 1143. miles. Their many dangers by Beares, Ice, Famine, Scorbute, in the way.

The first of May, it was faire weather with a West wind, then wee sod our last flesh, which for a long time we had spared, and it was still very good, and the last morsell tasted as well as the first, and we found no fault therein, but onely that it would last no longer. The second, it was foule weather, with a storme out of the South-west, whereby the Sea was almost cleare of Ice, and then wee beganne to speake about getting from thence, for we had kept house long enough there. The third, it was still foule weather, with a South-west wind, whereby the Ice began wholly to driue away, but it lay fast about the ship, and when our best meate, as flesh, and other things beganne to faile vs, which was our greatest sustenance, and that it behooued vs to be somewhat strong, to sustaine the labour that wee were to vndergoe, when we went from thence, the Master shared the rest of the Bacon amongst vs, which was a small Barrell with salt Bacon in pickle, whereof euery one of vs had two ounces a day, which continued for the space of three weekes, and then it was eaten vp.

The fourth, it was indifferent faire weather, the wind South-west, that day fise of vs went to the ship, and found it lying still as fast in the Ice as it did before, for about the middle of March it was but seuentie fise paces from the open water, and then it was fise hundred paces from the water, and enclosed round about with high hills of Ice, which put vs in no small feare, how wee should bring our Scute and our Boat through or ouer that way into the water, when wee went to leaue that place. That night there came a Beare to our house, but as soone as shee heard vs make a noyse, she ranne away againe, one of our men that climbed vp in the Chimney, saw when shee ranne away, so that it seemed that as then they were afraid of vs, and durst not bee so bold to set vpon vs, as they were at the first. The fift, it was faire weather, with some snow, the wind East, that Deuening, and at night wee saw the Sunne when it was at the lowest, a good way about the Earth. The sixt, it was faire cleare weather, with a great South-west wind, whereby we saw the Sea open both in the East and in the West, which made our men exceeding glad, longing sore to be gone from thence. The seuenth, it was foule weather, and snow hard, with a North wind, whereby we were closed vp againe in our house.

The tenth, it was faire weather with a North-west wind, that night the Sunne by our common Compasse being North North-east, and at the lowest, we tooke the height thereof, and it was eleuated 3. degrees and 45. minutes, his declination was 17. degrees and 45. minutes, from whence taking the height aforesaid, there rested 14. degrees, which subtracted from 90. degrees, there rested 76. degrees for the height of the Pole.

The fourteenth, wee fetcht our last Sled with fire-wood, and still ware our shooes made of Rugge on our feet.

The fise and twentieth, it was faire weather, with an East wind, then at noone time wee tooke the height of the Sunne, that was eleuated about the Horizon 34. degrees and 46. minutes, his declination 20. degrees and 46. minutes, which taken from the height aforesaid, there rested 14. degrees, which taken from 90. degrees, rested 76. degrees for the height of the Pole.

The sixe and twentieth, it was faire weather, with a great North-east wind, whereby the Ice came in againe. The seuen and twentieth, it was foule weather, with a great North-east wind, which draue the Ice mightily in againe, whereupon the Master, at the motion of the companie, willed vs to make preparation to be gone.

The nine and twentieth in the morning, it was reasonable faire weather, with a West wind, then ten of vs went vnto the Scute to bring it to the house to dresse it, and make it ready to sayle, but wee found it deepe hidden vnder the snow, and were fayne with great payne and labour to digge it out, but when wee had gotten it out of the snow, and thought to draw it to the house, wee could not doe it, because wee were too weake, wherewith wee became wholly out of heart, doubting that wee should not bee able to goe forward with our labour, but the Master encouraging vs, bade vs striue to doe more then wee were able; saying, that both our liues and our well-fare consisted therein: and that if wee could not get the Scute from thence, and make it ready, then hee said wee must dwell there as Burgers of *Nova Zembla*, and make our Graues in that place: but there wanted no good-will in vs but onely strength,

Burgers of *Nova Zembla*.

which made vs for that time to leaue off worke and let the Scute lie still, which was no small grieve vnto vs, and trouble to thinke what were best for vs to doe; but after noone being thus comfortlesse come home, wee tooke hearts againe, and determined to turne the Boat that lay by the house with her keele vpwards, and to amend it, that it might bee the fitter to carrie vs ouer the Sea, for wee made full account that we had a long troublesome Voyage in hand, wherein wee might haue many crosses, and wherein wee should not bee sufficiently provided for all things necessarie, although wee tooke neuer so much care, and while wee were busie about our worke, there came a great Beare vnto vs, wherewith wee went into our house, and stood to watch her in our three doores, with Harquebusses, and one stood in the Chimney with a Musket, this Beare came boldlier vnto vs then euer any had done before, for shee came to the nearer step that went to one of our doores, and the man that stood in the doore saw her not, because hee looked towards the other doore, but they that stood within saw her, and in great feare called to him, wherewith he turned about, and although he was in a maze, he shot at her, and the Bullet past cleane through her body, whereupon she ranne away. Yet it was a fearefull thing to see, for the Beare was almost vpon him before hee saw her, so that if the Peece had sayled to giue fire (as oftentimes they doe) it had cost him his life, and it may bee, that the Beare would haue gotten into the house. The Beare being gone somewhat from the house lay downe, wherewith wee went all armed and killed her out right, and when wee had ript open her bellie: we found a piece of a Bucke therein, with haire, skinned and all, which not long before shee had torne and deuoured.

Bucke.

The one and thirtieth of May, it was faire weather, but somewhat colder then before, the wind being South-west, whereby the Ice draue away, and we wrought hard about our Boat, but when wee were in the chiefe part of worke, there came another Beare, as if they had smelt that wee would be gone, and that therefore they desired to taste a piece of some of vs, for that was the third day, one after the other, that they set so fiercely vpon vs, so that wee were forced to leaue our worke, and goe into the house, and shee followed vs, but we stood with our Peeces to watch her, and shot three Peeces at her, two from our doores, and one out of the Chimney, which all three hit her: but her death did vs more hurt then her life, for after we ript her belly, we drest her Linner and ate it, which in the taste liked vs well, but it made vs all sicke, specially three that were exceeding sicke, and wee verily thought that wee should haue lost them, for all their skins came off, from the foot to the head, but yet they recouered againe.

Beares Linner venomous.

June.

The third of June, in the morning it was faire cleare weather the wind West, and then wee were somewhat better, and tooke great paines with the Boat, that at last we got it ready, after we had wrought fixe dayes vpon it: about Eeuening it began to blow hard, and therewith the water was very open, which put vs in good comfort that our deliuerance would soone follow, and that we should once get out of that desolate and fearefull place.

The fourth, it was faire cleare weather, and indifferent warme, and about the South-east Sunne, eleuen of vs went to our Scute where it then lay, and drew it to the ship, at which time the labour seemed lighter vnto vs then it did before, when wee tooke it in hand and were forced to leaue it off againe. The reason thereof was, the opinion that wee had that the snow as then lay harder vpon the ground, and so was become stronger; and it may be that our courages were better; to see that the time gaue vs open water, and that our hope was that wee should get from thence; and so three of our men stayed by the Scute to build her to our minds: and for that it was a Herring Scute, which are made narrow behind, therefore they sawed it off behind, and made it a broad stearne: and better to brooke the Seas, they built it also somewhat higher, and drest it vp as well as they could, the rest of our men were busie in the house to make all other things ready for our Voyage, and that day drew two Sleds with victuals and other goods vnto the ship, that lay about halfe way betweene the house and the open water, that after they might haue so much the shorter way, to carrie the goods vnto the water side, when wee should goe away: at which time all the labour and paines that wee tooke, seemed light and easie vnto vs, because of the hope that wee had to get out of that wilde Desart, irksome, fearefull, and cold Countrey.

The fift, it was foule weather, with great store of haile and snow, the wind West, which made an open water, but as then we could doe nothing without the house, but within we made all things ready, as Sayles, Oares, Masts, Sprit, Rother, Swerd, and all other necessarie things. The sixt, in the morning it was faire weather, the wind North-east, then wee went with our Carpenters to the ship, to build vp our Scute, and carried two sleds full of goods into the ship, both victuals and Merchandise, with other things, which wee meant to take with vs; after that there rose very foule weather in the South-west, with snow, haile, and raine, which wee in long time had not had, whereby the Carpenters were forced to leaue their worke, and goe home to the house with vs, whereby also we could not be drie, because wee had taken off the Deales, therewith to amend our Boat and our Scute, there lay but a sayle ouer it, which would not hold out the water, and the way that lay full of snow began to be soft, so that wee left off our shooes made of Rugge and Felt, and put on our Leather shooes.

The

The eight, it was faire weather, and wee drew the wares to the ship, which wee had packed and made ready, and the Carpenters made ready the Scute, so that the same euening it was almost done, the same day all our men went to draw our Boat to the ship, and made ropes to draw withall, such as wee vse to draw with in Scutes, which wee cast ouer our shoulders, and held fast with all our hands, and so drew both with our hands and our shoulders, which gaue vs more force, and specially the desire and great pleasure wee tooke to worke at that time, made vs stronger.

The tenth, wee carried foure Sleds of goods into the ship, the wind then being variable, and at euening it was Northerly, and wee were busie in the house to make all things ready, the Wine that was left we put into little vessels, that so wee might diuide it into both our vessels, and that as wee were enclosed by the Ice, (which wee well knew would happen vnto vs) wee might easilier cast the goods vpon the Ice, both out and into the Scutes, as time and place serued vs. The eleuenth, it was foule weather, and it blew hard North North-west, so that all that day we could doe nothing, and we were in great feare lest the storme would carrie the Ice and the ship both away together, (which might well haue come to passe) then wee should haue beene in greater miserie then euer wee were, for that our goods both victuals and others, were then all in the ship, but God prouided so well for vs, that it fell not out so vnfortunatly. The twelfth, it was indifferent faire weather, then we went with Hatchets, Halberds, Shouels, and other instruments, to make the way plaine, where we should draw the Scute and the Boat to the water side, along the way that lay full of knobs and hills of Ice, where wee wrought sore with our Hatchets and other instruments, and while we were in the chiefest of our worke, there came a great leane Beare out of the Sea vpon the Ice towards vs, which we iudged to come out of *Tartaria*: for we had seene of them twenty or thirty miles within the Sea, and for that wee had no Muskets, but onely one, which our Surgeon carried, I ranne in great haste towards the ship to fetch one or two, which the Beare perceiuing ranne after mee, and was very likely to haue ouer taken me, but our companie seeing that, left their worke and ranne after her, which made the Beare turne towards them, and left me, but when she ran towards them, she was shot into the body by the Surgeon, and ranne away; but because the Ice was so vneuen and hilly, she could not goe farre, but being by vs ouertaken, we killed her out right, and smote her teeth out of her head, while she was yet liuing. Beare slayne.

The thirteenth, it was faire weather, then the Master and the Carpenters went to the ship, and there made the Scute and the Boat ready, so that there rested nothing as then, but onely to bring it downe to the water side, the Master and those that were with him, seeing that it was open water, and a good West wind, came backe to the house againe, and there hee spake vnto *William Barents* (that had beene long sicke) and shewed him, that he thought it good, (seeing it was a fit time) to goe from thence, and so willed the companie to driue the Boat and the Scute downe to the water side, and in the name of God to beginne our Voyage, to sayle from *Noua Zembla*: then *William Barents* wrote a Letter, which he put in a Muskets charge, and hanged it vp in the Chimney, shewing how he came out of *Holland*, to sayle to the Kingdome of *China*, and what had happened vnto vs being there on Land, with all our crosses, that if any man chanced to come thither, they might know what had happened vnto vs, and how we had beene forced in our extremitie to make that house, and had dwelt ten moneths therein, and for that wee were put to Sea in two small open Boats, and to vndertake a dangerous and aduenturous Voyage in hand, the Master wrote two Letters, which most of vs subscribed vnto, signifying how wee had stayed there vpon the Land in great trouble and miserie, in hope that our ship would bee freed from the Ice, and that we should sayle away with it againe, and how it fell out to the contrary, and that the ship lay fast in the Ice, so that in the end the time passing away, and our victuals beginning to faile vs, we were forced for the sauing of our owne liues, to leaue the ship, and to sayle away in our open Boats, and so to commit our selues into the hands of God. Which done, he put into each of our Scutes a Letter, that if wee chanced to lose one another, or that by stormes or any other misaduenture we happened to be cast away, that then by the Scute that escaped, men might know how we left each other, and so hauing finished all things as we determined, we drew the Boat to the water side, and left a man in it, and went and fetcht the Scute, and after that eleuen Sleds with goods, as Victuals, with some Wine that yet remayned, and the Merchants goods, which we preserved as well as we could, *vz.* sixe packes with fine woollen Cloth, a Chest of Linnen, two packets with Veluet, two small Chests with Money, two Dri-fats with mens Clothes and other things, thirteene Barrells of Bread, a Barrell of Cheefe, a sitch of Bacon, two Runlets of Oyle, sixe small Runlets of Wine, two Runlets of Vineger, with other packes belonging to the Saylers, so that when they lay all together vpon a heape, a man would haue iudged that they would not haue gone into the Scutes, which being all put into them, we went to the house, and first drew *William Barents* vpon a Sled to the place where our Scutes lay, and after that we fetcht *Claes Adrianson*, both of them hauing beene long sicke, and so we entred into the Scutes, and diuided our selues into each of them alike, and put into either of them a sicke man, then the Master caused both the Scutes to lie close one by the other, and

The Letter is omitted. It was subscribed by Jacob Hemkerke, Peter Peterson Vos, Master Hans Vos, Lawrence Wilimfon, Peter Cornelison, John Remarson, William Barents, Gerrat de Veer, Leonard Hendrickson, Jacob Johnson Scheadam, Jacob Johnson Steevenburg, Orange Island, Open Scutes.

and there we subscribed to the Letters which he had written, and so committing our selues to the will and mercy of God, with a West North-west wind, and an indifferent open water, we set sayle and put to Sea.

The fourteenth of June in the morning, the Sunne Easterly, wee put off from the Land of *Nona Zembla*, and the fast Ice thereunto adioyning, with our Boat and our Scute, hauing a West wind, and sayled East North-east all that day to the Islands point, which was five miles, but our first beginning was not very good, for we entred fast into the Ice againe, which there lay very hard and fast, which put vs into no small feare and trouble, and being there, foure of vs went on Land, to know the situation thereof, and there we tooke many Birds, which wee kild with stones vpon the cliffs.

The sixteenth, we set sayle againe, and got to the Island of *Orange*, with a South wind, which is eight miles distant from the Point of *Desire*, there we went on Land with two small Barrels, and a Kettle, to melt snow, and to put the water into the Barrels, as also to seeke for Birds and Egges, to make meate for our sicke men. We put to the Sea againe with a South-east wind and drowlie miseling weather, whereby we were all dankish and wet, for wee had no shelter in our open Scutes, and sayled West, and West and by South, to the *Ice-point*, and wee made our Scutes fast to a great piece of Ice, and there eate somewhat, but the weather was still fouler and fouler, so that we were once againe enclosed with Ice, and forced to stay there.

The seuenteenth in the morning, when we had broken our fasts, the Ice came so fast vpon vs that it made our haire stare vpright vpon our heads, it was so fearefull to behold: by which meanes we could not make fast our Scutes, so that we thought verily that it was a fore-shewing of our last end, for wee draue away so hard with the Ice, and were so sore preft betweene a flake of Ice, that we thought verily the Scutes would burst in a hundred pieces, at last, being in this discomfort, and extreme necessitie, the Master said, if we could take hold with a rope vpon the fast Ice, we might therewith draw the Scute vp, and so get it out of the great drift of Ice, but as this counsell was good, yet it was so full of danger, that it was the hazard of his life that should take vpon him to doe it, and without doing it, was it most certaine, that it would cost vs all our liues: this counsell as I said was good, but no man (like to the tale of the Mice) durst hang the Bell about the Cats necke, fearing to bee drowned, yet necessitie required to haue it done, and the most danger made vs choose the least, so that being in that perplexitie, I being the lightest of all our companie, tooke on me to fasten a rope vpon the fast Ice, and so creeping from one piece of driving Ice to another, by Gods helpe got to the fast Ice, where I made a rope fast to a high howell, and they that were in the Scute, drew it thereby vnto the said fast Ice, and then one man alone could draw more then all of them could haue done before, and when we had gotten thither, in all haste wee tooke our sicke men out, and layed them vpon the Ice, laying clothes and other things vnder them, and then tooke all our goods out of the Scutes, and so drew them vpon the Ice, whereby for that time we were deliuered from that great danger, making account that we had escaped out of deaths clawes, as it was most true.

The eighteenth, we repaired and amended our Scutes againe, being much bruised and crushed with the racking of the Ice, and were forced to driue all the nayles fast againe and to piece many things about them, God sending vs Wood, wherewith we molt our Pitch, and did all other things that belonged thereunto, that done, some of vs went vpon the Land to seeke for Egges, which the sicke men longed for, but we could finde none, but we found foure Birds, not without great danger of our liues, betweene the Ice and the firme Land, wherein wee often fell, and were in no small danger.

The nineteenth, it was indifferent weather, the wind North-west, and West South-west, but we were still shut vp in the Ice, and saw no opening, which made vs thinke that there would be our last abode, and that we should neuer get from thence.

The twentieth, *Claes Adrianson* and *William Barents* died, the death of *William Barents* put vs in no small discomfort, as being the chiefe Guide, and onely Pilot on whom wee reposed our selues, next vnder God.

The two and twentieth in the morning, it blew a good gale out of the South-east, and then the Sea was reasonable open, but we were forced to draw our Scutes ouer the Ice to get vnto it, which was great paine and labour vnto vs; for, first we were forced to draw our Scutes ouer a piece of Ice of fifty paces long, and there put them into the water, and then againe to draw them vp vpon other Ice, and after drew them at the least an hundred paces more ouer the Ice, before we could bring them to a good place where we might easily get out, and being gotten vnto the open water we committed our selues to God, and set sayle the Sun being about East North-east, with an indifferent gale of wind out of the South, and South South-east, and sayled West, and West and by South, till the Sunne was South, and then we were round about enclosed with Ice againe, and could not get out, but were forced to lie still, but not long after the Ice opened againe like to a sluice, and we past through it and set sayle againe, and so sayled along by the Land, but were presently enclosed with Ice, but being in hope of opening againe, meane time wee eate somewhat, for the Ice went not away as it did before: after that wee vsed all the meanes wee could

Dangerous attempt to draw the Boat ouer the Ice.

W. Barents dieth.

Enclosed again with Ice:

and againe.

could to breake it, but all in vayne, and yet a good while after, the Ice opened againe, and we got out, and sayled along by the Land, West and by South, with a South vvind.

The three and twentieth, wee sayled still forward West and by South, till the Sunne was South-east, and got to the *Trust-point*, which is distant from the *Ice-point* five and twentie miles, and then could goe no further, because the Ice lay so hard and so close together, and yet it was faire weather: the same day we tooke the height of the Sunne with the *Astrolabium*, and also with our Astronomicall Ring, and found his height to be 37. degrees, and his Declination 23. degrees and 30. minutes, which taken from the height aforesayd, there rested 13. degrees and 30. minutes, which subtracted out of 90. degrees, the height of the Pole was 76. degrees and 30. minutes, and it was faire Sun-shine weather, and yet it was not so strong as to melt the Snow, that we might haue water to drinke, so that wee set all our Tinne platters and other things full of Snow to melt, and so melt it, and put snow in our mouthes, to melt it downe into our throates, but all was not enough, so that we were compelled to endure great thirst.

From the Low-land, to the Streame Bay, the course East and West, foure miles. From the Streame Bay, to the Ice-hauen point, the course East and by North, foure miles. From the Ice-hauen point, to the Ilands point, the course East North-east, five miles. From the Ilands point, to the Flushingers point, the course North-east and by East, three miles. From the Flushingers point, to the Head point, the course North-east, foure miles. From the Head point, to the point of Desire, the course South and North, sixe miles. From the point of Desire, to the Island of Orange, North-west, eight miles. From the Island of Orange, to the Ice point, the course West, and West and by South, five miles. From the Ice point, to the point of Trust, the course West and by South, five and twentie miles. From the point of Trust, to Nassawes point, the course West, and West and by North, ten miles. From the Nassaw point, to the East end of the Crosse Island, the course West and by North, eight miles. From the East end of the Crosse Island, to Williams Island, the course West and by South, three miles. From Williams Island, to the Blacke point, the course West South-west, sixe miles. From the Blacke point, to the East end of the Admirable Island, the course West South-west, seven miles. From the East end of the Admirable Island, to Cape Planto, the course South-west and by West, ten miles. From Cape de Planto, to Lomb-bay, the course West South-west, eight miles. From Lomb-bay, to the Staues point, the course West South-west, ten miles. From the Staues point, to Langenelle, the course South-west and by South, fourteene miles. From Langenelle, to Cape de Cant, the course South-west and by South, sixe miles. From Cape de Cant, to the point with the Blacke clifts, the course South and by West, foure miles. From the point with the Blacke clifts, to the Blacke Island, the course South South-east, three miles. From the Blacke Island, to Constant-sarke, the course East and West, two miles. From Constant-sarke, to the Crosse point, the course South South-east, five miles. From Crosse point, to Saint Laurence Bay, the course South South-east, sixe miles. From Saint Laurence Bay, to Mel-hauen, the course South-east, sixe miles. From Mel-hauen to the two Ilands, the course South South-east, sixe miles. From the two Ilands, where we crost over to the Ruffia Coast, to the Ilands of Matfloe and Delgoy, the course South-west, thirtie miles. From Matfloe and Delgoy, to the Creeke where we sayled the compasse round about, and came to the same place againe, two and twentie miles. From that Creeke, to Colgoy, the course West North-west, eighteene miles. From Colgoy, to the East point of Camdenas, the course West North-west, twentie miles. From the East point of Camdenas, to the West side of the White Sea, the course West North-west, fortie miles. From the West point of the White Sea, to the seven Ilands, the course North-west, twentie miles. From the seven Ilands, to the VVest end of Kilduin, the course North-west, twentie miles. From the VVest end of Kilduin, to the place where Iohn Cornelis came unto vs, the course North-west and by VVest, seven miles. From thence to Cola, the course VVest Southerly, eighteene miles.

So that wee sayled in the two open Scutes, sometimes in the Ice, then ouer the Ice, and through the Sea, three hundred and eightie one miles Flemish, which is one thousand one hundred fortie and three miles English.

The foure and twentieth of Iune, the Sunne being Easterly, we rowed heere and there in the Ice, to see where we might best goe out, but wee saw no opening, but when the Sunne was South, we got into the Sea, for the which we thanked God most heartily, that hee had sent vs an vnexpected opening, and then we sayled with an East winde, and went lustily forward, so that we made our account to get aboue the point of Nassawes close by the land, and wee could easily see the point of Nassawes, and made our account to bee about three miles from it.

The fixe and twentieth, it still blew hard out of the South, and broke the Ice whereunto we were fast in pieces, and we thereby draue into the Sea, and could get no more to the fast Ice, whereby we were in a thousand dangers to bee all cast away, and driuing in that sort in the Sea, wee rowed as much as we could, but we could not get neere vnto the Land, therefore we hoy-sed vp our Focke, and so made vp with our sayle, but our Fock-mast brake twice in peeces, and then it was worse for vs then before, and notwithstanding that there blew a great gale of Wind, yet we were forced to hoyse vp our great Sayle, but the winde blew so hard into it, that if wee

had not presently taken it in againe, we had sunke in the Sea, or else our Boate would haue been filled with water, for the water began to leape ouer-board, and wee were a good way in the Sea, at which time the waues went so hollow, that it was most fearefull, and wee thereby saw nothing but death before our eyes, and euery twinckling of an eye looked when wee should sinke. But God that had deliuered vs out of so many dangers of Death, holpe vs once againe, and contrary to our expectations, sent vs a North-west wind, and so with great danger wee got to the fast Ice againe, when we were deliuered out of that danger, and knew not where our other Scute was, wee sayled one mile along by the fast Ice, but found it not, whereby we were wholly out of heart, and in great feare that they were drowned, at which time it was mystic weather, and so sayling along, and hearing no newes of our other Scute, we shot off a Musket, which they hearing shot off another, but yet we could not see each other, meane time approaching neerer to each other, and the weather waxing somewhat cleerer, as wee and they shot once againe, we saw the smoake of their Piece, and at last we met together againe, and saw them lye fast, betweene driuing and fast Ice, and when we got neere vnto them, we went ouer the Ice, and holpe them to vnlade the goods out of their Scute, and drew it ouer the Ice, and with much paine and trouble brought it into the open water againe, and while they were fast in the Ice, wee found some Wood vpon the Land by the Sea side, and when we lay by each other, we sod some Bread and Water together, and eat it vp warme, which did vs much good.

The eight and twentieth, when the Sunne was in the East, wee layd all our goods vpon the Ice, and then drew the Scutes vpon the Ice also, because we were so hardly prest on all sides, with the Ice, and the wind came out of the Sea vpon the Land, and therefore wee were in feare to be wholly inclosed with the Ice, and should not be able to get out thereof againe, and being vpon the Ice, we layd sayles ouer our Scutes, and lay downe to rest, appointing one of our men to keepe watch, and when the Sunne was North, there came three Beares towards our Scutes, where- with hee that kept the Watch cryed, *three Beares, three Beares*, at which noyse wee leapt out of our Boates with our Muskets, that were laden with hayle-shot to shoote at Birds, and had no time to discharge them, and therefore shot at them therewith, and although that kinde of shot could not hurt them much, yet they ranne away, and in the meane time they gaue vs leasure to lade our Muskets with bullets, and by that meanes wee shot one of the three dead, which the other two perceiuing ranne away, but within two houres after they came againe, but when they were almost at vs and heard vs make a noyse, they ranne away, at which time the winde was West, and West and by North, which made the Ice driue with great force into the East.

The nine and twentieth of Iune, the Sunne being South South-west, the two Beares came againe to the place where the dead Beare lay, where one of them tooke the dead Beare in his mouth, and went a great way with it ouer the rugged Ice, and then began to eate it, which vve perceiuing shot a Musket at her, but she hearing the noyse thereof ranne away, and let the dead Beare lye, then foure of vs went thither, and saw that in so short time she had eaten almost the halfe of her, we tooke the dead Beare and layd it vpon a high heape of Ice, that we might see it out of our Scute, that if the Beare came againe we might shoot at her, at which time we tryed the great strength of the Beare, that carryed the dead Beare as lightly in her mouth, as if it had beene nothing, whereas wee foure had enough to doe to carry away the halfe dead Beare betweene vs.

The first of Iuly, it was indifferent faire vweather, with a West North-west wind, and in the Morning the Sunne being East, there came a Beare from the driuing Ice towards vs, and swam ouer the water to the fast Ice whereon we lay, but when she heard vs, she came no neerer but ran away, and when the Sunne was South-east, the Ice came so fast in towards vs, that all the Ice whereon we lay with our Scutes and our goods, brake and ran one peece vpon another, whereby vve were in no small feare, for at that time most of our goods fell into the water, but wee with great diligence drew our Scutes further vpon the Ice towards the Land, where vve thought to be better defended from the driuing of the Ice, and as we went to fetch our goods, we fell into the greatest trouble that euer we had before, for that wee endured so great danger in the sauing thereof, that as we layd hold vpon one peece thereof, the rest sunke downe with the Ice, and many times the Ice brake vnder our owne feete, vwhereby we were wholly discomforted, and in a manner cleane out of all hope, expecting no issue thereof, in such sort that our trouble at that time surmounted all our former cares and impeachments, and vwhen wee thought to draw vp our Boates vpon the Ice, the Ice brake vnder vs, and we were carryed away vvith the Scute, and all by the driuing Ice, and when vve thought to saue the goods, the Ice brake vnder our feet, and with that the Scute brake in many places, especially that which wee had mended, as the Mast, the mast planke, and almost all the Scute, wherein one of our men that vv as sicke, and a Chest of money lay, which we with great danger of our liues got out from it, for as we were doing it, the Ice that was vnder our feet draue from vs, and slid vpon other Ice, vwhereby we were in danger to burst both our armes and our legges, at vv which time, thinking that wee had beene cleane quit of our Scute, vve beheld each other in pittifull manner, knowing not vvhat vve should doe, our liues depending thereon, but God made so good prouision for vs, that the peeces of Ice draue from each

each other, wherewith we ranne in great haste vnto the Scute, and draw it to vs againe in such case as it was, and laid it vpon the fast Ice by the Boate, where it was in more securitie, which put vs vnto an exceeding and great and dangerous labour, from the time that the Sunne was South-east, vntill it was West South-west, and in all that time wee rested not, which made vs extreame wearie, and wholly out of comfort, for that it troubled vs fore, and it was much more fearefull vnto vs, then at that time when *William Barents* dyed, for there we were almost drowned, and that day we lost (which was sunke in the Sea) two Barrells of Bread, a Chist with Linnen Cloth, a Dry Fat with the Saylor's Clothes, our Astronomicall Ring, a packe of Scarlet Cloth, a Rundlet of Oyle, and some Cheetes, and a Rundlet of Wine, which bouged with the Ice so that there was not any thing thereof saued.

The fourth, it was so faire cleere weather, that from the time we were first in *Noua Zembla*, we had not the like. The fifth, it was faire weather, the Wind West, South-west, the same day dyed *Iohn Franson* of *Harlem*.

The seuenth, it was faire weather with some Raine, the Winde West, South-west, and at Euening VWest, and by North, then we went to the open water, and there killed thirteene Birds, which we tooke vpon a piece of driuing Ice, and laid them vpon the fast Ice.

The ninth, in the morning, the Ice began to driue, whereby we got open water on the Land side, and then also the fast Ice whereon we lay, beganne to driue whereupon the Master and the men went to fetch the Packe and the Chist, that stood vpon the Ice, to put them into the Scute, and then drew the Scutes to the water, at least three hundred and fortie paces, which was hard for vs to doe, in regard that the labour was great, and we very weake, and when the Sunne was South South-east we set sayle with an East-wind, but when the Sunne was West, we were forced to make towards the fast Ice againe, because thereabouts it was not yet gone, the Winde being South, and came right from the Land, whereby wee were in good hope that it would driue away, and that we should proceed in our Voyage. The tenth, from the time that the Sunne was East North-east, till it was East, we tooke great paines and labour to get through the Ice, and at last we got through, and rowed forth, vntill we happened to fall betweene two great flakes of Ice that closed one with the other, so that we could not get through, but were forced to draw the Scutes vpon them, and to vnlade the goods, and then to draw them ouer to the open water on the other side, and then we must goe fetch the goods also to the same place, being at least one hundred paces long, and when we were in open water againe, we rowed forward as well as we could, but we had not rowed long, before wee fell betweene two great flakes of Ice, that came driuing one against the other, but by Gods helpe, and our speedy rowing, we got from betweene them, before they closed vp, and being through we had a hard West Winde, right in our Teeth, so that of force we were constrained to make towards the fast Ice that lay by the shoare.

The eleuenth, in the morning as we fate fast vpon the Ice, the Sunne being North-east, there came a great Beare out of the water running towards vs, but we watcht for her with three Muskets, and when she came within thirtie paces of vs, wee shot all the three Muskets at her, and killed her out-right, so that she stirred not a foot, and we might see the fat runne out at the holes of her skinne, that was shot in with the Muskets, swimme vpon the water like Oyle, and so driuing dead vpon the water, we went vpon a flake of Ice to her, and putting a Rope about her necke, drew her vp vpon the Ice, and smit out her Teeth, at which time we measured her bodie, and found it to be eight foot thicke, then we had a West Wind with close weather, but when the Sunne was South it began to cleere vp, then three of our men went to the Island that lay before vs, and being there, they saw the *Crosse* Island, lying West-ward from them, and went thither to see if that Summer there had beene any *Russian* there, and went thither vpon the fast Ice, that lay betweene the two Islands, and being in the Island, they could not perceiue that any man had beene in it since wee were there, there they got seuentie Egges, but when they had them, they knew not wherein to carrie them, at last one of them put off his Breeches, and tying them fast below, they carried them betweene two of them, and the third bare the Musket: and so came to vs againe, after they had beene twelue houres out, which put vs no small feare to thinke what was become of them, they told vs that they had many times gone vp to the knees in water, vpon the Ice betweene both the Islands: and it was at least fixe mile to and fro, that they had gone, which made vs wonder how they could indure it, seeing we were all so weake. With the Egges that they had brought, wee were all well comforted, and fared like Lords, so that we found some reliefe in our great miserie, and then wee shared our last Wine amongst vs, whereof euery one had three Glasses.

The twelfth, in the morning, when the Sunne was East, the Wind began to blow East, and East North-east, with mystic weather, and at Euening fixe of our men went into the Land, to seeke cerryne stones, and found some, but none of the best sort, and comming backe againe, eyther of them brought some Wood. The thirteenth, it was a faire day, then seuen of our men went to the firme Land to seeke for more stones, and found some, at which time the VVind was South-east. The fourteenth, it was faire vweather, with a good South VVind, and then the Ice began to driue from the Land, whereby wee were in good hope to haue an open water, but the Wind

Huge Beare?

Wind turning Westerly againe, it lay still, when the Sunne was South-west, three of our men went to the next Iland that lay before vs, and there shot a *Bercheynet*, which they brought to the Scute, and gaue it amongst vs, for all our goods were common.

The sixteenth, there came a Beare from the firme Land, that came very neere vnto vs, by reason that it was as vvwhite as Snow, vvhereby at first vve could not discerne it to be a Beare, because it shewed so like the snow, but by her stirring at last we perceiued her, and as she came neere vnto vs, vve shot at her and hit her, but shee ranne away: that morning the Wind was VVest, and after that againe, East North-east with close weather. The seuenteenth, about the South South-east Sunne, five of our men went againe to the neere Iland, to see if there appeared any open water, for our long staying there was no small grieue vnto vs, perceiuing not how wee should get from thence, who being halfe way thither, they found a Beare lying behind a piece of Ice, which the day before had bene shot by vs, but shee hearing vs went away, but one of our men following her with a Boat-hooke, thrust her into the skinne, wherewith the Beare rose vp vpon her hinder feet, and as the man thrust at her againe, she strooke the Iron of the Boat-hooke in pieces, wherewith the man fell downe vpon his buttockes, which our other two men seeing, two of them shot the Beare into the bodie, and with that she ranne away, but the other man went after her with his broken staffe, and strooke the Beare vpon the backe, wherewith the Beare turned about against the man three times one after the other, and then the other two came to her and shot her into the bodie againe, wherewith shee sat downe vpon her buttockes, and could scant runne any further, and then they shot once againe, wherewith shee fell downe, and they smote her Teeth out of her head: all that day the Winde was North-east, and East North-east.

The eighteenth, about the East Sun, three of our men went vp vpon the highest part of the land to see if there was any open water in the Sea, at which time they saw much open water, but it was so far from the land, that they were almost out of comfort, because it lay so far from the land, and the fast Ice, being of opinion that we should not be able to draw the Scutes and the goods so farre thither, because our strengthes still beganne to decrease: and the sore labour and paine that we were forced to indure more and more increased, and comming to our Scutes, they brought vs that newes, but we being compelled thereunto by necessitie abandoned all wearinesse and faint-heartednesse, and determined with our selues to bring the Boats and the goods to the water side, and to row vnto that Ice, where wee must passe ouer to get to the open water, and when wee got to it, wee vnladed our Scutes, and drew them first ouer the Ice to the open water, and after that the goods; it being at the least one thousand paces, then wee set sayle, till the Sunne was West and by South; and presently fell amongst the Ice againe, where wee were forced to draw vp the Scutes againe vpon the Ice, and being vpon it, wee could see the *Crosse Iland*, which wee ghest to bee about a mile from vs, the Wind then being East, and East North-east.

The nineteenth, lying in that manner vpon the Ice, about the East Sunne, seven of our men went to the *Crosse Iland*, and being there they saw great store of open water in the West, wherewith they much reioyced, and made as great haste as they could to get to the Scutes againe, but before they came away they got 100. Egges, and brought them away with them, and comming to the Scutes, they shewed vs that they had seene as much open water in the Sea as they could discerne, being in good hope, that that would be the last time that they should draw the Scutes ouer the Ice, and that it should bee no more measured by vs, and in that sort put vs in good comfort, whereupon we made speed to dresse our Egges, and shared them amongst vs, and presently the Sunne being South South-west we fell to worke, to make all things ready to bring the Scutes to the water, which were to be drawne at least two hundred paces ouer the Ice, which wee did with a good courage, because we were in good hope that it would be the last time, and getting to the water, we put to Sea with Gods helpe, with an East, and East North-east Wind, and a good gale, so that with the West Sunne, we past by the *Crosse Iland*, which is distant from *Cape de Nassawes* ten miles, and presently after that the Ice left vs, and wee got cleere out of it, yet wee saw some in the Sea, but it troubled vs not, and so wee held our course West and by South, with a good gale of Wind out of the East, and East North-east, so that wee ghest that betweene euery meale-tyde we sayled eightene miles.

Admirals Iland.

The twentieth, hauing still a good gale about the South-east Sunne, wee past along by the *Blacke Point*, which is twelue miles distant from the *Crosse Iland*, and sayled West South-west, and about the Eeuening with the West Sunne, we saw the *Admirals Iland*, and about the North Sunne past along by it, which is distant from the *Blacke Point* eight miles, and passing along by it, we saw about two hundred Sea-horses, lying vpon a flake of Ice, and wee sayled close by them, and draue them from thence, which had almost cost vs deere, for they being mightie strong fishes, and of great force, swamme towards vs, (as if they would be reuenged on vs for the despite that we had done them (round about our Scutes) with a great noyse, as if they would haue deuoured vs, but we escaped from them, by reason that we had a good gale of Wind, yet it was not wisely done of vs to wake sleeping Wolues. The one and twentieth, we past by *Cape Plancio*,

Plancio, about the East North-east Sunne, which lyeth West South-west eight miles from the *Cape Plancio*: *Admirals* Iland, and with the good gale that we had about the South-west Sunne, we sayled by *Langenes*, nine miles from *Cape Plancio*: there the Land reacheth most South-west, and we had a good North-east wind.

The two and twentieth, we hauing so good a gale of wind when wee came to *Cape de Cant*, there we went on land to seeke for some Birds and Egges, but we found none, so we sayled forwards, but after that about the South Sunne we saw a Clift that was full of Birds; thither wee sayled and casting stones at them, we killed two and twentie Birds, and got fiftene Egges, which one of our men fetcht from the Clift, and if we would haue stayed there any longer, wee might haue taken a hundred or two hundred Birds at least, but because the Master was somewhat further into Sea-ward then we, and stayed for vs, and for that wee would not loose that faire fore-wind, we sayled forwards along by the Land, and about the South-west Sunne, wee came to another point, where wee got a hundred twentie and siue Birds, which wee tooke with our hands out of their Nests, and some wee killed with stones, and made them fall downe into the water, for it is a thing certayne that those Birds neuer vsed to see men, and that no man had euer sought or vsed to take them, for else they would haue flowne away, and that they feared no hodie, but the Foxes and other wild beasts, that could not climbe vp the high Clifts, and that therefore they had made their Nests thereon, where they were out of feare of any beasts coming vnto them, for we were in no small danger of breaking of our legges and armes, especially as we came downe againe, because the Clift was so high and so steepe, those Birds had euery one but one Egge in their Nests, and that lay vpon the bare Clift without any straw or other thing vnder them, which is to be wondred at, to thinke how they could breed their young ones in so great cold, but it is to be thought and beleueed, that they therefore sit but vpon one Egge, that so the heate which they giue in breeding so many, may be wholly giuen vnto one Egge.

Strange Birds
breeding in
strong cold.

The foure and twentieth, it was faire weather, but the winde still Northerly, whereby wee were forced to lye still, and about noone we tooke the height of the Sunne with our *Astrolabium*, and found it to be eleuated above the Horizon 37. degrees and 20. minutes, his declination 20. degrees and 10. minutes which subtracted from the height aforesaid rested 17. degrees and 10. minutes, which taken from 90. degrees, the height of the Pole was 73. degrees and 10. minutes, and for that we lay still there, some of our men went oftentimes on Land to seeke stones, and found some that were as good as euer any that we found.

The seuen and twentieth, wee had sayled from *Cape de Cant*, along by *Constinsarke*, to the *Crosse Point*, twentie miles, our course South South-east, the Wind North-west.

The eight and twentieth, it was faire weather with a North-east wind, then we sayled along by the Land, and with the South-west Sunne, got before Saint *Laurence Bay*, or *Sconce Point*, and sayled South South-east six miles, and being there, wee found two *Russians Lodgies*, or ships beyond the Point, wherewith we were not a little comforted, to thinke that we were come to the place where we found men, but were in some doubt of them, because they were so many, for at that time we saw at least thirtie men, and knew not what they were, there with much paine and labour we got to Land, which they perceiuing, left off their worke, and came towards vs, but without any Armes, and we also went on shoare, as many as were well, for diuers of vs were very ill at ease, and weake by reason of a great scouring in their bodies, and when wee met together, wee saluted each other in friendly wise, they after theirs, and wee after our manner, and when we were met, both they and wee lookt each other stedfastly in the face, for that some of them knew vs, and wee them, to bee the same men which the yeere before, when wee past through the *Wey-gates* had beene in our ship: at which time wee perceiued that they were abasht and wondred at vs, to remember that at that time wee were so well furnished with a great ship, that was exceedingly prouided of all things necessary, and then to see vs so leane and bare, with so small Scutes in that Countrey: and amongst them there were two, that in friendly manner clapt the Master and me vpon the shoulder, as knowing vs since that Voyage: for there was none of all our men that was as then in that Voyage, but we two only, and asked vs for our *Crabbe*, meaning our ship, and we shewed them by signes as well as we could (for we had no Interpreter) that we had lost our ship in the Ice, wherewith they said, *Crabbe pro pal* (which wee vnderstood to bee, *Haue you lost your ship?*) and we made answere, *Crabbe pro pal*, which was as much as to say, That we had lost our ship, and many more words we could not vse, because we vnderstood not each other, then they made shew to be sorrie for our losse, and to be grieved that we the yeere before had beene there with so many ships, and then to see vs in so simple manner, and made vs signes that then they had drunke Wine in our ship, and asked vs what drinke wee had now, wherewith one of our men went into the Scute and drew some water, and let them taste thereof, but they shak't their heads, and said, *No dobbre* (that is, It is not good) then our Master went neerer vnto them, and shewed them his mouth, to giue them to vnderstand that we were troubled with a loosenesse in our bellies, and to know if they could giue vs any counsell to helpe it, but they thought wee made shew that wee had great hunger wherewith one of them went vnto their Lodging, and fetcht a round Rie Loafe, weighing about eight pounds, with some

Two *Russian*
Lodgies or *Lod-*
gies.

some smored Fowles which we accepted thankfully, and gaue them in exchange halfe a doozen of Muschuyt, then our Master led two of the chiefe of them with him into his Scute, and gaue them some of the Wine that we had, being almost a Gallon, for it was so neere out: and while we stayed there, we were very familiar with them, and went to the place where they lay, and sod some of our Mischuyt with water by their fire, that we might eat some warme thing downe into our bodies, and wee were much comforted to see the *Russians* for that in thirteene moneths time, that we departed from *Iohn Cornelison*, we had not seene any man, but onely monstrous and cruell wild Beares.

The nine and twentieth, it was reasonable faire weather, and that morning the *Russians* beganne to make preparation to bee gone, and to set sayle: at which time they digged certayne Barrells with Trayne Oyle out of the sieges which they had buried there, and put it into their ships.

No Raine. The thirtieth, lying at Anchor, the Wind still blew North-west, with great store of Raine, and a sore storme, so that although we had couered our Scutes with our Sayles, yet we could not lye dry, which was an vnaccustomed thing vnto vs: for wee had had no Raine in long time before, and yet we were forced to stay there all that day.

Scuruy-grasse, or Lepre leaues cure their scowring and Scorbuiticall infirmitie. The one and thirtieth, in the morning, about the North-east Sunne, wee rowed from that Iland to another Iland, whereon there stood two Crosses, wee thought that some men had layne there about Trade of Merchandize, as the other *Russians* that wee saw before had done, but wee found no man there, the Wind as then beeing North-west, whereby the Ice draue still towards the *Wey-gates*: there to our great good wee went on Land, for in that Iland wee found great store of Lepre leaues, which serued vs exceeding well, and it seemed that God had purposely sent vs thither: for as then wee had many sicke men, and most of vs were so troubled with a scowring in our bodies, and were thereby become so weake, that wee could hardly row, but by meanes of those leaues we were healed thereof: for that as soone as we had eaten them, we were presently eased and healed, whereat wee could not choose but wonder, and therefore wee gaue God great thanks for that, and for many other his mercies shewed vnto vs, by his great and vnexpected aide lent vs, in that our dangerous Voyage: and so as I said before, wee ate them by whole handfuls together, because in *Holland* we had heard much spoken of their great force, and as then found it to be much more then we expected.

August. The first of August, the Wind blew hard North-west, and the Ice that for a while had driuen towards the entry of the *Wey-gates*, stayed and draue no more, but the Sea went very hollow, whereby we were forced to remoue our Scutes on the other side of the Iland, to defend them from the waues of the Sea, and lying there wee went on Land againe to fetch more Lepre leaues, whereby we had beene so well holpen, and still more and more recovered our healths, and in so short time, that we could not choose but wonder thereat, so that as then some of vs could cate Bisket againe, which not long before they could not doe. The second, it was darke mistie weather, the Winde still blowing stiffe North-west, at which time our victuals beganne to decrease, for as then wee had nothing but a little Bread and Water, and some of vs a little Cheefe.

The third, about the North Sunne, the weather being somewhat better, wee agreed amongst our selues to leaue *Noua Zembla* and to crosse ouer to *Russia*, and so committing our selues to God, we set sayle with a North-west Wind, and sayled South South-west till the Sunne was East, and then we entred into Ice againe, which put vs in great feare, and about the South-west Sunne got cleere thereof, and entred into the large Sea, where we saw Ice, and then what with sayling and rowing we had made twentie miles, and so sailing forwards wee thought to approach neere vnto the *Russian* Coast; but about the North-west Sunne we entred into Ice againe, and then it was very cold.

The fourth, about the South-east Sunne, being gotten out of the Ice, we sayled forward with a North-west Wind, and held our course Southerly, and when the Sunne was South, at noone time we saw the Coast of *Russia* lying before vs, whereat we were exceeding glad, and going neerer vnto it, we strooke our sayles and rowed on Land, and found it to be very low Land, like a bare Strand that might be flowed ouer with the water, there we lay till the Sunne was South-west, but perceiving that there wee could not much further our selues, hauing as then sayled from the Point of *Noua Zembla* (from whence we put off) thither full thirtie miles, wee sayled forward along by the Coast of *Russia*, with an indifferent gale of Winde, and when the Sunne was North, we saw another *Russian* Ielle or ship, which we sayled vnto to speake with them, and being hard by them, they came all aboute Hatches, and wee cryed vnto them *Candinaes Candinaes* (whereby we asked if we were about *Candinaes*) but they cryed againe and said, *Pitzora*, *Pitzora*, (to shew vs that wee were thereabouts) and for that wee sayled along by the Coast, where it was very dry, supposing that we held our course West and by North, that so we might get beyond the Point of *Candinaes*, we were wholly deceiued by our Compasse, that stood vpon a Chist bound with Iron bands which made vs vary at least two Points, whereby we were much more Southerly then wee thought our course had beene, and also farre more Easterly, for wee thought

Pitzora:
Compasse de-
ceiued by ill
Neighbour-
hood.

thought verily that we had not bene farre from *Candinaes*, and wee were three dayes sayling from it as after we perceiued, and for that we found our selues to bee so much out of our way, we stayed there all night till day appeared.

The twelfth of August, it was faire weather, at which time the Sunne being East, wee saw a *Russian* Lodgie come towards vs, with all his sayles vp, wherewith we were not a little comforted, which we perceiuing from the Strand, where we lay with our Scutes, we desired the Master that we might goe vnto him, to speake with him, and to get some victuals of them, and to that end we made as much haste as we could, to launch out our Scutes, and sayled towards them, and when we got to them, the Master went into the Lodgie, to aske them how farre wee had to *Candinaes*, which we could not well learne of them, because wee vnderstood them not, they held vp their five Fingers vnto vs, but we knew not what they meant thereby, but after we perceiued that thereby they would shew vs, that there stood five Crosses vpon it, and they brought their Compasse out and shewed vs that it lay North-west from vs, which our Compasse also shewed vs, which reckoning also we had made: but when we saw we could haue no better intelligence from them, the Master went further into their Ship, and pointed to a barrell of Fish that he saw therein, making signes to know, whether they would sell it vnto vs, shewing them a peece of eight Rials, which they vnderstanding gaue vs one hundred and two Fishes, with some Cakes which they had made of Meale when they sodde their Fish, and about the South Sunne wee left them.

The sixteenth of August in the Morning, sayling forward North-west, we perceiued that we were in a Creeke, and so made towards the *Russian* Lodgie, which we had seene on our starre-board, which at last with great labour and much paine wee got vnto, and comming to them about the South-east Sunne, with a hard winde, we asked them how farre we were from *Zembla de Cool* or *Kilduin*, but they shooke their heads, and shewed vs that wee were on the East-side of *Zembla de Candinaes*.

The seuenteenth, lying at Anchor in the Morning at breake of day, wee saw a *Russian* Lodgie that came sayling out of the *white Sea*, to vvhom we rowed, that vve might haue some instruction from him, and when we boarded him, vwithout asking or speaking vnto him, he gaue vs a loafe of Bread, and by signes shewed vs as well as he could, that hee had seene our Companions, and that there vvas seuen men in the Boate, but wee not knowing well what they sayd, neither yet beleeuing them, they made other signes vnto vs, and held vp their seuen Fingers, and pointed to our Scute, thereby shewing that there was so many men in the Boate, and that they had sold them Bread, Flesh, Fish and other victuals: and while wee stayed in their Lodgie, vve saw a small Compasse therin, which we knew that they had bought of our chiefe Boatson, which they likewise acknowledged. About mid-night wee found a fall of fresh Water, and then we went on Land to fetch some, and there also wee got some *Leple-leaues*, and as wee thought to row forward, we were forced to sayle, because the flood was past, and still we lookt earnestly out for the point of *Candinaes*, and the five Crosses, whereof we had bene instructed by the *Russians*, but we could not see it.

The Eighteenth, in the Morning the Sunne being East, we puld vp our Stone, (which we vsed in steed of an Anchor) and rowed along by the Land, till the Sunne was South, and then we saw a point of Land reaching into the Sea, and on it certayne signes of Crosses, which as vve went neerer vnto we saw perfectly, and when the Sunne was West, we perceiued that the Land reached West and South-west, so that thereby we knew it certainly to bee the point of *Candinaes*, lying at the mouth of the *white Sea*, which we were to crosse, and had long desired to see it. This Point is easily to bee knowne, hauing five Crosses standing vpon it, which are perfectly to be discerned, and hauing a good North-east vvind (which was not for vs to slacke) we set forward in the Name of God, and when the Sunne was North-west, we past the Point, and all that night and the next day sayled with a good Wind, and all that time rowed but while three Glasses were runne out, and the next Night after ensuing, hauing still a good vvind, in the Morning about the East North-east Sunne, we saw Land on the West-side of the *white Sea* which we found by the rushing of the Sea vpon the Land before we saw it, and perceiuing it to bee full of Clifts, and not low sandie ground with some Hills, as it is on the East-side of the *white Sea*, wee assured our selues that we were on the West-side of the *white Sea*, vpon the Coast of *Lapland*, for the which we thanked God, that he had helped vs to sayle ouer the *white Sea* in thirtie houres, it being fortie *Dutch* miles at the least, our course being West with a North-east winde.

The twentieth, we espied certayne Crosses, with Warders vpon them, vvhereby we vnderstood that it was a good way, and so put into it, and being entred a little way within it, we saw a great *Russian* Lodgie lying at Anchor, whereunto we rowed as fast as we could, and there also we saw certayne Houses wherein men dwelt, and when wee got to the Lodgie, we made our selues fast vnto it, and cast our tent ouer the Scute, for as then it began to rayne, then we vvent on land into the Houses that stood vpon the shoare, vvhere they shewed vs great friendship, leading vs into their Stoues and there dryed our wet Cloathes, and then seething some Fish, bade vs sit downe and eate somewhat vvith them. In those little houses wee found thirteene *Russians*, *Russian Houses*, who

Laplanders mi-
erable life.

who euery morning went out to Fish in the Sea, whereof two of them had charge ouer the rest, they liued very poorely, and ordinarily eate nothing but Fish and Bread: at Eeuening when we prepared our selues to goe to our Scute againe, they prayed the Master and me to stay vvith them in their Houses, vvwhich the Master thanked them for, would not doe, but I stayed vvith them all that night: besides those thirteene Men, there was two *Laplanders* more, and three Women vvith a Child, that liued very poorely of the ouerpluss which the *Russians* gaue them, as a peece of a Fish, and some fishes heads vvwhich the *Russians* threw away, and they vvith great thankfulness tooke them vp, so that in respect of their pouertie, we thought our selues to bee well furnished: and yet vve had little enough, but as it seemed their ordinary liuing was in that manner, and we were forced to stay there, for that the vvind being North-west, it was against vs.

The one and twentieth, wee met our other Companie vvherewith we rejoyced, and shewed each other of our proceedings, and how vvee had sayled too and fro in great necessitie and hunger, and yet they had beene in greater necessitie and danger then we, and gaue God thanks that hee had preserved vs aliuie, and brought vs together againe, and then we eate something together and dranke of the cleere Water, such as runneth along by *Collen* through the *Rhene*, and then vve agreed that they should come vnto vs, that we might sayle together.

Slutterie a fast
breaker.

The two and twentieth, the rest of our men vvith the Boate came vnto vs, about the East South-east Sunne, whereat wee much rejoyced, and then we prayed the *Russians* Cooke to bake a sacke of Meale for vs, and to make it Bread, paying him for it, vvwhich hee did, and in the meane time, when the Fisher-men came vvith their Fish out of the Sea, our Master bought foure Cods of them, vvwhich we sodde and eate, and vvwhile we were at meate, the chiefe of the *Russians* came vnto vs, and perceiuing that we had not much Bread, hee fetched a Loafe and gaue it vs, and although we desired them to sit downe and eate some meate vvith vs, yet we could by no meanes get them to grant thereunto, because it was their Fasting day, and for that vve had powred Butter and fat into our Fish: nor vvee could not get them once to drinke vvith vs, because our Cup vvas somewhat greasie, they were so superstitious touching their Fasting and Religion, neither would they lend vs any of their Cups to drinke in, least they should likewise bee greased, at that time the vvind was North-west.

The foure and twentieth, the wind blew East, and then the Sunne being East, we got to the seven Ilands, where we found many Fisher-men, of vvhom we enquired after *Cool* and *Kilduin*, and they made signes that they lay West from vs, (vvwhich we likewise ghest to bee so) and vvithall they shewed vs great friendship, and cast a Codde into our Scute, but for that wee had a good gale of vvind, we could not stay to pay them for it, but gaue them great thanks, much vvondering at their great courtesie, and so vvith a good gale of vvind we arriued before the seven Ilands, when the Sunne was South-west, and past betweene them and the Land, and there found certayne Fisher-men that rowed to vs, and asked vs where our Crable (meaning our Ship) was, whereunto we made answer, vvith as much *Russian* language as wee had learned; and sayd, *Crable pro Pal*, (that is, our Ship is lost) vvwhich they vvnderstanding, sayd vnto vs, *Cool Brabouse Crable*, vvhereby we vvnderstood, that at *Cool* there was certayne *Netherland* Ships, but wee made no great account thereof, because our intent was to sayle to *Ware-houfe*, fearing least the *Russians* or great Prince of the Countrey would stay vs there.

Kilduin.

The fve and twentieth, sayling along by the Land vvith a South-east vvind, about the South Sunne, we had a sight of *Kilduin*, at vvwhich time we held our course West North-west, and sayling in that manner betweene *Kilduin* and the firme Land, about the South South-west Sunne, we got to the West end of *Kilduin*, and being there looked if we could see any Houses or people therein, and at last we saw certayne *Russian* Lodgies that lay vpon the Strand, and there finding a conuenient place for vs to Anchor vvith our Scutes, vvwhile wee went to know if any people were to bee found, our Master put in vvith the Land, and there found fve or fixe small Houses, vvherein the *Laplanders* dwelt, of vvhom we asked if that were *Kilduin*, whereunto they made answer, and shewed vs that it was *Kilduin*, and sayd, that at *Coola* there lay three *Brabants Crables* or Ships, whereof two were that day to set sayle: wee found a small House vpon the shoare, vvherein there was three Men and a great Dogge, vvwhich receiued vs very friendly, asking vs of our affaires, and how we got thither, whereunto we made answer, and shewed them that we had lost our Ship, and that wee were come thither to see if we could get a Ship that would bring vs into *Holland*: whereunto they made vs answer as the other *Russians* had done, that there was three Ships at *Coola*, whereof two vvvere to set sayle from thence that day, then wee asked them if they would goe vvith one of our men by Land to *Coola*, to looke for a Ship, vvherewith wee might get into *Holland*, and sayd we would reward them vvell for their paines, but they excused themselves, and sayd, that they could not goe from thence, but they sayd they would bring vs ouer the Hill, vvwhere vve should finde certayne *Laplanders* vvhom they thought would goe vvith vs, as they did: for the Master and one of our men going vvith them ouer the Hill, found certayne *Laplanders* there, vvwhereof they got one to goe vvith our man, promising him two Ryals of eight for his paines, and so the *Laplander* going vvith him, tooke a Piece on his necke, and our man a Boat-hooke, and about Eeuening they set forward, the vvinde as then being East, and East North-east.

The

The fixe and twentieth, it was faire, vveather, the vvind South-east, at vvhich time we drew vp both our Scutes vpon the Land, and tooke all the goods out of them, to make them the lighter; vvhich done, we went to the *Russians* and vvarmed vs, and there dressed such meates as wee had, and then againe we began to make two meales a day, vvhen we perceiued that we should euery day finde more people, and vve dranke of their drinke which they call *Quasse*, vvhich was made of broken peeces of Bread, and it tasted well: for in long time wee had drunke nothing else but Water. Some of our men went further into the Land, and there found blew Berries and bramble Berries, vvhich they plucked and eate, and they did vs much good, for we found that they healed vs of our loosenesse, the vvind still blew South-east.

10 The eight and twentieth, it was indifferent good vvether, and then we drew the Scutes vp on the Land againe, that we might take the rest of the goods out of them, because the vvind still blew hard North, and North North-west, and hauing drawne the Scutes vp, we spread our sayles vpon them, to shelter vs vnder them, for it was still mystie and raynie vvether, much desiring to heare some newes of our man, that was gone to *Coola* with the *Laplander*.

20 The nine and twentieth, wee spied the *Laplander* comming alone without our man, whereat we wondred, and were somewhat in doubt, but when hee came vnto vs, he shewed vs a Letter that was written vnto our Master, which he opened before vs, the Contents thereof being, that hee that had written the Letter wondred much at our arriual in that place, and that long since hee verily thought that we had bene all cast away, being exceeding glad of our happie fortune, and how that he would presently come vnto vs with victuals, and all other necessities to succour vs withall, we being in no small admiration who it might bee, that shewed vs so great fauour and friendship, could not imagine what he was, for it appeared by the Letter that he knew vs well: and although the Letter was subscribed, by me *John Cornelison Rip*, yet wee could not bee perswaded that it was the same *John Cornelison*, who the yeere before had bene set out in the other ship with vs, & left vs about the *Beare* Island: for thole good newes we payd the *Laplander* his hyer; and besides that, gaue him Hose, Breeches, and other furniture, so that hee was apparelled like a *Hollander*: for as then wee thought our selues to bee wholly out of danger, and so being of good comfort, we layd vs downe to rest. Heere I cannot chuse but shew you how fast the *Laplander* went: for when he went to *Coola*, as our Companion told vs, they were two 30 Dayes and two Nights on the way, and yet went apace, and when he came backe againe he was but a Day and a Night comming to vs, which was wonderfull, it being but halfe the time, so that we sayd, and verily thought that hee was halfe a Coniurer, and he brought vs a Partridge, which hee had killed by the way as he went.

The thirtieth, wee saw a *Russian* Ioll come rowing with *John Cornelison*, and our Companion that we had sent to *Coola*, who being landed, wee receiued and welcommed each other, with great joy and exceeding gladnesse, as if either of vs on both sides had seene each other rise from death to life againe: for we esteemed him, and hee vs to bee dead long since: hee brought vs a Barrell of *Roswicke* Beere, Wine, *Aqua vite*, Bread, Flesh, Bacon, Salmon, Suger, and other things, which comforted and relieved vs much, and we rejoyced together for our so vnexpected meeting: at that time giuing God great thanks, for his Mercie shewed vnto vs.

40 The first of September, in the Morning with the East Sun, we got to the West-side of the Riuer of *Coola*, and entred into it, where we rowed till the Flood was past, and then wee cast the Stones that serued vs for Anchors vpon the ground, at a point of Land till the Flood came in againe: and when the Sunne was South, wee set sayle againe with the Flood, and so sayled and rowed till mid-night, and then wee cast Anchor againe till morning. The second, in the Morning, we rowed vp the Riuer, and as we past along wee saw some Trees on the Riuer side, which comforted vs, and made vs glad as if we had then come into a new world, for in all the time that wee had bene out, we had not seene any Trees, and when we were by the *Salt Kettles*, which is about three miles from *Coola*, we stayed there a while, and made merrie, and then went forward 50 againe, and with the West North-west Sunne, got to *John Cornelisons* Ship, wherein we entred and drunke: there wee began to make merrie againe, with the Saylers that were therein, and that had bene in the Voyage with *John Cornelison* the yeere before, and bad each other welcome: then we rowed forward, and late in the Eeuening got to *Coola*, where some of vs went on Land, and some stayed in the Scutes to looke to the goods: to whom we sent Milke and other things to comfort and refresh them, and we were all exceeding glad that God of his mercie had deliuered vs out of so many dangers and troubles, and had brought vs thither in safetie.

The third, wee vnladed all our goods, and there refreshed our selues after our toylefome and wearie Iourney, and the great hunger wee had endured, thereby to recouer our healths and strengths againe.

60 The eleuenth, by leaue and consent of the *Bayart*, Governour of the great Prince of *Moscowia*, we brought our Scute and our Boate into the Merchants House, and there let them stand for a remembrance of our long, farre (and neuer before sayled way) and that wee had sayled in those open Scutes, almost foure hundred *Dutch* miles, through, and along by the Sea Coasts to the Towne of *Coola*.

Septembers

Trees are rare sight.

Coola.

Their Scute and Boate layd vp for a Monument: how much more worthily then the old world.

The *Argo*.

Y y

The feuenteenth of September, *John Cornelison* and our Master being come aboard, the next day about the East Sunne, we set sayle out of the Riuer *Coola*, and with Gods grace put to Sea, to sayle homewards, and being out of the Riuer, wee sayled along by the Land North-west and by North, the winde being South.

Vpon the nine and twentieth of October, wee arriued in the *Mase*, with an East North-east wind, and the next morning got to *Maseland Sluce*, and there going on Land, from thence rowed to *Delfe*, and then to the *Hage*, and from thence to *Harlem*. And vpon the first of Nouember about Noone, got to *Amsterdam*, in the same Clothes that wee wore in *Noua Zembla*, with our Caps furr'd with white Foxes skinner. The newes thereof being spred abroad in the Towne, it was also carryed to the Princes Court in the *Hage*, at which time the Lord Chancellour of *Denmarke*, Ambassadour for the sayd King, was then at Dinner with Prince *Maurice*: for the which cause we were presently fetcht thither by the Scout, and two of the Burgers of the Towne, and there in the presence of those Ambassadors, and the Burger-masters, wee made rehearfall of our Journey both forwards and backwards.

I thought good to adde hither for Barents or Barentsons sake, certaine Notes which I haue found (the one Translated, the other Written by him) amongst Master *Hakluyts* Paper.

This was Written by *William Barentson* in a loose Paper, which was lent mee by the Reuerend *Peter Plantius* in *Amsterdam*, March the seuen and twentieth, 1609.

Intelligence
from Samoieds.
1595.
Barkes going
from Pechora
to Gielhsidi:
wintering
there.
Gielhsidi won
from the Tar-
tars 1592.

1592.
No Ebbe nor
Floud.

September 9.

The foure and twentieth of August, Stilo nouo 1595. wee spake with the Samoieds, and asked them how the Land and Sea did lye to the East of Way-gates. They sayd after five dayes iourney going North-east, wee should come to a great Sea, going South-east. This Sea to the East of Way-gates, they sayd was called *Marmoria*, that is to say, A calme Sea. And they of Ward-houle haue told vs the same. I asked them, if at any time of the yeere it was frozen ouer? They sayd it was. And that sometimes they passed it with Sleds. And the first of September 1595. Stilo nouo, the Russes of the Lodie or Barke affirmed the same, saying, that the Sea is sometimes so Frozen, that the Lodies or Barkes going sometimes to *Gielhsidi* from *Pechora*, are forced there to winter: which *Gielhsidi* was wonne from the Tartars, three yeeres past.

For the Ebbe and Flood there I can finde none; but with the Winde so runneth the streame. The third of September, Stilo nouo, the winde was South-west, and then I found the water higher, then with the winde at North or North-east. Mine opinion is grounded on Experience. That if there bee a passage, it is small: or else the Sea could not rise with a Southerly Winde. And for the better prooffe to know if there were a Flood and Ebbe, the ninth of September, Stilo nouo, I went on shoare on the South end of the States Iland, where the Crosse standeth, and layd a Stone on the brinke of the Water, to proue whether there were a Tide, and went round about the Iland to shoote at a Hare, and returning, I found the Stone as I left it, and the Water neither higher nor lower: which proueth as afore, that there is no Flood nor Ebbe.

CHAP. VI.

A Treatise of IVER BOTY a Gronlander, translated out of the North Language into High Dutch, in the yeere 1560. And after out of High Dutch into Low Dutch, by *WILLIAM BARENTSON* of Amsterdam, who was chiefe Pilot aforesaid. The same Copie in High Dutch, is in the hands of *IODOCVS HONDIVS*, which I haue seene. And this was translated out of Low Dutch, by Master *WILLIAM*

STERE, Marchant, in the yeere 1608. for the vse of me *HENRIE*

HVDSON. *WILLIAM BARENTSONS* Booke is in the hands of Master *PETER PLANTIVS*, who lent the same vnto me.

*N*primis, it is reported by men of Wisedome and Vnderstanding borne in Gronland, That from Stad in Norway to the East part of Island, called *Horn-nesse*, is seven dayes sayling right West.

Item, men shall know, that betweene Island and Gronland, lyeth a Riffe called *Gombornse-skare*. There were they wont to haue there passage for Gronland. But as they report there is Ice vpon the same Riffe, come out of the long North Bottom, so that we cannot vse the same old Passage as they thinke.

Item, from *Long-nesse* on the East side of Island to the abouesaid *Horn-nesse*, is two dayes sayle to the *Brimstone Mount*.

Gombornse-
skare.
The long
North bottom.

Item,

Item, if you goe from *Bergen* in *Norway*, the course is right West, till you bee South of *Rokenesse* in *Island*: and distant from it thirteene miles, or leagues. And with this course you shall come vnder that high Land that lyeth in the East part of *Groneland*, and is called *Swafster*. A day before you come there, you shall haue sight of a high Mount, called *Hmit-sarke*: and betweene *Whitsarke* and *Groneland*, lyeth a Head-land called *Hernoldus Hooke*; and thereby lyeth an Hauen, where the *Norway* Merchants Ships were wont to come: and it is called *Sound Hauen*.

Item, if a man will sayle from *Island* to *Groneland*, hee shall set his course to *Snofnesse*, which is by West *Rokenesse* thirteene miles, or leagues right West, one day and nights sayling, and after South-west to shun the Ice, that lyeth on *Gombornse-skare*; and after that one day and night North-west. So shall hee with this course fall right with the abovesayd *Swafster*, which is high Land, vnder which lyeth the aforesayd Head-land, called *Hernoldus Hooke*, and the *Sound Hauen*.

Item, the Easter Dorpe of *Groneland* lyeth East from *Hernoldus hooke*, but neere it, and is called *Skagen Ford*, and is a great Village.

Item, from *Skagen Ford* East, lyeth a Hauen called *Beare Ford*: it is not dwelt in. In the mouth thereof lyeth a Riffe, so that great Ships cannot harbour in it.

Item, there is great abundance of Whales: and there is a great Fishing for the killing of them there: but not without the Bishops consent, which keepeth the same for the benefit of the Cathedral Church. In the Hauen is a great *Swalth*: and when the Tide doth runne out, all the Whales doe runne into the sayd *Swalth*.

Item, East of *Beare Ford*, lyeth another Hauen called *Allabong Sound*: and it is at the mouth narrow, but farther in, very wide: The length whereof is such, that the end thereof is not yet knowne. There runneth no Streame. It lyeth full of little Iles. Fowle and Oxen are there common: and it is playne Land on both sides, growne ouer with greene Grasse.

Item, East from the Icie Mountayne, lyeth an Hauen called *Fendebother*; so named, because in *Saint Olafes* time there was a Ship cast away, as the speech hath beene in *Groneland*; In which Ship was drowned one of *Saint Olafes* men, with others: and those that were saued did burie those that were drowned, and on their Graues did set great stone Crosses, which wee see at this day.

Item, somewhat more East toward the Icie Mountayne, lyeth a high Land, called *Corse Hought*, vpon which they Hunt white Beares, but not without the Bishops leaue, for it belongeth to the Cathedral Church. And from thence more Easterly, men see nothing but Ice and Snow, both by land and water.

Now wee shall returne againe to *Hernoldus Hooke*, where we first began to come to the first Towne that lyeth on the East-side of *Hernoldus Hooke*, called *Skagen Ford*: and so we will write the Names of all that lye on the West-side of the Ford or Sound.

Item, West from *Hernoldus Hooke*, lyeth a Dorpe called *Kodosford*, and it is well built: and as you sayle into the Sound, you shall see on the right hand a great Sea and a Marsh: and into this Sea runneth a great streame: and by the Marsh and Sea standeth a great Church, on which the Holy Crosse is drawne, of colour white: it belongeth to *Emelnesse de Hokesong*, and the Land to *Peters Wike*.

Item, by *Peters Wike*, lyeth a great Dorpe called *Wartsdale*, by which lyeth a water or Sea of twelue miles or leagues ouer: in which is much Fish: And to *Peters wike* Church belongeth *Wartsdale* Boy or Towne, and the Villages.

Item, neere this Boy or Towne, lyeth a Cloyster or Abbey, in which are Canons Regular, it is Dedicated to *Saint Olafes*, and *Saint Augustines* name. And to it belongeth all the Land to the Sea side, and toward the other side of the Cloyster.

Item, next *Godosford*, lyeth a Ford called *Rompnes Ford*: And there lyeth a Cloyster of Nuns of *Saint Benedicts* Order.

Item, this Cloyster to the bottome of the Sea, and to *Wegen Kerke*, was Dedicated to *Saint Olaf* the King. In this Ford lye many small Iles. And to this Cloyster belongeth halfe the Ford and the Church. In this Sound are many warme Waters. In the Winter they are intollerable hot: but in the Summer more moderate; and many Bathing in them are cured of many diseases.

Item, betweene *Rompnes* and the next Sound, lyeth a great Garden called *Vose*, belonging to the King. There is also a costly Church dedicated to *Saint Nicolas*. This Church had the King before this. Neere it lyeth a Sea of Fresh water, called *Vose*, in which is great abundance of Fish, without number. And when there falleth much Rayne, that the Waters doe rise therewith, and after fall againe, there remayneth vpon the Land much Fish drie.

Item, when you sayle out of *Emelnes Ford*, there lyeth an Inlet, called *South-woders Wike*: and somewhat higher in the same Sound, and on the same side, lyeth a little Cape called *Bloming*: and beyond that lyeth another Inwike called *Granwike*, and aboue that lyeth a Garden called *Daleth*, which belongeth to the Cathedral Church. And on the right hand as you sayle out of the same Sound, lyeth a great Wood, which pertayneth to the Church, where they feede all their

land* or *Norway*.
Fruits.

Punnus and *Pot-
harſe*.

Item, West from this lyeth another high Land, called *The long high Land* : and by another cal-
led whereon are eight great Orchards, all belonging to the Cathedrall Church.
But the Tenths thereof they giue to *Warsedall* Church.

Item, next to this Sound lyeth another Sound called *Swalſter* Ford, wherein standeth a Church
called *Swalſter*. This Church belongeth to all this Sound, and to *Romſe* Ford, lying next it. In
this Sound is a great Garden belonging to the King, called *Saint Henleſate*.

Item, next to that lyeth *Ericks* Ford, and entring therein lyeth an high Land called *Ericks*
Hought ; which pertayneth the one halfe to *Deuers Kerke* , and is the first Parish Church on
Groneland, and lyeth on the left hand as you sayle into *Ericks* Ford : and *Deuers Kerke* belon-
geth all to *Meydon* Ford, which lyeth North-west from *Ericks* Ford.

Item, farther out then *Ericks* Ford, standeth a Church called *Skogel Kerke*, which belongeth to
all *Medford* : And farther in the Sound standeth a Church called *Leaden Kerke*. To this Church
belongeth all thereabout to the Sea ; and also on the other side as farre as *Bonsels*. There lyeth
also a great Orchard called *Grote Lead*, in which the *Gufman* (that is a chiefe or Bayliffe ouer the
Boores) doth dwell.

And farther out then *Ericks* Ford, lyeth a Ford or Sound called *Fossa*, which belongeth to the
Cathedrall Church : and the sayd *Fossa* Sound lyeth as men sayle out towards *Ericks* Ford ; and
to the North of it lye two Villages, the one called *Euer-boy*, and the other *Forther-boy*, because
they lye so.

Item, from thence farther North lyeth *Breda* Ford, and after that *Lormont* Ford from that
West, and from *Lormont* Ford to the West is *Ice* Dorpe. All these are places built, and in them
dwell people.

Item, from the Easter builded Land to the Wester Dorpe, is twelue miles or leagues : and the
rest is all waste land. In the Dorpe in the West standeth a Church, which in times past belonged
to the Cathedrall Church, and the Bishop did dwell there. But now the *Skerlengers* haue all the
West Lands and Dorps. And there are now many Horſes, Oxen, and Kine, but no people nei-
ther *Christian* nor *Heathen* ; but they were all carryed away by the Enemie, the *Skerlengers*.

All this before Written was done by one *Iuer Boty* borne in *Groneland*, a principall man in the
Bishops Court : who dwelt there many yeeres, and saw and knew all these places. He was cho-
sen by the whole Land for Captayne, to goe with Ships to the West land, to driue away their
Enemies the *Skerlengers*. But hee comming there, found no people neither *Christian* nor *Hea-
then*, but found there many Sheepe running being wilde, of which Sheepe they tooke with
them as many as they could carrie, and with them returned to there Houses. This before named
Indo Boty was himſelfe with them.

To the North of the West Land, lyeth a great Wildernesſe with Clifes or Rockes, called *He-
mel Hatsfelt*. Farther can no man sayle, because there lye many *Swalgen* or Whirle-pooles : and
also for the Water and the Sea.

Item, in *Groneland* are many Siluer Hills, and many white Beares with red patches on their
heads ; and also white Hawkes, and all sorts of Fiſh, as in other Countries.

Item, there is Marble stone of all colours, also Zeuell stone or the Load stone, which the Fire
cannot hurt, whereof they make many vessels, as Pots, and other great vessels.

Item, in *Groneland* runneth great streames, and there is much Snow and Ice : But it is not so
cold, as it is in *Island* or *Norway*.

Item, there grow on the high Hills, Nuts and Acornes, which are as great as Apples, and good
to eate. There groweth also the best Wheate, that can grow in the whole Land.

This Sea Card was found in the Iles of *Fero* or farre, lying betweene *Shot-laut* and *Island*, in an
old reckoning Booke, written aboue one hundred yeeres agoe : out of which this was all taken.

Item, *Punnus* and *Potharſe*, haue inhabited *Island* certayne yeeres, and sometimes haue gone to
Sea, and haue had their trade in *Groneland*. Also *Punnus* did giue the *Islanders* their Lawes, and
caused them to bee written. Which Lawes doe continue to this day in *Island*, and are called by
name *Punnus* Lawes.

The Course from Island to Groneland.

IF men bee South from the Hauen of *Bred* Ford in *Island*, they shall sayle West, till they see
Whitsarke vpon *Groneland*, and then sayle somewhat South-west till *Whitsarke* bee North off
you, and so you need not feare Ice, but may boldly sayle to *Whitsarke*, and from thence to
Ericks Hauen.

If men be North the Hauen of *Bredford* in *Island*, then sayle South-west, till *Whitsarke* beare North: then sayle to it, and so come to *Ericks* Hauen.

If you see Ice, that commeth out of *Trolebothon*, you shall goe more Southerly, but not too farre South for feare of *Freeisland*, for there runneth an hard streame. And it is fifteene miles or leagues from *Freeisland*.

Item, *Freeisland* lyeth South, and *Island* East from *Gronland*.

Item, From the Ice that hangerh on the Hilles in *Gronland*, commeth a great Fogge, Frost and Cold. And such a Fogge commeth out of the Ice of *Trolebothon*: and it is a great *Wilderneffe*.

There are Sables, Marternes, Hermelins, or Ermins, White Beares, and White Hawkes, Seales, White and Gray, Gold and Siluer Hills, also Fish dryed and salted, and thousands of Salmons: also store of Losh Hides and other Hides. There are Hares, Foxes, Wolues, Otters, and Veltfrasen.

Now if it please God they come to *Gronland*, then shall they set but two men on shoare; who shall take with them diuers kindes of Marchandize: and let them deale with good order, and let them bee such as can make good Report, what they there doe see or finde, and let them obserue whether men may there Land or no, with the loue of the Inhabitants.

And I counsaile and charge those that shall Trade for *Gronland*, that they set no more folke on Land, but they keepe men enough to man the Ship. And looke well to the course you hold to *Gronland*, that if those that bee set on shoare bee taken, they may come home againe with Gods helpe. For if shipping returne, they may come home or bee releued in a yeere and a day. And in your liuing there so demeane your selues to them, that in time you may winne the Countrey and the people.

Remember my Scholler and Clarke, which shall bee there appointed as Commander, that you send those on Land, that will shew themselves diligent Writers, and that they carrie themselves so, that they may learne thereby the State of the Countrey. They shall take with them two Boats and eight Oares, and take Tynder-boxes for fire if there be no Habitation. Also set vp Croffes of Wood or Stone, if need be.

This Note following was found in an old Booke of Accompts, in the Yeere 1596.

In *Normis*, From *Grad* in *Normay*, standing neere the Latitude of sixtie three Degrees, you shall hold your course due West: and that course will bring you vpon *Swartnesse* in *Gronland*. And in this course is the least streame and least perill of *Swalgen* or *Indrafts*. There is lesse perill this way, then is on the North-side; you shall keepe $\frac{1}{2}$ of the Sea on *Freeisland* side, and one third on *Island* side. And if it bee cleere weather, and you haue kept your course right West, you shall see the Mount of *Snelus Iokul* in the South-west patt of *Island*. And if you haue a storme in the North, you must shunne it as you can, till *Whitsarke* be North of you. Then shall you sayle right with it, and seeke the Land: and you shall finde a good Hauen, called *Ericks Ford*.

Item, If you bee betweene *Gronland* and *Island*, you may see *Snelus Iokul* on *Island*, and *Whitsarke* on *Gronland*, if it be cleere weather. Therefore men of experience doe affirme, that it is but thirtie leagues betweene both.

Also if you haue a storme betweene *Gronland* and *Island*, you must haue care you bee not laid on *Freeisland* with the streame and Winde; for the streame or Current doth run strong vpon *Freeisland*, out of the North.

Also if you haue a storme out of the South, you shall not sayle out of your course, but keepe it as neere as you can possibly, till *Whitsarke* in *Gronland* beare North off you: then sayle toward it, and you shall come into *Ericks Ford*, as it is afore-said in the first Article.

CHAP. VII.

*A Description of the Countries of Siberia, Samoieda, and Tingoefia.
Together with the Iourneyes leading vnto the same Countries to-
ward the East and North-east, as they are daily fre-
quented by the Moscouites.*

§. I.

*Discoverie of Siberia, and the subiecting of the same
to the Russes.*

moieds.
The first Voy-
age vnto the
Samoieds coun-
treies.

Here is in *Moscouie*, a Kindred called the *Sonnes* of *Oneeko*, of a rusticke or base descent, and first sprung from one *Oneeko* a Husband-man. He being very rich in Lands, dwelt vpon a certaine Riuer called *Wichida*, or *Wusogda*, falling into the Riuer *Duina*, which about one hundred leagues beneath, neere vnto the Castle called *S. Michael the Archangel*, which falleth into the *White Sea*. This *Oneeko* being rich (as is said) had also many Children, God hauing largely blessed and provided him with plentie of all things. Yet neuerthelesse, hee had an earnest desire and affection, to know what Countreies were possessed and inhabited by those people, which yeerely came into *Russia* to trafficke, bringing with them costly Furrer, and diuers other Merchandizes, much differing in Language, Apparel, Religion, and Behaviour, calling themselves *Samoieds*, and by other vnknowne names. These people came euery yeere downe the Riuer *Wichida*, and exchanged their Commodities with the *Russes* and *Moscouites*, in the Townes of *Ossel* and *Vsting*, on the Riuer *Duina*; which at that time were the Receits and chiefe Mart Townes of all kind of Marchandizes, but especially of costly Furrer. *Oneeko* therefore (as hath beene said) was most desirous to know, from whence these people came, or what Countreies they did inhabit, easily conjecturing, That great wealth was there to be gotten; since the Furrer yeerely brought them amounted to a great summe of Money. Wherefore secretly hee got acquaintance and consorted himselfe with diuers of them, and sent in their company about tenne or twelue of his owne people into those parts; enioyning them, that through what Countreies so euer they should trauell, they should make diligent search of euery particular thing therein, and fully obserue the Manners, Rites, Dwellings, and whole course of life of those Nations; that at their returne they might bring from thence perfect knowledge thereof. Which they hauing at length performed, he entertained them bountifully at their returne, and shewed them all fauour, but with especiall charge to keepe silence. Hee likewise kept all these things close to himselfe, not reuealing them to any man.

Great wealth
obtaind by
continuance of
this Voyage.

And the next yeere following, he sent thither a greater number of his people, joyning with them certayne of his Kindred and Alliance. These carried with them diuers base Marchandize; as small Bells, and other like *Dutch* small Wares; and tooke diligent notice of euery thing in those parts; and after they had passed many Deserts, and diuers great Riuers, they came to the Riuer *Obi*; where making Acquaintance and Friendship with the *Samoieds*, they found that Furrer were to be had for a small price, and that great wealth was there easily to be gotten; and further, that this people had not any Cities, but liued together in Companies, and peaceably, and gouerned by some of the ancientest among them; that they were lothsome in their feeding, and liued on the flesh of such beasts as they tooke: that they had no knowledge of Corne or Bread, were cunning and skilfull Archers, making their Bowes of a gentle and flexible kind of Wood, and that their Arrowes were headed with sharpened stones or fish bones: with those they killed wilde beasts, which are exceeding plentiful in those places: that they sowed also with bones of fishes, seruing them for Needles; their thred being made of the sinewes of certaine small beasts, and so they sew together the Furrer, wherewith they cloath themselves: the Furrer side in Summer turned outward, and in Winter inward. That they couered their Houses with the Skins of Elkes and such like beasts, little esteemed among them. Finally, these Messengers of *Oneeko*, searched curiously into euery matter, and returned home stored with costly Furrer.

Now when as *Oneeko* vnderstood by their report, that which he so much longed to know, he together with certayne others of his Friends, continued his Trafficke into those Countreies for diuers yeeres together: by meanes wherof the *Oneekos* grew very mightie, and bought great Possessions in all parts. Those that dwelled neere vnto them being ignorant from whence all this wealth arose, greatly wondred at it. For the *Oneekos* builded Churches in some of their

Vil-

Villages. Yea, afterward they erected in the Towne of *Osoil* vpon the *Wichida*, where at that time they dwelt, an exceeding faire Church, which was rayfed from the very foundations of hewen stone. Finally, they knew no end of their goods.

Now among the *Russes* it goeth for a common Prouerbe, that *Hee which hath no friends in Court, is scarce to be accounted in the number of the lining*. For most commonly it happeneth, that they that excell others in any thing, are presently enuyed and fallly accused in the Princes Court, where if they haue not a friend to succour them, they are forth-with without hearing the cause, oppressed; yea, and vtterly ruined. For which cause the *Oneekos* beeing growne to much wealth, as is said, got into the fauour of one of the greatest in the Court, which was *Borisodanous*, Brother to the Wife of the Emperour *Pheodor Euanowich* then reigning, to whom also he succeeded in the Empire. Vnto this *Boris* the *Oneekos* determined to reueale the whole matter: who first presenting him with gifts after the custome of the Countrey, prayed him to grant them hearing in a matter, which they had to deliuer for the benefit of the whole Empire. *Boris* presently listning to this Petition, receiued them with extraordinary kindnesse: and after they had declared vnto him the situation of the Countreyes of *Samoiedia*, and *Siberia*, then what they had seene and obserued therein, and how great Riches might thence arise vnto the Empire of *Mosconia*. *Boris* presently grew into an ardent desire to set forward this business, enter-tayning them as his Children, and gracing them to the vttermost of his power, procuring them from the Emperour a most ample Priuiledge, by which it was ordayned, That they should for euer enjoy the Lands which they possessed, and might dispose of them vnto their Heires at their pleasure. And farther, if it happened they were abiding in the Citie of *Mosconia*, he tooke them into his owne Sled: which among the *Mosconites* is the greatest kind of honour, especially being offered by principall Noblemen, such as then was *Boris*, a man of the greatest power, and in whom the chiefe authoritie of the Empire rested. *Boris* pondering these things attentiuely, signified the whole matter to the Emperour, to whom it was very pleasing; And not sleeping about the matter, employed therein certayne Captaynes, and Gentlemen of small abilitie of his owne followers: commanding them to prepare themselves to goe to that Iourney, in company of such as the *Oneekos* should appoint vnto them, and that they should apparell themselves gallantly, and like vnto Ambassadors, adding further certayne Souldiers, and Presents of small value to be distributed among the people, to which they should come: enioyning them further to note diligently all Passages, Riuers, High-ways, Woods, and what else they should meete with in their trauell; as also to commit to memorie the names of them; that at their returne they might make a faithfull and true report thereof: adding further that they should intreat the people with all courtesie, and that they should seeke out some conuenient place for building of Castles and Fortresses, and that in any case (if it were possible) they should bring backe with them into *Mosconia*, some of the Inhabitants of those Countreyes.

These Messengers being sufficiently furnished with all things necessary for the Iourney, namely, Apparell, Weapons, Money, and Presents, departing from the *Mosconia*, not long after came to the Riuer *Wichida*, and to the *Oneekos*: who also sent some of their owne people with them. As soone as they were arrived into those parts, they began to performe what was giuen them in charge, shewing freely all tokens of courtesie vnto the barbarous people, and carefully obseruing who were of greatest authoritie among them, to whom they vsed reuerence and gaue gifts, such as were of small and almost no value to themselves, but which seemed so precious vnto the other, that when the *Mosconites* were coming a farre off towards them, they would stay for them with great dancings and clapping of their hands, and cast themselves downe at the feet of the Giuers, being so gallantly attyred, accounting them altogether as Gods. The *Mosconites* vsing the *Samoieds* for their Interpretors, which had continued certayne yeeres in the Villages of *Mosconia*, to learne their Language, began to discourse with the *Barbarians* concerning their Emperour of *Mosconia*, whom they wonderfully extolled, and made him little lesse then an Earthly God, enterlacing other things with all, whereby those people were stirred vp to wish that they might behold these things with their eyes. These their desires were pleasing to the *Mosconites*, who signified that they were likewise well contented therewithall: Adding, that they would leaue certayne pledges among them, which during the *Samoieds* abode in *Mosconia*, might learne their Language: And by this meanes they drew vnto their purpose the good will of many of the people on the West-side of *Obi*, who of their owne accord subjected themselves to the authoritie of the *Mosconites*, and suffered them to lay a Taxation vpon them, promising yeerely of euery head (not excepting the Boyes that were but yet learning to handle the Bow) two skinnies of Sables; which to themselves were of no value, but esteemed of the *Mosconites* as precious as Iewels. These they promised to deliuer to such a Treasurer as the Emperour should ordayne. Neither did they faile to performe the same.

After this the Messengers passed ouer the Riuer *Obi*, and trauelled beyond it almost two hundred leagues toward the East and North-east, hauing seene by the way many wild beasts of strong shapies, most cleere Fountaynes, extraordinary Plants and Trees, pleasant Woods, and *Samoieds* of diuers sorts, whereof some did ride on *Elkes* or *Loshes*, other were drawne in Sleds by

L. Boris, that Theodore Emperour. The Russes pronounce thus.

Imperiall priuiledge.

The first Voyage set out by Boris Godonow.

They submit themselves to the Mosconites.

Trauaile beyond Obi. Elkes or Loshes. Raine

Raine Deere.
Dogs equal in
swiftnesse to
Harts.

Raine Deere, and others also were drawne by Dogges, which are equall to Harts for swiftnesse. Finally, many other things in their whole Iourney they met with, not before seene, and therefore to be marvelled at: which orderly and truly noted downe, that they might more certainly report the same at their returne. And so at length taking with them some voluntarie *Samoieds*, and leauing there diuers of their owne people to learne their Language, they returned backe into *Mosconia*; where at their first conueniencie they made knowne to *Boris*, and by him vnto the Emperour the whole successe of their Voyage.

Samoieds shoot-
ing:
* Stiuier.

They marvelled at the *Samoieds* which were brought vnto them, commanding them to make some shew of their cunning in shooting; which they did so perfectly, that almost it seemed to any man incredible. For taking a piece of Coyne lesse then our * Pennie, and fastning it to the stocke of a Tree, and then going as farre from the same, as they could very hardly discernie it, they did every time that they did shoot so assuredly hit the same, that they did not once misse it. Where at many of the beholders did aboue measure wonder.

And on the other side, the *Samoieds* as greatly wondred both at the *Mosconites* manner of liuing and fashions, as also at the stateliness of the Citie: neither did they without a certayne terrour behold the Emperour himselfe, so richly attired and mounted either on Horse-backe, or in his Coach drawne by many Horses together, and enuironed with so many Nobles most gallantly adorned. Then with admiration they beheld the Guards furnished with their Caliuers, of whom about foure hundred waited on the Emperour at his going abroad. So oft also as they heard the ringing of the Bells, which are very many among the *Mosconites*, and saw so many faire shops, and the rest of the Citie's beautie, they were altogether astonished, and thought themselves to bee in some Mansion of the Gods; wishing withall, that they were a while among their Countrey-men to tell them of all things. Yea, they reported themselves to be happy, that they had the fortune to serue so glorious an Emperour, whom they altogether accounted as a Diuine power. The Meates which the *Mosconites* did set before them, they did greedily eate: whereby it plainly appeared, that the same were more pleasant to their taste, then the raw flesh, or fish dried in the winde, wherewith they feed themselves at home. Finally, they promised to receiue the Emperour for their Lord; and to perswade their Countrey-men, inhabiting farre and wide to doe the same. They humbly also prayed the Emperour to vouchsafe them the fauour, to send them certaine Gouvernours to rule ouer them, and to whom they might pay the aforesaid Tribute. Concerning their Idolatrie, there was no speech made thereof, but they were left to their owne customes. Notwithstanding, I thinke that the *Christian Faith* would easily be spread among them, if they had sufficient and godly Teachers. Neither doubt I but the *Mosconites* would haue taken order therein, if they had not bene hindred by these most troublesome Warres.

These things so done as is declared, the *Oneckes* were raised to great Honours, and endowed with great Priuiledges, as also with Supreme Authoritie ouer many places, adioyning vnto their Lands, enjoying Possessions lying one hundred miles asunder vpon the Rivers of *Duina*, *Wibichida*, and *Suchana*: so that they are very mighty and rich, and increase daily in greater Honours.

Castles build-
ed.

Sinke of bad
people.

It was further ordayned by the *Mosconites*, that there should bee places chosen by the River *Oby*, and in the fields adioyning vnto it, fortified by the naturall situation for the building of Castles thereon, and furnishing them with Garrisons, and that there should be sent thither a chiefe Gouvernour, principally for further discovering the Countrey, and bringing it vnder subiection. These things so ordayned, did likewise take effect. And first of all, there were builded certaine Castles enclosed with certaine strong beames, cut out of the Woods thereby, and fastned one in another in double reues, filled betweene with earth, and fortified with Garrisons; And so great a multitude of men is duely sent thither, that in some places there are Cities assembled, consisting of *Poles*, *Tartars*, *Russes*, and other Nations mingled together. For, into these parts are sent all that are banished, Murtherers, Traitors, Theeues, and the scumme of such as deserue death: some of which are for a time kept in prison, others enforced to continue there for certaine yeeres, euery one according to the rate of his offence: whereby there are very populous assemblies of people growne together, who with the Castles already builded, doe almost make a pretie Kingdome: Many men of the meane sort, daily flocking thither, the rather for that they enioy great priuiledges, neither pay any thing for the Lands which they possesse.

Siberia and
Siber.

* Then Male-
factors of Am-
sterdam at the
Prison, &c.

The whole Countrey is called *Siberia*, the Citie builded therein *Siber*. And in deed at the first, the Offenders among the *Mosconites*, did no lesse tremble at the name of *Siberia*, then * doe euill persons in *London*, when they are threatned with New-gate: for they were forth-with sent away into *Siberia*. But now the often inflicting of that punishment is almost growne into contempt. But Noblemen and great Personages, if at any time they incur the Princes displeasure, doe as yet very much loath the name of *Siberia*. For many times both themselves, with their Wiues and Families are sent away into those parts: where some Office is committed vnto them, till the Emperours anger bee asswaged, and they called home into *Mosconia*.

I will now shew the way by which they trauell out of *Mosconia* into those parts, and that in

in the best manner that I could get notice thereof. Which whatsoever it shall seeme to bee, I haue not attained vnto it, without great paines and ready furtherance of some friends, which I found in the Court, while I continued in *Russia*: who though they were ready to pleasure me, and that I had beene very instant with them about it, yet with much adoe were brought to communicate this particular Iournall vnto me. For if at any time after, when the land should bee at quiet, it should any way come to light, doubtlesse it would cost them all their liues. For such is the disposition of the *Russes*, that they will not indure to haue the secrets of their State to bee made knowne.

This Iournall to the North-east was hardly obtained by some friends in Court. The great danger for imparting this Iournay.

§. II.

A briebe Description of the wayes and Riuers, leading out of Moscouia toward the East and North-east into Siberia, Samoiedia, and Tingoesia, as they are daily frequented by the Russes: with further Discoueries towards Tartaria and China.

From the Citie *Osoil* vpon the Riuer *Wichida*, where the *Oneckos* dwell, they goe against the streame, vntill they come to *Iauinis*, a little Towne built by the *Russes*, and it is distant from *Osoil* almost seuentene dayes iourney. Whither before they come, they passe many Riuers and Woods. The Riuer *Wichida* springeth out of the Mountaines of *Iugoria*, which to the South ioyneth vpon *Tartarie*, and from thence runne Northwards to the Ocean Sea. Out of the same Mountaines issueth the Riuer *Petfora*, which falleth into the Ocean Sea on this side the Streight of *Waygats*. From *Iauinis*, after three weekes iourney, they come to *Neem*; a Riuer so named of the gentle gliding of her streames through the Woods. For *Neem* in *English* signifieth *Still* or *Dumbe*. On this Riuer they proceed about five dayes space with their Boats; and then, for that the *Neem* taketh his course another way, for shortning their iourney, they must of force cause their stuffe to be carried by Land, the space of a league: And so they come to the *Wiser*, a Riuer issuing out of certaine Rockes adioyning to the Mountaines of *Iugoria*. These Rockes the *Mosconites* call *Camenas*. From hence they are carried downe the Riuer *Wiser*, for the full space of nine dayes, vntill they come to *Soil Camscoy*, a small Towne built by the *Mosconites*, for refreshing of Trauellers for a short space, which hence forward are to proceed on their Iourney by Land. As for the *Wiser*, it keeping on his course somewhat farther, at length falleth into the *Cam*, which passing by *Viatcam*, a Towne of *Moscouia*, falleth into the great Riuer *Rba*, commonly called *Volga*, which entreth with seuentie branches into the *Caspian* Sea, as I haue receiued from eye witnesses.

Osoil.
Iauinis 17. daies iourney distant from *Osoil*, against the streame.

Iugoria.
Riuer *Petfora*.
Neem Riuer 3. weekes iourney from *Iauinis*.

From *Neem* to *Wiser* 5. dayes iourney.
From *Wiser* to *Soil Camscoy* 9. dayes.
Volga by the *Tartars* called *Uil*.

The Towne of *Soil Camscoy* is reasonably inhabited, hauing many Villages round about it. The Inhabitants, for the most part are *Russes* or *Tartars*. Here is great store of Cattell, and chiefly of Horses. Trauellers hauing here somewhat refreshed themselves, doe lade their carriages on Horses, and trauell for the most part through Mountaines full of Firres, Pines, and other trees of strange sorts. Betweene these Mountaines they passe ouer the Riuers *Soiba*, and from thence ouer *Cosna*, both running toward the North-east.

Soil Camscoy.

Now these Mountaines are diuided into three parts; whereof the two first are passed ouer each of them in two dayes, and the third in foure dayes. The first part is called *Cosninscoy Camen*: The second *Cirginscoy Camen*: The third *Poduinscoy Camen*. And doubtlesse all these mountainous Countries are much different from the other Countries out of which they enter into them. For the Woods vpon them, are fairer and thicker growne with trees, bearing euery where diuers sorts of Plants. These three Desarts are frequented by none in a manner but *Tartars*, and *Samoieds*, who onely hunt after those costly Furies, which are to pay their tribute to the Emperour of *Moscouia*. The Mountaines of *Poduinscoy Camen* are higher then the rest, and for the most part couered with Snow and Cloudes, and therefore difficult for Trauellers to passe ouer: but by little and little they haue a gentle descent. From thence they come to *Vergateria*, in which Towne they must abide vntill the Spring, by reason of the Riuer *Toera*, which arising not farre from thence, is all the rest of the yeere very shallow.

The Riuer *Soiba*.
The Riuer *Cosna*.

Cosninscoy Camen.
Cirginscoy Camen.
Poduinscoy Camen.

Vergateria.
Toera Riuer.

But the Spring approaching, when the Snow melts from the hoary Hills, and the Land waters arise, it is passed ouer with Skiffes and small Boats. *Vergateria* is the first Towne of the Countrey of *Siberia*, and was begun to be builded with some other Townes within these one and twenty yeeres. It is reasonably full of buildings, and the lands about it are tilled as in *Moscouia*. Heere there is resident for the Emperour of *Moscouia* a Gouvernour, which yeerely at the beginning of the Spring, by way of the Riuers doth distribute great store of Corne, and Victuals among the Castles with Garrisons throughout all *Siberia*: furnishing also in like manner the *Mosconites*, which remayne beyond the Riuer *Oby*. For in those places the ground is not yet tilled; and the *Samoieds*, as before is said, for the most part feed on the flesh of wilde beafts.

Vergateria the first Towne of *Siberia*.

They trauell
400. leagues
into the In-
land beyond
Noxinscoy.
The Reigne of
Boris Godonova.

Downe the Riuer *Toera*, in five dayes they come to *Iaphanis*, a Towne builded and inhabited within these two yeeres. Thence againe they passe downe the *Toera*, and hauing proceeded two dayes thereon, they are enforced by reason of the often windings and turnings of the Riuer, to cut ouer it in certaine places, for shortning of the way. In these places there now dwell here and there, *Tartars* and *Samoieds*, liuing for the most part vpon Cattell and Fishing.

At length leauing *Toera*, they come to the mighty Riuer *Tabab*, distant from *Vergateria* about two hundred leagues. And from thence they proceed farther to *Timna*, a populous Towne, and builded by those aboue mentioned. But many trauell also from *Iaphanis* to *Timna*, by Sleds in the Winter time, in the space of twelue dayes. And here is vsed much buying and selling of costly Fures, betweene the *Moscouites*, *Tartars*, and *Samoieds*. And this is a very conuenient place, for such as determine to stay in the Countrey not aboue fixe moneths. But many doe search the further parts, and trauell farre beyond the *Oby*, toward the East and South.

From *Timna* they come to *Tobolsca*, the chiefe of all the Townes of *Siberia*: wherein is the seat of the chiefe Gouvernour of *Siberia*, and of the *Moscouites* that are in the same. To this place yeerely are brought from the other Townes of the whole Countrey, as well on this side, as beyond *Oby* the tributes, which being brought together, and guarded with Souldiers, are after carried into *Moscouia* to the Emperour. Here also the Law is most seuerely administred: and all the other Gouvernours in *Samoiedia*, and *Siberia*, are bound to obey him onely. In this Citie besides is the chiefe Market of commodities brought out of *Moscouia*; the *Tartars* out of the South parts, and almost farthest parts of *Tartarie*, and men of other Nations repairing thither: who, the farther that the report of these Countries reacheth, doe in so much the greater number assemble thither: whereby there ariseth great profit to the *Moscouites*. Furthermore, in diuers places there are Churches and Chappels erected, wherein the *Greeke* Religion is exercised, which among the *Russes*, and other Northerne People is most vsed, although corrupted with diuers Superstitions. But howsoeuer, no man is forced against his will to their Religion: but certaine gentle meanes are vsed by the *Russes*, by which these people are perswaded and wonne thereunto.

The Citie *Tobolsca* is situated on the Riuer *Yrtis*, which with a most forcible streame, and as it were another *Danubius*, rising from the South, taketh his course toward the *Oby*, through which it seemeth to runne with the same course. On the other side is the Riuer *Tobol*, of which the Citie taketh her name. Into this falleth the Riuer *Tassa*, which seemeth to spring from the North-east, and from certaine Mountaines there vpon the Coast. On the side of this Riuer the *Moscouites* haue of late builded a Towne, called *Pohemy*, inhabited with dwellers drawne out of *Siberia*, for no other cause, but that it is enuironed with an exceeding fertile soyle, as also with very pleasant Woods, wherein diuers sorts of wilde beasts doe breed, as Panthers, Ounces, Foxes, Sables, and Martens. Now *Pohemy* is distant from *Tobolsca*, about two weekes Iourney toward the North-east. *Yrtis* with almost the like distance from *Tobolsca*, falleth into the *Oby*. And at the mouth of it was builded a Towne, called *Olscoygorod*, but afterward razed downe by commandement of the Gouvernour of *Siberia*: The cause whereof was not then knowne: which notwithstanding I guesse to haue been either the extremity of the cold, or that the Towne stood rer vnto the Sea then they thought fit, and feared lest some inconuenience might grow thereby. for which cause about fiftie leagues aboue that razed Towne, they builded another vpon an Iland of the Riuer *Oby*, called *Zergolta*. From hence sayling vp the Riuer, they vse small sayles, either because winds blow faintly, or for the highnesse of the shoare: so that, though the *Oby* bee almost euery where very broad; notwithstanding, they drew their Boats in it with ropes, altogether after the same sort that they trauell vp the Rivers of *Moscouia*.

Two hundred leagues aboue *Zergolta*, they came to *Noxinscoy*, a Castle builded thirteene yeers agoe, at which time the Gouvernour sent certaine men thither out of *Siberia*, to seeke out Countries profitable for mankind, and fit to build Townes in. Wherefore at that time they builded this Castle, and furnished it with a certaine Garrison, in a very pleasant, wholesome, warme, and fertile soyle, and wherein were great store of Beasts and Fowles of rare kinds. The very Castle being situated toward the South-east, by little and little grew to be a Citie. The Inhabitants whereof were enioyned to proceed by degrees into further and more temperate Countries, and to trafficke truely in euery place, and courteously and kindly to entreat all people that they met withall: whereby at length they might more largely extend the Dominion, and spread abroad the *Russian* Name. Wherefore flocking thither in great numbers, and piercing into the Inland foure hundred leagues, they found goodly Countries, but not inhabited. And whereas ten yeeres past, hauing sayled two hundred leagues vp the Riuer *Oby*, they lighted vpon a Countrey very fruitfull and pleasant, which was very temperate, and free from all discommodities, and the Winters very short, and in a manner none at all. They tooke occasion thereupon to returne into *Siberia*, & to send word of these things into *Moscouia*. *Boris Godonova* was then Emperour there, who hauing receiued such good tidings, forthwith commanded the Gouvernour of *Siberia*, that with all speed hee should cause a Citie to bee builded there. The Gouvernour obeyed, and there was a Castle builded vpon his commandement, with certaine houses adioyned; so that now it

is a large Citie. The name thereof is *Tooma*, because they vnderstood, that a great multitude of *Tartars* in times past were seated there, of whom this Citie tooke that name for the pleasant-
ness of the situation thereof. And it is reported that these *Tartars* had at that time a King,
whose name was *Alim*: Whereby it came to passe, that the Citie which was first builded, held
out many assaults of sundry people that dwelt in those Champion Countreys. And now this
Citie is so mightie, that in processe of time, some reasonable great Kingdome is likely to grow
out off it.

Furthermore, betweene this Castle of *Noxinscoi*, and the Citie *Tooma*, and *Siberia*, the *Mos-*
couites daily doe discover many people dwelling in the In-land parts, some of whom call them-
selues *Ostachies*, and now are growne into one bodie with the *Tartars*, *Samoieds*, and *Russes*, li-
uing friendly together; they haue many Kings among them, almost like vnto the *Indians* (I
speake of the pettie Kings, not of the greater Kings of *India*.) And to bee brieue, the *Moscouites*
haue proceeded so farre into that mayne Land, that we haue just cause to maruell thereat. More-
ouer, there are many Castles and Townes betweene the Riuer of *Obi* and *Yrtis*, builded almost
at the same time when *Tobolsca* was, and are now proper Townes: whose Inhabitants are *Mos-*
couites, *Tartars*, and *Samoieds* of their kind, which we call, *The same Samoieds*, in respect of those
which are altogether wild.

And the first of the Townes is *Tara*: from which place it is neere ten dayes journey between
Obi and *Yrtis*. Then *Iorgoetum*, builded about fifteene yeares past. *Besobia*, and *Manganscoi-*
gorod, both of them builded about *Iorgoetum* toward the South. The Inhabitants that dwell on
the west side of the Riuer *Obi*, seeke daily to discover more and more. On this side of *Obi* are
seated the Cities *Tobolsca*, *Siberia*, *Beresia*, and certaine others, builded vpon certaine Riuer:
and more are builded daily. Beyond *Obi* are *Narim*, *Tooma*, and diuers other Cities, the Inhabi-
tants whereof instead of Horses vse Reyne Deere, or exceeding swift Dogs, which they fatten
with diuers kinds of fishts, and especially with Thornebacks; because they thinke they be made
the stronger with that kinde of food. *Iorgoetum*, whereof I spake before, is builded in an Iland
of the Riuer *Obi*.

Also about *Narim* as men trauaile toward the East, they meete with the Riuer *Telta*: on the
banke whereof they haue builded a Castle, named *Comgof-scoi*. The garrison Souldiers of which
Castle, together with the Inhabitants of *Narim*, about seuen yeeres past, were commanded by
the Gouvernour of *Siberia* to trauell East, and diligently to search what vnknowne Nations
dwelt in those parts. Therefore traueiling through certaine vast Deserts, for the space of tenne
weekes or thereabouts, passing in the way through many faire Countreys, many Woods, and
Riuers, at length they espied certaine Cottages set vp in the fields, and certaine Hords or
Companies of people. But because they had *Samoieds* and *Tartars* for their guides, which were
acquainted with those places, they were not afraid. The people came vnto them reuerently,
and with humble behauiour, and signified by the *Samoieds* and *Tartars*, that they were called
Tingoesi, and that their dwelling was vpon the banke of the great Riuer *Ienisee*, which they said
did spring from the South South-east, but that they knew not the head thereof. These people
were deformed with swellings vnder their throats, and in their speech they thratled like
Turkie-cocks. Their language seemed not much to differ from the *Samoieds*, which also vnder-
stood many of their words.

Ienisee being a Riuer farre bigger then *Obi*, hath high mountaines on the East, among which
are some that cast out fire and brimstone. The Countrey is plaine to the West, and exceeding
fertile, stored with plants, flowers, and trees of diuers kinds. Also many strange fruits do grow
therein, and there is great abundance of rare Fowles. *Ienisee* in the spring ouerfloweth the
fields about seuentie leagues, in like manner as they report vnto vs, as *Nilus* doth *Egypt*. Where-
with the *Tingoesi* being well acquainted, doe keepe beyond the Riuer, and in the mountaines,
vntill it decrease, and then returne, and bring downe their herds of Cattell into the plaines.

The *Tingoesi* being a very gentle people, by the perswasion of the *Samoieds*, without delay
submitted themselves to the same Gouvernours which they obeyed, whom they reuerenced as a
kind of Gods. But what God they worship, or with what rites, it is vncertaine, neither as yet
can bee knowne, the *Moscouites* being negligent searchers into such things.

Neither hereafter will I maruell, though the Streight of *Waygats* bee stopped vp to the
North-east, with such huge Mountaines of Ice, since the Riuer *Obi* and *Ienisee*, and very many
more, whose names are not yet knowne, powre out so huge a quantitie thereof, that in a man-
ner it is incredible. For it cometh to passe in the beginning of the spring, that in places neere
vnto the Sea, the Ice through the excessive thicknesse and multitude thereof, doth carrie downe
whole woods before it. And without doubt this is the cause, that about the shoares of
the Streight of *Waygats*, so great abundance of floating wood is euery where seene. And where-
as in that Streight neere vnto *Nova Zembla*, it is extreame cold, it is no maruell, if in regard of
the narrownesse of the Streight, so huge heapes of Ice are gathered and frozen together, that in
the end they grow to sixtie, or at least to fiftie fathoms thicknesse, as this present yeere (1612)
they measured the same, which at the cost of *Isaac Lamer* went thither in a small Barke, in
whose

whose

whose companie the said *Isaac Lamer* would haue sent mee, but I would not. For I am readie to proue, that this is no passible way, and that they will still lose their labour, whosoeuer shall attempt the same, vnlesse they take another course in the businesse. But let vs returne to our purpose.

The first voyage Eastward beyond the Riuer *Lenisce*. Many Nations dwell toward the South, which are in warre one with another. Such are the *Zagatay Tartars*, as before in *Goes* is scene. The second voyage East beyond the Riuer *Lenisce*. Certaine people taken. The Riuer *Pisida*. Bells.

The description of the people dwelling vpon the Riuer *Pisida*. Such are the people of the East both *Tartars* and *Chinois*. The third voyage beyond *Lenisce* Eastward.

The rowling of brazen Bells of which they haue in *China*, and perhaps in the North parts about it. Horses in *Pisida*. Vessels sayling downe *Pisida* with square sayles. They came not home till Autumne. The pleasantnesse of this Countrey in Aprill and May.

Furthermore, those whom I mentioned before, vnderooke a long Iourney beyond the Riuer *Lenisce* Eastward, and were somewhat afraid to turne to the South, taking with them certaine *Tingoesies*, by whom they were informed, that many Nations dwelt toward the South, which differed much from them, whose Kings were most commonly in warre one with another. But hauing trauelled certaine dayes to no great purpose, at length they returned home; Yet before their returne they gaue order to the *Tingoesies*, to search those Countreys more thorowly; who promise that they would doe so: And they renewed the league which formerly they had made with the *Moscouites*. The *Moscouites* at their departure, left diuers of their people in those parts, and also certaine *Samoieds* and *Tartars* their confederates, after they had bestowed some small gifts among the *Tingoesies*.

The yeere following, the *Tingoesies* sent diuers of their owne people Eastward: who traouelling somewhat farther then they had done before, at length found another mightie Riuer, somewhat lesser then *Lenisce*, but as swift as it: And following the course thereof some few dayes, they lighted vpon certaine people whom they tooke, being swifter a foot then they: But they could not vnderstand their language, sauing that by certaine signes and words of the *Saluages*, which often repeated *om om*, they coniectured that on the other side of the Riuer, they heard it often thunder. They added also, that they had often heard the noyse of men in those parts: And pointing to the Riuer with their fingers, they often repeated the word *Pisida*: whereby the *Tingoesies* gathered, that that should bee the name of the Riuer; but by the voyces *om om*, the *Moscouites* did afterward gather, that they were knollings of Bells. The *Tingoesies* at their returne from thence, carried with them diuers of the people of that Countrey, which died all by the way, either for feare, or through change of ayre. The *Tingoesies* were verie sorrie for their deaths. For at their returne they affirmed, that they were men of good vnderstanding, well set, with small eyes, flat faced, browne colour, and enclining to tawnie.

When the *Moscouites* vnderstood these things by the *Samoieds*, which returned into *Siberia* out of the Countrey of the *Tingoesies*, estoone they were stirred vp with a great desire to search out the farther parts of that Countrey, wherefore they became sutors to the *Gouernour*, that they might bee sent thither with some others ioyned with them. Hee presently yeelded to their request, granting vnto them a certaine companie of Souldiers, and enioyned them curiously to search out all things, and to take with them *Tingoesies*, *Samoieds*, and *Tartars*. So beeing about seuen hundred men, they passed the Riuer *Obi*, and came to the Riuer *Lenisce*, through the countreys of the *Samoieds* and *Tingoesies*. And passing the Riuer, they marched forth Eastward, hauing the *Tingoesies* for their guides: which did not onely serue them as guides, but also plentifully provided all the company with victuals, taking with wonderfull dexteritie, Fowles, Goats, Reyne Deere, and such like wilde beasts: as also no small quantitie of fish out of the Riuer which they met in the way. Hauing traouailed as farre as the Riuer *Pisida*, they pitched their Tents on the banks thereof, with purpose to stay there till it were passable, the Ice being shortly to breake vp, because the spring was at hand, at which time they came thither; yet they durst not passe ouer the Riuer *Pisida*; hauing now plainly heard the sound, whereof they were aduertised before: which they certainly iudged to bee nothing else but the towling of Brazen Bells; and when the wind blew from the farther side of *Pisida*, they sometimes heard the noyse of men and horses. Moreouer they saw certayne sayles, though but a few; whereby they coniectured that they were vessels, which sayled downe the streame. They sayd further, that the sayles were square, like the Indian sayles, as wee suppose. But seeing no people at all on that side of the Riuer where they remained, after they had staied there a certaine space, and had perceived that in the spring time the Riuer did greatly swell (which neuer thelesse they can hardly affirme for a certaintie, since the shoare is high on both sides:) At length by very great iourneys, and yet not before Autumne they returned home to *Siberia*; reporting, and that vpon their oathes, That in the moneths of Aprill and May, they were very much delighted with the exceeding faire shew of that Countrey; And that they had scene therein many rare Plants, Flowers, Fruits, Trees, Fowles, and wild Beasts. But the *Moscouites* are nothing curious in such things, as men that seeke after nothing but gaine, in all things else very negligent and rude.

These newes being brought to the Court of *Moscouia*, the Emperour *Boris*, and the Noblemen that were with him, much wondering thereat, and inflamed with a great desire to search out exactly all particulars, resolved the yeere next ensuing, to send Ambassadors thither, which should carrie presents with them, and should take *Tartars*, *Samoieds*, and *Tingoesies* in their companie. And they were enioyned to search out the further side of the Riuer *Pisida*, and to make a league of friendship with the Kings if they found any, and set downe in writing all things that they could obserue by the way, and should make report of them most exactly. But these things did not take effect, because of the breaking out of the ciuill warres, among the *Moscouites* in the meane season.

I am

I am of opinion, that in this countrey is the beginning, and the bounds of the Kingdome of Cataia, which bordereth vpon China. Yet I feare the Mosconites will lose their labour, if they euer returne thither. But time will declare the euent hereof.

Yet for all this, by the commandement of the Gouvernours, euen in the time of this warre, there was a voyage made into those parts, many Inhabitants of Siberia being employed in the same, who passing ouer the Riuer *Leniscé*, travelled further on foot, diuers of whom died by the way, being not accustomed to hardnesse. These also found many things agreeable to the relation of the former. And they likewise did oftentimes heare the towlings of brazen Bells. But vpon the dissuasions of the *Tingoesies* they durst not passe the Riuer: But they stayed awhile in the Mountaines, out of which they saw oftentimes flames of fire ascend; & they brought thence some small quantitie of brimstone, and of touch-stone: so that some rich Mines seeme to bee in those hills. Moreover, the Gouvernour of Siberia caused certaine covered Boats to bee made, and commanded them to saile downe by the shoare of the Riuer *Obi*, in the first beginning of the spring, and to coast the same continually till they came to the Riuer of *Leniscé*; wherein they should afterward saile certaine dayes, discharging it selfe (as hee thought) into the sea. He sent others likewise to trauell ouer Land: giuing commandement to both of them before they went: To the Land-men, that they should stay by the Riuer side vntill the Boates arrived; and that if they did not arrive there, then after one yeere they should returne. To them that were in the Boates, ouer whom he made one *Lucas* Captayne, he gaue in charge, diligently to discover the Coast, and whatsoeuer thereon was worthy to bee obserued. They did as they were enjoyned. And the Mariners arriving at the mouth of the Riuer *Leniscé*, met with certayne of them which travelled ouer Land, which were sent before in Boats and Skiffes downe the Riuer.

In their journey, they found all things in a manner to fall out as the Gouvernour had fore-told. But *Lucas* being dead by the way, and some others, they thought it the best course, for both of the Companies to returne the same way that they came: And when they came home into Siberia, they declared vnto the Gouvernour the whole successe of their journey: which caused the same to be sent vnto the Emperour: And this Relation is layed vp among the Treasures of *Moscouia* vntill these Warres bee ended; and then, as it is thought, it shall bee examined. But wee feare that by this time it is perished, which if it be so, truly it is much to be lamented, in regard that they haue found so many rare and sundry Ilands, Riuers, Fowles, and wild beasts, and that farre beyond the Riuer *Leniscé*.

Moreover, the Riuer *Taes* falleth into the Riuer of *Obi*, springing as it seemeth, out of places neere vnto the Riuer *Leniscé*, and out of a great Wood in those parts: out of which Wood another Riuer seemeth also to haue his Fountayne not farre from the Riuer *Taes*, and falleth into the Riuer of *Leniscé*. So that euen from *Obi* they trauell by water along the Coast of the *Samoieds*, and passing only two leagues ouer Lands, they meet with the Riuer *Torgalse*, downe which with the streame they fall into the Riuer *Leniscé*. And this is a very easie way, and lately found out by the *Samoieds*, and the *Tingoesies*.

Doubtlesse (it is to be lamented) that the *Hollanders* haue not had good successe in passing the Strait of *Way-gats*; but surely they know not the right way to attempt the same. For if they attempt it by shippes, though it were an hundred times, it would hardly once take effect. But if they would thoroughly discover these Countreyes, then they should stay two or three yeares about *Petsora* and *Way-gats*, where they should not want good Hauens, nor Victuals: and from thence they should send out some with small Boates to discover the further parts, by the very example of the *Russes*, whose Friendship if they would procure vnto themselves, they should easily find Guides and Pilots: and so at length all these Coasts would thoroughly bee discovered.

Doubtlesse goodly Countreyes would bee found out, and not only Ilands, but the Mayne Land also. Yet there is iust cause to doubt, whether *America* aboue *China* joyne not with some of the three parts of the old World: As wee see *Africa* joyned vnto *Asia*, with a narrow necke of Land vpon the Redde Sea. And doubtlesse, this seemeth likely to bee true. For who can affirme, that they bee separated? Saying that they haue found some things in the Writings of prophane Authors, whereby it may be prooued, and bring many Arguments from thence. And though these parts bee not joyned together, yet they must needs bee diuided with some small Strait.

From Mezen to Pechora, is a thousand Versis: and the same is travelled with Reyne Deere. From Pechora to Montnaia Recca, or The troubled Riuer, and to the parts of Mongosey, it is travelled in Boats called Coaches in seuen Weekes. At this place is a certayne Ouer-hall, where the foresaid Boats or Vessels are drawne ouer by men. Out off Montnaia Recca, or The troubled Riuer, passing this Ouer-hall, they enter into Zelena Recca, or the Greene Riuer. From Zelena Recca, or the Greene Riuer to Obi, is three Weekes rowing, running downe with the Current; but with a faire wind it is no more but three dayes and three nights Iourney. From Obi to Tas Castle, is a Weekes rowing. From Tas Castle to the Riuer Yenisey vpon long Wooden Pattens through the Snow, is three Weekes trauaile. But through the deepe Channell in the afore-said Vessels, called Coaches, is foure Weekes trauaile. It bringeth them to a place, called Tooron-hansko Zeemonia, that is, The Wintering place of one called Tooronhan. Hauing trauelled to this Tooron-hansko Zeemonia, they come out on the backe tide to a place called, The Riuer of Tingoose, being a stonie or Rocky Riuer, which falleth into the Riuer Yenisey. In that place liue the Tingoses, and people of the afore-said Land of Tingoose. Beyond them liue a people called The Boulashies: And beyond the Boulashies inhabit the people of Seelabee. These people report concerning Yenisey the Great, and Yenisey the Lesser: That beyond this fore-said Yenisey inhabit the people Imbaki, and the Ostaki, which are a kind of Tartars. Also beyond the Tingoses is a Riuer called Geta, which was traualled by the Russes of Vashen, and Russes of Pechora. These men by report liued in the parts of Geta, sixe yeeres. After which one of the Russes of Vashen, named Wolfe, returned into Siberia; and he reported, that he was traualing from Tingoose to Geta a Summer. Likewise, this said Wolfe reported, that a Samied told him, that in Yenisey the greater were Vessels of a great burthen, seene to be drawne with the Rope, by a very great number of people: but hee could not tell what people they were, neither whither they did intend to trauaile with the said Vessels.

CHAP. VIII.

A Voyage made to Pechora 1611. Written by WILLIAM GOVARDON of Hull, appointed chiefe Pilot, for Disconerie to Ob, &c.

He eleuenth of Aprill we weighed Anchor at Blacke-wall in the Riuer of Thames, in a ship called the *Amitie*; whereof James Vadun was Master, and sayling along the Coasts of England, Scotland, Norway, and Finmarke, on the eleuenth of the next moneth of May, wee found our selues in the latitude of 71. degrees 40. minutes.

The twelfth, wee ranne fortie eight leagues North North-east, the wind being at South South-east, and found our selues in the latitude of 73. degrees 42. minutes, and at night wee had shoaldings of *Cherie* Iland: for wee were enioyned by our Commission to touch there, although it were three degrees to the North out of our way.

Cherie Iland. The thirteenth, being Whit-sunday it cleered vp, and then we did see *Cherie* Iland six leagues East South-east from vs.

The fourteenth, being faire weather, we stood to the Northwards, thinking to haue gone on shoare, but we could not for Ice, and labouring to Land on the South side of the Iland, wee met with *Jonas Poole* about Eeuening in the *Elizabeth*, who came as then to the Iland, and was set forth by the Right Worshipfull Company of our Russian Merchants, to discover further Northward, from eightie degrees toward the North Pole. Then we stood to the Eastward, where wee found great store of Ice.

The fifteenth, we spent on the South-side of the Iland, in hope of the arriual of the *Marie Margaret*, which being a ship of nine score Tunnes, was set forth very chargeably by the afore-said Russian Company, and had in her sixe *Basket*, being excellent Whale-killers of Saint *Iohn de Luz*, for the killing of the Whale on the Coast of Greenland, in a Road called *Crosse* Road, standing

Six Biscainers.
Crosse Road.

standing exceeding farre to the North, euen in the latitude of 79. degrees and better. The same day at night, seeing that there we could doe no good, we determined to proceed on our Voyage for the Riuer of *Pechora*: and Letters being giuen one to the other for Testimoniall of our meeting in that place, we left *Jonas Pooley*, and directed our course to the Eastward.

The two and twentieth of May, we came to a small Island, called *Bigs Hole* by *Tapani Harbour*.

The three and twentieth, we arrived at the Ile of *Kildin* in *Lappia*.
The foure and twentieth, *Iofias Logan*, which was appointed Factor for *Pechora*, and my selfe with two more, went to *Olena*, and stayed there all the five and twentieth, being Saturday, where wee found a ship of *Tarmouth*, whereof *James Wright* of *Hull* was Master, of whom we learned the proceeding of the *Hollanders*.

The seuenth of Iune, in the morning we had sight of the Coast of *Lappia*, a little short of *Cape Comfort*, and met with a ship of *Amsterdam*, by which we sent Letters to Master *Iohn Mericke* our *Englisb* Agent, then Resident in *Colmogro*; and we had two Hogheads of Beere of them.

The eight, we plyed to *Cape Comfort*, the wind at South-east.
The ninth being Sunday, in the morning wee put off from the Coast of *Lappia*, to crosse ouer the *White Sea*, to the Cape of *Callinos* corruptly, and commonly called *Candinos*. At noone we passed through some Ice, the weather being thicke and foggie.

The eleuenth, we plyed to the Cape of *Callinos*, passing through much Ice, the wind at North North-east. And therefore wee thought it better to goe to the Southward againe: and in the Euening we came to an Anchor in ten fathomes. This night wee had a fore storme; the winde at North-east.

The twelfth, in the morning we weighed, and in weighing brake our Anchor: and then wee stood to the Southward, and came to an Anchor: and at night wee went on shoare for Wood, and Water, where was good store of Drift Wood: And within a ledge of Rockes on the West-side of *Callinos* there lay ten Lodias or *Russe* small shippes, some fourteene or fifteene Tunnes the biggest (of a Towne called *Pinega*) all which were bound for *Noua Zembla*, to kill the Morffe: with the men of which Fleete wee had some conference, and did see their Prouisions: which were Launces of their fashion, and Harping Irons; their Victuals were Salt-fish, Butter, Bacon, Meale, their Drinke Quasse.

The sixteenth, in the morning wee weighed and stood our course for the Ile of *Colgoiene*, the wind being at South South-west, and did find the Ice that was close to the shoare to bee open: but at night finding that we could not sayle our course for the Ice, we thought it better to stay, and so came to an Anchor.

The seuteenth, wee weighed in the morning, and stood along the shoare, which did lye South-east by East, and North-west by West. And in the after-noon, wee went on shoare with our shallop, and came to a Riuer, which we called *Hakluyts Riuer*, where wee did see certayne *Samoieds*, with their Deere: but when they perceiued vs, they fled into the Land, carrying with them such things as in haste they could get together: but left most of their necessities, as Bowes, Arrowes, long Speares, wanting Iron heads burnt at the end, Harping Irons, Wimbles, and Morffe-skinnes, lying hid, some in one place, some in another: which wee caused our men to vncover, and would not suffer them to take any thing away: only I tooke the Pizzell of a Morffe which they had lately killed; and *Iofias Logan* left a Knife, that they might not shunne vs hereafter. The same Euening we anchored and stayed all night.

The eighteenth, wee weighed, and at noone wee came to an Harbour; which, as wee thinke, was the very same where Master *Stephen Burrow* was in his Discouerie of *Vaigatz*, and *Noua Zembla*, 1556. where there is twelue, or thirteene foot at high water vpon the Barre, and within six or seuen fathomes. Also in this place were three Lodias of *Pinega*, which when they saw vs come in, rowed out, and at night returned, and some of their men came aboard of vs, and told vs that they could not passe for Ice; and said, that they were bound for *Sharskai Gooba*, or *Sbar Bay* to fish for certayne fishes; which they call *Omilie*, which are somewhat like a Shad, and for Morffes.

The twentieth, *Iofias Logan* and my selfe went ouer to the Mayne, which was distant two leagues, and came to a great Riuer in 67. degrees and 40. minutes, where there had bene people: and there we saw foure or five great white fishes swimming, which are foure or five yards long, and called by the *Russes* *Belluga*, whereof they make Oyle, whereof afterward we found at *Pechora*, great store to be spoyled.

The one and twentieth, we sent our men for Wood, for there was good store of Flote-wood as we had found all the Coast along; but none growing.

The two and twentieth, in the morning we came ouer the Barre, the winde at South South-east, directing our course for the Ile of *Colgoiene*; and at noone wee passed through much Ice, which lay so thicke that wee could not sayle, but tooke in our sayles, and made fast our ship to a piece of Ice.

The three and twentieth, in the morning wee set sayle, and plyed to the Wind-ward, the wind at South-east, with raine: and at night wee mored to a Cake of Ice.

The foure and twentieth, in the morning we set sayle, and pyled to wind-ward, the wind at South-west to get cleere of the Ice; and at noone we obserued and found our selues to bee in 67. degrees 12. minutes, and in the after-noone we had sight of the Land againe, being foure leagues to the Southwards of the aforesaid Harbour; and finding the Tyde to set very fore vpon the shoare to the Westward, we stood to the Eastward, bearing through the Ice, and at twelue at night wee mored to a piece of Ice.

The five and twentieth, we loofed and sayled to the Eastward, till we found the Ice so thick, that we could not passe further: then we made fast to a piece of Ice: the wind at North North-east, thicke fogge, and some raine. The six and twentieth, we set our fore top-sayle, the wind at North North-east, blowing hard and thicke fogge: we stood sometimes one way, sometimes another, as we could find the Ice open; and at noone we had sight of the shoare, being foure or five leagues off, and the Ice lying so thicke, that we could make no meanes to get farther from the shoare: wherefore wee made fast to a great Cake of Ice. The seuen and twentieth, wee lay still, the Ice lying very close, with thicke foggie weather: the wind at North North-west.

The eight and twentieth, in the morning it was cleere, and the Land did beare North by West seuen leagues off, and then we set sayle, passing to the Eastward till noone: then we made fast to a piece of Ice, it being very foggie: the wind at West North-west. And the same day at eight in the after-noone wee loofed from the Ice, it being cleere, the wind at North-west. And at mid-night we got cleere of the Ice, keeping our course East North-east.

Cape Smetinos.

The nine and twentieth, at eight in the morning, we had sight of Cape Smetinos, the winde at North North-west, with thicke foggie weather: At noone, finding the Ice to lye close to the shoare, we cast about to the Westward. And at eight in the Eueening, wee came to an Anchor in tenne fathomes; and then I went on shoare, where there were two *Russian* Crosses: the Land was smooth, and full of fresh Ponds, being a kind of white Chalke Clisses. At our comming aboard, we weighed and stood neerer to the shoare because of the Ice.

William Gour-
dangoeth on
shoare.
Two Russe
Crosses.

The thirtieth, in the morning the Ice came so extremely vpon vs, that we could not weigh; for our men being cast from the Capstan, our Cable brake, and so wee lost an Anchor. Then seeing wee could not passe to the Eastward, wee stood to the Westward of Cape Smetinos, into the afore-said deepe Bay in seuen fathomes: the wind at East North-east, cleere weather.

A deepe Bay
Westward of
Cape Smetinos
They goe on
Land againe.
An house of
Wood.

The first of Iuly, we went on shoare to see if there were any thing to take notice of: but wee found nothing worth the going. For only we saw a wild Deere, and an House of Wood after the *Russe* fashion, where people had beene. The second, likewise we rode still, and going againe on shoare we did see the Ice all gone to the Eastward; and so came aboard. The third, at sixe in the morning we weighed, the wind at East North-east, and plyed through some Ice: and at foure in the after-noone we got cleere of it: and at eight of the clocke wee came to an Anchor, it being calme and cleere weather: then I went on shoare, where we were first; and came aboard because of the great abundance of Muskitos or Gnats. At our comming hauing the winde at South-west, we set sayle and stood along the shoare.

They goe on
Land the sixth
time.
Abundance of
Muskitos.

The fourth, we sayled along the shoare with faire weather, hauing the winde variable. The fifth, wee plyed to the Eastward, wind at North-east by East faire weather. The sixth, wee plyed along the shoare, the wind at North by East. And in the after-noone wee passed through much Ice. The seuenth, we plyed through the Ice to the Eastward, the winde at East North-east, thicke and foggie. The eight, with cleere weather, the winde at North North-east, we plyed to the Eastward; and at noone obserued the Sunne hauing 69. degrees 40. minutes: At Eueening we had sight of the Land to the Eastward of the Riuer of *Pechora*; and thinking to get into the shoare we could not for the shoald water.

Crosses found
and certayne

The Dry Sea.
Dolgoi is seuen
leagues vp
from the Barre

The ninth, in the morning we stood backe to find the Barre or entrance of the Riuer of *Pechora*. And in the after-noone, seeing the Sand ouer the Ice, which was not broken off from the shoare, I went thither with my shallop, and going on shoare, we espyed three Crosses, and certayne *Russes* walking vpon the Sand; who told vs, that that was the place that we desired: and one of them came aboard our ship to bring vs ouer the Barre. But comming to shoald water, wee durst not trust his skill, but stood backe againe, and came to an Anchor in foure fathomes.

The tenth, in the morning I went to sound the Barre; where we had eleuen and tenne, and in one place but nine foot water. And comming aboard wee set sayle to come in. And in going ouer the Barre we were on ground; but, God be thanked, wee got well ouer, and came to an Anchor in six fathomes.

The eleuenth, the Ice brake off from the shoare, and came so fast vpon vs, that we could not shift from it, but were put on ground vpon a Sand; yet God be thanked without any harme. The same day leauing our ship lying so, *Iosias Logan* our Factor, my selfe, *William Purse* lone, being rowed in our Skiffe by six of our Mariners, tooke our way toward the Towne ouer a shoald Sea, which the *Russes* call, *The Dry Sea*: which may very wel be so called. For on the starboord or West side going vp is a low dry Sand, and on the Larboord or East side is all shoald water, as two, three, or foure foote water. And seuen leagues within to the South-west is an Island, called *Dolgoi*, that is to say, *The long Island*, which you must keep on the Larboord or East side, & then steer away South South-west,

west, neere vpon twentie leagues, all in shoald water; and then you shall come to the sight of a high Land called *The Boluan*; which in the *Russe* Tongue signifieth, a *Blocke*: which you must leaue on the Larboord, or East side. And be sure to keepe the channell, which doth trend South-west, and South-west by West. By report of the Inhabitants the Riuer hath two and seuentie mouths.

The twelfth, we passed ouer the *Drie Sea*, (which the *Russes* call in their Language, *Sucho Morie*,) to the mouth of the Riuer *Pechora*: where we found many small Islands, some a mile, some two miles in length, and so shoald water, that wee could not get to the shoare with our Shallop, but lay in her all night at an anchor, being vncertaine which way to take: and seeing so many entrances before vs; we could hit right at none. The thirteenth, in the morning wee got to an Island, at the very mouth of the Riuer, where wee stayed all the day, hauing much wind and fogge. The fourteenth, being Sunday, we set sayle from the Island, the Sea going very high: and at noone we came by Gods direction, into one of the chiefe entrances of the Riuer *Pechora*; and came to an house, where there were two and their families, who made vs the best entertaynement that they could, and gaue vs directions how to goe to the Towne.

The fifteenth, we came to a Sari or Ferme house of one of the principall men of the Towne; who bid vs kindly welcome: and as the place and season afforded, hee made vs good cheere. He lay there at this time, to take Duckes, Swannes, Geese, and other Fowles: for then was the time of the yeere. Their feathers they sell, and their bodies they salt for winter prouision. He also gaue vs a man to bring vs to the Towne.

The sixteenth, we came to the Towne of *Pustozera*, which standeth vpon a Lake. There was no Gentleman or Gouverneur in the Towne at our arriual: for he had destroyed the Castle, and fled away the last Winter. For certaine dayes wee could haue no answer, whether wee might stay or no, all the chiefe men being abroad for their Winters prouision. But the chiefe Customer *Marphe*, sending men to know their mindes, the three and twentieth day of the same moneth of Iuly, we were embraced of them, and desired to stay, and they appointed vs an house to dwell in. Furthermore, they told vs that the Riuer *Pechora* was more conuenient for vs, then the Riuer of *Dvina*: and that a great part of the goods, which come to *Colmogro* vpon *Dvina*, doe passe in one place or other by the Riuer *Pechora*, which, they say, runneth through *Siberia*; and how much farther they themselves know not. The five and twentieth, in the morning, hauing one of their Boats full with feathers, wee departed from the Towne, taking our leaues of *Iofias Logan*, who stayed behind.

The fixe and twentieth, we came downe to the *Boluan*, where wee went aboard of two Coches of some fiftene tunnes a peece, bound for *Mouguzza*. Here I went on shoare, and bought an aire of Slight-falcons, being very young. The seven and twentieth, in the Euening wee came aboard our ship, and the same night tooke in the Feathers, and laded their Boat againe with Meale, sending her vp to the Towne by the *Russes* that brought her downe.

The eight and twentieth, we got out our goods, which were appointed to be left at *Pechora*, vnder the charge of Master *Logan*, and made ready our ship. The nine and twentieth, wee weighed anchor, and fell lower downe, the wind North North-east. The thirtieth, wee rode still, and in the after-noon two Lodias that were fishing for *Omulais*, went out to Sea, the wind at North-west by West. The one and thirtieth, the wind being at West North-west, there came in foure and twentie sayles of Lodias or Coches, all bound for *Mugunzea*: but the yeere being farre spent they gaue ouer their Voyage, and went to the Towne of *Pustozera*, to winter. Out of one of the which Lodias we hired a man belonging to the Towne, to stay with *William Pursglone* and *Marmaduke Wilson*, by our goods, till the Lodia came, which we had hired. Which two were to winter with Master *Logan* in the Countrey. The foresaid foure and twentie Lodias were of *Colmogro*, *Pinega*, *Mezen*, and *Pustozera*.

The first of August, the wind at West, we weighed, and, God bee thanked, came safely ouer the Barre of *Pechora*. From thence wee directed our course for *Nova Zembla*: and at noone we came to Ice: where hauing sayled many points of our Compasse, at mid-night wee tooke in our sayles, and made fast to a peece of Ice; the weather being very thicke and foggie. The second being very cleere, and seeing no way to passe to the Northward for Ice, we determined to return; and because the yeere was so farre spent to go for *Cherie* Island, to see if it pleased God to giue vs there any good successe, for the bearing of the charges of this Voyage. So wee loosed, and at eight in the Euening wee got cleere off the Ice, keeping our course by the edge of it, which did lie East by North, and East North-east. The third, at noone we had sight of *Colgoiene* Island, and tooke the latitude, being on the North side of the Island which was 69. degrees 20. minutes: and at night I went on shoare to see the Land, which was high clay ground: and I came where there was an aire of Slight-falcons: but they did flie all away saue one, which I tooke vp, and brought aboard. This Ile of *Colgoiene* is but thirtie leagues from the Barre of *Pechora*.

The fourth, we passed through some Ice, and at noone wee got cleere off it, and stood to the Northward, *Colgoiene* bearing South-west fixe leagues, the wind at East North-east. The fift, we had faire weather, the wind at East South-east, wee sayled two and thirtie leagues North

The *Boluan*, or East head land of the Riuer *Pechora*. The channell trendeth South-west.

An Island neere the mouth of the Riuer. They find one of the chiefe entrances of the Riuer.

They come to a Ferme house of a principall man of the Towne.

The Towne is called *Pustozera*.

Pechora runneth through *Siberia*, and farther.

Two Coches or Lodias, bound for *Mouguzza*. He buyeth two Falcons.

The stocke of goods left in *Pustozera*.

24. Lodias bound for *Mugunzea*, which is to the Eastward of *Ob*.

They safely passe the Barre of *Pechora*.

Colgoiene Island 69. degrees, 20. minutes.

72. degrees 34
minutes.
74. degrees 30.
minutes.

North-west, we obserued, and found our selues in 70. degrees and 40. minutes. The sixt, the wind being at South South-west, we steered North North-west fortie leagues, and were in 72. degrees 34. minutes. The seuenth, the wind was variable, the weather faire : we steered North by West, eight and thirtie leagues, and at noone had the latitude of 74. degrees 30. minutes. And at eight in the Eeuening we founded, and had eightie fathomes Greene Oze. The eight, the wind at West, we sayled North twenty leagues : in the morning we founded, and had seuentie fathoms Oze : and at three in the afternoone, the wind comming North, wee cast about to the Westward.

The ninth, faire weather, we sayled thirteene leagues West, the wind at North. At noone we founded, and had an hundred and twentie fathomes, Greene slime. The tenth, the wind variable, with fogge and raine : wee steered West North-west fise and twentie leagues : and at noone we obserued, and had the latitude of 74. degrees 57. minutes. The eleuenth, was thicke foggie weather ; wee sayled foure and twentie leagues West : and at eight in the Eeuening wee founded, and had ninety fathomes, soft Oze. The thirteenth, at noone wee had sight of *Cherie* Island, being within a mile of it, before we did see it : and the same Eeuening wee got into the *Cone*, and mored our ship. Here we stayed twelue dayes, taking what it pleased God to send, which was but little.

The sixe and twentieth of August, we left the Island, because the time of the yeere was farre spent, and returned for *England*, where (blessed be God) we safely arriued in *Saint Catharines* Poole, in the Riuer of *Thames*, on Saturday being *Saint Matthews* day, and the one and twentieth of September, 1611.

There were in the Hauen of the Riuer *Pechora*, at our being there, about thirtie Lodias, or small *Russe* ships, hauing ten, twelue, fourteene, and sixteene men in each of them : which purposed to haue gone, some to *Noua Zembla*, some to *Tasse gorodoc*, and some to other places in *Mougumsey*, to the East of the Riuer *Ob*. These Lodias for the most part, were of *Usting*, *Colmogro*, *Pinega*, *Mezen*, and *Pechora*.

Also, we that went vp to the Towne, found about fiftie Cayucks, or Boats of foure, fise, six, and seuen tunnes a piece, fishing in the Riuer of *Pechora* for Salmon, and other kinds of fish ; most of which Cayucks come from the great Towne of *Usting*, and the Townes thereunto adjoining, by the Riuer *Iug*, through the Land into the Riuer *Pechora*, and at the *Boluan*, at the River mouth they tooke most part of their Salmon.

CHAP. IX.

A Letter of *RICHARD FINCH* to the Right Worshipfull Sir *THOMAS SMITH*, *Gouernour* ; and to the rest of the Worshipfull Companie of English Merchants, trading into *Russia* ; touching the former Voyage, and other obseruations.

R

ight Worshipfull, my dutie remembred vnto you, with prayer to God for the preservation of your healths and prosperous successe in all your worthie affaires. My last Letters vnto you were from *Typani* in *Lapland*, by *Thomas Hare-castle* of *Hull*, dated the foure and twentieth of May, 1611. The other, the nine and twentieth of May from *Kyldin* neere *Camen*, by a ship of *Hamburg* : which foresaid Letters were directed to our *Gouernour*, the right Worshipfull Sir *Thomas*

They arriue in the Port of *Pechora* the ninth of Iuly.

Two Crosses standing on the sand. *Pinega*.

Ship endanged by Ice.

Smith, Knight. May it now please you further to vnderstand, That the ninth day of Iuly, wee came to the mouth of the Riuer of *Pechora*, which the *Russes* call *Pechorskoï Zauorot* with our ship. And being entred into the aforesaid Harbour, it was full of Ice, and hard to finde : for we found no mayne Land, saue a small Sound behind the Ice. And labouring to and fro along the same, we sent *William Gourdon* in our Shallop manned to the shoare : who, as soone as they were landed, espied two Crosses standing on the sand : and presently our men espied three men comming toward them. These men belonged to three Boats of *Pinega*, which Boats had beene in our companie not long before, at a place called by them, *Promoya*, by vs, *Obscure*, but by other Writers, *Morshowitz*. One of these *Russes* came on boord of our ship, and told vs, that wee could goe no farther with our ship, then the place, that their Vessels, called *Coaches*, rid in ; and that to the Towne we must goe in small Vessels ; giuing vs directions to sayle by, for the better finding of the Towne. After our getting ouer the Barre of the *Pechorskoï Zauorot*, and that we were come to an anchor, we rode in great danger by the abundance of Ice, and the strong tide both of the ebbe and floud, which droue the same so forcibly against our ship. For, the eleuenth of Iuly, lying in foure fathomes water, a piece of an Island of Ice, set with such a power against our ship, that it droue vs out of our riding into eight foot and an halfe, and nine foot water.

The

The eleventh of Iuly, Master *Iosias Logan*, *William Gourdon*, and *William Pursgloue*, with our Shallop went vp to the Towne of *Pechora*, taking directions of the *Russes* for the finding of the same. Neuerthelesse, two dayes after their departure from our ship, they had mistaken their way, if by chance they had not met with a small *Russe* Boat, in which were *Russes* that directed them. Being about thirty Versts from the Towne, they came to the house of one *Vasili Deadoole*, who that this present is one of the chiefeft Customers: by which Customers the Towne of *Pechora* is now gouerned, since there was no Gentleman sent from the *Mosco*. This man gaue them good entertaynement, and sent vp with them a man of his owne, fearing that the people would bee amazed at our mens sudden and vnexpected comming. Yet as soone as they espied our people, they were all exceedingly afraid. Diuers of them with their women fled into the Woods, vntill that one of the chiefeft Customers had sent for them other Customers, who at that time were all out of Towne. But being met together, Master *Logan* shewed them the Priviledges, of severall of their Emperours granted to your Worships. After the perusing of which, with the good report giuen of Master *Mericke*, your Agent, and our Nation by one of *Colmogro*, with whom Master *Logan* was acquainted; the Townes-men were well satisfied: and appointed our people an House. And many of them sent Bread, Pies, Ducks, Fish, and such like vnto them, entertayning them very well, according to the fashion of the Countrey, with continuall admiration how they found the Towne.

Touching the Inhabitants, there is no doubt, but that they will be glad of our trading thither. Neuerthelesse, by that which I haue heard and perceiued, it is very likely, that the same will be distastfull to the Merchants of the Countrey, and others that trauell thither in the Winter time, out of many parts of *Russia*: and also, to them that trade in the Summer time, by Sea to *Mongossey*, and through the Riuer of *Peozza* in Cayucks to *Perm*, *Oust-zilme*, and *Pechora*.

The euen and twentieth of Iuly, our Shallop with a small *Russe* Boat, returned to our ship from *Pechora* Towne, departing from the same the Thursday before, being the five and twentieth of Iuly, in our foresaid Shallop, and *Russe* Boat, were sent downe by *Iosias Logan*, five and fortie bags of white Partridges feathers, and an hundred and seuentie white Foxe skinnies. These Feathers and Foxe skinnies, are bought of a *Colmogro* man, to be payd for the same in *Russia* by Master *Mericke*; and, as I vnderstand, not so cheape as others doe buy there of the Fowlers themselves. But if two men were left, one at *Pechora*, another at *Oust-zilme*, and *Perm*, with ready money and a little commodities, much good might be done in the Winter time by buying of Sables, Beuers, Beuers wombs, Squerrils, Foxe skinnies white and dunne, Losh hides, and Deere skinnies. And for the transportation of your goods to *Pechora*, or bringing of your goods from *Pechora*; the same may be done from *Arch-angel* vpon the *Dunya* to *Mezen*, and from *Mezen* to *Pechora*, *Oust-zilme*, and *Perm*, both by Winter ouer Land, and in Summer through fresh water Riuers, or alongst the shoare with speed, and with a little charge: as by the manner of their ordinary trauell appeareth, as it hath bene of a trueth deliuered mee, from the mouthes of men of long experience.

The last of August, came into *Pechorskoj Zauerot*, or the Hauen of *Pechora*, fixe and twentie Lodias or Boats, which was the Fleet set out from *Ousting*, *Colmogro*, *Pinega*, and *Mezen*: all of them being bound for *Mongossey*; but hauing been crossed with contrary winds, & the time of the yeere being spent, they gaue ouer their intended Voyage; purposing with the next faire wind, to sayle to the Towne of *Pechora*, there to lay vp their Lodias and commodities till the next Spring, and themselves with their small Boats or Wherries to goe home, passing from thence vp the Riuer of *Peozza*, which they told me they could easily doe in a moneths time. As soone as this Fleet of Lodias was come to an anchor, many of them came aboard of our ship, wondring to see a ship there. They demanded of me, how wee came thither, and what the intent of our comming was: and whither we purposed to sayle from thence. Among these were some which seemed to be Merchants, who asked to buy Lifts, remnants of Cloth, Cap-clothes, *Aqua vita*, especially, they asked for small Pewter Dishes, which I vnderstand to be a commoditie sold by them to the *Samoyeds*, at a great rate. I answered them, that the goods which wee had brought, were part already at *Pechora*, and the rest was to be transported thither, as soone as the Vessell came that was hired to carrie the same vp: so that, if any of them were minded to buy of our commodities, they might haue it of one of our Countrey-men there. After which, two or three of them demanded of me, whether I would buy any Sables, or Squerrils: which was but a brag. At this time many of them being on board together, some of them were in private talke, which was my chance to ouer-heare, and was as followeth: If these *Neamchines*, or Strangers resort to these places, it will be an occasion in short time to make vs to be without Bread. The like speeches I heard a little before, of two men of *Pinega*; and of an old man remayning in *Pechora*, that came downe to our ship with the Feathers.

Touching the goods left with *William Pursgloue*, *Marmaduke Wilson*, and the *Russe*, in regard the same lay in no good place, we were desirous to haue hired one of their *Russe* Boats, to haue carried the same to the Towne at a reasonable rate; the rather because it was on their way, and their Boats were not ouerladen: which they with two Boats might haue done with ease: yet they

Our men arrived at Towne of Pechora. People afraid of the English.

White Partridges and Foxes.

Commodities.

The Fleet of Mongossey of 26. Lodias. Or Mongals.

From Pechora to Colmogro is a moneths traueled by Riuer.

Small Pewter Dishes, a great commodity.

they would not, vnlesse wee would giue them thirtie or fve and twentie Rubbels at the least, and that with Condition, that they might distribute into each Boate somewhat thereof. Therefore vnderstanding their vnreasonable demand, hauing a Boate already hyred, wee vtterly refused to talke with them any further thereof: especially when they were minded to diuide the goods into all the fixe and twentie Lodias or Boates: which had beene a trick to haue lost all.

A great fishing
of Salmon,
beginning the
first of August.

The first of August, leauing Master *Iofias Logan*, *William Pursgloue*, and *Marmaduke Wilson*, at *Pechora*, wee sayled ouer the Barre of *Pechorskoie Zauorot*, directing our courle for *Nona Zembla*, till that wee had runne so farre, and were so inclosed in huge Ice, that in a Day and a Night we could goe neither backward nor forward: And finding no meanes to proceed on our intended Voyage for *Nona Zembla*, wee cleared our selues out of that place. Truth it is, that this hath beene an hard Summer to all the *Russes*, both to them which were bound for *Mongozey*, and those that went to kill *Morfes*, and fishing of a certayne Fish called *Omeli*. From the foresayd place wee set our course for *Cherie* Island, intending to meete with the Ile of *Colgoiene*, and *Willoughbies* Land. With *Colgoiene* wee met, but we missed of the other. The seventh of August, *William Gourdon* and I with our Shallop went on shoare. This *Colgoiene*, is a very long and broad Island with many Vallies in it. On the same are many Geese, which the *Russes* vse to take with Nets in the time of the yeere, before they bee ouer fledge. In this Island seemeth to bee store of Hawkes. Heere *William Gourdon* and our Cooper, caught two Hawkes, whereof one was spoyled in the taking, the other remayneth aliuie.

The thirteenth of August, wee arriued at *Cherie* Island, standing in 74. degrees and odde minutes, and Anchored in the South Coue, finding the same very cleare of Ice. And presently after our Ship was at an Anchor, *James Vadin* the Master, *William Gourdon*, and I, went on shoare on the Coue to looke for *Morfes*. Here we found a certayne Note, which was left there by *Thomas Edge*: the effect of which was: That he arriued there with three Shalops from *Greenland*, and that there he had found the Ship called the *Elizabeth*, and that hee was gone in her to *Greenland* the foure and twentieth of Iuly, hoping to finde the goods which hee had left there: and that hee did purpose to returne againe to *Cherie* Island with as much speed as could be made. Subscribed: *Thomas Edge*.

At our comming to the Island, wee had three or foure dayes together very fine weather: in which time came in reasonable store of *Morfes*, both at the South Coue and at the North-side: and wee were in good hope we should haue made a sauing Voyage. Neuerthelesse, though there were store of Beasts, yet by no meanes would they goe on those beaches and places, that formerly they haue beene killed on. But fortie or fiftie of them together, went into little holes within the Rocke, which were so little, steepe and slipperie, that as soone as wee did approach towards them, they would tumble all into the Sea. The like whereof by the Masters and *William Gourdon*s report, was neuer done. For lying as they did, and being so they as they were, it was not possible to doe any good vpon them. Moreouer, to get them off these foresaid Rockes to make them come on shoare vpon their accustomed places, the Master and our men on both sides of the Island went to driue them away, yet they would not. But by often driuing of them out of their holes, we killed as many as wee could. In the end the weather growing stormie and cold, there were few or none of them left. Wherefore seeing all hope of good to be done of them to be past, wee departed from thence the fixe and twentieth of August, 1611. for *England*. We did not perceiue any Ship of *Hull* to haue beene there this Summer.

Hauing touched the chiefeft points of our Voyage, I thinke it meete to set downe somewhat of the State, Commodities, and Trade of *Pechora*, *Oust Zilma*, and *Parmia*.

The Towne of *Pechora* is small, hauing three Churches in it: and the most part of the people are poore. In the Spring and a great part of the Summer, they liue by catching of Partridges, Geese, Duckes, and Swannes, of which they euery Summer take a great number. The flesh of these Fowles they salt, and liue of them the most part of the Winter. But the feathers of the said Fowle they gather together, and sell to the men of *Colmogro*, *Ousling*, and others, that come euerie yeere out of *Russia* to buy the same: Some of them giue a little money before hand to the Fowlers. Which must be done with great care as the times are now. One *Meafed* a mans sonne of *Pechora*, whose Father is a man of great dealings, told mee, That they sold white Partridge feathers to men of *Colmogro* for readie money, at fve Altines the Poud, and Duckes feathers (among which was Downe) they sold now for seuen or eight Altines the Poud. Likewise hee told me that in former times the *Russes* that vsed to trade thither, before the people of the Countrey knew what Commodities were worth, had commonly a Poud of Partridge feathers for two pence of their money, and a peece of cake Sope worth at *Colmogro* ten pence of their money. So that the chiefeft Commoditie and best cheape is Feathers, being bought at *Pechora* with readie *Russe* money of the Fowlers themselues, and not of the Ligers there, that vse to sell them to vs at *Archangel* on the Riuer of *Dunya*.

Moreover one hundred *English* miles on this side of the Towne of *Pechora*, is a place called by them the *Boluan*, where they take great store of Salmon. But it is alwayes the first of August before

before they begin to cast out their Nets. And oftentimes toward the later part of the Summer, they haue such store, that they are sold ordinarily for foure-pence a Fish, and sometimes for a penie a Fish of their money. Yea, in a plentiful yeere, I haue bene told, one may buy whole draughts of Salmon for a very small summe of money. The Salmon here are fat: three Fishes weighing commonly a Powd and no more. The best sort of the people of *Pechora*, vse to preserve a great quantitie of their Salmon with a little salt. For they salt eightie, or one hundred Fishes with a Powd of Salt: and many times in plentiful yerres, much Fish is cast away for want of salt; which they are loath to bestow when Salt is deare.

This Salmon is carryed by the *Pechora* men to *Mezen* in Sleds, drawne with Reyne Deere. But if they be minded to carrie the said Fish from *Mezen* to *Colmogro*, then they carrie the same from thence with Sleds drawne with Horses.

Also many men of *Colmogro*, *Pinega*, and *Mezen*, buy Salmon at *Pechora*, and carrie it in the Winter time to *Mezen*, to which place they pay from *Pechora* for the hyer of a Sled and a Reyne Deere, ordinarily ten Altines, being twelue dayes journey: and from *Mezen* to *Colmogro*, being sixe dayes journey, they pay foure-pence a Powd at the most. The Deere that trauell from *Pechora* to *Mezen*, will not draw aboue seuen Powd weight. This way is trauelled euery Winter twice. The first is sixe or eight weekes before Christmasse. And the second time is two or three weekes before Shrouetide: which bee the times that they very diligently obserue to sell the Salmon in. Most part of the men of *Pechora*, haue euery one his owne Deere to trauell with. And

some particular men of the better sort haue twentie or thirtie Deere, which they let out to hyer in the Winter time; and in the Summer time they put them forth to the *Samoieds* to keepe. Also when the Winter way is set and beaten, many Merchants and others come out of *Russia* to buy Sables, Beuers, Beuers wombes, Squirrels, blacke, white and dunne Foxes, of which in the Winter time is store, brought thither by the *Samoieds* round about those parts: which Trading is in the Winter time and not else. The chiefest *Russe* Merchants or Furriers that vse these parts, I haue bene told, are the *Obleazones*, the *Shepekins*, and the *Yeadomskoies*. The Commodities carryed by them, are red, and yellow Cloathes; but chiefly *Russe* money, with which they buy Commodities there of the *Russes*, as well as that which they buy of the *Samoieds* in barter.

The Commodities carryed from *Volochda*, *Ousting*, *Colmogro*, *Pinega*, and *Mezen*, to *Pechora* and *Mongozei*, are Meale, Bacon, Butter, Ote-meale, Tolockno, and Salt, with some small quantitie of Yeasts and tanned Leather, with some Cloath, and other of our Commodities. These Commodities at *Mongozei* are sold at great rates. But at *Pechora*, Commodities are sold sometimes deare and sometimes cheape, in respect of profit. For if the Fleet, being at least thirtie Boates that set out euery Summer for *Mongozey*, laden with these Prouisions and Commodities afore said, bee crossed with contrarie windes; and that by the latenesse of the yeere they cannot reach to *Mongozey*, but are constrained to leaue the same and come for *Pechora*, (as this yeere 1611. they were:) Then commonly Meale, Bacon, and such like Commodities with them are not deare. For by report a little quantitie of Meale doth serue all those parts. For the greater part of them liue of fresh Fish sod and dried in stead of Bread, of which Fish they haue plentie.

Likewise, there vseth not to goe from *Colmogro* with these Prouisions, aboue two Boates in a Summer directly to the Towne of *Pechora*: especially since the Towne was burnt, and that there was no Gouvernour in the same. Also by the *Mongozey* men it did appeare, that there was no likelihood for them to vtter that quantitie of Commodities at *Pechora*, at any rate. For if there had, there would not haue resolved to lay vp their goods in Ware-houses till the next Spring, and then to proceed for *Mongozey*.

Further from the Towne of *Pechora*, is a place called by the *Russes*, *Oust Zilma*. This is, by the description giuen vnto me in distance from *Pechora*, as *Ousting* is from *Colmogro*: and is likewise to bee trauelled by water against the streame: And in Winter time it is to bee trauelled in Sleds drawne with Reyne Deere. In this place of *Oust Zilma*, is great store of Squirrels, Beuers, and Beuers wombes, Foxe skinnes white and dunne, and other Fures, but chiefly Squirrels, of which is great store by all mens report, that I haue talked withall. So that hauing a man in the Winter time at this place, a good quantitie of Squirrels and other Fures, may bee provided at a reasonable rate. Moreouer, heere are to be bought Losh-hydes, and Deere-skinnes, which in the Winter time are brought to this Towne of *Oust Zilma* from *Perm*, which is not farre from thence. But to buy Losh-hydes and Deere-skinnes, the best course is to goe from *Oust Zilma* to *Perm*, and to buy them there, where one should bee sure to haue Choise, and at a farre better rate. Also those that vse to come out of *Russia* in the Winter time to *Perm*, to buy these foresaid Hydes; toward the later part of Winter carrie all these Hydes by Sleds, some two or three dayes Journey from *Perm* to the side of a certayne Riuer, neere vnto which is a small Towne or Village; where as soone as the Ice is gone, they haue small Dorshenicks and Floates, on which they lade their Hydes, and being out of this Riuer, they enter into *Dunya*, and transport them to *Colmogro* and *Archangell*.

Likewise being at *Pechora*, *Oust Zilma*, or any of those parts, there is in the Winter time to bee

Travelling Deere.

Fish in stead of Bread.

Oust Zilma.

Perm.

Elephants
teeth, whence,
and which
way.

bee had among the *Samoyeds*, Elephants teeth, which they sell in pieces according as they get it, and not by weight. And I haue beene told, they sell the same at a very small rate. It is called in *Russe*, *Mamanta Kasst*. Thus much may suffice at this time to bee spoken of *Pechora*, *Oust-Zilma*, and *Perm*.

1. Now I will set downe as I haue beene enformed by diuers *Russes*, the Names of the chiefeft places which they vse to sayle vnto from *Slobodka*, an Hauē so called in the Prouince of *Mezen*, to the *Pechorskoie Zauorot*, or the Hauē of the Riuer of *Pechora*, and the Distances to each place: with a Direction how to sayle from *Pechorskoie Zauorot* vp to the Towne of *Pechora*.

2. I will also set downe the *Russes* sayling from the foresayd *Pechorskoie Zauorot*, to the *Tonhor-skoie-share*. And from thence to the Riuer of *Ob*: and thence to *Mongozey*.

3. I will likewise set downe a true Direction, to goe by water in their Boates called *Cayooks*, through the Riuer of *Peozza*, and other Riuers, till they come from *Mezen* to *Oust Zilma*, and *Pechora*.

4. Likewise I meane to write of the *Samoyeds*, traueilling from *Vaygats* to the parts of *Mongozey*, in the Winter time, and from thence backe againe to the foresayd Towne of *Mezen*, called *Slobodka*.

5. Lastly, I will intreate of such Commodities as are to bee had at *Mezen*, with the speedie passage from thence to *Colmogro* by Sea, or by Land in the Sommer time. And it is as followeth.

The things aboue mentioned, that I haue not seene my selfe, I haue not sleightly set downe from the mouthes of one or two, but from the mouthes of many ancient men, well experienced in the Trauels and Trades of all these parts, which Master *Iames Vadun* the Master of our Ship can likewise witnesse. Therefore if the same may bee any way beneficiall vnto the Company, and that thereby I haue discharged my dutie vnto your Worships, I shall bee heartily glad thereof. Thus fearing I haue beene ouer tedious by my rude Letter, I rest, with my heartie prayer vnto Almighty God, for the happie preseruations of your selues, and all yours. Written on Ship-boord, the last of August, 1611.

Your Worships humble Seruant to com-
mand, RICHARD FINCH.

*The Names of the principall places, which the Russes sayle by from Mezen
to the Pechorskoie Zauorot, or the Hauē of
Pechora. 1611.*

FROM *Mezen* to *Candinos*, with a faire wind and stiffe gale, is thirtie houres sayle: They say-
ling commonly almost 40. leagues in foure and twentie houres, according to which it is 30.
leagues. From *Candinos* to the Ile of *Colgoie*, is as before thirtie houres sayling, and after 40.
leagues in foure and twentie houres, is 30. leagues. From *Candinos* to *Promoya* or *Obscure*, is
twentie houres sayling, or 35. leagues. From the Ile of *Colgoie* to *Colocol-cona*, is fiftene houres
sayling, and reckoned as aboue appeareth, is 25. leagues. Along the shoare of this place are heapes
of Sand, in the forme of Bells. Therefore the *Russes* call this place *Colocol-cona*, being deriued
from *Colocol*, which in *English* signifieth a Bell. From *Colocol-cona* to the *Peasaneetsa*, is three
houres sayle, or 5. leagues. This place is onely a small Brooke which they vse for a Sea-marke,
more then for any benefit is to bee reaped at the same. From *Peasaneetsa* to the *Pechorskoie Za-
uorot*, is sixe houres sayle, or 10. leagues. So that from *Colgoie* lland to this foresayd *Pechorskoie
Zauorot*, is not aboue 40. leagues at the most.

*A direction to sayle from the Pechorskoie Zauorot, where wee rode with
our Ship in August 1611. to the Towne of Pechora,
as followeth.*

Dolgoie lland in
the Soofie Mo-
ra.

The Boluanou.

FROM this *Pechorskoie Zauorot*, they sayle into the *Soofie Mora*, or *Drie Sea*, and not before:
stirring away from hence South-west and by South, and in a faire gale of Winde, in foure
houres they come to an lland called *Dolgoie*. This lland is reported to bee three or foure *Russe*
Versts long, hauing on it in some time of the yeere many Geese, which the men of *Pechora* take
before they bee able to flie. From this *Dolgoie*, they stirre away South South-west; and sayling
this course with a faire gale of wind, in eight or nine houres sayle they come in sight of the maine
Land, being an indifferent high Land. This Land is called the *Boluanou*; and this is 20. leagues at
the most. This *Boluanou* they haue on their Larboord side. Neere this place are diuers that in-
habite in *Russe* Houses: where in the Summer time they lye a Fowling, and fishing of a certayne
Fish called *Omeli*, which are like our Maccarels. If need bee, heere a man may haue a guide or
good

good instructions to conduct him to *Pechora Towne*. Hard by this *Bolmanon*, is the *Oustia* or barre of the entring of *Pechora Riuer*. For as soone as you are ouer this barre, you come into the Riuer mouth, which leadeth to *Pechora Towne*. If it bee thicke foggie weather, then one of them continually soundeth the depth of the Channell, keeping as neere as they can in the deepest water: and in so doing, they seldom mistake their way, so that they stire away West from the *Bolmanon* to the Riuer mouth, keeping the Land on their Starboard side. And by all mens report, from the *Bolmanon* to *Pechora Towne*, is with a faire winde and stiffe gale, not aboue twentie houres sayle: which according to their sayling, is about three and thirtie leagues. And it is not aboue fiftie leagues from the *Pechorskoie Zauorot*, where our Ship lay, to *Pechora Towne*.

The names of the places that the Russes sayle by, from Pechorskoie Zauorot, to

Mongozey: with the manner of their Travell, and Distance betweene

each place, or time of Sayling, Halling, and Rowing

unto the same.

From *Pechorskoie Zauorot* to *Matpheyone Ostrone*, or Island, is with a faire wind and stiffe gale, at the most thirtie houres sayle, which being reckoned as before, after fortie leagues in toure and twentie houres, is fiftie leagues: to which they stire away East From *Matpheyone Ostrone* to the *Touhorskoie-share*, is nine houres sayle or fiftene leagues. When they are come to this Island, they stire away from thence East to the said *Touhorskoie-share*. Also in cleere weather from *Matpheyone Ostrone*, they can see the maine Land, with the *Meedanetskoie Zauorot*: where the two Islands bee called the *Zelenyee* or *Greene Islands*: to which Islands many of the *Russes* resort, to take a kinde of Fishes, called *Omesh*, which are like Maccarels: of which heere are store. This maine Land they haue on their right hand, or Starboard side, lying South from *Matpheyone Ostrone*. Also to the Southward of the *Matpheyone Ostrone*, is another Island which the *Russes* call *Dolgoie*, that is, the long Island. So that there are two *Dolgoies*: the one, within the *Pechorskoie Zauorot*, entring into the *Soboy Myna*, or *Drie Sea*. The other is this, which is betwixt the *Matpheyone Ostrone*, and the *Touhorskoie-share*: lying as before was sayd, South from the sayd *Matpheyone Ostrone*. From which Island in a cleere day they can see the Land of *Vaygats*, which lyeth on the Larboord side, being very high Land. So that stirring out-right, in the middle betweene the *Meedanetskoie Land* on their Starboard, and the Land of *Vaygats* on their Larboord side, they sayle directly into the *Touhorskoie-share*. Likewise there is not much of this *Touhorskoie-share*. For they say, that being at one end, they can see the Sea at the other end thereof. Also, about the Land of *Vaygats* are neither Flats nor Shoalds. From the *Touhorskoie-share* to the *Carskoie Gooba*, is twelue houres sayle, or twentie leagues. In this Bay or *Gooba*, is the *Meastnoy Ostrone*, or *Meastnoy Island*. Further it is to bee remembered, that as soone as they enter this *Carskoie Gooba* or Bay, they sayle vpon a Riuer, leaving this Bay on their Starboard: which Riuer bringeth them into the *Mootnoya Reca*, which signifieth the thicke or troubled Riuer. From *Carskoie Gooba* to this *Mootnoya Reca*, is 20 leagues. Likewise, being a little past the *Touhorskoie-share*, there may bee described an high Land, which they call *Socoha Looda*, that is, *The Hawkes perch*. And being ouer the *Mootnoya Reca*, which they are eight dayes, and eight nights in halling along the shoare by the Rope or *Beachana*, they come into two Lakes, which two Lakes from one end to the other they commonly row ouer in one Day or two Tides: the same not being aboue ten or twelue leagues. Hauiug gotten to the end of those two Lakes, they come to a place called the *Nauoloke*, which signifieth an Ouer-hall. And it is almost two hundred fathoms, or foure hundred paces in length: And hauiug emptyed their Vessels, called *Coaches*, laying poles vnder them, with the Companies, or men of foure or fve Boates, hauiug twelue or thirtene men in a Boate, they hall their Vessels ouer, launching them into a third Lake, which they call the *Zelenoy Osera*, that is, the *Greene Lake*. These Ouer-halls constraime them to comfort themselves into Companies: otherwayes they could not get this way to *Mongozey*. At the end of this *Zelenoy Osera*, or *Greene Lake*, they come into the *Zelenoya Reca*, or *Greene Riuer*, into which they runne with the streame, being often compelled to emptye their great Boates with their Lodias, or Wherries, laying their Goods vpon the shoare: which being done they row their great Lodias ouer the shoalds emptye; and hauiug got ouer the shoalds, they bring their goods onboord againe. And thus they doe in diuers places of this *Zelenoya Reca*, or *Greene Riuer*: by reason whereof they are commonly ten dayes from the Ouer-hall, before they can get through this foresayd Riuer, which is all with the streame; but the Distance hereof cannot yet bee perfectly learned. Being come to the end of this *Zelenoya Reca*, they enter into the Riuer of *Ob*; and hauiug rowed a little way vp the same, they come to a place which they likewise call *Zauorot*: which signifieth a turning, winding, or entring into a place. From this *Zauorot*, they turne into the *Tawze Reca*, stirring away South to *Tawze Riuer*; but it is foure and twentie houres sayle, or fortie leagues from the Riuer of *Ob*, before they come into any part of the *Tawze Reca*.

Mezen more
perfectly.
Mezen a Town
of great traf-
fick for Furres.

Reca. In the River of Ob, are neither Woods nor Inhabitants, till they sayle so farre vp the same, that they come neere to Siberia. But there are Woods.

When they are entred into this Tawze River, they have foure dayes and foure nights sayling to Tawze Castle, with a faire wind and a stiffe gale: But if they bee driven to row to the Tawze Gorodoc or Castle, then they are twelue dayes and twelue nights rowing thither at the least, ha- uing calme weather. This Tawze Gorodoc, or Tawze little Castle, with the Villages, Townes, and all other places thereto belonging, is by all the Russes generally called Mongosey. At this place are two Gentlemen or Governours, with three or foure hundred Gunners, and small Castles in severall places of these parts of Mongosey. Moreover, the men of Mezen, from whom I had all these Notes, told me; That in the Winter time there went men from Siberia to Mongosey, to buy Sables: deliuering vnto mee, that the Sables taken by the Samoyeds about Mongosey, are richer in Furres then those that come from Siberia. Also they told me, that the Samoyeds inha- biting vpon the mayne land ouer against Vaygats, trauelled in the Winter time with their Reyne Deere to the parts of Mongosey, to kill Sables and other beasts: and doe carrie their Furres from thence to Mezen, to sell there at a place called by the Russes, Stoboda, to which they did commonly resort about Shroue-tide, staying not there long, but as soone as they had made sale of their Furres, they departed home againe. Further, these men of Mezen told me, that in the Winter time with them was to be sold store of Squerrils, Beaters, Beaters wombs, and some Sables. And that all those that trauelled in the Winter time from any part of Mongosey, Sibira, Pechora, and Oust-selma, to any part of Russia, whether they were Merchants, or buyers vp of the Furres, or the Samoyeds that caught them; they must of force come to their Towne of Me- zen, to hire Horses to carrie them to Colmogro. By which meanes they told mee, their Towne was well replenished with all manner of Furres, especially of Squerrils. Also they informed me, that diuers of Colmogro, and other parts of Russia, that sold vs Furs, for the most part bought the same of them, lying there in the Winter time for that purpose. Therefore, said they, if that any of our Nation would trade into their parts, they would be glad thereof, and that they may be furnished of all sorts of Furres, and at a farre better rate then hitherto we haue had them at. And that wee could vpon any occasion be quickly at Colmogro in the Winter time by Sled, or in any part of the Spring or Summer time by Boats, at a very small charge. Lastly, that in the Spring time we should not faile of a parcell of Trane-oyle, and Deeres skinnies, which euery Summer they transported to Archangel to sell.

A true direction of the Russes travelling from Mezen, with Cayooks or small Boats, through the Riuer Peozareca, and from thence to a place called by them Peaskanoy Nauolock, or The Sandy Ouer-hall, passing from thence through other Rivers, till they come to Oust-selma, and to the Towne of Pechora: And is as followeth.

Mezen.
Peozareca.
Peaskanoy Na-
uolock.

Oust-selma.
Pustozera.
The Boluanon.
Pechora.

H Aving imbarqued themselves at Mezen, in these small Cayooks or Boats, covered with the barkes of trees, they sayle to a Riuer called Peozareca. From thence they sayle, or draw their Boats to a place called, the Peaskanoy Nauolock, or Sandy Ouer-hall. From Mezen to this Ouer-hall is ten dayes haling along the shoare with the rope. This said Ouer-hall is five Russe Versts ouer. And after they haue vnladen their goods out of their Cayooks, they draw the said Vessels ouer at times with Horses; that come from Mezen of purpose; lying there the most part of the Summer, to that intent: and they pay fixe pence Russe for drawing ouer an empty Boat. Being ouer this Ouer-hall, they driue with the streame in three dayes to the Towne of Oust-selma: and with the streame in foure dayes they driue to a place called Pustozera: and from Pustozera against the streame they come to the Boluanon, and from the Boluanon to the Towne of Pechora. Also, many of these Boats very often in their returne home with their fore- said Cayooks, carrie Furres to Vsting, and diuers other places into the Countrey of Russia. All which they doe in a Summers time.

CHAP. X.

The Voyage of Master Iosias Logan to Pechora, and his wintering there, with Master WILLIAM PURSGLOVE, and MARMADUKE WILSON.

Anno 1611.

The first of Iuly, William Gurdon, Richard Finch, and William Pursgloue, went on shoare at *Suatinose*, where two Crosses stand. The second, wee weighed anchor againe, and stood into the Bay because of the Ice: and that night wee went on shoare againe. The third, we weighed anchor, and stood it about *Suatinose*. The fift, we stood to the Eastwards five leagues more, and about twelue of the clocke at night, wee were thwart of the *Iland of Toxar*. The tenth, at eight of the clocke at night, we weighed, and went ouer a Barre, at two fathomes, and came into Harbour, where wee anchored at ten of the clocke in the morning in five fathoms, hauing sands round about vs, being land-locked. The eleuenth, my selfe, William Gurdon, and William Pursgloue, with sixe of our men more, departed from the ship with our Shallop, to goe vp to the Towne of *Pustoxera*.

The fourteenth, wee arrived at the fishing house of one *Euan Vasilion sene sombau*, where the people were afraid of vs, and were ready to runne away: but we spake to them, and gaue them some Biscuit and *Aqua vite*, and they sod vs some fish, and shewed vs our way to another Fishery: but they ran away from vs, so we departed on our way. The fifteenth day, at foure of the clocke in the afternoone wee met with a *Russe*, that was borne at *Usting*, who gaue vs Milke, and such things as he had, and we gaue him some Biscuit, and some *Aqua vite*, and hee directed vs vnto another Fishery, about some five miles from that place where wee arrived, about sixe of the clocke the same night. But comming ashore, we found not any, saue one man, who after some conference had with vs, and giuing him some Bread, and some of our *Aqua vite*, hee told vs, that the Master of the house, with three of his sonnes were hunting of Duckes, and that their wiues were afraid, and were runne into the Woods to hide themselves, leauing a young childe behind them for haste. So he brought vs into the house, where by that time that we had stayed an houre (because there were so many *Muschitars*, which are like vnto a Midge, and sting most horribly, so that we were not able to stay without) the Master of the house, and his sonnes came thither, who at the first, were afraid, thinking we came to rob them. And they were about to shoot our men in the Boat; but one of our men holding vp a Biscuit cake, they then came to them, and spake vnto them: but our men not vnderstanding them, made them signes to the house, where my selfe, William Gurdon, and William Pursgloue were: who, when they came into the house, being yet afraid, they came in one after another. Now, when we had saluted them after the *Russe* manner, they asked vs of whence we were, and for what cause we came thither:

whereunto I made answere, that wee were *English-men*, who because of the troubles in *Russia*, came thither to seeke a Trade, hauing heard diuers times of the fame of those parts. Then hee replied, that in times past those places had beene good for trading: but now, by reason of a bad *Gouernour*, in those troublesome times, vpon a spleene he had fired the Towne, and burned about an hundred houses: and so by that meanes they were fallen into pouerty, and trading decayed, by reason of his great exactions. Yet hee said, that they haue great store of Salmon, and that the last yeere they got about 15000. Salmon, and in the Winter is their chiefe Mart. For then the *Samoyeds* come thither from diuers places, and bring Sables, and Beauers, white Foxes, *Rosamacks*, Feathers, and some Squerrils. So hauing supped with him, we gaue him a gallon of our *Aqua vite*, and some fortie cakes of our white Biscuit, and three or foure pound of Raisins: for we heard, that he was one of the principallest men in the Towne. Then desiring his fauour, he holpe vs to a man to goe with vs vp to the Towne, because of the fearefulnesse of the people, which they conceiue through the Warres of the *Poles*: and so wee departed from thence that night to the Towne.

The sixteenth, in the afternoone we arrived at the Towne of *Pustoxera*, where wee found not many people, considering the number of houses there, which are betwixt fourescore and an hundred, being of wood, built after the *Russian* manner, and they are subiect vnto the *Russe*, obseruing all their Rites as doe the *Russes*. The people were all abroad (some, in getting of *Morses Oyle*, and *Belougues Oyle*, and some fishing of a fish called *Ometta*, which is a very sweet fish, and some hunting Duckes) sauing the Customers, and three or foure more, who were likewise afraid of vs, although we had one of their owne people with vs, and were ready to flee away. So we seeing their fearefulnesse, caused their man to come on Land as yet: then hee calling to them, not permitting the rest of our men to come on Land as yet: then hee calling to them, they stayed, still peeping from behind the corners of their houses, vntill at the last there was a *Russe*, one of *Colmogro*, that had wintred with them, who knew me, and had seene me some two

The former part of the Voyage is omitted, to auoide tedious repetition. *Toxar.*

Pustoxera.

Iuly.

Cola in Lappia.

yeeres before at Cola in Lappia, at his Vncles house. And so he encouraged them, speaking greatly in our commendation, shewing them, that I was a Merchant, and came to trade with them, and not with any intent of harme: for hee knew mee very well, and told them, that I was at Cola foure or five yeeres together, and lay at his Vncles house. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had seene mee with his Vncle at Cola. Then I called to mind, that I had seene him there, and so we grew acquainted: and he went with vs to the Custome-house, where staying an houre, at length the Customer came: and after many questions had concerning our comming thither, I craued licence, that foure of vs might winter with them: which they denyed, alledging that they durst not without the Emperour of Russia his licence. Whereupon I answered, that the Emperours Maiestie, when he was reigning, was very gracious vnto our Nation, aboue all other strangers; and shewed what great priuiledges hee had bestowed on our people: and how by the English-mens meanes at the first; what a trade is now at Arkania, and what profit came, not onely into his Maiesties Treasurie, but also into all parts of his Dominions, which in time might be brought hither: and withall shewed the Emperours priuledge. Wherefore then they began to put away feare, and willed vs to stay five or sixe dayes, vntill he had sent for the chiefeest men of the Townes-men, who were abroad, and then they would giue vs an answer. Then I desired, that we might haue an house to be in, and not to stay without doores. So he gaue libertie to any that would, to entertayne vs, where-to there was one Callem that made answer, that he would: whereupon wee went with him, and were in an Ambar of his, vntill wee receiued answer from them. In the meane time wee made much of them, and feasted them with our Aqua vite, Biscuit, and Figs, that we might the better obtayne their loue.

Arkania.

The foure and twentieth, the Customers came to giue vs our answer, and told vs, that they had concluded that we might stay if wee would: but they must write vp to the Muske of our being here. So we thanked them, and gaue them such entertaynement as we could, and sent presents to sixe of them of the chiefeest, which they tooke very thankfully, and promised what fauour they could. So this night I made ready my Letters to send for England.

Molgomssey.

The fourth of August, five and twentie Lodyas arrived at the Towne laden with Meale, and others which were bound for Molgomssey: but by reason of contrary winds, they were forced into Pechora, and came vp to the Towne of Pustoxer, and vnladed to make sale.

Pole baptized Russe.

The sixe and twentieth, we remoued from the house where we were at the first, vnto a Poles house, who is christened Russe, where we are to remayne all the Winter.

Frost in August.

The nine and twentieth, the frost was so strong, that the Ozero was frozen ouer, and the Ice driuing in the Riuer to and againe, brake all the nets, so that they got no Salmon, no not so much as for their owne victuals. The second of September, the frost brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Towns-men bought, that went downe the Riuer to haue gone for Ingoria, and had a faire wind: but they neglecting two dayes sayling, that would haue carried them forth of the Riuer to the Sea, the wind came contrary, so that they were wind-bound, and could not get any further: and on the nineteenth, gaue ouer their Voyage, and came vp to the Towne.

The thirteenth of October, the frost was so extreme, that the Ozero stood in one night, that men did walke on it the next day, and so continued all the Winter after.

The twelfth of Nouember, there went two men of Penega to Ust-zilma, to buy Squerrils, and Beauers, and other commodities. The thirteenth, the Sunne arose at South and by East by the Compasse, and set at South-west and by West.

Slobodka Mart.

The foure and twentieth, there went diuers men, with at the least, three or fourescore Sleds drawne with Deere, to a place called Slobodka, where they hold a Mart, from the beginning of December to the middle thereof: and they carried fresh-water fish thither, with whom William Pursglone went into Russia. The sixe and twentieth, the Sunne arose at South and by West by the Compasse, and set at South-west and by West.

Ingoria.

The first of December, the Sunne arose at South and by West Westerly by the Compasse, and set South-west and by West Southerly. The fourth, the Towns-men of Pechora went ouer land into Ingoria, to trade with the Inhabitants there, and the Samoyeds.

The eleuenth, Marmaduke Wilson said that he saw the Sunne, but it was but the way of the Sunnes beames. The thirteenth, I saw the Sunnes beames my selfe, but I could not see the Sun it selfe, although I watched it very strictly. The fourteenth, it was snowie, and stormie weather, and continued so vntill the foure and twentieth day, which was close weather also.

Sunne returneth.

The five and twentieth, being Christmas day, I saw the Sunne, and it rose at South and by West, and set at South-west and by South, it hauing the neathermost part of it all the way iust with the Horizon. The sixe and twentieth, it was stormy and snowy weather, and so continued vntill the end of the moneth.

The second of Ianuarie, the Sunne arose at South somewhat Westerly, and set South-west a little Southerly, it mounting a pretie height aboue the Horizon.

The fift, William Pursglone returned from Colmogro. The eleuenth, the Sunne arose at South by East by the Compasse, and set at South-west and by West.

Th:

The twelfth, there came a command from the Patriarch, that there should bee a generall Fast, both for young and old, not exempting the sucking babes; which began the thirteenth, continuing three dayes space, they neither eating nor drinking, so much as water, neither admitted they their sucking Babes, save those that fainted, to whom they gaue a few Figs and a little water.

The nineteenth, the Inhabitants of *Pustoxer* that went into *Iugoria*, returned from thence, hauing had but an hard Voyage, by reason of the Warres which the *Samoyeds* had amongst themselves: so that they durst not goe into *Molgomsey*, where they catch the most part of the Sables which come into *Russia*.

The three and twentieth, came the *Carratchey*, which is the chiefe of the *Samoyeds*, but they had no commodities to speake of, by reason of the Warres: so that they neither durst trade with the *Samoyeds* of *Molgomsey*, neither hunt for the Sables themselves, which at other times they were wont to doe. The thirtieth, I had the chiefe *Carratchey*, his sonne, his sonnes sonne, and his brothers sonne at Dinner, and had some conference with him, who told mee, that they had seene ships in the *Vaygats*, two yeeres one after another: but they durst not bee seene of them, but fled from them: for the *Russes* told them, that they would kill them, or carrie them away prisoners. Yet they seemed to be glad of our comming, when they saw our behauiour, and the entertaynement that they had of vs: Neuerthelesse, they are very timorous, and vnreasonable couctous, as by more acquaintance I perceiued by them.

The second of February, the most part of the *Samoyeds* went to *Slobodca* with their commodities, because in the Summer they had beene together by the eares with the *Samoyeds* of *Calenose*, and had slayne one or two of them: wherefore they went to agree with them, and to pay ranfome for some of their men that were taken afterwards.

The fiftenth, the Sunne arose at South-east, a little Southerly, and set at West and by South Westerly. The sixteenth, the Sunne arose at South-east, and set at West due by the Compasse, as I could set it, the variation being two points Westerly: for, at a South South-west, the Sunne commeth to the Meridian.

The twentieth, I had conference with a *Russe*, concerning their trade of *Molgomsey*, who had beene there twice, and he was the first that euer attempted it, and none hath beene farther then he to the Eastwards. And he told me, that their course from *Medenskey Zauorot*, at the mouth of *Pechora* to the Eastward, to the two Ilands called *Zyelenfa*, is two dayes and three nights distance, sayling with a faire wind. From thence to *Breit-vinnose*, three dayes and three nights sailing with a faire wind, which is within the Streight of *Vaygats*. And from thence by an Iland, or rather a Rocke, called *Socolia Lowdia*, leauing it on the Starboard side for feare of Rockes, still keeping your course North-east, vntill you come to a long Point on the Starboard side, with a land lying off into the Sea three miles, some fise or sixe dayes sayling. Which when you haue gotten about, you must hold your course somewhat more enclining to the South, fise or sixe dayes more: and then you shall come to the Riuer of *Ob*; against the mouth whereof lieth an Iland: but you must keepe the Sea-board of it, by reason it is shoald betwixt it and the Mayne. The Land all alongst the shoare is a fine lowe Land, and the going into the Riuer, is on the East

side of the Iland. The Riuer is reported to be a Summer dayes sayling ouer in bredth, and is full of Ilands: whereby they report it to be shoald. Yet, in my opinion, so great a Riuer cannot be without a mayne channell; which as yet they haue not sought for: and therefore they iudge it innauigable. Also they report it to bee very plentifull of Fish of diuers sorts: but the people here, and the *Russes* are vnwilling that wee should goe thither. Moreouer, hee told mee, that from the Riuer *Ob* to the Eastwards, the Land stretcheth East, some fixe or eight dayes sayling more. To the Eastward of the Riuer *Ob* lieth another great Riuer as large as *Ob*, and is very deepe water, and runneth from the South, how farre as yet it is vnknowne. Although that hee affirmed, that he himselfe had sayled at the least three weekes vp the Riuer: and all along as they went, they met with sundry sorts of People, differing in Language one from another, which they call *Samoyeds*. Yea, and the People there did certifie them, that vp more towards the South, there are *Tartars* inhabiting, who ride vpon Horses. And hee affirmed, that they found pieces of Ploughes that had beene driuen downe the Riuer by the fouds, caused by the Snow melting from the Mountaines. This Riuer is very high Land, and deepe water on both sides. Into this Riuer, on the East side falleth another Riuer, called *Tingussey*, and the Inhabitants thereof are so called: whereby I coniecture, that it is not farre from the Citie *Tangut* in *Cathay*. These *Tingusses* report, that there is another huge Riuer, that trendeth to the Southwards, which the necke of a Land parteth from the Riuer of *Tingussey*: wherein there are great ships, not vnlike vnto the *Russes* ships, that sayle in it, hauing many Masts and Gunnes, which when they are shot off, make all the earth shake with the noyle: which should seeme to be the *Chinians*, that trade thither in the Summer, and returne backe againe ere the Winter doth come. The like also affirmeth another, being a *Russe*, who hath beene in the Riuer of *Tingussey*, where the people make this report.

The first of March, the *Russes* tooke their Journey from hence, from *Pustoxer* into *Russia*, with such commodities as they bought.

The twelfth, the Sunnes altitude by the Quadrant was 67. degrees and 40. minutes; and the declination, no degrees 52. minutes, which being added, maketh 68. degrees and 30. minutes, being the true height of *Pustozers*.

The thirteenth, the Sun arose at East and by South a little Southerly, and set at West North-west. This day the Sunnes altitude by the Quadrant was 67. degrees 20. minutes; and the declination, 1. degree 15. minutes: which added together, maketh 68. degrees 35. minutes: so that I conclude, that *Pustozers* standeth in about 68. degrees 30. minutes. The eight and twentieth, the Sunne arose at East and by North, and set at North-west and by West.

The eleventh of Aprill, the Inhabitants of this Towne returned from *Slobodka*, bringing with them Rice, Rice-meale, and other provisions.

The one and twentieth, having conference with a *Permack*, concerning what commodities were to be had at the Towne of *Ust-zilma*, he told me, that there were Losh hides, Squerrils, Sables, white Foxes, and Rosomackes. Moreouer, he told me, that beyond the River of *Yenisey*, the Land trendeth due East, and then there is a River called *Peasda*, and beyond that another, called *Catonga*, which runneth into *Cathay*: whose King, these *Permacks* and *Russes* call *Tenkis*. The River lieth North and South as they of *Yenisey* say, but they cannot tell how farre: for, there hath not any bene vp the River, by reason they are afraid of their shot. And this *Permack* told me, that on the Sea coast betwixt these two Rivers, *Peasda* and *Catonga*, they found certaine stones like vnto Gold, and some like Siluer, being about the halfe way betwixt the two Rivers.

The two and twentieth, we had newes brought that the Ice was broken, in the *Pechora*, all alongst by the sides.

The ninth of May, the Sunne arose at North-east somewhat Easterly, and set at North somewhat Westerly, it being iust foure houres by the Houre-glasse vnder the Horizon.

The three and twentieth, the Sun did not goe vnder the Horizon, for it was a pretie height about the Horizon, at a North North-east point of the Compasse: it then being at the lowest.

The foure and twentieth, we had newes that the *Pechora* brake vp, vpon the twentieth day of this instant moneth. The sixe and twentieth, at foure of the clocke in the after-noon, I departed from *Pustozers*, to goe to *Ust-zilma*, where I arriued the thirtieth day instant. And the River of *Pechora* lieth most part North North-east, and South South-west, and sometimes North and South. *Ust-zilma*, is a Village of some thirtie or fortie houses, and standeth in the height of 66. degrees and 30. minutes. They haue Corne growing there, both Barley and Rice: and their Barley is passing faire and white almost as Rice.

The ninth of Iune, I departed from *Ust-zilma* backe againe to *Pustozers*, where I arriued the eleventh of Iune. The one and twentieth, seuentene *Soyms* departed from hence to goe to *Molgomsey*: some belonging to this place, some to *Ust-zilma*, and some to *Mezen*, and *Penega*. The two and twentieth, diuers Boats went from hence to the Sea, to fish for Omelyes and Bealwages Oyle. The foure and twentieth, I sent downe *William Pursglone* to the Sea side, to buy the Oyle which God shall send them.

The third of Iuly, I receiued a Letter forth of England, by the way of *Colmogro*.

The fift, we had newes that the Gouvernour and Souldiers of *Tom* have burnt the Towne, and fled from thence, by reason they wanted victuals, and their pay: and about three hundred of them intended to come to *Ust-zilma*, to rob the Inhabitants thereof. This day I was told, that from *Pustozers* vp *Pechora* with a faire wind, to the River of *Onse*, is three weekes trauell: and then vp the River of *Onse*, to *Podcamen*, ten dayes, and from thence to *Ob*, eight dayes, drawne by Deere: and from thence to *Beresona*, sixteene dayes, which is a Towne of trading. This mine Host told me, that he was a prisoner at *Beresona*, and at *Tobolsco*: and hee affirmeth, that *Tobolsco* is a Citie of great trade, and that the *Tsecks*, *Bombars*, and *Tartars*, come thither to trade, who bring Silkes, Veluets, Grogran, Sendames, and Kindackes, and that great store of Cloth, Pewter, and Copper may be vented there. Also there is great store of Furrer, as Sables, Squerrils, Foxes, Blacke, Rosamackes, and Beauers. He sayth, that from *Pustozers* to *Vade* in *Ingoria*, which is on this side *Ob*, with carriage vpon Deere, it is a moneths Iourney, and *Nosona* is on the other side of *Ob*; and it is two weekes and an halfe with light carriage or pott. Moreouer, he told me, that *Pechora* runneth into *Velega permia*, five weekes Iourney from *Pustozers*, and from *Velega permia* to *Verho tomia*, nine dayes Iourney by Horse and Sleds: and from thence to *Tumen* by River, ten dayes: and from *Tumen* to *Tobolsco*, sixe dayes by the River *Irtish*, and is the chiefe Citie of all Siberia. And from *Tobolsco* to *Sowrgout*, is sixe weekes Iourney vp the River *Ob*, from whence come all the rich Furrer which come to *Arcania*. From *Sowrgout* to *Tome*, which is amongst the *Tartars*, is three weekes vp the River *Ob*: and yet none knoweth how farre the *Ob* runneth further, as he sayth, he was carried these wayes to the *Musko*, in the beginning of *Rofriga* his time.

The sixteenth, I was told by a *Permack*, hauing some speech with him concerning the *Vaygats*, that from *Medniskoy Zauorot* to the *Vaygats*, is one day and a nights sayle with a faire wind. And as you goe forth of the *Vaygats*, there lieth an Iland called *Meastno Ostrone*, not being

being farre from *Socolia Lowdy*: and from *Vaygats* through *Yongorskey Shar* into *Oarskey gouba*, (which is a great Bay and deepe) is two dayes and one nights sayling into *Mowtnoy River*, the course East, somewhat Southerly. And from *Mowtnoy* to *Sharrappa Shar*, which is an Inlet, is halfe a dayes sayling: and from thence to *Yowconone* is halfe a dayes sayling, which is an high Land: and from thence to *Naromzia* is a dayes sayling. And there are three little Rivers betwixt them: and there are Morfes all alongst that shoare, and farther he knew not by Sea. But he sayth, that the River *Ob* is a dayes sayling right over. And from *Zylena reca* to the *Taz*, *Zanorot*, the course is South-east, a dayes sayling: and from the *Zanorot* of *Taz* to the Rivers mouth, is a day and a nights sayling: and there is an Island in the mouth thereof, being high land. And from thence vp the River, the course is South-east to the Towne eight dayes journey, to be haled with a rope, there runneth such a streame. But ere you come to the *Taz* River, there is another River on the Starboord side, called *Powre*, where they get of the best Sables that come: and you must leave the land at the *Taz* on the Larboord side. And from *Taz* Towne vp the River *Volochanco*, is fixe dayes journey Easterly against the streame, vntill you come to a Vollocke, about a mile and an halfe long, Marsh ground, and so into another River, some foure dayes rowing with the streame, to the River that is called *Tromban*, which is a great River, and falleth into *Yenissey*, some three dayes journey more with the streame: at the entrance whereof lieth an Island, called by the same name, whereon there is a little Towne of the same name. From thence downe the River *Yenissey* to the River *Hantike*, is twelue dayes sayling: and it is a great River, and runneth to the East (as it is thought) into *Cathay*, which of the *Permarks*, is called *Kishayskey Tsarrstua*.

The first of August, my selfe, and the Boy, went aboard the *Lodia* departing from *Pustozor*. The tenth, we arrived at the *Gloubocke*, which are the deepe water, whither *William Parfeglowe* was come with the *Oyle*, where we melted what we could, before we departed. The twelfth, I obserued in the *Gloubocke*, and had it on the Quadrant 56. degrees 30. minutes: and the Declination was 12. degrees 42. minutes, so it standeth in 69. degrees 12. minutes.

The eighteenth, we departed from the *Gloubocke*, and entered the *Dry Sea*, and arrived at the *Zanorot* the one and twentieth.

The two and twentieth, we weighed and went out to Sea, the wind at East North-east, but the wind comming to the North-west, we put roomer againe, and came to an Anchor at the *Zanorot* againe. The foure and twentieth, I obserued at the *Zanorot*, and had it on the Quadrant 63. degrees no minutes, and the Declination was 7. degrees 26. minutes, so it standeth in about 70. degrees 30. minutes.

The six and twentieth, we departed from the *Zanorot* about noon, the wind being at East, the land trending betwixt it & *Collocolona* East & West, being two Voadaes, or sixty Versts distance.

The seuen and twentieth, we came to an Island called *Mezyou Sharry*, being sixtie Versts to the Eastwards of *Suatinose*, and it is about ten Versts in length, and two Versts broad. At the East end thereof, *Oliver Brunell* was carried into Harbour by a *Ruffe*, where he was Land-locked, hauing the Island on the one side, and the Mayne on the other.

The eight and twentieth, we departed from *Mezyou Sharry*, the wind at North-east, a little gale, but before night it fell thicke, and wee steered away North-west, and about mid-night, it came to the North North-east blowing a very sore storme: so that we were not able to beare our sayle aloft, and hauing floud vnder foot, we were fogged into the Bay, and put ashore some two houres before day, vpon the long point of the obscure Harbour, about three miles to the Westwards, the wind being at North: where we got all our goods on Land, alwayes looking when the *Lodia* would haue split. But, by Gods Almightye Prouidence, she beate ouer that Sand, and lay betwixt it and the beach: so that when the tyde was fallen, she fate on ground, as if she had beene in a creeke, the Sands all dry round about her. Also on the West side of *Suatinose*, in the Bay is a great River, called *Indiga*, which is, deepe Water, and a good Harbour for a ship, as the *Russes* doe report.

The thirtieth, the storme continued all the day long. The one and thirtieth, about noone it blew lesse wind, and at night we stopped our leakes as well as we could.

The first of September, in the morning wee got our goods againe aboard. The second, in the morning, we went roomer with the obscure Harbour, the wind being at the North-west, but at noone, it came to the South-east and East South-east, so we weighed, and stood to the Westwards againe, vntill wee came to the River, where wee came on shoare the last yeere: which is called *Zenouea*, where wee anchored a little to the Eastwards, and ridde the most part of that night.

The third, in the morning we weighed, and stood to the Westwards, but the wind comming to the West South-west blowing hard, and hauing the tyde against vs, we anchored againe about ten of the clocke on Thursday, being the third day: yet within two houres after, we were forced to weigh, and put roomer to a little River or Creeke, that is, called *Croostona*: where wee ridde vntill the ninth day. Then we loosed, thinking to haue gone forth to Sea, the wind being Easterly; but it blowing hard, and there running a great streame of fresh water, that it put vs

on ground againe, wee were in great danger againe of losing all. So wee were forced to get all things on shoare againe, and then got her off the eleventh day, and went into the Creak againe: and stopping our leakes as well as we could, we got our goods aboard againe.

The fourteenth, the winde comming to the East South-east, wee got forth to Sea with much adoe; and sodne after, the winde came to the East North-east, a faire gale: and wee stood it alongst the Land South-east and by South, and North-west and by North all that after-noon untill mid-night; at what time we were thwart of Callenose. The fifteenth, about three of the clocke in the morning, the winde came to the North-east, and blew very hard, so we steered away South South-west, and at night wee fell with a shoald, which they said, is thwart of the

Knocke Iohn. Mezen mouth; but I take it, it was *Knocke Iohn*.

The sixteenth, in the morning about eight or nine of the clocke, having carried but an hullocke of our sayle all night, we fell with *Danieloue Stolbe*, on the Coast of *Lappia*, the wind being at South, and blowing hard, so that we went into Harbour at the West of the Iland, there standing five Crosses on it, it being a Rocke. And there are foure Warlocks on the Mayne, and another on a Rocke to the Westwards; yet it is but for Lodyes, and that a bad one also, beeing full of Rockes round about, where we rid untill the six and twentieth. Then we departed forth of *Daniela Stolbe* about noone, and at night we came to *Sasnowets*, where we rid all night. The seven and twentieth, in the morning we fell with *Churua Nose*. The eight and twentieth, wee arrived at *Arkania*, where wee landed our Oyle. The nine and twentieth, wee arrived at *Colmogre*.

Extracts taken out of two Letters of *Iofias Logan* from *Pechora*, to Master *Hakluyt* Prebend of *Westminster*.

THere use to come hither in the Winter about two thousand Samoieds with their Commodities, which may be such as we dreamed not on yet. For by chance one came to us with a piece of an Elephants Tooth, which he said he bought of a Samoied. And heere are men called *Tingussies*, whose Countrey is beyond the Rivers of *Obi*, and *Taes*; and bordereth upon the great River *Yenisse*: which is a good River and a deepe, and falleth into the Sea *Naromzie*. And it should seeme it is not farre from China. Therefore you may conceive what hope there is of this Enterprize, if it please God it may be followed as it ought to be. Thus beseeching Almighty God to blesse you and us, I commit you to the protection of him, who is the giver of all goodnesse, Jul. 24. 1611.

This piece of an Elephants Tooth was sent into England. The Sea Naromzie,

In another Letter from *Pechora*, August 16.

THere come two or three thousand Samoieds hither to trade with their Sables, Beavers, Blacke Foxes, Squirrels, Wolfes, Rosomacks, Ermines. And here is caught in September, good store of Salmon, Traine of a certayne great fish, called a *Bealonga*, and *Morfes*, and Seales Oyle in the Sommer time, and White Foxes and Feathers. I had some conference with a Russe, who told mee that the Samoieds told him, that there lye *Minchins*, which in their Language is strangers, buried in the Sand in Coffins, with their armes a crosse their breasts: which they estimate to be about sixtie yeeres ago. And that they found Writing Tables in one of their pockets, and other small Trifles which they tooke away. The *Vaygats* is sometimes open and sometimes shut: and upon them groweth *Christall* of the Mount. The *Russes* and *Permarks* trade yeerely with them of the River *Obi*, and beyond. They goe by Sea into the great Bay beyond *Pechora*, called *Yowgorsky Shar*: into which there fall foure Rivers; The Eastermost whereof they call *Cara Reca*, or the Blacke River; beyond which they passe unto another, called *Moetnaia Reca*; then they come to a *Voloc* or necke of Land, which continueth but three *Versts*; over which they draw their Boats and goods, and so come to another River, called *Zelena Reca*, or The Greene River, which bringeth them into *Obi*: Into which on the Easter side, the River *Taes* falleth, making but one mouth with the River *Obi*, being shoald, and they report it to bee as broad toward the mouth, as a man can discerne over, having many Ilands therein.

Chrystall vpon the *Vaygats*. *Yowgorsky Shar*. *Cara Reca*. *Moetnaia Reca*. The *Voloc* or necke of Land. *Zelena Reca*. *Obi* River. *Taes* River. *Yenissey* River.

Tingussieya people. A White Citie. Great ringing of Bels.

Horses. People in Armour. They are not farre from *Cataia* and *China*.

Moreover, there is another great River, called *Yenissey* beyond *Taes*: which they say, is rather bigger and deeper then *Obi*; and it runneth up into the Land no man knoweth how farre. Although they haue discovered some fourteene dayes rowing up therein: neither can they learne of the Inhabitants thereof how farre it stretcheth; whom they call *Tingussieya*: who are a proper people of themselves. And the Samoieds report that they haue travelled so farre, that they came within sight of a White Citie or Towne: which should seeme to be builded of stone, for they durst not goe to make triall: and they heard great ringing of Bels. Also they say, that they saw beasts, but they were not like their Deere; for they had a great Mane, a long Taile, no Hornes, and their footing was round, not clouen, as their Deeres are: and they use to ride upon their backs, and not to draw in Sleds as their Deere use to doe. These I assure my selfe are Horses. And further they report, that there came people unto them all made of Iron, their heads, armes, hands, and legges: so that neither Arrows, Swords, nor Spears, could enter; which, as I coniecture, were people in Armour. For they said, that two hundred of them they thought were able to conquer all their Realme. By this you may gather, that they are not farre from *Cataia* and *China*. Thus haue I shewed unto you the greatest secret, and the nearest to the truth that I know. Requesting

you, if you thinke it meet, that the Right Honourable the Earle of Salisburie might haue a Copie thereof. Thus wishing you health and prosperitie in this World, and felicitie in the world to come, I cease.

CHAP. XI.

A briefe Relation of a Voyage to Pechora, and wintering there, began in the yeere 1611. Written by WILLIAM PERSGLOVE.

MAfter Iosias Logan, and William Gourdon, having received directions from the Right Worshipfull Company of English Merchants, Trading Russia. The eleuenth of Aprill, 1611. departed from Blackwall in the River of Thames, in a good ship, called the *Amitie*; whereof Iames Udum of Rederiffe was Master.

The sixteenth of Iuly, we arrived at *Pustozera*, being much wondred at by the Inhabitants, a *Permac* received vs into his House, and let vs haue a Warehouse for our goods. We all continued there vntill the five and twentieth of Iuly. Then wee returned in our Shallop againe to our ship, hauing a small *Russe* Boate in our company, to carrie some of the Feathers and Downe, which we brought there, our owne Boat not being able to carrie all, being pestered with our Prouision, and some Feathers, and White Foxes. Wee came aboard our ship the seuen and twentieth of Iuly, where wee deliuered those White Foxes, Feathers, and Downe, and an exceeding rich blacke Foxe skinne, hauing laded the *Russe* Boate with part of our goods. The rest of our goods they laid vpon the Sand to be sent vp afterward, leauing mee and *Marmaduke Wilson*, and an hired *Russe* with them, where wee attended to heare of Boates from the Towne. But Master Logan not hearing of any aboue a tunne and an halfe, could not get any to come downe to vs; because they feared to goe ouer the dry or shoald Sea in their little Boates being laden.

The one and thirtieth, our ship departed ouer the Barre, purposing to make their Voyage in *Noua Zembla*, or some Ilands not farre distant from thence. At their departure there were five and twentie Coaches or *Soymas*, in that Road of *Pechora*, with at least two hundred men in them bound for *Molgomsfey*, but hindered by contrary Windes and Ice, our shippes being ouer the Barre, they all came on shoare to vs; some threatening, others flattering vs, but after I had bestowed two Bottles of Beere among some of the best of them, they all went vp to *Pustozera*; where most of them that had any goods to sell stayed all Winter, and sold their Commodities in barker with the Inhabitants, and when they could happen secretly vpon any *Samoieds*, they would be trading with them also: which is contrarie to the Priuiledges granted by the Emperour to the *Pustozers*. Their Wintering there was no little hinderance to vs for the sale of our goods.

We arrived at the Towne the seuenth of August. In mine absence Master Logan had hired part of an House of one, called *Tiffon Vriawich*, a *Polonian*, who was turned *Russe*.

The three and twentieth of Nouember, I departed from *Pustozera* to goe for *Russia*, at three of the clocke in the afternoone, in the Company of certayne *Russes*, *Permacks*, and *Samoieds*, which *Samoieds* were our Guides ouer the Mountaynes: and one dayes journey ouer the Rocks, which they call *Cameni*, which are not Rockie Hills, as in *Norway*, but high Lands, yet in most places smooth, and most marsh grounds full of little Hillocks, which being couered with Snow and frozen, did not much annoy vs. Our Argeshey or Carauan were about two hundred and ten Sleds, drawne the most part with two Deere in a Sled. They had also about two hundred spare Deere, to ease the wearied. We kept company vntill the fourth of December together, hauing

passed two third parts of our way to *Slobotka*, being the first Towne in the Countrey of *Mesen*, that we saw. And then in company of foure Sleds, hauing each two choice Buckes, with a *Samoied* in the fift for our Guide, we left the Argeshey, and rid post for *Slobotka*, where wee arrived the ninth of December, at ten of the clocke at night. In this Towne I found one *Thomas Ligon* an *Englishman*, who had serued Master *Richard Cockes* of *London*, who saluting mee in *English*, maruelled much to meet me there: and carried me from the rest of my company to his Lodging, and gaue me there very kind entertaynement. The next morning I departed thence in his Sled, hauing ouer night hired an Horse to the next Towne, which was fifteenth Versts off: And so traouelling day and night, changing Horses at euery conuenient place, I came to *Colmogro* the twelfth of December: and deliuered my Letters from Master *Iosias Logan* our Faكتور in *Pustozera*, to Master *Fabian Smith*, then Agent for the *English* Company. Hauing rested my selfe foure

dayes there, and received certayne Money to helpe to put off some of our goods at *Pechora*, I departed from *Colmogro* the seuateenth of December, and came to *Slobotka* the nineteenth day; the height of the Pole being there some sixtie five degrees. I stayed there till the two and twentieth of the said moneth, by which time the *Permacks* and the Inhabitants of *Pustozera* were

They were first received into a *Permack* House.

August.

Nouember. His Voyage ouer-land to *Slobotka* and *Colmogro*. Mountaynes & *Cameni*, or Rocks.

Trade with the *Samoieds* of *Ougoria*. Eight or nine hundred *Samoieds* come to *Pustozera*.

The false suggestions of the *Russes* against vs.

Hauing made my prouision for my journey, and taken my leaue of Master *Thomas Ligon*, wee set forward that night, and rid not aboue five and twentie Versts, to a place where wee found the *Argeshey* which set out from *Slobotca* the two and twentieth day in the morning by breake of day. We had better passage in our returne, then we had in our journey from *Pustozera*, by reason of much Snow fallen in the time of our being in *Russia*, and frozen so hard, that it bare both Deere and Sleds in all places. Wee kept together with the *Argeshey*, being then two hundred and fiftie Sleds, till we had passed more then two thirds of our way ouer the Mountaynes: and then long before day hauing chosen Buckes of the best, wee departed the fourth of Ianuarie, being eight Sleds in company, and rid post all that day and night following, beeing *Moone-light*, saue sometimes for the space of an houre that wee stayed where, the *Samoied* our Guide knew there was good store of Mosse, (which is white) to refresh our Deere. The fifth of Ianuarie, we came to *Pustozera*, hauing in fortie houres travelled three hundred and fiftie Versts with our choice Buckes. Our *Argeshey* or Carauan arrived there after vs the twelfth of Ianuarie.

The *Samoieds* being the onely Guides in Winter, either from *Pustozera* to *Slobotca*, or to any other places Eastward, as *Ougoria*, *Siberia*, or *Molgomsey*; know, by their continuall travell, the way, though it be neuer so thicke weather, as also where most store of white Mosse is growing: and according as they find themselves neere vnto some mosse place, be it something before night, or within night foure or five houres before they can come thither: there for that Night they pitch their Tents, being for the most part made of Deere and Elkes skinnes: we had in our companie foure great Tents set vp, and some twentie vnder each Tent. This worke of pitching the Tents belongeth vnto the Women. In the meane time the men vnyoake the Deere, and turne them loose to digge through the Snow, bee it neuer so deepe, for their food and sustenance. Then the *Samoieds* (of euery Tent one) out of the next Wood, prouide as much Fuell as shall serue their turnes for their abode there. First, they set on Kettles full of Snow water, which being melted, they drinke thereof euery one a good draught: then they seeth their Supper, vsing as before Snow water melted for their Drinke. Our lodgings were vpon the Snow within our Tents, round about the Fire, hauing vnder vs for our Beds the skinnes of Deere, couered with our day apparell. For all the time of our journey, the Merchants, whether Stranger, *Russe*, or *Permac*, according to the number of them, make prouision of Victuals to feed the whole familie in euery Tent, euery man his day about, together with the *Samoieds*, their Wiues and Children; who carrie all their Household euery where with them; and out of their Sonnes and Daughters, they appoint a watch ouer their Deere, for feare of the Wolfe and other Beasts, which notwithstanding their watch sometimes kill in a night one or two of their Deere, as it fell out two nights in our journey to *Slobotca*. This *Slobotca* is a pretie Towne, hauing in December and Ianuarie, great resort of people repaying thither, as well Rich *Russes* out of many places, with money to buy Fures, as others with prouision of Meale and Malt, and other Commodities, to furnish the *Pustozers*, as also to buy Fish, to wit, Salmones, Oyle of *Bealugos*, Deere skinnes, and Fures of them.

The tenth of Ianuary, the Inhabitants of *Pustozera*, returned from Trading with the *Samoieds* of *Ougoria*, on which Iourney they set forward the five and twentieth of Nouember: and within three dayes after, came betwixt eight or nine hundred *Samoieds* with a small quantitie of their Commodities, in respect of former yeeres, by reason of Warre betweene the *Samoieds* of *Ougoria*, and *Molgomsey*, who were wont to Trade one with another, and not to warre one against another. So Sables, and other Commodities being scant, the inhabitants sold them very deare: yet notwithstanding, the *Russes* bought vp all, struing one to haue them before another. So that after that little money, which we had was bestowed, wee could not doe any thing in barter. Moreouer, the *Russes* did not onely informe against vs, to the Inhabitants to stirre them vp against vs, but also vsed the like meanes to the *Samoieds* to dissuade them from trading with vs, either in their owne Countries, or else-where; alleading that wee would betray them, and not onely carrie them away to make them Slaues, and robbe them, but also would murder and destroy all the rest, wheresoeuer wee should come. The Inhabitants also of *Pustozera*, being incensed by the *Russes*, doubting wee would enter farther into their Trade Eastward, began also to hinder, and forbid the *Samoieds* to come to vs. Yet by meanes of our Host being a *Polac* borne, we spake with diuers of the principall of the *Samoieds*, hee being our Interpreter, and wee our selues vnderstood certayne *Samoieds* speaking broken *Russe*, and by these meanes we found out more at large the despitefulness of the *Russes*, and the enuie of some of the Inhabitants against vs; as also their feare, least wee, or any other Stranger, should enter into further Discoverie of their trafficking toward the East, but especially about the River *Ob*. Some sayd we were sent as spies to betray their Land to the *Pole* or the *Swethen*, with whom they then had warre. Some gaue counsell to put vs vnder the Water: others aduised to set vs vpon the Sand, where wee should haue bene without all doubt drowned in short space, others thought best to send vs vp

to the Nobilitie, and to seaze on all our goods to the vse of the State. But diuers of the best in the Towne, with whom wee kept all friendship that possible we could, withstood those bloudie practises. The Lord therefore bee blessed.

The fifth of March, the Inhabitants of *Pustoxer* went againe to *Slobotca*, carrying the *Russes* March. with their Commodities thither.

They returned home the eleuenth of Aprill, 1612. The one and twentieth of Aprill, water was first seene vpon the maine Riuer *Pechora* about the Ice, descending from about *Oust-zilma*.

The twentieth of May, the Ice brake vp. The five and twentieth of May, certayne of the Inhabitants of *Pustoxer*, went by water vnto *Oust-zilma*.

10 The sixe and twentieth, *Iosias Logan* with our Hoast the *Polonian*, hired a Boate and went toward *Oust-zilma*, carrying with him certayne Cloath and Copper Kettles, in hope to sell them well there, being intreated in the Summer before by one of their Townesmen to come thither, or to send one to Winter there: alledging that they got great store of Losh-hydes, Squirrels, Sables, and Beuers. Which some yeeres indeed, as we were credibly informed, falleth out according to his report. But at his arriual there, diuers of the Townesmen came against him, and would not suffer him nor any of his Boate to Land for the space of ten houres: but in the end, they let him goe on shoare, after, as wee suppose, the Inhabitants of *Pustoxer* had bought most of their Commodities. So that hee staying there two dayes, could get but nine Losh-hydes, and halfe a timber of course Sables, in barter for some Cloath and Copper. The principall cause of his going thither, was, to meete with some of the *Permacks* out of *Permia*, who some yeeres come downe with Rie, and Rie-meale, and thought to haue giuen notice to those *Permacks* of our being at *Pustoxer*, and to haue willed them to haue perswaded their Countrey-men to bring thither the next Spring following all their Commodities, being Waxe, Honey, Losh-hydes, and Furies, which they might doe for halfe the charge that they are at in bringing them to *Archangell*, on the Riuer *Duina*.

Oust-zilma is a pretie Towne of some sixtie Houses: and is three or foure dayes sayling with a faire wind against the streame from *Pustoxer*, but backe againe they may sayle it in two dayes.

The third of Iune, came the first *Russes* in their Cayooks by Riuer out of *Russia* to *Pustoxer*. These Cayooks, be small Boates of two tunnes, hauing two men in each Boate.

30 The twentieth of Iune, nine *Russe* Coaches or Soymas, passed by *Pustoxer* from *Oust-zilma* for *Molgomsy*. The one and twentieth, sixe *Russe* Soymas more departed from *Pustoxer*: all the rest hauing giuen ouer their Voyage, which came thither the Summer before, 1611. The two and twentieth, one Soyma belonging to the Towne of *Pustoxer*, departed for *Molgomsy*.

The three and twentieth, and foure and twentieth, the Inhabitants of *Pustoxer*, went to Fish for *Bealugos* vnder the *Boluan*, being the highest Land neere vnto the *Drie Sea*, and two dayes sayling from the Towne.

50 The five and twentieth, I departed after them, and arriued there the seven and twentieth, hoping to haue prouided good store of *Bealugos* Oyle. But it fell out contrarie: though there were about fiftie Boates, hauing in euery Boate three men, and in many foure, by reason it pleased God to send such windie and stormie weather, that the Boates could not goe to Sea in many dayes together, during their wonted time of Fishing for those Beasts: being till the twentieth of Iuly. Then euery man leaueth that Fishing, and repaire to their owne Fisherie, to hunt Ducks, Geese, and Swannes, which most yeeres they get in abundance, and make good profit of their Feathers and Downe: as also of their Flesh, which they salt vp in Caske for Winter prouision, seruing them also all the Summer for Flesh dayes. These *Bealugos* they catch with harping Irons, tyed fast to a long rope of ninetie or an hundred fathoms, with a staffe of the length of two yards or somewhat longer, being put loose into the Iron, wherewith when the beast commeth within the reach of him that striketh, he smiteth him with the Iron, leauing it in the Beast: then the rope being layed out cleere to vere out, the man holding his Staffe still in his hand: but the Beast being wounded hasteneth to the bottome, where hauing beate himselfe neare to death, they hall in their rope by little and little, the Beast ascending thereby. And if they finde him not neere death, they strike him againe: and being dead they cut off his skinne with the fat on it in many parts, some the breadth of two hands, some more or lesse. Then comming on shoare, they take the Fat from the skinne, and cut it in small peeces to dissolue it to Oyle, casting away the Flesh which is red, to the Fowles of the Sea; except some poore *Samoied* come that way, whotaketh it, though it haue lyen putrifying two or three dayes, and dryeth it, and maketh good cheare with it with his Familie. This Beast is as bigge as two good Sturgions. Moreouer, I was informed by an ancient Traueller, that the Flesh and Fat of that Beast, being cut as Beeffe and salted in Caske, is a great and rich Commodity in *Italie*; which cannot chuse but to be much better then young Whales, which I haue heard that the *Biskayners* vse to preferue for good meate. With the Fat of some one of these Beasts, they will fill three Barrells, of some lesser two barrells, and some yeeld but one barrell of Blubber, which they call *Shilliga*. In that Summer when I was there, by reason of Northerly windes blowing hard, they killed by all their Boates not about fortie Beasts: with some Boate they killed two, with other three, with some foure. But with most not one.

Our men intreated to winter at *Oust-zilma*.

Oust-zilma.

Iune 3.

Sixteene Soymas depart for *Molgomsy*.

Fishing for *Bealugos* vnder the *Boluan*.

The Riuer *Ob*.
The Riuer *Tas*.

The thirteenth of July, I received a Letter from Master *Iosias Logan*, the effect whereof was ; That the Company of our *English* Merchants of *Russia*, had sent a Boate out of *Russia* by Riuer, which stood them in foureteene Rubbels or Marks for vs to goe in her, or by *Lodia* for *Russia*. For they were purposed not to send a Ship for vs that yeere.

The ninth of August, Master *Iosias Logan*, and *Marmaduke Wilson*, came from the Towne of *Pustozera* in a *Lodia* to goe for *Russia*, and Anchored in the *Glowbuc*, which is a deepe place of the Riuer. Heere wee stayed ten dayes to make vp our Oyle. In the meane time the *Lodia* got her full lading with Omelies, and Seegies salted in Caske, attending a faire winde.

The ninth of August, wee set sayle out of the *Glowbuc*, and entred the *Suchoi-morie*, that is, The *Drie or shoald Sea*, and stirred away next hand North North-east.

The nine and twentieth, a little before day, not thinking wee had beene so neere the Land, wee were on the Breches of *Promoi Coskoi*, or the Sands of *Promoi*, a bad Harbour so called by the *Russes*, and beate ouer one Sand by Gods prouidence onely, so high, being halfe full of water, that in dispaire of euer getting her off againe, wee vnloaded most of the goods, as Fish, Oyle, Feathers, Downe, and Losh-hydes, as soone as it began to bee day-light, and that the *Russes* knew vs to bee vpon the mayne Land. The thirtieth day, being somewhat calme, and the wind Easterly, but thicke weather still, there came three men from *Vasilie Beregen* his *Lodia*, who was our Consort, while wee were working to get our *Lodia* a floate againe, and told vs, that their *Lodia* was beaten in peeces vpon the mayne Land, some seuen or eight Verfts to the Westward off vs. The one and thirtieth, wee laboured againe, and by Gods assistance got her a floate, hauing taken out almost all her goods : and that night laded some part againe.

The first of September, wee got all our goods aboard, and at Night-tide being faire weather, the winde North-west and Moone-light, wee put from that comfortlesse place, and went into the *Promoi* Harbour, hauing on the Barre nine or ten foote water ; but within foure or fve fathoms. A South-west Moone maketh there a full Sea. It is in the great Bay betweene *Suti-nos* and *Candinos*. The second, the winde at East North-east faire weather, wee set sayle with our leake *Lodia*, the Pompe neuer resting.

The third, the winde variable, wee sayled along the the shoare till about Noone : then the wind comming to the West, wee put backe againe for *Christona Stanouecha*, which is the Crosse Harbour, where wee rode in a fine Riuer, hauing a bad Barre.

The ninth, in the Morning wee purposed to put to Sea againe, the winde Easterly : but the Barre was so growne and warped vp with sands, when wee came vpon the entrance of it, that we could not passe ouer, neither with Wind nor Qares, but were forced vpon the mayne : where our *Lodia* was beaten so high vpon the sand, that all hope of sauing her was past. That day wee got out of her an hundred Barrels of Fish and Oyle, and yet we could not get her off againe.

The tenth, the winde being at North-west, caused high Tides, by which meanes we got her off, and brought her againe into Harbour. The eleuenth wee had so much winde and Snow, that we could not get our goods aboard all that day. The twelfth, we got all aboard, hauing stopped most of our leakes with Mofse and old Cloutes.

The thirteenth, the wind at East, faire weather, wee put to Sea out of that bad Harbour, lea- uing one of our Boates there, and eight Barrels of Fish to ease our leake *Lodia*. The fourteenth, about mid-night we were thwart of *Candinos*, and stirred South-west, and South South-west all the next day : but the Night following being much winde, the *Russes* esteeming themselves to bee on the Westerne shoare, strooke sayle, and by Day-light we saw Land to the Westward of the *White Sea*, being the sixteenth day : and wee were forced againe into another bad Harbour, called *Danilo Stolb*, that is, *Daniels Piller*, on the Coast of *Lapland*, where we made our *Lodia* fast among the Rockes : where shee lay drie halfe-tide, and lay there benept and wind-bound vntill the fixe and twentieth day : and then at Tide-time wee got out of that place.

The eight and twentieth, wee entred into the Riuer of *Dunya*, and landed that night at the Castle of *Archangel* in the *English* House, all our Oyle, Losh-hydes, and other goods, as Fea- thers, Downe, &c.

The nine and twentieth, about mid-night we came to the *English* House at *Colmogro*, and there continued all the Winter.

The three and twentieth of Aprill 1613. the Riuer of *Dunya* brake vp at *Archangel*.

Other Observations of the sayd WILLIAM PURSGLOVE.

FROM *Medenskoi Zauorot* to the Isle of *Vaygats*, is two dayes sayling with a *Russe* *Lodia*. 60
FROM *Vaygats* to the Riuer *Ob*, is foure dayes sayling. The Riuer *Ob* lyeth North and South. The course from *Vaygats* to *Toukoi-coscoy*, is North-east ; and from thence East to the mouth of *Ob*. Within the *Ob* some three dayes sayling, is a Riuer on the East side called *Tas*, hauing as it were a Barre at the entrance thereof : yet there is alwayes eleuen or twelue foote water vpon it.

it, but within it is very deepe. Within two dayes sayling within the *Tas*, the *Russe* hath builded a Towne and a Castle, being called *Molgomsey*; where all the Hunters of Beasts assemble, and bring their Furs with them. Also the *Russe* Soymas or Boats and those of *Pustozera*, come thither with their Meale and other Merchandizes. And hauing sold or bartered their Commodities, euery one returneth home, some to *Pustozera*, and others to *Russia*. The Hunters also provide against the next Winter for Hunting againe.

There are three Riuer vnder the high Land of *Ougoria* and *Naramzey*, and great store of Morffes about the point of *Naramzei*, whither the Inhabitants of *Pustozera* doe send a Lodia in the Autumne, with diuers Commodities to trade with the *Ongorian Samoieds*. Also they kill many Morffes, onely taking their Teeth, and trauell among the *Samoieds* all the Winter to trade with them, and returne ouer Land to *Pustozera* in Ianuarie next following. Some yeeres, if the winde doe not serue them instantly, they are glad to giue ouer that Voyage by Sea. As for example, in the yeere 1611. when we wintered there, the frost came vpon them before they had wind to serue them; whereupon they were forced to giue ouer that Voyage. And as soone as they could trauell by Sled, some of the richest of the Sonnes and Seruants of the Townsmen, were sent with certayne Commodities to barter with the *Samoieds*, against their Fathers or other Friends should come after in the Winter, and to buy vp all the best Furs and other Commodities.

The *Russes* when they sayle for *Molgomsey* in their Soymas, goe not about *Naramzei* point to the mouth of the Riuer *Ob*, but sayle vp a narrow Riuer, called *Moetnaia Reca*, that is to say, the Muddie Riuer, & at the head therof they hale their Boats ouer a little neck of land into the Riuer *Zelenai*, that is, the Green Riuer, & so fall down into the Riuer *Ob*: and so saile Southward vp the Riuer *Ob* till they come to the Riuer *Tas*. From the Barre of *Tas* to the Riuer's mouth, is about a daies & a nights sailing. There is an Iland in the mouth of *Tas*, being very high land. From thence the Riuer to the Towne, leaning the Iland on the left hand are eight dayes sayling. But ere you come to the *Tas* Riuer, there is a small Riuer called *Power*, or *Piet*; where they get the best Sables of all *Molgomsey*. And vp the Riuer *Tas* to *Volochanko*, against the streame are fixe dayes sayling Eastward, till you come to a *Voloc*, or necke of Land a mile and an halfe ouer, beeing marish ground, ouer which the *Russes* and *Pustozers* hale their Boats into another Riuer, called *Toromhan*, and rowing downe with the streame three dayes, they fall into the mightie Riuer *Yenisee*. At the mouth of the Riuer *Toromhan*, there dwell people on an Iland, hauing builded them a little Towne and a Church. And from thence they sayle downe the Riuer to *Hawtick*, which is a great Riuer, and runneth vnto the East.

The Riuer of the *Tingussies*, is three dayes and three nights sayling within the Riuer *Yenisee*. There are no Woods neere vnto the mouth of *Yenisee*. But in the Riuer of *Tingussie* are great store of Woods. There are two or three Riuer betweene the mouth of *Yenisee* and *Tingussie*, but not so large as the *Tingussie* Riuer is; neere vnto which the *Russes* doe fish: and as soone as it freezeth, they go againe to their old trade of hunting the Sables, Beuers, and Foxes. And hauing in two winters so laboured for themselves, those that be good Husbonds return rich into *Russia*: And except they fall againe into pouertie through fire or other wayes, neuer returne thither againe.

The *Tingussies* are a taller people then the *Samoieds*, and weare their Garments made of skins shorter, and made closer to their bodies then the *Samoieds*. They be a very gentle people to converse withall.

From the mouth of *Ob* to the great Riuer *Yenisee*, as a *Russe* told mee, is foure dayes and foure nights sayling. Betwixt *Ob* and *Yenisee*, is high blacke Land.

Beyond *Yenisee* Eastward is another great Riuer, called *Pisida*. The Land trendeth due East beyond the Riuer *Yenisee* to *Pisida*: and to another Riuer, called *Catonga*, which commeth out of *Cathay*, whose King the *Permackes* call *Toulka Tsar*. The Riuer lyeth North and South: they know not how farre. For the *Tingussies*, of whom they had intelligence of this Riuer, are afraid of Gun-shot that they doe heare, which they vse on the South part of that Riuer, and dare not trauell vp it. In it they saw Vessels with two or three sayles, which in the Spring, sayle downe the Riuer Northward, and in the Autumne, returne againe to the South. But they know not whether they fish, or goe to gather some Mynes, which are supposed to be in those Countreies, not daring to goe neere them. It was told me, that betwixt *Pisida* and *Catonga*, about the mid-way vpon the Sea-coast were found diuers Stones, some like vnto Gold in colour, other white and like Siluer. Also the *Tingussies* haue seene people about that great Riuer, called *Catonga*, riding on Horses: and it is said, that there is great store of Corne, Beefes, Horses, Sheepe, and Goates in this Countrey.

The trauell from *Pechora* to *Permia*, *Ougoria*, and to the Riuer *Ob*, and the Townes situated thereupon, ouer Land.

From *Pustozera* vp the Riuer *Pechora*, with a faire wind to the Riuer *Onse*, is fourteene dayes sayling by Riuer. From *Onse* to *Podcamen*, ten dayes. From *Podcamen* to *Ob* eight dayes by Deere

Molgomsey a great Mart.

Ougoria and *Naramzei*.

Store of Morffes. They returne from *Ougoria* in Ianuarie.

A Towne.
A necke of Land.

The Riuer *Toromhan*.
The Riuer *Hawtick*.

The Riuer of the *Tingussies*.
Two or three Riuer from *Tingussie* to the mouth of *Yenisee*.

The Riuer *Pisida*.
The Riuer *Catonga*.

Ships with two or three sayles.

Horses about the Riuer *Catonga*.

Beresena.

Deere in Winter time, as soone as the Snow is fallen and frozen. From thence to *Beresena* sixteene dayes; which is a Towne of Trade, it is from *Pustozera* to *Vade* in *Ougoria*, beeing on the West side of *Ob*, a monethes journey or trauell by Deere. This *Vade* is a little Towne, hauing the Houses thereof builded vnder the ground.

The Riuer of *Pechora*, runneth through great *Permia*; and the head thereof is five Weekes trauell from *Pustozera*.

Vercho-towria.

From Great *Permia*, is nine dayes trauell by Horse and Sled to *Vercho-towria*. *Vercho* signifieth in the *Russe* Tongue, The higher: as *Vercho-towria*, is *Towria* The higher. From thence by Riuer

Tumen.

Tobolsca.

Surgout.

Tom.

is ten dayes journey to *Tumen*. From *Tumen* to *Tobolsca*, sixe dayes downe the Riuer *Irtysh*. *Tobolsca* is the chiefe Citie in *Siberia*. From *Tobolsca* to *Surgout*, or *Sergalt*, is sixe Weekes journey vp the Riuer *Ob*. From *Surgout* to the Citie *Tom*, seated among the *Tartars*, is three Weeks vp the Riuer *Ob*. The *Russes* know no farther of the Riuer *Ob*; nor how farre it stretcheth to the Southward: But they suppose that it runneth much farther to the South, by reason there come so many severall Nations downe the said Riuer to trade at *Surgout*, and *Tobolsca*: as namely, the people of *Boughar*, the *Teficks* or *Persian* Merchants, and many sorts of *Tartars*. *Abraham Michaelonich* was chiefe Customer at *Surgout*, 1611. And hee told me, that hee receiued for the Emperours Custome for goods, bought and sold that yeere, the summe of sixteene thousand Robles, or Markes.

Many Nations come downe the Riuer *Ob*, from the South to trade at *Surgout* and *Tobolsca*.

The Country of King *Alteen*.

An *Alteen* is six pence, a *Dingo* is a penie.

Moreover, he told me, that the people of *Cathay* doe trade to *Surgout*, and people from diuers other Kingdomes, as from *Alteen Tzar*, or King *Alteen*, who among other things bring Plates of Silver and sell them. Another *Russe* named *Philat*, who had trauelled farther among the *Tingussies*, then any other *Russe*, and speaketh their Language, told mee he had bought of a *Tingussie*, a Plate of Silver weighing in *Russe* Money fortie two *Alteens*, foure *Dingoes*, for twentie blue Glasse Beades.

Beresena vpon the *Ob*, before you come neere *Tobolsca*, is a Towne of Trade for Fures, but especially for Losh-hides; which are bought for tenne *Alteens* a piece. I was told by a *Permac*, that there was a *Russe* which bought foure thousand Elkes, or Losh-hides, there for a fourth part of a Roble or Marke a piece.

Hawkes as white as snow.

To the Eastward of *Pechora* are store of Hawkes, which I hold to bee as good as the *Turkie* Hawkes, namely, slight Falcons, Goshawkes, and Ier-falcons, whereof some are as white as Snow, others speckled White and Red. Likewise, there are all kinds of the richest Sables brought from *Molgomssey*, and blacke Foxes. There is also Christall of the Mountayne. If we might haue libertie to trauell those Countreyes, wee might haue these Commodities cheaper there then at *Pechora*. And within the *Ob* we might vent our Commodities at a better rate.

Commodities for Pechora, Siberia, Permia, Ougoria, and among the Tingussies.

Russe Money.

First, at *Pechora* readie Money, being *Russe* Money, is the best and principallest both to put off other goods to profit, as also to get credit among the Merchants-strangers at our first comming thither, till Trade be settled and knowne through *Permia*, and *Siberia*. Salt, Rie, Meale, white *Danske* Rie Kil-dried for heating in the ship, Oat-meale and Butter for the *Samoieds*; all sorts of course Cloth, some fine Cloth, Copper, and Brasse Kettles of the middle size, from two pound to thirtie, or thirtie five. But Brasse not aboue fifteene pound with eares of Brasse, all the Kettles and eares of one piece. Also Files to sharpe Arrowes and other things, small Horse-bells, course Canuasse for vpper Gownes. Foure peny, sixe peny, and ten peny Nayles: small Anchors of foure and twentie pound a piece. Frankincense for their Churches and Houses.

Commodities for the Tingussies.

A course Ham-borough Cloth.

Pewter, Pewter Sawcers, Little Platters, Flat Poringers, some grauen, some vngrauen. Nests of Cups, some grauen, others vngrauen. Salt-sellers. Plates, or sheets of Latten being white. *Hamborough* Lichenaes, Blue, Red, and Tawny. But I think our course Northerne dozens, and course Kerfies Northerne dyed into those colours, would vent as well and better then they: they being thicker walked. And the *Samoieds* delight altogether in thicke Cloth. Grey dozens of an easie price would vent well among the *Permarks*, which were much grey or mingled coloured course Cloth. And some course dozens died Yellow, or Northerne course Cloth Red and Yellow, would bee no bad Commoditie.

Aqua vite of two sorts, the best and indifferent for the *Samoieds*. Glasse Beades, Skie coloured. Needles round and three square. Brasse Basons, *Russe* Linnen Cloth, or *Polish* Linnen Cloth. Hops, Mault, *Russe* Sope. All sorts of strong Wines, as Sacke and *Canarie* Wine. Bacon is a good Commoditie in *Siberia*.

CHAP. XII.

Later Observations of WILLIAM GOVDON, in his Wintering at Pustozera, in the yeares 1614. and 1615. with a Description of the Samoyeds life.

He twentieth of Nouember, I departed from Pustozera, to goe to Tongorie, at foure in the after-noon, and did ride most of the Night, before wee came to the Choome, going East South-east. The one and twentieth, Mihiloe returned to the Towne, and we remoued and went our Iourney, faire and little wind. The two and twentieth, little wind North, wee kept on our course East South-east, hauing gone from the Towne 50. miles, at night Mihiloe came to vs. The three and twentieth, little wind, we went on our Iourney, and at Noone passed ouer a little Riuer, called Coy, falling North into Pechora, 14. leagues below the Towne, and at Night came all the Russes from the Towne, hauing gone 24. miles East South-east.

The foure and twentieth, wee remoued on our Iourney being very cold, and went not above ten miles East South-east, at Night wee broke one of our Sleds, which went laden with Viſtuals.

The five and twentieth, wee went forward very slowly, at Noone I receiued a Letter from Master Copman by Poma Cretisoue, this after-noon another had his Sled broken, we went 10. or 12. miles. The sixe and twentieth, we continued on our Iourney, and at Euen we passed ouer a Riuer, called Shapkina, falling South into Pechora; halfe way betwixt Pustozera and Oust-zilma, a Sled broken and mended out of hand, going East South-east 15. miles. The seuen and twentieth being Sunday, the wind at South-west, did blow very hard, and Snow all the day, the snow driving that wee could hardly see which way to goe, yet we kept on East South-east 18. miles.

The eight and twentieth, in the Morning, wee passed ouer Nougorotka Riuer, which falleth West South-west into Shapkina Riuer, fixe dayes Iourney about Oust-zilma, the wind South-west, and Snow all day, wee kept on still East South-east 15. miles. The nine and twentieth, the wind South, with Snow all day, being not cold, we went on East South-east 20. miles. The thirtieth, the wind East South-east, very cold in the after-noon, we passed ouer Habeaga Riuer, which falleth into Pechora, fixe dayes Iourney about Oust-zilma, going 20. miles.

The first of December, the wind East blowing very hard, the Snow did drive so hard, that we could not goe forward, but stood still all day and did not remoue. The second, calme and not so cold, wee went on East South-east 10. miles. The third, in the Morning it was very warme, at Noone the wind North, it was extreame cold, the Snow driving very thicke, in the after-noon we passed ouer the Riuer Haryena, which falleth into Coluoy South-east, hauing gone East South-east 15. miles.

The fourth day warme, we went East, at Euen we came to a Riuer called Coluoy, which falleth South into the Riuer Onse, where wee stayed all Night, hauing gone 20. miles. The fift, in the Morning we went on vpon the Riuer six or seuen miles East and by North, and came where it parted in two, the one keeping North-east, the other being called Sandauets; from the South-east wee went betwixt them both East and by South 12. miles, and tooke vp our lodging vpon a Playne where no Wood is to be seene.

The sixt, being Saint Nicholas day, which with the Russes is held a principall day, in the morning they caused their Images to be brought into the Choome, lighting Wax-candles before them, making their Prayers to them, according to their order; after which, I gaue them a bottle of Aqua vita, wherewith the Guides were drunke, that they could not guide their Deeres, but set me to direct the way by Compasse, which I did all the day, although I had but little skill, we went South-east and by East 20. miles.

The seuenth, being very faire weather, our Guides lay all the day with Pohmeall, and could not goe forward. The eight, faire and calme, we went forward South-east and by East 10. miles, and tooke vp our lodging by a small Riuer which falleth into Sandauets Riuer. The ninth, very cold, that we had much adoe to keepe our selues from freezing, going on foot all the day ouer a playne where no Wood groweth, going South-east 15. miles, and lay by a Wood side all night. The tenth, the Frost was so extreame, that wee lay still and could not proceed. The eleuenth, being Sunday, the Frost continued extreame, we remouing, there were few in the Companie that had not some part of their faces frozen, and my selfe, although I was something better provided then any of them, yet I had something to doe to keepe my selfe from freezing, going on foot most part South-east and by East 15. miles. The twelth, the Frost was so extreame, that there was no looking forth, but lay still all day. The thirteenth, not altogether so cold, wee proceeded on our Iourney 20. miles South-east & by East, and at night we passed ouer the Riuer Hoseda, which falleth South-east into the Riuer Azua. The fourteenth, the winde South, with Snow and not so cold, we went thorow Woods 20. miles, East South-east. The fifteenth, the wind South, with

Glouboka is 67. degrees 55. minutes.

Snow, and not so cold, we went East South-east, at Noone wee passed ouer *Azua* River, which falleth South into *Ouse*, we continued still East South-east 30. miles.

The sixteenth, the wind South, in the Morning we set forth East South-east, ouer a high ridge or Mountayne, called *Yangoda*, and vpon the top of the same the wind shittling North, with Snow so thicke, that our Guides did not know well which way to goe, yet sometimes backe and sometimes forward, with much adoe we got ouer, in the Euening passing ouer the River *Roganaya Mensha*, falling South into *Ouse*, where we stayed all Night, hauing gone 20. miles.

The seuenteenth, faire and warme, wee passed thorow Woods, where the Snow was very deepe, and came to a Playne, called *Correapin Tundra*, where a *Russe* whose name was *Correappa* dyed, (and was buried, therefore they gaue that place that Name) some thirtie yeeres past, where we stayed all Night, hauing gone 15. miles South-east and by East. The eighteenth, in the Morning wee went on thorow Woods, the Snow being very deepe, and at Mid-night we came to the River *Roganaya Bolska*, where the *Russes* had a Gorodocke, and bartering with the *Samoits*, hauing gone 30. miles East South-east, the River falleth with turnings to the Southward into *Ouse*; heere I stayed till the sixth of Ianuary.

The thirtieth of December, I obserued with my Astrolobia, and had the Sun 2. degrees above the Horizon. Latitude 65. degrees and 48. minuts, the variation of the Compasse being 20. degrees.

The sixth of Ianuary, at three in the after-noon, wee departed from the Gorodocke, the wind South South-west blowing very hard, going North-west 30. miles, and at mid-night came to the Choome. The seuenteenth, the wind South South-west, blowing very hard, the Snow driving so thicke, that we could not goe ouer the Mountayne, called *Yangoda*, but stayed by a Wood side, hauing gone West North-west 15. miles. The eight, in the Morning wee passed ouer the River, called *Roganaya Mensha*, and at Noone ouer the *Yangoda*, keeping backe our way 30. miles West North-west, faire and warme. The ninth, little wind North but sharpe, we went on North-west and by West, at Noone we passed ouer *Azua* River, and in the after-noon came to a Herd of wilde Deere, the *Samoits* killed three, giuing me a haunch; going in all 30. miles.

The tenth, calme and very cold, we went on 20. miles, West North-west. The eleuenth, little wind South-east; at Noone we passed ouer *Hofeda* River, which falleth South-east into *Azua*, we went 30. miles North-west & by West. The twelfth, the wind South and cold, we went West and by South, ouer many Creeks & Ponds 25. miles. The thirteenth, this day the wind South and not cold, we went West & by South 30. miles, thorow many woods and plaines. The fourteenth, faire and warme, at Noone we passed ouer *Saudaets* River, which falleth South-west into *Coluoy*, we went West and by North 30. miles.

The fifteenth, being Sunday, we went West North-west ouer a broad playne, with many great Ponds, at Night we passed ouer *Coluoy* River going South into the River *Ouse*, which falleth into *Pechora*, nine dayes journey from *Oust-zilma*, we went 30. miles, hauing most of our Deere tyred, the Snow was so deepe. The sixteenth, little wind, we went on West North-west, at noone we passed ouer *Haryena* River, which falleth South-east into *Coluoy*, going 20. miles. The seuenteenth, the wind South, blowing very hard, the Snow driving, wee went West North-west 25. miles, at Night we tooke vp our lodging vpon the River *Habeaga*, which falleth into *Pechora*, sixe dayes journey from *Oust-zilma*.

The eighteenth, we went on West North-west 10. miles, where the Townesmen ouer-tooke vs, riding post to the Towne, where making our selues ready, wee followed, the same Euening we passed ouer *Nougorotka* River, which falleth West South-west into *Shapkina* River, which falleth South-west into *Pechora*, halfe way betwixt *Pustozor* and *Oust-zilma*, and in the Morning we passed ouer *Coy* River, which falleth into *Pechora* 14. leagues Northward from *Pustozor*; and the same day, being the nineteenth day in the after-noon, wee came to the Towne, hauing rid aboue 150. miles without rest. The last of Aprill, 1615. being Sunday, was the first appearing of the water, increasing at *Pustozera*. The seuenth of May, *Euan Croticoue*, had almost slaine with a knife his two Vncles, *Foma Croticoue*, and *Erasmi Croticoue*.

The eighteenth, the water was at the highest, being so extreame that many were forced out of their Houses, and we our selues in like manner, hauing the water a foot deepe in our bed Chamber. The twentieth, the water did a little begin to fall, and so continued falling by degrees.

The ninth of Iune, my seruant *Marmaduke Wilson* came from *Oust-zilma*, hauing Wintered there, to buy and sell goods, bringing with him such Commodities as the place doth afford, as Sables, Rofomacks, Wolues, Ermins, Squirrels, &c.

The fifteenth, we laded three small Lodias with goods, to carrie downe to the *Glouboka*. The three and twentieth, I departed from *Pustozor*, and came to the *Glouboka* the five and twentieth, with two small Lodias laden with goods. The eight and twentieth of Iune, I obserued at the *Glouboka*, which I found to lye in the height of 67. degrees 55. minutes, and the Compasse varied 18. degrees. The last of Iune, I went from the *Glouboka* to passe ouer the *Drie Sea*, the wind at South, but the wind comming to the North, I returned backe the next day. The second of Iuly, being Sunday, the wind at South South-east, I departed the second time, to come to the *Zauorot*, but comming neere *Dalgoy*, an Iland lying in the *Drie Sea*, the Ice lay so firme, that we could not passe but returned backe to the *Glouboka*.

The

The fourth of Iuly, *John Copman* came to the *Glonboka*, bringing with him all our goods for sayle, having payed all Customes and duties for the same. The sixth of the same, I departed the third time from the *Glonboka*, the wind at South, but did not continue, but came to the East, and East North-east, so rowing alongst the shoare, wee passed to the West side betwixt the shoalds and the shoare, and having passed the Wester Iland, called *Louetsky*, we came to the *Zackhar-reoneberoge* or Coast, which doth lye South-west and North-east, and put into a small Riuer, where we stayed (the seventh) all night, and the next day with Sayle and Oares, wee came to a Bay to the South of *Casnets Nose*, where we stayed all night, the wind East South-east.

The eight, in the Morning we passed by *Cuznets-Nose* amongst the Ice, having much adoe to get cleare, the wind at North North-west, and at Night we came to the *Zanorot*, where were five and twentie sayle of small Lodias, some going for *Munganza*, other for Fish, and some going to *Pustozor*, who told me they had beene aboard our Ship at Sea. The ninth, this day being Sunday, our Ship came ouer the Barre, where I was receiued, not looked for. The eleuenth, at Night we departed from the ship, and went to get downe our goods from the *Glonboka* and the Towne.

The sixteenth, I departed from the *Glonboka*, with three small Lodias laden with goods, but the wind at East North-east, two of them returned backe, but I kept on and came aboard our Ship the eighteenth in the morning. The twentieth, the other two came with the goods aboard, and the one and twentieth, we returned to the *Glonboka* with three Boates, and got thither that night. The three and twentieth, I came the second time from the *Glonboka*, with three Boates with goods, and the next morning came to our Ship, where I remayned, sending vp all the Boats the sixe and twentieth of Iuly.

The eight of August, came *John Copman* with *Thomas Dogget*, bringing two Boats laden with goods, fitting to set sayle for *Holland*, but did not depart till the 21. of August. And the three and twentieth of September, (giuing heartie thanks to God) we arriued at *Dort* in *Holland*.

NOW for the manner of the *Samoits* in their Iourney, their vpper Coat is called a *Parka*, which is for the most part of Deere-skin, and some of white Foxe or Woluerin, which they wear the hayre or furre outward, vnder that they haue another Coat, which is called a *Mallek*, made of young Fawne-skins, or Hare-skins, or Swan-skins, very soft and well dressed, a Cap of Beuer, double and close to their heads, with two flaps for their Eares, tyed vnder their Chin, a payre of Breeches of Deere-skin with the hayre inwards, vpon their Feete they haue sockes or stockins of Deere-skin, the hayre to their skin, vpon that long Bootes which they call *Pemyes*, made of the legges of Deere-skins, thus apparellled, they sit vpon their Sleds crosse-legged, with a Deere-skin vnder them. Two Deere being yoked to a Sled, they will runne with such swiftnesse, and so long to continue, as is not to be beleued, except to those that haue seene the same. For riding post, they will ride without rest or sleepe, two hundred miles in foure and twentie houres; but with their Argish or stuffe, thirtie miles in twelue houres; their Women vsually doe guide their Argish, which is ten Sleds, and to euery Sled a Backe, all made fast one after another, the Men in the way doe prouide Wood for firing, and doe hunt for all manner of Beasts & Fowle, which the women dresse. It is the Womans labour to set vp the Choome or Tent, making one place therein alwayes Holy, which the woman must not set her foot into, neither goe about the Tent round; which if they chance to doe, they will presently remoue all, for feare of the Wolfe or Beare, which they say, would deuoure them if they did not remoue.

Their Tent or Choome, is made in this manner; first, they set vp long Firre-poles, then they haue sixe quarters double of Deere-skin, which being set vp, they throw Snow round about the edges a yard thicke, leaving the top open for to vent smoake, making a Fire in the middle, spreading Deere-skins, vpon which they lye, in which manner, it is altogether as warme as the Stoues in *Russia*, they haue no Townes, neither any certaine place of abode, but with their Deere they trauell from place to place, where they finde the best Mofse for their Deere.

Their Wiues they buy for Deere, and will haue if hee haue abilitie foure or five Wiues, with whom he lyeth by turn euery night seueral; he is the richest man that hath most Deere or Daughters, selling them to any that will giue most for them. In their Marriages hauing agreed of price, they vse not great Ceremonies; onely they make a Feast to their friends, after which the Woman is brought to the Man that hath bought her, shee being hung with many Iron Rings and Brazen Bels, all departing out of the Tent saue they two till the next Morning, and then he departeth; but if he bee one of wealth, they will continue their Feast seuen dayes. It falleth out many times, that after they haue had their Wiues halfe a yeere or a yeere, they will turne them backe to their Friends, taking their Deeres againe, paying for the charge of the Feast, which is alwayes to bee made at her Fathers charge, and losing the increase of his Deere.

They haue not knowledge of the true God, but worship Blocks and Images of the Deuill, vnto which, they will strangle tame Deere, rubbing the bloud on the Idols, and eating the meate themselues.

When a Rich man dyeth, because hee should not trauell on foot, his friends will kill three Deere to draw him in the new World, and they will strangle a Slaue to tend on him. The Deere

they kill in this manner to serue the dead man, they make a Stake sharpe, which they thrust into the Beasts fundament, with many howlings and cryings, till they be dead. The Master with the Slaue they burie, the Deere they eat as well raw, as boyled or roast, although they vie all. three

Their yeere
but halfe a
yeere.

If a young Child dye vnder foureteene of their yeeres, which is seuen of ours, they doe hang it by the necke on some Tree, saying, it must flie to Heauen.

Iudgement or
Oath.

If any Controuersie bee, which cannot bee decided or the truth knowne, then one of the two betwixt whom the Controuersie is, must bee sworne, which is in this manner; they will make an Image of a Man of Snow, bringing a Wolues nose, deliuering a Sword to him that must sweare, he rehearsing by name all his Friends, desiring that they might all bee cut in peeces in that manner, as hee doth cut that Image of Snow. Then he himselfe, doth cut the Image of Snow all to peeces with the Sword; then after, the Wolues nose being layd before him, he desires that the Wolfe may destroy all his tame Deere, and that hee may neuer more take or kill any wilde Deere after that, if hee speake not the Truth, so cutting the Wolues nose in peeces, there is no more to bee sayd of that Controuersie.

Their persons.

The *Samoit* is stout and bold of Spirit, not very tall but broad Brested, broad Faces, with hollow Eyes. Their ordinary instruments for Warre, are Bowes and Arrowes, very dangerous, they haue long Speares, (the heads bee made in *Monganzey*, by another sort of *Samois*) and short Swords, not much vnlike some that I haue seene brought from *East India*.

Diuination.

When they would know any thing to come, they send for their Priest or Witch to conuerse with the Deuill, sitting in one side of the Tent, hauing before his face a peece of an old shirt of Mayle, hung with Bels and peeces of Brasse, in his right hand a great Tabor made with a Wolues skinne, beating vpon the same with a Hares foot, making a very dolefull sound, with singing and calling for the Deuill, to answer his demand, which being ended, they strangle a Deere for a Sacrifice, making merrie with the Fleish.

Womens hard-
dinesse.

The Women be very hard of Nature; for at their Child-bearing, the Husband must play the Midwife, and being deliuered, the Child is washed with cold water or Snow, and the next day the Woman able to conduct her Argish.

The *Russes* haue a yeerely Trade with the Merchants of *Boghar*, at a place called *Tumen* in *Tartarie*, whither they of *Boghar* come with Camels every yeere.

From *Tumen* in *Tobal* in *Siberia*, they come in foureteene dayes.

From *Tobal*, they come to *Beresona* in nine dayes, all downe the Riuer *Ob*.

From *Beresona*, partly by the Riuer *Ob*, then ouer a necke of Land of halfe a mile ouer, into the Riuer *Ouse*, and downe the Riuer *Ouse* into the Riuer *Pechora*, and so to *Pustoxera* in three weekes. At *Pustoxera*, the *Englishe* haue Wintered three yeeres.

Master Bennets
second Voy-
age thither.
His first Voy-
age thither
A. 1603. I haue
added at the
end of this
Chapter, after
Pooles Relati-
ons: this be-
ing set before
I saw that.

We set sayle from London the fifteenth of Aprill 1604. in a Ship called the *God Speed*, of sixtie Tunnes, with thirtene Men and a Boy; our Merchant was one Master Thomas Welden, our Master was one Steven Bennit of Saint *Catherins*. We arriued at *Cola* in *Lapland*, the first of May, where wee tarried till the last of the same Moneth, at which time wee set sayle from *Cola*, and went to an Harbour called *Pechingo*, which lyeth betweene *Cola* and *Ward-house*. In which Harbour of *Pechingo*, we continued vntill the thirtieth of Iune. At which time wee set sayle from thence, and through contrarie windes and foule weather, were put into *Ward-house*, where we tooke in fresh water, and stayed vntill the sixth of Iuly.

The same day, the wind came Southerly, and we steered away Northwest and by North about 56. leagues, wee obserued the Sunne at twelue of the clocke at Noone, and found our selues to be in 73. degrees 5. minutes of Northerly Latitude. The seuenth of Iuly, it was all day calme, and wee sounded, but had no ground in two hundred and fiftie fathoms. The eight day, we had little winde, which was at South-east, and foggie weather; and at eight of the clocke at Night, wee saw great flockes of Sea-fowles, which we call Willockes: some of these Fowles had each of them a small Fish in their bills, and flew toward the North-west and by North. The other without Fish, some of them flew contrarie to the former, and some sate in the Sea very neere our Ship.

A Morfe.

About twelue of the clocke at night we sounded, and had ground at one hundred and twentiefathomes. We steered away North-west and by North, till foure of the clocke the eight day in the morning, then it fell calme: and as the ship lay still, our Master spied a Morfe, which came to our ship and swamme round about it. While we were all gazing at this Monster, I spied the

the Iland ten leagues off, bearing North North-west halfe a point Westerly, which shewed very high Land, and much Snow vpon it. The wind came to the North-east. The ninth day, wee came to an Anchor on the South South-east side, in fise and twentie fathomes streamie ground. We hoysed out our Boate, and Master *Welden* went toward the Land: but thinking to haue landed he could not, because there went a great Sea, and great store of Ice all along the shoares side. Within one houre the Boate came aboard, and they said, there were so many Fowles, that they covered the Rockes, and flew in such great flockes, that they shewed like a Cloud. While thus they were talking close by the Boate, rose vp an huge Morfe, putting his head aboue the water, looking earnestly at the Boate, and made such an horrible noyse and roaring, that they in the Boate thought he would haue sunke it.

Cherie Iland described.

Store of fowles.

Morfe's roaring

The same day, at eight of the clocke at night, we weighed and stood away South-west and by South about foure miles, where wee doubled the Southermost point of the Iland, and found the Land to trend North North-west, and all along the shoare some scattering Ice. We sayled along the shoare, finding seuentene, eightene, and sometimes twentie fathomes, streamie ground with white shels. We held this course till wee saw all the Northermost part of the Iland: and being within three miles of it, and about thirteene miles from the Point, wee came round about it. And some two miles from the Land, we anchored in sixteene fathomes, streamie ground. We had not ridden one houre to an end, but a great piece of Ice came directly with the tyde vpon vs; and before wee could weigh, it strooke the ship with such force, that it hilded on the one side. As soone as it was past, we went on shoare, where wee found abundance of Sea Fowles, as Willocks, Gules, Noddies, Sea-mewes, a small Fowle like a Willocke, and diuers others, as wilde Geese, Sea-pidgeons, Oxbirds, and such like: whereof Master *Thomas Welden* killed so many with his Peece, that we almost laded our Boate with them. The same night we shot three heaps of fishing-lines, but when we haled them, wee found neither fish nor bayte: for the Seales had eaten them all off.

Abundance of Sea-fowles found on shoare.

The ninth day, Master *Welden* and our Master went on shoare, to see what they could finde. They went in the fore-noone about eight of the clocke, and came againe about foure in the after-noone very weary, seeing nothing but small Foxes, almost like Dogges in euery respect, saue their smell and their tayles. In the meane time, the Masters Mate and my selfe obserued the Sunne, and found that part of the Iland to be in 74. degrees and 45. minutes.

Small Foxes. 74. degrees, 45. minutes.

The tenth day we weighed, hauing the wind Southerly, and found the Land to trend away East South-east. The length of this side is about ten miles, good ground. We had not sailed past fixe miles, but we saw a landie Bay, against which we came to an Anchor in nine fathomes. We had not furred our Sayles, but we saw many Morfes swimming by our ship, and heard withall so huge a noyse of roaring, as if there had beene an hundred Lions. Immediately wee manned our Boate, wherein was Master *Welden* and sixe men more: we landed, and saw abundance of Morfes on the shoare, close by the Sea-side; and drawing neere vnto them, wee perceiued that they were all of the same company, which wee had seene before. It seemed very strange to vs to see such a multitude of Monsters of the Sea, lye like Hogges vpon heapes: In the end wee shot at them, not knowing whither they could runne swiftly or seize vpon vs or no. To be brieft, wee had but three Peeces, Master *Welden* a Fowling Peece, my selfe a Musket, and another a Musket. Their Peeces were spoyled instantly. For Master *Weldens* was cloyed, the other man when hee had shot one by himselfe, thought to knocke him on the head with the stock, but split his Peece. I shot still, and some when they were wounded in the flesh, would but looke vp and lye downe againe. Some were killed with the first shot; and some would goe into the Sea with fise or sixe shot: they are of such an incredible strength. When all our Powder and shot was spent, wee would blow their eyes out with a little Pease shot, and then come on the blind side of them, and with our Carpenters Axe cleaue their heads. But for all that we could doe, of aboue a thousand we killed but fiftene. We tooke off their heads, and when we had done, we went stragling vp and downe to see what we could finde. I found the first Tooth that was cast vpon the Iland, and going a little farther alone, I found as many Teeth more, as I and three men more could carrie, which filled an Hogthead: all which we did deliuer to Master *Welden*.

They kill the Morfes.

The Morfes Teeth.

The next day following, being the eleuenth day, we went on shoare againe, and killed about sixe more: And afterward wee went vp into the Land, and saw nothing but Fowle and Foxes. I perceiued in deed a great print of a Beares foote; and after that many other footings, but yet saw no Beare or other wild beast.

The twelfth, wee weighed from thence, and stood to the Eastward: wee had not gone past foure miles, but we found the Land to fall away South-east and by South. The length of this side is about twelue miles. All this side we went close by the shoare with our Boate, and the ship sayled along about three miles off. We went oftentimes on shoare, but could see nothing on all that side but Fowle, and abundance of Drift Wood, the most part whereof was Firres, which haue beene beaten vp and downe the Sea. This day being Sunday, about eight of the clocke at night, we anchored within two miles of the place where we arriued at the first. The same night wee went on shoare, and in a Bay vnder an huge Cliffe of a Rocke, vpon the Beach, wee found

Abundance of Drift Wood.

A thousand Morfes found. neere a thousand Morfes: wee killed thirtie or thereabouts, and when wee had taken off their heads, we went aboard.

The thirteenth, wee went on shoare againe, and with our Pieces fell a killing of the beasts. One of our company, named *Richard Lang-castle* split his Piece, and with all his hand: but Master *Welden* with Salues of his owne, healed it so skilfully, that he hath the vse of it againe. We killed that day sixtie Morfes, all the heads whereof were very principall. When we had done, wee went about a mile to the Eastward, to see what wee could finde: And landing at a Bay where Master *Bennet* had bene the yeere before, and found a piece of Lead Vre, wee looked for the same, but found none. The same day returning aboard, wee set sayle for *Pechingo* in *Lapland*, where wee arrived the five and twentieth of July; and stayed there foure dayes: at which time we set sayle for *Cola*, and arrived there the eight of August, where wee continued till the sixteenth day, at which time we departed thence for *England*, and arrived in the *Thames* the fifteenth of October, of the yeere aforesaid 1604.

Why the Iland was called Cherie Iland.

When wee came to *London*, because Sir *Francis Cherie* Knight and Merchant was at the charges of this Discouerie, this Iland was called *Cherie Iland*.

The third Voyage to Cherie Iland, performed by Master WELDEN Merchant, and STEPHEN BENNET Master, in the yeere 1605.

IN the yeere aboue said, wee set sayle from *London*, the first of May, with one ship of sixtie tunnes, and two and twentieth men and boyes. The three and twentieth of the said moneth, we were taken by a ship of *Dunkirke*. They tooke from vs two Hogsheds of strong Beere, our Muskets, a Fowling Peece of Master *Weldens*, which cost three pounds sterling. After the Captayne had misused vs at his pleasure, though we were in peace with his Countrey, he let vs goe.

Assumption.

July 2.
Cherie Iland.

Many Morfes killed with shot and Iauelings.

The fight of the Morfe.

Oyle made of the fat of the Morfes. Eleuen tunns of Oyle.

A Myne of Lead.

The eight and twentieth of Iune, we put off from *Assumption Point*, which is a place not farre from the North Cape, and about 70. degrees in latitude; but by contrarie winds wee were put backe againe. Yet the second of July, we came to *Cherie Iland*, and anchored on the South-east side: and hauing a Shallop in pieces to set vp, we carried it on shoare, and went to worke vpon it; and the third day after we had it on flote. The sixth day we entred into a Coue, hauing all our men on shoare with shot and Iauelings, and slue abundance of Morfes. The yeere before we slue all with shot, not thinking that a Iaueling could pierce their skinnes: which we found now contrarie, if they be well handled, for otherwise, a man may thrust with all his force and not enter: or if he doe enter, he shall spoyle his Lance vpon their bones; for they will strike with their fore-feet, and bend a Lance round, and breake it, if it bee not all the better plated. They will also strike with their Teeth at him that is next them: but because their Teeth grow downward, their strokes are of small force and danger. After we had opened the beasts which we had slaine, we tooke out the blubber, and carried it a mile into the Bay, where wee set vp the shallop. The reason why we carried it thither, was, because we thought that the fire of our Furnace would scare them away: for wee did boyle all their fat to bring it into Oyle. Thus wee followed our businesse till the foure and twentieth of July, at which time wee had very foule weather with fogs. Now the ship riding in the same Coue, where we killed our Morfes, had taken in eleuen tunnes of Oyle, and the teeth of all the beasts aforesaid. Then we made preparation to be gone home: and I was sent with our shallop, and eight men with me to fetch our Tent, and our boyling Coppers, our mens Clothes and some Teeth. At my returne, when I was almost aboard, comming through a place betweene the Iland and a Rocke, which of necessitie we must needs passe, the tyde being against vs, and a stiffe gale of winde blowing out of the Sea, made the Sea flye very high vpon the Rockes, whereby we had like to haue bene sunke: for our Boat was almost full of water; and if wee had not speedily rowed backe againe, wee had dyed each man of vs. To make short, we got into a Coue, where the Rockes did keepe the growne Seas from vs, & we lighted our Boat. In this Coue I found a Myne of Lead Vre, and digged vp about thirtie pounds weight of it, which I brought into *England*. And calling to mind that wee were in sight of our ship, when we shipped the water which I spake of before, I mistrusted that they thought, as they did indeed, that we were all drowned. Therefore I demanded who would goe with me, to the top of a Cliffe which stood ouer against the ship? And one *Iohn Ienings* said, that he would goe: he had not gone halfe way, but hee would goe no farther because it was so cold, and the Hill stood sloping very steepe toward the Sea, and all the side of it was loose Earth, which we must needs passe. Then I went forward all alone, and found all our men on shoare, sau-
ing an old man, and a sicke man. But the Cliffe being so high and steep, that they vnder it could scarce vnderstand what I said, nor I what they said, but with much adoe: They demanded, as I tooke it, if all our men were wel: I told them yea, as loud as I could: And then I threw downe a piece of the lead Vre which I had found, which *M. Welden* took vp: And when I was going away
I heard

I heard them shout; and looking behind me, I saw them all point toward the Skiffe that lay at anchor hard by the shoare; whereby I perceived that the rope was broken, which made it fast to the shoare, and the Skiffe was gone off to the length of her rope; so that they could not go aboard except one of them did swim to the Skiffe, which was exceeding dangerous, both because it was extreame cold, and also for feare of being killed by the Morfes, that were in the Sea all about the Boat. Whereupon with all speed possible I ranne to helpe our men in that distresse; and coming to the Shallop, some were willing, and some vnwilling: But I said that out I would; and taking nothing aboard with me but a few teeth, wee got out: and in the place where we had like to haue bene sunke before, wee had a great hollow Sea: but our Boat being light, and the tyde

Extreame cold the 25. of Iuly.

Abundance of driving Ice.

Mount Misery.

with vs, wee got through: whereat M. Welden, and Stenen Bennet our Master, with all the company were not a little ioyfull, and gaue God humble thankes, that had of his great mercy defended vs from a great many of dangers that day. For that day wee saw abundance of yce driving toward the Iland, but the winde and tyde shifting, put it another way. Likewise two boyes had like to haue bene slaine with the fall of a rocke, which fell close by them; they being but newly stepped out of the place where the rocke fell.

A monstrous fogge.

In the time that we were in this distresse, I called the Mountaine by the name of *Mount-miseric*, which is so called at this day. Likewise there is a very high Mountaine on the East South-east point of this Iland: which, because Master Welden and I got two Foxes neere it, I called it *Mount maleperdus*, alluding to the name in the merrie booke of *Reinold the Fox*.
The sixe and twentieth of Iulie, wee got out of the Coue with the Ship, hauing such a fogge, that although wee ridde so neere the land, that we could heare the fowle that were on shoare, yet wee could not see the land. This fogge continued vntill the eight and twentieth of Iuly: on which day hauing cleerer weather, wee got our water and other prouision aboard; and set sayle for England, and passing by the coast of *Finmarke* and *Normay*, we arrived at London the foure and twentieth of August. 1605.

The fourth Voyage to Chery Iland, 1606.

WE set sayle from London in a Ship and a Pinnasse; the Ship being of burden sixtie Tuns; and the same that I was in the Summer before; Master Thomas Welden was Merchant, and Master Bennet Master, hauing in all two and twentie men and boyes. The Pinnasse was of twentie Tunnes, and had eight men in her, and I Ionas Pool was Master of her: we were set out by Master Russell, one of the *Moscouie* Company.

August. 24. A Ship and Pinnasse set forth.

The eight and twentieth, wee had sight of land on the coast of *Normay*, in the latitude of sixtie degrees and a halfe; nine leagues off.

The Assumption.

The sixteenth of Iune, we fell with the *Assumption*, it bearing South and by West eight leagues off: and we lay beating betweene the North Cape and it, till the eighteenth of Iune: At what time wee put off, and steered away North North-west about fiftie fve leagues, and found much Ice: wee thought to haue gotten through it, but could not: and when wee had spent twelue houres in it, and hauing the wind Northerly, we put backe againe. The two and twentieth, we fell with the North Cape againe, at twelue of the clock at noone. The foure and twentieth, we put off againe, and being fve and fortie leagues from the Cape, wee met with Ice, and vpon a piece of Ice we saw a Beare. The Ship being on head of vs, bare close to the Ice; and Master Welden shot the said Beare dead at the first shot. This Beare was from the neere land about seuen and twentie leagues, and liued of Seales or other fish that he could prey vpon.

Much Ice 55. leagues from the North Cape.

Ice within 45. leagues of the North Cape. A Beare on Ice 27. leagues from any land. Iuly 2.

The second of Iuly, we saw *Cherie* Iland at a North found: the land bearing North and by West about ten leagues off. The same time we sounded and had ground at seuentie fve fathoms, white small shelly ground with small blacke stones.

The third of Iuly wee anchored on the West side of the Iland in twentie fathoms, hauing verie much Ice. I obserued the Sunne at the lowest, and found the latitude of that place to bee in 74. degrees, 55. minutes. It followeth there South-west and by South; and the flood commeth from the South-west.

Part of Cherie Iland in 74. degrees, and 55. minutes.

The fifth and sixth dayes, we were troubled with much Ice; but it being broken, we brought the ends of our Cables to our maine Masts; and hauing a good tyde, we did sheere, as wee tearme it, cleere off the Ice. We ridde thus in Ice sixe dayes, to wit, vntill the thirteenth day; at what time the Ice began to goe way, and the Morfes came on shoare. For their nature is such, that they will not come on land as long as any Ice is about the land.

The flood commeth from the South-west. The thirteenth of Iuly.

The fourteenth, we went on land; Master Welden, and Master Bennet, with the Ships company, and I with the company of the Pinnasse. And being altogether on shoare, and seeing of the beasts sufficient to make our voyage, wee prepared to goe to killing. Master Welden and Master Bennet appointed mee to take eleuen men with mee, and to goe beyond the beasts where they lay; that they and wee might meet at the middest of them, and so inclose them, that none of them should get into the Sea.

The nature of the Morfes.

A great white
Beare.

Seuen or eight
hundred beasts
slayne in fixe
houres.
A great Frost
the 24. of Iuly.

As I fetched a compasse about, before we were aware, rose a great white Beare within a Pikes length of vs: whereupon we made a stand, and my selfe hauing both a Musket and a Lance, thought to haue shot him: but remembring my selfe, that the report of my Peece might make all the Morfes goe into the Sea, and so hazard our Voyage, I went to him with my Lance. All this while he late foming at the mouth, and would not stirre, but gaped and roared as though he would haue eaten vs all: but presently wee pricked him in the snout; and then with an easie pace we proceeded on with our businesse; and before six houres were ended, we had slayne about seuen or eight hundred Beasts. And after that Master *Welden* slue the Beare. For ten dayes space we plyed our businesse very hard, and brought it almost to an end.

The foure and twentieth of Iuly, wee had the winde at North-east: and it freezed so hard, that the Ice did hang on our Clothes.

The fixe and twentieth, we had taken in two and twentie tunnes of the Oyle of the Morfes, and three hogheads of their Teeth.

The seuen and twentieth, Master *Welden* slue another Beare.

The eight and twentieth, we tooke in Water and Wood.

The nine and twentieth, we set sayle for England.

The fifteenth of August, 1606. we arriued in the *Thames*.

The sixth Voyage made to Cherie Island, the South part whereof standeth in 74. degrees and 40. minutes of Northerly latitude, in the yeere 1608.

The sixteenth of Aprill, in the yeere 1608. we set sayle from *Blacke wall*, and came to *Gransfend* in a ship called the *Paul*.

May 27.
Ward-house.
Tipary.

The one and twentieth of May, we were within 4. leagues of the North Cape, standing in 71. degrees and $\frac{1}{2}$ of North latitude. The foure and twentieth, wee came to *Ward-house*. The five and twentieth, we weighed, and came to *Tipary* in *Lapland* the fixe and twentieth: where we stayed about our businesse till the thirteenth of Iune.

Iune 13.
Cherie Island.

The thirteenth of Iune aforesaid, wee weighed anchor, and directed our course for *Cherie Island*. The eighteenth, at foure of the clocke in the morning wee saw *Cherie Island*, it bearing North North-west 10. leagues off: and at foure of the clocke at night wee anchored on the North-west side of it: and Master *Welden* went on Land on the North side, and slue a Beare.

A Beare slaine.
Another Beare
slayne.

The nineteenth, we rid still, and Master *Welden* went to the North side againe, and slue another Beare. The same day we sent two men to the South side of the land, to see if there were any Morfes on shoare. They came againe the next day, and said, that there were great store.

Great heate
the 20. and 21.
of Iune.

The twentieth and one and twentieth dayes it was calme, and the weather cleere, and wee had it as hot as I haue commonly felt in *England* at that time of the yeere. For the Pitch did runne downe the ships sides; and that side of the Masts that was to the Sunne ward, was so hot, that the Tarre did frye out of it, as though it had boyled.

1000. Morfes
killed in seuen
houres.

The two and twentieth, at a North-east Sun, we weighed and went to the South side of the land, and came into a Coue, where the Morfes were, and slue about 900. or 1000. of them in lesse then seuen houres: and there wee plyed our businesse vntill the second of Iuly: at what time we had taken into our ship 22. tunnes and three hogheads of Oyle.

Iuly 3.
A Voyage set
out by Master
Duppa to Cherie
Island, 1607.

The third of Iuly, being Sunday, one *Richard Stenens* of *Harewich* came to the said *Cherie Island*, in a ship called the *Dragon*, being set out by Master *Duppa*, a Brewer dwelling in *Saint Catharines* neere the Tower of *London*; which set out a ship with Master *Thomas Welden* the yeere before 1607.

A liuing Morfe
brought into
England.

The ninth day, we made our Voyage, and came out of the Coue, hauing taken in 31. tunnes of Oyle, and one hoghead, one barrell, and one terce of Morfes teeth: besides 400. other teeth.

The twelfth, we tooke into our ship two young Morfes, male and female, aliue: the female died before we came into *England*: the male liued about ten weekes. When wee had watered, we set sayle for *England* about foure of the clocke in the morning.

The fourteenth day, we saw the land bearing North North-west, 15. leagues off vs, and sounded, and had 85. fathoms, Greene Oze, like *Doues dung*.

The twentieth of August, wee arriued at *London*; and hauing dispatched some priuate businesse, we brought our liuing young Morfe to the Court, where the King and many honourable personages beheld it with admiration for the strangenesse of the same, the like whereof had neuer before beene seene aliue in *England*. Not long after it fell sicke and died. As the beast in shape is very strange, so is it of strange docilitie, and apt to be taught, as by good experience we often proued.

*The seuenib Voyage to Cherie Iland, made in the
yeere 1609.*

WEe were furnished with two ships, determining to goe to *Tipany* in *Lapland*, to buy fish of the *Lappes* and *Russes*, and afterward to goe to *Cherie Iland*: the one was called the *Lionesse*, in which I went for Master, the other, the *Paul*, which was there the last yeere, 1608.

The one and twentieth day of March, we weighed anchor at *Gransend*: and the fixe and twentieth, we came to *Harwich*: where it was concluded, that the *Lionesse* should goe directly to *Cherie Iland*. The fifteenth of Aprill, we weighed at *Harwich*: and the last of the same moneth we fell betweene *Lofoot* and *Zenam* vpon the Coast of *Finnmark*.

The second of May, we came to the North Cape; and the same day wee stood for *Cherie Iland*: but meeting with contrary winds and foule weather, we bare backe againe for the Cape, and fell with the Land the fourth day. The fife day in the morning, we put the second time from the North Cape; and the eight day wee anchored at *Cherie Iland*. It did freeze very hard, but we found no Ice about the Iland, saue that which claue to the Rockes. We went into the Coue with our Shallop, and found eight Morfes on the Ice hard by the shoares side: And we also found all the beafts that were killed the last yeere not washed away with the Sea, couered ouer with Snow and Ice. Wee thought to haue gotten abundance of Fowle as wee had done in the yeeres before: but they would not sit; the reason was, because they were but new come to the Iland, and not settled as then: yet some Fowle we got, and came aboard. And because the wind was

Northerly, that we could not conueniently goe to the North side with the ship, we determined to send some men ouer Land, to see if there were any Morfes on shoare vpon that side. The ninth day, I prepared to goe ouer Land to the North side, about a North-east Sunne, with three men in my companie. I my selfe had a Musket, and about a quarter of a pound of Powder, and fixe Bullets; an Halfe-pike in mine hand, and an Hatchet at my backe. One of the men had a birding Peece; the other two had each of them a lauelin. Wee went ouer the Snow and Ice apace outward; but came wearily homeward, by reason we rested not any where. And when we were within a mile of the other side, one of my companie said, he saw a Beare: whereupon we looked vp, and saw three great ones. Whereupon I made a stand, and gaue each of my com-

panie some *Aquavita*, and a little Bread, and told them, that wee must not in any case seeme fearefull, because the nature of them is such, that whoeuer seemeth fearefull, or offereth to runne away, they will seize vpon him. In this time I made my Musket readie: and the Beares seeing vs to come toward them, stood vpon their feet, and two of them went toward the Sea: The third stood still clamping and foming, as though hee would haue eaten vs. When I was within shot of him, he beganne to follow his fellows, still looking behind him with his former gesture. In the meane while I got ground of him, the three men following mee with their weapons. In the end the angry deuill turned backe, and came directly toward mee: I let him come within two long Pikes lengths, and gaue him such a welcome, that hee fell downe stone dead.

The company that were with me were glad as well as I: yet I had beene at the killing of Beares before. After this Beare was slayne, we told seuentene more, whereof three were young ones. This done, we went on to the Sea side, where we found the Shallop which we left the yeere before. Wee were no sooner set to eat a little food, but there came a Beare with two young ones as big as Lambes of a moneth old: they skipped about their dams necke, and played with one another very wantonly. The dame came so neere that I shot at her, and being loth to hurt the young ones, being playing about her fore-parts, I shot her through the top of the shoulder, then she went away. Immediately we saw another Beare comming toward vs, which before he came to vs, stood vpon his hinder feet twice or thrice, vsing the same countenance that the first did, which I flue. I let him come very neere, and thinking to giue him his passport, the flint of my Musket was broken, which made him come very neere vs. Then the fellow that had the bir-

ding piece shot him into the foot: whereupon he ran away faster then wee could follow him.

Wee seeing so many Beares, and hauing no store of Powder nor Shot, bent our iourney toward our ship againe. Wee had not come a quarter of a mile, but wee saw a huge Beare fast a sleepe on the Snow. I went softly toward him, and gaue him such a flip, that he neuer rose out of the place where he lay. His skin when he was slayed was thirteene foot long. A neere neighbour of his hearing the report of my Peece came toward me: and him I flue also. Now, hauing but one shot left, I thought it not best to bestow it there, although I saw another lie vpon the Snow hard by. While we sate downe to rest vs in the mid-way, there came toward vs another Beare with one young one: they came almost within shot, and went backe againe: presently she turned againe, and came within shot of me, and stood on her hinder legs directly vpright, and

so did the young one. I made account they would haue come neerer; but they to the contrarie ran away. Wee came being very wearie aboard our ship about a North-west Sunne. Then wee weighed, and stood to the Northward, hauing the wind at South; and by three of the clocke the next morning, wee came to the North-east Point with the ship. There wee manned our

Shallop,

*Lofoot

slayne.*

The tenth day.

Six Beares
slayne.
All the Beares
slayed.

Shallop, and Master *Thomas Welden* and I went on shoare, where hee slue five Beares, and I one, and I wounded two more very sore. And before a North Sunne, our men had fleyed them all; both them that I slue the day before, and them that wee slue this last time: for they were all together.

The eleventh day, we went on Land, and washed some old fleyed Morfes skinnes, which had lyen there two yeeres: but they will hardly proue good. The twelfth day, we rid at the West side, and got some Fowle with shot, and there we rid till the thirteenth.

The thirteenth, wee saw very much Ice to the Southwards and Westwards, wich came driuing so fast toward the shoare where wee rid, that wee were forced to weigh, and stood to the North side of the Iland. The Ice followed vs still: then wee stood to the East side of the Iland: and there wee found both the Iland and our selues encompassed round with Ice. But the winde being Westerly, and a good stiffe gale, it blew the Ice about a mile and an halfe from the Eastern side: by which meanes wee got betwixt the Ice and the Iland, and stood to the Southward, but saw not any thing in all the Sea saue Ice; sauing close by the Land a little open Sea treading to the South-westward. That way wee stood with our fore top-sayle, and stood one while one way, and another while another way, and could not see open Sea till the fifteenth of the same moneth; at a North-west Sunne wee saw the open Sea: onely a ledge of Ice which began to part insunder, was betwixt vs and it. Toward that place we stood, and intending by Gods helpe to get through, we made prouision to defend the ship from the Ice, by hanging Cables ends, and Plankes, and Capitan barres about the bowes of our ship. But for all our tenders, our ship had a great knocke vpon a piece of Ice. About a North Sunne, we got out into the open Sea; with humble thanks to God for our deliuerance.

Frost the 16. of
May.

The sixteenth day, the Iland did beare North-east and by North, eight leagues from vs: and it did freeze all that day, the wind being at North, which was almost calme. The seuenteenth, at noone the Iland did beare North-east and by North, about nine leagues off, the wind Southerly, snowy weather. The same day we saw a sayle, bearing East North-east off vs about 5. leagues.

Snow.

The eighteenth, the Iland did beare North about 15. leagues off, the wind being at East and by

Snow.

North, Snow and frosty weather. The nineteenth, at twelue of the clocke at noone the Iland

Five Seales.

put roome toward the Iland, and vpon one piece of Ice we saw five Seales: one I killed, and one

Snow.

I tooke alieue, and brought it aboard our ship. But wee could not come neere the Iland by sixe leagues. The wind came to the West with thicke weather and Snow. The twentieth, at twelue at noone the Iland beare North North-west, about twelue leagues off. We sounded, and had 100. fathoms, greenish Oze, faire weather, but cold.

A ship of Hull.

The one and twentieth, we saw the ship that wee had seene the seuenteenth day; wee spake with them about 12. at noone. The Master told vs he was of *Hull*. Wee demanded whether he was bound? He told vs, to *Cherie Hand*, and that there he would make his Voyage. The Iland at this time did beare North and by East about nine leagues off; and it was faire, but cold frostie

Frosty wether.

weather. The 22. 23. 24. and 25. dayes, we did beate vp and downe in the Ice. The 26. 27. and

Snow & frost.

28. dayes, likewise wee sayled vp and downe in the Ice; hauing the wind Northerly, and the Iland bearing betweene the North and the North North-east, cold weather. The nine and twentieth, the Iland beare North nine leagues off, the wind at North-east, snowy weather and Frost.

26. Seales.

The thirtieth day, we slue 26. Seales, and espied three white Beares: wee went aboard for

A Beare killed

Shot and Powder, and comming to the Ice againe, we found a shee-Bear and two young ones:

on the Ice.

Master *Thomas Welden* shot and killed her: after shee was slayne, wee got the young ones, and

cold and frostie weather.

moneths space

The ninth, the Land beare North-west off vs about six leagues off. That day we had the first

fogge since the time of our arriual, which was the eight of May. Neither lost wee the sight

of the Iland about eightene houres in all this time. This day, about a North-east Sunne it be-

gan

gan to thaw ; and in fixe houres the snow was melted, which lay vpon the Ice about fixe inches thicke : which put vs in good hope that the Ice was almost past.

The first thaw.

The tenth, we got within fixe miles of the shoare : where I made an attempt to haue got to the land with the Shallop : but comming within three miles of the shoare, I could get no farther, the Ice was so thicke, and such foggy weather. I made another attempt the same day, and got within one mile of the Land : but the Ice was so thicke that I could get no farther. The same day wee saw good store of Morfes on the Ice and in the Sea.

The eleuenth and twelfth, we plyed vp and downe sayre by the land, to see if wee could get on Land with our Shallop ; but the Ice was so close about the Land, that wee could not by any meanes. This day the wind was at South-east, thicke foggy weather. The thirteenth, we had thicke fogge and calme weather ; and when it began to cleere, wee had sight of the Souther part of the land, bearing East South-east, about fixe miles off ; but it fell thicke suddenly againe. There wee anchored in fortie fathoms, white shelly ground ; and rid till ten of the clocke at night : at what time I prepared to goe on shoare, as fast as I could with a Shallop and fixe men. About eleuen of the clocke we put from the Ship, and with great labour got through the Ice to the land, by a North-east Sunne.

Foggy

The fourteenth day, I landed on the Wester side of the land, and determined to goe from thence to the North side, where wee slew the Beares. The ninth of May I left three men with the Shallop, and tooke three men with me. In my iourney I found such bad way, that I had no stomacke to goe through ; for where there was no snow, the ground was so soft, and without grasse, that we went vp to the ankles in dirt, and where the snow lay, which was in some holes, three or foure fathoms thicke, it was so soft, that we slipt each step vp to the twist ; so that wee were about three houres in going scarce two miles. Whereupon, considering it would bee long before I should get ten miles and backe againe, I returned to our Shallop, and found that the men which I left had killed some fowle, which wee fod, and when wee had eaten them, I prepared to goe in the Shallop to the North side. I went close by the shoare ; for the Sea was full of Ice. As wee went along by the Clifffes, we got good store of Fowle ; which made vs glad and ioyfull, because there was no hope to get aboard the Ship that day, nor the next. About a North-west Sun wee got to the place abovesaid, and found nine Beares, three of them I slew, the other tooke the Sea. Those three that were slaine we dead, and tooke their flesh and salted it in their skinnes ; which I stowed in the Shallop for feare of a dearth. I had a terce full of salt there, which wee left in that place the eleuenth of May.

The Beares slaine on the North side.

Three Beares slaine, powdered, and eatens

The fifteenth day, when wee had ended our businesse, and eaten some of our Beares flesh, and set vp an Ensigne in token of our possession of the land, wee prepared to be gone : and about an East North-east Sunne the wind came Westerly ; which made me thinke, as it proued, that the Ship would be on the South-east side of the land ; and when wee were comming, and almost at the North-east point, we saw nine men ; presently I knew them to bee the men of Hull. Along I came to the East side, where we tooke in drift wood, and a broad stone to make a fire vpon in our Boat. While wee were there, wee espied our ship vnder her Fore-top sayle, and her Misen. We made all the haste we could, and came to the Coue, where wee made our voyage the Summer last past. There likewise I set vp a Pike, with a white cloth vpon it, and a letter signifying our possession for the right worshipfull Company trading to Moscouie. When I had done, I espied the Hull mans Boat rowing into the Coue, and a Tent set vp in the bottom of the Bay. I went thither, and told him we had taken possession there, the eight of May last. He answered, That if the beasts came on shoare, he would kill them if he could ; and that there were as good men which ventured in that Ship, as the Company. I told him he durst not answer these words in England, and so departed and got some Fowle. About a South-west Sunne wee stood toward our Ship, hauing the wind at West South-west, and the Ship bearing from vs South-east about foure leagues. I had not sailed ten miles, but the Ice was so close and firme, that I could not get aboard, nor backe againe ; for it closed with such force, that it made the Shallops sides cracke, as though they would haue met together. Wee laboured very fore to laue our Boat, because it did concerne our liues, and got her into a place where shee lay betweene two pieces of Ice. After this sort we draue with the Ice till we had lost sight of our Ship, which was about a North sun ; and still wee draue, being not able otherwise to moue till we were about eight leagues from the land.

Possession taken of Cherie land for the Muscouie Company.

Drift wood on the East side.

The Coue.

The sixteenth day, at an East South-east Sun, the Ice began to open. Then, although my Company were in despaire, and said it was impossible to get out, to worke wee went, and by cucting off Ice, and remouing of it one piece from another, we made way through toward the Land. The neerer to the Land wee got, wee found the more open Sea ; and by a North Sunne wee got on shoare. After wee had giuen God thanks for our deliuerance out of such extreame danger, wee ate some Fowle and Beares flesh, which wee fod vnder a Cliffe. There wee found nine young Foxes, and killed the old one. There also we slept vpon the cold Sand, which was not past three inches thicke, and vnderneath Ice ; and staid here till a South-east Sunne the seuenteenth day. The seuenteenth, we went from this place to the Coue, where we found the Hull mans Boat ; I made a tilt of the Shallops sayle, and fod some Beares flesh and Fowle ; and staid about the

Coue all that day. And vpon an Island, commonly called *Gull-land*, I found three Mynes of Lead Vre: but hauing no fit tooles to breake the Rocks, and also becaufe it was in the view of the *Hull* mans Tent, I was forced to let it rest, till the Ships could get into the Coue.

The eighteenth day, wee went to the North side of the Island, and in our way wee found good Sea-coales to burne: some wee tooke with vs to try them, and found them good. And on the North side I slew two Beares. Then wee shared the bread that was left; and wee had but two cakes to a man: for some of my Company while I was asleepe, or killing of the Beares, had broken open the chest wherein the bread was, and had conueyed some away. Our beere was spent before this time, and we were faine to drinke snow water.

The nineteenth, wee went to the Coue, the wind being Westerly, to see if wee could espy our Ship; but wee could not, neither could thee come neere the Island for Ice; for all the Sea, as farre as I could see from the top of an high Hill was couered with Ice, sauing that within a quarter of a mile off the shoare, it was cleere round about once in a tyde.

The twentieth day, I went to the North side againe, and slew a Beare. Thus wee spent the time, sometimes on one side, sometimes on the other, neuer staying aboue one day in one place till the Ship came in; vvhich vvas the seuen and twentieth of Iune; on vvhich day I slew another Beare. I slew seuen in all, vvhose flesh vve eate full sauerly, forgetting the oylly ranknesse of it; for hunger is a sauourie sawce.

The seuen and twentieth, our ship came to an anchor on the North side, where we then were; as soone as vve saw her, we needed no bidding to go aboard. When we were come to the ship side, they had vs vvelcome: but vvhetheras vve thought to haue releued our selues, vvee found it farre otherwise; because the Ship had a knocke vwith a piece of Ice in the Sterne, vvhich brake in the corner of a Planke vnder the vvater, so that our bread-roome vvas full of vvater, and all our bread spoyled, sauing about one hundred vveight: vvhich vvas but a small quantitie for three and forty men. This day a Ship called the *Matthew* came to an anchor by vs. Then *Master Welden* and I vvent on shoare, vvhether vve found one *John Skinner*, Masters mate of the *Matthew*, vwith eleuen men by him. We set vp our Tent, and told him there vvas no voyage for him to make: but our necessitie vvas such, that vve vvere faine to take foure hundred of bread of them, vpon some condition, vvhich I vvill not speake of here. The same day vvee thought to haue taken a Copper aboard, vvhich I digged out of the snow; but by negligence it vvas let fall into the Sea, yet afterward taken vp againe and carried aboard. The same day, another Ship called the *Mary Margarite* came into the said Coue on the South side.

The eighteenth, I vvent to the Coue vwith the Shallop and fixe men, vvhether I found the *Marie Margarite*; there passed no great kindnesse betweene them and me. I slew three Morfes there, two vvere lost, the others head I brought aboard. The next day I came aboard our Ship, and vve rid on that side, looking still vvhether any beasts vvould come on shoare, till the second of July. Then vve vveighed, and stood to the East side of the Island; because the vvind vvas at West North-west, and great store of Ice came from those parts. We had not rid one houre to an end, but vve saw a Skiffe comming towards vs. In this Skiffe vvas one *Iosias Logan*, and *Thomas Edge*, Factors in the *Paul* for the vvorshipfull Company. They told vs that the *Paul* vvas in the Coue, and the ship of *Hull*. They vvent aboard againe, and vvhether the tyde vvas spent, vve weighed and thought to haue anchored neere the Coue; but the vvind vvas so far Easterly, that vve could not: so vvee vvent to the Wester side, and ridde there till the fourth day, vvhether vve got Fowle; for in all the time of our being about the Island, and in the Ice, they vvere our chiefest food.

The fourth, vve vveighed and vvent to the North side; vvhether vve vvere troubled vwith much Ice: The vvind vvas at West and by North, vvhich brought the Ice vvhole vpon vs; so that we vvere forced to vveigh againe.

The sixth, vve came into the Coue; vvhether *Master Welden* slew a Beare. The eight day, he slew another Beare; and the same day I vvent to the North side, vwith the Shallop and vvithuals for the men vvhich kept on that side. I stayed there till the fourteenth of July: on vvhich day vve had the vvind Northerly, vwith snow and frost, and the Island enuironed round with Ice. In this time the Ships Company on the South side did digge some Minerall Lead. And vve caught aboue twentie Foxes, vvhich vve did eat as sauerly as if they had beene Venison.

The fifteenth day, by a North-east Sunne vve came aboard the Ship, vvhich lay in the Coue, vwith our Shallop and all our prouision that vvas on the North side. And the *Lionesse* prepared to goe to Saint *Nicolas* in *Russia*, as it was appointed before in *London*.

The sixteenth, the wind being North-east brought such store of Ice to the Island, that it vvas compassed round close to the shoare; and filled the Coue so full, that by no meanes possible the Ships could get out, but ridde still shut in for fivedayes.

The seuenteenth, the Ice began to open at the mouth of the Coue, and some were willing to goe out with their Ships; but couetousnesse had like to haue brought vs all to great misery: for each man struing to ride longest in the Coue, supposing that there the Morfes would come first on shoare, they found it cleane contrary; for the wind came Southerly, and blew all the Ice from this side of the Island, saue that which was in the Coue: which pressed so sore vpon our Ships,

Ships, that our Anchors could not hold vs. For the *Matthew* was put from three Anchors, and droue with that small tyde, that runneth there within her length of a sunken Rocke: but a great piece of Ice on ground vpon the Rocke did keepe her from it. And when the floud came againe, she was driuen within halfe her length of the Rockes; so that they were glad to get most of their victuals out of her vpon the Rockes, looking each minute when she should split in sunder. And though the rest of the ships did not driue as she did, yet they had many a sore stroke with the Ice. For the Southerly wind caused a hollow Sea to come in; so that our ships strooke with such force against the Ice, that wee could hardly stand on our feete in them. Then each man layed to his hand to saue his ship, by putting Plancks and old Cables ends, and bundels of
10 Hoops betweene their ships and the Ice. But they were beaten all to pieces presently. Then we put pieces of Elme Plancke betweene the bowes of the *Paul*, in which ship I was: Immediately, they also were beaten into small pieces, although they were about foure inches thicke. With the stroke that brake the Plancke, the Carpenter said, the ships side did cracke, and two timbers were broken. Then presently wee also got out of the ship most of our victuals, and carried it to the shoare. There might you see a sorrowfull spectacle. For all the ships, being five in number, were so fast in the Ice, that all the men that were in them all, which were one hundred eightie two, could not imagine how to saue one. Among the rest, we made account that the *Matthew* would sinke, ere long: because the Ice had broken nine timbers on one side, and eleuen on the other; so that the Greene Sea did come into the ship: and her mayne beame was broken at that
20 instant likewise. In this sort we continued till the twentieth day following; when we looked still to bee put on the Cliffes with the force of the Ice, that pressed vpon our ships so sore, that our Anchors could not possibly hold.

Vpon the twentieth day, it pleased God to bring the wind Westerly, then the Ice began to open, and to driue out of the Coue by little and little, to our great comforts. But that Ice that did not get cleane out, came backe againe, and ranne round in a Circle; so that wee had a continual labor to defend the ships from it. Whereupon we made meanes to get out by long ¹ Warps, as wee terme them. Wee were faine to let slip one Cable, and the *Lionesse* one. The *Matthew* had but one Cable and Anchor; but they borrowed one of vs. By a North-west Sunne, all the ships got out of the Ice to the Coues mouth; where we stayed for the ebbe. When the ebbe
30 was come, the *Lionesse* departed on her Voyage to Saint Nicholas in *Russia*. And presently the *Matthew*, and the *Mary Margarete* set saile and got out. Then wee in the *Paul* set saile, and before our Anchor was vp, it got hold vpon one of *Matthewes* Cables, that shee lost, when shee droue out, and brought vs vp to a *Bitter*, so that wee were very neere the Rockes: but wee got off againe, and ride there till a North-west Sunne the next day.

The one and twentieth day, we weighed and stood to the East side of the Iland, where wee found the *Mary Margarete*, which had lost her Boat. Streight way we sayled to the North side, where we anchored and rid till a North Sunne.

The two and twentieth day, it cleered vp of a fogge, which had continued since the time of our comming out of the Coue. And wee thought it best to fetch the victuals aboard, which we carried on shoare when the ship was like to be split with Ice.
40

Then *Iosias Logan* and I tooke seuen men more with vs, and came to the Coue on the South side: where wee found abundance of Morfes lying on the Ice, that was in the Coue. I slue one of them, and tooke off his head: we could not get to the shoare where our victuals lay, but we made a fire vnder a Cliffe in the same Coue.

The three and twentieth day, wee got to our victuals, and *Iosias* went with it to our shippe: but I tarried at the Coue, hoping that the beastes would come on Land when the Ice was gone; as they did afterward. There I tarried till the five and twentieth of Iuly; at what time *Iosias Logan* came to mee with the Shallop, and a Skiffe laden with Caske and other prouision, and told mee, that they had slaine five or sixe hundred Morfes on the North side.

Hee tarried with mee till the seuen and twentieth of Iuly: now seeing no beastes
50 did come on Land, because the Ice did hang about the Coue, he went to the North side againe: but the same day after he was gone, they began to come on Land.

The next day following, being the eight and twentieth, wee slue about eightie, and tooke their Blobber and Teeth. Then they began to come on shoare againe the thirtieth day: at what time Master *Bonner* was come into the Coue to seeke his Anchors. Then his men came on shoare, and we slue about one hundred and fiftie beast more. But there rose a storme at South-east, that brought in such a surge, that it washed about sixtie beastes into the Sea; so that most of them were lost.

The next day being the last of Iuly, Master *Welden* and Master *Iones* came to the Coue with about twelue men, being all very wearie. For they had left the Shallop in a Coue on the North-west side of the Iland, and came ouer Land. Then to worke wee went on all hands, and placed
60 our Coppers. And by the fift day of August we had ended our businesse; and the ship came from the North side into the Coue.

is said to bee brought to a Bitter. The Bitter end is that end of the Cable within boord at the Bitts.

Ccc

The

1 A warpe, is a Rope (commonly a Hawser) vied to warpe a ship, that is, with an Anchor bent to the Hawser and layd out to hale the ship forward: which is done when they want wind to carrie out, or into a Harbour.

m A Bitter, is a turne of the Cable about the Bitts, for when they come to Anchor, they take a turne with it about the Bitts (two mayne square pieces of Timber, which stand Pillar wise in the loofe of the ship, to make fast the Cable vnto) that they may by little and little vere it out at ease: otherwise, if a stopper faile, the Cable would runne out end for end, that is altogether; but thus stopped, the shippe

August.

Note.

The sixt of August, I tooke the Skiffe and seuen men to fetch the Shallop to the Coue, that Master *Welden* had left in a Coue, on the North-west side of the Iland, the last of Iuly. When I came to the place, considering I was neere the North side, where we commonly make our Voyage, and also desired by Master *Welden*, if I could goe, to doe so, I went thither, and found about five and fortie as good headed beasts for Teeth, as euer I saw. Wee had no more Launces to kill th m with all, but two, I tooke one, and a lustie fellow that was our Cooper had the other: we had not killed past ten but his Lance brake. Then I slue all the rest in lesse then two houres, and wee tooke their Teeh; and the next day by a West Sunne wee came aboard the *Paul* with them.

The eight day, wee got the Southermost Point of the Iland: where wee rid all that day. Their Skiffe from their long Boats sterne, and we manned our Boat to fetch her againe: but then rose such a fogge, that we had like to haue lost both our Boats and men; but they got to the ship againe with much adoe.

The ninth day, it was calme; but wee had such a fogge, that wee could not see two Cables length from the ship. And about eight of the Clocke at night, wee lost our Skiffe altogether.

The tenth day, we had a little Wind at North-west and by West. Then seeing no amendment of the weather, wee left the ship of *Hull* behind vs in the Iland, and about sixe of the Clocke set sayle for *England*, and arriued safely at *London* the last of August, 1609. Blessed bee God.

A Voyage performed to the Northwards, Anno 1603. in a ship of the burthen of fiftie tunnes, called the Grace, and set forth at the cost and charges of the Worshipfull FRANCIS CHERIE. Written by WILLIAM GORDEN; being the first Voyage to Cherie Iland; which came to my hands since the former (or rather later Voyages) were in the Presse.

THe ship being readie the tenth of Aprill, whereof was Master *Stephen Bennet*, and for Factor and Ouer-seer *William Gorden*, our Directions from the said Merchant, were first to proceed to *Cola*, and there to make sale of such goods as we had, and to take in such other as the Countrey of *Lappia* did affoord, and then to proceed vpon some Discoverie. Wherefore omitting our Iourney to *Cola*, as a matter of small importance, being so well knowne before, after our Affaires ended, we were readie to proceed forward. But our men not being hired thereunto would haue refused, if there had not bene made an agreement by meanes of *Iosias Logan*, who was to lye there as Factor for Master *Cherie*, the Master and my selfe, partly with promises, partly with gifts. And thus setting forward the sixt of August, did hinder vs; or if we did not light vpon some land: our determination was hindered by meanes of meeting with an Iland, and likewise the yeere being farre spent, keeping our course from the West end of *Kilden*, to the Ilands of *Ward-house*, which wee passed the tenth of August with little wind; then directing our course North North-west, the wind at South-west easie wind, so that the eleuenth day we did reckon our selues to haue sayled twentie leagues North-west. The twelfth day, it was most part calme and foggie. The thirteenth day, it was cleere, and the wind at South, and we had sayled twentie two leagues North North-west. The fourteenth day, the wind at East, we kept our course and sayled ten leagues, and the same day being thicke and foggie, we had thought wee had seene Land about foure of the clocke in the after-noon, bearing from vs West North-west, and North-west by West, but sayling towards it three houres, keeping still his forme, and not altering till the wind increasing, caused it to fade away (for it was no other then a banke of fogges) after we had sayled three leagues changing our course, we sayled then fifteene dayes twentie leagues, North-west and by North, still hauing close weather, that we could not make any obseruation. The sixteenth day in the morning, at two of the clock, we did see two great high Hills, which did seeme to vs aboue the Clouds, and did seeme very neere, but we found it otherwise for sayling towards it, we found it further then we did expect, for it was sixe of the clocke at night before wee could come neere vnto the Land, where wee anchored in thirtie fathomes. In which time we could not sayle lesse then eightene leagues North and by West. That night our Master knowing, better what did belong vnto those Affaires, would not suffer the Boat to goe aland till the morning: which was the seuenteenth day of August, and before our going aland, the Master caused a shanke of Lines to bee shot for, to toy for neere adjoyning, where we had much adoe to get to our Boat againe, by reason of the steepnes

of

of the Rockes: then we went on shoare vpon the Mayne, where at our comming on Land, wee did see two Foxes, one White, the other Blacke. Thus spending most part of the day, wee returned aboard our ship without any profit: only one of our men tooke vp a piece of Lead, and I found a piece of a Morfes Tooth, by which we perceiued that the Sea Morfes did vse thither, but the time for that yeere was past, for we did see none. After our comming aboard, hauing haled the Line, we found nothing but one but fish thereon, wherefore presently weighing Anchor, we sayled West to see if we could haue any true obseruation, the next day which wee had, and found our selues to bee in 74. degrees 30. minutes. The same day directing our course for London, where we arriued the tenth of September, by Gods helpe, in health and safetie.

CHAP. XIII.

Diuers Voyages and Northerne Discoveries of that worthy irreconuerable Discoverer Master HENRY HUDSON. His Discoverie toward the North Pole, set forth at the charge of certaine Worshipfull Merchants of London, in May 1607. Written partly by IOHN PLAYSE one of the Company, and partly by H.

HUDSON.

Nno 1607. Aprill the nineteenth, at Saint Ethelburge in Bishops Gate street, did communicate with the rest of the Parishioners these persons Seamen, purposing to goe to sea foure dayes after, for to discouera Passage by the North Pole to Japan and China. First, Henry Hudson Master. Secondly, William Colines his Mate. Thirdly, James Young. Fourthly, John Colman. Fifthly, John Cooke. Sixtly, James Benbery. Seuenthly, James Skrutton. Eightly, John Pleyce. Ninthly, Thomas Baxter. Tenthly, Richard Day. Eleuenthly, James Knight. Twelfthly, John Hudson a Boy.

The first of May 1607. we weyed Anchor at Grauesend, and on Tueday the sixe and twentieth day in the morning, we made the Iles of *Shotland*, and at noone we were in 60. degrees 12. minutes, and sixe leagues to the Eastward of them: the Compasse had no variation. We had sixtie foure fathomes at our sounding, blacke, ozie, sandie, with some yellow shels. Our ship made more way then we did suppose. On Saturday the thirtieth of May, by our obseruation we were in 61. degrees 11. minutes, This day I found the Needle to incline 79. degrees vnder the Horizon. For foure dayes space we made very little way by contrary winds.

On Thursday the fourth of Iune, we were by our obseruation still in 61. degrees and 14. minutes, eight and twentie or thirtie leagues from the Norther part of *Shotland*: the Land bearing by our Accompt East and by North off vs, I found variation in five degrees Westerly.

The seuenth of Iune, wee were in 63. degrees 25. minutes. The eighth, all the fore-noone we had a fresh gale Southerly; we steered away North and by West, and by obseruation we were in 65. degrees 27. minutes.

The eleuenth, wee saw sixe or seuen Whales neere our shippe: wee were in sixtie seuen degrees thirtie minutes. About five of the clocke, the winde came vp at North-east and by East; wee steered away North North-west with a fresh gale all the night at East. Thetwelfth, the winde was at East North-east, a stiffe gale, wee steered away as afore, and accounted wee had runne by this day noone thirtie leagues. In the after-noone wee steered away North and by West fifteene leagues, all the night procued a great fogge with much wind.

The thirteenth, betweene one and two in the morning, we saw some Land on head of vs, and some Ice: and it being a thicke fogge, we steered away Northerly, and hauing much wind wee stood away South and by East, sixe or eight leagues. Our sayle and shroudes did freeze. At eight in the morning it cleered vp, the wind being at North-east and by East, with much wind wee were hardly able to maintayne a sayle. This was a very high Land, most part couered with Snow. The neather part was vncovered. At the top it looked reddish, and vnderneath a blackish Clay, with much Ice lying about it. The part which we saw when wee cast about, trended East and West: And the Norther part which we saw, trended North-east and by North, and North-east: and the length which wee saw was nine leagues; wee saw much Fowle. Also wee saw a Whale close by the shoare. We called the Head-land which we saw, *Yonges Cape*; and neere it standeth a very high Mount like a round Castle, which wee called, the *Mount of Gods Mercie*. All the after-noone, and all the Eeuening it rained. At eight in the Eeuening we cast about, and steered all night North and by West, and sometimes North North-west.

The fourteenth, being neere the Land we had Snow. At foure in the morning, the wind veering Northerly, we cast about and stood South-east and by South. This day wee had much wind and raine, we shorted sayle being neere the Land. The fifteenth, in the morning it blowed so much wind at North-east, that wee were not able to maintayne any sayle, wee then strooke a

hull, and let our ship drive, wayting for a fitter wind; this night was very much raine. The sixteenth, was much wind at North-east. The seventeenth, we set sayle at noone, we steered away East and by South, and East South-east. The eighteenth, in the afternoone a fine gale South-east, which toward the Evening increased, and we steered North-east three Watches, twelve leagues. The nineteenth we steered away North North-east sixteene leagues. At noone wee had raine with fogge. From twelve to foure we steered North North-east eight leagues, and did account our selues in seuentie degrees neereft hand: purposing to see whether the Land which we made the thirteenth day, were an Iland or part of *Groneland*. But then the fogge increased very thicke with much wind at South, which made vs alter our course, and to shorten our sayle, and we steered away North-east. Being then as we supposed, in the Meridian of the same land, hauing no obseruation since the eleuenth day, and lying a hull from the fifteenth to the seuenteenth day, wee perceiued a current setting to the South-west. This day wee saw three Whales neere our ship, and hauing steered away North-east almost one watch, five leagues, the Sea was growne euery way: we supposed wee were thwart of the North-east part of that Land which we made the thirteenth day, and the current setting to wind-ward. The reason that moued vs to thinke so; was, that after we had sayled five or sixe leagues in this Sea, the wind neither increasing nor dulling, we had a pleasant and smooth Sea. All this night was foggie with a good gale of wind, we steered away North-east vntill the next day at noone, and sayled in that course twentie leagues.

The twentieth, all the morning was a thicke fogge with the winde at South: wee steered North-east till noone. Then we changed our course, and steered away North North-east, hoping for an open Sea in our course to fall with the bodie of *Newland*. This day at two in the afternoone it cleered vp, and wee saw the Sunne, which wee had not scene since the second of this moneth. Hauing steered North North-east, two watches and an halfe, fifteene or sixteene leagues wee saw Land on our Larboord, about foure leagues off vs, trending as wee could ghesse North-east and South-west. We steered away East North-east, the wind at South a good gale, but reasonable cleere: wee saw many Birds with blacke backes, and white bellies in forme much like a Ducke: we saw also many pieces of Ice driuing at the Sea. We loofed for one and went roomer for another. And this morning about foure, a thicke fogge we saw a head of vs.

The one and twentieth, in the morning we steered North-east, and East North-east two watches, five or sixe leagues. Then it grew thicke fogge. And we cast about, and steered North-east and East North-east two watches, sixe leagues, finding wee were embayed. The wind came at East South-east a little gale: we tacked about and lay South. All this night was a thicke fog with little wind, East we lay with the stemme.

The two and twentieth, in the morning it cleered vp, being calme about two or three of the clocke: after we had a prettie gale, and we steered away East and by North three leagues. Our obseruation was in 72. degrees 38. minutes, and changing our course, we steered North-east, the wind at South-east a prettie gale. This morning when it cleered vp, we saw the Land, trending neere hand East North-east, and West South-west, esteeming our selues from it twelve leagues. It was a mayne high Land, nothing at all covered with snow: and the North part of that mayne high Land was very high Mountaynes, but we could see no snow on them. We accounted by our obseruation the part of the mayne Land, lay neereft hand in 73. degrees. The many fogs and calmes with contrary winds, and much Ice neere the shoare, held vs from farther Discouery of it. It may bee objected against vs as a fault, for haling so Westerly a course. The chiefe cause that moued vs thereunto, was our desire to see that part of *Groneland*, which (for ought that we know) was to any *Christian* vnkowne: and wee thought it might as well haue beene open Sea as Land, and by that meanes our passage should haue beene the larger to the Pole: and the hope of hauing a Westerly wind, which would be to vs a landerly wind if wee found Land. And considering wee found Land contrarie to that which our Cards make mention of; we accounted our labour so much the more worth. And for ought that wee could see, it is like to bee a good Land, and worth the seeing.

On the one and twentieth day, in the morning while we steered our course North North-east, we thought we had embayed our selues, finding Land on our Larboord, and Ice vpon it, and many great pieces of Drift Ice: we steered away North-east, with diligent looking out euery cleere for Land, hauing a desire to know whether it would leaue vs to the East, both to know the bredth of the Sea, and also to shape a more Northerly course. And considering wee knew no name giuen to this Land, wee thought good to name it, *Hold with hope*, lying in 73. degrees of latitude.

The Land of
Hold with Hope
in 73. degrees.

The Sunne was on the Meridian on the South part of the Compasse, neereft hand. Heere is to bee noted that when we made *The Mount of Gods Mercie*, and *Youngs Cape*, the Land was covered with snow for the most part, and extreame cold, when wee approached neere it: But this Land was very temperate to our feeling. And this likewise is to be noted, that being two dayes without obseruation; notwithstanding, our lying a hull by reason of much contrary wind, yet our obseruation and dead reckoning were within eight leagues together, our shippe beeing before

Snow.

before vs eight leagues. This night vntill next morning proued little Winde.

The three and twentieth, in the morning we had an hard gale on head of vs, with much rayne that fell in very great drops, much like our Thunder showers in *England*; wee tacked about and stood East Northerly with a short sayle, to our feeling it was not so cold as before we had it. It was calme from noone to three of the clocke with fogge. After the winde came vp at East and East South-east, we steered away North-east with the fogge and rayne. About seuen or eight of the clocke, the winde increased with extreame fogge, wee steered away with short sayle East North-east, and sometimes East and by North. About twelue at mid-night, the wind came vp at South-west, we steered away North, being reasonable cleere weather.

10 The foure and twentieth, in the morning about two of the clocke, the Masters mate thought he saw Land on the Larboord, trending North North-west Westerly, and the longer we ranne North, the more it fell away to the West, and did thinke it to bee a mayne high Land. This day the wind being Westerly, we steered away North, and by obseruation wee were in 73. degrees nearest hand. At noone we changed our course, and steered away North and by East, and at our last obseruation, and also at this, we found the Meridian all Leeward on the South and by West, Westerly part of the Compasse, when we had sayled two Watches eight leagues.

The five and twentieth, the wind scanted and came vp at North North-west, we lay North-east two Watches 8. leagues. After the wind became variable betweene the North-east and the North, we steered away East and by North, and sometimes East, we had thicke fogge. About noone three Granpassees played about our shippe. This After-noone the wind vered to the East and South-east, we haled away North and by East. This night was close weather, but small fogge (we vse the word *Night* for distinction of time but long before this the Sunne was alway about the Horizon, but as yet we could neuer see him vpon the Meridian North.) This Night being by our accompt in the Latitude of 75. degrees, we saw small flockes of Birds, with blacke Backes and white Bellies, and long speare Tayles. We supposed that Land was not farre off, but we could not discerie any, with all the diligence which we could vse, being so close weather, that many times we could not see fixe or seuen leagues off.

The sixe and twentieth, in the morning, was close weather, we had our wind and held our course as afore. This day, our obseruation was 76. degrees 38. minutes, and we had Birds of the same sort as afore, and diuers other of that colour, hauing red Heads; that we saw when we first made the Mount of Gods Mercy in *Greenland*, but not so many. After we steered away North and by East two VVatches 10. leagues, with purpose to fall with the Souther part of *Newland*, accounting our selues 10. or 12. leagues from the Land. Then wee stood away North-east one VVatch five leagues.

30 The seuen and twentieth, about one or two of the clocke in the morning we made *Newland*, being cleere weather on the Sea; but the Land was couered with fogge, the Ice lying very thick all along the shoare for 15. or 16. leagues which we saw. Hauing faire wind wee coasted it in a very pleasing smooth sea, and had no ground at an hundred fathoms, foure leagues from the shoare. This day at noone, wee accounted we were in 78. degrees, and we stood along the shoare. This day was so foggie, that we were hardly able to see the Land many times, but by our account we were neare *Vogel Hooke*. About eight of the clocke this Eeuening, we purposed to shape our course from thence North-west. Heere is to bee noted, that although we ranne along neere the shoare, we found no great cold, which made vs thinke, that if we had beene on shoare the place is temperate. Holding this North-west course, about ten of the clocke at night, we saw great store of Ice on head off vs, bearing Wester off vs; which we could not goe cleere off with the foresayd course. Then we tacked about, and stood away betweene the South and the South-east, as much desirous to leaue this Land as we were to see it.

40 The eight and twentieth, was a hard gale of wind all the fore-noone betweene the South and the South-west. We shaped our course, we did it to bee farther from the Ice and Land. It pleased God that about twelue of the clocke this night it cleered vp, and we found that we were betweene the Land and the Ice; *Vogel Hooke* then bearing nearest hand East off vs. Then we tacked about, and stood in for the shoare, hauing Sea-roome between the Ice and the Land. The nine and twentieth, at foure in the morning the wind at North-east, a pretie gale, we thought best to shorten our way, so we tacked about and stood North North-west, the wind a little increasing. About twelue at noone, we saw Ice a head off vs; we cast about again, and stood away East South-east with very much wind, so that we shortned our sayles for the space of two Watches. Then about eight this Eeuening, we strucke a Hull, and it proued the hardest storme that we had in this Voyage. The thirtieth, in the morning was stormie; about noone it ceased, at seuen in the Eeuening it proued almost calme.

50 The first of Iuly, all the fore-noone the wind was at South-east, we stood North-east for the shoare, hoping to finde an open Sea betweene the shoare and the Ice. About noone wee were embayed with Ice, lying betweene the Land and vs. By our obseruation we were in 78. degrees 42. minutes, whereby we accounted we were thwart of *The great Indraght*. And to free our selues of the Ice, we steered betweene the South-east and South, and to the Westward, as

A mayne high Land.

let.

we could haue sea; And about six, this Euening it pleased God to giue vs cleere weather; and we found we were shot farre into the Inlet, being almost a Bay, and enuironed with very high Moun-
taynes, with low Land lying betweene them; wee had no ground in this Bay at an hundred fa-
thoms. Then being lure where we were, we steered away West, the wind at South-east and
calme, and found all our Ice on the Norther shoare, and a cleare Sea to the Southward.

78. Degrees 56.
Minutes.
78. degrees 33.
minutes.

The second, it pleased God to giue vs the wind at North-east, a faire gale, with cleere wea-
ther, the Ice being to the Northward off vs and the weather shoare, and an open Sea to the South-
wards vnder our Lee. We held on our course North-west till twelue of the clocke; hauing say-
led in that course 10. leagues, and finding the Ice to fall from vs to the , we gaue
thanks to God, who maruellously preserved vs from so many dangers, amongst so huge a quan-
tity of Ice and Fogge. We steered away North-west, hoping to be free from Ice, we had ob-
seruation 78. degrees 56. minutes, we fell with Ice againe, and trended it as it lay betweene the
West and South South-east. The third, we had obseruation 78. degrees 33. minutes. This day
wee had our shrouds frozen, it was searching cold, we also trended the Ice, not knowing whe-
ther we were cleare or not, the wind being at North.

The shroudes
and sayles fro-
zen.
The mouth of
the Inlet.
77. degrees 30.
minutes.

The fourth, was very cold, and our shroudes and sayles frozen, we found we were farre in the
Inlet. The wind being at North, we beare vp and stood South South-east, and South and South-
west by West till ten this night. The fifth, was very much wind at North Easterly: at twelue
we strooke a Hull, hauing brought our selues neare the mouth of the Inlet.

78. degrees.
The end of
the Sacke.
A Blacke and o-
pen Sea.

The sixth, in the morning the wind was as before, and the Sea growne. This morning we
came into a very Greene Sea, we had our obseruation 77. degrees 30. minutes. This after-noon
the wind and Sea asswaged. About foure of the clocke we set sayle, and steered North-west and
by West, the wind being at North North-east. This day proued the clearest day we had long
before. The seuenth, at foure in the morning was very cleare weather, and the fairest Morning
that we saw in three weekes before, we steered as afore, being by our account in 78. degrees nea-
rest hand, and out of the Sacke. We found we were compassed in with Land and Ice, and were
againe entred into a Blacke Sea, which by prooffe we found to be an open passage. Now hauing
the wind at North North-east, we steered away South & by East, with purpose to fall with the
Southernmost part of this Land which we saw, hoping by this meane, either to defray the charge
of the Voyage, or else, if it pleased God in time to giue vs a faire wind to the North-east, to sa-
tisfie expectation. All this day and night afterward proued calme.

Much Drift-
wood.

The eight, all the fore-noon proued calme, and very thicke fogge. This morning we saw ma-
ny peeces of Drift-wood driue by vs, we heaued out our Boate to stop a leake, and mended our
riggings. This day wee saw many Seales, and two Fishes which we iudged to bee Sea-horses,
or Morfes. At twelue, this night we had the winde at East, and by South, wee stood away
North-east.

Many Seales.
Morfes.

The ninth, all the fore-noon was little wind at South-east, with thicke fogge. This day we
were in amongst Islands of Ice, where we saw many Seales.

The tenth, in the morning was foggie, afterward it proued cleere, we found we were compas-
sed with Ice euery way about vs; wee tacked about, and stood South and by West, and South
South-west one Watch five leagues, hoping to get more Sea-roome, and to stand for the North-
east, we had the wind at North-west.

From hence it
seemeth is ta-
ken out of Hen-
Hudsons owne
Notes.
Blue and Greene
Seas.

The eleuenth, very cleere weather, with the winde at South South-east, we were come out
of the Blue Sea into our Greene Sea againe, where we saw Whales. Now hauing a fresh gale of
wind at South South-east, it behoued mee to change my course, and to sayle to the North-east,
by the Souther end of Newland. But being come into a Greene Sea, praying God to direct mee, I
steered away North ten leagues. After that, we saw Ice on our Larboord, we steered away East
and by North three leagues, and left the Ice behind vs. Then we steered away North till noone.
This day wee had the Sunne on the Meridian South and by West, Westerly, his greatest height
was 37. degrees 20. minutes. By this obseruation we were in 79. degrees 17. minutes, we had a
fresh gale of wind and a smooth sea, by meanes whereof our ship had out-runne vs. At ten this
Euening cleere weather, and then we had the company of our troublesome neighbours Ice with
fogge. The wind was at South South-west. Heere we saw plentie of Seales, and we supposed
Beares had beene heere, by their footing and dung vpon the Ice. This day, many of my Compa-
nie were sicke with eating of Beares flesh the day before vsalted.

79. degrees 17.
minutes.

Sick of Beares
flesh vsalted.

The twelfth, for the most part was thicke fogge, we steered betweene South and by East, and
South South-east 2. $\frac{1}{2}$. leagues, to cleere vs of the Ice. Then we had the wind at South, we steer-
ed till noone North-east five leagues. This morning we had our shrouds frozen. At noone by our
accompt we were in 80. degrees, being little wind at West South-west, almost calme with
thicke fogge. This after-noon we steered away North, and sometimes North-east. Then we
saw Ice a head off vs, we cast about and stood South-east, with little wind and fogge. Before we
cast about by meanes of the thicke fogge, we were very neere Ice, being calme, and the Sea setting
on to the Ice, which was very dangerous. It pleased God at the very instant to giue vs a small
gale, which was the meanes of our deliuerance, to him be praise therefore. At twelue this night,

80. degrees.

it cleered vp, and out of the top *William Collins* our Boat-swaine saw the Land, called *Newland* by the *Hollanders*, bearing South South-west twelve leagues from vs.

The thirteenth, in the Morning the wind at South and by East, a good gale, we cast about and stood North-east and by East, and by obseruation we were in 80. degrees 23. minutes. This day we saw many Whales. This fore-noonne proued cleere weather, and we could not see any signe of Ice out of the top. Betweene noone and three of the clocke, we steered away North-east and by East five leagues, then we saw Ice on head off vs, we steered East two Glasse one league, and could not be cleare of the Ice with that course. Then we steered away South-east two leagues $\frac{1}{2}$. after we sayled East and by North, and East foure leagues, till eight the next morning.

10 The fourteenth, in the morning was calme with fogge. At nine the wind at East, a small gale with thicke fogge, we steered South-east and by East, and running this course we found our *Greene Sea* againe, which by prooffe we found to be free from Ice, and our *Azure Blue Sea* to be our *Ice Sea*. At this time we had more Birds then we vsually found. At noone being a thicke fogge, we found our selues neere Land, bearing East off vs; and running farther we found a Bay open to the West and by North Northerly, the bottome and sides thereof being to our sight very high and ragged Land. The Norther side of this Bayes mouth being high land, is a small Island, the which we called *Collins Cape*, by the name of our Boat-swaine, who first saw it. In this Bay we saw many Whales, and one of our company hauing a Hooke and Line ouer-board to trie for Fish, a Whale came vnder the Keele of our ship, and made her held, yet by Gods mercie we had no harme, but the losse of the hooke and three parts of the line. At a South-west

20 Sunne from the North-west and by North, a flood set into the Bay. At the mouth of this Bay we had sounding thirtie fathoms, and after sixe and twentie fathoms, but being farther in, we had no ground at an hundred fathoms, and therefore judged it rather a Sound then a Bay. Betweene this high ragged, in the swamps and vallies lay much snow. Heere wee found it hot. On the Souther side of this Bay, lye three or foure small Islands or Rockes.

In the bottome of this Bay, *John Colman* my Mate, and *William Collins* my Boat-swaine, with two others of our company went on shoare, and there they found and brought aboard, a payre of Morfes teeth in the jaw, they likewise found Whales bones, and some dosen or more of Deeres Hornes, they saw the footings of Beasts of other sorts, they also saw Rote-geese, they saw much drift Wood on the shoare, and found a streame or two Fresh water. Here they found it hot on

30 the shoare, and dranke water to coole their thirst, which they also commended. Here we found the want of a better Ship-boate. As they certified me, they were not on the shoare past halfe a houre, and among other things brought aboard a Stone of the Countrey. When they went from vs it was calme, but presently after we had a gale of wind at North-east, which came with the Flood with fogge. We plyed top and againe in the Bay waiting their comming; but after they came aboard we had the wind at East and by South a fine gale, we minding our Voyage, and the time to performe it, steered away North-east, and North North-east. This night proued cleere, and we had the Sunne on the Meridian, on the North and by East part of the Compasse, from the vpper edge of the Horizon with the Crosse-staffe, we found his height 10. degrees 40. minutes, without allowing any thing for the Semidiameter of the Sunne, or the distance of the end of the staffe from the Center in the Eye. From a North Sunne to an East Sunne, we sayled betweene North and North North-east, eight leagues.

The fifteenth, in the morning was very cleere vweather, the Sunne shining vvarme, but little vwind at East Southerly. By a South-east Sunne vve had brought *Collins Cape* to beare off vs South-east, and we saw the high Land of *Newland*, that part by vs Discovered on our starboard, eight or ten leagues from vs, trending North-east and by East, and South-west and by West, eightene or twentie leagues from vs to the North-east, being a very high Mountaynous land like ragged Rockes, vvith snow betweene them. By mine account, the Norther part of this Land which now vve saw, stretched into 81. degrees. All this day proued cleere vweather, little

50 Wind, and reasonable vvarme. The sixteenth, in the morning warme and cleere weather, the vwind at North. This morning we saw that vve were compassed in with Ice in abundance, lying to the North, to the North-west, the East and South-east, and being runne toward the farthest part of the Land by vs discovered, which for the most part trendeth nearest hand North-east and South-west, vvee saw more Land ioyning to the same, trending North in our sight, by meanes of the cleernesse of the vweather, stretching faire into 82. degrees; and by the bowing or shewing of the skie much farther. Which when I first saw, I hoped to haue had a free Sea betweene the Land and the Ice, and meant to haue compassed this Land by the North. But now finding by prooffe it vvas vnpossible, by means of the abundance of Ice compassing vs about by the North, and ioyning to the land, and seeing God did blesse vs with a faire wind to sayle by the South of this Land to the North-east, vve returned, bearing vp the Helme, minding to hold that part of the Land, vvwhich the *Hollanders* had discovered in our sight, and if contrary vvindes should take vs, to Harbour there, and to trie what vve could finde to the charge of our Voyage, and to proceed on our Discouerie, as soone as God should blesse vs with Winde. And this I can assure at this present, that betweene 78. de-

Newland or *Greenland*, of which the *Hollanders* hath made a little Discouerie by *Barents*, as before is deliue- red, but nei- ther so farre, nor so exact, nor so vsfull: nor first as be- fore is obser- ued of *Sir H. Willoughbies* English exacter Discoueries finding the Whale and Morfe benefir, they also en- terloped.

grees and $\frac{1}{2}$. and 82. degrees by this way there is no passage: but I thinke this Land may bee profitable to those that will aduenture it. In this Bay before spoken of, and about this coast, we saw more abundance of Seales then we had seene any time before swimming in the water. At noone, this day hauing a stiffe gale of wind at North, we were thwart of Collins Cape, standing in 81. degrees and a halfe: and at one of the clocke the Cape beare North-east off vs. From thence I set our course West South-west, with purpose to keepe in the open Sea free from Ice, and sayled in that course 16. leagues. At ten this night we steered away South-west, with the wind at North a hard gale, vntill eight the next morning 18. leagues.

The seuenteenth, in the morning a good gale at North: at eight, we altered our course, and steered away South till eight in the Eeuening, and ranne 12. leagues. This day proued reasonable cleere and warme. The eighteenth, in the morning the wind encreased at South and by East, with thicke fogge. All this after-noone and night proued close weather, little fogge, and reasonable warme.

The nineteenth, at eight in the morning the wind at South, with thicke fogge, we steered South-east 4. leagues till noone: then the wind vered more large; wee steered South-east and by East 4. leagues till foure: then wee vered shete, and steered East and by South Easterly, 15. leagues, till eight the next morning. This day after the morning proued reasonable cleere and warme.

The twentieth, in the morning little wind: at eight this morning wee saw Land ahead of vs vnder our Lee, and to weatherward of vs distant from vs 12. leagues, being part of Newland. It is very high mountainous Land; the highest that we had seene vntill now. As we sayled neere it, we saw a Sound ahead of vs, lying East and west. The Land on the Norther side of this Sounds mouth, trendeth neereft hand West North-west, and East South-east 12. leagues, in our sight being 10. leagues from vs. And the Land on the Souther side being 8. or 10. leagues in our sight; at this time trendeth South South-east, and North North-west; from eight to noone was calme. This day by obseruation we were in 77. degrees 26. minutes. On the Norther side of the mouth of this Inlet lie three Ilands, not farre the one from the other, being very high mountainous Land. The farthest of the three to the North-west, hath foure very high Mounts like heapes of Corne. That Iland next the Inlets mouth, hath one very high Mount on the Souther end. Here one of our companie killed a red billed Bird. All this day after the morning, and all night proued calme, enclining rather to heate then cold. This night wee had some warme rayne.

The one and twentieth, all the fore-noone calme; at foure in the after-noone we had a small gale of wind at South South-east, with fog; we steered away East to stand in with the Land, and sayled 3. leagues vntill mid-night: then the wind came at North-east, we cast about, and steered South 10. leagues till eight the next morning. The two and twentieth, at eight in the morning much wind at East, and variable, with short sayle wee steered 3. leagues South and by East: then came downe very much wind; wee strooke a hull. All this after-noone and night, proued very much wind with raine.

The three and twentieth, all the fore-noone was very much wind at South, with raine and fogge. At foure this after-noone wee saw Land, bearing North-east of vs 6. leagues from vs. Then we had the wind at South South-west; wee steered away South-east, and South-east and by East 4. leagues, the Sea being very much growne. We accounted we had hulled North-west and by North 22. leagues; and North 3. leagues. Then fearing with much wind to be set on a lee shoare, we tackt about, and made our way good West and by North, halfe a point Northerly, all this night wick much wind.

The foure and twentieth, in the morning much wind as afore, and the Sea growne. This morning wee strooke our mayne Top-mast to ease our ship, and sayled from the last Eeuening eight to this noone 15. leagues West and by North halfe a point Northerly. From twelue to eight, 6. leagues as afore, with the wind at South and by West: at eight we tackt about with the winde at South South-west, and lay South-east and by East, with much winde, and the Sea growne.

The five and twentieth, was a cleere morning we set our mayne Top-mast, we saw Land bearing North of vs, and vnder our Lee, we sayling South-east and by East. Then the wind scanted: we cast about, and lay South-west and by West 2. leagues; till noone. Then it began to ouer-cast, and the wind to scant againe: we cast about, and lay South-east and by South, the wind at South-west and by West, and sayled in that course 3. leagues till foure in the after-noone. Then the wind scanted againe, and we sayled 3. leagues South. Now, seeing how contrarie the winde proued, to doe the good which wee desired this way; I thought to proue our fortunes by the West once againe: and this Eeuening at eight, wee being the latitude of 78. with the better, and from Land 15. leagues, which leagues part whereof beare from the North-east to the East off vs, we steered away West, with the wind at South-east, and cleere weather.

The sixe and twentieth, all this day proued rayne with thicke fog, and an hard gale of wind at East and by North, and East North-east. From the last Eeuening at eight to this noone, wee ranne

ranne 25. leagues : from noone till mid-night 19. leagues, the wind at East and by South ; from mid-night till two the next morning, 2. leagues West.

The seven and twentieth, extreme thicke fog, and little wind at East and by South. Then it proued calme, and the Sea very loftie. Wee heard a great rutte or noise with the Ice and Sea, which was the first Ice we heard or saw since we were at *Collins Cape*: the Sea heauing vs Westward toward the Ice. Wee heaued out our Boat, and rowed to towne out our ship farther from the danger ; which would haue bene to small purpose, by meanes the Sea went so high : but in this extremitie it pleased God to giue vs a small gale at North-west and by West, we steered away South-east 4. leagues till noone. Here we had finished our Discouerie, if the wind had continued that brought vs hither, or if it had continued calme: but it pleased God to make this North-west, and by West wind the meane of our deliuerance : which wind wee had not found common in this Voyage. God giue vs thankfull hearts for so great deliuerance. Here we found the want of a good ship-beat, as once we had done before at *Whales Bay* : we wanted also halfe a dozen long Oares to rowe in our ship. At noone the day cleered vp, and we saw by the skie Ice bearing off vs: from West South-west to the North and North North-east. Then we had a good gale at West, we steered away South till foure 7. leagues. From foure to six South 4. leagues, and found by the Icy skie and our neerenesse to *Groneland*, that there is no passage that way : which if there had bene, I meant to haue made my returne by the North of *Groneland* to *Dauis* his Streights, and so for *England*. Here finding we had the benefit of a Westerly wind, which all this Voyage we had found scant, we altered our course, and steered to the Eastward, and ran South-east foure leagues. From eight this Eueening till noone the next day ; East South-east 30. leagues. All this day and night proued very cold, by meanes, as I suppose, of the winds coming off so much Ice.

Danger escaped.

Whales Bay.

The eight and twentieth, very cold, the wind at West, not very foggie. At noone this day we steered away South-east and by East, and by obseruation we were 76. degrees 36. minutes. From noone to eight 10. leagues. Then the wind scanted to South-east and by South, we steered away East and by North 18. leagues, till the next day noone.

The nine and twentieth, all the fore-noone a thicke fog and wet, the wind at South-east and by East, neereft hand, and raw cold. From noone to foure, wee sayled three leagues East and by North, halfe a point Northerly. Then the wind vered more large, we steered East and by South 8. leagues till twelue at night. At this timet to windward we heard the rutte of Land ; which I knew to be so, by the colour of the Sea. It was extreme thicke fog, so that we could hardly see a Cables length from our ship. We had ground 25. fathoms, small blacke peble stones. Wee founded againe, and had ground at 30. fathomes small stones like Beanes, at the next cast no ground at 60. fathomes. I cast about againe, and steered South-west 6. leagues, West and by North two leagues till the next day noone. All this day and night extreme thicke fog.

The thirtieth, all the fore-noone very thicke fog. At noone almost calme : after we had little wind, and steered North North-west till two : then it cleered vp, so that we could see from vs 2. leagues with the wind at North-west. Then we steered East South-east: after it cleered. At South in the Eueening, we saw an Island bearing off vs North-west from vs 5. leagues, and we saw land bearing off vs from vs 7. leagues. We had land likewise bearing off vs from East South-east, to South-east and by East as wee iudged, 10. leagues. Then hauing the winde at West North-west, we steered South and by East. It presently proued calme till ten this Eueening : then wee had a little gale at South-west and by West, wee steered away South South-east till twelue this night, and accounted ourselues in 76. from Land 10. leagues : which was the likeliest Land that wee had seene on all the parts of *Newland*, being playne riggie Land of a meane height, and not ragged as all the rest was that we had seene this Voyage, nor couered with snow. At twelue this night we saw two Morfes in the Sea neere vs, swimming to Land. From twelue at night to foure, calme.

The one and thirtieth, at foure this morning we had the wind at South-east, we steered South South-west. Then it proued calme, and so continued all the fore-noone. The after-noone wee had the wind at East South-east, we steered South 8. leagues. Then being like to proue much wind, contrarie to our purpose, and finding our fog more thicke and troublesome then before, diuers things necessarie wanting, and our time well nigh spent to doe further good this yeere, I commanded to beare vp for our returne for *England*, and steered away South South-west. And this night proued a hard gale of wind at South-east and by East. Wee were thwart of *Cheries* Island the next morning at foure of the clocke, being to windward off vs 5. leagues : knowing we were neere it, we looked out carefully for the same, and it prouing cleere, we saw it, being a very ragged Land on the Wester side, rising like Hey-cockes.

Cheries Island.

The first of August, a very hard gale of wind at East South-east, we shorted sayle, and steered away South South-west. This night was very foggie, with a hard gale of wind at East and by South, we steered by our account 27. leagues : and from eight this Eueening till the next morning foure, 10. leagues as afore. All this night was very foggie, wet and raw cold.

The second, in the morning calme with a thicke fog, cold and slabbie weather. About noone

we

we had a little gale West and by North, wee steered away as afore. The third, in the morning calme and cleere weather, with a little gale East and by South, we sayled South South-west: then wee had the wind at South-east, wee sayled as afore. All this day and night proued close weather, a little fogge at noone, which continued not long. At twelue this night the wind vered to the East and by North, wee held our course South South-west, as afore.

The fifteenth of August, we put into the Isles of Farre, standing in 52. degrees; and the fifteenth of September, I arrived in Tilberie Hope in the Thames.

CHAP. XV.

A Second Voyage or Employment of Master HENRY HUDSON, for finding a passage to the East Indies by the North-east: written by himselfe.

* I haue Robert Inets Journall also, for breuitie omitted.

Heir names employed in this action are as followeth: Henry Hudson, Master and Pilot; Robert Inet, the Master his Mate; Ludlowe Arnall; John Cooke, Boatsonne; Philip Stacie, Carpenter; John Barnes; John Braunch, Cooke; John Adrey, James Strutton, Michael Feirce, Thomas Hikes, Richard Tomson, Robert Raynar, John Hudson, and Humfrey Gilby. The courses obserued in this Journall were by a Compasse, that the Needle and the North of the Flye were directly one on the other.

Aprill.

Anno 1608. the two and twentieth of Aprill, being Friday, we set sayle at Saint Katherines, and fell downe to Blacke wall.

May.

The twentieth of May, at noone by obseruation we were in 64. degrees 52. minutes, and at this time and place the Needle declined vnder the Horizon by the Inclinatorie 81. degrees, and wee had a smooth Sea, by meanes whereof my obseruation was good.

Lowfoot.

The one and twentieth, at night thicke fog, wee sayled North North-east, with the wind at East. The two and twentieth, in the fore-noone the winde at South-east, wee steered North North-east, as afore: in the after-noone little wind and thicke fog; we accounted vs in 67. degrees, the Sea smooth, the Needle declined 82. degrees, this night was calme and cleere. The three and twentieth, in the morning the wind was Easterly, we stood North North-East, and North and by East. All the fore-noone was foggie: in the after-noone it cleered, and the wind shortned vpon vs, we made our way good North all night. The foure and twentieth, the wind at East North-east, and East and by North, we lay as neere as wee could with a full sayle; wee accounted Lowfoot from vs East Northerly, 16. leagues, distant from vs; at foure a clocke this after-noone, wee stood all night, as afore.

The five and twentieth, the wind at East North-east, we stood away North as we could lie: all this day was cleere weather, and searching cold, which cold begonne the one and twentieth day, and then my Carpenter was taken sicke, and so doth yet continue; and three or foure more of our companie were enclining to sicknesse, I suppose by meanes of the cold. All the night it was calme. The sixe and twentieth, cold but cleere weather, the wind betweene East and East North-east, we stood North-easterly till twelue a clocke at night: then wee had the wind at North-east & North North-east, we stood South-east and East till noone the next day. The seven and twentieth, cold and drie weather, at noone we had the wind North and North North-west; Wee stood away North-east, and East North-east, as we could, and accounted our selues in 69. degrees 40. minutes, and the Needle enclined, hauing a smooth Sea, neere 84. degrees. All night we had wind and weather as afore.

Sun 5. degrees 35. minutes at mid-night.

The eight and twentieth, drie cold cleere weather; the wind betweene North North-west and North, we made our way good East North-east; wee saw the Sunne on the North Meridian about the Horizon 5. degrees 35. minutes. All this night we had much wind, as afore. The nine and twentieth, a hard gale at North North-west: by account we ranne from mid-night to noone 21. leagues, East North-east. Wee had the Sunne on the Meridian 5. degrees, the latitude 73. degrees 13. minutes, whereby wee found our ship to haue out-runne vs. At mid-night the wind came to South-east: we cast about, and stood East North-east. This day partly cleere weather with some snow. The thirtieth, cold cleere weather, the wind betweene North-east, and East and by North; we went East South-east, and obseruing, were in 73. degrees 50. minutes. The one and thirtieth, cold and cleere weather: from the last day till this day noone, we stood South-east and by South, in the latitude of 72. degrees 45. minutes.

June.

The first of June, a hard gale at East North-East, with snow: we made our way good South South-east. The second, a hard gale of wind at North-east: towards night, calme with fogge, our course was South-east all day. The third, in the morning we had a sight of the North Cape; and at a West and by North Sunne, the Cape bore off vs South-west, halfe a point Southerly, being from vs 8. leagues: and obseruing the variation, I found it to the Westward 11. degrees: and

North Cape.

Variation west 11. degrees.

and hauing a smooth Sea, the Needle enclined vnder the Horizon 84. degrees and a halfe, the neereft I could finde. We had the wind at South-west, and wee stood away North-east and by East. It was cleere weather, and we saw *Norway* Fisher-men at Sea.

Needles inclination 84. degrees and a halfe.

The fourth, warme cleere sun-shine, we stood away North-east and by East. Now by Gods helpe our Carpenter recouered, and made a Mast for our ship-boat, and the companie made a Sayle, we had the Sunne in the sight on the North Meridian: his height was 5. degrees 40. minutes. Inclination 23. degrees 21. minutes: Poles height 72. degrees 21. minutes. The fift, in the morning calme weather: wee sounded, and had 140. fathoms, sand Oze: here wee saw a swelling Sea setting North-east and by East, and South-west and by West, with streame-leches: and we saw drift wood. After we had wind; and we sayled and made our way North North-east: towards night we sounded, and found ground at 150. fathoms, sand Oze. This day cleere weather, and not cold. The sixt, wee had cleere weather, the wind being at East North-East, from the last day till this day noone; we shaped our way on diuers courses North and by West, in the latitude of 73. degrees 24. minutes. We found that our ship had out-runne vs, sounding in 160. fathoms: in the after-noone little wind.

The seuenth, in the morning the wind at South, after at South South-east: from the last day till this day noone, wee accounted our way from diuers courses North-east, 15. leagues. This day was close but cleere weather, and we had a good gale of wind at this time. And three dayes before this, our Cooke and one more of our companie were very sicke. In the morning, we had ground at 150. fathoms, and at night we had no ground at 180. fathoms, which encreased hope. This night we had some snow, which continued foure houres: then the wind came at North-east and by East with storme; and with short sayle we stood North and by West: here the Needle enclined 86. degrees. I accounted that we were in 74. degrees and a halfe at neereft hand. This night we saw the Sunne on the North Meridian, his height was 7. degrees 40. minutes, which maketh the Poles height 74. degrees 23. minutes. The eight, from twelue a clocke last night till noone, we accounted our way on diuers courses, North and by East: then our latitude was 74. degrees 38. minutes, and we had no ground at 200. fathoms. In the after-noone the wind came at South South-east, and South-east and by East. This day and night wee had cleere weather, and we were here come into a blacke blue Sea.

74. degrees 30. minutes

The ninth, cleere weather, the wind came at South-east and by East: from the last day till this day noone, wee had a good way North-east, in latitude of 75. degrees 29. minutes: then wee entred into Ice, being the first we saw in this Voyage: our hope was to goe through it, we stood into it, and held our course betweene North-east, and East North-east, loosing for one, and bearing roome for another, till foure in the after-noone: at which time we were so farre in, and the Ice so thicke and firme ahead being in it foure or five leagues, that wee had endangered vs somewhat too farre; wee returned as wee went in, and with a few rubbes of our ship against the Ice; by eight a clocke this Eeuening wee got free of it. Wee made our way till next day at noone, South-west and by South, 18. leagues: in the middest of this way wee had no ground at 180. fathoms. The tenth, in the morning hasey weather; but at noone it cleered vp, and then we cast about, and stood away North and by East, the wind being at East South-east, two watches, five leagues: then we had the wind at East, we cast about, and stood South South-east, and made a South way, sixe leagues. The eleuenth, in the morning a hard storme at East, and East and by South we strooke ahull.

Darke blue Sea.

The twelfth, in the morning fog, and all day after cleere weather, the wind at South South-west, we steered East and by North: at noone being in the latitude 75. degrees 30. minutes. From noone till foure a clocke, five leagues East and by North; then we saw Ice ahead of vs, and vnder our Lee trending from the North-west to the North and East of vs: We had sounding 100. fathom, greenish Oze. Here we saw diuers pieces of drift wood by vs driuing, and streame Leeches lying South South-west, and North North-east. We many times saw the like since we saw the North Cape. The thirteenth, cleere weather, the wind at East, we made a South way 6. leagues, two watches: then we cast about, and made a North way one watch 3. leagues: At twelue at night, much wind with fog, we strooke ahull and layed our ships head to the Southward. The fourteenth, in the fore-noone fog, and our shroudes were frozen: the after-noone was cleere Sun-shine, and so was all the night.

The fifteenth, all day and night cleere sun-shine; the wind at East, the latitude at noone 75. degrees 7. minutes. We held Westward by our account 13. leagues. In the after-noone the Sea was asswaged; and the wind being at East we set sayle, and stood South and by East, and South South-east as we could. This morning, one of our companie looking ouer boord saw a Mermaid, and calling vp some of the companie to see her, one more came vp, and by that time shee was come close to the ships side, looking earnestly on the men: a little after, a Sea came and ouerturned her: from the Nauill vpward, her backe and breasts were like a womans, (as they say that saw her) her body as big as one of vs; her skin very white; and long haire hanging downe behind, of colour blacke: in her going downe they saw her tayle, which was like the tayle of a Porposse, and speckled like a Macrell. Their names that saw her, were *Thomas Hilles* and *Robert Rayner*.

Mermaide scene, and described.

The

The sixteenth, cleere weather, the wind being at East. From the last day till this day noone, we made our way South and by East 9. leagues, and from noon to eight a clocke in the Evening, 6. leagues: then we cast about and stood to the Northwards.

The seventeenth, cleere weather, the wind at South-east and by East; from the last day till this day noone, our way was North-east and by East, at noone being in the latitude of 74. degrees 40. minutes. At after-noon we sounded, and had ground at 86. fathom, greene Oze, and our water whitish greene: Here we saw Whales, Porpoises, and the Sea full of Fowles: from noone to mid-night North-east and by East we had the Sunne at lowest, on the North and by East, Easterly part of the Compasse: latitude 74. degrees 54. minutes. Sounding we had 92. fathoms water, Oze as before.

The eighteenth, faire weather, the wind at South-east and by East, from mid-night till this day noone, we sayled North-east and by East, in the Latitude of 75. degrees 24. minutes, and had ground at ninetie five fathome Oze, as afore. Heere we had Ice in our sight to the Northward off vs. In the after-noon, hauing little wind at North-east, we cast about and lay East South-east, and at fixe a clocke, had ground at ninetie five fathoms and a halfe Oze, as afore. From noone to twelue a clocke at night, our way was South-east, and South-east and by East, and had the Sunne on the Meridian, North and by East halfe a point Eastward. The Sunnes height was eight degrees 40. minutes. Sounding ninetie fathom. All this day, we had Ice on our Larboord trending: and at this time, from the North-west off vs to the East South-east, I haue some reason to thinke there is a Tide or Current setting to the Northwards; the course wee held and the way we made betweene this noone and mid-night Obseruations, doe make mee suspect it the more.

Current:

Needles inclination 89. degrees and a halfe, in 75. degrees 22. min.

The nineteenth, faire and warme weather, the sea smooth. Here the Needle inclined vnder the Horizon 89. degrees and a halfe, being in the Latitude at noone of 75. degrees 22. minutes; Sounding wee had ground in an hundred fathom. From twelue a clocke last night till this day at noone, we accounted our way from East and by North to South-east, ten leagues, hauing Ice alwayes in our sight trending on our Larboord, wee had the winde betweene North, and North North-west. We saw the Sunne at the lowest on the North and by East, halfe a point Easterly, his height was 8. degrees 10. minutes, which maketh the Poles height 74. degrees 56. minutes; Sounding we had ground in one hundred and twentie sixe fathom. From noone to this time, wee accounted our way East and by South, and East South-east, twelue leagues.

Beares roaring
Store of Seale.

The twentieth, faire warme weather, this morning at foure of the clocke, wee had depth one hundred and twentie five fathom. Heere we heard Beares roare on the Ice; and we saw vpon the Ice and neare vnto it, an incredible number of Seales. We had sounding one hundred and fifteen fathom, and after ground at ninetie five fathom sandie Oze. We had the Sun on the Meridian North and by East, halfe a point Easterly; his height was 7. degrees 20. minutes. From twelue a clocke last night, to twelue a clocke this night, our way was made good by our account South-east and by South, twelue leagues, and South-east, three leagues and a halfe, the Ice alwayes being on our Larboord. The wind this day, betweene North and North-west.

Sunne at mid-night high 7. degrees 40. minutes, in 74. degrees 33. minutes.

Just notes tell of a sudden variation of the Compasse, from the North to the East one point which had been two immediately before.

The one and twentieth, at foure a clocke in the morning wee sounded, and had one hundred and twentie fathome greene Oze, and the Ice bore off vs East, the winde variable; in diuers courses wee made our way good South South-east; our Latitude at noone being 74. degrees 9. minutes, we were haled to the Northward beyond expectation. All this day faire, cleere, and warme weather, and Ice on our Larboord at a North and by East Sunne; being then at lowest, his height was 7. degrees 40. minutes, which made the Poles height 74. degrees 33. minutes. From the last day at noone, till twelue a clocke this night, by account of our ships way, wee made our way good East North-east, fixe leagues and a halfe; whereby it doth appeare how we were haled to the Northward. Heere wee had ground at one hundred and thirteene fathome, greene sandie Oze.

The two and twentieth, faire cleare weather, the winde at West North-west. At eight a clocke in the Morning, we had ground at one hundred and fifteen fathom, greene Oze. From mid-night to noone, our course was North-east and by East, being in the Latitude of 74. degrees 35. minutes, and we found that our ships way, and our obseruation were not but there was carefull heed taken of both. Heere we had Ice a head off vs, trending to the South-east; and all day before Ice on our Larboord. Here we stood South-east five leagues, then the Ice trended South and by West fixe leagues; we sayled by it, and doubled it by eight a clocke in the Evening, and then it bore East off vs. Heere hauing a smooth sea, the Needle inclined 85. degrees, from eight a clocke to twelue, North and by East Easterly. Then we had the Sunne on the Meridian, North and by East $\frac{1}{2}$ a poynt Easterly. The Sunnes height was 7. degrees 45. minutes, which made the Latitude 74. degrees 43. minutes.

The three and twentieth, in the morning thicke fogge, the wind at North North-west. From mid-night till foure a clocke this morning, we sayled North-east five leagues, and then we were among the Ice; we cast about, and stood two houres South-west, two leagues, and had no ground at one hundred and eightie fathom. Then we cast about againe, and stood East till eight a clocke

two

two leagues, and then it cleered vp, and we had Ice a head off vs. And from North, we stood to South-east, and our shroudes were frozen. Then till noone wee went East and by South, foure leagues, and were neere Ice on our Larboord, in the Latitude of 74. degrees 30. minutes. In the after-noone the wind being at North, wee stood two houres and a halfe, five leagues and a halfe; three houres South South-east, five leagues; one houre South-east and by South, one league and a halfe; an houre East halfe a league, which brought eight in the Eeuening alwayes Ice on our Larboord. This after-noone, wee had some snow. From eight a clocke to mid-night, South South-west foure leagues, with Ice as afore. We saw the Sunne at the lowest, North North-east, his height was 7. degrees 15. minutes, the Poles height 74. degrees 18. minutes.

The foure and twentieth, cleere, but cold and some snow, the wind betweene North North-east, and North-east, from mid-night to foure a clocke, wee stood Southward two leagues, and South-east and by East two leagues. And from foure a clocke till noone, South-east Southerly nine leagues, sounding we had ground in one hundred and fortie fathome. From noone to three a clocke, we stood South-east and by South three leagues; from three to foure, South-west and by South one league; and had Ice from the North-east to the South-east off vs. From foure a clocke to eight, we stood South-west two leagues and a halfe, Southward halfe a league, with Ice neere vs vnder our Lead.

The five and twentieth, cold and cleare, the wind at East South-east; from eight a clocke last night till foure this morning, our way was South and by East, foure leagues and a halfe; sounding we had ground in eightie fathome, then we had little wind till noone, at East North-east, and the Sunne on the Meridian, on the South-west and by South point of the Compasse, ere it began to fall, wee were in the Latitude of 72. degrees 52. minutes, and had Ice on our Larboord, and our hope of passage was gone this way, by meanes of our nearenesse to *Noua Zembla*, and the abundance of Ice. We had from Noone to eight a clocke in the Eeuening, the wind between North North-east, and North-east, we stood South-east three leagues and a halfe, and had Ice on our Larboord, and shoalding sixtie eight fathome.

The sixe and twentieth, faire Sun-shining weather, and little wind at East North-east. From twelue a clocke at night till foure this morning, we stood Southward two leagues, sounding wee had sixtie sixe fathome Oaze, as afore. From foure a clocke to noone, South-east and by South foure leagues, and had the Sunne on the Meridian, on the South-east and by South point of the Compasse, in the Latitude of 72. degrees 25. minutes, and had sight of *Noua Zembla* foure or five leagues from vs, and the place called by the *Hollanders*, *Swart Cliffe*, bearing off South-east. In the after-noone, wee had a fine gale at East North-east, and by eight of the clocke, we had brought it to beare off vs East Southerly, and sayled by the shoare a league from it.

The seuen and twentieth, all the fore-noone it was almost calme; wee being two mile from the shoare, I sent my Mate *Robert Inet*, and *John Cooke* my Boat-swaine on shoare, with foure others, to see what the Land would yeeld that might bee profitable, and to fill two or three Caskes with water. They found and brought aboard some Whales Finnes, two Deeres Hornes, and the Dung of Deere, and they told me that they saw Grasse on the shoare of the last yeere, and young Grasse came vp amongst it a shaftman long; and it was boggie ground in some places, there are many streames of Snow water nigh, it was very hot on the shoare, and the snow melted apace, they saw the footings of many great Beares, of Deere, and Foxes. They went from vs at three a clocke in the morning, and came aboard at a South-east Sunne; and at their comming, wee saw two or three companies of Morfes in the sea neere vs swimming, being almost calme. I presently sent my Mate, *Ladlow* the Carpenter, and sixe others a shoare, to a place where I thought the Morfes might come on the shoare, they found the place likely, but found no signe of any that had beene there. There was a Crosse standing on the shoare, much Drift-wood, and signes of Fires that had beene made there. They saw the footing of very great Deere and Beares, and much Fowle, and a Foxe; they brought aboard Whale finnes, some Mousse, Flowers and greene things that did there grow. They brought also two peeces of a Crosse, which they found there. The Sunne was on the Meridian on the North North-east, halfe a point Easterly, before it began to fall. The Sunnes height was 4. degrees 45. minutes, Inclination 22. degrees 33. minutes, which makes the Latitude 72. degrees 12. minutes. There is disagreement betweene this and the last obseruation; but by meanes of the cleerenesse of the Sunne, the smoothnesse of the Sea, and the neerhesse to Land, wee could not bee deceived, and care was taken in it.

The eight and twentieth, at foure a clocke in the Morning our Boat came aboard, and brought two dozen of Fowle, and some Egges, whereof a few were good, and a Whales finne; and wee all saw the Sea full of Morfes, yet no signes of their being on shoare. And in this calme, from eight a clocke last Eeuening, till foure this Morning, we were drawne backe to the Northward, as farre as wee were the last Eeuening at foure a clocke, by a Streame or a Tide; and we chose rather so to driue, then to aduenture the losse of an Anchor, and the spoyle of a Cable. Heere our new Ship-boate began to doe vs seruice, and was an incouragement to my Companie, which want I found the last yeere.

No passage
that way.
Swart Cliffe

They goe
a shoare.

The nine and twentieth, in the morning calme, being halfe a league from the shoare, the Sea being smooth, the Needle did encline 84. degrees, we had many Morfes in the Sea neere vs, and desiring to find where they came on shoare, wee put to with Sayle and Oares, towing in our Boat, and rowing in our Barke to get about a point of Land, from whence the Land did fall more Easterly, and the Morfes did goe that way. VVee had the Sunne on the Meridian on the South and by VVest point, halfe a point to the VVester part of the Compasse, in the latitude of 71. degrees 15. minutes. At two a clocke this after-noon we came to anchor in the mouth of a Riuer, where lieth an Iland in the mouth thereof, foure leagues: wee anchored from the Iland in two and thirtie fathomes, blacke sandy ground. There droue much Ice out of it with a streame that set out of the Riuer or Sound, and there were many Morfes sleeping on the Ice, and by it we were put from our Road twice this night; and being calme all this day, it pleased God at our need to giue vs a fine gale, which freed vs out of danger. This day was calme, cleere and hot weather: all the night we rode still.

Riuer and
Iland.

The thirtieth, calme, hot, and faire weather, we weighed in the morning, and towed and rowed, and at noone we came to anchor neere the Ile aforesaid in the mouth of the Riuer, and saw very much Ice driving in the Sea, two leagues without vs lying South-east and North-west; and driving to the North-west so fast, that wee could not by twelue a clocke at night see it out of the top. At the Iland where wee rode, lieth a little Rocke, whereon were fortie or fiftie Morfes lying asleepe, being all that it could hold, it being so full and little. I sent my companie ashore to them, leauing none aboard but my Boy with mee: and by meanes of their heere nesse to the water, they all got away, saue one which they killed, and brought his head aboard; and ere they came aboard they went on the Iland, which is reasonable high and steepe, but flat on the top. They killed and brought with them a great Fowle, whereof there were many, and likewise some Egges, and in an houre they came aboard. This Ile is two flight-shot ouer in length, and one in breadth. At mid-night our Anchor came home, and wee tayld aground by meanes of the strength of the streame, but by the helpe of God, wee houghed her off without hurt. In short time wee moued our ship, and rode still all night; and in the night wee had little wind at East, and East South-east. VVee had at noone this day an obseruation, and were in the latitude of 71. degrees 15. minutes.

July.

The first of July, we saw more Ice to Seaward of vs; from the South-east to the North-west, driving to the North-west. At noone it was calme, and we had the Sunne on the Meridian, on the South and by VVest point, halfe a point to the VVesterly part of the Compasse, in the latitude of 71. degrees 24. minutes. This morning I sent my Mate *Eueret*, and foure of our companie to rowe about the Bay, to see what Riuer, were in the same, and to find where the Morfes did come on land; and to see a Sound or great Riuer in the bottome of the Bay, which did alwaies send out a great streame to the Northwards, against the tide that came from thence: and I found the same in coming in, from the North to this place before this. VVhen by the meanes of the great plenty of Ice, the hope of passage betweene *Newland* and *Noua Zembla* was taken away; my purpose was by the *Vaygats* to passe by the mouth of the Riuer *Ob*, and to double that way the North Cape of *Tartaria*, or to giue reason wherefore it will not be: but being here, and hoping by the plentie of Morfes wee saw here, to defray the charge of our Voyage; and also that this Sound might for some reasons bee a better passage to the East of *Noua Zembla*, then the *Vaygats*, if it held according to my hope conceived by the likenesse it gaue: for whereas we had a floud came from the Northwards; yet this Sound or Riuer did runne so strong, that Ice with the streame of this Riuer was carried away, or any thing else against the floud: so that both in floud and ebbe, the streame doth hold a strong course; and it floweth from the North three houres, and ebbeth nine.

His purpose
altered.

Strong stream.

The second, the wind being at East South-east, it was reasonable cold, and so was Friday; and the Morfes did not play in our sight as in warme weather. This morning at three of the clocke, my Mate and companie came aboard, and brought a great Deeres horne, a white Locke of Deeres haire; foure dozen of Fowle, their Boat halfe laden with drift Wood; and some Flowers and greene things, that they found growing on the shoare. They saw a herd of white Deere, of ten in a companie on the land; much drift wood lying on the shoare, many good Bayes, and one Riuer faire to see to on the North shoare, for the Morfes to land on: but they saw no Morfes there, but signes that they had beene in the Bayes. And the great Riuer or Sound, they certified me, was of breadth two or three leagues, and had no ground at twentie fathoms, and that the water was of the colour of the Sea, and very salt, and that the streame setteth strongly out of it. At sixe a clocke this morning, came much Ice from the Southward driving vpon vs, very fearefull to looke on: but by the mercy of God and his mightie helpe, wee being moored with two Anchors ahead with vering out of one Cable, and heauing home the other, and fending off with Beames and Sparres, escaped the danger: which labour continued till sixe a clocke in the Euening, and then it was past vs, and we rode still and tooke our rest this night.

Herd of white
Deere.

The third, the wind at North a hard gale: At three a clocke this morning wee weighed our anchor, and set sayle, purposing to runne into the Riuer or Sound before spoken of.

The

The fourth, in the morning it cleered vp with the wind at North-west, we weighed and set sayle, and stood to the Eastwards, and past ouer a Reeve, and found on it fise and a halfe, sixe, sixe and a halfe, and seuen fathoms water: then we saw that the Sound was full, & a very large Riuer from the North-eastward free from Ice, and a strong streame comming out of it: and wee had founding then, foure and thirtie fathoms water. Wee all conceiued hope of this Northerly Riuer or Sound, and sayling in it, wee found three and twentie fathomes for three leagues, and after twentie fathomes for fise or sixe leagues, all tough Ozie ground. Then the winde vered more Northerly, and the streame came downe so strong, that wee could doe no good on it: wee came to anchor, and went to supper, and then presently I sent my Mate *Iuet*, with fise more of our companie in our Boat, with Sayle and Oares to get vp the Riuer, being provided with Victuall and Weapons for defence, willing them to found as they went; and if it did continue still deepe, to goe vntill it did trende to the Eastward, or to the Southwards, and wee rode still.

The Riuer searched.

The fift, in the morning we had the wind at West: we began to weigh anchor, purposing to set sayle and to runne vp the Sound after our companie: then the wind vered Northerly vpon vs, and we saued our labour. At noone our companie came aboard vs hauing had a hard rought; for they had bene vp the Riuer sixe or seuen leagues, and sounded it from twentie to three and twentie; and after brought it to eight, sixe, and one fathome; and then to foure foot in the best: they then went ashore, and found good store of wilde Goose quills, a piece of an old Oare, and some Flowers, and greene things which they found growing: they saw many Deere, and so did we in our after-dayes sayling. They being come aboard, we presently set sayle with the wind at North North-west, and we stood out againe to the South-westwards, with sorrow that our labour was in vaine: for, had this Sound held as it did make shew of, for breadth, depth, safenesse of harbour, and good anchor ground, it might haue yeilded an excellent passage to a more Easterly Sea. Generally, all the Land of *Noua Zembla* that yet wee haue seene, is to a mans eye a pleasant Land; much mayne high Land with no Snow on it, looking in some places greene, and Deere feeding thereon: and the Hills are partly couered with Snow, and partly bare. It is no maruell that there is so much Ice in the Sea toward the Pole, so many Sounds and Riuers being in the Lands of *Noua Zembla*, and *Newland* to ingender it; besides the coasts of *Pechora*, *Russia*, and *Groenland*, with *Lappia*, as by proofes I finde by my trauell in these parts: by meanes of which Ice I suppose there will be no nauigable passage this way. This Eeuening wee had the wind at West and by South: wee therefore came to anchor vnder Deere Point; and it was a storme at Sea, wee rode in twentie fathomes, Ozie ground: I sent my Mate, *Ladlow*, with foure more ashore to see whether any Morfes were on the shoare, and to kill some Fowle, (for we had seene no Morfes since Saturday, the second day of this moneth, that wee saw them driuing out of the Ice.) They found good landing for them, but no signe that they had bene there: but they found that fire had bene made there, yet not lately. At ten of the clocke in the Eeuening, they came aboard, and brought with them neere an hundred Fowles called Wellocks; this night it was wet fogge, and very thicke and cold, the winde at West South-west.

Noua Zembla pleasant to the eye.

Cause of much Ice in those Seas, which make no nauigable passage.

The sixt, in the morning wee had the wind stormie and shifting; betweene the West and South-west, against vs for doing any good: we rode still and had much Ice driuing by vs to the Eastward of vs. At nine of the clocke, this Eeuening wee had the wind at North North-west: we presently weighed, and set sayle, and stood to the Westward, being out of hope to find passage by the North-east: And my purpose was now to see whether *Willoughbies* Land were, as it is layd in our Cardes; which if it were, wee might finde Morfes on it; for with the Ice they were all driuen from hence. This place vpon *Noua Zembla*, is another then that which the *Hollanders* call *Costing Sarch*, discovered by *Oliuer Brownell*: and *William Barentsons* obseruation doth witnesse the same. It is layd in plot by the *Hollanders* out of his true place too farre North: to what end I know not, vnlesse to make it hold course with the Compasse, not respecting the variation. It is as broad and like to yeeld passage as the *Vaygats*, and my hope was, that by the strong streame it would haue cleered it selfe; but it did not. It is so full of Ice that you will hardly thinke it. All this day, for the most part, it was fogge and cold.

Willoughbies Land, a conceit of Card-makers: it seeming to be no other then *Newland* or *Greenland* (as is before obserued cap. 2.) as *Costing Sarch* of *Brunell* is to others *Noua Zembla*. Note.

The seuenth, cleere but cold weather: in the morning the wind was at the North; from the last Eeuening to this morning, we set saile and kept our course West and by South, fiftene leagues. from morning to eight a clocke in the Eeuening it was calme: then we had the wind againe at North, and we sayled till nine a clocke next morning West South-west, eight leagues; then the wind being West and by South, wee went North and by West, three leagues, and wee had the Sunne at the highest South South-west, in the latitude of 71. degrees 2. minutes. The eight, faire weather; at noone we had the wind at East North-east, we stood North three leagues till foure a clocke: then the wind being at west and by North, wee stemmed North and by West one league and a halfe, till six a clocke in the Eeuening; then the wind was at North-east a hard gale, and wee stood till next day at noone West and by North, by account three and twentie leagues: we had the Sunne on the Meridian, South and by West, halfe a point neere West, in

the latitude of 70. degrees 41. minutes. The ninth, cleere weather: from this to the next day at noone, we sayled South-west and by West, twelue leagues, and Northward three leagues: and in these courses had these soundings, 41. 42. 46. 48. and 45. fathoms: we had the Sunne South and by VWest, halfe a point to the VWest part of the Compasse. The Sea was loftie: our latitude was 70. degrees 20. minutes.

The tenth, cleere but close weather: from this till next day noone, wee had little wind at West North-west: by account we made our way five leagues North-easterly. Wee had the Sun at the highest on the South and by West point, and a terce Westward, in the latitude of 70. degrees 55. minutes, and I thinke we had a rustling tide vnder vs; and in this time had sounding betweene fortie five and fortie fathomes, white sand. The eleuenth, cleere weather: from this to the next day at noone, little wind at North North-east, and sometimes calme; wee sayled West and by North by account five leagues; and had the Sunne on the Meridian on the South and by West point $\frac{1}{2}$. West in the latitude of 70. degrees 26. minutes, and found a rustling vnder vs. This fore-noone we were come into a greene Sea, of the colour of the mayne Ocean, which we first lost the eight of Iune: since which time wee haue had a Sea of a blacke blue colour, which (both by the last and this yeeres experience) is a Sea pestered with Ice.

The twelfth, faire weather: from noone to mid-night wee had the wind shifting betweene the North and West; our course was betweene VWest North-west, and South South-west. Then we had the wind at South, we sayled till the next day at noone, West and by North, thirteene leagues: wee accounted our way from the last day till this day noone Westward, eighteene leagues. This after-noone wee saw more Porpoises then in all our Voyage afore. The thirteenth, close weather: in the after-noone hauing much wind at South, with short sayle we stood away West and by North, till eight a clocke in the Eeuening: then we had the wind at South, but most times calme till noone the next day: wee stood away as afore, foure leagues, which made in all twelue leagues: we had the Sunne ere it began to fall, South and by West, in the latitude of 70. degrees 22. minutes.

The fourteenth, wee stood West North-west till mid-night, seuentene leagues: then the wind scanted and came at West, we stood North North-west, one league and a halfe; then the wind being more Southerly, wee sayled West North-west, five leagues. From the last till this day at noone, our way was out of diuers courses North-west and by West, foure and twentie leagues. We had the Sunne beginning to fall at South and by West, in the latitude of 70. degrees 54. minutes.

The fifteenth, faire; but towards night like to be stormie with thunder, the wind betweene South and South South-east; from this, till the sixteenth day at noone, our course was West and by North, seven and twentie leagues, and the Sunne then began to fall at South, three quarters of a point Westward, in the latitude of 70. degrees 42. minutes. The sixteenth, faire; our way was from this till next day at noone North-west, twelue leagues, out of diuers courses: and we had the wind shifting, sometimes at East, at West South-west, and West and by North; the latitude by a bad obseruation, 71. degrees 44. minutes. The seuenteenth, in the fore-noone faire; the wind being at West and by North. At foure a clocke this morning we saw Land beare off vs, West and South South-west, which was about *Ward-house*: this after-noone wee had a storme at West and by North, we layed it to trie till eight a clocke in the Eeuening, and then set sayle with the wind betweene West North-west, and North-west: our course till the next day at noone, was South-west and by South, twelue leagues: the Cape *Hopewell* bore off vs South South-west, and we were foure or five leagues from land.

The eighteenth, guffy, with raine all the fore-noone; then we had the wind shifting till next day at noone from South South-east to East, and South-east: our course in generall was North-west, foure and twentie leagues: then did North *Kene* beare off vs West halfe a point Southward, being from vs foure leagues; and the North Cape in sight bearing West and by North, &c.

The seuen and twentieth, cold with raine and storme; this night we began to burne Candle in the Betacle, which we had not done since the nineteenth of May: by reason wee had alwaies day from thence till now. The thirtieth, we had the Sunne vpon the Meridian due South, in the latitude of 68. degrees 46. minutes; whereby we found vs to bee afore our ship, ten or twelue leagues, and *Lowfoot* bore East of vs, but not in sight.

The seuenth of August, I vsed all diligence to arriue at *London*, and therefore now I gaue my companie a certificate vnder my hand, of my free and willing returne, without perswasion or force of any one or more of them: for at my being at *Nova Zembla*, the sixt of Iuly, voide of hope of a North-east passage, (except by the *Vaygats*, for which I was not fitted to trie or proue) I therefore resolved to vse all meanes I could to sayle to the North-west; considering the time and meanes wee had, if the wind should friend vs, as in the first part of our Voyage it had done, and to make triall of that place called *Lumleys Inlet*, and the furious ouer-fall by Cap-*tain* *Danis*, hoping to runne into it an hundred leagues, and to returne as God should enable mee. But now hauing spent more then halfe the time I had, and gone but the shortest part of the way, by meanes of contrary winds; I thought it my durie to laue Victuall, Wages, and Tackl

Greene Sea.

Thunder.

No night in
ten weekes.

See Hak. 10. 3.

Tackle, by my speedy returne, and not by foolish rashnesse, the time being wasted, to lay more charge vpon the action: then necessitie should compell, I arriued at *Gransend* the six and twentieth of August.

CHAP. XVI.

The third Voyage of Master HENRIE HUDSON toward Noua Zembla, and at his returne, his passing from Farte Islands, to New-found Land, and along to fortie foure degrees and ten minutes, and thence to Cape Cod, and so to thirtie three degrees; and along the Coast to the Northward, to fortie two degrees and an halfe, and up the Riuer neere to fortie three degrees. Written by ROBERT IVET of Lime-house.

ON Saturday the five and twentieth of March, 1609. after the old Account, we set sayle from *Amsterdam*; and by the seven and twentieth day, we were downe at the *Texel*: and by twelue of the clocke we were off the Land, it being East of vs two leagues off. And because it is a journey vsually knowne, I omit to put downe what passed, till we came to the height of *The North Cape of Finmarke*, which we did performe by the fift of May (*stilo nono*) being Tuesday. On which day we obserued the height of the Pole, and found it to bee 71. degrees and 46. minutes; and found our Compasse to vary six degrees to the West: and at twelue of the clocke, the North Cape did beare South-west and by South, tenne leagues off, and wee steered away East and by South, and East.

After much trouble with fogges, sometimes, and more dangerous of Ice. The nineteenth, being Tuesday, was close stormie weather, with much wind and snow, and very cold: the wind variable betweene the North North-west, and North-east. We made our way West and by North till noone. Then we obserued the Sunne hauing a flake, and found our height to bee 70. degrees 30. minutes. And the ship had out-runne vs twentie leagues, by reason of the set of the streame of *The White Sea*: and we had sight of *Wardhouse*. Then at two of the clocke wee tackt to the Eastward: for we could not get about the North Cape, the wind was so scant; and at eight of the clocke at night, on the one and twentieth, the North Cape did beare South-east and by South seven leagues off. And at mid-night *Assumption Point* did beare South and by East, five leagues off vs.

The two and twentieth, gusting weather with haile and snow, the Sunne breaking out sometimes: we continued our course along the Land West South-west. And at tenne of the clocke at night we were thwart off *Zenam*. The bodie of it did beare East off vs five leagues: and the course from the North Cape to *Zenam*, is for the most part West and by South, and West South-west, fiftie foure leagues.

The three and twentieth, faire Sun-shining weather; the wind at East and by South, and East South-east, wee steered along the Land South-west, and South-west and by West, eight leagues a Watch, for so we found the Land to lye from *Zenam* to *Lofote*. And the distance is fiftie leagues from the bodie of *Zenam*, to the Westermost Land of *Lofote*. And from the one to the other, the course is South-west and by West. For the Needle of our Compasse was set right to the North. At twelue of the clocke at night, the bodie of *Lofote* did beare South-east, fixe leagues off.

The foure and twentieth, faire cleere Sun-shining weather: the wind variable vpon all points of the Compasse, but most vpon the South-east, and sometimes calme. We continued our course West South-west as before. And at eight of the clocke at night, the Souther part of *Lofote* did beare South-east ten leagues off vs.

The five and twentieth, much wind at North-east, with some snow and haile. The first watch the wind came to the East a fine gale, and so came to the North-east, the second watch at foure of the clocke, and freshed in: And at eight of the clocke it grew to a storme, and so continued. At noone we obserued, and made the ship to be in 67. degrees 58. minutes. Wee continued our course South-west, twelue leagues a watch. At nine of the clocke, *Lofote* did beare East of vs 15. leagues off. And we found the Compasse to haue no variation. The wind increased to a storme.

The six and twentieth, was a great storme at the North North-east, and North-east. Wee steered away South-west afore the wind with our fore-course abroad: for wee were able to maintayne no more sayles, it blew so vehemently, and the Sea went so high, and brake with all, that it would haue endangered a small ship to lye vnder the Sea. So we skudded seuentie leagues in foure and twentie houres. The storme began to cease at foure of the clocke.

The seven and twentieth, indifferent faire weather, but a good stiffe gale of wind at North,

May 5. *stilo nono*.

Beale More. Wardhouse. They doubled the North Cape. Assumption Point. Zenam.

Lofote.

No variation.

A great current setting to the North-east.

Farre Iles set 14 leagues to *farre West*.

Stromo.

June,

m The Bittacle is a close place in which the Compasse standeth. *Basse Iland*. Their first sight of stars: for further North, they had continuall Sun-light. Change of water. A strange current out of the South-west.

Note well.

Bonnets are those which are laced and ecked to the sayles to enlarge them: with reference whereto the mayne course, misse course, fore course, is understood of those sayles without their Bonnets.

and North North-east, wee held on our course as before. At noone wee obserued and found our heighth to be 64. degrees 10. minutes. And wee perceived, that the Current had hindred vs in fortie eight houres to the number of 16. leagues to our best judgement. We set our mayne-sayle, sprit-sayle, and our mayne-top-sayle, and held on our course all night, having faire weather.

The eight and twentieth, faire weather and little wind at North-east, we held on our course South-west. At noone wee obserued the heighth, and were in 62. degrees and 30. minutes. The after-noon was little wind at North North-west. The second watch it fell calme. At foure of the clocke wee had sight of the Iles called *Farre*, and found them to lye out of their place in the Sea Chart fourteene leagues to *farre West*erly. For in running South-west from *Losfoote*, wee had a good care to our steerage and obseruations; and counted our selues thirtie leagues off by our course and obseruation: and had sight of them sixteene or eightene leagues off.

The nine and twentieth, faire weather sometimes calme; and sometimes a gale with the wind varying at South-west, and so to the North-east. Wee got to the Ilands, but could not get in. So we stood along the Ilands. The ebbe being come, we durst not put in.

The thirtieth faire weather; the wind at South-east and East South-east. In the morning we turned into a Road in *Stromo*, one of the Ilands of *Farre*, betweene *Stromo* and *Mugge-nis*, and got in by nine of the clocke: for it flowed so there that day. And as soon as we came in, we went to Romage, and sent our Boat for water, and filled all our emperie Caskes with fresh water. Wee made an end of our Romaging this night by ten of the clocke.

The one and thirtieth, faire Sun-shining weather, the wind at East South-east. In the fore-noon our Master with most of his Company went on shoare to walke, and at one of the clocke they returned aboard. Then we set sayle.

The first of June, *Bilo nouo*, faire Sun-shining weather, the wind at East South-east. We continued on our course South-west and by West. At noone wee obserued the Sunne, and found our heighth to be 60. degrees 58. minutes: and so continued on our course all night with faire weather. This night we lighted Candles in the m Bittacle againe.

The second mystie weather, the wind at North-east. At noone we steered away West South-west, to find *Basse Iland*, discovered in the yeere 1578. by one of the ships of Sir *Martin Fro-bisher*, to see if it lay in her true latitude in the Chart or no: wee continued our course as before all night, with a faire gale of wind: this night we had sight of the first stars, and our water was changed colour to a white Greene. The Compasse had no variation.

The third, faire Sun-shining weather; the wind at North-east. We steered on our course South-west and by West, with a stiffe gale of wind. At noone we obserued and found our heighth to be 58. degrees 48. minutes. And I was before the ship 16. leagues, by reason of the Current that held vs so strong out of the South-west. For it is eight leagues in foure and twentie houres. We accounted our selues neere *Basse Iland*: by mid-night we looked out for it, but could not see it.

The fourth, in the morning was much wind with fogge and raine. Wee steered away South-west by west all the fore-noon, the wind so increating, that wee were enforced to take in our top-sayle: the winde continuing so all the after-noon. Wee steered away South-west all the fore-part of the night; and at ten of the clocke at night it was little wind; and that was at South, and so came vp to the South South-east.

The fift, stormie weather, and much wind at South, and South by East, so that at foure of the clocke in the morning, we tooke in our fore-sayle, and lay a try with our mayne corse, and tryed away West North-west foure leagues. But at noone it was lesse wind, and the Sunne shewed forth; and we obserued, and found our heighth to be 56. degrees 21. minutes. In the after-noon the wind vered to and fro betweene the South-west and the South-east, with raine and fogge, and so continued all night. Wee found that our ship had gone to the VWestward of our course. The sixth, thicke hase weather with gusts of wind, and showers of raine. The wind varied betweene East South-East and South-west, wee steered on many courses a West South-west way. The afternoone watch the wind was at East South-east, a stiffe gale with myst and raine. Wee steered away South-west, by West eight leagues. At noone the Sunne shone forth, and we found the heighth to be 56. degrees 8. minutes. The seventh, faire sun-shining weather all the fore-noon, and calme vntill twelue of the clocke. In the after-noon the wind came to the North-west, a stiffe gale. We steered South-west by West, and made a South-west way. At noone we found the height to be 55. degrees one minute, and it continued all night a hard gale.

The eighth, stormy weather, the wind variable, betweene West and North-west much wind: at eight of the clocke wee tooke off our Bonnets. At noone the Sunne shewed forth, and wee obserued, and our height was 54. degrees 30. minutes. The ninth, faire sun-shining weather, and little wind all the fore-part of the day vntill eleuen of the clocke. Then the wind came to the South South-east, and we steered away West South-west. At noone we found our height to be 53. degrees and 45. minutes, and we had made our way South by West ten leagues. In the after-noon the wind increased and continued all night at East North-east and East.

The twelfth, faire weather, the wind variable betweene East North-east and South-east, wee steered on our course as before. At foure of the clock in the afternoon the wind came vp at South-east,

east. And we held our course as before. At noone wee obserued and found our height to be 52. degrees 35. minutes.

The eleventh, in the morning was thicke and foggie, the winde varying betweene South South-west, and North-west. At four of the clocke in the morning, wee tackt about to the Southward. At eleven of the clocke the winde came to the North-west, and so to the West North-west. This day we had change of water, of a whitish Greene, like to the Ice water to the North-west. At noone it cleered vp, and became very faire weather. wee put out our mayne top-sayle: then we obserued the Sunne, and found our height to be 51. degrees 24. minutes. We had sayled many courses and found our ship gone to the Southward of our account ten leagues, by reason of a current from the North-ward. The Compasse varied on point to the East.

A current from the North. Variation one point East.

The twelfth, faire Sun-shining weather, but much wind at the West: we stood to the Southward all day, the wind shifting betweene the South-west and the West and by North. Wee made our way South halfe a point West, eight and twentie leagues. Our height at noone was 50. degrees 9. minutes. At eight of the clock at night we took off our Bonets, the wind increasing.

The thirteenth, faire Sun-shining weather: the wind variable betweene the West, and North North-west. We made our way South South-west seven and twentie leagues. At noone we obserued, and found our height to be 48. degrees 45. minutes. But not to be trusted, the Sea went so high. In the after-noon the winde was calmer, and wee brought to our Bonets, and stood to the Southward all night with a stiffe gale.

The fourteenth, faire and cleere Sun-shining weather: the winde variable betweene the North-west and South-west by West. At mid-night I obserued the North starre at a North-west by West Guard; a good obseruation 49. degrees 30. minutes. And at noone wee obserued the Sunne, and our height was 48. degrees 6. minutes. And I made account we ranne betweene the two obseruations twelue leagues. At one of the clocke in the after-noon, wee cast about to the Westward, and stood so all night: the winde increased to a storme, and was very much winde with Raine.

Latitude 48. degrees 6. minutes.

The fifteenth, we had a great storme, and spent ouer-board our fore-mast, bearing our fore corse low set. The sixteenth, we were forced to trie with our mayne sayle, by reason of the vnconstant weather. So wee tried foure watches South-east and by South eight leagues and an halfe, and two watches fixe leagues. The seuenteenth, reasonable faire weather: the wind variable betweene West South-west, and West North-west. And a stiffe gale of wind, and so great a swelling Sea out of the West South-west, that wee could doe nothing. So one watch and an halfe wee droue North foure leagues and an halfe, and foure watches and an halfe South and by East halfe a point East twelue leagues. The eighteenth, reasonable weather but close and cloudie, and an hard gale of wind, and a great Sea. The winde being at the North-west, wee lay to the Southward, and made our drift South and by West, fise leagues. The after-noonne proued little wind, and the night part calme. The nineteenth, in the fore-noonne faire weather and calme. In the morning we set the piece of our fore mast, and set our fore corse.

* To spend the Mast, is vnderstood of breaking it by foule weather only.

The one and twentieth, faire Sun-shining weather, but much wind and a great Sea. We split our fore saile at ten of the clocke; then we laid it a trie with our mayne sayle, and continued so all day. In the night it fell to be little wind. This day our height was 45. degrees 48. minutes.

* That is, bare no more sayle but the mayne sayle, &c. Variation.

The two and twentieth, very faire Sun-shining weather, and calme all the after-noonne. At noone we made a very good obseruation, and found our height 44. degrees 58. minutes. At eight of the clocke at night wee had a small gale of winde at South-east. And wee steered away West for Newfoundland. The true Compasse varied one point East.

The three and twentieth, thicke weather with much wind and some raine. At eight of the clocke in the morning, the wind came to the West South-west, and West so stiffe a gale, that we were forced to take our top-sayle, and steered away North North-west vntill foure of the clock in the after-noonne. Then we tackt to the Southward the winde at West North-west. At eight of the clocke at night wee tooke in our top-sayles, and laid it a trie with our mayne sayle, the winde at West.

The foure and twentieth, a stiffe gale of wind, varying betweene the West and North North-west, we tried till fixe of the clocke: at which time we set our foresaile, and steered way West and by South by our Compasse eight leagues in foure watches: and wee tried away South in one watch and an halfe.

The fise and twentieth, faire Sun-shining weather, the wind at North North-west and North, we steered away West by South by our Compasse till twelue of the clocke: at which time we had sight of a sayle, and gaue her chafe but could not speake with her. She stood to the Eastward; and we stood after her till fixe of the clocke in the after-noonne. Then wee tackt to the Westward againe, and stood on our course. It was faire all night, and little wind sometimes.

The six and twentieth, all the fore-part of the day very faire weather and hot, but at foure of the clocke in the after-noonne it grew to bee much winde and raine: the winde was at South South-east. At noone wee obserued and found our height to bee 44. degrees 33. minutes. At eight of the clocke at night, the wind came to South-west, and West South-west. Wee steered North-

North-west, one Watch, and at twelue in the night, to the West, and West and by South, very much wind. So we could lye but North North-west.

The seuen and twentieth, very much winde and a soare storme, the wind Westerly. In the morning at foure of the clocke, wee tooke in our fore-corse, and layd it a trie with our mayne-corse low set; and so continued all the day and night, two watches to the Northward. At eight of the clocke at night, we tackt to the Southward.

The eight and twentieth, faire sun-shining weather, the wind at West and by South; we lay a trie to the Southward till eight of the clocke in the morning. Then wee set our fore-corse, and stood to the Southward a stiffe gale of wind, but faire weather and a great Sea, out of the Westward boord, and so continued all night.

The nine and twentieth, faire sun-shining weather, the wind at West and by South; we stood to the Southward vntill sixe of the clocke at night, and made our way South and by East, foure leagues. Then the winde came to the South-west, and wee cast about to the VWestward, and made our way VWest North-west all night. At noone, I found the height 43. degrees 6. minutes. The variation one point VWest.

The thirtieth, faire sun-shining weather, the winde at South-west and by VWest, we steered North-west and by VWest. And made our way so, by reason of the variation of the Compasse. At noone, I found the height to bee 43. degrees 18. minutes; wee continued our course all night, and made our way North-west and by VWest, halfe a point VVesterly, five and twentie leagues.

July.

The first of July, close, mystie and thicke weather, but a faire gale of wind at South-west, and South-west by South. We steered away North-west and by West, Westerly, and made our way so, by reason of the variation of the Compasse. At eight of the clocke at night, wee sounded for the Banke of *New-found Land*, but could get no ground.

The Banke of
New found Land

The second, thicke mystie weather, but little wind, and that at West, and West and by South. At eight of the clocke in the morning, we cast about to the Southward, and when our ship was on staves, we sounded for the Banke, and had ground in thirtie fathoms, white sand and shells, and presently it cleered: and we had sight of a sayle, but spake not with her. In the night we had much Rayne, Thunder and Lightning, and wind shifting.

Variation west
17. degrees.
French-men Fish-
ing on the
Banke.

The third, faire Sun-shining weather, with a faire gale of wind at East North-east, and wee steered away West South-west by our Compasse, which varied 17. degrees Westward. This morning we were among a great Fleet of *French-men*, which lay Fishing on the Banke; but we spake with none of them. At noone wee found our height to bee 43. degrees 41. minutes. And we sounded at ten of the clocke, and had thirtie fathoms gray sand. At two of the clocke wee sounded, and had five and thirtie fathoms gray sand. At eight of the clocke at night, we sounded againe, and had eight and thirtie fathoms gray sand, as before.

Variation 15.
degrees North-
west.

The fourth, the fore-part of the day cleere, with a faire gale of wind, but variable betweene the East North-east, and South and by East, wee held on our course as before. The after-noon was mystie, the wind shifting betweene the South and the West, till foure of the clocke. Then we tooke in our top-sayle and sprit-sayle, and sounded and had no ground in seuentie fathoms. The winde shifted still vntill eight of the clocke, then it came to the North North-east, and North-east and by North, and we steered away West North-west, by our varied Compasse, which made a West way halfe point North. The Compasse varied 15. degrees from the North to the West.

Variation 13.
degrees.

The fift, faire sun-shining weather, the wind at North-east and by North, we steered away West North-west, which was West halfe a point North. At noone we found our height to be 44. degrees 10. minutes, and sounded, and had no ground in one hundred fathoms. The after-noon proued calme sometimes, and sometimes little wind, vntill nine of the clocke in the night. Then the wind came to the East, and we held on our course. At mid-night I obserued and found the height to bee 44. degrees 10. minutes, by the North Starre and the *Scorpions* heart. The Compasse varied 13. degrees.

Foggie and
thick weather.

The sixth, the fore-part of the day faire weather, and a stiffe gale of wind, betweene South South-east, and South-west, wee steered West and by North, and West North-west. The after-part of the day from two of the clocke, was all foggie and thicke weather; the wind a hard gale, varying betweene South-west and by South, and West and by North, we made our way North-west halfe a point Northerly, nineteene leagues, vpon many points foure Watches. At night at eight of the clocke, we sounded and had no ground at one hundred fathoms.

The seuenth, faire sun-shining weather, the wind varying betweene West and by North, and West and by South. At foure of the clocke in the morning, we cast about to the Southward, and stood so till one in the after-noon. At noone we found our height to be 44. degrees 26. minutes. At seuen of the clocke, we tackt to the Northward. At eight at night, we tackt to the Southward, and sounded, and had nine and fiftie fathoms, white sand.

The eight, in the fore-noon faire weather, but the morning foggie till seuen of the clocke. At foure of the clocke in the morning we sounded, and had five & fortie fathoms, fine white sand, and we had runne five leagues South and by West. Then wee stood along one Glasse, and went

one league as before. Then we stood one Glasfe and sounded, and had sixtie fathoms. Then wee takt and stood backe to the Banke, and had five and twentie fathoms; and tryed for Fish, and it fell calme, and we caught one hundred and eightene great Coddes, from eight a clocke till one, and after Dinner wee tooke twelue, and saw many great Scoales of Herrings. Then wee had a gale of wind at South, and it shifted to the West North-west, and we stood three Glasses and sounded and had sixtie fathoms, and stood two Glasses, and had two and fortie fathoms, red stones and shells. So wee sounded euery Glasfe and had feuerall soundings 35. 33. 30. 31. 32. 33. and 34. fathoms.

Many great Cods taken. Many great Scoales of Herrings.

To sound is to trie the depth by Line and Lead, or Pole, &c.

The ninth, faire calme weather, we lay becalmed all day and caught some Fish, but not much, because we had small store of salt. At three of the clocke in the after-noone, wee had a gale at South-east, and South South-east, and we steered away Westerly, our Compasse was West and by South halfe a point South. At foure of the clocke, we sounded and had but fiteene, seuentene, and nineteene fathoms on a fishing Banke; and we sounded euery Glasfe. Then we could get no ground in five and twentie fathoms, and had sight of a sayle on head off vs. At noone our height was 44. degrees 27. minutes. We stood to the Westward all night, and spake with a French-man, which lay Fishing on the Banke of *Sablen*, in thirtie fathoms, and we saw two or three more.

The tenth, very mystie and thicke weather, the wind at South-west, a faire gale. We stood to the South-ward, and made our way South-east and by East. At twelue of the clocke we sounded, and had eight and fortie fathoms: againe at two we sounded, and had fiftie fathoms. And at sixe of the clocke we sounded: and had eight and fortie fathoms on the end of the Banke. Againe, at eight of the clocke at night wee sounded, and had no ground in eightie fathoms, and were ouer the Banke. So wee stood along till mid-night. The Compasse varied 17. degrees to the Westward.

Variation 17. degrees.

The eleuenth, very thicke and mystie weather. At twelue of the clocke at night, we cast about to the Westward, and stood so all day, and made our way West North-west. We sounded at twelue of the clocke, but had no ground; so we stood to the Westward all the fore-part of the night, and sounded but could get no ground in fiftie or sixtie fathoms till mid-night. Then I sounded and had ground at fiteene fathoms, white sand.

The twelfth, was very foggie, we stood our course all the morning till eleuen of the clocke; at which time we had sight of the Land, which is low white sandie ground, right on head off vs; and had ten fathoms. Then we tackt to the Southward, and stood off foure Glasses: then we tackt to the Land againe, thinking to haue rode vnder it, and as we came neere it, the fog was so thicke that we could not see; so wee stood off againe. From mid-night to two of the clocke, we came sounding in twelue, thirteene, and foureteene fathoms off the shoare. At foure of the clocke, we had 20 fathoms. At eight of the clocke at night 30. fathoms. At twelue of the clocke 65. fathoms, and but little winde, for it deeped apace, but the neerer the shoare the fairer shoalding.

Land, being low, white and sandie.

The thirteenth, faire sun-shining weather, from eight of the clocke in the fore-noone all day after, but in the morning it was foggie. Then at eight of the clocke we cast about for the shoare, but could not see it; the wind being at South by our true Compasse, wee steered VWest and by North. At noone we obserued, and found our height to bee 43. degrees 25. minutes; so we steered away VWest and by North all the after-noone. At foure of the clocke in the after-noone, we sounded and had five and thirtie fathoms. And at sixe of the clocke, wee had sight of the Land, and saw two sayles on head off vs. The land by the waters side is low Land, and white sandie Bankes rising full of little Hills. Our soundings were 35. 33. 30. 28. 32. 37. 33. & 32. fathoms.

43. degrees 25. minutes. Sight of Land againe, and of two Ships.

The foureteenth, full of myfts flying and vading, the wind betweene South and South-west, we steered away West North-west, and North-west and by West. Our soundings were 29. 25. 24. 25. 22. 25. 27. 30. 28. 30. 35. 43. 50. 70. 90. 70. 64. 86. 100. fathoms, and no ground.

The fifteenth, very mystie, the winde varying betweene South and South-west, wee steered West and by North, and VWest North-west. In the morning we sounded, and had one hundred fathoms, till foure of the clocke in the after-noone. Then we sounded againe, and had seuentie five fathoms. Then in two Glasses running, which was not aboue two English miles, we sounded and had sixtie fathoms, and it shoalded a great pace vntill we came to twentie fathoms. Then we made account we were neere the Ilands that lie off the shoare. So we came to an Anchor, the Sea being very smooth and little wind, at nine of the clocke at night. After supper, we tryed for Fish, and I caught fiteene Cods, some the greatest that I haue seene, and so we rode all night.

The sixteenth, in the morning it cleered vp, and wee had sight of five Ilands lying North, and North and by VWest from vs, two leagues. Then wee made ready to set sayle, but the myft came so thicke, that we durst not enter in among them.

Five Ilands.

The seuenteenth, was all mystie, so that wee could not get into the Harbour. At ten of the clocke two Boates came off to vs, with sixe of the *Saluages* of the Countrey, seeming gl'd of our comming. VVe gaue them trifles, and they eate and dranke with vs; and told vs, that there were Gold, Siluer, and Copper mynes hard by vs; and that the French-men doe Trade with them; which is very likely, for one of them spake some words of French. So wee rode still all day and all night, the weather continuing mystie.

Sixe Saluages come aboard them.

The

A large Riuer.

44. Degrees 10. minutes.

The trade of the French with the Sauages.

They spoyle Houses of the Sauages.

Variation 10. degrees toward the North-west

Variation 6. degrees to the West.

Variation 5. & a halfe degrees.

The eighteenth, faire weather, wee went into a very good Harbour, and rode hard by the shoare in foure fathoms water. The Riuer runneth vp a great way, but there is but two fathoms hard by vs. VVe went on shoare and cut vs a fore Mast, then at noone we came aboard againe, and found the height of the place to bee in 44. degrees 1. minute; and the Sunne to fall at a South South-west Sunne. VVe mended our sayles, and fell to make our fore-Mast. The Harbour lyeth South and North, a mile in where we rode.

The nineteenth, we had faire sun-shining weather, we rode still. In the after-noon we went with our Boate to looke for fresh water, and found some; and found a shoald with many Lobsters on it, and caught one and thirtie. The people comming aboard, shewed vs great friendship, but we could not trust them. The twentieth, faire sunne-shining weather, the winde at South-west. In the morning, our Scute went out to catch fresh Fish halfe an houre before day, and returned in two houres, bringing seuen and twentie great Coddes, with two hookes and lines. In the after-noon we went for more Lobsters, and caught fortie, and returned aboard. Then wee espied two French Shallops full of the Countrey people come into the Harbour, but they offered vs no wrong, seeing we stood vpon our guard. They brought many Beauer skinnes, and other fine Furrer, which they would haue changed for redde Gownes. For the French trade with them for red Cassockes, Kniues, Hatchets, Copper, Kettles, Treuits, Beades, and other trifles.

The one and twentieth, all mystie, the wind Easterly, wee rode still and did nothing, but about our Mast. The two and twentieth, faire Sun-shining weather, the winde all Northerly, we rode still all the day. In the after-noon our Scute went to catch more Lobsters, and brought with them nine and fiftie. The night was cleere weather.

The three and twentieth, faire sun-shining weather and very hot. At eleuen of the clocke, our fore Mast was finished, and we brought it aboard, and set it into the step, and in the after-noon we rigged it. This night we had some little myst and rayne.

The foure and twentieth, very hot weather, the winde at South out of the sea. The fore-part of the day wee brought to our sayles. In the morning, our Scute went to take Fish, and in two houres they brought with them twentie great Coddes, and a great Holibut, the night was faire also. We kept good watch for feare of being betrayed by the people, and perceiued where they layd their Shallops.

The five and twentieth, very faire weather and hot. In the morning wee manned our Scute with foure Muskets, and sixe men, and tooke one of their Shallops and brought it aboard. Then we manned our Boat & Scute with twelue men and Muskets, and two stone Pieces or Murderers, and draue the Sauages from their Houses, and tooke the spoyle of them, as they would haue done of vs. Then wee set sayle, and came downe to the Harbours mouth, and rode there all night, because the winde blew right in, and the night grew mystie with much rayne till mid-night. Then it fell calme, and the wind came off the Land at West North-west, and it began to cleere. The Compasse varied 10. degrees North-west.

The sixe and twentieth, faire and cleere sunne-shining weather. At five of the clocke in the morning, the winde being off the shoare at North North-west, we set sayle and came to sea, and by noone we counted our ship had gone foureteene leagues South-west. In the after-noon, the winde shifted variably betweene West South-west, and North-west. At noone, I found the height to bee 43. degrees 56. minutes. This Eeuening being very faire weather, wee obserued the variation of our Compasse at the Sunnes going downe, and found it to bee 10. degrees from the North to the VVestward.

The seuen and twentieth, faire sun-shining weather, the winde shifting betweene the South-west, and West and by North, a stiffe gale, we stood to the Southward all day, and made our way South and by West, seuen and twentie leagues. At noone, our height was 42. degrees 50. minutes. At foure of the clocke in the after-noon, wee cast about to the Northward. At eight of the clocke, we tooke in our top-sayles and our fore-bonnet, and went with a short sayle all night.

The eight and twentieth, very thicke and mystie, and a stiffe gale of wind, varying betweene South South-west, and South-west and by VVest; we made our way North-west and by VVest, seuen and twentie leagues, wee sounded many times and could get no ground. At five of the clocke, we cast about to the Southward, the wind at South-west and by VVest. At which time we sounded, and had ground at seuentie five fathoms. At eight, wee had sixtie five fathoms. At ten, sixtie. At twelue of the clocke at mid-night, fiftie sixe fathoms, gray sand. The Compasse varied 6. degrees the North point to the VVest.

The nine and twentieth, faire weather, we stood to the Southward, and made our way South and by VVest a point South, eightene leagues. At noone, we found our height to bee 42. degrees 56. minutes, wee sounded oft, and had these 60. 64. 65. 67. 65. 65. 70. and 75. fathoms. At night, wee tryed the variation of our Compasse by the setting of the Sunne, and found that it went downe 37. degrees to the North-ward of the VVest, and should haue gone downe but 31. degrees. The Compasse varied 5. 7. degrees.

The thirtieth, very hot, all the fore-part of the day calme, the wind at South South-east, wee steered

steered away VVest South-west and sounded many times; and could find no ground at one hundred and seuentie fathomes. VVe found a great current and many ouer-falls. Our current had deceiued vs. For at noone we found our height to be 41. degrees 34. minutes. And the current had heaued vs to the Southward fourteene leagues. At eight of the clocke at night, I sounded and had ground in fiftie two fathomes. In the end of the mid-night watch, wee had fiftie three fathomes. This last obseruation is not to be trusted.

A great current and many ouer-falls.

The one and thirtieth, very thicke and mystie all day, vntill tenne of the clocke. At night the wind came to the South; and South-west and South. We made our way West North-west nineteene leagues. Wee sounded many times; and had difference of soundings, sometimes little stones, and sometimes grosse gray sand, fiftie six, fiftie foure, fortie eight, fortie seuen, fortie foure, fortie six, fiftie fathomes; and at eight of the clocke at night it fell calme, and we had fiftie fathomes. And at ten of the clocke we heard a great Rut, like the Rut of the shoare. Then I sounded and found the former Depths; and mistrusting a current; seeing it so still that the ship made no way, I let the lead lie on the ground, and found a tide set to the South-west, and South-west by West, so fast, that I could hardly vere the Line so fast, and presently came an hur-ling current, or tyde with ouer-falls, which cast our ship round; and the Lead was so fast in the ground, that I feared the Lines breaking, and we had no more but that. At mid-night I sounded againe, and we had seuentie fve fathomes; and the strong streame had left vs.

A great Rut.

A current to the South-west and South-west by West, with ouer-falls August.

The first of August, all the fore-part of the day was mystie, and at noone it cleered vp. We found that our height was 41. degrees 45. minutes, and we had gone nineteene leagues. The afternoon was reasonable cleere. We found a rustling tide or current, with many ouer-falls to continue still, and our water to change colour, and our sea to bee very deepe, for wee found no ground in one hundred fathomes. The night was cleere, and the winde came to the North, and North North-east, we steered West.

The second, very faire weather and hot: from the morning till noone we had a gale of wind, but in the after-noon little wind. At noone I sounded and had one hundred and ten fathomes; and our height was 41. degrees 56. minutes. And wee had runne foure and twentie leagues and an halfe. At the Sun-setting we obserued the variation of the Compasse, and found that it was come to his true place. At eight of the clocke the gale increased, so wee ranne sixe leagues that watch, and had a very faire and cleere night.

The third, very hot weather. In the morning, we had sight of the Land, and steered in with it, thinking to goe to the North-ward of it. So we sent our shallop with fve men, to sound in by the shore: and they found it deepe fve fathomes within a Bow-shot of the shoare; and they went on Land, and found goodly Grapes, and Rose trees, and brought them aboard with them, at fve of the clocke in the Euening. We had seuen and twentie fathomes within two miles of the shoare; and we found a floud come from the South-east, and an ebbe from the North-west, with a very strong streame, and a great hurling and noyses. At eight of the clocke at night, the wind began to blow a fresh gale, and continued all night but variable. Our sounding that wee had to the Land, was one hundred, eightie, seuentie foure, fiftie two, fortie sixe, twentie nine, twentie seuen, twentie foure, nineteene, seuentee, sometimes Oze, and sometimes gray sand.

They goe on Land neere Cape Cod.

The fourth, was very hot: we stood to the North-west two watches, and one South in for the Land, and came to an Anchor at the Norther end of the Headland, and heard the voyce of men call. Then we sent our Boat on shoare, thinking they had beene some *Christians* left on the Land: but wee found them to bee Sauages, which seemed very glad of our comming. So wee brought one aboard with vs, and gaue him meate, and he did eate and drinke with vs. Our Master gaue him three or foure glasse Buttons, and sent him on Land with our shallop againe. And at our Boats comming from the shoare he leapt and danced, and held vp his hands, and pointed vs to a river on the other side: for we had made signes that we came to fish there. The bodie of this Headland lyeth in 41. degrees 45. minutes. We set sayle againe after dinner, thinking to haue got to the Westward of this Headland, but could not; so we beare vp to the Southward of it, & made a South-east way; and the Souther point did beare West at eight of the clocke at night. Our soundings about the Easter and Norther part of this Headland, a league from the shoare are these: at the Easter side thirtie, twentie seuen, twentie seuen, twentie foure, twentie fve, twentie. The North-east point 17. degrees 18. minutes, and so deeper. The North-end of this Headland, hard by the shoare thirtie fathomes: and three leagues off North North-west, one hundred fathomes. At the South-east part a league off, fifteene, sixteene, and seuentee fathomes. The people haue Greene Tabacco, and pipes, the boles whereof are made of Earth, and the pipes of red Copper. The Land is very sweet.

Sauages.

The fift, all mystie. At eight of the clocke in the morning, wee cast about to the Westward, and stood in till foure of the clocke in the after-noon; at which time it cleered, and wee had sight of the Head-land againe fve leagues from vs. The Souther point of it did beare West off vs: and we sounded many times, and had no ground. And at foure of the clocke we cast about, and at our staying wee had seuentie fathomes. Wee steered away South and South by East all night,

night, and could get no ground at seuentie and eightie fathomes. For wee feared a great Riffe, that lyeth off the Land, and steered away South and by East.

The sixth, faire weather, but many times mysting. Wee steered away South South-east, till eight of the clocke in the morning; Then it cleered a little, and wee cast about to the Westward. Then we sounded and had thirtie fathomes, grosse sand, and were come to the Riffe. Then wee kept our Lead, and had quicke shoalding, from thirtie, twentie nine, twentie seuen, twentie foure, twentie two, twentie and an halfe, twentie, twentie, nineteene, nineteene, nineteene, eighteene, eighteene, seuentee; and so deeping againe as proportionally as it shoalded. For we steered South and South-east till we came to twentie sixe fathomes. Then we steered South-west for so the tyde doth set. By and by it being calme we tryed by our Lead; for you shall haue sixteene or seuentee fathomes, and the next cast but seuen or six fathomes. And farther to the Westward you shall haue foure and fise foot water, and see Rockes vnder you; and you shall see the Land in the top. Vpon this Riffe we had an obseruation, and found that it lyeth in 40. degrees 10. minutes. And this is that Headland which Captaine Bartholomew Gosnold discovered in the yeere 1602. and called Cape Cod; because of the store of Cod-fish that hee found thereabout. So we steered South-west three leagues, and had twentie, and twentie foure fathomes. Then we steered West two Glasses halfe a league, and came to fiftene fathomes. Then we steered off South-east foure Glasses, but could not get deepe water; for there the tyde of ebbe laid vs on; and the streame did hurle so, that it laid vs so neere the breach of a shoald, that wee were forced to Anchor. So at seuen of the clocke at night, wee were at an Anchor in tenne fathomes: And, I giue God most heartie thanks, the least water wee had was seuen fathomes and an halfe. We rode still all night, and at a still water I sounded so farre round about our ship as we could see a light; and had no lesse then eight, nine, ten, and eleuen fathomes: The myst continued being very thicke.

This dangerous Riffe is in 41. degrees 10 minutes, and lyeth off East from Cape Cod into the Sea.

The seuenth, faire weather and hot, but mystie. Wee rode still hoping it would cleere, but on the floud it fell calme and thicke. So we rode still all day and all night. The floud commeth from the South-west, and riseth not aboue one fathome and an halfe in nepe streames. Toward night it cleered, and I went with our shallop and sounded, and found no lesse water then eight fathomes to the South-east off vs: but we law to the North-west off vs great Breaches.

The Flats.

The eight, faire and cleere weather. In the morning, by sixe of the clocke at flake water wee weighed; the wind at North-east, and set our fore-sayle and mayne top-sayle, and got a mile ouer the Flats. Then the tyde of ebbe came, so we anchored againe till the floud came. Then wee set sayle againe, and by the great mercie of God, wee got cleere off them by one of the clocke this after-noon. And wee had sight of the Land from the West North-west, to the North North-west. So we steered away South South-east all night; and had ground vntill the middle of the third watch. Then we had fortie fise fathomes, white sand, and little stones. So all our soundings are twentie, twentie, twentie two, twentie senen, thirtie two, fortie three, fortie three, fortie fise. Then no ground in seuentie fathomes.

The ninth, very faire and hot weather, the wind a very stiffe gale. In the morning, at foure of the clocke, our shallop came running vp against our sterne, and split in all her stemme; So we were faine to cut her away. Then wee tooke in our mayne sayle, and lay atrie vnder our fore-sayle vntill twelue of the clocke at mid-day. Then the wind ceased to a faire gale, so wee stood away South-west. Then we lay close by, on many courses a South by West way fiftene leagues; and three watches South-east by East, ten leagues. At eight of the clocke at night, wee tooke in our top-sayles, and went with a low sayle; because we were in an vnknowne sea. At noone we obserued and found our heighth to be 38. degrees 39. minutes.

The tenth, in the morning some raine and cloudie weather: the winde at South-west, wee made our way South-east by East, ten leagues. At noone, wee obserued and found our heighth to be 38. degrees 39. minutes. Then wee tackt about to the Westward, the wind being at South and by East, little wind. At foure of the clocke it fell calme, and we had two Dolphines about our ship, and many small fishes. At eight of the clocke at night, wee had a small lingring gale. All night we had a great Sea out of the South-west, and another great Sea out of the North-east.

A current setting to the North. Variation one point.

The eleuenth, all the fore-part of the day faire weather, and very hot. VVee stood to the VWest South-west till noone. Then the wind shorted, and we could lye but South-west and by South. At noone, wee found our heighth to be 39. degrees 11. minutes. And that the current had laid vs to the Northward thirtie two minutes contrary to our expectation. At foure of the clocke in the after-noon there came a myst, which endured two houres. But wee had it faire and cleere all night after. The Compasse varied the North point to the VWest one whole point.

Variation 10. degrees.

The twelfth, faire weather, the wind variable betweene the South-west and by South, and the North little wind. In the morning we killed an extraordinary fish, and stood to the Westward all day and all night. At noone we found our heighth to be 38. degrees 13. minutes. And the obseruation the day before was not good. This noone, we found the Compasse to vary from the North to the West ten degrees.

The thirteenth, faire weather and hot: the wind at North-east. Wee steered away West and by

by our Compasse two and twentie leagues. At noone wee found our height to bee 37. degrees 45. minutes, and that our way from noone to noone was West South-west, halfe a point Southerly. The Compasse was 7. degrees and a halfe variation, from the North point to the West.

The fourteenth, faire weather, but cloudie, and a stiffe gale of wind, variable betweene North-east and South-west, wee steered away West by South, a point South all day vntill nine of the clocke at night; then it began to Thunder and Lighten, whereupon we tooke in all our sayles, and layd it a hull, and hulled away North till mid-night, a league and a halfe.

The fifteenth, very faire and hot weather, the winde at North by East. At foure of the clocke in the morning we set sayle, and stood on our course to the Westward. At noone wee found our height to bee 37. degrees 25. minutes. The after-noone proued little wind. At eight of the clocke at night, the winde came to the North, and wee steered West by North, and West North-west, and made our way West. The Compasse varied 7. degrees from the North to the West.

37. Degrees
25. minutes

The sixteenth, faire shining weather, and very hot, the wind variable betweene the North and the West, wee steered away West by North. At noone wee found our height to bee 37. degrees 6. minutes. This morning we sounded and had ground in ninetie fathomes, and in fixe Glasses running it shoalded to fiftie fathoms, and so to eight and twentie fathoms, at foure of the clocke in the after-noone. Then wee came to an Anchor, and rode till eight of the clocke at night, the wind being at South and Moone-light, we resolved to goe to the Northward to finde deeper water. So we weighed and stood to the Northward, and found the water to shoald and deepe, from eight and twentie to twentie fathomes.

37. Degrees
6. minutes.

The seuenteenth, faire and cleere Sun-shining weather, the winde at South by West, wee steered to the Northward till foure of the clocke in the morning, then wee came to eightene fathomes. So we Anchored vntill the Sunne arose to looke abroad for Land, for wee iudged there could not but be Land neere vs, but we could see none. Then we weighed and stood to the Westward till noone. And at eleuen of the clocke wee had sight of a low Land, with a white sandie shoare. By twelue of the clocke we were come into five fathomes, and Anchored; and the Land was foure leagues from vs, and wee had sight of it from the West, to the North-west by North. Our height was 37. degrees 26. minutes. Then the wind blew so stiffe a gale, and such a Sea went, that we could not weigh; so we rode there all night an hard rode.

A low Land
with a white
sandie shoare.
37. degrees 26.
minutes.

The eighteenth, in the morning faire weather, and little winde at North North-east and North-east. At foure of the clocke in the morning, we weighed and stood into the shoare to see the deeping or shoalding of it, and finding it too deepe, we stood in to get a rode; for wee saw as it were three Ilands. So wee turned to windward to get into a Bay, as it shewed to vs to the Westward of an Iland. For the three Ilands did beare North off vs. But toward noone the wind blew Northerly, with gusts of wind and rayne. So we stood off into the Sea againe all night; and running off we found a Channell, wherein we had no lesse then eight, nine, ten, eleuen, and twelue fathomes water. For in comming ouer the Barre, wee had five, and foure fathomes and a halfe, and it lyeth five leagues from the shoare, and it is the Barre of Virginia. At the North end of it, it is ten leagues broad, and South and North, but deepe water from ninetie fathoms to five, and foure and a halfe. The Land lyeth South and North. This is the entrance into the Kings Riuer in Virginia, where our English-men are. The North side of it lyeth in 37. degrees 26. minutes, you shall know when you come to shoald water or sounding; for the water will looke Greene or thicke, you shall haue ninetie and eightie fathomes, and shoalding a pace till you come to ten, eleuen, nine, eight, seuen, ten, and nine fathomes, and so to five, and foure fathomes and a halfe.

Barre of Virgi-
nia.
Kings Riuer.

The nineteenth, faire weather, but an hard gale of winde at the North-east, wee stood off till noone, and made our way South-east by East, two and twentie leagues. At noone wee cast about to the Westward, and stood till fixe of the clocke in the after-noone, and went five leagues and a halfe North-west by North. Then wee cast about againe to the Eastward, and stood that way till foure the next morning.

Note.

The twentieth, faire and cleere weather, the winde variable betweene East North-east, and North-east. At foure of the clocke in the morning, wee cast about to the Westward, and stood till noone; at which time I sounded; and had two and thirtie fathomes. Then we takt to the Eastward againe; wee found our height to bee 37. degrees 22. minutes. We stood to the Eastward all night, and had very much wind. At eight of the clocke at night we tooke off our Bonnets, and stood with small sayle.

37. degrees 22.
minutes.

The one and twentieth, was a sore storme of winde and rayne all day and all night, wherefore wee stood to the Eastward with a small sayle: till one of the clocke in the after-noone. Then a great Sea brake into our fore-corse and split it; so we were forced to take it from the yard and mend it; wee lay a trie with our mayne-corse all night. This night our Cat ranne crying from one side of the ship to the other, looking ouer-boord, which made vs to wonder; but we saw nothing.

Variation 4.
degrees West-
ward.

The two and twencieth, stormy weather, with gusts of rayne and wind. In the morning at eight of the clocke we set our fore-corse, and stood to the Eastward vnder our fore-sayle, mayne-sayle and misen, and from noone to noone, we made our way East South-east, fourteene leagues. The night reasonable drie but cloudie, the winde variable all day and night. Our Compasse was varied 4. degrees Westward.

The three and twentieth, very faire weather, but some Thunder in the morning, the winde variable betweene East by North. At noone wee tackt about to the Northward, the winde at East by North. The after-noon very faire, the wind variable, and continued so all night. Our way we made East South-east, till noone the next day.

The foure and twentieth, faire and hot weather, with the wind variable betweene the North and the East. The after-noon variable winde. But at foure of the clocke, the wind came to the East and South-east; so wee steered away North by West, and in three Watches wee went thirteene leagues. At noone our height was 35. degrees 41. minutes, being farre off at Sea from the Land.

The five and twentieth, faire weather and very hot. All the morning was very calme vntill eleuen of the clocke; the wind came to South-east, and South South-east; so wee steered away North-west by North, two Watches and a halfe, and one Watch North-west by West, and went eightene leagues. At noone I found our height to bee 36. degrees 20. minutes, being without sight of Land.

The sixe and twentieth, faire and hot weather, the winde variable vpon all the points of the Compasse. From two of the clocke in the morning vntill noone, wee made our way North by East, seuen leagues. In the after-noon the wind came to the North-east, and vering to the East South-east, wee steered away North-west fifteene leagues, from noone till ten of the clocke at night. At eight of the clocke at night wee sounded, and had eightene fathomes, and were come to the Banke of *Virginia*, and could not see the Land. Wee kept sounding, and steered away North, and came to eight fathomes, and Anchored there; for the wind was at East South-east, so that wee could not get off. For the Coast lyeth along South South-west, and North North-east. At noone our height was 37. degrees 15. minutes. And wee found that we were returned to the same place, from whence we were put off at our first seeing Land.

and North
North-west.
Latitude 37.
degrees 15. mi-
nutes.

This agreeth
with Robert
Tyndall.

The seuen and twentieth, faire weather and very hot, the winde at East South-east. In the morning as soone as the Sunne was vp, wee looked out and had sight of the Land. Then wee weighed, and stood in North-west two Glasses, and found the Land to bee the place, from whence wee put off first. So wee kept our loofe, and steered along the Land, and had the Banke lye all along the shoare; and wee had in two leagues off the shoare, five, sixe, seuen, eight, nine, and ten fathomes. The Coast lyeth South South-west, and is a white Sandie shoare, and sheweth full of Bayes and Points. The streame setteth West South-west, and East North-east. At sixe of the clocke at night, wee were thwart of an Harbour or Riuer, but we saw a Barre lye before it; and all within the Land to the Northward, the water ranne with many Ilands in it. At sixe of the clocke we Anchored, and sent our Boate to sound to the shoare-ward, and found no lesse then foure and a halfe, five, sixe, and seuen fathomes.

The Point of
the Land.

A great Bay
and Riwers.

The eight and twentieth, faire and hot weather, the winde at South South-west. In the morning at sixe of the clocke wee weighed, and steered away North twelue leagues till noone, and came to the Point of the Land; and being hard by the Land in five fathomes, on a sudden wee came into three fathomes; then we beare vp and had but ten foote water, and ioyned to the Point. Then as soone as wee were ouer, wee had five, sixe, seuen, eight, nine, ten, twelue, and thirteene fathomes. Then wee found the Land to trend away North-west, with a great Bay and Riwers. But the Bay wee found shoald; and in the offing wee had ten fathomes, and had sight of Breaches and drie Sand. Then wee were forced to stand backe againe; so we stood backe South-east by South, three leagues. And at seuen of the clocke wee Anchored in eight fathomes water; and found a Tide set to the North-west, and North North-west, and it riseth one fathome, and floweth South South-east. And hee that will throughly Discover this great Bay, must haue a small Pinnasse, that must draw but foure or five foote water, to sound before him. At five in the morning wee weighed, and steered away to the Eastward on many courses, for the Norther Land is full of shoalds. Wee were among them, and once wee strooke, and wee went away; and steered away to the South-east. So wee had two, three, foure, five, sixe, and seuen fathomes, and so deeper and deeper.

A small Shal-
lop needfull.

The Norther
Land is full of
shoalds.

Many Ilands.

They strike.

The nine and twentieth, faire weather, with some Thunder and showers, the winde shifting betweene the South South-west, and the North North-west. In the morning wee weighed at the breake of day, and stood toward the Norther Land, which we found to bee all Ilands to our sight, and great stormes from them, and are shoald three leagues off. For we comming by them, had but seuen, sixe, five, foure, three, and two fathoms and a halfe, and strooke ground with our Rudder, we steered off South-west, one Glasse, and had five fathoms. Then wee steered South-east three Glasses, then wee found seuen fathomes, and steered North-east by East, foure leagues, and came to twelue and thirteene fathoms. At one of the clocke, I went to the top-
mast

maist head, and set the Land, and the bodie of the Ilands did beare North-west by North. And at foure of the clocke, wee had gene foure leagues East South-east, and North-east by East, and found but seuen fathoms, and it was calme, so we Anchored. Then I went againe to the top-maist head, to see how farre I could see Land about vs, and could see no more but the Ilands. And the Souther point of them did beare North-west by West, eight leagues off. So wee rode till mid-night. Then the winde came to the North North-west, so wee waighed and set sayle.

The thirtieth, in the morning betweene twelue and one, we weighed, and stood to the Eastward, the winde at North North-west, wee steered away and made our way East South-east. From our weighing till noone, eleuen leagues. Our soundings were eight, nine, ten, eleuen, twelue, and thirteene fathomes till day. Then we came to eightene, nineteene, twentie, and to fixe and twentie fathoms by noone. Then I obserued the Sunne, and found the height to bee 39. degrees 5. minutes, and saw no Land. In the after-noone, the winde came to North by West; So wee lay close by with our fore-sayle, and our mayne-sayle, and it was little winde vntill twelue of the clocke at mid-night, then wee had a gale a little while. Then I founded, and all the night our soundings were thirtie, and fixe and thirtie fathomes, and wee went little.

The one and thirtieth, faire weather and little wind. At fixe of the clocke in the morning we cast about to the Northward, the wind being at the North-east, little wind. At noone it fell calme, and I found the height to bee 38. degrees 39. minutes. And the streames had deceiued vs, and our sounding was eight and thirtie fathoms. In the afternoone I founded againe, and had but thirtie fathoms. So we found that we were heaued too and fro with the streames of the Tide, both by our obseruations and our depths. From noone till foure of the clocke in the after-noone, it was calme. At fixe of the clocke wee had a little gale Southerly, and it continued all night, sometimes calme, and sometimes a gale; wee went eight leagues from noone to noone, North by East.

The first of September, faire weather, the wind variable betweene East and South, we steered away North North-west. At noone we found our height to bee 39. degrees 3. minutes. Wee had soundings thirtie, twentie seuen, twentie foure, and twentie two fathomes, as wee went to the Northward. At fixe of the clocke wee had one and twentie fathomes. And all the third watch till twelue of the clocke at mid-night, we had soundings one and twentie, two and twentie, eightene, two and twentie, one and twentie, eightene, and two and twentie fathoms, and went fixe leagues neere hand North North-west.

The second, in the morning close weather, the winde at South in the morning; from twelue vntill two of the clocke we steered North North-west, and had sounding one and twentie fathoms, and in running one Glasse we had but sixteene fathoms, then seuentene, and so shoalder and shoalder vntill it came to twelue fathoms. We saw a great Fire, but could not see the Land, then we came to ten fathoms, whereupon we brought our tackes aboard, and stood to the Eastward East South-east, foure Glasse. Then the Sunne arose, and we steered away North againe, and saw the Land from the West by North, to the North-west by North, all like broken Ilands, and our soundings were eleuen and ten fathoms. Then wee looft in for the shoare, and faire by the shoare, we had seuen fathoms. The course along the Land we found to be North-east by North. From the Land which we had first sight of, vntill we came to a great Lake of water, as wee could iudge it to bee, being drowned Land, which made it to rise like Ilands, which was in length ten leagues. The mouth of that Lake hath many shoalds, and the Sea breaketh on them as it is cast out of the mouth of it. And from that Lake or Bay, the Land lyeth North by East, and wee had a great streame out of the Bay; and from thence our sounding was ten fathoms, two leagues from the Land. At fise of the clocke we Anchored, being little winde, and rode in eight fathoms water, the night was faire. This night I found the Land to hal the Compasse 8. degrees. For to the Northward off vs we saw high Hills. For the day before we found not about 2. degrees of Variation. This is a very good Land to fall with, and a pleasant Land to see.

The third, the morning mystie vntill ten of the clocke, then it cleered, and the wind came to the South South-east, so wee weighed and stood to the Northward. The Land is very pleasant and high, and bold to fall withall. At three of the clocke in the after-noone, wee came to three great Riuers. So we stood along to the Northermost, thinking to haue gone into it, but we found it to haue a very shoald barre before it, for we had but ten foot water. Then wee cast about to the Southward, and found two fathoms, three fathoms, and three and a quarter, till we came to the Souther side of them, then we had fise and fixe fathoms, and Anchored. So wee sent in our Boate to sound, and they found no lesse water then foure, fise, fixe, and seuen fathoms, and returned in an houre and a halfe. So wee weighed and went in, and rode in fise fathoms, Ozie ground, and saw many Salmones, and Mulletts, and Rayes very great. The height is 40. degrees 30. minutes.

The fourth, in the morning as soone as the day was light, wee saw that it was good riding

Good Harbour

farther vp. So we sent our Boate to sound, and found that it was a very good Harbour; and foure and five fathoms, two Cables length from the shoare. Then we weighed and went in with our ship. Then our Boate went on Land with our Net to Fish, and caught ten great Mulletts, of a foot and a halfe long a peece, and a Ray as great as foure men could hale into the ship. So wee trimmed our Boate and rode still all day. At night the wind blew hard at the North-west, and our Anchor came home, and wee droue on shoare, but tooke no hurt, thanked bee God, for the ground is soft sand and Oze. This day the people of the Countrey came aboard of vs, seeming very glad of our comming, and brought greene Tabacco, and gaue vs of it for Kniues and Beads. They goe in Deere skins loose, well dressed. They haue yellow Copper. They desire Cloathes, and are very ciuill. They haue great store of Maiz or Indian Wheate, whereof they make good Bread. The Countrey is full of great and tall Oakes.

The fifth, in the morning as soone as the day was light, the wind ceased and the Flood came. So we heaued off our ship againe into five fathoms water, and sent our Boate to sound the Bay, and we found that there was three fathoms hard by the Souther shoare. Our men went on Land there, and saw great store of Men, Women and Children, who gaue them Tabacco at their comming on Land. So they went vp into the Woods, and saw great store of very goodly Oakes, and some Currants. For one of them came aboard and brought some dried, and gaue me some, which were sweet and good. This day many of the people came aboard, some in Mantles of Feathers, and some in Skinnies of diuers sorts of good Fures. Some women also came to vs with Hempe. They had red Copper Tabacco pipes, and other things of Copper they did weare about their neckes. At night they went on Land againe, so wee rode very quiet, but durst not trust them.

The sixth, in the morning was faire weather, and our Master sent *Iohn Colman*, with foure other men in our Boate ouer to the North-side, to sound the other Riuer, being foure leagues from vs. They found by the way shoald water two fathoms; but at the North of the Riuer eighteen, and twentie fathoms, and very good riding for Ships; and a narrow Riuer to the Westward betwene two Ilands. The Lands they told vs were as pleasant with Grasse and Flowers, and goodly Trees, as euer they had seene, and very sweet smells came from them. So they went in two leagues and saw an open Sea, and returned; and as they came backe, they were set vpon by two Canoes, the one hauing twelue, the other fourteene men. The night came on, and it began to rayne, so that their Match went out; and they had one man slaine in the fight, which was an English-man, named *Iohn Colman*, with an Arrow shot into his throat, and two more hurt. It grew so darke that they could not find the ship that night, but labored too and fro on their Oares. They had so great a streame, that their grapnell would not hold them.

The seuenth, was faire, and by ten of the clocke they returned aboard the ship, and brought our dead man with them, whom we carryed on Land and buried, and named the point after his name, *Colmans Point*. Then we hoyfed in our Boate, and raised her side with waste boards for defence of our men. So we rode still all night, hauing good regard to our Watch.

The eight, was very faire weather, wee rode still very quietly. The people came aboard vs, and brought Tabacco and Indian Wheat, to exchange for Kniues and Beades, and offered vs no violence. So we sitting vp our Boate did marke them, to see if they would make any shew of the Death of our man; which they did not.

The ninth, faire weather. In the morning two great Canoes came aboard full of men; the one with their Bowes and Arrowes, and the other in shew of buying of Kniues to betray vs; but we perceiued their intent. Wee tooke two of them to haue kept them, and put red Coates on them, and would not suffer the other to come neere vs. So they went on Land, and two other came aboard in a Canoe: we tooke the one and let the other goe; but hee which wee had taken, got vp and leapt ouer-board. Then we weighed and went off into the channell of the Riuer, and Anchored there all night.

The tenth, faire weather, we rode still till twelue of the clocke. Then we weighed and went ouer, and found it shoald all the middle of the Riuer, for wee could finde but two fathoms and a halfe, and three fathomes for the space of a league; then wee came to three fathomes, and foure fathomes, and so to seuen fathomes, and Anchored, and rode all night in soft Ozie ground. The banke is Sand.

The eleuenth, was faire and very hot weather. At one of the clocke in the after-noon, wee weighed and went into the Riuer, the wind at South South-west, little winde. Our soundings were seuen, fixe, five, fixe, seuen, eight, nine, ten, twelue, thirteene, and fourteene fathomes. Then it shoalded againe, and came to five fathomes. Then wee Anchored, and saw that it was a very good Harbour for all windes, and rode all night. The people of the Countrey came aboard of vs, making shew of loue, and gaue vs Tabacco and Indian Wheat, and departed for that night; but we durst not trust them.

The twelfth, very faire and hot. In the after-noon at two of the clocke wee weighed, the winde being variable, betwene the North and the North-west. So we turned into the Riuer two leagues and Anchored. This morning at our first rode in the Riuer, there came eight and

twentie

twentie Canoes full of men, women and children to betray vs : but we saw their intent, and suffered none of them to come aboard of vs. At twelue of the clocke they departed. They brought with them Oysters and Beanes, whereof wee bought some. They haue great Tabacco pipes of yellow Copper, and Pots of Earth to dresse their meate in. It floweth South-east by South within.

28. Canoes full of men. Oysters and Beanes. Copper Pipes.

The thirteenth, faire weather, the wind Northerly. At seuen of the clocke in the morning, as the floud came we weighed, and turned foure miles into the Riuer. The tide being done wee anchored. Then there came foure Canoes aboard : but we suffered none of them to come into our ship. They brought great store of very good Oysters aboard, which we bought for trifles.

10 In the night I let the variation of the Compasse, and found it to be 13. degrees. In the after-noon we weighed, and turned in with the floud, two leagues and a halfe further, and anchored all night, and had fise fathoms soft Ozie ground, and had an high point of Land, which shewed out to vs, bearing North by East fise leagues off vs.

Variation 13. degrees.

The fourteenth, in the morning being very faire weather, the wind South-east, we sayled vp the Riuer twelue leagues, and had fise fathoms, and fise fathoms and a quarter lesse ; and came to a Streight betweene two Points, and had eight, nine, and ten fathoms: and it trended North-east by North, one league : and wee had twelue, thirteene and fourteene fathomes. The Riuer is a mile broad: there is very high Land on both sides. Then wee went vp North-west, a league and an halfe deepe water. Then North-east by North fise miles; then North-west by North two leagues, and anchored. The Land grew very high and Mountainous. The Riuer is full of fish.

The Riuer a mile broad. Very high and mountainous Land.

The fifteenth, in the morning was misty vntill the Sunne arose : then it cleered. So wee weighed with the wind at South, and ran vp into the Riuer twentie leagues, passing by high Mountaines. Wee had a very good depth, as fixe, seuen, eight, nine, ten, twelue, and thirteene fathoms, and great store of Salmon in the Riuer. This morning our two Sauages got out of a Port and swam away. After we were vnder sayle, they called to vs in scorne. At night we came to other Mountaines, which lie from the Risers side. There wee found very louing people, and very old men : where wee were well vsed. Our Boat went to fish, and caught great store of very good fish.

Very louing people.

30 The sixteenth, faire and very hot weather. In the morning our Boat went againe to fishing, but could catch but few, by reason their Canoes had beene there all night. This morning the people came aboard, and brought vs eares of Indian Corne, and Pompions, and Tabacco: which wee bought for trifles. Wee rode still all day, and filled fresh water ; at night wee weighed and went two leagues higher, and had shoald water : so wee anchored till day.

Maiz, Pompions and Tabacco.

The seuenteenth, faire Sun-shining weather, and very hot. In the morning as soone as the Sun was vp, we set sayle, and ran vp fixe leagues higher, and found shoalds in the middle of the channell, and small Ilands, but seuen fathoms water on both sides. Toward night we borrowed so neere the shoare, that we grounded : so we layed out our small anchor, and heaued off againe. Then we borrowed on the banke in the channell, and came aground againe ; while the floud ran we heaued off againe, and anchored all night.

Shoalds and small Ilands.

The eighteenth, in the morning was faire weather, and we rode still. In the after-noon our Masters Mate went on land with an old Sauage, a Gouvernour of the Countrey ; who carried him to his house, and made him good cheere. The nineteenth, was faire and hot weather: at the floud being neere eleuen of the clocke, wee weighed, and ran higher vp two leagues about the Shoalds, and had no lesse water then fise fathoms : wee anchored, and rode in eight fathomes. The people of the Countrie came flocking aboard, and brought vs Grapes, and Pompions, which wee bought for trifles. And many brought vs Beuers skinnies, and Otters skinnies, which wee bought for Beades, Kniues, and Hatchers. So we rode there all night.

Grapes and Pompions : Beuers and Otters skinnies.

The twentieth, in the morning was faire weather. Our Masters Mate with foure men more went vp with our Boat to sound the Riuer, and found two leagues about vs but two fathomes water, and the channell very narrow ; and about that place seuen or eight fathomes. Toward night they returned : and we rode still all night. The one and twentieth, was faire weather, and the wind all Southerly : we determined yet once more to goe farther vp into the Riuer, to trie what depth and breadth it did beare ; but much people resorted aboard, so wee went not this day. Our Carpenter went on land, and made a Fore-yard. And our Master and his Mate determined to trie some of the chiefe men of the Countrey, whether they had any treacherie in them. So they tooke them downe into the Cabbin, and gaue them so much Wine and *Aqua vite*, that they were all merrie: and one of them had his wife with him, which sate so modestly, as any of our Countrey women would doe in a strange place. In the end one of them was drunke, which had beene aboard of our ship all the time that we had beene there; and that was strange to them ; for they could not tell how to take it. The Canoes and folke went all on shoare: but some of them came againe, and brought stropes of Beades : some had fixe, seuen, eight, nine, ten, and gaue him. So he slept all night quietly.

The two and twentieth, was faire weather : in the morning our Masters Mate and foure more

Mountaines.

of the companie went vp with our Boat to sound the Riuer higher vp. The people of the Coun-
trei came not aboard till noone: but when they came, and saw the Sauages well, they were
glad. So at three of the clocke in the after-noon they came aboard, and brought Tabacco, and
more Beades, and gaue them to our Master, and made an Oration, and shewed him all the Coun-
trei round about. Then they sent one of their companie on land, who presently returned, and
brought a great Platter full of Venison, dressed by themselves; and they caused him to eate with
them: then they made him reuerence, and departed all save the old man that lay aboard. This
night at ten of the clocke, our Boat returned in a showre of raine from sounding of the Riuer;
and found it to bee at an end for shipping to goe in. For they had bene vp eight or nine leagues,

The three and twentieth, faire weather. At twelue of the clocke wee weighed, and went
downe two leagues to a shoald that had two channels, one on the one side, and another on the
other, and had little wind, whereby the tide layed vs vpon it. So, there wee sate on ground the
space of an houre till the floud came. Then we had a little gale of wind at the West. So wee
got our ship into deepe water, and rode all night very well.

The foure and twentieth was faire weather: the winde at the North-west, wee weighed,
and went downe the Riuer seuen or eight leagues; and at halfe ebbe wee came on ground on a
banke of Oze in the middle of the Riuer, and sate there till the floud. Then wee went on
Land, and gathered good store of Chest-nuts. At ten of the clocke wee came off into deepe
water, and anchored.

The fise and twentieth was faire weather, and the wind at South a stiffe gale. We rode still,
and went on Land to walke on the West side of the Riuer, and found good ground for Corne,
and other Garden herbs, with great store of goodly Okes, and Wal-nut trees, and Chest-nut
trees, Ewe trees, and trees of sweet wood in great abundance, and great store of Slate for houses,
and other good stones.

The sixe and twentieth was faire weather, and the wind at South a stiffe gale, wee rode still.
In the morning our Carpenter went on Land with our Masters Mate, and foure more of our
companie to cut wood. This morning, two Canoes came vp the Riuer from the place where we
first found louing people, and in one of them was the old man that had lyen aboard of vs at the
other place. He brought another old man with him, which brought more stropes of Beades, and
gaue them to our Master, and shewed him all the Countrey there about, as though it were at his
command. So he made the two old men dine with him, and the old mans wife: for they brought
two old women, and two young maidens of the age of sixteene or seuteene yeeres with them,
who behaued themselves very modestly. Our Master gaue one of the old men a Knife, and they
gaue him and vs Tabacco. And at one of the clocke they departed downe the Riuer, making
signes that wee should come downe to them; for wee were within two leagues of the place
where they dwelt.

The seuen and twentieth, in the morning was faire weather, but much wind at the North,
we weighed and set our fore top-sayle, and our ship would not stat, but ran on the Ozie banke
at halfe ebbe. Wee layed out anchor to heaue her off, but could not. So wee sate from halfe
ebbe to halfe floud: then wee set our fore-sayle and mayne top-sayle, and got downe sixe
leagues. The old man came aboard, and would haue had vs anchor, and goe on Land to eate with
him: but the wind being faire, we would not yeeld to his request; So hee left vs, being very
sorrowfull for our departure. At fise of the clocke in the after-noon, the wind came to the
South South-west. So wee made a boord of two, and anchored in fourteene fathomes water.
Then our Boat went on shoare to fish right against the ship. Our Masters Mate and Boat-swaine,
and three more of the companie went on land to fish, but could not finde a good place. They
tooke foure or fise and twentie Mullets, Breames, Bases, and Barbils; and returned in an houre.
We rode still all night.

The eight and twentieth, being faire weather, as soone as the day was light, wee weighed at
halfe ebbe, and turned downe two leagues belowe water; for, the streame doth runne the last
quarter ebbe: then we anchored till high water. At three of the clocke in the after-noon we
weighed, and turned downe three leagues, vntill it was darke: then wee anchored.

The nine and twentieth was drie close weather: the wind at South, and South and by West,
we weighed early in the morning, and turned downe three leagues by a lowe water, and ancho-
red at the lower end of the long Reach; for it is sixe leagues long. Then there came certaine
Indians in a Canoe to vs, but would not come aboard. After dinner there came the Canoe with
other men, whereof three came aboard vs. They brought Indian Wheat, which wee bought
for trifles. At three of the clocke in the after-noon wee weighed, as soone as the ebbe came,
and turned downe to the edge of the Mountaines, or the Northermost of the Mountaines, and
anchored: because the high Land hath many Points, and a narrow channell, and hath many
eddie winds. So we rode quietly all night in seuen fathoms water.

The thirtieth was faire weather, and the wind at South-east a stiffe gale betwene the Moun-
taines. We rode still the after-noon. The people of the Countrey came aboard vs, and brought
foure

some small skinnes with them, which we bought for Kniues and Trifles. This a very pleasant place to build a Towne on. The Road is very neere, and very good for all winds, saue an East North-east wind. The Mountaynes looke as if some Metall or Minerall were in them. For the Trees that grow on them were all blasted, and some of them barren with few or no Trees on them. The people brought a stone aboard like to Emery (a stone vsed by Glasiers to cut Glasse) it would cut Iron or Steele: Yet being bruised small, and water put to it, it made a colour like blacke Lead glistering; It is also good for Painters Colours. At three of the clocke they departed, and we rode still all night.

Small skins.

Likelihood of
Minerals.

October.

The first of October, faire weather, the wind variable betweene the West and the North. In the morning we weighed at seuen of the clocke with the ebbe, and got downe below the Mountaynes, which was seuen leagues. Then it fell calme and the flood was come, and wee anchored at twelue of the clocke. The people of the Mountaynes came aboard vs, wondring at our ship and weapons. We bought some small skinnes of them for Trifles. This after-noone, one Canoe kept hanging vnder our sterne with one man in it, which we could not keepe from thence, who got vp by our Rudder to the Cabin window, and stole out my Pillow, and two Shirts, and two Bandleeres. Our Masters Mate shot at him, and strooke him on the brest, and killed him. Whereupon all the rest fled away, some in their Canoes, and so leapt out of them into the water. We manned our Boat, and got our things againe. Then one of them that swamme got hold of our Boat, thinking to ouerthrow it. But our Cooke tooke a Sword, and cut off one of his hands, and he was drowned. By this time the ebbe was come, and we weighed and got downe two leagues, by that time it was darke. So we anchored in foure fathomes water, and rode well.

The second, faire weather. At break of day wee weighed, the wind being at North-west, and got downe seuen leagues; then the flood was come strong, so we anchored. Then came one of the Sauages that swamme away from vs at our going vp the Riuer with many other, thinking to betray vs. But wee perceived their intent, and suffered none of them to enter our ship. Whereupon two Canoes full of men, with their Bowes and Arrowes shot at vs after our sterne: in recompence whereof we discharged fixe Muskets, and killed two or three of them. Then about an hundred of them came to a point of Land to shoot at vs. There I shot a Falcon at them, and killed two of them: whereupon the rest fled into the Woods. Yet they manned off another Canoe with nine or ten men, which came to meet vs. So I shot at it also a Falcon, and shot it through, and killed one of them. Then our men with their Muskets, killed three or foure more of them. So they went their way, within a while after, wee got downe two leagues beyond that place, and anchored in a Bay, cleere from all danger of them on the other side of the Riuer, where we saw a very good piece of ground: and hard by it there was a Cliffe, that looked of the colour of a white greene, as though it were either Copper, or Silver Myne: and I thinke it to be one of them, by the Trees that grow vpon it. For they be all burned, and the other places are greene as grasse, it is on that side of the Riuer that is called *Manna-hata*. There we saw no people to trouble vs: and rode quietly all night, but had much wind and raine.

Treacherie of
these Sauages.
A skirmish and
slaughter of
the Sauages.

A Myne of
Copper or
Silver.
The Countrey
of *Manna-hata*.

The third, was very stormie; the wind at East North-east. In the morning, in a gust of wind and raine our Anchor came home, and we droue on ground, but it was Ozie. Then as we were about to haue out an Anchor, the wind came to the North North-west, and droue vs off againe. Then we shot an Anchor, and let it fall in foure fathomes water, and weighed the other. Wee had much wind and raine, with thicke weather: so we roade still all night.

The fourth, was faire weather, and the wind at North North-west, wee weighed and came out of the Riuer, into which we had runne so farre. Within a while after, wee came out also of the great mouth of the great Riuer, that runneth vp to the North-west, borrowing vpon the Norther side of the same, thinking to haue deepe water: for wee had founded a great way with our Boat at our first going in, and found seuen, six, and fve fathomes. So we came out that way, but we were deceived, for we had but eight foot & an halfe water: and so to three, fve, three, and two fathomes and an halfe. And then three, foure, fve, fixe, seuen, eight, nine and ten fathomes.

The great mouth
of the great Ri-
uer.

And by twelue of the clocke we were cleere of all the Inlet. Then we tooke in our Boat, and set our mayne-sayle and sprit-sayle, and our top-sayles, and steered away East South-east, and South-east by East off into the mayne sea: and the Land on the Souther-side of the Bay or Inlet, did beare at noone West and by South foure leagues from vs.

They leaue
the Coast of
Virginia.

The fift, was faire weather, and the wind variable betweene the North and the East. Wee held on our course South-east by East. At noone I obserued and found our height to bee 39. degrees 30. minutes. Our Compasse varied fixe degrees to the West.

We continued our course toward England, without seeing any Land by the way, all the rest of this moneth of October: And on the seuenth day of Nouember, *stilo nono*, being Saturday: by the Grace of God we safely arriued in the Range of *Dartmouth* in *Devonshire*, in the yeere 1609.

CHAP. XVII.

An Abstract of the Iournall of Master HENRY HUDSON, for the Discoverie of the North-west Passage, begunne the seuenteenth of Aprill, 1610. ended with his end, being treacherously exposed by some of the Companie.

Aprill 17.

He seuenteenth of Aprill, 1610. we brake ground, and went downe from Saint Katharines Poole, and fell downe to *Blacke-wall*: and so plyed downe with the 10 ships to *Lee*, which was the two and twentieth day.

The two and twentieth, I caused Master *Coleburne* to bee put into a Pinke, bound for *London*, with my Letter to the Aduenturers, importing the reason wherefore I so put him out of the ship, and so plyed forth.

May.
The Iles of
Orkney.

The second of May, the wind Southerly, at Eeuén we were thwart of *Flamberough Head*. The fift, we were at the Iles of *Orkney*, and here I set the North end of the Needle, and the North of the Flie all one.

Note.
Farre Ilands 62
degrees 24.
minutes.
Westmony.

The sixt, wee were in the latitude of 59. degrees 22. minutes, and there perceiued that the North end of *Scotland*, *Orney*, and *Shotland* are not so Northerly, as is commonly set downe. The eight day, wee saw *Farre Ilands*, in the latitude of 62. degrees 24. minutes. The eleuenth 20 day, we fell with the Easter part of *Island*, and then plying along the Souther part of the Land, we came to *Westmony*, being the fifteenth day, and still plyed about the mayne Iland, vntill the last of May with contrary winds, and we got some Fowles of diuers sorts.

Iune.

The first day of Iune, we put to Sea out of an Harbour, in the Westermost part of *Island*, and so plyed to the Westward in the latitude of 66. degrees 34. minutes, and the second day plyed and found our selues in 65. degrees 57. minutes, with little wind Easterly.

The third day, wee found our selues in 65. degrees 30. minutes, with winde at North-east, a little before this we sayled neere some Ice.

Groneland.

The fourth day, we saw *Groneland* ouer the Ice perfectly, and this night the Sunne went downe due North, and rose North North-east. So plying the fift day, we were in 65. degrees, 30 still encombred with much Ice, which hung vpon the Coast of *Groneland*.

Frobishers
Streights.

The ninth day, wee were off *Frobishers Streights* with the winde Northerly, and plyed vnto the South-westwards vntill the fifteenth day.

Desolation.

The fifteenth day, we were in sight of the land, in latitude 59. degrees 27. minutes, which was called by Captayne *John Davis*, *Desolation*, and found the error of the former laying downe of that Land: and then running to the North-westward vntill the twentieth day, wee found the ship in 60. degrees 42. minutes, and saw much Ice, and many Riplings or *Ouer-fals*, and a strong streame setting from East South-east, to West North-west.

A current West
North-west.

The one and twentie, two and twentie, and three and twentie dayes, with the winde variable, we plyed to the North-westward in sight of much Ice, into the height of 62. degrees 29. minutes. 40

East entrance
into the
Streights.

The foure and twentie, and fife and twentie dayes, sayling to the West-ward about mid-night, wee saw Land North, which was suddenly lost againe. So wee ranne still to the West-ward in 62. degrees 17. minutes.

Iuly.

The fift of Iuly, wee plyed vp vpon the Souther side, troubled with much Ice in seeking the shoare vntill the fift day of Iuly, and we obserued that day in 59. degrees 16. minutes. Then we plyed off the shoare againe, vntill the eight day, and then found the height of the Pole in 60. degrees no minutes. Here we saw the Land from the North-west by West, halfe Northerly vnto the South-west by West, couered with snow, a *Champaigne Land*, and called it, *Desire prouoketh*.

Desire prouoketh.

We still plyed vp to the Westward, as the Land and Ice would suffer vntill the eleuenth day; when fearing a storme, we anchored by three Rockie Ilands in vncertayne depth, betweene two and nine fathomes; and found it an Harbour vnsufficient by reason of sunken Rockes, one of which was next morning two fathomes aboue water. Wee called them the *Iles of Gods Mercies*. The water floweth here better then foure fathomes. The Floud commeth from the North, flowing eight the change day. The latitude in this place is 62. degrees 9. minutes. Then plying to the South-westward the sixteenth day, wee were in the latitude of 58. degrees 50. minutes, but found our selues imbayed with Land, and had much Ice: and we plyed to the North-westward vntill the nineteenth day, and then wee found by obseruation the height of the Pole in 61. degrees 24. minutes, and saw the Land, which I named, *Hold with Hope*. Hence I plyed to the North-westward still, vntill the one and twentieth day, with the wind variable. Heere I found the Sea more growne, then any wee had since wee left *England*.

Iles of Gods
Mercies.Hold with Hope.
A mightie
growne Sea.

The three and twentieth day, by obseruation the height of the Pole was 61. degrees 33. minutes, 60

utes. The five and twentieth day, we saw the Land; and named it *Magna Britannia*. The sixe and twentieth day, wee observed and found the latitude in 62. degrees 44. minutes. The eight and twentieth day, we were in the height of 63. degrees 10. minutes, and plyed Southerly of the West. The one and thirtieth day, plying to the Westward, at noone wee found our selues in 62. degrees 24. minutes.

Magna Britannia.

The first of August, we had sight of the Northerne shoare, from the North by East to the West by South off vs: the North part twelue leagues, and the Wester part twentie leagues from vs: and we had no ground there at one hundred and eightie fathomes. And I thinke I saw Land on the Sunne side, but could not make it perfectly, bearing East North-east. Here I found the latitude 62. degrees 50. minutes.

August.

The second day, we had sight of a faire Head-land, on the Norther shoare six leagues off, which I called *Salisburies Fore-land*: we ranne from them West South-west, fourteene leagues: In the mid-way of which wee were suddenly come into a great and whirling Sea, whether caused by meeting of two streames, or an Ouer-fall, I know not. Thence sayling West and by South seven leagues farther, we were in the mouth of a Streight and sounded, and had no ground at one hundred fathomes: the Streight being there not about two leagues broad, in the passage in this Wester part: which from the Eatter part of *Fretum Danis*, is distant two hundred and fiftie leagues thereabouts.

Salisburies fore-land:
A great and whirling Sea:
A Streight which led vs into the deepe Bay of Gods great Mercies.

The third day, we put through the narrow passage, after our men had beene on Land, which had well obserued there, *That the Floud did come from the North*, flowing by the shoare five fathomes. The head of this entrance on the South side, I named *Cape Worfenholme*; and the head on the North-west shoare, I called *Cape Digs*. After wee had sailed with an Easterly winde, West and by South ten leagues, the Land fell away to the Southward, and the other Iles and Land left vs to the Westward. Then I obserued and found the ship at noone in 61. degrees 20. minutes, and a Sea to the Westward.

Cape Digs.

A larger Discourse of the same Voyage, and the succeffe thereof,
written by ABACUK PRICKET.

WE began our Voyage for the North-west passage; the seuateenth of Aprill, 1610. Thwart of *Shepey*, our Master sent Master *Colbert* backe to the Owners with his Letter. The next day we weighed from hence, and stood for *Harwich*, and came thither the eight and twentieth of Aprill. From *Harwich* we set sayle the first of May, along the Coast to the North, till we came to the Iles of *Orkney*, from thence to the Iles of *Faro*, and from thence to *Island*: on which we fell in a fogge, hearing the Rut of the Sea ashoare, but saw not the Land whereupon our Master came to an Anchor. Heere we were embayed in the South-east part of the Land. Wee weighed and stood along the Coast, on the West side towards the North: but one day being calme, we fell a fishing, and caught good store of fish, as Cod and Ling, and Butte, with some other sorts that we knew not. The next day, we had a good gale of wind at South-west, and rayfed the Iles of *Westmonie*, where the King of *Denmarke* hath a Fortresse, by which we passed to rayse the *Snow Hill* foot, a Mountayne so called on the North-west part of the Land. But in our course we saw that famous Hill, *Mount Hecla*, which cast out much fire, a signe of foule weather to come in short time. Wee leaue *Island* a sterne of vs, and met a Mayne of Ice, which did hang on the North part of *Island*, and stretched downe to the West, which when our Master saw, he stood backe for *Island* to find an Harbour, which we did on the North-west part, called *Derefer*, where wee killed good store of Fowle. From hence wee put to Sea againe, but (neither wind nor weather seruing) our Master stood backe for this Harbour againe, but could not reach it, but fell with another to the South of that, called by our *Englishmen*, *Loufie Bay*: where on the shoare we found an hot Bath, and heere all our *Englishmen* bathed themselves: the water was so hot that it would scald a Fowle.

An hot Bath:
The first of Iune.

From hence the first of Iune, we put to Sea for *Groneland*, but to the West wee saw Land as we thought, for which we beare the best part of a day, but it proued but a foggie banke. So wee gaue it ouer, and made for *Groneland*, which we rayfed the fourth of Iune. Vpon the Coast thereof hung good store of Ice, so that our Master could not attayne to the shoare by any meanes. The Land in this part is very Mountaynous, and full of round Hills, like to Sugar-loaves, couered with snow. We turned the Land on the South side, as neere as the Ice would suffer vs. Our course for the most part was betweene the West and North-west, till we rayfed the *Desolations*, which is a great Island in the West part of *Groneland*. On this Coast we saw store of Whales, and at one time three of them came close by vs, so as wee could hardly shunne them: then two passing very neere, and the third going vnder our ship, wee receiued no harme by them, prayed bee God.

Island of *Desolation*.
Store of Whales.

From the *Desolations* our Master made his way North-west, the wind being against him, who

else would haue gone more to the North: but in this course we saw the first great Iland or Mountayne of Ice, whereof after we saw store. About the latter end of Iune, we rayfed Land to the North of vs, which our Master tooke to bee that Iland which Master *Danis* setteth downe in his Chart. On the West side of his Streight, our Master would haue gone to the North of it, but the wind would not suffer him: so we fell to the South of it, into a great Rippling or ouerfall of current, the which setteth to the West. Into the current we went, and made our way to the North of the West, till we met with Ice which hung on this Iland. Wherefore our Master casting about, cleered himselfe of this Ice, and stood to the South, and then to the West, through store of floting Ice, and vpon the Ice store of Seales. We gained a cleere Sea, and continued our course till wee meete Ice; first, with great Ilands, and then with store of the smaller fort. Betweene them we made our course North-west, till we met with Ice againe. But, in this our going betweene the Ice, we saw one of the great Ilands of Ice ouerturne, which was a good warning to vs, not to come nigh them, nor within their reach. Into the Ice wee put ahead, as betweene two Lands. The next day we had a storme, and the wind brought the Ice so fast vpon vs, that in the end we were driuen to put her into the chiefeft of the Ice, and there to let her lie. Some of our men this day fell sicke, I will not say it was for feare, although I saw small signe of other grieve.

Iland of Ice ouerturneth.

Danger by Ice.

Iles of Gods Mercie.

Partridges.

The storme ceasing, we flood out of the Ice, where wee saw any cleere Sea to goe to: which was sometime more, and sometime lesse. Our course was as the Ice did lye, sometime to the North, then to the North-west, and then to the West, and to the South-west: but still inclosed with Ice. Which when our Master saw, he made his course to the South, thinking to cleere himselfe of the Ice that way: but the more he stroue, the worse he was, and the more inclosed, till we could goe no further. Here our Master was in despaire, and (as he told me after) he thought he should neuer haue got out of this Ice, but there haue perished. Therefore hee brought forth his Card, and shewed all the company, that hee was entred aboue an hundred leagues further then euer any English was: and left it to their choice, whether they would proceed any further; yea, or nay. Whereupon, some were of one minde, and some of another, some wishing themselves at home, and some not caring where, so they were out of the Ice: but there were some who then spake words, which were remembered a great while after.

There was one who told the Master, that if he had an hundred pounds, hee would giue foure score and ten to be at home: but the Carpenter made answere, that if hee had an hundred, hee would not giue ten vpon any such condition, but would thinke it to be as good money as euer he had any, and to bring it as well home, by the leaue of God. After many words to no purpose, to worke we must on all hands, to get our selues out, and to cleere our ship. After much labour and time spent, we gained roome to turne our ship in, and so by little and little, to get cleere in the Sea a league or two off, our course being North and North-west.

In the end, we rayfed Land to the South-west, high Land and couered with Snow. Our Master named this Land, *Desire promokes*. Lying here, wee heard the noyse of a great ouerfall of a tyde, that came out of the Land: for now we might see well, that wee had beene embayed before, and time had made vs know, being so well acquainted with the Ice, that when night, or foggie, or foule weather tooke vs, we would seeke out the broadest Iland of Ice, and there come to anchor and runne, and sport, and fill water that stood on the Ice in Ponds, both sweete and good. But after we had brought this Land to beare South of vs, we had the tyde and the current to open the Ice, as being carried first one way, and then another: but in Bayes they lye as in a pond without mouing. In this Bay where wee were thus troubled with Ice, wee saw many of those Mountaynes of Ice aground, in fixe or seuen score fathome water. In this our course we saw a Beare vpon a piece of Ice by it selfe, to the which our men gaue chase with their Boat: but before they came nigh her, the tyde had carried the Ice and the Beare on it, and ioyned it with the other Ice: so they lost their labour, and came aboard againe.

We continued our course to the North-west, and rayfed Land to the North of our course, toward which we made, and comming nigh it, there hung on the Eastermost point, many Ilands of floting Ice, and a Beare on one of them, which from one to another came towards vs, till she was readie to come aboard. But when she saw vs looke at her, she cast her head betweene her hinder legges, and then diued vnder the Ice: and so from one piece to another, till she was out of our reach. We stood along by the Land on the Southside ahead of vs, wee met with Ice that hung on a point of Land that lay to the South, more then this that we came vpon by: which when our Master saw, he stood in for the shoare. At the West end of this Iland (for so it is) we found an Harbour, and came in (at a full Sea) ouer a Rocke, which had two fathome and an halfe on it, and was so much bare at a low water. But by the great mercie of God, we came to an Anchor cleere of it: and close by it, our Master named them, the *Iles of Gods Mercie*. This is an Harbour for need, but there must be care had how they come in. Heere our Master sent me, and others with me, to discover to the North and North-west: and in going from one place to another, we sprung a Couey of Partridges which were young: at the which *Thomas Woodhouse* shot, but killed only the old one. This Iland is a most barren place, hauing nothing on it but

plashes

plashes of water and riuen Rockes, as if it were subiect to Earthquakes. To the North there is a great Bay, or Sea (for I know not what it will proue) where I saw a great Iland of Ice aground, betweene the two Lands, which with the Spring-tide was set afloat, and carried into this Bay or Sea to the North-westward, but came not backe againe, nor within sight. Here wee tooke in some Drift wood that we found ashore.

Drift-wood.

From hence we stood to the South-west, to double the Land to the West of vs, through much floating Ice: In the end wee found a cleere Sea, and continued therein, till wee rayfed Land to the North-west. Then our Master made his course more to the South then before: but it was not long ere we met with Ice which lay ahead of vs. Our Master would haue doubled this Ice to the North, but could not; and in the end put into it downe to the South-west through much Ice, and then to the South, where we were embayed againe. Our Master stroue to get the shoare, but could not, for the great store of Ice that was on the coast. From out of this Bay, we stood to the North, and were soone out of the Ice: then downe to the South-west, and so to the West, where we were enclosed (to our sight) with Land and Ice. For wee had Land from the South to the North-west on one side, and from the East to the West on the other: but the Land that was to the North of vs, and lay by East and West, was but an Iland. On we went till we could goe no further for Ice: so we made our ship fast to the Ice which the tide brought vpon vs, but when the ebbe came, the Ice did open, and made way; so as in seuen or eight houres we were cleere from the Ice, till we came to weather; but onely some of the great Ilands, that were carried along with vs to the North-west.

20 Having a cleere Sea, our Master stood to the West along by the South shoare, and rayfed three Capes or Head-lands, lying one aboue another. The middlemost is an Iland, and maketh a Bay or Harbour, which (I take) will proue a good one. Our Master named them *Prince Henries Cape*, or *Fore-land*. When we had layd this we rayfed another, which was the extreme point of the Land, looking towards the North: vpon it are two Hills, but one (aboue the rest) like an Hay-cocke; which our Master named, *King James his Cape*. To the North of this, lie certaine Ilands, which our Master named, *Queene Annes Cape*, or *Fore-land*. Wee followed the North shoare still. Beyond the Kings Cape there is a Sound or Bay, that hath some Ilands in it: and this is not to be forgotten, if need be. Beyond this, lieth some broken Land, close to the Mayne, but what it is I know not: because we passed by it in the night.

Three Capes.
Prince Henries Cape.
King James his Cape.
Queene Annes Cape.

30 Wee stood to the North to double this Land, and after to the West againe, till wee fell with Land that stretched from the Mayne, like a shewer from the South to the North, and from the North to the West, and then downe to the South againe. Being short of this Land, a storme tooke vs, the wind at West, we stood to the North, and rayfed Land: which when our Master saw, he stood to the South againe; for he was loath at any time that wee should see the North shoare. The storme continuing, and comming to the South shoare againe, our Master found himselfe shot to the West, a great way, which made him muse, considering his Leeward way. To the South-west of this Land, on the Mayne, there is an high Hill, which our Master named *Mount Charles*. To the North and beyond this, lieth an Iland, that to the East hath a faire head, and beyond it to the West other broken Land, which maketh a Bay within, and a good Road may be found there for ships. Our Master named the first, *Cape Salisbury*.

Note.
Mount Charles.
Cape Salisbury.

40 When we had left this to the North-east, we fell into a Rippling or Ouer-fall of a Current, which (at the first we tooke to bee a Shoald: but the Lead being cast, wee had no ground. On we passed still in sight of the South shoare, till we rayfed Land lying from the Mayne some two leagues. Our Master tooke this to bee a part of the Mayne of the North Land; but it is an Iland, the North side stretching out to the West more then the South. This Iland hath a faire Head to the East, and very high Land, which our Master named *Deepes Cape*: and the Land on the South side, now falling away to the South, makes another Cape or Head-land, which our Master named, *Worsenhams Cape*. When wee were nigh the North or Iland Cape, our Master sent the Boat ashore, with my selfe (who had the charge) and the Carpenter, and diuers others, to discouer to the West and North-west, and to the South-west: but we had further to it then we thought; for the Land is very high, and we were ouer-taken with a storme of Raine, Thunder and Lightning. But to it we came on the North-east side, and vp we got from one Rocke to another, till we came to the highest of that part. Here we found some plaine ground, and saw some Deere; as first, foure or fve, and after, a dozen or sixteene in an Herd, but could not come nigh them with a Musket shot.

Deepes Cape.
Worsenhams Cape.

50 Thus, going from one place to another, wee saw to the West of vs an high Hill aboue all the rest, it being nigh vs: but it proped further off then we made account; for, when wee came to it, the Land was so steepe on the East and North-east parts, that wee could not get vnto it. To the South-west we saw that wee might, and towards that part wee went along by the side of a great Pond of water, which lieth vnder the East side of this Hill: and there runneth out of it a streame of water, as much as would drive an ouer-shot Mill; which falleth downe from an high Cliffe into the Sea on the South side. In this place great store of Fowle breed, and there is the best Grasse that I had seene since we came from *England*. Here wee found Sorell, and that which

Store of fowle and grasse.
Sorell and Scuruy grasse.

Fowles hanged.

which wee call Scury-grasse, in great abundance. Passing along wee saw some round Hills of stone, like to Grasse cockes, which at the first I tooke to be the worke of some Christian. Wee passed by them, till we came to the South side of the Hill; we went vnto them, and there found more; and being nigh them, I turned off the vppermost stone, and found them hollow within, and full of Fowles hanged by their neckes. Then *Greene*, and I, went to fetch the Boat to the South side, while *Robert Billet* and hee got downe a Valley to the Sea side, where wee tooke them in.

Our Master (in this time) came in betweene the two Lands, and shot off some Peeces to call vs aboard; for it was a fogge. Wee came aboard, and told him what we had seene, and perswaded him to stay a day or two in this place, telling him what refreshing might there bee had: but by no meanes would he stay, who was not pleased with the motion. So we left the Fowle, and lost our way downe to the South-west, before they went in sight of the Land, which now beares to the East from vs, being the same mayne Land that wee had all this while followed. Now, we had lost the sight of it, because it falleth away to the East, after some fife and twenty or thirty leagues. Now we came to the shallow water, wherewith wee were not acquainted since we came from *Island*; now we came into broken ground and Rockes, through which we passed downe to the South. In this our course we had a storme, and the water did shoald apace. Our Master came to an anchor in fifteene fathoms water.

Wee weighed and stood to the South-east, because the Land in this place did lie so. When we came to the point of the West Land (for we now had Land on both sides of vs) we came to an anchor. Our Master sent the Boat ashore, to see what that Land was, and whether there were any way through. They soone returned, and shewed that beyond the point of Land to the South, there was a large Sea. This Land on the West side, was a very narrow Point. Wee weighed from hence, and stood in for this Sea betweene the two Lands, which (in this place) is not two leagues broad downe to the South, for a great way in sight of the East sheare. In the end we lost sight thereof, and saw it not till we came to the bottome of the Bay, into fixe or seuen fathomes water. Hence we stood vp to the North by the West shoare, till wee came to an Island in 53. where we tooke in water and ballast.

lours.Footing of a
man.Sticke on a
Rocke.

From hence wee passed towards the North: but some two or three dayes after (reasoning concerning our comming into this Bay, and going out) our Master tooke occasion to reuiue old matters, and to displace *Robert Luet* from being his Mate, and the Boat-swaine from his place, for words spoken in the first great Bay of Ice. Then hee made *Robert Billet* his Mate, and *William Wilson* our Boat-swaine. Vp to the North wee stood, till we raised Land, then downe to the South, and vp to the North, then downe againe to the South: and on Michaelmasse day came in, and went out of certaine Lands: which our Master sets downe by the name of *Michaelmasse Bay*, because we came in and went out on that day. From hence wee stood to the North, and came into shoald water; and the weather being thicke and foule, wee came to an anchor in seuen or eight fathome water, and there lay eight dayes: in all which time wee could not get one houre to weigh our anchor. But the eighth day, the wind beginning to cease, our Master would haue the anchor vp, against the mind of all who knew what belonged thereunto. Well, to it we went, and when we had brought it to a peake, a Sea tooke her, and cast vs all off from the Capstone, and hurt diuers of vs. Here wee lost our Anchor, and if the Carpenter had not beene, we had lost our Cable too: but he (fearing such a matter) was ready with his Axe, and so cut it.

From hence we stood to the South, and to the South-west, through a cleere Sea of diuers sounding, and came to a Sea of two colours, one blacke, and the other white, sixteene or seuen-teene fathome water, betweene which we went foure or fife leagues. But the night comming, we tooke in our Top-sayles, and stood afore the wind with our Maine-sayle and Fore-sayle, and came into fife or fixe fathomes, and saw no Land for it was darke. Then we stood to the East, and had deepe water againe, then to the South and South-west, and so came to our Westernmost Bay of all, and came to an anchor neere to the North shoare. Out went our Boat to the Land that was next vs, when they came neere it, our Boat could not stote to the shoare: it was so shallow: yet ashore they got. Here our men saw the footing of a man and a Ducke in the snowy Rockes, and Wood good store, whereof they tooke some and returned aboard. Being at anchor in this place, we saw a ledge of Rockes to the South of vs, some league of length; It lay North and South, couered at a full Sea; for a strong tide setteth in here. At mid-night wee weighed, and stood to goe out as we came in; and had not gone long, but the Carpenter came and told the Master, that if he kept that course he would be vpon the Rockes: the Master conceiued that he was past them, when presently wee ranne on them, and there stucke fast twelue houres; but (by the mercy of God) we got off vnhurt, though not vnscarred.

Wee stood vp to the East and rayled three Hills, lying North and South: wee went to the furthest, and left it to the North of vs, and so into a Bay, where wee came to an anchor. Here our Master sent out our Boat, with my selfe and the Carpenter to seeke a place to winter in: and it was time; for the nights were long and cold, and the earth couered with Snow. Ha-
uing

uing spent three moneths in a Labyrinth without end, being now the last of October, we went downe to the East, to the bottome of the Bay : but returned without speeding of that we went for. The next day we went to the South, and the South-west, and found a place, whereunto we brought our ship, and haled her aground : and this was the first of Nouember. By the tenth thereof we were frozen in : but now we were in, it behooued vs to haue care of what we had; for, that we were sure of; but what we had not, was vncertaine.

Last of October.

Nouember the tenth frozen in.

Wee were victualled for fixe moneths in good proportion, and of that which was good : if our Master would haue had more, he might haue had it at home and in other places. Here we were now, and therefore it behoued vs so to spend, that wee might haue (when time came) to bring vs to the *Capes* where the Fowle bred, for that was all the hope wee had to bring vs home. Wherefore our Master tooke order, first for the spending of that wee had, and then to increafe it, by propounding a reward to them that killed either Beast, Fish, or Fowle, as in his Iouruall you haue seene. About the middle of this moneth of Nouember, dyed *John Williams* our Gunner : God pardon the Masters vncharitable dealing with this man. Now for that I am come to speake of him, out of whose ashes (as it were) that vnhappy deed grew which brought a scandall vpon all that are returned home, and vpon the action it selfe, the multitude (like the dog) running after the stone, but not at the caster : therefore, not to wrong the liuing, nor slander the dead, I will (by the leaue of God) deliuer the truth as neere as I can.

John Williams dyeth.

You shall vnderstand, that our Master kept (in his house at *London*) a young man, named *Henrie Greene*, borne in *Kent*, of Worshipfull Parents, but by his lewd life and conuersation hee had lost the good will of all his frinds, and had spent all that hee had. This man, our Master would haue to Sea with him, because hee could write well : our Master gaue him meate, and drinke, and lodging, and by meanes of one Master *Venson*, with much adoe got foure pounds of his mother to buy him clothes, wherewith Master *Venson* would not trust him : but saw it laid out himselfe. This *Henrie Greene* was not set downe in the owners booke, nor any wages made for him. Hee came first aboard at *Grauesend*, and at *Harwich* should haue gone into the field, with one *Wilkinson*. At *Island* the Surgeon and hee fell out in *Dutch*, and hee beat him a shoare in *English*, which set all the company in a rage; so that wee had much adoe to get the Surgeon aboard. I told the Master of it, but hee bade mee let it alone, for (said hee) the Surgeon had a tongue that would wrong the best friend hee had. But *Robert Inet* (the Masters Mate) would needs burne his finger in the embers, and told the Carpenter a long tale (when hee was drunke) that our Master had brought in *Greene* to cracke his credit that should displease him : which words came to the Masters eares, who when hee vnderstood it, would haue gone backe to *Island*, when he was fortie leagues from thence, to haue sent home his Mate *Robert Inet* in a Fisher-mag. But, being otherwise perswaded, all was well. So *Henry Greene* stood vpright, and very inward with the Master, and was a seruiceable man euery way for manhood : but for Religion he would say, he was cleane paper whereon he might write what hee would. Now, when our Gunner was dead, and (as the order is in such cases) if the company stand in need of any thing that belonged to the man deceased, then is it brought to the Mayne Mast, and there sold to them that will giue most for the same : This Gunner had a gray cloth gowne, which *Greene* prayed the Master to friend him so much as to let him haue it, paying for it as another would giue : the Master saith hee should, and thereupon hee answered some, that sought to haue it, that *Greene* should haue it, and none else, and so it rested.

Henry Greene bad conditions

Now out of season and time, the Master calleth the Carpenter to goe in hand with an house on shoare, which at the beginning our Master would not heare, when it might haue beene done. The Carpenter told him, that the Snow and Frost were such, as hee neither could, nor would goe in hand with such worke. Which when our Master heard, hee ferreted him out of his Cabbin to strike him, calling him by many foule names, and threatning to hang him. The Carpenter told him that hee knew what belonged to his place better then himselfe, and that hee was no House Carpenter. So this passed, and the house was (after) made with much labour, but to no end. The next day after the Master and the Carpenter fell out, the Carpenter tooke his Peece and *Henry Greene* with him, for it was an order that none should goe out alone, but one with a Peece, and another with a Pike. This did moue the Master so much the more against *Henry Greene*, that *Robert Billet* his Mate must haue the gowne, and had it deliuered vnto him; which when *Henry Greene* saw, hee challenged the Masters promise : but the Master did so raile on *Greene*, with so many words of disgrace, telling him, that all his friends would not trust him with twenty shillings, and therefore why should he? As for wages he had none, nor none should haue, if he did not please him well. Yet the Master had promised him to make his wages as good, as any mans in the ship; and to haue him one of the Princes guard when we came home. But you shall see how the deuil out of this so wrought with *Green*, that hee did the Master what mischief hee could in seeking to discredit him, and to thrust him and many other honest men out of the Ship in the end. To speake of all our trouble in this time of Winter (which was so cold, as it lamed the most of our Company, and my selfe doe yet feele it) would bee too tedious.

Greenes conspiracie.

Their hand wintring.

But I must not forget to shew, how mercifully God dealt with vs in this time; for the

F f f

space

- Store of Partridges. space of three moneths wee had such store of Fowle of one kinde (which were Partridges as white as milke) that wee killed aboue an hundred dozen, besides others of sundry sorts: for all was fish that came to the net. The Spring comming, this Fowle left vs, yet they were with vs all the extreame cold. Then in their places came diuers sort of other Fowle, as
- Other Fowles succeeding in their seasons. Swanne, Geese, Duck, and Teale, but hard to come by. Our Master hoped they would haue bred in thole broken grounds, but they doe not: but came from the South, and flew to the North, further then we were this Voyage; yet if they be taken short with the wind at North, or North-west, or North-east, then they fall and stay till the winde serue them, and then flye to the North. Now in time these Fowles are gone, and few or none to bee seene. Then wee went into the Woods, Hilles, and Valleys, for all things that had any shew of substance in them, how vile soeuer: the mosse of the ground, then the which I take the powder of a post to bee much better, and the Frogge (in his ingendring time as loathsome as a Toade) was not spared. But amongst the diuers sorts of buds, it pleased God that *Thomas Woodhouse* brought home a budde of a Tree, full of a Turpentine substance. Of this our
- Medicivable budde. Surgeon made a decoction to drinke, and applyed the budde hot to them that were troubled with ach in any part of their bodies; and for my part, I confesse, I receiued great and present ease of my paine.
- A Sauage. About this time, when the Ice began to breake out of the Bayes, there came a Sauage to our Ship, as it were to see and to bee seene, being the first that we had seene in all this time: whom our Master intreated well, and made much of him, promising vnto himselfe great matters by his meanes, and therefore would haue all the Knives and Hatchets (which any man had) to his priuate vse, but receiued none but from *John King* the Carpenter, and my selfe. To this Sauage our Master gaue a Knife, a Looking-glasse, and Buttons, who receiued them thankfully, and made signes that after hee had slept hee would come againe, which hee did. When hee came, hee brought with him a Sled, which hee drew after him, and vpon it two Deeres skines, and two Beauer skines. Hee had a scrip vnder his arme, out of which hee drew those things which the Master had giuen him. Hee tooke the Knife and laid it vpon one of the Beauer skines, and his Glasses and Buttons vpon the other, and so gaue them to the Master, who receiued them; and the Sauage tooke those things which the Master had giuen him, and put them vp into his scrip againe. Then the Master shewed him an Hatchet, for which hee would haue giuen the Master one of his Deere skines, but our Master would haue them both, and so hee had, although not willingly. After many signes of people to the North, and to the South, and that after so many sleepes he would come againe, he went his way, but neuer came more.
- Turke. Now the Ice being out of the Sounds, so that our Boat might go from one place vnto another, a company of men were appointed by the Master to go a fishing with our net; their names were as followeth: *William Wilson*, *Henry Greene*, *Michael Perce*, *John Thomas*, *Andrew Moler*, *Bennet Mathewes*, and *Arnold Lodlo*. These men, the first day they went, caught fise hundred fish, as big as good Herrings, and some Troutes: which put vs all in some hope to haue our wants supplied, and our Commons amended: but these were the most that euer they got in one day, for many dayes they got not a quarter so many. In this time of their fishing, *Henry Green* and *William Wilson*, with some others, plotted to take the net and the shallop, which the Carpenter had now set vp, and so to shift for themselves. But the shallop being readie, our Master would goe in it himselfe, to the South and South-west, to see if hee could meete with the people; for, to that end was it set vp, and (that way) wee might see the Woods set on fire by them. So the Master tooke the Sayue and the Shallop, and so much victuall as would serue for eight or nine dayes, and to the South hee went. They that remained aboard, were to take in water, wood, and ballast, and to haue all things in a readinesse against hee came backe. But hee set no time of his returne; for he was perswaded, if he could meet with the people, hee should haue flesh of them, and that good store: but hee returned worse then hee went forth. For, hee could by no meanes meete with the people, although they were neere them, yet they would set the woods on fire in his sight.
- Fishing. Being returned, hee fitted all things for his returne, and first, deliuered all the bread out of the bread roome (which came to a pound a piece for euery mans share) and deliuered also a Bill of Returne, willing them to haue that to shew, if it pleased God, that they came home: and he wept when hee gaue it vnto them. But to helpe vs in this poore estate with some reliefe, the Boate and Sayue went to worke on Friday morning, and stayed till Sunday noone: at which time they came aboard, and brought fourescore small Fish, a poore reliefe for so many hungry bellies. Then we wayed, and stood out of our wintering place, and came to an Anchor without, in the mouth of the Bay: from whence we wayed and came to an anchor without in the Sea, where our bread being gone, that store of cheese we had was to stop a gap, whereof there were fise, whereat the company grudged, because they made account of nine. But those that were left, were equally diuided by the Master, although he had counsell to the contrarie: for there were some who hauing it, would make hast to bee rid thereof, because they could not gouerne it. I knew when *Henric Greens*
- Belly straits.

Greene gaue halfe his bread, which hee had for fourteene dayes, to one to keepe, and prayed him not to let him haue any vntill the next Munday: but before Wednesday at night, hee neuer left till hee had it againe, hauing eaten vp his first weekes bread before. So Wilson the Boatswaine hath eaten (in one day) his fortnights bread, and hath beene two or three dayes sicke for his labour. The cause that moued the Master to deliuer all the Cheefe, was because they were not all of one goodnesse, and therefore they should see that they had no wrong done them: but every man should haue alike the best and the worst together, which was three pounds and a halfe for seuen dayes.

The wind seruing, we weighed and stood to the North-west, and on Munday at night (the eighteenth day of Iune) wee fell into the Ice, and the next day the wind being at West, we lay there till Sunday in sight of Land. Now being here, the Master told Nicholas Simmes, that there would be a breaking vp of chests, and a search for bread, and willed him (if hee had any) to bring it to him, which hee did, and deliuered to the Master thirty cakes in a bagge. This deed of the Master (if it bee true) hath made mee maruell, what should bee the reason that hee did not stop the breach in the beginning, but let it grow to that height, as that it ouerthrew himselfe and many other honest men: but there are many denices in the heart of man, yet the counsell of the Lord shall stand.

Being thus in the Ice on Saturday, the one and twentieth of Iune at night, Wilson the Boatswaine, and Henry Greene came to mee lying (in my Cabbin) lame, and told mee that they and the rest of their Associates, would shift the Company, and turne the Master, and all the sicke men into the shallop, & let them shift for themselves. For, there was not fourteen daies victual left for all the Company, at that poore allowance they were at, and that there they lay, the Master not caring to goe one way or other: and that they had not eaten any thing these three dayes, and therefore were resolute, either to mend or end, and what they had begun they would goe through with it, or dye. When I heard this, I told them I maruelled to heare so much from them, considering that they were married men, and had wiues and children, and that for their sakes they should not commit so foule a thing in the sight of God and man, as that would bee; for why should they banish themselves from their native Countrey? Henry Greene bad me hold my peace, for he knew the worst, which was, to be hanged when hee came home, and therefore of the two he would rather be hanged at home then starued abroad: and for the good will they bare me, they would haue mee stay in the Ship. I gaue them thanks, and told them that I came into her, not to forsake her, yet not to hurt my selfe and others by any such deed. Henry Greene told me then, that I must take my fortune in the Shallop. If there bee no remedie (said I) the will of God bee done.

Wilson & Greene,
their wicked-
nesse.

Away went Henry Greene in a rage, swearing to cut his throat that went about to disturbe them, and left Wilson by me, with whom I had some talke, but to no good: for he was so perswaded, that there was no remedie now, but to goe on while it was hot, least their partie should faile them, and the mischief they had intended to others, should light on themselves. Henry Greene came againe, and demanded of him what I said. Wilson answered, He is in his old song, still patient. Then I spake to Henry Greene to stay three dayes, in which time I would so deale with the Master, that all should be well. So I dealt with him to forbear but two dayes, nay twelue houres; there is no way then (say they) but out of hand. Then I told them, that if they would stay till Munday, I would ioyne with them to share all the victuals in the ship, and would iustifie it when I came home; but this would not serue their turnes. Wherefore I told them, it was some worse matter they had in hand then they made shew of, and that it was bloud and reuenge hee sought, or else he would not at such a time of night vndertake such a deed. Henry Greene (with that) raketh my Bible which lay before me, and sware that hee would doe no man harme, and what hee did was for the good of the voyage, and for nothing else; and that all the rest should do the like. The like did Wilson sweare.

Henry Greene went his way, and presently came Iuet, who because hee was an ancient man, I hoped to haue found some reason in him; but hee was worse then Henry Greene, for hee sware plainly that he would iustifie this deed when he came home. After him came John Thomas, and Michel Perce, as birds of one feather: but because they are not liuing, I will let them goe, as then I did. Then came Moter and Bennet, of whom I demanded; if they were well aduised what they had taken in hand. They answered, they were, and therefore came to take their oath.

Robert Iuet, Sec.
widhoues
notes.

Now, because I am much condemned for this oath, as one of them that plotted with them, and that by an oath I should bind them together to performe what they had begun, I thought good heere to set downe to the view of all, how well their oath and deedes agreed: and thus it was. *You shall sweare truth to God, your Prince and Countrey: you shall doe nothing, but to the glory of God, and the good of the action in hand, and harme to no man.* This was the oath, without adding or diminishing. I looked for more of these companions (although these were too many) but there came no more. It was darke, and they in a readinesse to put this deed of darknesse in execution. I called to Henry Greene and Wilson, and prayed them not to goe in hand with it in the darke, but to stay till the morning. Now, euerie man (I hope) would goe to his rest, but wickednesse

Oath abused.

kednesse sleepeth not; for *Henry Greene* keepeth the Master company all night (and gaue mee bread, which his Cabbin-mate gaue him) and others are as watchfull as he. Then I asked *Henrie Greene*, whom he would put out with the Master? he said, the Carpenter *John King*, and the sicke men. I said, they should not doe well to part with the Carpenter, what need soeuer they should haue. Why the Carpenter was in no more regard amongst them, was; first, for that he and *John King* were condemned for wrong done in the victuall. But the chiefeest cause was, for that the Master loued him, and made him his Mate, vpon his returne out of our wintering place, thereby displacing *Robert Billet*, whereat they did grudge, because hee could neither write nor read. And therefore (said they) the Master and his ignorant Mate would carry the Ship whither the Master pleased: the Master forbidding any man to keepe account or reckoning, hauing taken from all men whatsoeuer serued for that purpose. Well, I obtained of *Henrie Greene* and *Wilson*, that the Carpenter should stay, by whole meanes I hoped (after they had satisfied themselves) that the Master, and the poore man might be taken into the Ship againe. Or, I hoped, that some one or other would giue some notice, either to the Carpenter *John King*, or the Master; for so it might haue come to passe by some of them that were the most forward.

The Carpenter spared.

Now, it shall not bee amisse to shew how we were lodged, and to begin in the Cooke roome; there lay *Bennet* and the Cooper lame; without the Cooke roome, on the steere-board side, lay *Thomas Wydhhouse* sicke; next to him lay *Sydrack Funer* lame, then the Surgeon, and *John Hudson* with him; next to them lay *Wilson* the Boatswaine, and then *Arnold Lodlo* next to him: in the Gun-roome lay *Robert Iuet* and *John Thomas*; on the Lar-board side, lay *Michael Bute* and *Adria Moore*, who had neuer bene well since wee lost our Anchor; next to them lay *Michael Perce* and *Andrew Moter*. Next to them without the Gun-roome, lay *John King*, and with him *Robert Billet*: next to them my selfe, and next to me *Francis Clements*: In the mid-ship, betweene the Capstone and the Pumpes, lay *Henrie Greene* and *Nicholas Simmes*. This night *John King* was late vp, and they thought he had been with the Master, but he was with the Carpenter, who lay on the Poope, and coming downe from him, was met by his Cabbin-mate, as it were by chance, and so they came to their Cabbin together. It was not long ere it was day: then came *Bennet* for water for the Kettle, hee rose and went into the Hold: when hee was in, they shut the Hatch on him (but who kept it downe I know not) vp vpon the Deck went *Bennet*.

They bind the Master.

In the meane time *Henrie Greene*, and another went to the Carpenter, and held him with a talke, till the Master came out of his Cabbin (which hee soone did) then came *John Thomas* and *Bennet* before him, while *Wilson* bound his armes behind him. He asked them what they meant? they told him, he should know when he was in the Shallop. Now *Iuet*, while this was a doing, came to *John King* into the Hold, who was prouided for him, for he had got a sword of his own, and kept him at a bay, and might haue killed him, but others came to helpe him: and so he came vp to the Master. The Master called to the Carpenter, and told him that he was bound; but, I heard no answer he made. Now *Arnold Lodlo*, and *Michael Bute* rayled at them, and told them their knauerie would shew it selfe. Then was the Shallop haled vp to the Ship side, and the poore, sicke, and lame men were called vpon to get them out of their Cabbins into the Shallop. The Master called to me, who came out of my Cabbin as well as I could, to the Hatch way to speake with him: where, on my knees I besought them, for the loue of God, to remember themselves, and to doe as they would be done vnto. They bad me keepe my selfe well, and get me into my Cabbin; not suffering the Master to speake with me. But when I came into my Cabbin againe, hee called to me at the Horae, which gaue light into my Cabbin, and told mee that *Iuet* would ouerthrow vs all; nay (said I) it is that villaine *Henrie Greene*, and I spake it not softly.

The Carpenter leagued.

Now was the Carpenter at libertie, who asked them, if they would bee hanged when they came home: and as for himselfe, hee said, hee would not stay in the Ship vnlesse they would force him: they bad him goe then, for they would not stay him: I will (said hee) so I may haue my cheft with mee, and all that is in it: they said, hee should, and presently they put it into the Shallop. Then hee came downe to mee, to take his leaue of mee, who perswaded him to stay, which if he did, he might so worke that all should bee well: hee said, hee did not thinke, but they would be glad to take them in againe. For he was so perswaded by the Master, that there was not one in all the ship, that could tell how to carrie her home; but (saith he) if we must part (which wee will not willingly doe, for they would follow the ship) hee prayed me, if wee came to the Capes before them, that I would leaue some token that wee had bene there, neere to the place where the Fowles bred, and hee would doe the like for vs: and so (with teares) we parted. Now were the sicke men driuen out of their Cabbins into the Shallop; but *John Thomas* was *Francis Clements* friend, and *Bennet* was the Coopers, so as there were words betweene them and *Henrie Greene*, one saying, that they should goe, and the other swearing that they should not goe, but such as were in the shallop should returne. When *Henrie Greene* heard that, he was compelled to giue place, and to put out *Arnold Lodlo*, and *Michael Bute*, which with much adoe they did.

In the meane time, there were some of them that plyed their worke, as if the Ship had bene entred

entred by force, and they had free leaue to pillage, breaking vp Chests, and rifling all places. One of them came by me, who asked me, what they should doe. I answered, hee should make an end of what hee had begun; for I saw him doe nothing but sharke vp and downe. Now, were all the poore men in the Shallop, whose names are as followeth; *Henrie Hudson, John Hudson, Arnold Lodlo, Sidrack Faner, Phillip Staffe, Thomas Woodhouse, or Wydhonse, Adam Moore, Henrie King, Michael Bute.* The Carpenter got of them a Peece, and Powder, and Shot, and some Pikes, an Iron Pot, with some meale, and other things. They stood out of the Ice, the Shallop being fast to the Sterne of the Shippe, and so (when they were nigh out, for I cannot say, they were cleane out) they cut her head fast from the Sterne of our Ship, then out with their Top-sayles, and towards the East they stood in a cleere Sea. In the end they tooke in their Top-sayles, righted their Helme, and lay vnder their Fore-sayle till they had ransacked and searched all places in the Ship. In the Hold they found one of the vessels of meale whole, and the other halfe spent, for wee had but two; wee found also two firkins of Butter, some twentie senen piece of Porke, halfe a bushell of Pease, but in the Masters Cabbin we found two hundred of bisket Cakes, a pecke of Meale, of Beere to the quantitie of a Butt, one with another. Now, it was said, that the Shallop was come within sight, they let fall the Main-sayle, and out with their Top-sayles, and fye as from an Enemy.

The names of
the company
exposed in the
Shallop.

Then I prayed them yet to remember themselues: but *William Wilson* (more then the rest) would heare of no such matter. Comming nigh the East shoare they cast about, and stood to the West and came to an Island, and anchored in sixteene or seuteneene fathome water. So they sent the Boat, and the Net ashoare to see if they could haue a Draught: but could not for Rocks and great stones. *Michael Perse* killed two Fowle, and heere they found good store of that Weede, which we called Cockle-grasse in our wintering place, whereof they gathered store, and came aboard againe. Heere we lay that night, and the best part of the next day, in all which time we saw not the shallop, or euer after. Now *Henrie Greene* came to me and told mee, that it was the Companies will, that I should come vp into the Masters Cabbin, and take charge thereof. I told him it was more fit for *Robert Inet*: he said, he should not come in it, nor meddle with the Masters Card, or Iournals. So vp I came, and *Henrie Greene* gaue me the Key of the Masters Chest, and told me then, that he had laid the Masters best things together, which hee would vse himselfe when time did serue: the bread was also deliuered me by tale.

Last sight of
the Shallop.

The wind seruing, we stood to the North-east, and this was *Robert Billets* course, contrarie to *Robert Inet*, who would haue gone to the North-west. We had the Easterne shoare still in sight, and (in the night) had a stout gale of wind, and stood afore it, till wee met with Ice, into the which we ranne from thinne to thicke, till we could goe no further for Ice, which lay so thicke ahead of vs (and the wind brought it after vs afterne) that wee could not stirre backward, nor forward: but so lay imbayed fourteene daies in worse Ice, then euer wee met to deale withall, for we had beene where there was greater store, but it was not so broad vpon the water as this: for this floating Ice contained miles, and halfe miles in compasse, where we had a deepe Sea, and a Tide of flood and ebbe, which set North-west and South-east. Heere *Robert Inet* would haue gone to the North-west, but *Robert Billet* was confident to go through to the North-east, which he did. At last, being cleere of this Ice, he continued his course in sight of the Easterne shoare, till he sailed foure Ilands which lay North and South: but we passed them fixe or seuen leagues, the wind tooke vs so short. Then wee stood backe to them againe, and came to an Anchor betweene two of the most Northermost. We sent the Boat ashoare, to see if there were any thing there to be had, but found nothing, but cockle Grasse, whereof they gathered store, and so returned aboard. Before we came to this place, I might well see, that I was kept in the ship against *Henry Greene*'s minde, because I did not fauour their proceedings better then I did. Then hee began (very subtilly) to draw me to take vpon me to search for those things, which himselfe had stolne: and accused me of a matter no lesse then Treason amongst vs, that I had decerued the company of thirtie Cakes of bread. Now they began to talke amongst themselues, that *England* was no safe place for them, and *Henry Greene* swore, the shippe should not come into any place (but keepe the Sea still) till he had the Kings Majesties hand and Seale to shew for his safetie. They had many deuices in their heads, but *Henry Greene* in the end was their Capitaine, and so called of them.

Foure Ilands.

The wicked
flee where
none pursue.

From these Ilands we stood to the North-east and the Easter Land still in sight: wee raysed those Ilands, that our Master called *Rummes* Ilands. Betweene these Ilands and the shallow ground to the East of them, our Master went downe into the first great Bay. We kept the East shoare still in our sight, and comming thwart of the low Land, wee ranne on a Rocke that lay vnder water, and strooke but once; for if shee had, we might haue beene made Inhabitans of that place: but God sent vs soone off without any harme that wee saw. Wee continued our course and raysed Land a head of vs, which stretched out to the North: which when they saw, they said plainly, that *Robert Billet* by his Northerly course had left the Capes to the South, and that they were best to seeke downe to the South in time for reliefe, before all was gone: for we had small store left. But *Robert Billet* would follow the Land to the North, saying, that he hoped in

God to find somewhat to releue vs that way, as soone as to the South. I told them that this Land was the Mayne of *Worsenhome* Cape, and that the shallow rockie ground, was the same that the Master went downe by, when he went into the great Bay. *Robert Inet* and all said, it was not possible, vnlesse the Master had brought the ship ouer Land, and willed them to looke into the Masters Card, and their course how well they did agree. We stood to the East, and left the mayne Land to the North, by many small Islands into a narrow gut betweene two Lands, and there came to an Anchor. The Boat went ashore on the North side, where wee found the great *Horne*, but nothing else. The next day wee went to the South side, but found nothing there, save Cockle grasse of which we gathered. This grasse was a great releefe vnto vs, for without it, we should hardly haue got to the Capes for want of victuall. The wind seruing we stood out, but before we could get cleane out, the wind came to the West, so that we were constrained to anchor on the North side.

Cockle grasse.

The next day, wee weighed and doubled the point of the North Land, which is high Land, and so continueth to the Capes, lying North and South, some five and twentie or thirtie leagues. To the North we stood to see store of those Fowles that breed in the Capes, and to kill some with our shot, and to fetch them with our Boat. We raised the Capes with joy, and bare for them, and came to the Islands that lie in the mouth of the streight: but bearing in betweene the Rockie Iles, we ranne on a Rocke that lay vnder water, and there stucke fast eight or nine houres. It was ebbing water when we thus came on, so the floud set vs afloat, God guiding both wind and Sea, that it was calme, and faire weather: the ebbe came from the East, and the floud from the West. When wee were afloat, wee stood more neere to the East shoare, and there anchored.

A Rocke.

Note.

July 27.

The next day being the seuen and twentieth of Iuly, we sent the Boat to fetch some Fowle, and the ship should way and stand as neere as they could: for the wind was against vs. They had a great way to row, and by that meanes they could not reach to the place where the Fowle bred: but found good store of *Gulls*, yet hard to come by, on the Rocks and Cliffes, but with their Peeeces they killed some thirtie, and towards night returned. Now we had brought our ship more neere to the mouth of the Streights, and there came to an anchor in eighteen or twentie fathom water, vpon a Riffe or shelve of ground: which after they had weighed their Anchor, and stood more neere to the place where the Fowle bred, they could not find it againe, nor no place like it: but were faine to turne to and fro in the mouth of the Streight, and to be in danger of Rockes, because they could not find ground to let fall an Anchor in, the water was so deepe.

Sauages.

The eight and twentieth day, the Boat went to *Digges* his Cape for Fowle, and made directly for the place where the Fowle bred, and being neere, they saw seuen Boates come about the Easterne point towards them. When the Sauages saw our Boate, they drew themselves together, and drew their lesser Boats into their bigger: and when they had done, they came rowing to our Boat, and made signes to the West, but they made readie for all assaies. The Sauages came to them, and by signes grew familiar one with another, so as our men tooke one of theirs into our Boate, and they tooke one of ours into their Boate. Then they carried our man to a Coue where their Tents stood toward the West of the place, where the Fowle bred: so they carried him into their Tents, where he remayned till our men returned with theirs. Our Boat went to the place where the Fowle bred, and were desirous to know how the Sauages killed their Fowle: he shewed them the manner how, which was thus, They take a long Pole with a snare at the end, which they put about the Fowles necke, and so plucke them downe. When our men knew that they had a better way of their owne, they shewed him the vse of our Peeeces, which at one shot would kill seuen or eight. To be short, our Boat returned to their Coue for our man, and to deliuer theirs. When they came they made great joy, with dancing and leaping, and stroking of their breasts: they offered diuers things to our men, but they only tooke some *Morfes* Teeth, which they gaue them for a Knife, and two glasse buttons: and so receiuing our man they came aboard, much rejoycing at this chance, as if they had met with the most simple and kind people of the World.

Sauages manner of fowling.

Greene's confidence.

And *Henry Greene* (more then the rest) was so confident, that (by no meanes) we should take care to stand vpon our Guard: God blinding him so, that where hee made reckoning to receiue great matters from these people, he receiued more then he looked for, and that suddenly by being made a good example for all men: that make no conscience of doing euill, and that we take heed of the Sauage people, how simple soeuer they seeme to be.

The next day, the nine and twentieth of Iuly, they made haste to be ashore, and because the ship rid too farre off, they weighed and stood as neere to the place where the Fowle bred, as they could: and because I was lame, I was to go in the Boat, to carrie such things, as I had in the Cabbin of euery thing somewhat: and so with more haste then good speed (and not without swearing) away we went, *Henry Greene*, *William Wilson*, *Iohn Thomas*, *Michael Perse*, *Andrew Mote*, and my selfe. When we came neere the shoare, the people were on the Hills, dancing and leaping: to the Coue we came, where they had drawne vp their Boates: wee brought our Boate to the East side of the Coue, close to the Rockes. Ashore they went, and made fast the Boat

10

60

Boat to a great stone on the shoare, the people came, and euery one had somewhat in his hand to barter: but *Henry Greene* swore they should haue nothing, till he had Venison, for that they had so promised him by signes.

Now when we came, they made signes to their Dogges (whereof there were many like Mongrels, as bigge as Hounds) and pointed to their Mountaine, and to the Sunne, clapping their hands. Then *Henry Greene*, *John Thomas*, and *William Wilson*, stood hard by the Boate head, *Michael Perse*, and *Andrew Moter* were got vp vpon the Rocke, a gathering of Sorrell: not one of them had any weapon about him, not so much as a stick, saue *Henry Greene* only, who had a piece of a Pike in his hand: nor saw I any thing that they had wherewith to hurt vs.

Sauages dogges.

Sauages trecherie

10 *Greene* and *William Wilson* had Looking-glasses, and Iewes Trumps, and Bells, which they were shewing the people. The Sauages standing round about them, one of them came into the Boats head to me to shew me a Bottle: I made signes to him to get him ashoare, but he made as though he had not vnderstood me, whereupon I stood vp, and pointed him ashoare. In the meane-time, another stole behind me to the sterne of the Boat, and when I saw him ashoare, that was in the head of the Boat, I sate downe againe: but suddenly I saw the legge and foote of a man by mee. Wherefore I cast vp my head, and saw the Sauage with his Knife in his hand, who strooke at my brest ouer my head: I cast vp my right arme to saue my brest, he wounded my arme, and strooke 20 me into the bodie vnder my right Pappe. He strooke a second blow which I met with my left hand, and then he strooke me into the right thigh, and had like to haue cut off my little finger of the left hand. Now, I had got hold of the string of the Knife, and had woond it about my left hand, he struing with both his hands, to make an end of that he had begunne, I found him but weake in the gripe (God enabling me) and getting hold of the sleeue of his left arme, so bare him from me. His left side lay bare to me, which when I saw, I put his sleeue off his left arme into my left hand, holding the string of the Knife fast in the same hand: and hauing got my right hand at libertie, I sought for somewhat wherewith to strike him (not remembring my Dagger at my side) but looking downe I saw it, and therewith strooke him into the bodie, and the throate.

Whiles I was thus assaulted in the Boat, our men were set vpon on the shoare. *John Thomas* and *William Wilson* had their bowels cut, and *Michael Perse* and *Henry Greene* being mortally wounded, came tumbling into the Boat together. When *Andrew Moter* saw this medley, hee came running downe the Rockes, and leaped into the Sea, and so swamme to the Boat, hanging on the sterne thereof, till *Michael Perse* tooke him in, who manfully made good the head of the Boat against the Sauages, that pressed sore vpon vs. Now *Michael Perse* had got an Hatchet, wherewith I saw him strike one of them, that he lay sprawling in the Sea. *Henry Greene* crieth 30 *Coragio*, and layeth about him with his Truncheon: I cryed to them to cleere the Boat, and *Andrew Moter* cryed to bee taken in: the Sauages betooke them to their Bowes and Arrowes, which they sent amongst vs, wherewith *Henry Greene* was slaine out-right, and *Michael Perse* receiued may wounds, and so did the rest. *Michael Perse* cleereth the Boate, and puts it from the shoare, and helpeth *Andrew Moter* in: but in turning of the Boat, I receiued a cruell wound in 40 my backe with an Arrow. *Michael Perse* and *Andrew Moter* rowed the Boate away, which when the Sauages saw, they ranne to their Boats, and I feared they would haue launched them, to haue followed vs, but they did not, and our ship was in the middle of the channell, and could not see vs.

Trecherie iust to vniust Traytors.

Greene slaine.

Now, when they had rowed a good way from the sheare, *Michael Perse* fainted, and could row no more: then was *Andrew Moter* driuen to stand in the Boat head, and waft to the ship, which (at the first) saw vs not, and when they did, they could not tel what to make of vs, but in the end they stood for vs, and so tooke vs vp. *Henry Greene* was throwne out of the Boat into the Sea, and the rest were had aboard, the Sauage being yet aliue, yet without sense. But they died all there that day, *William Wilson* swearing and cursing in most fearefull manner: *Michael Perse* liued two dayes after, and then died. Thus you haue heard the Tragicall end of *Henry Greene* and his 50 Mates, whom they called Captaine, these foure being the only lustie men in all the ship.

Wicked and wretched end of wretched wicked men.

The poore number that was left, were to ply our ship to and fro, in the mouth of the streight, for there was no place to anchor in neere hand: besides, they were to goe in the Boate to kill Fowle, to bring vs home, which they did, although with danger to vs all. For if the wind blew, there was an high Sea, and the eddies of the Tydes would carrie the ship so neere the Rockes, as it feared our Master, for so I will now call him. After they had killed some two hundred Fowle, with great labour on the South Cape, wee stood to the East: but when wee were fixe or seuen leagues from the Capes, the wind came vp at East. Then wee stood backe to the Capes againe, and killed an hundred Fowle more. After this, the wind came to the West, so wee were driuen to goe away, and then our Master stood (for the most) along by the North shoare, till he fell in- 60 to broken ground about the *Queenes Pore-land*, and there anchored. From thence wee went to *Gods Mercies*, and from thence to those Ilands, which lye in the mouth of our Streight, not seeing the Land, till we were readie to runne our Bosprite against the Rockes in a fogge. But it cleered a little, and then we might see our selues inclosed with Rockie Ilands, and could find no ground

Miserie pursueth the rest.

ground to anchor in. There our Master lay atrie all night, and the next day the fogge continuing, they sought for ground to anchor in, and found some in an hundred and odde fathomes of water. The next day we weighed and stood to the East, but before wee came heere, we had put ourselues to hard allowance, as halfe a foule a day with the pottage: for yet we had some meale left, and nothing else. Then they beganne to make triall of all whatsoeuer: wee had slayed our Fowle, for they wil not pull: and *Robert Inet* was the first, that made vse of the skins by burning of the Feathers: so they became a great dish of meate, and as for the garbidge, it was not throwne away.

Poore Diet.

After we were cleere of these Ilands, which lie out with two points, one to the South-east, and the other to the North, making a Bay to the sight as if there were no way through, we continued our course East South-east, and South and by East, to raise the *Desolations*, from thence to shape our course for *Ireland*. Thus we continued diuers dayes: but the wind comming against vs, made vs to alter our course, and by the meanes of *Robert Inet* who perswaded the company, that they should find great reliefe in *Newfound Land*, if our Country-men were there, and if they were gone before we came, yet should we find great store of bread and fish left ashore by them: but how true, I giue God thanks, we did not trie. Yet we stood to the South-west, and to the West, almost to fiftie seuen degrees: when (by the will of God) the winde came vp at South-west. Then the Master asked me, if he should take the benefit of this wind, and shape his course for *Ireland*. I said it was best to goe, where we knew Corne grew, and not to seeke it, where it was cast away, and not to be found. Towards *Ireland* now wee stood, with prosperous winds for many dayes together: then was all our Meale spent, and our Fowle restie and dry: but (being no remedie) we were content with the Salt broth for Dinner, and the halfe Fowle for Supper. Now went our Candles to wracke, and *Bennet* our Cooke made a messe of meate of the bones of the Fowle, frying them with Candle-grease, till they were crispe, and with Vineger put to them, made a good dish of meate. Our Vineger was shared, and to euery man a pound of Candles deliuered for a weeke, as a great daintie. Now *Robert Inet* (by his reckoning) saith, wee were within sixtie or seuentie leagues of *Ireland*, when wee had two hundred thither. And sure our course was so much the longer, through our euill steeredge: for, our men became so weake, that they could not stand at the Helme, but were faine to sit.

Robert Inet's death.

Then *Robert Inet* dyed, for meere want, and all our men were in despaire, and said wee were past *Ireland*, and our last Fowle were in the steep-tub. So, our men cared not which end went forward, inso much as our Master was driuen to looke to their labour, as well as his owne: for some of them would sit and see the fore-sayle, or mayne-sayle flie vp to the tops, the sheetes being either flowne or broken, and would not helpe it themselves, nor call to others for helpe, which much grieved the Master. Now in this extremitie it pleased God to giue vs sight of Land, not farre from the place our Master said he would fall withal, which was the Bay of *Galloway*, and we fell to the West of the *Derfes*, and so stood along by the coast, to the South-west. In the end, there was a joyful cry, a sayle, a sayle, towards which they stood, then they saw more, but to the neereft we stood, and called to him: his Barke was of *Fowly*, and was at anchor a Fishing: he came to vs, and brought vs into *Bere Hauen*. Here we stayed a few dayes, and delt with the *Irish*, to supply our wants, but found no reliefe: for in this place there was neither Bread, Drinke, nor meny to be had amongst them. Wherefore they aduised vs to deale with our Country-men, who were there a fishing, which we did: but found them so cold in kindnesse, that they would doe nothing without present money, whereof we had none in the Ship. In the end, we procured one *John Waymouth*, Master of the Barke that brought vs into this Harbour, to furnish vs with money, which hee did, and receined our best Cable and Anchor in pawne for the same. With this money, our Master with the helpe of *John Waymouth*, bought Bread, Beere, and Beefe.

A sayle of *Fowly* Bere Hauen in *Ireland*.

Now, as wee were beholding to *Waymouth* for his money, so were wee to one Captaine *Taylor*, for making of our contracts with *Waymouth*, by whose meanes hee tooke a Bill for our Cable and Anchor, and for the mens Wages, who would not goe with vs, vnlesse *Waymouth* would passe his word for the same: for they made shew, that they were not willing to goe with vs for any wages. Whereupon Captaine *Taylor* swore hee would presse them, and then, if they would not goe, hee would hang them.

They arrive at *Plimouth*.

In conclusion, wee agreed for three pound ten shillings a man, to bring our Ship to *Plimouth*, or *Dartmouth*, and to giue the Pilot five pound: but if the winde did not serue, but that they were driuen to put into *Bristow*, they were to haue foure pound ten shillings a man, and the Pilot fixe pound. Omitting therefore further circumstances, from *Bere Hauen* wee came to *Plimouth*, and so to an anchor, before the Castle: and from *Plimouth*, with faire winde and weather without stop or stay, wee came to the *Downes*, from thence to *Gransend*, where most of our men went a shoare, and from thence came on this side *Erith*, and there stopped: where our Master *Robert Billet* came aboard, and so had mee vp to *London* with him, and so wee came to Sir *Thomas Smiths* together.

Forasmuch as this report of Prickett may happely bee suspected by some, as not so friendly to *Hudson*, who returned with that Companie which had so cruelly exposed *Hudson* and his, and therefore may seeme

to lay heavier imputation, and rip up occasions further then they will beleene; I haue also added the report of Thomas Widhoufe, one of the exposed Companie, who ascribeth those occasions of discord to Iuet. I take not on mee to sentence, no not to examine; I haue presented the Euidence iust as I had it: let the Bench censure, hearing with both eares, that which with both eyes they may see in those, and these notes; to which, I haue first prefixed his Letter to Master Samuel Macham.

M After Macham, I heartily commend mee vnto you, &c. I can write vnto you no newes, though I haue seene much, but such as euery English Fisherman haunting these Coasts can report better then my selfe.

Wee kept our Whitsunday in the North-east end of Island; and I thinke I neuer fared better in England then wee feasted there. They of the Countrey are very poore, and liue miserably: yet we found therein store of fresh Fish and daintie Fowle. I my selfe in an after-noon killed so much Fowle, as feasted all our Companie, being three and twentie persons at one time, onely with Partridges; besides Curlew, Plover, Mallard, Teale, and Goose. I haue seene two hot Bathes in Island, and haue bene in one of them. Wee are resolved to trie the uttermost, and ly onely expecting a faire winde, and to refresh our selues to aroyd the Ice, which now is come off the West Coasts, of which wee haue seene whole Islands, but God bee thanked, haue not bene in danger of any. Thus I desire all your prayers for vs. From Island this thirtieth of May, 1610.

Islanders
poore.

The cause of
their stay at
Island.

A note found in the Deske of Thomas Wydownse, Student in the Mathematickes, hee being one of them who was put into the Shallop.

T He tenth day of September, 1610. after dinner, our Master called all the Companie together, to heare and beare witnesse of the abuse of some of the Companie (it hauing bene the request of Robert Iuet) that the Master should redresse some abuses and slanders, as hee called them, against this Iuet: which thing after the Master had examined and heard with equitie what hee could say for himselfe, there were prooued so many and great abuses, and mutinous matters against the Master, and actions by Iuet, that there was danger to haue suffered them longer: and it was fit time to punish and cut off farther occasions of the like mutinies.

It was prooued to his face, first with Bennet Mathew our Trumpet vpon our first sight of Island, and hee confess, that hee supposed that in the action would be man-slaughter, and prone bloodie to some.

Secondly, at our comming from Island, in hearing of the companie, hee did threaten to turne the head of the Ship home from the action, which at that time was by our Master wisely pacified, hoping of amendment.

Thirdly, it was deposed by Philip Staffe our Carpenter, and Ladlie Arnold, to his face vpon the holy Bible, that hee perswaded them to keepe Muskets charged, and Swords readie in their Cabbins, for they should be charged with shot, ere the Voyage were ouer.

Fourthly, wee being pestered in the Ice, hee had used words tending to mutinie, discouragement, and slander of the action, which easily tooke effect in those that were timorous; and had not the Master in time preuented, it might easily haue ouertrowne the Voyage: and now lately being imbayed in a deepe Bay, which the Master had desire to see, for some reasons to himselfe knowne, his word tended altogether to put the Companie into a fray of extremitie, by wintering in cold: leaving at our Masters hope to see Bantam by Candlemasse.

For these and diuers other base slanders against the Master, hee was deposed; and Robert Bylot, who had shewed himselfe honestly respecting the good of the action, was placed in his stead the Masters Mate.

Also Francis Clement the Boatson, at this time was put from his Office, and William Wilton, a man thought more fit, preferred to his place. This man had basely carryed himselfe to our Master and to the action.

Also Adrian Mooter was appointed Boatsons mate: and a promise by the Master, that from this day Iuats wages should remaine to Bylot, and the Boatsons ouerplus of wages should be equally diuided betweene Wilton and one Iohn King, to the owners good liking, one of the Quarter Masters, who had very well carryed themselves to the furtherance of the businesse.

Also the Master promised, if the Offenders yet behaved themselves henceforth honestly, hee would be a meanes for their good; and that hee would forget iniuries, with other admonitions.

These things thus premised touching Hudsons exposing, and Gods iust iudgements on the Exposers, as Pricket hath related (whom they reserued as is thought, in hope by Sir Dudley Digges his Master to procure their pardon at their returne) I thought good to adde that which I haue further receiued from good Intelligence, that the Ship comming aground at Digges Island, in 62. degrees 44. minutes, a great flood came from the West and set them on floate: an argument of an open passage from the South Sea to that, and consequently to these Seas. The Weapons and

Arts

Arts which they saw, beyond those of other Sauages are arguments hereof. Hee which assauleth *Pricket* in the Boate, had a weapon broad and sharpe indented of bright Steele (such they vse in *lava*) riueted into a handle of Morfe tooth.

CHAP. XVIII.

The Discoveries of M. M. NICOLO, and ANTONIO ZENI, gathered out of their Letters, by FRANCISCO MARCOLINO: whereto is added QVIRINO his Ship-wracke.

They are related by Master Hakluyt, in his 3. vol pag. 121.

Frisland.

In the yeere 1380. Master Nicolo Zeno being wealthy, and of a haughtie spirit, desiring to see the fashions of the world, built and furnished a Ship at his owne charges, and passing the Straits of *Gibraltar*, held on his course Northwards, with intent to see *England* and *Flanders*. But a violent tempest assailing him at Sea, hee was carried hee knew not whither, till at last his Ship was carried away vpon the Ile of *Frisland*; where the men and most part of the goods were saued.

In vaine seemes that deliuerie, that deliuers vp presently to another Executioner. The Ilanders like *Neptunes*, hungry groomes, or his base and blacke Guard, set vpon the men whom the Seas had spared: but heere also they found a second escape, by meanes of a Prince named *Zichmui*, Prince of that and many Ilands thereabouts: who being neere hand with his Armie, came at the out-crie, and chasing away the people, tooke them into protection.

This *Zichmui* had the yeere before giuen the ouerthrow to the King of *Norway*, and was a great aduenturer in feates of Armes. He spake to them in *Latine*, and placed them in his Nauie, wherewith hee wonne diuers Ilands. *Nicolo* behaued himselfe so well, both in sauing the Fleet by his Sea-skill, and in conquest of the Ilands by his valour, that *Zichmui* made him Knight and Captaine of his Nauie.

Saint Thomas Monasterie in Groenland. Here Spring and the strange effects thereof.

After diuers notable exploits, *Nicolo* armed three Barks, with which hee arriued in *Engroenland*: where hee found a Monasterie of Friers of the *Preachers* Order, and a Church dedicated to *Saint Thomas*, hard by a Hill, that casteth out fire like *Vesunius* and *Aina*. There is a Fountaine of hot water, with which they heate the Church of the Monasterie, and the Friers chambers. It commeth also into the Kitchin so boyling hote, that they vse no other fire to dresse their meate; and putting their Bread into brasie Pots without any water, it doth bake as it were in an hot Oven. They haue also small Gardens, which are couered ouer in the Winter time, and being watered with this water, are defended from the violence of the Frost and cold, and bring forth Flowers in their due seasons. The common people astonished with these strange effects, conceiue highly of those Friers, and bring them presents of Flesh and other things. They with this Water, in the extremitie of the cold, heate their Chambers, which also (as the other buildings of the Monasterie) are framed of those burning stones, which the mouth of the Hill casts forth. They cast water on some of them, whereby they are dissolved, and become excellent white Lime, and so tough, that being contriued in building, it lasteth for euer. The rest, after the fire is out, serue in stead of stones to make walls and vaults, and will not dissolve or breake, except with some Iron tooles.

Their Winter lasteth nine moneths: and yet there is a faire Hauen, where this water falleth into the Sea, not frozen: by meanes whereof there is great resort of wild Fowle and Fish, which they take in infinite multitudes. The Fishers Boates are made like to a Weauers shuttle, of the skinnies of Fishes, fashioned with the bones of the same Fishes, and being sowed together with many doubles, they are so strong, that in foule weather they will shut themselues within the same, not fearing the force either of Sea or winde. Neither can the hard-hearted Rockes breake these yeelding Vessels. They haue also as it were a Sleeue in the bot tome thereof, by which with a subtill deuce, they conuey the water forth, that soaketh into them. The most of these Friers spake the *Latine* tongue.

Estotiland.

A little after this, *Nicolo* returned and dyed in *Frisland*, whither his brother *Antonio* had before resorted to him, and now succeeded both in his goods and honour; whom *Zichmui* employed in the Expedition of *Estotiland*: which happened vpon this occasion. Sixe and twentie yeeres before, foure Fisher-Boates were apprehended at Sea by a mightie and tedious storme; wherewith after many dayes, they were brought to *Estotiland*, about a thousand miles West from *Frisland*: vpon which, one of the Boates was cast away, and sixe men that were in it, were taken and brought to a populous Crie; where, one that spake *Latine*, and had been cast by chance vpon that Iland, in the name of the King asked them what Country-men they were; and vnderstanding their case, hee acquainted the King therewith. They dwelt there sixe yeeres, and found it to be an Iland very rich, being little lesse then *Iseland*, but farre more fruitfull. One of them said hee saw *Latine* bookes in the Kings Librarie, which they at this present doe not vnderstand.

stand. They haue a peculiar Language, and Letters or Characters to themselves. They haue mines of Gold and other Mettals, and haue Trade with *Engroneland*. They sow Corne, and make Beere and Ale. They build Barkes (but know not the vse of the Compasse) and haue many Cities and Castles. The King sent these Fisher-men with twelue Barkes Southwards, to a Countrey which they call *Drogio*: in which Voyage escaping dreadfull tempests at Sea, they encountered with *Canibals* at Land, which deuoured many of them. These Fishers shewing them the manner of taking Fish with Nets, escaped, and for the presents which they made of their Fish to the chiefe men of the Countrey, were beloued and honoured. One of these (more expert it seemeth then the rest) was holden in such account, that a great Lord made warre with their Lord to obtaine him: and so preuayled, that he and his companie were sent vnto him. And in this order was hee sent, to five and twentie Lords, which had warred one with another to get him, in thirteene yeeres space: whereby hee came to know almost all those parts, which, he said, was a great Countrey, and (as it were) a new World. The people are all rude, and voide of goodnesse: they goe naked, neither haue they wit to couer their bodies with the Beasts skinnes which they take in Hunting, from the vehement cold. They are fierce, and eate their enemies, hauing diuers Lawes and Gouvernours. Their liuing is by hunting.

Drogio.

Further to the South-west, they are more ciuill, and haue a more temperate ayre: They haue Cities and Temples dedicated to Idols, where they sacrifice Men, and after eate them; and haue also some vse of Gold and Siluer.

Hee fledde awry secretly, and conueying himselfe from one Lord to another, came at length to *Drogio*, where hee dwelt three yeeres. After this time finding there certaine Boates of *Estotiland*, hee went thither with them: and growing there very rich, furnished a Barke of his owne, and returned into *Friesland*: where hee made report vnto his Lord of that wealthy Countrey. *Zichmuis* prepared to send thither: but three dayes before they set forth, this Fisherman dyed. Yet taking some of the Marriners which came with him in his stead, they prosecuted the Voyage, and encountered after many dayes an Iland; where ten men of diuers Languages, were brought vnto them, of which they could vnderstand none, but one of *Iseland*. Hee told them, that the Iland was called *Icaria*, and the Knights thereof called *Icari*, descended of the ancient pedigree of *Dedalus*, King of *Scots*, who conquering that Iland, left his Sonne there for King, and left them those Lawes, which to that present they retayned. And, that they might keepe their Lawes inuiolate, they would receiue no Stranger. Onely they were contented to receiue one of our men, in regard of the Language, as they had done those ten Interpreters.

Zichmuis sayling hence, in foure dayes descried Land, where they found abundance of Fowle, and Birds egges, for their refreshing. The Hauen they called *Cap Trin*. There was a Hill, which burning, cast out smoake: where was a Spring, from which issued a certayne water like Pitch, which ranne into the Sea. The people of small stature, wilde, and fearefull, hid themselves in Caues. *Zichmuis* built there a Citie, and determining to inhabite, sent *Antonio* backe againe, with the most of his people to *Friesland*.

This Historie I haue thus inserted at large, which perhaps, not without cause in some things, may seeme fabulous; not in the *Zeni*, which thus writ, but in the relations which they receiued from others. Howsoeuer, the best Geographers are beholden to these Brethren, for that little knowledge they haue of these parts; of which none before had written: nor since haue there beene any great in-land Discoveries.

Hondius, &c.*

The Ship-wracke of Master PIERO QUIRINO, described by CHRISTOFORO FIORAVANTI, and NICOLO DI MICHEL, who were present there: heere contracted.*

IT semeth to bee a conuenient dutie to make a memoriall, and not suffer to bee buried in oblivion, that most lamentable, and cruell Voyage full of innumerable and extreame miseries, which befell a *Venetian* Ship, wherein wee carryed aboue seuen hundred Buttes of Wine, Spices, Cottons, and other Merchandises of great value, furnished in *Candia* with threescore and eight men, to goe towards the West. The Master whereof was Master *Piero Quirini*, a *Venetian* Gentleman, in the yeare 1431. Who after many troubles, misfortunes, and wants befallne him, after his departure from *Candia* towards the West, on the sixth of Nouember, in the foresaid yeere of the Lord, by chance came into the mouth of the Channels of *Flanders*, and went farre beyond them, by a storme from the South, towards the North-west, about one hundred and fortie miles, running still vpon the Iland of *Vssenti*, where, by agreement, wee *Christoforo Fioravanti*, and *Nicolo Michiel*, say, that at noone wee sounded the bottome of the ocean, and these parts the Ponent or West. * These are particularly related by *Quirino* the Patron or Owner. They lost their Rudder on a Rocke, not farre from *Cales* in *Spain*, and were faine to make thither to repaire it: and other diasters followed.

* There is also the relation hereof by *Quirino* himselfe, extant together with this in *Ramusio*, Typ. 2. Out of which I haue heere added diuers annotations. * The *Italians* call the sayling into the *Mediterranean*, the *Leuantor* East; and thence into the *Spanish* Ocean.

Sea

Sea with the Lead, and found our selues in five and fiftie fathome of water, and afterward toward the Evening wee sounded, and found our selues in ninetie fathomes and more, but the storme and furie of the windes was so great, that it brake five of the hinges off our rudder.

On the twelfth, in the morning, the storme not ceasing, but increasing every houre more and more, beat vpon our weake rudder with so great violence and furie, that it broke away all that held it, in such sort, that it hung on the one side, where, for the last remedie, wee fastened a great Cable vnto it, with the which, for three dayes wee drew it after vs, not being able to doe it otherwise, in which time in our iudgement, wee thought wee had runne two hundred miles and more, against our wills.

Afterward we tooke away the two Rudders, and with many pieces of Timber we made another, which might rather be called a shadow then a true Rudder, and wee put it in his place to guide and direct the ship. But it could not endure longer, then till the six and twentieth of November, when the violence of the Sea carried it all away: so that then wee remayned deprived of all hope of government and direction. On the fourth of December, the furie of the winde grew so outrageous againe, that it carried away all this third sayle, and so being spoyled and bereft of Sayle and Rudder, we went at aduenture vntill the eight day, alwayes wandering, not knowing by any meanes how to provide for our safetie. Afterward the winde alwayes increasing from the East, and with so great violence and furie, that the Sea beganne to swell so high, that the waues seemed Mountaynes, and farre greater then we had euer scene before, with the darknesse of the extreame long night, so that we seemed to goe in the bottomlesse depth of Hell: whereby you may imagine how great the anguish and trembling of our hearts was, because although we were living, yet at that instant wee seemed to bee dead, expecting death every houre, which we saw present: In this darknesse the Heauen was sometimes scene to open with the lightnings and sudden flashes of fire so bright, that they tooke away the sight of our eyes. And sometimes we seemed to touch the starres, the ship mounted so aloft, and then againe we saw our selues buried in Hell, inso much as being all astonished, we had lost our strength and force. And being in this miserable case we did nothing else, but with pittie behold one another, & running with so great violence for many houres, in the end a surge of the Sea came ouer the ship vnder the wind with such furie, that the water entred into it, filled it almost halfe full, whereby being now much weakened, it was readie to sinke, and turned vp the Keele. And surely that was the last houre, and our end, and truly we had bene swallowed vp of the Sea, if our Lord Iesus Christ had not bene, who forsaketh not them that religiously call vpon him, who put such power and strength into our afflicted minds, that seeing the ship in so dangerous a case, full of water, as it could not be cast out by any humane force, we determined to cut downe the mayne Mast, and cast it together with the mayne Yard and Tackling into the Sea, and so wee did, whereby the ship being disburdened, paused awhile, and we then taking courage, beganne to cast out the water, which with our great trouble and labour we ouercame in the end. In this manner wee went scouring away all that long night. Now when the day was almost come, they agreed to make readie the Boat and the Schiffe, with that little prouision of victuall which was remayning, equally parted. And the Patron said, With your consent I command you *Nicolo di Michiel* the Notary, that you set downe in a note the names of those that are willing to enter into the Schiffe and Boat: so presently he gaue him fortie five persons in a note, who were willing to enter into the Schiffe, which was capeable but of one and twentie men only, and therefore it was necessary to cast Lots who should goe therein: and so it was done, and they prepared it, and set it in order, and did the like to the Boate, into the which the Master with fortie seuen men entred. The one and twentie persons to whom the lot fell, entred the Schiffe, and a rate was giuen them according to the proportion of the victuall which was remayning of Bisket, and also of *Frisoppi*, three hundred pound weight, of Cheefe of *Candia* eightie pounds, of dried Bacon eight pounds, of Tallow to trim their Schiffe fortie pounds, of Oyle about two pound waight and no more: but besides wee bestowed there seuen *Carrattells* of *Tyrian* Wine, which is a kind of *Malua*, for the Pinnasse or Schiffe would hold no more. In like manner fortie seuen men, reckoning the Master, entred into the Boate or Pinnasse, vnto whom rateably fell their proportion of victualls, adding thereto a little Greene Ginger in Sirrope, and Sirrope of Limons, with some small quantitie of Spices, which wee had taken. We were (in our iudgement) distant from the neereist Iland or Land about five hundred miles or more, from the point of Land to Lee-ward of the North part, and we sayled with these Conserues in a quiet and calme Sea, that little time of the day together with our one and twentie companions, comforting our selues in that which we had scene the beginning of so faire a fortune. But when the night came, a darke mist rose, which was a token of the euill successe and end, which our companions of the Schiffe were to haue, of whom we had now lost the sight, so that we neuer saw them any more.

The nineteenth day, the morning appearing, and not seeing any token of the Schiffe, it made vs suspitious of their death, whereupon our mindes were much troubled, doubting what might befall them, because the windes raged in such manner, that a waue of the Sea mounted with so great

They leaue the ship.

The Schiffe lost.

great violence into the Pinnasse, behinde the Poop, where wee *Christopher* and *Nicholas* were set downe, that through the force of the furie thereof, two staves were battered and bent, which left a token of vnsupportable trouble and grieve, by meanes that the Pinnasse was more charged with the weight of the water, then with her owne burthen. Wherefore to remedie it, wee ranne all to lade it out with our hands, and being constrained through feare and necessitie, for the freeing of her, wee were faine to cast out all that, whether with water or without, which came most fit and ready to our hands. The Pinnasse becomming drie againe, presently in this storme, wee agreed to cast over-boord the greatest part of the Wine, and wee found our selues in so great extremitie, that if wee would taste thereof to comfort our troubled senses, no more then one gob-
10 let of Wine apeece fell to euery mans share for the whole day, and who so would drinke more, was constrained to take the Sea-water: and this measure and quantitie of Wine held out eight dayes, and no more.

And afterward being driuen to greater necessitie, wee brought our selues to a greater extremitie, by restrayning our proportion to halfe a goblet a day, and none of vs could securely sleepe, for the diuers doubts and dangers, wherein wee alwayes presently stood. Wee continued euery day and night, foure or sixe of vs at the Helme, and those that were at the Pumpe, stood alwayes firme and vpright changing their courses, where wee endured cold beyond comparifon farre
20 greater then that, which not many yeeres since was in *Venice*, when all the Channels were frozen, so that from *Margara* to *Venice*, not onely Men and Women, but Oxen, Horses, Carts, and Waggon, went ouer vpon the Ice in great multitudes, to the admiration of all the people, because that Region is (without comparifon) much colder then the Countrey of *Italy*. Now consider what our case was, being without Clothes to couer vs, and not hauing any thing to eate, or drinke, or other necessary thing for the maintenance of mans life, except a few *Frisoppi* which were left, and the nights one and twentie houres long, and also darke. Through the which cold,
30 wee began to lose the feeling of our feete, and by little and little, the cold becomming more vehement, possessed the whole body, procuring a dogged and raging appetite and hunger, so that euery one sought to deuoure that which was hid in a corner, and whatsoeuer hee had next at hand, wherefoeuer hee could finde it, as well as hee might, with that weake and litle strength which hee had remayning. Afterward, death seasing vpon them, you might see them shake the
35 head, and fall downe presently dead.

In the which Diseases, of seuen and fortie men (which wee found in that case) sixe and twentie yeelded vp the ghost, and it was not any wonder, considering wee could not haue any succour, nay, it is a diuine miracle that any one remayned alieue. And those few of vs that are remayning, liue onely to commend to memorie, and highly to exalt the great power of God. Those
fixe and twentie dyed, from the three and twentieth of December vntill the fifth of Ianuary, now one, now two, and sometimes more, in one day, whom we buried in the Sea.

The one and thirtieth of December, our Wine being wholly spent, and hauing seene the cruell and lamentable experience of our fixe and twentie Companions, who dyed with drinking of the Sea-water, necessities gaue vs a good stomacke, that is to say, to take our owne water to
40 quench our thirst. Now, there were some of the companie exceedingly troubled with giddinesse: for, wanting the abundant plentie of Wine, they were not able to indure thirst, nor to expell it, but they accounted it a great fauour to bee able to obtayne of their companions, whereof there were some who denyed it to their dearest friend, to keepe it for themselues. It is true, that some of vs warily mortified it, by mingling a litle sitrop of greene Ginger, or Limons therewith, which by chance we had remayning. During this time, vntill the fifth of Ianuary, we were
euery houre more accustomed to greater extremities.

The third of Ianuary, 1431. wee had sight of the first Land, which gaue vs great hope, although it so fell out, that it was very farre distant, where wee saw certayne Rockes to weatherward couered to the top with infinite heapes of Snow, to the which, the windes being con-
50 trary, wee were not able to approach with the sayles, and much lesse with Oares, because our armes were exceedingly weakened: wherefore wee stroue to come neere them with the winde, but passing beyond them through the current of the water, wee lost sight of them altogether.

And after difficult escape from the Rockes, sayling forward towards a very high Rocke, wee had sight of a Valley scituated betweene the two next Mountaynes, into the which desiring to enter about the fourth houre of the night, the cruell and outrageous windes would not suffer vs. Notwithstanding, inflamed through an exceeding great desire to goe on Land, wee tooke courage and strength, and (through force of the Oares, and the helpe of God) entred into the sayd Valley, at a point of Land in the least doubtfull and dangerous place, as it were at the very be-
60 ginning and entrie thereof, in the which, as soone as they perceiued the Pinnasse to touch vpon the sand, fise of our companie being more desirous of drinke, then of any other refreshing and recreation, leaped into the water without any regard, although it were very deepe, and went their way toward the Snow, and so glutted themselues therewith, that it was an incredible
G g g thing

Hard dyet.

Great Frost as Venice.

Extrem cold

The death of fixe and twentie.

Great thirst.

Sight of Land.

Hot strong stomackes to cold small drinke.

thing. And afterward, they brought a great quantitie thereof vnto vs, who remayned in the Pinnasse, to defend it from the beating of the Sea, of the which wee also with great greedinesse, receiued without measure.

And running according to our iudgement, as wee had runne in this Pinnasse for eightene dayes, from the day that wee departed from the ship, vntill this sixth of Ianuarie, sayling alwayes betweene the North-east and the East, and not with lesse winde then after sixe miles an houre, wee had runne about two thousand five hundred miles and more, without euer seeing any Land.

They goe on Land.

Iland of Saints or Santi, bearing off the coast of Norway. See Ortelius his Map of Scandia: hee placeth Santi and Rustene in 74. degrees, but too Northerly then they are from the North Cape, from which this Rocke (saith Quirino) bare Westward 70. miles other Rockes: not farre distant, some inhabited some not. This is off Rustene three miles in compass, and called in their Language for the extreame remotenesse, *The arse of the World.* Foure dye and others after.

Great weaknesse.

Miserable cold

Abundance of Lice.

They finde a Fish.

On the sixth of Ianuary, at the time of the solemne day of the *Epiphanie*, nineteene of vs went on land in this desolate and drie place, called the *Iland of the Saints*, in the Coast of *Norway*, 10 subiect to the Crowne of *Denmarke*, leauing two other to looke to the weake Pinnasse, that it might not bee broken with the beating of the Sea. And being landed there by meanes of an Oare, we endeauoured to kindle fire, and with a tynder boxe and Steele to strike fire, wee retired our selues into the closest place from the winde, and at the sight of the fire, nature thereby receiued a little strength.

Finding this Iland not inhabited, and seeking to goe in the Pinnasse to another Iland five miles off, shee so leaked, that part of vs landing, as it were all in the water, and some of vs vp to the middle in shallower water, wee stroue to draw her on land, and despairing to bee euer able to goe in her againe, wee determined to fit her in such sort, that shee might serue our turne to couer vs, after the best manner that wee could. Wee broake her into two parts: and of the greater 20 wee made a shelter, or Cottage for thirteene of vs, and of the lesser a shedde, capable of five men, vnder the which wee entred couering them with part of our sayles, and with the rest, and the cordage of the sayd Pinnasse, wee made continuall fire to preferue our liues.

Now being vterly destitute of all sustenance of meate and drinke, wee went wandring vpon the Sea shoare, where Nature gaue vs food to maintayne life, with certtine Perewinkles, or Shel-fish and Barnacles. And of these, not as many nor when wee would, but in very small quantitie. And remouing the Snow in some places, wee found a certayne Herbe, which together with the Snow wee cast into the Caldron, and when wee thought it was boyled, wee ate it. Nor could wee satisfie our selues therewith, and thus wee liued for thirteene dayes together, with small charitie amongst vs, by reason of the great scarcitie of all things and extreame 30 famine, leading rather a brutish life, then the life of men.

Continuing in this rude and homely kinde of life, it happened, that through the intollerable wants foure of our companions of the greater retiring place, failed euen where the afflicted Master was, with those remedies and slender comforts for their soules and bodies: so that you may thinke their bodies remayning nere vnto vs, who being very weake had lost all our strength, wee were not able to remooue them two yardes out of sight: and yet I will say more, that wee had no sooner taken the frozen or warme water in our mouthes, but presently Nature of it selfe cast it vp againe, wee not being able to abstaine from it, nor almost to stand on our feete.

The cold season of the yeere had brought vs to such necessitie, that (to warme vs) wee stood close thronged, in such sort, that wee seemed (as it were) to bee sewed together. Wherefore I entred vnder the sayles, which couered both our Cottages round about downe to the ground, the smoake not being able to issue forth, which proceeded (as I thinke) from the Pitch which was within certaine peeces of the Pinnasse, which we burned, so that our eyes were swolne that wee could not see: neuerthelesse wee indured all, that wee might bee warme. And our garments which wee neuer put off, were full of vermine, and the Lice swarmed in such number, that taking them from our backs, wee cast them by whole handfuls into the fire, and they had entred into the flesh in such manner through the skinn, euen to the bones, that finally they brought a young man of our company (that was a Notarie) euen vnto death, so that hee was neuer able to defend himselfe from so loathsome a litle vermine. A thing of most manifest example, to abase and abate our pride, and haughtinesse of minde.

Now concord sayling among vs, every one vsed his owne proper aduise, whereupon part of our companie wandring through the Sauage and vn-inhabited place, came to the knowledge of a solitarie and ancient retiring place made by the Shepherds heretofore, for the time of their abode, and it was seated on the highest part of the Coast of the sayd Iland towards the West, distant from ours about a mile and a halfe. Vnto the which, sixe of the companie of the number of those eight, which were found in that first and greater retiring place, determined to remooue themselves to that new-found solitarie habitation, for their lesse inconuenience leauing the other two, their other companions alone, in an abandoned and forsaken place, as well because they were not able to trauell, as also for that wee were altogether vnable to conduct them.

It came to passe, that those sixe through the gracious goodnesse and gift of God, found an exceeding great Fish, to the which I know not what name to give, whether Whale, or Por 30 pisse

pisse of the Sea, which wee are to thinke was sent from the Diuine and excellent bountie to feed vs. And considering that wee saw it cast vp by the Sea vpon the shoare, dead, fresh, good and great, and at the time of our so great necessitie, wee rendred thanks vnto our most gracious Lord God, who at that time would sustayne our so weake and diseased bodies, with that foode, appeased peraduenture through the prayers of some vigilant and deuout soule.

With this Fish, wee fedde our selues for nine dayes sufficiently. And as it happened, those very nine dayes were so tempestuous with windes, rayne and snow, that by no meanes the cruell storme would haue suffered vs to goe one pace out of our Cottage.

10 The miraculous Fish being spent, the furious tempest was somewhat asswaged, wherefore not hauing wherewith to maintayne life, like Wolues that oppressed with famine, goe to seeke out other places of abode, wee arose out of the Cottage, and went wandring through the desert Rockes to finde any succour to sustayne our life with Perewinckles of the Sea and Barnacles; with the which wee were of necessitie to bee contented, although they were very little thinges, and so wee maintayned our selues vntill the last of Ianuary, 1431. and therefore wee were leane, pale, afflicted, and but halfe aliue. In which time finding certayne dung of Oxen scorched and dried with the cold and winde, (whereof wee gathered euery day to make a fire) wee certainly knew that place to bee frequented by Oxen: which thing gaue vs assured hope of some good end, and through this perswasion wee indured part of our grievous cares and sorrowes.

1431 in Fo.
raine account,

20 In the end the houre came, wherein our benigne Creator and most gracious Lord, purposed to conduct his little flocke so much afflicted, into the Hauen of their safetie: and it was in this manner. Two young Heifers of a Fisher-man neere vnto this Iland within fve miles, beeing strayed the former yeere from the place where hee vsed to dwell, and neuer vnderstanding any newes of them within the yeere, nor hauing any hope to finde them againe, on the very first day of February, 1431. at night, one of the Sonnes of the said Fisher-man of *Rustene* (for so the said Iland was called) being of the age of sixteene yeeres, dreamed that certainly the two Heifers were escaped, and gone vp to the Iland of *Saints* distant from them, where wee were lodged, at the point of the West part, vpon the which no man durst euer goe at the low water. Whereupon the Sonne who had such a vision or dreame, prayed the Father, and an elder Brother of his, that they would accompany him to goe to seeke them.

Ile of *Rustene*.

30 And so, all three in a Fisher-boate tooke their way towards the sayd Iland, and came to the point where wee were, and the sayd young men landing there, left their Father to looke to the Boate, and hauing ascended a little vpon the Cliffe, they saw a smoake arise in the ayre, from their retiring place which they had formerly vsed. Whereupon through feare and astonishment they maruelled, and that not a little, how, whence, and by what meanes it might come to passe. Wherefore, they stood a long time much amazed. And desiring to know the cause, they began to talke one with another. And although wee perceiued the noyse, and heard the voyce; yet wee could not conceiue whence it should bee, but rather iudged it to bee the crying of Crowes, then the voyce of men. And wee were the rather induced thereunto, because some few dayes before, wee had seene (vpon the miserable Carkasses of our eight companions cast to the winde) multitudes of Crowes, that rent the ayre with their croking, feeding themselves vpon them: whereupon wee thought it could bee no other.

40 But continuing from good to better, the voyces of the children of God sent to saue vs, wee cleerely perceiued that they were the voyces of Men, and not the crying of Fowles. And at that instant *Christophoro Fiorauanti* arose out of the Cottage, and seeing the two young striplings, crying with a loude voyce came towards vs, saying, Reioyce, behold two come to seeke vs. Whereupon, inflamed with an earnest desire, wee raysed our selues on our feete, going rather with the heart then with the feete, and drawing neere vnto them, wee perceiued that through the sudden and extreame strangenesse of the matter, they were afraid, and their countenances began to waxe pale. But contrarily wee cheered our selues, and being comforted with an assured hope, shewed with actions and gestures of humilitie, that wee came not to offend them in any wise. Diuers thoughts came in our mindes, whether wee should detaine one of them or both, or whether one or two of vs should goe with them. The first determination was against vs, because wee knew not with whom, nor with how many wee had to doe, for that wee vnderstood not them, nor they vs.

50 But being aduised by the holy Ghost, wee went downe to their Boate, in the best and most amiable manner that wee could, where the Father was, who expected them: and when he saw vs, hee also remayned astonished and amazed. In this meane space, wee looked whether there were any thing in their Boate to succour our necessities, to maintayne life: but wee found nothing there. So, they moued through pitie, seeing vs affamished, by signes and actions which wee made vnto them, were contented to carrie with them *Ghirardo da Lione*, a Sewer, and *Cola di Otranto*, a Marriner, who had some knowledge, and were able to speake the *French* and the high *Dutch*, leauing vs in great hope of present safetie and helpe.

A Germaine
Priest.

Their Boate comming to *Rustene* with our two companions, all the people flocked together, and seeing the countenance and habite of our companions, astonished at so great and strange a matter, they demanded among themselves, whence, & how such like fellowes as these appeared, or from what place they landed: and that they might be the better aduertised, they attempted to speake vnto them in diuers Languages, but in the end an *Almaine* Priest of the Order of the Preachers, spake with one of the said companions in the high *Dutch*, and by that meanes, they were certified what wee were, from whence, and how wee had arriued there. The which matter the morning following, which was the second day of Februarie dedicated to the glorious Mother of Christ, the said Priest published to all the people of *Rustene*, exhorting them, that through our misfortune, they would bee moued to pitie and to helpe vs, according to their abilitie.

In this meane space, through the Catholike remembrance of the *Almaine* Priest, on the third day of Februarie, 1431. at the very instant of the day of Saint *Biagio*, the courteous and pittifull Inhabitants of *Rustene* came vnto vs with great plentie of all sustenance, which they vse for their provision, to feed vs and preserue vs, being desirous to conduct vs to their kinde habitations, to refresh our weake bodies. And so wee were guided and receiued into *Rustene* vpon the sayd day, where wee had great restoratiues, which were rather hurtfull for vs, through the exceeding abundance thereof, because wee could neuer satisfie our selues with eating, and our weake stomackes not being able to indure it, it made our hearts to grieve, so that wee thought wee should haue dyed.

There were remayning in the first and greater of our two retiring places, two of the companie which were impotent and weake, who knew nothing of this our so miraculous succour. Wherefore giuing these Catholike Countrey people notice of them, and likewise of the other eight that were dead and vnburi'd, assembling themselves together, they went with the Priest singing Psalmes and Hymnes, as well to burie those eight that were dead, as to conduct to the Haue of safetie the two that were remayning behinde, and arriuing at the Island of *Saints*, they performed a worke of mercy to the eight that were dead, to the which number, one of the two remayning was added, whom they found dead. Now imagine, how the other could continue being depriued of companie and all humane sustenance, and yet hee was brought to *Rustene* with some little shew of life, where, at the end of two dayes hee departed this transitorie life.

Eleuen of vs being come to *Rustene*, wee landed and went into the house of our Guide, Host, and Lord, as hee and the rest desired, whereinto our most prudent Master, Master *Piero Quirini* entring, vsing his wisdom and discretion, performed an action of exceeding great humilitie, as soone as hee saw the companion of our Conductor and Sergeant Maior, declaring by semblance that hee would acknowledge her to bee the Mistresse of the house, hee cast himselfe downe at her feet: but shee refused and lifted him vp from the ground, embracing him and bringing him to the fire, and with her owne hand gaue him somewhat to eate.

Rustene described.

Stock-fish in
stead of money.

Their drinke
and bread.

Halibuts very
great.

Sinceritie.

In this Island there are twelue little Houses, with about one hundred and twentie persons, for the most part Fishermen, and they are by nature indued with vnderstanding to know how to make Boates, Buckets, Tunnes, Baskets, Nets of all sorts, and euery other thing necessarie for their vse and trade. And they are very courteous one toward another and seruiceable, desirous to please rather for loue, then for hope of any gift or good turne to bee done them againe. Fishes called Stock-fish, in all their payments and bartering, are vsed in stead of coyned money, and they are all as it were of one bignesse and measure, of the which euery yeere they drie an infinite number in the winde: and in the time of May freight themselves with them, carrying them through the Realmes of *Denmarke*, that is to say, *Sweden*, *Denmarke*, and *Norway*, being all Subject to the King of *Dacia*: where they barter and exchange the said Fish, for Leather, Cloathes, Iron, Pulse and other things, whereof they haue scarcitie.

Few other things for maintenance of life are found there, except Fish, yet at certaine times, they haue some small quantitie of Beefe, and Milke of Kine, of the which, with Rice, and I know not what other mixture, they make Bread of a naughtie taste. Their Drinke is sowre Milke, displeasing vnto them, who haue not beene accustomed thereunto. They vse also Ale, that is to say, Wine drawne out of Rie. Wee eate of the Plaice or Halibut fish, which are exceeding great, so that you would not beleue it. Wee saw some of them somewhat longer then sixe feete of the common *Venetian* measure, aboue two foote broad vpon the Chine, and more then three quarters of a foote in thicknesse: a wonderfull thing to bee spoken. They cloath the men with redde Hides, and likewise blacke, able to defend them from the water, and they vse cloathes very course, of azure, redde, and ash-colour, brought from *Denmarke*, of small price and estimation.

These Countrey people vse much to frequent the Church, because they are very deuout, and yeeld great reuerence to the worship and seruice of God. Auarice, is as it were altogether extinguished, for, they vnderstand not in any sort, nor know not what thing of anothers may become theirs, but by barter: and therefore they vse not to locke Doore, House, nor Windows,

dowes, nor any Chest for feare to bee robbed, but onely by reason of the wilde Beasts.

The Inhabitants of this place both young and old, are of so great simplicitie of heart, and obedient to the Commandement of God, that they neither vnderstand, know, nor imagine in any wife, what Fornication, or Adulterie may bee: but vse Marriage according to Gods Commandement. And to giue you a true prooffe hereof I *Christophoro* say, that we were in the house of our foresaid Host, and slept in one and the same Cottage, where hee also and his Wife slept, and successiue in one Bed neere adjoyning, were their Daughters and Sonnes of ripe age together, neere to the which Beds we also slept, almost close adjoyning to them: so that when they went to sleepe, or when they arose, or when they stripped themselves naked, and wee in like manner, we indifferently saw one another, and yet with that puritie, as if wee had bene little children. But I will tell you more, that for two dayes together, our said Host, with his elder Sonnes arose to goe a fishing, euen at the time of the most delightfull houre of sleepe, leaving his Wife and Daughters in the Bed, with that securitie and puritie, as if he had properly left them in the armes and embracements of the Mother, not returning to his home in lesse time then the space of eight houres.

The Inhabitants of this Iland, especially the elder sort, are found so vnited in their wils to the will of God, that in euery casualtie of naturall death, which befalleth Father, Mother, Husband, Wife, Children, or whatsoever other Kinsman, or Friend, when the houre of their passage vnto another life appeareth, presently without any griefe of heart and complaining, they assemble themselves together vnto the Cathedrall Church, to thanke and prayse the Heauenly Creator, who hath permitted such an one to liue so many yeeres, and at that present, as his creature vouchsafed to call him, or her into his gracious fauour, and neere vnto him: and at the appointed houre they cause them to be washed cleane, to haue them pure and neate, as they were borne. Whereupon rejoycing and contenting themselves with his infallible will and pleasure, they giue him prayse and glorie, not shewing any passion either in words or gestures, as if properly they had but slept. Surely we may say, that from the third of February 1431. vntill the fourteenth of May 1432. which amounteth to an hundred dayes and one, we were within the circuit of Paradise, to the reproch and shame of the Countreies of *Italie*.

There at the beginning of May we saw great varietie and alteration. First, their women vse to goe vnto the Bathes, which are very neere and commodious, as well for puritie, as for the custome they obserue, which they hold agreeable vnto Nature: they vse to come forth of their houses starke naked, as they came out of their Mothers wombe, going without any regard to their way, carrying only in their right hand an heape of grasse, in manner of a broome, as they say, to rub the sweat from their backe, and the left hand they hold vpon their hip, spreading it as it were for a shadow to couer their hinder parts, that they should not much appeare: where hauing twice seene them, we passed away by them, as easily as their owne people, the Countrey was so cold, and the continuall seeing of them, that it caused vs to make no account thereof. On the contrary part, these very women were seene on the Sunday to enter into the Church in long and comely Garments. And that they might not by any meanes be seene in the face, they wear on their head a thing like a compleat Morion with a Gorger, which hath an hole to see through at the end, like the hole of a Pipe, through the which they behold within that, no further off from their eyes then the hole is long, so that they seeme to haue it in their mouthes to pipe: and worse then that, they can neither see nor speake, vlesse they turne themselves a yard or more, from the hearer. I thought good to note these two extreame varieties, as worthy to bee vnderstood.

From the twentieth of Nouember, vntill the twentieth of February, the night continueth and lasteth there about one and twentie houres or more, the Moon neuer wholly hiding her bodie or her rayes at least. And from the twentieth of May vntill the twentieth of August, either the whole Sunne is alwayes seene, or elsie his beames neuer faile.

In this Countrey there is infinite plentie of white Birds, in their Language called *Muxi*, but we called them Cockes of the Sea, which by nature conuerse, and willingly abide where men inhabit, whether they find them in Barks or on the Land. And they are so domesticall and tame, as House-dowes are with vs.

In this Iland, and in the Countreies of *Suecia*, we saw very white skins of Beares as white as Armelins, much longer then twelue *Venetian* feete. Wee abode in *Rustene* three moneths and eleuen dayes, expecting a fit time to passe with our Host into *Sueden*, with his vsuall freight of Stock-fish, which is in the time of May, when these Countrey people depart, carrying with them infinite plentie thereof through the Realmes of the foresaid King of *Dacia*.

On the fourteenth day of May 1432. came the houre so much desired, to turne our faces towards our amiable and beloued Countrey, as our minde and desire alwayes was, and leaue the charitable place of *Rustene*, which was the last succour and refreshing to our miseries. So wee tooke our leaue of our Domesticall friends of the House; and of our Mistresse and Hostesse, to whom in token of our loue we left, not that whereunto we were in dutie bound, but what wee had remayning: and that was certayne small trifling things of little value in our opinion, as

Simplicitie. Thus the *Indians* thought in regard of their differing ielousie, which scarcely permits the growne Sonne or Brother to sleepe vnder the same roose with the Mother or Sister. *Quirino* saith in the same Chamber, their houses being built of timber in round forme, with one light in the top, which in winter by reason of the vsupportable cold is covered with skinned great fishes, which cast a great lustre. Their children after foure daies old are set vnder the same for the snow to fall on them, that they may bee hardened for the cold. From the first of Febr. to the 14. of May, it almost alway snows. Their garments are of coarse cloth of *London*, &c. more then of Lether. Funerall. Bathing. Long nights. *Quirino* saith, that it is three moneths night with continual light of the Moone: and three others day with continual light or light at least of the Sunne. Birds, *Muxi*. They remaine.

Goblets, Girdles, and small Rings. And likewise wee tooke leaue of the Neighbours, and the Priest, and generally of all, shewing them by signes and words, as the Interpreter might vnderstand then, that we acknowledged our selues bound vnto them all. And hauing performed due salutations, we entred into a Barke of the burthen of twentie tunnes, or thereabouts, laden with the said fish, guided by our Patrone and Host, with three of his Sonnes, and certayne of their Kindred. And we departed on the said day bending our course towards *Bergie*, which is the first conuenient and fit Hauen for the dispatch and riddance of such fish, which place is distant from *Rustene*, about some thousand miles. So we conducted the said Barke through certaine direct and safe channels, rowing most commodiously and at ease.

Bergie.

Tokens of the Skiffe drowned.

But after we were about two hundred miles off from *Rustene*, wee found certaine Relikes of the planks and ribs of our Skiffe, whereby we plainly knew, that our companions which were in it, were perished and drowned, the first night that they departed from vs.

Trondon.

The nine and twentieth of May 1432. we arrived with the said Barke at *Trondon*, vpon the Coast of *Norway*, the Princely Seate of the King of *Denmarke*, where the Honourable bodie of our Voyage: but not finding it, because we would lose no more time, wee tooke leaue of our beloued Host, his Sonnes and the rest, to proceed on our journey by Land.

Saint Olaus.

Vastena.

The ninth of Iune we departed from *Trondon*, traouelling on foot, going towards *Vastena*, a place subject to the King of *Denmarke*, within the Prouince of *Sweden*, where the cheek-bone and part of the bone of the head of *Saint Bridget* remayneth. Being there, wee vnderstood by the *Venetians*, that the Inhabitants for the reuerence of their glorious King *Saint Olaus*, vnto whom (as they well knew) our Signorie of *Venice* did great fauour in his going and returning from his Voyage to *Hierusalem*, were disposed with deeds to prouide for vs by their counsell, helpe and money. And first, they aduised vs not to goe the direct way into *Dacia*, by reason of the dangers of wilde beafts, which might befall vs, but to adresse our selues to goe directly to *Stichimborgi*, to find out a valiant *Venetian* Knight called *M. Gionan Francho*, from whom wee should receiue fauour and helpe in plentifull manner, for loue of our Countrey, although the way were thirtie dayes iourney, quite contrary to our direct way. On the eighteenth day we came to the Court of the said *Cavallier M. Gionan Francho*, an Honourable Baron, and highly esteemed of the Crowne of *Dacia*, where (with great joy) we found our two straggling companions.

Venetian Knight.

The valorous Knight being now informed of our comming, with a cheereful countenance declared well vnto vs how great the loue of his Countrey was, and especially knowing the calamitie and penurie of vs his Countrey-men, and being easily able to releue it. And therefore he could not sufficiently satisfie himselfe in honouring, clothing and feeding vs, but gaue vs money for our necessities, and furnishing vs afterward with good Horses, in his owne proper person, together with his only Sonne *M. Mapheo*, with an hundred and twentie Horses of his owne Seruants he accompanied vs many dayes journeyes through his Territories, traouelling alwayes at his owne charge. Afterward, vpon his limits and bounds wee tooke our leaue to depart, thanking him with the most reuerent and kind speeches that possibly we could. Whereupon he being departed, left vs for our Guide, his said sonne *M. Mapheo* with twentie seruants on Horse-backe, who kept vs company vnto *Vastena*, the place from whence about fortie dayes before we had departed, vnto the which place, for the auoyding of two monethes trauell, wee were faine to returne: so that on the thirtieth day of Iuly wee entred into *Vastena*, where wee abode vntill the second of August, being alwayes accompanied, and our charges borne by the said *M. Mapheo*.

Lodese.

* *Quirino* saith when he set foot on *England*, hee seemed to bee come out of Hell and returned. Hee came to *Combridge*, an Vniuersitie where a *Benedictine* gaue him sixteene Crownes, thence to *London*, where he stayed two moneths, &c.

On the second of August, we tooke our leaue of the foresaid *M. Mapheo*, yeelding him such thanks as we could. And being departed from him wee went to *Lodese*, where wee arrived the eleuenth of the said moneth: in which place we found two passages, the one for *England*, and the other for the *Low Countries*: and there we voluntarily diuided our selues into two parts.

The two and twentieth of August 1432. we *Christophoro Fiorauante*, one of the Councill of the vnfortunate ship, together with *Girardo da Lione*, the Sewer, and *Nicolo di Michiel* of *Venice* the Notarie, now Writer of this present Discourse, departed from the other eight of our companions, they going towards *London* and we to *Venice*, by the way of *Rostoch*, pretending to goe to *Rome* for a Pardon: and after many troubles and molestations, passing ouer Mountaynes, Valleys, Riueres, sometimes on foot, and sometimes on Horse-backe, through the helpe of the Omnipotent God, we came vnto our so much desired Countrey of *Venice*, on the twelfth of October, 1432. safe and sound, leauing the said *Girardo da Lion* at *Vasenech*, who from thence went vnto his Countrey: and those that went into *England* were these, Master *Francesco Quirini*, Sonne of Master *Iacomo a Venetian* Gentleman, being Merchant of the vnhappy ship. Master *Piero Gradenico*, Sonne of Master *Andrea*, of the age of eightene yeeres, a young Merchant, *Bernardo da Caghire*, Pilot of the ship, whose Wife being young, aswell through the long delay of time passed, as for that it was many times certainly reported, that the said ship with all them that were therein, were in great danger, and no token at all appearing to the contrary, being aduised more hastily, then vpon mature consideration, as is the manner of needie women, she

she married her selfe at *Trinifo*. But hearing of our comming, and the certayne newes of her li-
ving and true Husband, she presently separated the bond of the second Marriage, and shut her
selfe vp in an honest Monasterie, aswell to declare the Integrity of her minde, as to expect the
returne of her true Husband, who about some three moneths after came to *Venice* safe and sound,
and tooke her againe vnto him, &c.

CHAP. XIX.

Ancient Commerce betwixt ENGLAND and NORWAY,
and other Northerne Regions.

Great Alexander is said in hearing a Flatterers Historie of his conquests, making
them (how great soeuer in themselves) farre greater then they were, to haue cau-
sed that booke to bee throwne into the Sea, with iust indignation exclaiming,
that those incredibilities would make that which hee had indeed done, seeme in-
credible to posteritie. And a Liar (said Alexanders Master, *Aristotle*) gets this by
lying, that when he speaks truth he cannot be beleueed. So hath it fared with
that *Brittish* worthy, King *Arthur*, whose Great Acts by great Flatterers, seeking to light can-
dles to the Sunne, haue made others suppose it to be night, and his worth to be a worke of dark-
nesse and lyes. Neither doth the later posteritie know how to distinguish the one from the
other; and the Writers for and against the truth of thee *Brittish* storie, as *Ieffery* of *Monmouth* and
William of *Newbridge* of old, and others since, haue seemed to me to let the truth (as in altercation
is vsuall) to fall downe betwixt them, for others more moderate spirits to take vp. Although
therefore many things related of *Arthur* are absurd, yet so are not all, nor that altogether which
is spoken of his Northerne conquests, eleuen hundred yeeres since, and of commerce at least, if
not some kind of tributarie acknowledgment, of *Guillemarus* the King of *Ireland*, *Gunsacius* of
the *Orcades*, *Maluasius* of *Iceland*, * *Doldanis* of *Gotland*, *Aschilus* of the *Danes*, and *Lot* King of
Norway. Some * adde, that King *Arthur* left people to inhabite the Ilands, and that the *Nor-*
wegian Nobles tooke them *Brittish* wiues, and that the *Norwegians* professing their *Brittish* blood,
and liking *Englands* fertilitie better then that their own sterilitie and rockie barrenesse, fought
by force of warres often to conquer that which would not be peaceably yeelded; till King *Ed-*
ward, a maintainer of peace, with consent of the Kingdome, permitted them to dwell heere at
pleasure, as sworne brethren to the *English*. *Osther*, subiect and seruant to King *Alfred* about se-
uen hundred yeeres since, related to his said Lord his voyage from *Helgoland* (where he then
dwelt) to the North Cape, and (as probable circumstances argue) along the coast to the Bay of
Saint Nicolas.

Edgar, that famous founder of Monasteries, is said by *Ranulphus Cestrensis* to haue in annuall
use foure thousand ships, and by *Flores Historiarum* foure thousand eight hundred, vsing yeerely
to compasse this Iland, with his Nauie quadripartite, twelue hundred in the East, as many in the
West, and like proportions on the North, and on the South coasts, to scoure the Seas and secure
his subiects: And in the Charter of the foundation of the Cathedrall Church of *Worcester*, he vseth
these words; *Mihi autem concessit propitia diuinitas cum Anglorum Imperio, omnia Regna Insula-*
rum Oceani cum suis fercissimis Regibus usque Norwegiam. Maximamque partem Hyberniam, cum
sua nobilissima ciuitate Dublinia, Anglorum Regno subiugare, &c. Hee also stileth himselfe King and
Emperour of the Ocean, and the Ilands about *Britaine*, beginning, *Ego Edgarus Anglorum Basi-*
leus, omniumque Regum, Insularum, Oceanique Britanniam circumiacentis cunctarumque Nationum
que infra eam includuntur, Imperator & Dominus. So potent was he first of the *English* Kings (for
Arthur was a *Briton*) by his strong shipping, and well manned and mannaged Nauie.

Florentius Wigorniensis stileth him, *Flos & decus antecessorum Regum, Pacificus Rex Edgarus*
non minus memorabilis Anglis quam Romulus Romanis, Cyrus Persis, Alexander Macedonibus, Ar-
faces Parthis, Carolus Magnus Francis: and addeth, as before is notified, *Is itaque dum uiueret*
3600. robustas sibi congregauerat naues, ex quibus Paschali emensa solemnitate omni Anno 1200. In
orientali, 1200. in occidentali, 1200. in septentrionali insula: plaga coadunare & ad occidentalem cum o-
rientali classe, & illa remissa ad borealem cum occidentali, ipsaque remissa cum boreali ad orientalem
classen remigare, eoque modo totam insulam omni astate consueuerat circumnavigare, viriliter hoc a-
gens ad defensionem contra externos Regni sui, & suum suorumque ad bellicos usus exercitium. Both
Florentius and *Malmesbury*, and *Mat. Westminister* record, that hee sitting at the Sterne, was
rowed by eight Kings his Tributaries; *Kined* King of *Scots*, *Macolm* of *Cumberland*, *Macon* of
Man and many Ilands, *Dusnal* of *Demetia*, *Siferth* and *Howel* Kings of *Wales*, *Iacob* King of *Gal-*
wales, and *Iukul* of *Westmar*, hauing the same day there met at his summons, and sworne fealtie
and assistance to him by Sea and Land. These rowed him in the Riuer *Dee*, to the Monastery from
his Palace, and thence after seruice backe againe: So rightly did he instile himselfe in his Charter

Danes.
Wicinga Sig.
a Pirate.

Scanza is the
Chersonesus,
containing the
Country of
Norway, Swe-
den, &c.
Men sacrificed
to Thur.

* Mat. West.

This Sunne being set, darke and stormy times followed, by reason of Danish incursions. These Danes (as M. Camden recordeth) began to be knowne to the world, about the yeere of Christ 570. for their piracies called Wicingas; of them Dudo de S. Quintino hath this testimony, Dani e Scanza (that is, Scandia) velut examen apum e canistro & gladius e vagina, diuersitate multimoda, &c. The Danes, like a swarme of Bees out of their bive, and a sword out of a sheath, in diuersified manner and barbarous custome leaped forth from Scanza (or Scandia) after that with petulant lust they had multiplied their innumerable generations. These being growne, contended with their parents and progenitors about their possessions, and overflowing their native Bankes, a multitude of them (according to their ancient custome) are compelled by lot to seeke forraigne places, where by force they might plant themselves. In the consummating this expulsion or expedition, they anciently sacrificed to Thur, not with beasts, but the blood of men, esteeming that the most precious Holocaust. Their Priest used to diuine with yokes of Oxen, the heads of each chosen by lot being clouen asunder by one stroke, the heart veyne on the left side being searched, and with the blood thereof the heads of theirs being anointed, they presently set sayle. Dumarus, somewhat ancienter then Dudo, mentioneth a place, called Lederun, where euery ninth yeere in Ianuary, they all assembled and sacrificed ninetie nine Men, and as many Horses, with Dogs and Cocks, in stead of Haukes, to pacifie their Gods. Hereby wee see that by Danes, in our English stories, are intended not onely those which now we properly so call, but * Norwegians also, Gotes, Vandals,

HONDIVS his Map of NORVVEGIA and SVETIA.

Lambert's per-ambulation of Kent. Frieſlanders, and the Inhabitants generally of thoſe North-eaſterne parts, three Ships of whom, in the yeere 787. landed in the Weſt parts, ſlew the Reene of Beorhricke King of the Weſt Saxons, and were by the Countrey people forced backe to their Ships. Ann. 795. a few Ships of them made the like aſſay in Scotland, and ſoone after ſome of them entred Tynemouth Hauen, in the North part of England, and returned with the ſpoyle of the Churches of Hereſes and Tynmouth. This was in the yeere 800. Thirtie three yeeres after, in the reigne of Egbert, they were beaten at Dunmoth, but ſpoyled Sheepee, with murders and robberies, entring Thames with thirtie ſixe ſayle.

sayle. The next yeere they preuailed in battell against King *Egbert*, and after that ioyned with the *Welshmen* to inuade and destroy this Kingdome, but were both chased by the victorious power of the King; and *An. 836.* another hoatt of them was beaten. Another Fleet of thirtie foure Ships landed at *South-Hampton*, *An. 838.* and slew Duke *Ethelhelm*: after which they proceeded with continuall incursions (two *Hydras* heads still succeeding, when any *English Hercules* had cut off one) that it breeds horror to read or thinke of the spoyles, rapes, fires, murthers, barbarisme, heathenisme, desolation and destruction, which they brought euery where with them. And although *Alfred*, *Edward*, and *Adelstane* somewhat healed the Land of that pestilence; yet in *Etheldreds* time such a mortall relapſe happened, that first he charged the people with an insupportable tribute of *Danegelt*, arising to 48000. pounds yeerely (euen after the account of those times) and buying herewith nothing but perfidie on their part, and beggerly on his, by the aduice of one *Hu-*
10 *na* the Generall of his Armie, he wrote Letters to all places, that on Saint *Brices* day (which is the morrow after Saint *Martins* night, the *Danes* not hauing digested that drunken solemnitie should be all massacred, which accordingly was effected on man, woman, and child, not sparing those which fled to the Altars. A few in *London* escaped, and caused *Sweyne* with a *Danish* Army and vnspeakable crueltie to repay that butchery. *Etheldred* fled with his wife and children into *Normandie* (the seed of a new Conquest) so that *Suanus** hauing made the sheepfold a shambles and shepheardlesse, proclaimed himselfe King of *England*, which *Canutus* or *Cnuto* and his two sonnes, *Harold* and *Hardicanute*, held after him some thirtie yeeres space.

Danegelt continued till *Edward* the Confeſſor. *A. 1012.*

* This *Suanus*, or *Sueno* had killed his father.

* *A. 1042.* *Hocktide* I haue seene kept with publike feasting in the street, the women also binding men, or compelling them to some ranſome; the Tuesday fortnight after Easter.

English Conquest in *Sweden*. *A. 1024.*

20 And such was the *Danish* tyranny, that euery *Dane* was stiled *Lord Dane*, and had at his commandement the wiues, daughters, and the whole household where hee became. But after the death of *Hardicanutus*, that title was turned into the reproachfull terme of *Lurdane*, and the day of his death* (as the *Roman Fugalia*) was celebrated with open pastime and feasting in the streets, called *Hocktide* or *Hucktide*, as if *England* (then absolutely freed) made a mocke or scorne of her enemies. *Canutus* by treason of *Eadrike Streona* obtained the Kingdome, first as partner with *Edmund Ironside*, and after his death the whole by other perfidie, slaying *Eadwy* brother of King *Edmund*, and sending *Edmunds* two sonnes, *Edward* and *Edmund*, to the King of *Sweden* to be there made away. But hee hating such crueltie, sent them to *Salomon* King of *Hungary* to bring vp, where *Edmund* dyed, and *Edward* married *Agatha* daughter of *Henry* the Emperour, by whom hee had *Edgar Athling*, and *Margaret* married to *Malcolm* King of *Scots* (the mother
30 of *Maud* wife to *Henry* the first) and *Christine* a Nun.

Canutus diuided the Kingdome into foure parts, of which hee reserued *West Saxonie* to himselfe, *East England* hee committed to Earle *Turkill*, *Mercia* to Duke *Edrike*, and *Northumberland* to Earle *Erike*. Soone after, he caused Duke *Edrike* (which treacherously had aduanced him to the Crowne) to bee slaine, (a iust reward of treason) and then banished Earle *Turkill* and Earle *Erike* picking quarrell with them (weary of any stalking horses) the former of which was presently after his landing in *Denmarke* slaine. And now did *Canutus* seeke to win the fauour of the *English* by building and endowing Monasteries, making good Lawes, and marrying *Emma* the relict of King *Ethelred*. Thus hauing *Denmarke* by inheritance, and *England* by conquest & treachery, his ambition next aimed at *Sweden*, where first he had the worſe, but after compelled *Vlf* and *Eiglaſ* the
40 Kings of that Countrie to composition with him, Earle *Godwin*, the Generall of the *English*, prouoking and animating the *English* to recouer their pristine glory, and by solid vertue to ouercome them, who had ouercome their new Lord, whose fortune had subiected the *English*. Thus *Canutus* preuailed by *Godwins* policie and *English* valour, they by night without the Kings knowledge, or assistance of the *Danish* Armie, assaulting and ouerthrowing the *Swedens*: hee, the next day, missing the *English*, and fearing they had turned to the Enemy, till giuing the onſet with his *Danes* vpon the forsaken Campe of the Enemy, he found there nothing but carkasses and spoyle.

Anno 1027. hauing intelligence that the *Norwegians* contemned their King *Olaue* for his Saint *Olaue*.
50 simplicitie, he sent great summes of Gold and Siluer to the *Grandes* of *Norway*, to corrupt them, and caused them to reject *Olaue*, and to choose him for their King. For peruerſed with gifts they sent him word to come to them, whom he should find readie to entertayne him. *An. 1028.* he went with a fleet of fifty sayle to *Norway*, and expelled *Olaue*, subjecting that Kingdome to himselfe. *Olaue* which had beene the King, Doctor, Preacher and Apostle of the *Norwegians*, (as *Florilegus* stileth him) the sonne of *Harald* King of *Norway*, was slayne, *Anno 1030.* and cruelly butchered by his treacherous *Norwegians* with an Axe or Hatchet, for disanulling their Pagan superstitions, and hee since is there superstitiously worshipped for a Saint, whom then trayterously they permitted not to reigne or breathe. The same yeere perished at Sea, or (as some say) was slayne in one of the *Orcades*, Earle *Hacun*, whom *Canutus* fearing had banished in co-
60 lour of sending him Embassadour.

His greatnesse (hauing to wife his sisters daughter) made him grow suspicious: And according to the deuotion of that time. *Anno 1031.* *Canutus* or *Cnuto* went to *Rome* on Pilgrimage, and there made magnificent Offerings, and obtayned diuers Immunities of the Emperour and Pope. After his returne he inuaded the *Scots*, and ouercame King *Malcolme* with two other Kings.

Romish Pilgrimage a protection for tyrannous usurpation of Norway & England, without restitution to the right Heires: as if Peters pretended key were a Pick-locke to open Heaven to whomsoever.

Kings. He going from Rome to Denmarke, sent a Letter to his English subjects thus beginning: *Canutus Rex totius Angliae, & Danemerciae, & Norreganorum, & partis Suanorum, Aethelnotho Metropolitano & Alfrico Eboracensi Archiepiscopo, omnibusque Episcopis & Primatibus & toti Anglorum genti, tam nobilibus quam plebeijs, salutem. Notifico vobis me noniter inisse Romam, oratum pro redemptione peccaminum meorum & pro salute Regnorum, quique meo subiacerent regimini populorum. Hanc quidem protectionem Deo iam olim deuoveram: sed pro negotijs Regni & causis impediens huc usque perficere non potui. Nunc autem ipsi Deo meo Omnipotenti valde humiliter gratias ago, qui mihi concessit in vita mea Sanctos Apostolos suos Petrum & Paulum, & omne Sanctuarium quod iuxta urbem Romam aut extra addiscere potui expetere, & secundum desiderium meum presentialiter venerari & adorare. Ob id ergo maxime hoc patraui, quia a sapientibus didici sanctum Petrum Apostolum magnam potestatem a Domino accepisse ligandi atque soluendi, clauigerumque esse Regni Coelestis, & ideo speciale eius patrocinium apud Dominum diligenter expetere valde utile duxi, &c.*

HONDIUS his Map of Denmarke.

Canutus before his death set his Sonne Suanus in possession of Norway, and Hardecnutus his Sonne over the Danes. Harald and Hardecnutus divided England betwixt them after his death. Anno 1035. and Harald dying. Anno 1040. that quarrell was ended; and soone after, by the others death the Danish Empire in England; the small space of King Edward interceding that, and another Conquest of the Normans, descended also of like Northerne, namely of Norwegian Originall, Canutus his Daughter Cunilda was married to Henry the Emperour, and being accused of Adultery, against a Giantly Champion appeared in her defence a childish English Dwarfie which serued her, who Que the Giant and presented his head to the Ladie, who thereupon diuorced her

herfelfe, and became a Nunne. *Sueno* King of *Norway* after five yeeres deceased, and *Cannus* his ill-gotten *English* and *Norwegian* wings were quickly not only pulled, but cut off.

The *English* had occasion of further inuasion to and from *Norway*. For *Suanus* deceased, the *Norwegians* chose *Magnus* the Sonne of Saint *Olaue* for their King; which when *Hardecannus* vnderstood (as the *Danish* Storie set forth by *Erpold Lindenbruch* testifieth) hee inuaded *Norway* with his *English* and *Danish* forces, where he and *Magnus* came to composition that the Suruiuour should enjoy both Kingdomes. When *Hardecannus* was dead, *Sueno* the Sonne of *Estrid* his Sister, succeeded, and *Magnus* King of *Norway* fought with *Sueno* to obtrayne his co-uenanted Kingdome of *Denmarke*, and ouercame him. *Sueno* fled into *Sweden*, and there abode till the death of *Magnus*, after which he recovered his *Danish* Scepter. *Florentius* writeth that

Historia Danica.

Second *English* Expedition into *Norway*.

Suanus sent to King *Edward* the Confessor, intreating his aide with a Naue against *Magnus*; Earle *Godwine* counselled to send fiftie ships, but Earle *Leofrike* and the people refused; and *Magnus* with a great Naue fought with *Suanus*, and expelled him his Kingdome, which hee after recovered.

Harald Harnager the Sonne of *Siward* King of *Norway* and Brother by the Mothers side to Saint *Olaue* obtayned *Norway* after his Nephew *Magnus*, and sent an Embassage to King *Edward*, whereby Peace and Amitie was concluded betwixt both the Kings. He (after King *Edward*'s death) inuaded *England* with a great Naue of three hundred ships, and discomfited the Earles *Edwine* and *Morcar* neere *Torke*; but five dayes after *Harald* then King (Sonne of Earle *Godwin*) slue his Brother *Tosti* and *Harnager* at *Stamford Bridge*, permitting his Sonne *Olaue* to retorne vpon conditions to *Norway*. But while he conuerted the spoyle to his owne proper vse, he gaue such disgust to the *English*, that a few dayes after in the battayle with *William* Earle of *Normandie*, they were lesse zealous of his cause; where a new *Norman* period beganne: those Northerne quarrels hauing had no other end but this succession.

m Trecentis coggonibus.

From 787. to 1065.

vid. sup. l. 8. c. 6. §. 1.

I shall not need to adde what followed (the *Norman* Acts in *Italie*, *Palestina* and other places I haue handled else-where) little occurring of *Mars*, but *Mercurie*, of which I haue by me Letters from King *Henry* the Third, the first yeere of his Reigne to *Hacon* or *Haguin*, then King of *Norway*, for mutuall Trafficke betwixt both their subjects. It is remarkable that the Northerne humour of spoile, slaughter and blood continued while they were Pagans, and expired in manner with their Paganisme both in *Norwegians* and *Danes*: as if God would first by them punish the vices of those times, and withall conquer the Conquerours, with the Religion of the conquered, and by so strange a way bring the Northerne World (by this way of destroying) to saluation. Since that time, the State of *Norway*, *Island* and other parts hath decayed in numbers of shipping, courage of men, and other meanes of Earthly greatnesse. Somewhat yet for History and an Historians sake, I will adde of *Matthew Paris* an *Englishman* his Voyage to *Norway*.

Note.

In the yeere 1247. *Matthew Paris* recordeth, that on the day of Saint *Olaue*, a famous Saint in the Regions and Ilands of *Norway*, *Hacon* was crowned King, and solemnely anointed at *Bergaby* the Bishop of *Sabine* then Legate (from the Pope) in those parts. For the honour whereof the said King gaue the Pope 15000. Markes sterling, besides inualluable Gifts which the Legate himselfe had; and five hundred Markes by him extorted (saith our Author) from the Church of that Kingdome. The King also receiuing the Crosse for the *Holy Land* Expedition, obtayned of the Pope the third part of the Ecclesiasticall Reuenues of that Kingdome towards his charges. Which *Lewis* the French King knowing, writ in friendly termes to *Hacon*, to beare him company in the said Expedition, offering him full power (in regard of his Seaskill) ouer his Naue, and ouer the French Army. This Letter was carried by our Authour *Matthew Paris*, to whom King *Hacon* answered that he gaue great thanks to that deuout King: but knew in part the nature of the French, & as saith the Poet, *Omnisq. potestas Impatiens consortis erit*, and I say, *Omnisq. superbus, Impatiens consortis erit*. My people is impetuous, indiscreet, and impatient of wrongs, which might occasion irreparable damage; and therefore it is fitter for each to goe by himselfe. But I haue written to the King for quiet passage thorow his Countrey, and prouisions as need required. The Kings Answer thereto and Letters Patents were also deli- uered to him by this our Author in this forme.

Ma. Paris p. 981.

The Pope and his Legates deere friends to all Kingdomes. Saint *Lewis* his offers.

Ludonicus Dei gratia Francorum Rex, vniuersi amicis & fidelibus suis, Balliis, Maioribus, & Prepositis, ad quos presentes literae peruenerint, salutem. Cum clarissimus noster Illustris Hacon Rex Norwegia in subsidium Terra sancta transfretare proponat, sicut nobis per suas literas intimauit, vobis mandamus, quatenus si eundem Regem vel ipsius Nauigium per mare contiguum terra nostra transire contingat, vel in Terram nostram, vel in feuda nostra alicubi applicare, ipsum & suos benigne & honorifice recipiatis, permittentes eosdem in terra nostra victualia emere, & sibi per forum legitimum de sibi necessarijs providere. Actum apud Sanctum Germanum in Laia, A. D. 1248.

His Letter.

mous Monastery of Saint Benet, of Holm in Norway (of which title and order hee had founded another in England) it happened that the said Abbie, with the appurtenances was almost ruined by an impious Abbat, who forsaking his Order, and stealing away priuily the Seale of the Chapter, either sold, or by forged writings fraudulently engaged almost all the possessions thereof: wherein hee had the Sacrist, the keeper of the Seale, his copartner, both in this fugitiue apostacie and treacherie. Heereupon the Archbishop of Nidrosia, in whose Diocesse the said Abbie was situate, seiled the same and the appurtenances into his hands, alledging that the Monkes had only the habite, but were altogether ignorant of Monastike order, and Saint Bennets rule, some of them also theeuues and fugitiues. The Monkes appealed to the Pope (which caused the Archbishop to suspend his proceedings) and the Prior recouering somewhat, and gathering together a summe of money, went to the Roman Court, where the Abbat had bene a little before, and intangled by writings the said house in five hundred markes; which caused the Prior to returne frustrate and full of grieve. But in his way, hearing that the said Abbat was dead, in the Abby of Saint Alban in Selio (in Norway) he and the Couent made choice of an Abbat, and this Prior, with another Monke, and three hundred markes in mony, together with the Kings letter, being sent to Matthew Paris to take paines for their freedome, it was procured happily that the temporalities of the said house were freed from the Causines (the Popes Vsurers) then residing at London, within one yeeres space. But their Spiritualities were much maimed, they by bribes purchasing delays, lest the Archbishop should take possession of the Iland which wholly belonged to the Abby, and of it also, expelling the Monkes.

Now the Cardinall Bishop of Sabine then comming Legate into Norway, the Monkes sought to him for succour, and hee counselled them to go and petition the Pope to prouide them of an Instructor and Reformer, and he would write in their behalfe.

The Abbat therefore and Prior went with Letters from the King and Legate to the Pope, who gaue them leaue to chuse any man of whatsoeuer Region or Monasterie to be their Instructor. They answered the next day, that all the World had not Monkes of that Order liuing in more composed order then England, nor England any comparable by report, to Saint Albans: of which House they desired Matthew to be their Reformer, of whose wisdom and faithfulness they had had experience; a man also almost familiar and friendly to their King, and able by his meanes to order the rebellious and vnruely. Hereupon the Pope gaue them this Brieve to the Abbat of Saint Albans,

Innocentius, &c. Dilecto Filio Abbati Sancti Albani in Anglia Ordinis S. Benedicti, &c. Cum sit ex parte dilecti filij Abbatis Monasterij de Holm, Ordinis S. Benedicti Nidrosiensis Diocesis, fuit propositum coram nobis; idem Monasterium propter Predecessorum suorum negligentiam, sit in his que ad Monasticum Ordinem pertinent deformatum; nec inueniatur in illis partibus aliquis qui statuta & obseruantias eiusdem Ordinis bene sciat: Nos ad supplicationem eiusdem Abbatis, discretionem tuam rogamus, attentius & hortamur per Apostolica tibi scripta mandantes, quatenus dilectum filium Fratrem Mattheum Monachum tuum, qui dicitur probata vita ac religionis experta, ad idem Monasterium ut dictum Abbatem & Monachos suos in regularibus disciplinis & statutis que ad eundem ordinem pertinent, informet & instruat, transmittere pro diuina & Apostolica sedis ac nostra reuerentia non postponas. Datum Lugduni, &c. Hereto the Abbat obeying, and Matthew to his Abbat, the business luckily succeeded, and Monkerie both in that of Holm, and other Norwegian Monasteries was reformed.

Frier of Linne.

Hen. 4.

T. of Woodstock.

I might here shew the great stirres which in the first Ages after the Conquest the Norwegians haue caused in Ireland, Wales, Man, Anglesey, the Hebrides, and Orcades: as also of Harald (whom the Conquerour slue) his two sonnes and daughter fleeing to Sueno King of Denmarke, who gaue the daughter in Marriage to Ierusalem, or Waldemarus King of Russia: and of Nicolas de Lynna, a Franciscan Frier and Mathematician of Oxford, before mentioned, of whom Iacobus Cnoyen saith in his Iournall that he learned of a Priest who had descended of those which King Arthur had left to people the Ilands of Norway, Anno 1364. that in the yeere 1360. the said Frier had come into those Ilands, and proceeding further by Art Magicke, had described those Artike parts (as the Map presents) with foure Whirl-pooles or In-draughts. Yea (as Master Dee addeth) at the Northerne Ilands, the Record whereof at his returne he gaue to the King of England, the Booke being called *Inuentio fortunata* or *fortune*, contayning a description from fiftie foure degrees to the Pole. I might also adde out of Thomas of Walsingham, the Trauels of Henrie Earle of Darbie, (afterwards Henrie the Fourth, King of England) into Prussia and Lettow, or Lithuania, where by his helpe especially was taken Vilna the chiefe Citie (Skirgalle the King of Lettow, hauing fled thither for refuge) his Colours being first aduanced on the walls, foure thousand slaine, of which the King of Polands Brother, and three thousand captiued. Also I might adde the Voyage of Thomas of Woodstocke Duke of Glocester, sonne to King Edward the Third, along the Coasts of Denmarke, Norway, and Scotland. Other Letters likewise of King Edward the Second to Haquin or Hacon, King of Norway in behalfe of English Merchants there arrested: with Entercouries betwixt the English and the Dutch Knights in Liesland. But hauing only brieue mentions of these, and them or the most of them recorded by Master Hakluyts

industrie before, I doe here but *Index*-wile referre the Reader thither. I rather choose to giue new things and rare : and such may seeme these Notes which Anno 1605. I writ from the mouth of Matter George Barkeley.

HONDIUS his Map of the Arctike Pole, or Northerne World.

CHAP. XX.

A briefe Memoriall of the great Trauells by Sea and Land, of Master GEORGE BARKLEY Merchant of London ; in Europe, Asia, Africa, and America, and their Ilands.

BEing a childe, he was transported into the East Countries, and the first place of his landing was *Schagen*, from thence vnto *Eisenore*, a Towne as bigge as *Brentwood*, where the *Danish* Custome is taken ; and where he hath seene at one time the *Dane* making stay of all shipping fourteene dayes, for ostentation to a forreigne Nobleman, seuen hundred sayle. From thence to *Copenhagen*, thence to *Bornholme*, thence to *Danske*, a Towne subject to the Pole, being in continuall

buildings, if by any meanes they may fortifie themselves against the *Hilles* ouer-looking the Towne, a Rill running betweene, whence they haue their fresh water : they spare no time Sunday nor other. There lyeth here in the Sea by casting vp of sands a long Iland called *Frista* uering, where alongst, as on *Samaiden*, is gathered by the *Danske* Officers there, and here by the *Jewes*, that farme it of the Pole, *Amber*, cast vp by the Sea in great abundance, pieces as bigge as a pecke, more or lesse. The Bores that find it and gather, haue so many firkins of some other

meane commoditie: and if they keepe and sell it, they dye for it. Hée hath scene one piece of Amber taken vp, in the middest whereof was to be scene through the transparent Amber a Frog in similitude and full proportion: (Matter Vassall, his brother, a friend of mine, told me of a piece of Timber in the keele of a ship, where by occasion of a sinner, one cutting nine inches within the Timber every way, he found a great living Tode in the hollow thereof at Woolwich) betwixt this Frishnering and the Land is a great water Frishhoff, where at Saint Georges day they begin to fish, of which there is exceeding plentie, and for three halfe pence one may buy a cast as much as they shall draw the next time. One here in his Net drew vp a company or heape of Swallowes as bigge as a bushell fastned by the legs and bills in one, which being carried to their stoues, quickned and flew, and comming againe suddenly in the cold Aire dyed.

From Danske he went to Marienberg, a Towne also standing on the Vistle, whereby it runneth in another channell, and betwixt both these makes an Island wherein stands Nerdeich, which Island is compassed with a wall to fortifie it against the comming downe of the Vistle in the Spring at the thaw of the snowes, &c. This wall seemeth in some places as high as Pauls Steeple, and other-where as high as Pauls Church, where yet it hath sometime beene overflowne: full it is of Hoffes and Villages belonging to the Lords of Danske.

Marienberg is a free Towne for Religion (Danske then professing only Lutheran) saue certayne Friars and Nunnes liuing in Cloysters closely. There a Lutheran when he preacheth must make an end at his houre, and then a Iesuit preacheth to the Rom. Catholikes as long, the former both company, and Preacher being auoyded of himselfe, or by force. It was built by the Kreitzherne (Dei-parvini milites) Knights of the Crosse, who hauing lost their footing in the Holy Land, by consent of the Empire assaulted and conquered Prussia, being in this Conquest fixtie foure

HONDIVS his Map of BORVSSIA, or PRVSSIA.

yeeres, who after carried themselves so tyrannously, that the people yeelded themselves to the Pole, and destroyed the Kreitzberne, save those that made a head about the North parts, with whom after some doubtfull fights, was made a league, that This Order should cease; Their Cap-
tayne should be married, and should have seuentie two Townes in Prussia, to him and his Heires
Males, and in defect of such Heires to returne to the Pole. His Townes are not adjoynd toge-
ther, but the Poles Townes betwixt. Kinningburg is the Dukes Court.

Thence he went to Elbing, a faire Towne, where our Trade is now for Flaxe, which was be-
fore at Danske, thence remoued for their insolencies. Here our men only pay Custome: others
are free, and this they did voluntarily, and haue in this respect very much authoritie amongst
IO the Lords there: the Towne still flourisheth with buildings, &c.

Thence he went to Bransperg, (the Poles Towne) where is a Colledge of Iesuites: From this Bransperg.
place to Kinningberg, and thence to Liba in Curland, thence to Samaiden, and thence to Risa, or Rigato.
Risa in Liestland also. (This Risa is vnder the Pole) thence to Derpt, and thence to Reuel. At Derpt
he went to schoole three yeeres: it is vnder the Pole. Linonia is exceedingly distracted betwixt

HONDIUS his Map of LIVONIA or LIEFLAND.

the Sweden, Russe, and Pole. King Stephen recovered part from the Russe, who before had partly
60 killed, and partly carried captiue the Handicrafts men, in such desolate manner, that the Townes
are ruinate, the stone walls of Houses and Churches standing with trees of great bignesse grow-
ing through their vncovered roofes; the Woods (whereof they haue excellent stately) being
strowed with bones of dead carkasses; and himselfe did once in one of those Woods eat Honey
out of a Mans skull wherein a swarme of Bees were, and bred as it hanged on a Tree. Hee con-

quered all saue *Renell*: against which he made a Castle with water and straw, the frost binding them together as fast as they were laid. The Countrey is inhabited with the ancient *Indigena*, called *Momese*, and others of the *Dutch* called by them *Sac's*. Who by occasion of shipwracke being cast on these Countreys, did buy of the simple Inhabitants so much ground as a Rose hide, &c. to building in one place *Renell*, in another farre distant *Rie*, and so other Townes; by this meane commanding and subduing all the Countrey. *Derpt* was one Turfe of ground bought as before.

The *Momeses* are almost *Saluadoes*, retaining still their old superstitions, as to worship the Sun, or the first Beast they meet with, and especially they haue in religious reckoning their *Leane*.

This which they call *Se-leane*, or the *Groues*, is a company of Trees, which it is religious to touch; and he knew a *Dutchman*, *Martin Tekell* of *Derpt*, who breaking a bough was swelled a yeere together as big as his skinn would hold. Heere at Marriages and Burials they pray, but without Image. Their marriage is thus. The man and his Bride are set stridling on a Horse, and blinded; and so led into *Se-leane*, there taken downe and married by their Rites; then set vp againe, blinded as before, and conueyed with their company, and Musicke to their house, singing *Kosoku Kosoku Coniku, scamoha*: there taken downe and had to bed, still blinded till the next morrow, in the meane while they rest drinking, &c.

They mourne when one is borne, reioyce and make merry at death. Their mourning (in *Curland*) is then, and when they walke alone, or fetch wood, *Yerom, yerom, yerom, masculine babe*: the words themselves vnderstand not, but thinke it to haue remained since that *Babylonish Towre*. When the *Momeses* die, they are buried in their *Leanes*, with their knife vnder their arme, and their coate hanging ouer the graue. The *Momeses* are very ignorant, and aske who learne the Hares in the woods their prayers. At *Rie* the women haue a thing of Red veluet on their heads, made like a Ship with the keele vpward, at each end a lock of hayre.

The women of the *Sacs* differ in their fashion of attire each City from other, a pleted Petticote, with a damaske Vpper-body, a veluet Square on their heads, and thereon a Cloke, &c. The maid vncouered, if she haue had a child and refuse to goe couered, she is brought to the Pillory, her haire cut off, and there nayled, and a Kerchiefe put on. Here and in *Norway*, and in *White Russia*, &c. strangers pay nothing for entertainment, but salute, sit downe, and expect the Hosts expences. Their bed they must bring with them, which is commonly a Beares skin, or else they there haue a Locke of straw. To offer money is a disgrace, which yet might seeme to arise of the baseness of the coyne. Their houses are all of Timber beames laid square, and others laid on them in notches, so till they come to the rooffe, which they couer with straw, diuided in two roomes; the inner being the Parlour or stoue, where they haue as it were one Ouen ouer another: the middle hearth being of stones set grate-wise, the fire is put in on the Back-side or Hal-side, & there also the Sinke issueth. Before that mouth in the Stoue is set a vessell of water, which, when they wil haue the heat exceeding, they besprinkle on those hot stones. A fire lasteth a day, at night they renew it. Sometimes the old *Prusces* on the borders of *Curland*, according to their old heathenish Rites do sacrifice their Priest in fire.

From *Derpt* hee went to the *Peibus*, whereinto runne seuentie two Riuer making a great Lake full of Fish. In the *Peibus* betweene *Plesko* and *Narue*, the Ships (whereof are many, and some an hundred Tunne, with one Mast) are sowed together with Oiers, hauing no Iron workes, called *Boidacks*. They goe to Markets in Sleds, where coming to a walled Towne, and waiting the opening of the Gates, the Sled is drawne in sometime, with his Master sitting as before starke dead with cold. Thence he went to *Narue*, which runneth out of this Lake, where the Riuer being twice so bigge as the *Thames*, hath a fall a mile steepe on a Rocke. Here the *Sweden* (as is reported) made a Bridge ouer with the bodies of *Russes*, as the *Russe* had done before with his owne people about 40000. hence to *Iuanogrod*. These 40000. were onely bearded men slaine, &c. not women or children; these hee dashed by the heeles, the dried braines whereof hee hath seene on the wals, &c. these all out of two Townes, *Narue* and *Iuanogrod*. The Castle of *Iuanogrod* is so fortified, that it must bee thrice conquered before conquered, and built in a yeere, of Stone, which none else is in *Russia*. Hence hee went to *Yerastane*, where he and his companion were apprehended by the *Russes*, for traouelling without licence, and as they came at any Towne, blinded, and after some feares sent thence into *Letto*, or *Lithuania*: passing through Woods full of Beasts, Beares, &c. none hurtfull but *en luxe*, a kind of ounce or Cat-a-mountaine, with a tayle a handfull long, spotted, as big as a Dogge, in forme like a Cat, which would from off a tree leap on Travellers and kill them. Here they came to the *Weild* or *Vilna*, the chiefe Citie where the old Dutchesse a *Caluinist* (whom therefore they called the *Englishe Queen*) kept her Court. Her two sons being summoned to the Parliament in *Poland*, went garded with 30000. Here they vsually steale their wiues; a man viewing one to his content comes with his company to the place where she dwels, and lies in ambush till night when she comes forth to make water, and then they catch her, and on a Sled carry her away, &c. her friends not knowing what is become of her perhaps a moneth, and yet know what to suspect because of the custome. Their Churches are thin, and in the Villages they haue a Crosse of Wood, with a Pentise, and a Crucifixe,

HONDIVS his Map of LITHVANIA.

Crucifixe, and there say they their prayers once perhaps in a quarter, having a Priest come to them, or they goe to him in their Church twenty miles off. They worship also a Snake, which they keepe vp in their houses, saying, they haue reason for it, because it keepe their children: these Snakes goe often into the Woods, and thence returne, and before the fire vomit vp milke, which the men eat. Here they hunt the Vrochs, and other beasts. When the Lord will hunt, his Tenants or Slaues (as they are heere, and in Sweden, Poland, &c.) doe make fires in the Woods, bringing the beasts into a corner, & there they assault them. From Vilna he went to Grodno in the Mase, where are the best Poles souldiers, & they are Roman Catholikes. From hence to Cracovia. From thence to Warsonia, where is a Bridge (couered ouer with a Pentice, where toll is paid, twice so long as London Bridge) ouer Vistula, which soone after he was passed ouer, brake, and there were drowned many Polonish Gentlemen that came thither to the Parliament at that time there assembled.

To this Parliament came a Tartar to sue for his two daughters, taken captiue by the Christians: but not speeding he returned; and with him went our Author Master George Berkley, and stayed with him fixe moneths. This Tartar liued with his hord of about a thousand households of a kindred. They sowed a three square graine (Totarke) had cattle, liued at ease, euery day hunting; these worshipped Mahomet. Their manner is to make sudden Inrodes on the Christians, and prey on them, who therefore are readie for such assaults: the Polonish Gentleman at dinner hauing his two Peece by him, and his Seruing-men, which are Souldiers with their Peece also, when the Christians make head against them, they cannot most what find them. They are resolute, and wil ride with their Bowes in face of a Peece. If this Tartar could haue gotten his daughters, he would haue bestowed one on him, &c. if he would haue liued with him, and he said he neuer liued in all his life so pleasantly as with these Tartars. Hee returned into Poland againe. In Poland all are Gentlemen and Slaues. Punishable it is not for their Gentlemen to keepe Concubines, whose children they bring vp as their other, saue that they doe not inherit. There is freedome of religion. So many Cranes feathers as they weare in their Hats, so many Tartars or

H h h 3

Turkes

His going into
Tartaria.

HONDIVS his Map of POLONIA.

Turkes are holden to be slaine by them. No Townes very strong but Cammenieck built within a Rocke, the light let in at holes. The Turke went ouer it but could not win it.

The Polanders had a great murraine of beasts attributed to the Jewes: two Jewes comming to a woman offered her mony for some of her milke, she answered, her child but then sucked, they left their glasse there, promising to fetch it anon and to fatishe her: her husband meane while comming home and seeing so strange a thing as a glasse, asked from whence it came, and why; being answered two Jewes had left it there for milke for a medicine, bid her fleet Cowes milke and fill the glasse: which the Jewes receiuing, and hauing entertained a Boy, caused him to climbe vp one of the Ladders which there stand together with their three square gallows made of stone, with wooden rafters crosse, and to poure it into the mouth of one of the dead men (which there alway hang after execution) his mouth, who presently cryed like a beast, as the boy reuealed, and they thereupon cryed they were cofined: a murren followed which should haue been a plague. Many Jewes executed for it; which yet the Jewes said to bee a pretence for their money. The Jewes that farmed the Custome at Samaiden in Curland, killed a Polonish Merchant without punishment, beating out his braines for delaying to open his packe. Hee returned out of Poland into Prussia to Torne, the first place obtained by the Kreutzberne, where they built a Castle about an Oake which standeth there still, but is dead. Thence along the Vistla (where the Poles haue their Mafts, &c. with wares three miles together tyed downe the streame) to Dantzike; thence into Pomerland farre more barren then Prussia, to Cassubia, Coslin, Colberg. Thence to Statin, euery way exceeding pleasant and good. Thence to Rostock in Meckelberg. Thence to Lubbeck, a fairer Citie then Danske, so to Oldsloe, to Hamberg, to Brame, to Limenberg, to Mansuelt, to Bamberg, and thence through Bohemia into Silesia, to Breslaw, where hee went to schoole three yeeres: whence into Polonia againe, and thence to Pruss. Thence home into England.

Hee went againe into Norway, to Nilus, Bashus, &c. It is a barren soyle, as being nothing but Rockes and Valleys: the Rockes are couered with grasse, and the ground betweene they digge and sow with Corne, which yet is not able to fatishe the Country. The difference betweene the

Gentlemen

Gentlemen and Bore, is in his command, being otherwise, as raggedly apparrelled as hee, with twentie patches on his breech, and barefoot in winter.

In Sweden he was, at *Stockholm* the chiefe Citie. These now vnder Dake *Charles*, hold warre with their King, yet all things passing vnder his name, but so hating the *Poles*, that though of another Nation, neither the long attire, neither their Curb, or hooked Sword can pass safely among the Bore for suspicion of being *Poles*; and the rather because they were made beleecue that the *Pole* was ayded against them by the *Tartars* that were man-eaters. They are strong in shipping and had giuen the *Dane* the ouerthrow at the battle at *Bornaholm*, had he not bene assisted by the *Lubeckers* with money, &c. One also of whose Ships with a shot fired and blew vp the

10 Admirall of the Sweden. The *Lubeckers* therefore pay no custome to the *Danes*, and for their costs hold *Bornaholm* till they be satisfied out of the Reuenues thereof.

In Sweden (as in *Friesland* and other those Countries) the Lord holdeth the other his Tenants as Villaines and Slaues, and at his pleasure ships their Horses and Daughters to *Renell*, and there sells them; a bushell and halfe a Culmet of Salt for a woman, which yet is of person and complexion very comely, and very able to doe worke. He came againe to *Leesland*; and thence to *Finland*, where hee was with an *English* Captaine in a Castle; and thence into *Livonia*, and so into *Russia*, &c.

20 Betides those his Easterne trauels, he hath bin in our neerer neighbor places, as in *Belgia*, *France*, *Spain*, *Portugall*, &c. and passed to the West Indies by the Ilands of *Cape Verd*: in three of which *S. S. Ant on Vincent*, *Lucie*, the Inhabitants cannot prosper nor liue long, saue in those Ilands which yet are vnkind to other forrainers. He hath also bene in *Guinea*, in *Barbary*, in the Straits, at *Caribage*, where the old ruines remaine, and the Stones of Marble, &c. worth the bringing home, in *Italy*, *Slauonia*, *Morea*, at *Venice* often, at *Ferrara*, *Padua*, *Mat. Angelo*, thence to *Fermo*, to *Loretto* (where he visited the Ladie of *Loretto*) it is one street, walled about, the Temple faire, and in the Temple of our Ladies house inscriptions innumerable of diuers languages, affirming it to haue fled the *Turkes* conquests from *Iury* into *Sclauonia*, and from thence also hither. Here forsooth it was placed in a piece of ground belonging to two Brethren, which because of this new quest and request could not agree on the proprietie: and to auoyde further suite, in the night it was found remooued to a vacant place by the high-way, and there this Temple built whither resort Pilgrimes in troopes, as to a Mart from diuers Nations. The street on one side all

30 Innes, on the other makers of Images, Beades, and such other holy bables heere sanctified by touch of *Madonne*.
The Temple is hanged about with Monuments of their exploits, vpon vowes conceiued in distres of Warres, Diseases, &c. here hang the old Swords, &c. There are two Vestries of incredible wealth, and Priests of diuers Nations for their proper Pilgrimes. The House low and meane builded with white Bricks, such as in *Barbarie* they burne in the Sun. There are two roomes, in one whereof the Chimney where shee dressed her meate, and her dishes, &c. In the other her selfe, or statue with a Childe, aloft of blacke colour: to whom one whose office it is, on a staffe like a Musket-rest doth lift vp Beades, &c. by her touch to bee hallowed. The *French* Queene sent 40 her a Present to hang about her necke, which present would pull her in peeces by the weight. It is round, two foot in diameter made like a Sunne, in the center a Carbuncle, the rest set with Diamonds, the rayes pointed with orient Pearles, the Bricks (miraculously) cannot bee remooued, to which end they report of a Bishops superstitious steale: who was not able to passe without restitution.

Trauellling in diuers places of *Italy*, *Rome*, &c. hee returned by the *Alpes*, from *Venice* to *Me- stre*, thence to *Trenise*, so to *Seruaalle*, a Towne of Blade-smithes, which with Water-workes grinde and hammer their Mettals: thence vp the *Alpes* by a passage so narrow cut out of the Rocke, that sometime the Horse hooft hung ouer, it beeing a steepe mile high, a Riuer running vnder. Thus to *Basil*, thence backe to *Tiroll*.

50 After all these trauels in these parts of Europe better knowne, and those others in the more unknowne, and in *Africa* and *America*, hee much affecting the *Virginia* businesse and especially that of *Bermuda*, went thither to order publike affaires. And after all this (as you haue heard) went in place of *Cape Merchant* to the *East Indies*, and being Captaine of the *English* House at *Bantam*, there and thence trauelled to his long home. This I thought good to adde to the former relations, which I receiued many yeeres since from his owne mouth, beeing my louing and familiar friend, and for a generall Traueller by Sea and Land, in hote and cold Countries of the old and new world, not easily matchable. Had hee liued, I would haue better perfected these short Notes; but Death it selfe hath not taken from mee his loue, shall not from the world his memory; I rather chusing to giue the world these vnpolished Notes, as his, then either to burie them with him, or by refining and illustrating to make them mine. The best illustration 60 seemes that of *Mappes*, some of which out of *Hondius* I haue added.

CHAP. XXI.

Collections out of MARTIN BRONIOVIVS de Biezerfedea sent Ambassadour from STEPHEN King of Poland, to the Crim Tartar: Contayning a Description of Tartaria, or Chersonesus Taurica, and the Regions subiect to the Perecop or Crim Tartars, with their Customes private and publike in Peace and Warre.

The fields Sauranenses and Oczacowenses, betwixt the Rivers Bogus and Nester.

Long miles in those parts: and so vnderstand in the rest of this storie. Sharpe winter.

Raslaw is a Towne in Podolia with a Castle, numbred about five hundred Inhabitants, good Gunners, and well exercised in Tartarian skirmishes. They are good Guides in the Playnes to auoyde the Tartars and Kozackes. From thence thorow Woods not very thicke, after some miles journey to the small River Silnica, where the Braslawens keepe good guard alwayes against the Excursions of the Tartars and Walachians. Downe the River Bogus or Hipanis, you may goe almost to Oczacow. In the way are the Rivers Tristenet, Bersad, Olsank, Sauran (whence they are called the Fields of Sauran) a stone Bridge and Bathe sometimes belonging to Vitoldus, Great Duke of Lithuania, ruines and graues, Sinawod Riueret, the strong rockie Ile Probite, a good refuge for ours against the Tartars (the Braslawens in May and Iune, vse there and in the other many Ilands of Bogus to fish, armed with their Pieces) Ceretna Riuer the greater and the lesse, and that of Capcacley, and Hancocricus (the Tartars call it Cham) and the Lake Berezania. That Field is fiftie miles, or as they call it seuen dayes journey to a speedie traveller, from Braslaw to Oczacow. There are wilde Beasts, Bisonts, Elkes, Horses, Harts, Rammes with one horne, Goates, Swine, Beares: which ten yeeres since were sayd to bee killed with the sharpnesse of the Winter, and huge heapes of their bones are found in the fields. They had also innumerable herds of Horses, Turkish and Tartarian; Kine and Sheepe which fedde there, by the borders of Russia, Volinia, Kiow, Podolia, and Moldania, not long since destroyed. The hills called Mogili, are testimonies of Burials and Warres. The Field is fertile, rich of pasture and pleasure.

HONDIYs his Map of TAVRICA CHERSONESVS.

Passing

Passing ouer Prut or Hieras, a Riuer of Moldania, you come to Stepanouetia or Iassi, chiefe Towne of Valachia; or righter to Prutum Technia, a Towne and Fort of the Turkes, not long since fortified on the Nester; and there are found some Moldavian passages in the Nester, right into the champaines. It diffuseth it selfe into the Lake Vidono or Obidono (so called, as some fabulously conceue of Onidus) and soone after disembokes into the Euxine Sea, ouer against Bialogrod (named by the antients Moncastrum) not long since taken by the Turkes, from the Valachian or Moldavian Princes, & holden by them. In the very mouth of Tyras or Nester, bearing name of Neoptolemus as may seeme by Strabo, who there-awayes placeth Niconia on the right hand, and Ophiusa on the left hand of the Riuer.

Part of Moldavia or the lower Valachia, called sometimes Bessarabia. Lake Vidono in Nester. Bialogrod.

10 After followeth Beriboncum with deepe and large ditches neere the Sea, washed by the Lake where sometimes was a good Port. Adzigoli hath three Ditches, many salt Lakes nigh the Sea, where many Cozaks resort and often kill each other in mutuall warres and quarrels, which makes it terrible to Trauellers. Then follow Domnina Dolina, and the Lake Berezania, and the Bay Carcinitum. Strabo placeth fise hundred furlongs in the Sea, from the mouth of Tyras the Iland Lenca sacred to Achilles.

Beriboncum. Adzigoli. Domnina Dolina. Berezania, Carcinitum. Lenca.

Oczacovia called antiently Olbia, Olbis, and Olbiopolis, is seated on Boristhenes or the Carcenite Bay; sometimes builded by the Meletians: the Tower is of Stone, the Towne but meane, is subject to the Turkes. Boristhenes or Neper, a deepe, wide and swift streame, runneth from the North into the Bay, and neere to Oczacovia into the Euxine. Foure miles higher Bogus empties it selfe into Boristhenes. There the Turkes exact Customes. The Isthmus betwixt Boristhenes and the Sea, is a dayes iourney, ouer sandie plaines, with Hills, Lakes, Salt-pits; with Deeres, Beares, Goates, wilde Swine well stored. It is extended to Perecopia about thirtie miles in length, containing Medowes, Riuers, and Tartarian Cottages (which they call vlns) made of small pieces of wood, daubed with mud or myre and dung of beasts, and thatched with reed. The Tartars liue not in them in Summer and Autumne, but in April begin their progresse, with their wiues, children, slaues, and houses which are round, couered with clothes, scarcely commodious for foure or fise men, carried on two-wheeled carts, with one or two Camels or Oxen, together with their household. They carry with them Camels, Horses, Flockes, and Herds innumerable, leauing others in commodious pastures. They goe towards Perecopia, and sometimes into Taurica, or

Oczacovia. Boristhenes or Neper. Bogus. The Isthmus.

Their houses and pastures progresse.

30 ouer against Perecopia, to Ossow or Azaph, as the Turkes call it, a Towne by the Don (Tanais, a great and swift Riuer) sometimes fortified by the Greekes, and since by the Genuois; where the Turkes now haue a Garrison, and a Commander. They alway trauell into the Isthmus, or the large Plaines which are betwixt Boristhenes, and the Lake Meotis, and the Pontike Sea, where they find best pastures. In October the raynes, colds, and perpetuall windes force them to returne to their Cottages. For they are afraide of our Nizonian Cozaks, which passe downe the streame in Boats, and the Gunners, which then make incursions on them. Neper is frozen ouer in Winter. Ptolemy calls that Isthmus, Zenos Chersonesus, and Strabo writes that the Roxans and Roxolans (whom we call Russians) pastured those Fields twixt Tanais and Boristhenes (describing their life like that of these later Tartars)

Tanais or Don.

40 Perecopia (antiently called Eupatoria, Pompeiopolis, Holy Grove, Achilles Race, Gracida, Hera-clea) is seated in the confines of Taurica, or the Scythian Chersonesus, the Towne obscure and small, the Tower of stone, not well fortified; in which the Tartar Chans haue their perpetuall Palatine or Beg, which keepeth the Marches and passages of Boristhenes and Don, with all the borders, and is Generall Lieutenant ouer all the Tartars in the Playnes adioyning. Strabo writes that there was a deepe Ditch made, whence the Towne had, and still in the Tartarian and Turkish language hath the name. When Sachinbgierai reigned there (hee ouerthrew the Nagay Tartars at Perecopia with a memorable victory) there were seuentene stone Forts raised in that Ditch, some of them of the Skuls of the slayne, and the ditch repayred. Heere the Tartars keepe continuall Guard, permitting no Stranger thence to passe without the Chans Letters. And there 50 in occasions of Warres is their principall assembling.

Perecopia.

Ossow is seuen miles distant on the right hand, on the shore, where the Chan hath a perpetuall garrison. Ingermenum is hence twelue miles or more: it hath a stone Fort, a Temple, and Vaults vnder the Cattle and ouer against it, with wonderfull Art cut in the stone, being situate in a great and high Mountaine; and therefore the Turkes giue it the name of the Vaulis. It hath beene a wealthy Towne. Ouere against it the Promontorie trendeth some furlongs broad, and three or foure miles long. There appeare euident signes in the stonie Mountaines, that the ancient Greekes thence cut huge stones and carried them by Ships to build Chersona a Citie in those times famous, as the Greeke Christians still report. The Heraclians of Pontus sent thither a Colony. The Fort of Ingermenum was also built by the Greekes, as appeareth by Greeke Inscriptions and Scutcheons therein: and thorow all the Isthmus to the walls were sumptuous buildings, and innumerable Wells digged. There were also two great High-wayes or Caues of stone. There were many good Vineyards and Gardens, now called Belbec, and possessed by Greeke Christians, or Italians, and Iewes, and a few Turkes. Of the ruines the Turkes and Tartars make great Stalls and Enclosures for their beasts. This Chersonesus, Corsunum, or Chersona the Turkes called Sari

Ossow.

Ingermenum.

Chersonesus.

German.

Germenum, or *Yellow Tower* of the colour of that Tract; whereof admirable ruines remaine to testifie the *quondam* splendor. There are channells or conduits of hewen stone vnder ground foure miles to the Citie walls, still containing cleere water. From a place where is a Village of note, and not farre off, neere the Sea is a *Greeke Monastery* of *Saint George*, with anniuersarie deuotion frequented of the *Greekes* remaining in *Taurica* with great concourse. The Citie hath not bene inhabited these many ages; the Walls and Towers sumptuously built are yet seene entire. But the *Turks* carry thence excellent Marble, and Serpentine Columnes and great stones by Sea, for the vse of their publike and priuate buildings. Of the Temples the very ruines are vtterly ruined, and the houses lye buried in that Monument and Selfe-sepulchre.

Kion.

The walls of a *Greeke Monasterie* remayne very large, but without rooffe, and the ornaments spoyled. The *Russian* and *Polonian* Chronicles relate that *Volodimir*, great Duke of the *Russians* or *Kion*, carried thence two doores of *Corinthian* Brasse, and some artificiall *Greeke* Images which *Broslaus* the second King of *Poland* translated from *Kion* to *Gnesna*, there yet in the great Church to be seene. *Volodimir* tooke that Citie from *Iohn Zemisca* the *Constantinopolitan* Emperour: but after, marrying *Anna* the sister of Emperour *Basilus*, and being baptized in that Monastery after the *Greeke* Rites by a certayne Patriarch, hee restored it, as is still related by the *Christian* remainders in those parts. Before the Citie was the Promontorie *Parthenium* with a Temple and Image of that Goddesse, and other Antiquities by *Strabo* related.

Parthenium.

The Citie Balachei, or Lamboli.

That which the *Greekes* called *Lamboli*, the *Turkes* haue stiled *Balachei*, as the *Towre of fishes*, in regard of the plentie in that Sea. It was fortified in a high, great and stonie Mountayne by the *Genuois*, whiles the proud cowardly *Grecians* which held that part of *Taurica* quarrelling amongst themselves, lost it to them. There they had a notable Port, a strong and sumptuous Fort; and there the *Towres*, houses and walls with the *Genuois* Ensignes and Inscriptions, lye ruined. It is now inhabited of a few *Greekes*, *Iewes* and *Turkes*, and frequented by fewer Merchants and strangers by Sea.

Marcopia, or Mangat a City.

Marcopia stretcheth further to the Mountaynes, and Woods, and is not so neere the Sea: it hath had two Castles, *Greeke* Temples and Houses sumptuous, with many cleere Riis running out of the stone: but eightene yeeres after that the *Turkes* had taken it (as the *Greeke Christians* affirme) it was destroyed by a sudden and horrible fire. Neither hath any thing remayned of note but the higher Fort, in which is a goodly Gate, adorned with *Greeke* writing and store of Marble, and a high house of stone. Into that house the Messengers of the *Musconites* are by the barbarous *Chans* sometimes thrust, and there endure hard keeping. There remaynes the *Greeke* Church of *Saint Constantine*, and another meane one of *Saint George*. One *Greeke* Priest and some *Iewes* and *Turkes* dwell there; Obluion and Ruine hath deuoured the rest; nor are there men or Stories of the *quondam* Inhabitants, which I with great care and diligence euery-where sought in vaine. An old Priest which I saw there, said that a little before the *Turkes* besieged it, two *Greeke* Dukes of the Imperiall bloud of *Constantinople* or *Trapezond*, there resided, which were after carried alieue into *Constantinople*, and by *Selim* the *Turkish* Emperour slaine. In the *Greeke* Churches on the walls are painted Imperiall Images and Habits. The Tower and Citie *Marcopia* is nigh to *Cerceffigermenum* a new *Turkish* Fort taking name from *Cerceffium*; but the *Turkes*, and *Tartars*, and *Greekes* also haue now lost the name. The *Greeke* Dukes are said to haue there committed much wickednesse. And in that stony Hill whereon it is seated, it hath houses cut with admirable Artifice in the Rocke, which still for the most part remayne entire, although the place be become wooddie. A Temple adorned with Marble and Serpentine Pillars, now laid prostrate on the ground, testifie the *quondam* glorie.

Cerceffigermenum.

Admirable Vaults.

Baccasaray.

Salaticum.

The Palaces or Houses of the *Chans* reach vnto the *Mediterranean Taurica* (as *Strabo* calsit.) It hath a famous Towne, and a principall Store-house, called *Baccasaray*, wherein he perpetually resideth. That Towne is situated betweene two Mountaynes, and a little River flowes betweene, whereof the Towne is named. There is a stone *Mosche*; and the *Chans* Sepulchres built within the Townes Liberty of the *Christians* ruines. Not farre also from that Towne there is a *Mahometan* Monasterie, and very many *Tartarian* Graues curiously rayled out of the *Grecian* ruines. In the further end of that Towne, there is another Towne called *Salaticum*, adorned with faire buildings by the *Turkes* there inhabiting. The Royall Seate or Mansion of the *Chans* is sumptuously garnished by the ancient *Tartarian* Princes with Houses, Temples, Sepulchres, and exquisite Baths. When the Princes with their Wiues, oft giue themselves to ease, pastimes, pleasures, and recreation, they go thither. For that place or Region is commodious for huntings, it hath Orchards, Vineyards, Gardens, and many store of good grounds, and it is watered with Chrystalline streames. There are Mountaynes and store of Woods, wherein are seene very many ruines of Houses, and large Forts and Cities, yet they remayne desert, and are of few or none inhabited.

Almassaray.

Almassaray at the meeting of the River *Alma*, is a house of the Kings, where he is woont not often to reside, because he liues not there so commodiously, as in other places, and cannot lodge there with his Court: for there is only one base Village. There are some more obscure bordering Townes and Fortresses, where they are woont to maintayne their Wiues. Also not a few Castles

Castles where the *Sultans*, the *Chans* brothers, or their sonnes and wiues perpetually dwell. That part of *Chersonesus*, which the *Chan* with his *Tartars* possesse from *Perecopia*, toward the Fenne or Lake to the Citie *Cremum*, is cultivated, plaine, champian, fertile, and plentifull of grasse; but toward the Sea and the Palace of the *Chan*, and his Townes, Castles, and Villages, the Countrey is Mountaynous, woodie, well husbanded, and very fruitfull. The Mountaynes in that Coast are huge and remarkable. But the greatest is the highest of all, and hath in the top a Lake of no small quantitie. And although I did not ascend it, yet it is well discerned many miles off, and demonstrates no ordinary height and greatnesse. Plentie of Rivers and no small ones runne from those Mountaynes. Also they haue much fish, but not of any greatnesse (for the Riuer is shallow) yet very saourie and daintie. But because the *Tartars* doe not often feed on fish, the *Christians* only and our strangers when they come thither take paines to catch them. There is also abundance of delicious Fowles, which sometimes *Christian* or *Turkish* Gunners are wont to seeke after, seldome our strangers. There is much game of Harts, Goates, Boares, and Hares neere the Sea vnder the *Tartars* and *Turkes*. Oftentimes also the *Chan* himselfe is wont to hunt some dayes there, but more often he goes into the champion with *Turkish* and *Tartarian* hunting Dogges.

Sortassus is a *Tartarian* Village adjoyning to the *Chans* Regall Mansion, wherein the *Lettow* and *Muscovie* Ambassadors doe often lodge; it is spacious and delightfome. But when *Taurica* or the Peninsula beganne subiect to the *Chans* Dominion, diuers *Italian* Gentlemen *Genuois* after *Capha* was taken by the *Turkes*, or *Tartar* Princes, hauing their Charters written and sealed of their right and proprietie (which I haue seene among them) they held that Village with speciall Priuiledges, or purchased it with that Gold which they carried with them out of their Countrey, or with their seruice to the *Chans*. In going Ambassador to *Christian* Princes, it was permitted them to build a Catholike Temple in that Village, wherein I sometimes entred while I abode there. There was in that Temple one Priest a *Franciscan* Fryer, whom those *Christians* had then redeemed with their money from *Turkish* slauerie.

Cremum, or as the *Tartars* call it *Crimum*, is a Citie and a Castle much vnlike in the antiquitie, magnitude, and height of the wall, amplenesse and renowme, to the other Cities of *Taurica*; It is vnlike the *Mediterranean* (for so *Ptolomie* calls it) perhaps this was called by *Ptolomie* *Taphros*, but by *Plinie* *Taphra*. Now in these latter times before the comming of the *Genoes* into *Taurica*, it seemes to haue beene husbanded and inhabited by a great *Mahometan* Nation, who remooued thither out of *Asia*. For there are seene ancient *Mosches* or *Mahometan* Temples not only in the Citie it selfe, but also beyond the Citie very many with *Chaldaicke* Characters engrauen in great stones. There are very few *Turkish* or *Tartar* Inhabitants, yet the *Greekes* are fewer, who report this, that their Ancestors haue constantly deliuered, that that Citie was whilome dwelt in by the *Persian* Nation, and that it was a *quondam* noble and excellent Store-house of Mechanick Mysteries. A man may certainly conjecture by the ruines and largenesse of the place that it hath beene a famous Citie and a great Colonie of people. The *Tartars* are now vulgarly nominated from that place *Crimis*. They haue a Mint in that Citie. In the Towre which is the greatest in the Citie, the *Chans* wiues are alway kept and spend their liues.

Sidagios of the *Greekes*, but *Sudacum* of the *Genoes*, was called a Castle and Citie. The *Tartars* are vterly ignorant of it. In a loftie rockie and spacious Mountaine standing neere the Sea in the top of it, it hath a higher Towre, a second indifferent, and a third of baser esteeme. The *Greekes* or *Italian* *Genoes* founded their Castles enuironed and fortified with Walls and Towres. There are seene innumerable *Grecian* Churches, and seeme but few, as though they were Chapels, not a few vndermined, but very many are ruined, and lye ouerturned in the dust. The haughtie dissentious and idle *Greekes* being ouerthrowne and weakened by the *Italian* *Genoes*, lost that Citie. There are seene no contemptible signes of the *Genoes* much more illustrious then those of the *Greekes*.

But it is euident by the ruines, that it was once a famous place, & so it is reported by the *Greek*, *Christians*, of whom there are a very few Relikes. Moreouer, many *Christians* haue erected a multitude of Temples which they report to haue beene some hundreds. There are three great Catholike Churches, Houses, Walls, Gates, and faire Towres with Arrace and Ensignes of the *Genoes*, are seene in the lower Castle. I heard from a certayne Metropolitane a *Greeke* and an honest man, who then came thither from the *Grecian* Isles to visit their Priests, and entertayned mee, That when the most barbarous Nation of the *Turks* had besieged that Citie with a great Armada, it was valiantly and manfully defended by the *Genoes*: but when the *Genoes* could no more hold out the daily siege and famine, neither could longer sustaine the violence of such a great Armie of *Turkes*, some hundreds, or, as hee auouched, about a thousand stout-hearted men conueyed themselues into the greatest Church which yet abides entire, and some dayes hardly and courageously preferuing themselues in the lower Towre, into which the *Turkes* forceably entred, hauing made a notorious and memorable slaughter of the *Turkes*, at the length they were all slaine in that Temple. The doores and windowes of that Temple being stopt vp with a wall by the *Turkes*, the slaine bodies lye vnburied to this day. I was prohibited by the *Saniak* of *Capha* sometimes

times a *Turke*, that I should not enter into that Temple. The Custome of the Citie is not meane: it hath very fruitfull Vineyards and Orchards, which doe extend about two miles, now manured by *Caphaes*, *Turkes*, *Jewes*, and *Christians*: For the best Wine of all *Taurica* growes there; all that tract abounds with pleasant Rivers, which runne downe from the highest and middle Mountaynes and Woods, which are there very frequent.

Orium and Oxon.

Having now passed over those vpper Cities, and at the last *Sudaco*, also as farre as *Theodosia*, which the *Italian Genoes* call *Capha*, the banke of *Taurica* is in Longitude a thousand furlongs, craggie, mountaynous, and tempestuous with North windes. Before the Citie the Promontorie that is there seene, doth hang out into the Sea on the South-side toward *Paphlagonia*, and the Citie *Amastrium*, and *Strabo* relates, that it is called of the *Greekes*, *Orium* and *Oxon*, the *Rammes* forehead. And there is another Promontorie *Carambis* of the *Paphlagonians* opposite to it, whereby the *Euxine* Sea is diuided into the double Sea, and *Enripus* straightens them both. *Strabo* sayth, that *Carambis* is distant from the Citie of the *Cheremestay*, two thousand five hundred furlongs, but from the *Rammes* forehead, a farre lesser quantitie. Behind that hilly Countrey, as *Strabo* calls it, hee affirms the Citie *Theodosia* to bee founded, and that it hath large Fields notable for fertilitie, and a Hauen able to receive a hundred Ships, and that that Limit was assigned to the territorie of the *Bosphorines* and *Taurikes*.

Theodosia, now Capha.

Capha or *Theodosia*, is the excellentest and best defended Citie of all *Taurica*. It was built by the *Italian Genoes*; and is placed by the Sea. It hath a Hauen alway frequented. It is perspicuous, that in the times of the *Genoes*, it was a wealthy and populous Citie. But after it was taken from the *Genoes* by the *Turkes* about a hundred yeeres since, the *Italian* Christians were brought into such a straight, that there are but a very few and obscure remaines of them left. The Citie hath in a manner lost her pristine splendour. The *Romish* Churches of *Christians* are demolished, the Houses cast downe, the Walls and Towers, wherein are seene many tokens of honour of the *Genoes* and *Latine* inscriptions, are fallen. Onely two *Catholicke* Temples and two *Armenian* remayne whole, in which it is granted them of the *Turke*, after their owne custome to maintaine their proper Priests, and to bee present at their publike deuotions. It is replenished with *Turkes*, *Armenians*, *Jewes*, but very few *Italian* and *Greeke* Christian inhabitants: Now also it is famous over all that part of *Taurica* for Nauigation and the Hauen. It hath almost innumerable Vineyards, Orchards and Gardens. Men sayle often to *Capha*, from all the bordering and remote Islands of *Greece*, but oftner from the Citie *Constantinople*; for with a prosperous winde they come thither by Ship, in the space of two dayes or little more.

Petigorenses or Colchis.

The *Petigoren* Prouince, or *Colchis* is enlarged, as farre as the *Caspian* or *Hircan* Sea, and is much subiect to Mountaines and very large Woods, which are now seene in these Confines. It is a very free people, and hath many braue Commanders, to whom all the Nations and Families obey. Moreouer they professe themselues *Christians*, and it is manifest in the time of the *Genoes* very many of them were *Christians*, but now wanting Priests and Churches, they onely retayne the opinion of Religion. Most and the greatest part of them are Idolaters, amongst themselves rapacious and cruell, but to Strangers hospitall and free-hearted. The Parents, although they bee of the more Noble or of the Rustickes, sell their owne Children, their Sonnes for Slaues, their Daughters for Wiues to the *Turkes* and *Tartars*, also to many *Christians*, and those which they are wont to steale secretly among themselues, they sell closely beyond the Sea to barbarous strangers after a more then barbarous manner.

Idolaters.

Betweene *Perecopia*, *Cremum*, and *Cusfoma*, are Townes on the North. *Taurica* or the *Peninsula* is exceeding plaine, not very hilly, and altogether champaine. It hath a very fertile soyle, in great part stonie, but great scarcitie of good water. Yet there are found in diuers places very many extraordinarie deepe Fountaynes or Wells of a wonderfull profunditie and difficultie, in times past digged and made by the elder *Greekes*, or those great and antique Nations, who inhabited the *Peninsula* before the *Greekes*.

Deepe Wells.

From *Perecopia* the space of a mile, there is a great Lake congealed naturally of admirable Salt, from whence the purest and best Salt is continually gathered, as if it were frozen; it hath many other Salt lakes. In certayne commodious and in very many places, in Mountaynes and Groues are found in great number, ancient huge *Grecian* ruines of Castles, Cities, Temples and Monasteries, which while they haue many ages bene destitute of inhabitants, by reason of their antiquitie, haue lost their names. All *Taurica* or that *Peninsula*, from the West and North is plaine and champaine, and hath few Townes, many Villages; extends in length the summe of fiftie miles. But from the South and East, it is mountaynous and wooddie, and hath euery where marvellous high, large, stony Mountaynes. In which, betweene *Cremum* and *Capha*, it is reported that veynes of Gold and Siluer, and the best Iron, were whilom found by the Inhabitants. It hath a very fruitfull ground, Floods, delightfome Rivers, Fishes, Meadows, Pastures, abundance of wilde Beasts, Harts, Goates, Boares, Beares, Vineyards, Orchards, Territories, Champaines, Townes, Villages, Hamlets, many and large Granges. *Taurica* or the *Peninsula*, is spread in Latitude after a sort into a circle; in some places, the distance of one or two dayes journey, but in most places about the quantitie of one.

Salt Lake.

The

The Castles and Sea-cities, and the rest of all the *Peninsula*, which are described in their order, with many Villages and Hamlets of *Greeke Christians*, except the Holds and Sea-townes, and many lesse suspected walled Townes in *Perecopia* and *Casslonia*, and a few Villages of *Greeke Christians*, are subiect to the *Turkish* Emperour, and all obey his behests, and are kept with a sure Garrison. The *Peninsula*, which lyes in the middle from the East and South against *Perecopia*, hath a milde winter and temperate ayre. For in the end of December is the beginning of winter, but in the midst of Februarie the sharpnesse of winter, which is more snowie then cold, or subiect to Ice, neither yet doth that endure about three dayes together, neither continues it any longer then to the beginning of March. Therefore about the beginning of the Spring, and alway in a hot Autumne the ayre is very contagious.

10 In *Bratistavia*, the *Sauranen*, *Oczaconien*, and *Bialodogroden*, Plaines are situate betweene *Hipanis* or *Bogus*, *Tyra* or *Nester*. From the North toward *Neper* or *Boristhenes* and *Bogas*, are somewhat plaine and champion grounds, but from the West towards the River *Nester* and *Pruth* or *Hicrasus*, more wooddie and hilly. *Podolia*, *Cameneccia*, and *Moldavia* betweene the streames *Nester* and *Pruth*, euery where border on the middle *Tachnia* and *Bialogrod*, which is by the Lake *Uidono* or *Obidono*, and the *Euxine* Sea, on the West confine on the Plaines, and on the *Euxine* Sea, on the South *Bralogrod*, *Kibia*, and the River *Danubius*. *Oczaconia* hath on the North *Boristhenes*, (into which *Bogus* there dischargeth it selfe) and spacious Plaines, on the South the *Euxine* Sea, and the overflowing Salt meere *Berezania*, from the West the adioyning River *Nester*.

20 Further, that Continent which is betweene *Oczaconia* and *Boristhenes* in the fashion of an Ile, hath into the West *Boristhenes*, as though it were betweene *Boristhenes*, the Fen *Meotis*, and the *Euxine* Sea; on the North the Rivers *Tanais* or *Donum*, on the South the *Euxine* Sea, and that *Isthmus* or Continent, but beyond *Oczaconia* and *Boristhenes*, as far as *Perecopia*, that Continent is verie narrow in many places: but beyond *Perecopia* to the Castle *Ossonum*, a ranke soyle, and all champion and plaine: For in that neck of Land almost all the *Perecopian* and *Ossonian* *Tartars* feed their Flockes and Cattle, and liue there all Summer and Autumne. That Continent or *Isthmus* from *Oczaconia*, as farre as *Ossonum*, for there it is limited, is stretched out in Longitude, as is manifest out of the *Tartars* Diaries more then a hundred miles, but in Latitude not after an equall manner. For it is larger, as well beyond *Perecopia*, as toward *Oczaconia*, or *Boristhenes*.

30 The *Taurican* or *Chersonesen* *Tartars*, who are now called *Perecopen* or *Crims*, doe certainly seeme by the ancient Writers of the *Schythians* to haue been the *Iauolgenses*, and to haue had their originall and appellation from *Rha*, or the River *Volga*. Moreover between the famous, deepe, and great Rivers of the North *Tanais*, or *Don* and *Boristhenes*, it manifestly appeare that they passed by little and little into the Plaines, and a hundred and sixtie yeeres since, or very little more to haue come into *Taurica* or the *Peninsula*.

The stocke of the *Chans*, or of their *Tartar* Princes was antiently called *Cyngis* race, from whom was *Lochtonus* a certaine *Chan*, of whom all the *Chans* take their originall. Hee was the first Emperour of *Taurica* or *Chersonesus* in *Taurica*, or the *Peninsula*. They haue procreated the *Sirinen*, *Bachinien*, *Manguten*, and other *Kinazij* or Dukes, from whom are the *Caiacei*, who are the *Chans* Counsellours and chiefe Officers, who also marry the *Chans* daughters and sisters. The *Vlani*, which are antiently descended of the *Chans* blood, and (if the lawfull posteritie faile) succeed in the Regall Throne. It is very true that the *Mursies* are the noblest of each, now also their posteritie remaine & other warlike *Tartars*, of whom it is certaine he had diuers Hords, of some ten thousand a piece in his company passed into *Taurica*, or the *Peninsula* with him.

40 The *Chans* predecessors sincerely and constantly much esteemed the *Grecian* Chiefetaines, who inhabited at *Mancopia*, and *Ingermene*, and the *Italian* *Genoes*, who dwelt at *Iambold* and *Capha*, as also the other people they found in the *Peninsula*, with whom they had friendship, peace, and league, vntill they were overcome by the *Turkes*, and consumed in warre: they had also many yeeres common mony which I haue seene there.

50 But *Selim*, Emperour of the *Turkes*, compelled and subiugated *Mechmet Gererius Chan* to his Empire. Those Nations being weakned, almost all the Castles and Cities of the *Maritime Peninsula*, being taken and possessed: *Sachmates* the Prince of the *Iauolgan* *Tartars* put him to flight, with a singular and memorable slaughter hauing destroyed his Armie of a hundred thousand. Since which time the *Chans* acknowledge, as chiefe, the Empire of the *Turkes*. The Vice-royes, or Princes of the *Tartars* of *Taurica*, or the *Peninsula* are constituted by them, they receiue thence a Banner, and giue their sonnes and brothers *Soldans* for perpetuall pledges to the *Turkes*.

60 Notwithstanding, after the ancient custome of their Nation, they make a *Galga* or successor to the Empire (as the *French* doe their *Dolphines*) the brother or eldest sonne and more sufficient, who hath the greatest sway in peace and warre, but the *Chans* themselues perpetually depute and elect them, but with the approbation of the *Tartar* Nobles. And if also any dissention or war be raised betweene the *Soldans* or the *Chan* about the Empire, the *Turkish* Emperour neglects not to dispatch

dispatch the *Soldans* pledge, with an Armie and Standard into *Taurica* or the *Peninsula*: and is is sufficient for him to be Prince, the *Chan* and *Sultan* being appeased or forced to goe away by warre, for which cause he hath alwaies many *Ianizaries* in *Taurica*, or the *Peninsula*.

Election of the
Chan.

The election of the *Chans*, after the ancient custome of the Nation, did whilesome consist in the free suffrages of the *Dukes*, *Murshes*, and noblest *Tartars*. Furthermore, for their frequent discord and hidious warres which were occasioned by the *Nogaiens Tartars* bordering on *Taurica*, or the *Peninsula* about the Empire, *Sachibgiereins* and *Dealetigereins*, being *Chans* over the *Tartars*, hauing by subtilty destroyed the more noble and potent *Tartars*, and cast them into fetters, began absolutely to domineere ouer the *Tartars*, and by force to draw the election to their posteritie, the Emperour of the *Turkes* ayding them.

Sachibgiereins.

But if the *Chan* will not constitute his brother *Galga*, but his owne sonne, as it often fortunes, by reason of those discords and reciprocal butcheries among themselves, hee circumuents craftily and subtilly all the *Soldans* brothers, and couertly makes them away. Yet most of them flye to the *Turke*, of whom they are bountifully entertained and comforted, and receiue a perpetuall stipend of him.

The *Soldans* younger sonnes of the *Chans* are educated and tutored by the *Tartars*, or more noble *Murshes*, lest that when they are at mans estate, by reason of their pluralitie, dissentions, or warres might arise: for each *Chan* acknowledge a supreme Dominion, and when they are growne vp, those that are fit are set ouer certaine *Tartar* troupes, and allure many voluntary *Tartars* vnto them, notwithstanding they make leaders of the *Nogaiens Tartars*, and remunerate with monyes and horses most of their parents, whom they esteeme more speciall and substantiall. Very often also through feare of treacheries or seditions among themselves, being ayded by their Gardians fauour, they flye vnto the *Christian* or bordering Princes of their people.

Attalike.

The *Chan* hath *Attalike* Councillours, whom they so terme from the care of their women, parents, or their wiues, by whom those *Sultans* also are continually from their youth educated and provided for: hee hath *Hamiatts*, who are the Agents for exotick Princes affaires with him, and also perpetuall Court Officers. But especially hee conuocates to him the *Dukes*, *Coracei*, *Vlani*, and the nobler *Murshes*, and alwayes vseth to consult with them in weightie affaires. Hee hath principall and meet men Ministers of his Court, whose seruice hee vseth in his Ambassages, and in his diuers other necessary busineses and imployments, who also are exalted to Counsellours and Court Officers. He alwayes maintaines those who are chosen out of the more renowned and illustrious *Tartarian* youth, who are conuersant in his Court by moneths intexchangeably, and when they are made fit, are honoured with those dignities. Yet hee is chiefly and most delighted with the *Cercefins*, *Nogaiens* and *Petogorens*, who are very industrious, valiant, bold, and warlike. On the principall hee bestowes honourable gifts and annuall pensions, and of these his Court is alwayes replenished. In the Princes Court, the better reputed and nobler *Tartars*, are very richly and ciuilly decked, not to pride or superfluous luxurie, but for necessitie and decencie. For they are so enriched by the lazie cowardise, and especially by the irreligious impiety of the neighbouring *Christians*, through making often inrodes, and getting rich booties, that the greater nobler of them in priuate wealth and domestick splendor, are little inferiour to the *Turkes*. They may haue as many women by the *Mahometicall* Law as they will, and for the most part, they buy wiues of the *Petogorens*, which although they sustaine and maintaine, not proudly, but very comely and ciuilly according to the countrey guise, but those by whom they haue issue very honourably and gorgeously. They deliuer their sonnes in their infancie to be instructed in the *Arabike* Letters, but they keepe not their daughters at home, but commit them to the neereft in blood to be provided for. They place their sonnes growne to mans age in the *Chans* or *Sultans* seruice, their mariageable daughters in wedlock to the more honourable and nobler *Tartars* or *Turkes*.

Those *Tartars* are *Mahometans*, and haue Priests and *Mosches*, they vse the *Chaldaick* or *Arabike* Letters, which they haue receiued somewhat corrupted from the *Turks*, although before they came into *Taurica* or the *Peninsula*, they seeme to haue beene a sauage and brutish Nation, and of very sauage conditions, which now also is very perspicuous by the rusticks: for they wanted then altogether those Lawes, Rites, Letters, and Manners. But the *Tartars* being taught by the *Turks* humanitie, and that false worship, the more nobler now generally practise hospitality.

Law or Iustice, is administred in the Towns or Cities of the *Chan* & other *Sultans* among the *Tartars* after the *Mahometane* Law. There are alwayes presbiterall *Cadi* or Iudges in the Villages. *Begi* or Iustices, who heare and decide particular iniuries: but causes of life, blood, theft, which we call Criminall, or of Land, which we call Ciuill or Officiall, the *Chan* himselfe decideth with his Counsellours. In resoluing of which they need no Lawyer, nor vse tricks of law, calumnies, exculpations nor procrastinations. The *Tartars* or Strangers, of meane condition, lay open themselves very freely their wrongs before the Iudges and *Chan*, of whom they are alwayes heard and speedily discharged, for at any time any may haue access to him. When hee comes in publicke, men of the basest degree are not excluded, but being seene of the *Chan* are examined, to wit,

if they haue any fuit, that they relate it. For they doe not onely performe great obedience to the Lawes: they adore and venerate their Princes in Gods steed. All spirituall Iudges (after *Mahomets* Law) are accounted among them for Saints, men of all equitie and integritie, fidelitie and opinion. The Princes and Magistrates execute and dispatch whatsoeuer is bidden or commanded suddenly and faithfully, with alacritie, promptnesse, and great feare. They are far from controuersies, criminations, iustices, vnnecessary and personall brawlings, enuy, hatred, filthy excesses, luxury, and ambition in their victualls and array. I abode their nine moneths, neither heard I Criminall or Ciuill Act to haue happened among them, or any composition by reason of enmitie.

Great peace-
ableness to
the shame of
alway lawing
Gospellers.

10 In the Princes Court they weare not, nor at home Swords, neither Bowes nor any other weapon; except Wayfarers and Trauellers, to whom they are very courteous and friendly. They are alwayes secure from Spoylers; but except they keepe perpetuall watch, they are lesse safe from High-way-theeues, and Night-robbers, who steale nothing from them but their Horses.

No daily vse
of weapons.

Although they haue a rich soyle, yet very few Gentlemen, or Plebeians prouide for the household estate, for many neither till nor sow their ground: they abound with Horses, Camels, Oxen, Kine, Sheepe and Flockes of all Cattle, and thereof liue. Yet the Gentlemen haue bread, flesh, meate, distilled * wine and *Metheglin*; but the rusticks want bread, but vse stamp Miller, and macerated with milke and water, which they vulgarly call *Cassa*, for meate (and for drinke they vse Mares milke) and cheesse. They feed on Camels, Horses, and Oxen vnprofitable for burthen, and kill them when they are about to dye, sometimes eate sheeps flesh. The Gentlemen dwell not in the Plaines, but in the Villages of *Taurica* or the *Peninsula*. They which are neere Woods liue in them, although many doe not possesse proper Villages; yet they haue peculiar Lands and Manors. They vse the *Yngarian*, *Russian*, *Moschouian*, *Valachian*, or *Moldauian* slaues, which they keepe, and whereof they haue great plentie, as beasts to euery worke. Their houses are of Timber, much after the *Turkish* fashion: but the *Greeke Christians*, who are in a few Townes, labour and till their grounds as beasts. The *Tartars* serue the *Chan* or *Tartarian* Nobles, being hired at no price, but onely that they may haue meate and apparell: but the rest, and the greatest part of them are alwayes idle. In the Cities or Townes are very few Merchants: but some few practise Mechanick crafts, and some Merchants or Artificers are found there, either *Christian* Slaues or *Turkes*, *Armenians*, *Iewes*, *Cerceassians*, *Petigorens*, (which are *Christians*) *Phylistins*, or *Cyngans*, men of obscure and lowest degree. Those *Tartars*, which liue in the Plaines beyond *Perecopia*, or in the *Peninsula* haue no woods, euery where digge Wells. They vse in stead of Wood Beasts dung, which their Bond-mengather in the Fields, and dry in the Sunne, and houses of the same forme, whereof mention is made in the former description. Those *Tartars*, which are Slaues and Subiects of the *Chans*, *Sultans*, and other Noble-men, are drudges, and alwayes keepe and pasture their Lords innumerable Herds of Cattle; and although they goe from place to place, into the Plaines and Pastures, in seuerall Streets, Hamlets, Townes, or Villages, by separated troupes (or hords) whereof they beare the Names, and of their Masters, so that men may easily find there, those *Tartars* Slaues which they seeke to buy.

40 The *Chan* hath alwayes by the leagues and agreements, an annuall Donatiue of the King of *Polonia*, the great Dukedome of *Lituania*, the *Palatine* of *Moldania*, and *Cercassian*, and *Nogaien* *Tartars*. The Legats, Orators, Messengers, Truchmen of those Princes come to him yeerely, whom sometimes he entertaines benignely and bountifully, but sometimes receiues, misuses, and detaynes a great while after a more then brutish manner. When therefore they come into *Perecopia*, one of the *Chans* men meets them in the Summer, in the Medow or Plaine, where they rest vnder a Tent: in the Winter they are opportunely and commodiously conuayed into the Village of *Alma*, or *Bacchasanium* more safely bordering on the Towne of the Kings Palace. But after they are lodged there, they are saluted by the Counsellours or Seruants of the Court in the *Chans* name, which procure them refreshing or victualls, two oxen, or one, some sheepe, bread, wine, and barley, not liberally, but in a kind of hospitalitie, and moderately sufficient for once. But when they are called to the *Chan*, hee heares them, the *Soldans*, *Tuians*, *Vlans*, *Marzies*, chiefe Counsellours, and many other Ministers of his Court and principall *Tartars* being present, they are conducted onely by one man to the *Chans* gate, but are brought in by two Counsellours. When as therefore they are entred in, they reuerence the *Chan*, after the ancient custome of the Nation, and hauing saluted him on bended knees declare their message, and are admitted to eate with him. They are honoured with cups and goblets gilded and embossed with gems, filled with Mead or *Methegline* reached from the *Chans* hand, after the order of that people, in signe of clemencie and beneuolence, which they drinke on bended knees. And when they are dispatched, the *Chan* inuites them againe to a Feast. The Feast being ended, they goe backe a little from the Palace doores, and are rewarded with Silke Vests wouen with Gold as low as the ankles, prepared after the guise of the Nation, with one Horse or two, not seldome with Captiues of their owne people. And so attired with those Vests they returne againe to the *Chan*, and render thanks to him for his hospitalitie and liberalitie, and hauing saluted him, depart from the Ban-

Tribute.

THE BANQUET

ket. Sometimes a small prouifion is procured for them by one of the *Chans* men in his Dominions when he takes his iourney, and he is conuayed by him as farre as *Boristhenes*.

The *Turkish* Emperours haue made that authoritie constant to the *Chan*, in *Taurica*, or the *Peninsula*, so that when the *Bassa* of *Capha*, or the *Saniak* dye, he rules all the *Signories* in the *Peninsula*, vntill the *Turke* hath sent thither another *Saniak*, or whom he will preferre ouer *Capha*. The *Chan* hath a common Custome-house with the *Turke*, at *Perecopia*, *Caslouia*, *Capha*, and other Cities of *Taurica*, or the *Peninsula*, which are of the *Turkish* Empire. Hee demands annually a contribution of the *Tartars*, *Armenians*, *Iewes*, *Cercasians*, *Petigorens*, and *Grecian Christians*, of whom he hath very few in his Dominion; the *Turkes* are only excepted: euery day are paid for a perpetuall stipend out of the *Turkes* Exchequer twentie five Dollers to the *Chan*, twelue Dollers and a halfe to the *Galga*, to the *Soltan* pledge two and a halfe, and to the same Hostage, Villages, and ample Farmes neere *Adrianople*, called *Ianbola*, are giuen by the *Turke*. To the Dukes, *Caiaks*, *Vlans*, and *Murzies*, and many others which take pay, are giuen constant wages according to each of their estates. Notwithstanding the *Chan* alwayes payes euery yeere to the *Turkish* Emperour Captiues taken in warre of both sexes, the most excellent and precious Furs, and also baser, Butter and Salt, wherewith *Taurica* or the *Peninsula* abounds. And into whatsoeuer warre he shall bee sent or called, he may refuse; neither may hee wage warre with any, but the Duke of *Moscho*, without the Emperour of the *Turkes* leaue or knowledge. The *Chan* exacts annuall pecuniarie Rents from the better sort of Captiues taken in warre, three pieces of Gold; of the raskalitie one Doller, and a tenth of them; but from each of the Fountaines, which are many in his Dominions, in the Plaines of *Taurica*, or the *Peninsula*, one Horse of the *Tartars*; but any necessitie enforcing the *Chan*, all the *Tartars* decree a certaine contribution to him. The *Tartars* Nobles, alwayes at home, and in warre also, yeeld him sustenance of diuers sorts; for hee neither tills nor sowes. Hee hath alwayes proper Herds of Horses, Camels, Oxen, and infinite Flockes of Sheepe. Hee hath a peculiar money of base Copper, which is coyned in *Crimum*, a Towne of his Dominion, round money, whereof tenne are esteemed at a *Turkish* Siluer Asper, which makes one *Polonian* Groat or lesse. But I being present, there were stamped greater Copper money siluered ouer, which was valued at five Aspers. In coyning it he hath a great and plentifull gaine; for in three or foure yeeres, of the same money, which is carried by all the *Tartars* or Strangers into the Mint, new inuented money is alway stamped. For in all *Taurica*, or the *Peninsula*, it is lawfull for none (*Tartar* or stranger) euen in the Cities of the *Turkes* Dominion, vnder a capitoll punishment and confiscation of goods, of what estate soeuer hee bee, to exchange *Turkish* pieces of Gold, or the Doller of Strangers, or the *Turkes* Siluer Asper into *Tartar* coyne of the other value. Neither is it lawfull to buy with Gold or Siluer coyne, but *Tartarian*, which all strangers (none excepted) perpetually receiue by the *Chans* Edict.

Prouifion for warre.

When the *Chan* is about to go to any war, he first signifies to all the *Tartars* of his Dominions by the Seruitors of his Court, and commands them that they prepare themselves for war, within three (or at the most) in foure weekes, and that they prouide for themselves victualls for three or foure moneths. That sustenance is carried in Leather-bags, and those Bags among the Gentlemen are carried on Horses. And they carrie with them food of Millet parched in the fire, or stamped, or ground; for they haue Mills, and thereof steeped in water, the most make meate or drinke. They carry Cheefe and Flesh, and Mares-flesh dried in the Sun: they cut them in pieces boyled or drie, and taking out the bones put them in Sackes. They liue with Mares-milke and Cheefe, and sowre milke, which they tempering with a certaine Art, hold an excellent food. The *Chan* hath only one Chariot with him for any danger of sicknesse; also a few Camels, whereon is carried for his owne person *Aquanita*, or some other prouifion wherewith he is easily satisfied. But the *Tartars* seuerally set meat before him and his Courtiers, the gentlemen (yet very few of them) not seldome carry a little drie bread, and a little *Aquanita* on Camels, or in lighter Carts.

Manner and Art of warre.

But after the *Chan* hath determined any warlike Expedition, he prepares very speedily some exercised men in an indifferent number, and chooseth them sometimes *Tartars*, but more frequently *Cercasians*, *Petigorens*, and those which are accounted spies of Regions and Prouinces of other Princes, and expert Way-leaders, they verie well know each particular passage of Places and Borders, and Fords of Riuers. And when they come into the Marches, they goe into the neere confining circuits, and each in sundrie places view all things, and diligently seeke for Captiues, which when they haue intercepted, they returne with them speedily to the *Chan*, of whom, vsing interrogatories, the *Chan* quickly is acquainted with the estate of those Prouinces where his skouts haue beene. Forthwith therefore hee assigns the day of progression to the *Tartars*, wherein hee stirres alone, and premiseth speedily some seruants of his Court, through all that Hord or Prouince. They constraine and inforce to goe to warre and follow the *Chan* all *Tartars* and *Christians* of his gouernment, men and youth, if they can but sit on horses (besides impotent old men and children) who although they want Armies and Horses, yet are accommodated by the welthier in hope of spoyle. But in eight, or at the vtmost in ten dayes after the *Chans* departure, al of them follow him into certain new defined places, which are beyond *Perecopia* toward *Boristhenes*; the *Galga*, *Soltans*, *Dukes*, *Murzies*, & the most approued valiant and chiefe Warriours

Warriours and Souldiers, being gathered and conuocated together : and they being called to his Councell, first the later Captiues and priue Searchers also are examined, at length they suddenly consult of the seasonableness of time, places, occasion of well ordering the matter, and whether the warre be then commodiously to be prosecuted. And mutuall consent and counsell being made and determined ; yet none of these things is confusedly diuulged to the multitude.

From the same place therefore the Ministers of the Court of the *Chan*, *Galga*, and *Soltans* going before the companies of the Dukes, *Murzons* and other *Tartarian* Nobles (which they lead and rule according to the ancient claime of their kindred, and call them by various appellations in their Language) the *Chan* moues the Armie vnder the Ensignes, following in a meane order after the ancient custome of the Nation: but after they haue set foot in their enemies Land, againe he sends before a certaine number of the most experienced and skilfullest Espials. They goe before the Armie, and send backe to the *Chan* whatsoeuer Countreymen or others they shall take and meet with ; from whom hee may bee certified of the condition and armie of the enemies. But when the *Chan* is certainly informed that no armie of enemies comes out against him, he againe makes a Campe-councell with his Nobles and Peeres, how farre and wide he ought to endamage his enemies Dominions. Then at length he goeth slowly forward in a perfect order with all his Hoast, and commands vpon penaltie of their heads to kill all the obuious Rusticks, lest after they should be taken by the *Tartars*, they should peraduenture make an escape; and certifie his enemies of his bands to the hurt of his men. Moreouer, they kill not women nor children, nor lay hold on them, nor dare lay hands of any of the prey, lest his armie should be surcharged with it, and cause some stay in his proceeding.

But when the *Chan* comes with his armie to the Castles, Townes, Villages, Hamlets and manured places, he elects ten, or at the most fifteene thousand Souldiers with their Dukes, *Murzons*, and chiefe of his Court, and most notable, best tryed, and principall men of Armes of all his Hoast, and leaues them in his owne iurisdiction in his standing Campes, or in the siege of some Fortresse ; then he makes ready the *Galga*, other *Soltans*, Dukes, *Murzons*, and the rest of the Armie, which then is mustred some thousands. And that Armie being spread abroad in diuers bands, ouer each of which the best esteemed and ablest men are made Captaynes, is extended in longitude more then ten miles, and in latitude as much. And as they assemble among themselves at the farthest in seuen or eight dayes, but at the soonest in three or foure running about in troupes through diuers places, and leading straying preyes, and wasting with fire and Sword whatsoeuer they meet with, returne to the Campe : but if they come not backe at the prefixed day to the fortified Campe, they waite not for them, but all the Armie with wonderfull celeritie moue in their arrayes, out of the standing Campe.

And when as then also the *Chan* is truly signified that no Armie pursues him ; he prouides for places not medled with by his troupes, an Armie of some thousands of selected Horsemens, and as yet vnwearied. He employes as many more also in ambushes in diuers places neere the Townes and Castles obuious to the *Tartars*, lest that Armie might without delay fall into the lying in waite on any of their companies. But if he bee certified by his Scouts of any numerous hoast of Enemies, he neuer commits the matter to an vniuersall fight, but goes forward slowly and cautelously with his bands: but if the *Chan* be certainly assured that the Troupes of his Aduersaries are many and valiant, he retires a little, and seekes for the better husbanded and peaceabler places, and with wonderfull agilitie in his precipitious flight, spoyles them with fire and sword, and intends to returne home with the bootie that hee had hastily driuen away. But if then hee hopes his enemies cannot ouertake him, he marcheth with his Armie, yet not too securely, almost in the order to his confines.

But assoone as the *Chan* is entred into his Borders, he takes the tenth of the principall Captiues throughout all the Armie. But the Captaynes of companies, and they which haue brought a greater number of captiues, cull out of each Band the principall for themselves. The other *Tartars* of the promiscuous multitude diuide the Prisoners among their troupes. Notwithstanding before they come to that partition, they first satisfie all those which running about by Bands haue lost Horses, Garments, or any thing else. They sell to the *Tartars* both Noble and Ignoble captiues, if they shall appoint no price whereby they may free themselves, because the *Chan* being viciated with the Merchants gifts hath set a great value on them.

The condition of captiues is very miserable among the *Tartars*, for they are grievously oppressed by them with hunger and nakednesse, and the Husbandmen with stripes, so that they rather desire to dye then to liue. Many of them moued with the present calamitie, and follie, tell the *Tartars* that they are Gentlemen, and haue wealthy and rich parents and friends. They promise of their owne accord a great and almost inestimable ransom, which the barbarous, impious, couetous, hungry, and cruell Nation seekes almost daily to increase with all kind of subtilties and Examinations, tyes them in fetters, vseth them therefore more hardly. But when they vnderstand that an Agent of their people is come to the *Chan*, they meete him with their captiues, of whom sometimes they require the price falsly nominated by themselves, or some-

The Chans tenth.

Miserie of Captiues.

Manner of
redemption.

*Ars deluditor
Arts.*

times promised by the Prisoners: but the Agent who wel knowes the craft and deceitfulness of the *Tartars*, finds fault with the captiues foolishnesse, and tell the *Tartars* that they are neither noble nor rich, and that they knew not, nor will euer be able to pay the price, and as though they were neither moued with Pietie nor Religion reject them. Yet the Agent is diligent that they be inscribed in the Catalogue, and if they haue a purpose to ransom any with their own mony, they hold it expedient to suborne *Jewes* or *Tartars*, and other Merchants being corrupted with mony: by whom, being as it were neglected and rejected by the Agent, they are releated at a far easier rate. Nothing therefore is more frequent to the captiues, then to promise and offer to the *Tartars* this price, for which they are sold to the *Turkes*, *Jewes*, and stranger Merchants, and others beyond the Sea, or a little more, or twice so much, if they bee able to performe it: but if they cannot learne of the Rustickes or others what they are, as the *Tartars* are for the most part, went often to enquire of their captiues, they are content with little. Neither doe they sell them to strangers, but rather to the Agent of their Nation: but if they are not redeemed by the Agent, they command them to write to their Parents or Kinsfolke. Also many captiues are deliuered with the exchange of *Tartar* captiues, in prouiding for and freeing of whom, the *Tartars* exhibite and shew farre greater pietie, friendlinessse and care, then our *Christians*. For disrepecting all price, they first demand their *Tartar* captiues in exchange of ours, which often promising the same and not able to performe it, vse to bring vpon themselves a farre greater discommoditie. For they aske of them almost an vnualuable summe, wherewith they prize their *Tartars*, which when they are not able to pay, they sell them to barbarous Nations ouer the Sea for perpetuall slaues, for as great a price as they can, and very often at an excessiue rate, or if the *Tartars* are wealthy, they condemne them to perpetuall slavery.

The *Chan* hath all his *Tartar* Armie gathered of Horsemen, except some hundred Gunners *Ianizaries*, Footmen, which are either *Turkish* Auxiliaries, or some of his owne which he maintaynes. He is accustomed to carrie with him some smaller Ordnance to warre. From *Taurica* or the *Peninsula* the *Perecopens*, and *Crimis*, *Ossouiens*, *Nogariens*, *Cerceessians*, are Tributaries and Souldiers for aide, the Duke of the *Cerceessians*, *Petigorens* are Stipendiaries and Mercenaries, and are wont to goe voluntaries to the *Chans* warres. The *Oczacouiens* and *Bialogrodens*, also they who by the continuall couenants which they haue with the *Turkish* Emperour, sometimes also the *Dobruccen Tartars* and Inhabitants of *Dannubius*, by the command of the Emperour of the *Turkes* follow him to warre. All that Hoast collected out of those *Tartars*, is wont to make the number of a hundred and twentie thousand, sometimes also thirtie thousand more, but not seldome to exceed that Summe. I haue bin truly informed by many credible *Christians*, which often follow the *Chans* warres, and by some captiued Gentlemen of our Nation, who haue many times seene his Armie.

Their Horses.

All haue according to their vse *Tartarian* Horses, neat, excellent, stomackfull, swift, and indifferent good and commodious to vndergoe great labours. The *Chan*, most of the *Soltans*, and *Tartar* Nobles vse in warre *Turkish*, *Caramanian*, *Arabian*, and other *Asian*, *Tartarian*, and the best Out-landish Horses. The swiftest Horses are accounted among them at a great and almost inestimable price. They alwayes feed them Summer and Winter in the Plaines of *Taurica* or the *Peninsula*, but very often as farre as the Riuer *Boristhenes* and *Tanaïs*: the Gentlemen nourish at home very few Horses, only for their vrgent occasions, not for any arrogancie or luxurie. They seldome put their Iades and vnprofitable Horses for riding in the Waggon, for they doe all their businesse with Camels and Oxen.

Their Armes.

The *Tartars* vse their ancient weapons, a two-edged Sword, or *Tartarian* Cymiter somewhat long, and a *Turkish* Dart, or a *Persian*, shorter and broader of the best Iron, and well wrought; a peculiar *Tartarian* Bow, a long Arrow, and swift, a *Quiuer*, sometimes a short Speare after the old guise of their people. They goe with Brest-plates and Helmets, and in *Persian* or *Moscouian* Armes, wherewith they abound being enriched by the spoyle of *Christians*. They haue ancient Saddles and Bridles after the custome of the Nation, very fitting, not for pride or superfluitie: the Nobles haue them prepared very elegantly, strongly and compendiously for their vse. But most in the *Tartar* Armie are altogether vnarmed and cowards, and they carrie with them to warre by reason of their great Hoast, almost an infinite number of Horses. For a *Tartar* euen of the basest condition will scarcely be content with one or two Horses, but three, foure, and more, which he may haue alwayes readie with him at his hand. Therefore the Armie of the *Tartars* is made so numerous, great and terrible, which when it is seene as farre off, is deemed by our men almost an infinite and innumerable Hoast.

Store of Horses.

Now when the *Tartarian* Armie is come into their enemies Country, the *Tartars* ranke not themselves in bands or troupes, but all set forward and proceed leisurly. They dispose many Watchmen in all parts throughout their companies, which they make greater or lesser for their supply, but after that the foremost of them haue descryed their enemy, they counterfeite a flight, that they may more easily allure them into those troupes, which they haue laid in ambushments, and

Flight fayned.

and so ouer-charge him. But when they espie a great Armie of enemies, they make a retraite quickly and speedily to their Armie, Rankes, and Banners.

There is great celeritie in constituting and gouerning their troupes, seeing that they are not ruled onely by the aduertizements of the Generals and Praefects of their Regiments, but also by the shew of Whips, as is the long continued practice of the Nation: and they are subject so to a becke, that they are very easily brought into their Ranges, whensoever it is necessary.

The Chan is alwayes fortified in warre, with a band of some thousands of noble and courageous Tartars in number, some hundreds of Janizaries, Footmen, and some small Ordnance. In the Chans Regiment a very great white Mares tayle, and a piece of Greene and Red Silke of the Turkish Emperour is carryed before on a great Pike for the Standard. There appeare in the troupes of the other Tartars, many Ancients and Ensignes of various colours.

Their Discipline.

His strength. The principall Ensigne a Mares tayle.

The more famous Souldiers, and they which are notable in reputation, dexteritie and warlike Prowes, and haue archieued in warre some Noble Seruice and Enterprize, are greatly honoured by the Chan, Soldans, Kiniazons, and Murzons. And that respect is had to them, that the Chan doth not only reward them with certayne great beneficts and such liberalitie, as he can shew them, but also is so mindfull of their deserts and merits, that he assignes them and their successors in the Assembly, and as the fashion is, at his Table a perpetuall place of honour among his more noble Murzons. That dignitie among the Tartars is the greatest, and Hereditary, for they going to warre able and experienced men which possesse that place, are dignified by the Chan, with the glorie of leading the Troupes. The Chan also frees some Tartar captiues with the permutation of captiues, and in ransoming others he largely powres out his owne Treasure, and willingly comforts them as he is able.

CHAP. XXII.

DITHMAR BLEFKENS his Voyages, and Historie of Island and Groenland.

IN the yeere 1563. two Hamburg Merchants ships determined to sayle to Island, the Mariners, by an ancient custome, desirous to haue a Minister of Gods Word with them, commend this care to the Ministers of the Church of Hamburg, and intreat them to prouide them a Minister. One Doctor Paulus ab Etzen was then Superintendent of the Church of Hamburg. While therefore I stayd at Hamburg, expecting my Library from Rostoch, I entred into some familiaritie with Paulus, and the rest of the Ministers. This Office was bestowed vpon me, which I vndertooke the more willingly, because I had a longing desire to know strange things, and diuers Countries, yeelding to their perswasion. Taking ship therefore the tenth of Aprill, wee sayled vpon the Coast of England and Scotland, and passing beyond the Ilands Orcades, in number fifteene, whereof the most part lye vnmanured for the barrenesse; Ferow and Hitland are inhabited: Here wee saw a very high Rocke, which in the top representeth the head of a cooled Monke, where also there is a safe Harbour against all winds, and this Monke deliuereth many from present dangers. The fourteenth of Iune we descryed Island, which seemes as farre off, like winter clouds. The next day we attayned the Land and Hauen of Haffensford toward the South.

He published this Booke Anno 1607.

Island is a rough, hilly and snowie Land, which is supposed to bee twice bigger then Sicilia: it is thought to be a hundred leagues in length, which also Olans Magnus testifieth in his eleuenth Booke. It hath the name of the perpetuall Ice, and coldnesse of the Ayre, which is there most sharpe: for eight whole moneths it is troubled with Ice: It burneth notwithstanding with heat and inward fire in many places. The extremitie of cold increaseth this heate in the bowels of the earth, which cold continueth the greater part of the yeere (a few Summer moneths excepted) and so bindeth the pores in the vpper part of the Earth, that it can haue no free vent. And this Island hath so great a Latitude from the Equator, that the Arctick Circle diuides it in the middest, that is to say, sixtie five degrees and a halfe. The Ilands called Ebuda, are obiect to the North part of this Island. But whether that be of these, which Ptolemie, and ancient Writers call Thule, or rather Iseland, that great Island, I dare neither affirme, nor altogether denie, because there is no Island found where Ptolemie set Thule. Now, the later Writers make another manner of longitude about Scotland, and the bordering Ilands, then Ptolemie euer thought.

I will draw the Descent of this Nation from their first originall, following the truth of the Iseland Chronicles. In the yeere of Christ 900. in the time of Alebrand Bishop of Breme, certayne of the Nobilitie of East Frisia, and of the Countrey of Breme, desirous to discouer strange Countries toward the North, set sayle from Weser, and passing beyond the Orcades, found this Island almost in the vtmost skirts of Europe, yet habitable, but full of Snow: which they called Iseland, for the coldnesse and roughnesse thereof. And when they had sayled further towards the North about two hundred leagues, they found another Island, which (by contraries) they

Of the Iselanders Religion.

IN the yeere of Christ 1398. *Woldemarus*, the second of that name gouerned the *Danish* Kingdome, whereunto *Norway* was added, whose posteritie held it, vntill *Ericus* Duke of *Pomerania*, and *Christopher Banar*. Vnto this *Waldemar* all the *Aristoian* Colonies obeyed, so that now, vnder that *Woldemarus*, the *Iselanders* were first instructed in the Christian Religion, when before they had worshipped strange Gods. And when almost all Christian people, in that lamentable darknesse and title of a Church, as it were by Witchcraft deceiued, were detayned in most deepe bonds of superstition; it could not bee but they, who were furthest removed from the societie of Learned men, and dwelling vnder an vnciuill and barbarous Climate, should fall into most foule Idolatrie, when sometimes (as hereafter shall bee declared) they had Deuils to serue them, as familiar as domesticall seruants. But after *Luther* began to bee knowne, *Christianus* the King of *Denmarke* procured purer Doctrine to himselfe, and purged the Churches in the Kingdome of *Denmarke*, *Norway*, and all the Ilands subiect vnto him; sending Ministers into *Iseland*, to sow the seede of the Gospell there. Hee sent a Printer also out of *Denmarke*, to set forth the Bible, the common places of *Philip Melancthon*, the Workes of *Urbanus Regius* and others, in the vulgar Tongue, to the Pastors who were ignorant of the *Latine*, as at that time almost all of them were. And also sent for fit and apt young men out of *Iseland*, whom hee maintayned in the *Haffnian* Vniuersitie at his owne costs, and gaue them charge ouer Churches and Schooles.

The Christian care of King Christian.

King *Woldemare*, as soone as they should professe *Christian* Religion in *Iseland*, ordayned them two Bishops, one in *Scalholden* in the East part, and another in *Hollen* in the West, whose Successours at this day retayne nothing but a shadow, and a bare Title, for they haue no other reuenues but Butter and Fish. But when that reformation (whereof I spake) was made by King *Christian* in the Churches of *Iseland*, one of the Bishops in *Scalholden*, conspiring with the people, reiects the Doctrine of the Gospell, and making a rebellion they kill the Kings Lieutenant. The yeere following, which was 1535. the King sent a Noble man of the Order of Knighthood, one *Paul Hirselt* (whom I saw an old man in *Denmarke*) furnished with a Fleet, Souldiers, and Munition into the Iland. The seditious being slaine, hee renueth the reformation of the Doctrine of the Gospell, and returneth into *Denmarke*, leauing a certayne Noble man to take charge of the Church and Iland.

Two Bishops in Iseland.

The greatest man in *Iseland* at that time was one *Tadde Bonde*. Hee, after the Kings Armie was departed, conspiring with the principall men (whom by his Authoritie hee drew to take his part) revolted from his Allegiance, and perswaded the rest of the Ilanders to follow. They meete together in a place called *Waloec*, and conspiring to rebell, and cast off the Kings subiection, they impart their counsels together, and *Tadde* had his possessions not in one place, and many re-tayners, and for these causes hee thought they could not easily bee suppressed. The Bishop who dwelt in the East, had a speciall care to acquaint the Kings Lieutenant with all that was done (for the Lieutenant was absent in the West part of that Iland) and the Bishop hated *Tadde* a long time. For in that first Rebellion, hee had fallily accused him to the Lieutenant as guiltie, and author of the Rebellion. This accusation onely brought great and extreame calamitie vpon him.

Tadde Bonde.

Waloec.

The Lieutenant being certified what was done, hee perswadeth by fit instruments, some of the Complices of the faction, to continue in their Allegiance, propounding rewards and punishments. Then many of them when they saw the greatnesse of the danger, leauing him, came humbly to the Lieutenant, and begge pardon, and obtayne it. *Tadde* therefore is adiudged an Enemy, both of the King and of his Countrey, they promise therefore by an Oath and giuing of their Faith, that they will pursue him. Then hee, through feare of the danger, with a few of his Domestickes which hee had gathered together, kept himselfe at the foote of *Hekelued*, but being circumuented they were all slaine, and hee taken. They that tooke him, brought him to the Bishop, to commit him to Prison, but hee refused to receiue him. Therefore they draw him to another certayne man. of those who had the chiefe place in Iustice, neither would hee receiue him, fearing the hatred of the people. There was at that time there a certayne *Iselander*, *Ionas* by name, a man of courage. I know (sayth hee) to whom I will commit him, that will diligently keepe him, and forthwith hee slew him and buried him. And so the Sedition was appeased. And from that time vntill this day, the Word of God is taught amongst Barbarous men, after the manner of the Coufession of *Augusta*.

The Life and Manners of the Iselanders.

IN the whole Iland, there are three sorts of men, who are held in any reckoning and account: Three sorts of people. For the common people, by reason of the scarcitie of Ships wherewith they fish, make themselves slaues to the richer. Of those three sorts, the first is of them whom they call *Loeshmaders*, that

- that is to say, *Men of Iustice*: for *Loch* in their language, signifieth *Law*. These men administer Iustice, and there are many of them, but twelue of them onely haue the yeerely charge of Iustice. All men obey their Iudgement and Decrees. Another sort is of them, who are called *Bonden*: They are in the place of Nobles, and as euery one of them is richest in Shipping, and Cattle, so hee hath most Fishers, and followers. This onely power they know. The third sort is of Bishops and Ministers of the word of God, of the which many are found euery where throughout the whole Iland.
- Twelue Iustices each yeere** 10
- Strength.** There are many of the *Islanders* very proud and high minded, especially by reason of the strength of body which they haue. I saw an *Islander*, who easily put an *Hamburg Tunne* full of Ale to his mouth, drinking off it as if hee had had but one small measure.
- Habite.** Both Sexes in *Island* haue the same habite, so that by the garments you shall not easily discern whether it bee Man or Woman. They want Flaxe, except it bee brought vnto them by our Countrey-men. The Women-kinde there are very beautifull, but ornaments are wanting.
- Superstition and Witchcraft.** The whole Nation of the *Islanders* is much giuen to Superstitions, and they haue Spirits familiarly seruing them. For they onely are fortunate in Fishing, who are raised vp by night of the Deuill to goe a fishing.
- Night Rauens.** And although the Ministers of the Gospell vse all diligence in dissuading them from this impietie; yet this wickednesse hath taken roote, and sticketh so deeply in their mindes, and they are so bewitched of Sathan, that they can admit no sound Doctrine and Dehortation. Yea, by the Devils meanes, if you offer them money, they promise a prosperous wind and performe it, which I know, as hereafter shall bee spoken. *The like* Olaus Magnus *wructh of the Finlanders in his third Booke*. They hold Ships also by inchantment almost immoueable, and that in a prosperous wind.
- Sweet sacrifice for the Deuill, letice surable his lips.** And truely it is a wonder that Sathan so sporteth with them. For hee hath shewed them a remedie in staying of their Ships, to wit, the Excrements of a Maide being a Virgin: if they annoynt the Prow, and certaine planckes of the Ship, hee hath taught them that the Spirit is put to flight, and driuen away with this stinke.
- Learning.** In the rest of the carriage of their life, they thus behaue themselves. The Parents teach their male Children (euen from their child-hood) letters and the Law of that Iland, so that very few men are found throughout the whole Iland, but they know Letters, and many Women vse our letters, and haue also other characters, with the which they expresse some whole words of theirs, which words can hardly bee written with our letters. They giue themselves to hardnesse, and fishing from their Infancie; for all their life consists in Fishing. They exercise not Husbandrie, because they haue no Fields, and the greatest part of their foode consisteth in Fish, ynsauerie Butter, Milke and Cheese. In stead of Bread they haue Fish bruised with a Stone. Their Drinke is Water or Whay. So they liue many yeeres, without medicine or Physitian. Many of them liue till they bee one hundred and fiftie yeeres old. And I saw an old man who sayd hee had then liued two hundred yeeres. Nay, *Olaus Magnus* in his twentieth Booke sayth, that the *Islanders* liue three hundred yeeres.
- Fiwing & fish. Drinke.** The greater part of *Islanders* hath neuer scene Bread, much lesse tasted it. If our men at any time sell them Meale or Corne, they mingle it with Milke, and lay it vp for a long time, as delicacies for Nobles. They call this sauce or mixture, *Drabbell*.
- An old man or a loud lie.** The *Germanes* that trade in *Island* haue a place in the Hauen of *Hessensford* fenced by Nature, where vnder Tents they set their Merchandise to sale, as Shooes; Garments, Glasses, Kniues, and such kinde of Merchandise of no price. The *Islanders* haue Oyle molten out of the bowels of Fishes, knowne to our Tanners and Shoemakers: they haue Fish, Brimstone, white Foxe skinned, Butter and other things. They barter all these for our Commodities, nor is the bargain ratified, before they bee well stuffed with our Meat, Wine or Beere, together with their Wiues and Children whom they bring with them, how many soeuer they haue.
- Bread.** Comming into the Hauen, they haue their Daughters with them which are marriage-able: they after they haue inquired of our companie, whether they haue Wiues at home, or not, they promise a nights lodging for Bread, Bisket, or any other trifling things. Sometimes the Parents yeeld their Daughters freely, euen for a whole moneth, or as long as they stay. If shee prooue with Child by that lying with her, the parents loue their Daughter better then before, and the Child being borne, they bring it vp some yeeres, while either the Father returne, or they giue it to their Sonne in law that shall bee, for a Dowrie with their Daughter, who doth not despise it, because it is borne of the *Germane* blood. If any Virgin haue familiaritie with a *Germane*, shee is honoured among them, and therefore shee is sought of many Suiters. And the time was before this, that Whoordome, which was without the degrees of Consanguinitie and Affinitie, had no Infamie. And although Preachers crie out against it, and the offenders are seuerely punished, yet they hardly abstaine.
- Whoores.** They lay not vp Wine and Beere which they buy of our Countrey-men, but quasse it vp house by house by course one with another, and that freely or for nothing. While they drinke, they sing the heroicall acts of their ancestors, not with any certaine composed order or melodie, but as it commeth in euery mans head. Neither is it lawfull for any one to rise from the Table to make

make water, but for this purpose the daughter of the house, or another maid or woman attendeth alwayes at the Table, watchfull if any becken; to him that beckeneth shee giues the chamber-pot vnder the Table with her owne hands; the rest in the meane while grunt like Swine, least any noyse bee heard. The water being powred out, hee washeth the Bason, and offereth his seruice to him that is willing, and hee is accounted vnciuill who abhorreth this fashion. They entertaine them that come vnto them with a kisse, and they behold and looke each on other, if paraduenture they may see Lice creeping on their garments, which greatly trouble them for want of linnen: if thy see any, each taketh them from the other, and as often as he taketh away one, so often doth he thanke him, with his head discouered, and this they doe one to the other, as long as they see one.

Louing
wormes.
Lousie louts

- 10 By night the Master of the house, with all his family, his wife and children lye in one roome, Lodgings
couered with a cloth made of Wooll which they make. And the like clothes they lap vnder them, without straw or hay put vnder. All of them make water in one chamber-pot, with the which in the morning they wash their face, mouth, teeth, and hands; they alledge many reasons thereof, to wit, that this makes a faire face, maintaineth the strength, confirmeth the sinewes in the hands, and preserueth the teeth from putrifaction. If Catle perishe in the waters or snow (which often commeth to passe) they say, they are killed of God, and are accounted among the delicacies. And it happened in the yeere 1564. in a place called *Ackermisse*, that in the month of Ianuary some Kine strayed in the darke, and the fogge was so great, and the depth of snow, that they could not be found. In the moneth of April they were first found vntainted, and without any euill smell, and being distributed among the neighbours, some part was brought to the Gouvernour, with whom I liued at that time, which was not lawfull for him to despise, yet he commanded it to bee giuen to the poore.

- 20 In the Winter time, before and after the *Solstitium*, when the Sunne declineth, and being in *Sagittarius*, *Capricornus*, and *Aquarius*, it departeth from them, neither doth it ascend about the Horizon, while it touch *Pisces*, therefore they haue no light but of the Moone and Starres. In like manner about the Summer *Solstitium*, when the Sunne ascendeth to *Gemini*, *Cancer*, and *Leo*, it neuer goeth downe vnder the Horizon, therefore at that time they haue no Night. In the Winter time, they keepe their Beds many dayes, and exercise themselues in the game of Chessie, Chessie.
the inuention wherof is due to *Xerxes* the Philosopher: the meane while the seruants bring them
30 their meate dressed to their beds. They keepe Lampes of the oyle of Fish continually burning, others burne Tallow candles.

- In the moneth of Februarie, as soone as the Sunne ascends about the Horizon, by little and little the dayes grow longer, then they begin to Fish, whereof there is so great plentie, that it is scarce credible; for the Fishes which for three whole moneths swamme in the darke, as soone as they see a fish of Tinne fastened to an Iron, they ranne to it in schoales, that they are not onely drawne vp by the jawes, but wherefoeuer the Iron toucheth them. Hauing taken them, they plucke out the bones, and lay vp their bowels, and make Fat or Oyle of them. They heape vp their Fish in the open ayre, and the puritie of the ayre is such there, that they are hardened onely with the winde and Sunne, without Salt, better surely then if they were corned with salt.
40 And if they kill any Beasts, they preferue the flesh without stinke or putrifaction, without salt, hardened onely with the winde.

Dryed Fish

Of the wonderfull standing Pooles, Lakes and Fountaynes in Iseland.

- IN diuers places almost throughout the whole Iland, are Bathes and scalding Fountaynes, which flow out in great abundance. This water as soone as it begins to coole, hath a Sulphurie substance in the top thereof. In these scalding waters, wherein I could scarce dippe my finger, red Diue-doppers are seene afarre off, if you come neerer, they vanish, if you depart, they appeare againe, so all day long (if any please) they play boe-peepe with men. Whether they bee Diue-doppers indeed, I leaue it to others to decide.
50

Hot Bathes.

Diue-doppers.

- At the West of this Iland, there is a huge smoakie Lake, and very cold, which turneth all things that are cast into it into stones, and that in few dayes, and (which is worthy of great admiration) if you put a stick vpright into the bottome, the lower part which is flucke into the earth, hath the resemblance and hardnesse of Iron after two dayes, that which was in the water hath the hardnesse and shew of a Stone, the vpper part which remayned about the water, keepeth his wonted forme: And I twice proued the truth of this thing, but when I put the lower part (which represented Iron) to the fire that it might melt, it burned like a Coale.
60

Stone-making water.

Note.

- There are two Fountaynes of most different qualitie, in a place vpon the Sea coast, which is called *Turlocks* Hauen, the one cold, the other hot; these Fountaynes by pipes are drawne into one place, and tempered for bathing, they make a most wholesome Bath. Not farre from these Fountaynes, there is a certaine other Fountayne, which bubbles foorth liquor like Wax, which notably cureth the French disease, which is very common there.
60

French disease

Not farre from the Hauen *Haffnesforde*, there is a cleft in a Rocke like to a Fountayne of vnmeasu-

measurable depth. If you looke into it, you cannot see the water, but if you cast in a stone, halfe an houre after you shall heare it falling, as if it fell into brazen Vessels, and forthwith the water ariseth, and it is filled to the top of the Wels brimme, and it is a most cleere water, which notwithstanding no man dare touch, nor taste, neither doth it flow out, but so long after, as the stone which is cast in, sinketh to the bottome. There is another Lake in the middle of the Iland, which casteth forth a pestiferous fume, insomuch as it killeth Birds flying ouer it with the poyson thereof.

Of the wonderfull Mountaynes in Island.

There are three Mountaynes in *Island* very admirable, the one is called the Mountayne of the *Crosse*, the other *Snenelsjockell*. These two pierce the cloudes with their heigh, whose heads, or tops no man euer saw, nor are they euer seene without Ice and Snow; in those, Lightnings and horrible Thunders are daily heard, when neuerthelesse, in the neighbouring Valleyes the Aire is faire and cleere, as in Summer time. The third Mountayne lyeth on the North of the Iland, and not very high, but it hath burned very many yeeres; with what fire or matter, it is vnknowne; but seeing Brimstone is digged out of the Earth throughout the whole Land, it seemeth, that the Sulphurie matter is sometime inflamed. This Mountayne is not farre from the Sea, and the Sea on one side beates vpon it: it is called *Hecla*, sometimes it casteth forth flame, sometimes fierie water, then blacke ashes and Pumis stones, in so great abundance, that it darke-
neth the Sunne. No man also can dwell neere it by fixe mile, neither are there any pastures about it. Sometimes bold men, and such as regard not their liues, cast stones into the hollow places; for sometimes there is a wonderfull calme in the Mountayne; especially when the Westerne wind blowes, it casteth backe the stones flung into it with an horrible noyse and sound: the common people thinke the soules of the damned to be tormented heere: it is certayne that diuers and horrible spirits are obserued in this Mountayne and about it; for if a Battaille be fought in any place, the *Islanders*, especially they that sayle and fish in the Sea neere to *Hecla*, know the day of the Battaille fought, although they know not where it be done: for they see (as they report) wicked spirits going forth, and returning, and bringing soules with them. And such a storie is reported all *Island* ouer.

Hecla a burning Hill.

Conceit of Purgatorie.

Collusions of men, or Illusions of Devils. Arngimlonas an Islander scoffes at it as fabulous.

A Fisherman sayling by *Hecla*, met with another ship, both had a prosperous wind, and when (after the manner of Saylers) he was demanded who hee was and of what place, hee answered, that hee had the Bishop of *Breme* in his ship, whom hee would conuay to *Hecla*: and it was knowne that the Bishop dyed the same day, which notwithstanding, I would not set downe for truth. If any perish by Sea, or otherwise dye, sometimes leaving their Friends and Acquaintance, they appeare very heauie, being demanded whither they goe, and from whence, they answer they are brought to *Hecla*, vnder a cruell Master the *Denill*, and so vanish. And they are so bewitched of Satan, that they thinke them the soules of the departed.

But because no man that is well in his wits, will thinke that Hell is in this Mountayne, yet it may be demanded, whence the Hill hath this matter, whereby it should bring forth so many yeeres flames, so many ashes, and such abundance of Pumis stones? For wee see the most solid and firme bodies, and all things to be consumed by fire: and for that cause some thinke, that it shall come to passe that these flames shall once be extinguished: for the cause sayling, they deny that any effects can follow. But heere (what I thinke) I will freely speake, yet sauing other mens judgements. It is manifest by watry Meteors, that there is a continuall generation of water, by the vapours gathered together in the cauities of the Earth; which issueth forth by Fountayns; but the efficient and materiall causes abiding perpetually, the effects also continually remayne: so also in the bowels of the Earth, there are certayne places, which by their owne nature draw vnto them a hote and dry exhalation, and that it resolues it into flames, ashes, and Pumis stones, which may easily be done in this Mountayne, by reason of the Sulphur matter, which is found in *Island* throughout the whole Land. And as Fountaynes send forth more abundance of water in the Winter time, then in the Summer, nay, some of them are dry, because matter faileth; so is it with this Mountayne: for sometimes matter failing, it hath neither flames, nor smoke, and all is quiet, whereby it appeareth that the matter and efficient cause faile. However it bee, I know this, that no man may come to the foot of the Mountayne without danger and feare, as hereafter shall be declared.

Strange Story.

The same yeere I was in *Island*, the nine and twentieth of Nouember, about midnight in the Sea, neere *Hecla*, there appeared a flame, which gaue light to the whole Iland, so that all of vs astonished, wondred, and carefully expected the issue thereof: the elder sort and such as were skilfull in this matter, said, that this light came from *Hecla*: an houre after, the whole Iland trembled, as it should haue bene moued out of the place: after the Earthquake followed a horrible cracke, that if all warlike Ordnance had bene discharged, it had bene nothing to this terrour. It cannot be thought, much lesse expressed by word, how horrible it was. Wee thought that the whole frame of the World would fall, and that the last Day was at hand: but it was knowne

knowne afterwards that the Sea went backe two leagues in that place, and remayned dry.

About the beginning of Iuly, at a certayn time of the yeere great store of Ice suddenly floteth to the Island about *Hecla*, and there goes a rumour through the whole Island, nay it is beleued, that the damned soules are tormented in this Ice by course, in the Flame, in the Mountayne, and after in the Ice. This Ice for three whole moneths swimmeth only about *Hecla*. If you take any part of this Ice out of the Sea, and wrap it in a linnen cloth, and lay it vp in a Chest, it remayneth so long vnmelted, as it swimmeth in the Sea; but if the Ice in the Sea vanish, which suddenly in one night happeneth, this appeareth not, nor leaueth any signe of moysture in the linnen cloth, which is not a hard thing for Satan to doe, to take away the Ice without moysture, to increase their incredulitie. *Olaus Magnus maketh mention of this Ice in his eleventh Booke.* But because I determined to search out all things diligently, I sayled not without great feare vnto this Ice, and I obserued, that this Ice was violently cast against the Rockes by force of the winds, and so made a mournfull sound afarre off, as if miserable howlings were heard there. Hereupon the *Islanders* thinke the soules of the damned are tormented in this Ice.

Another wonder.

Of the Riches of the Islanders.

I haue said that *Island* was a rough and snowie Countrey, and besides, it is full of Rockes and stones; and so truly, that there is not a field in the whole Island: they haue not so much as Gardens, wherein they may haue Pot-herbes or Pulse: they know no kinde of Corne nor Apples, Peares, nor Cheries, nor any fruit of Trees. And, which is almost incredible, they neither vse Bread nor Salt, yet they are well liking, and strong. There is no Citie in the whole Island: they seldome haue two or three dwellings together. They haue their Cottages on the Sea side for fishing, and vnder ground by reason of the fierce windes.

No fruits.

There is no lone of money among them, for wares are changed for wares. Brimstone groweth on the South part, and almost throughout the whole Island, which is digged out in great abundance: they sell this stuffe purged for a small price. Mines of Gold or Siluer, nor of any other mettall they haue none. They vse Iron, but such as is brought vnto them. You shall scarce finde a man, who hath not Iron Nayles in a Bagge, wherewith Horse-shoes are fastened.

Bartar.

Brimstone.

All their houses are vnder ground, for they haue no matter for building. There is not a tree in the whole Island, except the Birch-tree, and that in ones place, which also exceedeth not the stature of a man in length, and that by reason of the vehemencie of the winds, that it cannot grow higher. This Birch-tree after the Summer *Solstitium* beginnes first to bud, the leaues haue a most sweet smell, and of so fragrant a sauour, that the *Germanes* put them in their Tents, and vpon their meats for a singular delight. Yet sometimes great abundance of Firre-trees from *Tartaria*, or else where carried by force of the waues and the Ice, arriued in *Island*. The chiefe vse of them is in building Cabbins vnder the ground: you shall scarcely find a house out of the earth, by reason of the strong winds, which sometimes ouerthrow Houses and their Riders. They haue great plentie of Butter, for the fatnes of the grasse: for the *Island* grasse is so fat,

Birch-tree.

Great winds.

Fat grasse.

that Oxen after a certaine time are to be driven from the Pastures, lest they burst. And it is of so pleasing a sent, that our men lay it vp in their Chests with singular care for their garments. The most part (for scarcitie of Vessels) lay their Butter aside in the corners of their Houses, (as we doe Lime or other matter) and that without Salt. They haue domesticall cattle, as kine; but many of them are without hornes. All their Horses are amblers & very fit for carrying of burdens. They haue very great sheepe, they keepe not a Hogge nor a Hen, for want of graine, if fodder or hay faile them in the Winter, they feed their cattle with fish. They haue rough Dogs bred without tayle and cares for their pleasure, which they sell deere and greatly esteeme, when notwithstanding they offer their children to any that will aske them, and that freely. Besides, this Island hath white Foxes, and huge Beares of the same colour. They haue no Birds but water-fowle,

Their kine,

horses, and

sheepe.

Dogs of more

price then

Beares and

Foxes.

White Crowes

whereof there are diuers kinds and sorts found there, vnkowne vnto vs. Crowes sometimes are changed white; and excellent Falcons, and some among them white, which being taken and gotten, with the great cost of the *Spaniards* and *Portugals*, are also carried away in great number, which thing was done, while I was in *Island*, to my great profit. *Island* also hath white Partridges. There are also euery where through the whole Island most pleasant Riuer, which yeeld the Inhabitants fish in great plentie, Salmon Trowes, and Sturgeons. There is one only bridge in all the Island, made of the bones of a Whale. They that goe from one part of the Island to another by the Continent, haue no way which they may follow, for the solitarinesse thereof: but as Saylers in the Sea, so they by the helpe of the Load-stone performe their journeyes. The depth of the Sea neere *Island* is very exceeding. In these gulfs there are Whales of wonderful bignes, and many

Riuers.

Whale-bone

Whales.

Sea-monsters which cannot bee killed or taken of men, the Ice only through the force of the winds dasheth them against the Rockes, and killeth them. I saw such a Monster cast vpon the shoare dead, whose length was thirty ells, his heighth more then a very long Warlike Pike.

A Whale being dead or killed, the Inhabitants make Buildings and Dwellings of the bones thereof with great dexteritie and skill, they make also seates, benches, tables, and other

Huge Whale,

Note.

Orca.

vtensils, smoothing them so that they seeme like Iuery. They that sleepe in these houses, are said alwayes to dreame of shipwrack. And although it bee a huge and fearfull creature, and haue great strength, yet notwithstanding oftentimes he is not onely withstood, but overcome of his capitall enemy (not so great) which is called *Orca*; this fish hath the shape of a ship turned vpside-downe, and vpon his backe very sharpe and long finnes, wherewith hee woundeth the soft of the belly of the Whale, and killeth him, and the Whale so feareth this fish, that in shunning him, he often dasheth himselfe against the shoare.

A Sea-monster.

The *Island* Sea hath a Monster also, whose name is vnkowne. They iudge it a kinde of Whale at the first sight, when hee shewes his head out of the Sea, hee so feareth men that they fall downe almost dead. His square head hath flaming eyes, on both sides fenced with long hornes, his body is blacke, and beset with blacke quills; if he be seene by night, his eyes are fiery, which lighten his whole head, which he putteth out of the Sea, nothing can either bee painted or imagined more fearfull. *Olaus Magnus* maketh mention of this Monster in his twentieth Booke, and saith, that it is twelve cubits long. Such a Monster at that time tore in pieces with his teeth a Fisher-boate, wherein there were three Fisher-men, so that they were drowned, one of them, who held in his hand a little cord, wherewith hee vsed to draw the hooke, and the fishes, laid hold of the boord which floated in the Sea; so he was saued getting out of the bottom vpon the planke and swam forth, and declared this to the Kings Gouvernour in my presence, adding moreouer that he was saued from heauen, that he might get maintenance for his children, who otherwise were readie to perish with hunger, when the other two though married, yet were without children.

Hacfal, another Monster.

Another Monster also is often there seene and taken, of ten or twelue elles long, it is called *Hacfal*, it is all fat; it is taken after a wonderfull manner: they haue a very long pike wherunto they fasten an Iron with a forked point, that it cannot goe backe, vnto the staffe a cord of a maruailous length is fastned; they sticke this speare in the Monster, which swimmeth vnto it for prey, perceiuing a man in the little boates; as soone as the Monster feesles himselfe strooken and wounded, forthwith he hides himselfe in the Deepe, and there (his blood being powdered out) dyes, afterward the Fishers draw him to the land by the long cords fastned to the speare.

Dog-fish.

Besides, it hath diuers Sea Monsters: a Dogge fish, which putting his head out of the Sea barketh, and receiueth his whelps sporting in the Sea againe into his belly, while they come to more growth. It hath Horses and Kine, and what not? and it is a maruell, how skilfull Nature sports, in expressing the shape of all earthly Creatures and Fowles in the Sea. Neither should any man perswade me that these things are true, although ten *Aristotles* should affirme them vnto me, vnlesse I had seene most of them with mine eyes. Let no man therefore presently cry out, that what he knowes not is fabulous.

Note.

The men of *Lubeck*, *Hamburg*, and *Breme*, were often wont to goe to this land, and leaue their seruants in the winter lodgings; but now it is provided by the Kings authoritie, that no *Germaine*, either by reason of trading or learning of the language, leaue his seruants there in the winter; but vpon what occasion this came to passe, the matter standeth thus. In the yeere of Christ 1561. there was a Citizen of *Hamburg*, one *Conradus Bloem*, left by an other in *Island* in the winter lodgings with the Bishop in *Scalholden*, for trading and learning of the tongue: the Bishops fishers find a whole Vnicornes horne in the Ice, brought out of *Groneland* (as it is thought) where yet at this day Vnicorns are said to be; & thinking it to be a Whales tooth, nor did the Bishop beleue otherwise, they bring it to their Master, who gaue it to *Conradus* begging it; he being somewhat craftie, sold it after at *Antwerp* for some thousands of Florins. When this thing came to the King of *Denmarks* eares, he forbade that no *Germaine* should winter in *Island* in any cause.

Horne of a Sea-fish. See *Ionas Poole* and *Basson*, l. 4.

Of the iudgement of the Islanders.

There is a most pleasant place almost in the midst of the land, you would say it were a Paradise in the Spring time, where sometimes there was a high Mountaine, which burned with inward fire, as *Hecla* doth at this day; which matter after it was consumed, made a Plaine, but the Rocks which were erected about the Mountaine, stand yet, therefore this place is so fenced by Nature, that they that enter it, must goe one by one. This place is famous for two great falls of water, where two Riueres from the highest Rocks cast themselves steepe downe one against the other, with an astonishing and horrible dashing of the waters against the Rocks. These Riueres meete together in the middle of the field, and by a great whirlepoole are swallowed vp into the ground.

Islanders terme

Heere yeerely the nine and twentieth of Iune, the Inhabitants who haue any controuersie, meete together: for in no other place or time Iustice is administred; after they are entred, standings are placed by the Gouvernours guard, who admit all that desire to come in, no man hath libertie to goe out, without the consent and authoritie of the Gouvernour. When they are come thither, the Gouvernour offreth his Charter to bee publikely read, whereby hee procureth credit to his Office, and hauing spoken before somewhat of the Kings goodwill, and his owne towards the Islanders, he exhorteth them to communicate Iustice vnto all, without respect of persons, hee after

after departeth, and keeps himselfe in his Tent, hauing heard a godly Sermon, the twelue men, whom they call *Lochmaders*, as it were men of Iustice, sit downe on the ground, each of them hath a Booke in his hand, contayning the Law of that Iland, written in the vulgar tongue. Accusation and answer being made, they goe apart into seuerall places, euery one reads ouer his Booke diligently, going afterwards againe to his place, without Scribe, without replication or doubling, and iuglings of such brabbling Lawyers, they conferre of the sentence and pronounce it: If any thing bee worthy of deliberation, it is brought to the Gouvernour for consultation and for his honours sake, when notwithstanding they leaue no power of deciding it to him.

Manner of
trials and
suites.

There are many accusations of Theft and Adulteries, they make no question of their Bonds, of their Fees, their Hereditarie fields, or any summe of money: there are no controuersies there. These twelue men, ouer which one is chiefe, are greatly honoured amongst them. These doe determine, and diligently inquire of all publike Controuersies. If there bee any wicked Act committed that yeere, if Murther bee committed any where, if Theft, if Adulterie, if Cattle be stolen away (which vseth oft to bee done) then these men set downe the punishment. They that are condemned to dye, are beheaded: the rest, who are any way to bee punished, they burne with a marke, this punishment with them is most grievous: for they are marked in the forehead: they that are so marked are accounted in the number of wicked men: others are beaten with rodde: and I saw when the Father and the Sonne for theft (for they were Cattell stealers) were held Captiues, that the Father was compelled to beate his Sonne with rodde, and hee afterwards beheaded.

Sentence and
execution.

of Groneland.

Iseland by Nature is somewhat long, it hath *Norway* on the East, the *Orcades* and *Scotland* on the South, *Groneland* on the West, and the *Hyperborean* or *Congeaed Sea* vpon the North. Although I purposed to passe ouer *Groneland* with silence, yet seeing I touched vpon the Land, and saw some few things, I thought it was to bee added. There was in a certaine Monasterie in *Island* called *Helgasfel*, a certayne blinde Monke left (for the Abbot of the Monasterie had conuerted the Reuenues to the Kings vse) who liued miserably there: hee was borne in *Groneland*, of a darke complexion and broad face. The Gouvernour commanded him to bee brought vnto him, that hee might know some certaintie of the state of *Groneland*. Hee sayd, there was a Monasterie of *Saint Thomas* in *Groneland*, into the which his Parents thrust him when he was but young, and after that, hee was taken out by the Bishop of *Groneland*, when hee was thirtie yeeres of age, to saile with him into *Norway*, to the Archbishop to *Nidrosia* (or *Dronten*) to whom the *Island* Bishops are subiect: in his returne hee was left in a Monasterie by the Bishop, whose Countrey *Groneland* was: this was done (as hee sayd) 1546. Hee said, that Iland was called *Groneland*, Antiphrastically. For that it seldome or neuer waxeth greene, and that there is so great cold there throughout the whole yeere, except Iune, Iuly and August, that being clothed and couered with Furies, they could scarce bee warme; and that they had at home certayne round peeces of wood, which being continually mooued with the feete, kept their feet warme. Hee sayd, it aboundeth as *Island* doth with Fishes, and that they had Beares and white Foxes, nay *Pigmies*, and *Vnicornes*, and that day did not appeare, till the Sunne had runne through *Pisces*.

Their *Pigmies*
are Beasts and
Vnicornes,
Fishes.

This Monke told vs maruellous strange things: that there was in the Monasterie of *Saint Thomas* (where hee liued) a Fountayne, which sent forth burning and flaming water, that this water was conueyed through pipes of stone, to the seuerall Cells of the Monkes, and that it made them warme, as *Stoaues* doe with vs; and that all kinde of meates might bee boyled in this Fountayne and fierie water, no otherwise, then if it had bene fire indeed. Hee added moreouer, that the walls of the Monasterie were made of Pumice stones, out of a certayne Mountayne (not farre from the Monasterie) like to *Hecla*: for if yee powre these burning Waters vpon the Pumice stones, there will follow a slimie matter, which in stead of Lime they vse for Morter.

After the Gouvernours conference with the Monke, I came priuately vnto him, to demand certayne particular things touching the *Pigmies* and other things; hee had little skill in the *Latine* tongue, hee vnderstood mee speaking *Latine*, but answered by an Interpreter. Hee sayd, the *Pigmies* represent the most perfect shape of Man, that they are hairy to the vttermost joynts of the fingers, and that the Males haue beards downe to the knees. But although they haue the shape of men, yet they haue little sense or vnderstanding, nor distinct speech, but make shew of a kinde of hissing, after the manner of Geese; that his Abbot kept two of them in his Monasterie, male and female, but they liued not long, and that they were vnreasonable Creatures, and liue in perpetuall darknesse. That some say, they haue warre with the Cranes, that hee knew not.

Pigmies, our
men haue not
seene such.

He affirmed, that the same maner of food was in *Groneland*, as in *Island*, to wit, of fish but not of cattle, because they haue no cattle, & that the country is not populous. Forthwith from *Island* begins the *Hyperborean Sea*, which beats vpon *Groneland*, and the Country of the *Pigmies*, which at this day is called *Nona Zembla*, & there the frozen Sea hath a Bay which is called the *White Sea*.

Of this the
Englishe Discou-
eries in this
and the next
Booke will
giue better
light.

or *Mare Album*, and there are there certayne passages whereby they sayle into the *Scythian Ocean*, if they can for Ice. And the Gouvernour had the King of *Denmarkes* Ship, furnished with all necessaries : but when hee heard (by the Monke) of these passages, and short cut into the Kingdome of *China*, hee affected this commendation, that hee might open these passages and Ice vnto the Kingdome of *China* by the *Tartarian Sea*, which had often bene attempted by others, but in vaine.

The Authors
Voyage for
Discoverie.

The last day therefore of March, in the yeere 1564. hee commanded that Ship to sayle to those places, and mee also together with them, being willing of mine owne accord : and enioyned me to marke diligently the scituation of the places, and whatsoeuer wee met with worthy of sight or report. Wee were in the Ship threescore and foure men, as well *Danes* as *Islanders*, and the twentieth day of Aprill wee arriued at a certayne Promontorie of *Gronland*, and when wee found no Hauen, to the which wee might safely commit our selues, and letting downe the lead, wee had sounded the depth of the Sea, it was such as wee could not anchor there, and the abundance of Ice was so great, that it was neither safe nor possible to sayle neerer to the Rocks ; foure and twentie therefore of vs armed, with great labour and danger went on shoare in our Skiffes among whom I also was) to trie whether wee could finde a harbour, and what kinde of men *Gronland* had. In the meane time, the great Ship floated in the Sea and Ice, in a great calme, halfe of our companie abode in the shoare to keepe the Skiffe ; another part (and I with them) ranne abroad to discover : they that were left on shoare to keepe the Skiffe, going hither and thither, found a little man dead with a long beard, with a little Boate, and a crooked Hooke of the bone of a Fish, and a leather cord : foure fish Bladders were bound vnto the Boate (as is supposed) that it should not bee drowned, whereof three were sunke and fallen flat : This Boate (because it was very vnlike ours) the Gouvernour sent to the King of *Denmarke*.

In Sir Thomas
Smiths Hall in
London is a
kind of Boate
somewhat like
of Barke fowed
Seales skins.

Olaus Magnus in his first Booke writeth, that there is a Rocke in the midst of *Island* and *Gronland*, called *Hutisocke*, which wee sayled by, and that there they haue Ships of leather, which hee testifieth hee saw, but it was not such an one : but *Petrus Bembus* in his senenth Booke, in the *Venetian Historie*, describeth a Ship, which was like vnto this, where hee writeth thus : While a French Ship kept her course not farre from Britaine, shee tooke a Boate built of Osiers the midst being cut out, and the solid barke of Trees ioyned together, wherein there were seven men of a middle stature, somewhat darke coloured, of a large and broad face, marked with strange scarres and violet colour ; these had their garments of Fishes skinnes, full of spots, they bore a painted Crowne of reede woven in, as it were with seven eares ; they did eat raw Flesh, and drunke Blood, as wee doe Wine ; their speech could not bee understood, sixe of them dyed, one young man was brought alive to the *Aulercos*, where the King was.

It is not unlikely to bee true, that this Ship with these seven men, were driuen out of *Gronland*, into the Britaine Ocean : seeing the description of Bembus his Ship agreeth with that found in *Gronland*.

A Beare.

Wee wandred in the meane season, in a Land vnkowne vnto vs, which was couered with Snow and Ice, wee found neither footing of men, nor any habitation, nor fit Port, but the Sea was closed and fenced on euery side with craggie Rockes. Yet we met with a great white Beare, which neither feared vs, nor could bee driuen away with our cries, but came full vpon vs, as to his certaine prey, and when hee came neere vnto vs, being twice shot through with a Gunne, hee stood bolt vpright with his fore-feet as a man standeth, till hee was shot through the third time, and so fell downe dead : his Skinne was sent to the King of *Denmarke*. We agreed amongst our selues before wee went on shoare, if wee found a fit Harbour, or else had need of their helpe, that wee should plucke vp our standerd, which wee carried out with vs for that purpose, and that they, if they would call vs backe, should signifie the same with their Ordnance. A tempest arising in the meane while, the Master of the Ship giues vs a signe to returne, by the discharging of a piece of Ordnance, and calls vs backe vnto the Ship : all of vs therefore returned with great labour after three dayes vnto the Ship with the Beares skinne ; wee sayled therefore to the other side of the *Iland* toward the North, to the Countrey of the *Pigmies* or *Nona Zembla*, that by the mouth of the *White Sea*, wee might come into the *Scythian*, or *Tartarian Sea*, from whence (they say) there is a passage to the Kingdome of *China*, and *Cathay* ; but beeing hindred by the Ice, wee could not passe the mouth of that Sea : therefore without doing any thing, wee returned into *Island* the sixteenth of Iune.

The Authors
Journey to
Mount Hecla.

I sayd before, that the *Islanders* the nine and twentieth of Iune yeerely came together almost in the middle of the *Iland* to Iudgement, and after our returne, the Gouvernour went thither, and I with him. Some of the next inhabitants of *Hecla* then came to Iudgement, whom the Gouvernour inuited twice or thrice to dinner and supper. These men while they were at supper, reported wonderfull things of the Mountayne *Hecla*, and other things ; I was forthwith inflamed with a desire to see and heare all. Wherefore the Gouvernour commended mee to these men, that they should bring mee thither, and commanded all things should bee shewed me, which they knew there worthy to bee seene. This Gouvernour was a *Dane*, a Noble man, and excellently well learned : to this man surely I am much bound for his great liberalitie towards mee, in that

that he caused me to be conueighed at his charge to diuers places of the Iland, where any notable thing was to be seene. I accompanied with two *Islanders*, and a certaine *Dane*, who carried provision, and a Tent on Horse-backe, spent foure whole dayes, while we go through rough places, Hilly and desolate vnto this Mountayne. For some Miles about *Hecla*, all was full of blacke ashes and Pumis stones. The *Islanders* aduised me that I should goe no neerer, leading away the Horse, which they had lent me.

I, because I purposed to see, and search out all things diligently; accompanied with the *Dane*, came neerer, as though I went to climbe the Hill, and although at the first sight we were afraid, yet I would not leaue off my purpose, and by reason of my young yeeres, not vnderstanding the danger, I went through the ashes and Pumis stones alone to *Hecla*, leauing the *Dane*. There was there at that time a wonderfull calme, so that I saw neither fire nor smoke. But behold, suddenly in the bowels of the Earth, a great noyse was heard, after this, followed flames of a greene colour, which had almost killed me with their Sulphurie and filthy stinke, so that I scarce escaped to my forsaken horses and companions. Vpon that sudden astonishment I fell into a sicknesse, and yebement cogitation, seeing these horrible flames were alwayes present before mine eyes: insomuch that my *Island* companions were compelled to carry me away vnto their house, with whom I lay sicke two whole monethes: while in the meane time the *Dane* returned to the *Gouernour*, and to the *Hamburgers*, and acquainted them with my state. I liued miserably amongst the *Barbarians*, sicke and vnknowne; they had Bisket which I sleept in Milke, and and so for that time, I indured hunger, while (being stronger) I might returne to the *Gouernour*.

The *Hamburgers*, by reason of the time of the yeere, least they should loose the opportunitie of sayling, despairing now of my returne, set sayle (for they depart before the foure and twentieth of August, lest being hindered after by the Ice, they cannot get out) yet with speciall care commended me to the *Gouernour* (if at any time I did returne) leauing Bisket, Wine, and Beere. The *Gouernour* hath a dwelling fit enough for the manner and fashion of this Countrey, on the South of this Iland, not farre from the Hauen of *Hafnesford*, the place is called *Bestede*. I was brought hither of the *Islanders*, to the *Gouernour*, who, for our common studies, entertayned me willingly and honorably. But although wee were plentifully furnished with all necessaries, yet being very wearie of that life in such darknesse, I expected the ships out of *Germany* the next yeere with great desire.

There grew then warre betweene *Ericus* of *Suetia*, and *Fredericke* the Second King of *Denmarke*; which was continued with great courage for ten yeeres after. The *Lubekers* were Conforts and Confederates of Warre vnto the *Dane*. So most part of the Cities on the Sea-coast, vpon the *Balticke* Sea, hindred or intangled with this Warre, intermitted their sayling into *Iland* this yeere, therefore wayting in vaine, I must stay. The yeere following, when I had wayted till the end of Iune, all hope of returning into *Germany* that yeere was taken away, and which was worse, the yeerely ship came not from *Denmarke*: and bread and Wine failed vs almost foure monethes.

There lay *Portugals* at anchor at that time in *Iland* in a small ship; who came thither to fowle, they caried away excellent Falcons, and white ones among them, in great number. I thought good rather to crosse ouer into *Portugall* with them, then to wayte another yeere, either for *Danes* or *Germanes*. And when they gaue the *Gouernour* his Custome, he dealt with them in my behalfe concerning the charge, that I might passe with them, and he liberally paid the charges, and honorably sent me away with a worthy Present. Not far from the Kings house, there was a certayn Minister, *Ionas* by name, he familiarly saluted me before I departed: for the time I was in *Iland*, I had some familiaritie with him, to whom also I left my Bookes when I departed: he for friendships sake, knit three knots in a handkerchiefe, and promised me a prosperous wind, say ing, if by chance the winds at any time grow contrary at Sea, open these knots, and then remember me. When therfore about the twentieth of September we had sayled, and now *Spaine* was in our view, there was so great a calme, that we felt not a breath of wind, and that for three whole dayes. In this calme my friends promise came into my minde, and I desired to proue it. I loosed the first knot, by and by, after one houre, there arose a very prosperous winde, but blowing very gently, I vntye the second and the third, forthwith a Tempest beganne more and more to grow, so truly that after two dayes we ridde in the Riuer *Tagus*, which beateth vpon *Lisbone*.

CHAP. XXIII.

Extracts of ARNERIM IONAS * an Islander, his
Chrymogæa or Historie of Island: published,
Anno Dom. 1609.

* This learned Islander published A. 1593. one Booke of Island, which M. Hak. translated and set forth in the first Tome of his Voyages. This worke is larger in three Booke out of which I have taken some things which I held conducent to our purpose. In the former worke he confuteth the errors of diuers Authors which write falsly many things of his Countrey. *Hola* in 65. degrees 44. minutes. Diuers names of Island. *Sneland*. *Naddoc* first Discoverer. *Farrellands*.

§. I.
Of Island, the Situation, Discoverie, Plantation
and Language.

Island is an Island of the North, compassed about with the huge Ocean: whose Cosmographically latitude towards the North, to wit, at *Hola*, the Episcopall Seat of North Island, is 65. degrees, and 44. minutes: and the longitude 13. degrees and 30. minutes, or thereabouts: for I will not precisely affirme the same, by reason of that scruple, arising from the Paralaxis of the Moone in the obseruation of the Eclipses to be doubted: which only way of finding out the longitude, that most famous man, *Gudbrandus Thorlacius*, now Bishop of North Island, hath hitherto shewed: who hath imparted vnto vs this longitude and latitude of his Sea: and was the first, that I know, among our Countreymen, who hath deliuered any certaintie in Writing, concerning this matter. And surely, that which at this day, and so from the first entrance of Inhabitants, beareth the name of *Island*, (while as yet it remained barren and desolate) had diuers names allotted orginen vnto it from diuers Discoverers: whereof three are mentioned. For first of all it was called *Snelandia*. For a certaine Pyrate called *Naddocus*, going towards the *Fareusian* Islands (commonly called *Farenar*, for the multitude of Egges) was brought vnto the shoares of East Island, through a Tempest, not farre from the Mountayne *Reidarfiell*, (so called after ward) to the Bay *Reidarfiard*: who ascending the Mountayne, and beholding the bordering Countrey farre and neere, found it all Desert. And departing from the Coast about Autumne, he perceiued the higher tops of the Mountaynes to bee couered with exceeding much Snow; and therefore, as the present case required, he called the Island *Snelandia*, that is to say, *The Snowie Countrey*.

Gardar second Discoverer.

A.D. 864.

Gardarsholme.

Floco third Discoverer.

Rauen Guides.

Another following him, one *Gardarus* the sonne of *Suarnus* a *Suecian* borne, perswaded through the report which *Naddocus* had brought concerning *Snelande*, went to seeke it: he found it, who arriued also neere the Easterne shoare, and from thence being carried about the Island, he abode in the Bay of North Island called *Skialfanda*, and wintered there in the yeere of Christ 864. and called the name of the Hauen, *Husawich*, from the wintering places, or houses built there. But the Spring beginning, *Gardarus* being about to depart into *Norway*, the ship Boat was driuen away by a tempest, into an Hauen neere vnto the former, and in the same Boat there was a certayne Mariner called *Nairare*: from whom also this hauen had the name of *Narfawicke*. Moreouer, *Gardarus* returning to his friends, called that new Countrey *Gardarsholme*, as it were, the Island of *Gardarus*, neglecting the name of *Snelande*. Moreouer, the desire also of visiting a Countrey newly discovered, possessed many. For the third also, one *Floco*, and he a most famous Pirate purposing to visit *Gardarsholme*, set sayle out of an Hauen of *Norway*, which lyeth neere the watch-towre or rather *Pharus Flokawarda*, situate in the limits of the Prouinces of *Hordalandia*, and *Rogalandia*: and passing by *Hietlandia*, (misnamed by some *Schetlandia*) called a certayne Hauen by the name of *Flokawogur*, and there the deepest part of the Sea (where *Geirbilda* the daughter of *Floco* by chance was drowned) was caled *Geirbildarvata*, from her: no otherwise then that Sea was called *Hellefontus*, wherein by misfortune *Phryxus* lost his sister *Helle*. There was yet no vse of the Mariners Compasse: wherefore *Floco* leauing *Hietlandia*, tooke certayne *Rauens* vnto him: and when hee thought hee had sayled a great way, he sent forth one *Rauen*, which flying aloft, went backe againe to *Hietlande*, which she saw behind. Whereupon *Floco* perceiuing that he was yet neerer to *Hietland* then other Countreies, and therefore courageously going forward, he sent forth another *Rauen*: which because she could see no Land, neither before nor behind, light into the ship again. But lastly, the third *Rauen* was sent forth by *Floco*, and hauing for the most part performed his Voyage, through the sharpnesse of her quicke sight attayning the Land, which the Mariners desired, she speedily flew thither: whose direction *Floco* following, beheld first the Easterne side of the Island, as his Predecessors did: and from thence directing his course to the South, found a very wide and open Bay twelue Islandish miles broad, betweene the two Promontories or high Lands, afterwards called *Renkanes*, and *Snafelsnes*. And hearing by a certayne Mariner (whom he had with him) a *Scot* borne, named *Faxa*, that the Bay they now met with, was the huge mouth of a Riuer or Floud;

Flood; Floco to reprove the folly of Faxa, supposing so huge a Bay of the Sea to be the mouth of a River, called the name of the Bay inclosed between the foresaid Promontories, Faxaas; which signifieth the mouth of Faxa. This Bay, by reason of the multitude of Hauens, was afterwards called Hafnafiordur: which name Hafnafiordur at this day is more specially vsed of a most safe Hau-
 uen of the same Bay.

After this, Floco sayling along the West side of the Island, entred somewhat within the Bay Breidafiord, remaining in a certaine Hauen of the Prouince Bardestraund, called Watnsfiordur (for I vse the names giuen them afterwards) and there preparing wintering places, he liued very commodiously and well with fish of diuers kindes, wherewith that Bay doth abound. But ha-
 10 uing the Spring time here very vntemperate through cold, hee found a Bay (which entreth this part of the Land on the North) to be filled with Ice of the Sea, which wee call Gronelandish Ice. From which Ice, Floco deuised the third name for the Island, and called it Island. Moreouer also Floco turning to the South side, passed another Winter in Island: and returning into Norway (from the Rauens, which hee vsed in stead of the Mariners Compasse) he allotted it the surname of Rafnastoke.

The name
 Island of Ice.

And Island surely obtained these names consequently from the finders, or discoverers thereof. For as touching the fourth, Thule, imposed vpon this Land by some, I cannot bee perswaded to
 20 beleue, it is true; chiefly by this argument; That Thyle, or Thule among the ancient Writers, was often in the mouth and writings not onely of Pliny in his second booke of Naturall Histories 75. Chapter and fourth booke, and sixteenth Chapter (and Pliny flourished about the eigh-
 tieth yeere of Christ) and of him who was more ancient then Pliny, Pythias Massiliensis: but also of Pub. Virgilius, who liued not aboue fourteene yeeres after Christ: but Island, till the yeere of Christ 874. remained altogether desert, as hereafter I shall speake. Thule therefore, which Vir-
 gil said should serue Augustus (Geor. 1. tibi seruiat ultima Thule: where euen every child knoweth that Thule is Synecdochically spoken, for the Inhabitanes of Thule) not onely inhabited in the times of Augustus and Virgil, but also knowne to the Romanes, is not Island, which many ages af-
 30 ter began first to be inhabited. Besides, Plinie himselfe seemeth in the later place recited to reckon Thule with the Islands of Britaine: for, saith hee, *Vltima omnium qua memorantur est Thule*: to wit, of the Britishe Islands, for hee speaketh of them. It is likely also that Virgil meant the same, who said Thule was the last, in the place before recited: and likewise, *Penitus toto diuisos orbe*
 Britannos: that is to say, the last. Let me yet vrge the same argument further, from the age of Claudianus Alexandrinus, and Pub. Papinius Statius, farre more ancient then he. For Claudianus about the yeere of Christ 390. writeth thus concerning the successe of the Getick Wars atchieued by Theodosius.

Island is not
 Thule.

Thule further
 of the Britishe
 Isles.

*Famaque ingranes succincta paucioribus alas,
 Secum cuncta trahens, a Gadibus usque Britannum
 Terruit Oceanum: & nostris procul axe remotam
 Insolito Belli, tremescit murmure Thulen.*

Then blackwing'd Fame Feare girt, frights all the World with Warre.
 From Cades to Britaine, from Our World shakes Thule farre.

40 But did Report and Fame cause Island not inhabited, and desert to tremble? And Statius more ancient by three hundred yeeres then Claudian, in his third Booke Sylua, writeth thus:

*Quamquam etsi gelidas irem mansurus ad Arctos,
 Velsuper Hesperia vada caligantia Thules.*

Though I should dwel in Arctike frosts,
 Or mytie shelues of Thules West coasts.

You heare, not onely a slight report of Thule came to Statius eares, but that the shallow places, quicke sand, or shelues found in approaching to the Island were sufficiently knowne vnto him, by
 50 the often relation of Nauigators: of which sort in the circuit of Island, there are none that I know, which experience speaketh: but in coming to the Islands of Britaine they are very ordinarie and common, as they say.

The Longitude thereof from the East vnto the West, hath not hitherto beene expressed by any certaine or assured measure that I know, nor yet the Latitude from North to South; saue that in an ancient Codicall or Writing I found that the Longitude was twentie dayes iour-
 ney: and the Latitude (where it is broadest) foure dayes, but the iourneyes, as elswhere, so also with vs are not alike, (yet here I vnderstand Pyngmannaleid twentie; in the Authors owne hand-writing it is Dagleider) nor is it expressed whether of Horse-men or Foot-men. But the
 60 Latitude it selfe is not euery where the same; by reason of Bayes on both sides, to wit, from the South and North entring the Land it selfe with vnequall distances. The Easterly bound is Austurhorn: the Westerne Raudestrandur (for the Promontory Sna-fellones lyeth more toward who proueth out of Pompenius, Ptolemens, and Procopius, that Island is not Thule but (as the name sounds) Tylemarke, a Region in Norway, or all Scandia, of which that is a part, still retaining the name.

the

the South-west) but the North bound is *Langanes*, and the South *Reikranes*. The Island also from the foure quarters of the World, is diuided into North, South, East and West, and the Promontorie *Langanes* diuideth North Island from East Island; from West Island, the Bay *Ratassfordur*: from South Island, the vast and huge deserts of rough, and inaccessible places extended the whole length of the Island. But South Island, opposite to the North, through these rough and inaccessible places lying between the Riuer *Ioculsa*, running through the deserts of *Solseimasande*, diuideth from East Island: from West Island also, a famous Riuer, named *Albis*, emptying it selfe into the Bay *Borgarsford*: So that, if it pleased me to represent the Island in humane shape, East Island should haue the proportion of the head. The two more famous Promontories *Langanes* and *Reikranes*, or bounds; the one Northerly, the other Southerly (as hath been said) should serue in stead of armes. And the deserts extended the whole length of the Island should make the backe, or backe bone: then North and South Island, the shoulders with the sides; the two opposite Bayes *Borgarsford*, and *Ratassfordur*, the one on the South, the other on the North, should diuide the forepart about the short ribs, from both the thighs or hips. But West Island should resemble the rest of the parts of a mans bodie, from the forepart about the short ribbes: which the Bay *Breidissfordur* comming in from the West, should contract and straighten into the right and left foot.

The Circuit.

The circuit also of the Island, is no more certainly knowne; yet an ancient rumour and opinion (as in another place where it is noted) reckoneth one hundred and fortie foure *Norwegian* miles (as I thinke) that is to say, two hundred-eightie eight *Germane* miles, *Chytræus* accounting the *Norwegian* mile, to equall two *Germane* miles, sayling from one Promontorie to the other, not by the Bayes: whereof North Island is esteemed to haue cleuen, East Island, twentie one, South Island fixe, and West Island seuentie.

* *Harald Hare-fagre* finding many pettie Princes made an absolute Monarchy of Norway, whereupon some fought to free themselves by new discoueries: and hence arose the plantation of Island

Haraldus Pulcricomus * swaying the Scepter in Norway, much neglected the chiefe Nobilitie of Norway: which the *Norwegian* Historie setteth downe at large, yet particular Histories of noble Families expelled by *Pulcricomus*, more largely prosecute the same, as hereafter wee purpose to write. For *Pulcricomus* not contented with Kingly authoritie, or chiefe soueraignetie, that is to say, with the right of Lawes, Magistracie, and appeale of Warre and Peace, challenged all vnto himselfe, by the right of a proprietarie. Insomuch, as very many chose rather to leaue their Countrey and rich inheritances, then to exchange their Generositie for slauerie and tributes: for they thought it altogether vnworthy and ill befeeming their owne valour and their ancestours. Hence, for the most part arose mutuall iniuries against the King, or the Kings partakers; as murdering of the Kings friends, allies, or faction; then the exercises both at Sea and Land were rapines and robberies. From these noble Families therefore, refusing the violence of *Harald*, this our Island, with the neighbouring Islands began first to be inhabited, and that almost by these steps and voyages.

A.D. 874.
Ingulfus.

In the yeere of our Redemption 874. a certaine Inhabitant of Norway, one *Ingulfus*, going out of his Countrey, following the steps of *Naddocus*, *Gardarus*, and *Floco* mentioned before, was made Standard-bearer of the Inhabitants which were to bee conueyed into Island, and that vpon this occasion. *Ingulfus* was famous for his parentage and riches, whose father, called *Orne*, which signifieth an Eagle, was Duke of *Fyrdasylce* in Norway; the sister of *Ingulfus* was *Helga*, a Virgin indued with all womanly ornaments, and his cousin germane *Leifus*; who for a notable sword, which through his singular warlike prowesse he got in Ireland, was named *Hiorleifus*. For *Hir* is a Sword. Moreover, at that time among the Nobilitie of Norway, there were three naturall brothers, *Hallstenn*, *Holmstenn*, and *Herstenn*; the sonnes of *Atlas*, or *Atlantes*, a certaine Baron of Norway: who bore certaine priuie grudges to the foresaid *Ingulfus* and *Hiorleifus*; which presently after brake forth into cruell and bloudie slaughters. For when by chance they feasted together, after the manner of that age, they inioyned euery one to make some solemn Vow. *Herstennus* therefore first vowed, that he would take *Helga*, *Ingulfus* sister to wife, or marrie none. Then presently *Ingulfus* vowed, that hee would admit none into his Fathers Inheritance with him, saue only *Hiorleifus*: meaning thereby that his sister *Helga*, by his consent should marry none but *Hiorleifus* (contrary to the vow of *Herstennus* for the marrying of her only.) After that *Helmstennus* vowed, that if he were chosen Arbitrator betweene the aduerser parties, he would by no meanes be compelled, to suffer an vniust sentence. And so the rest after them. Not long after succeeded the Vow of *Ingulfus*, for *Hiorleifus* tooke his Cousin Germane *Helga* to wife. For at that time the Mariages of Cousin Germanes were lawfull. From hence arose the extreame hatred, and enmitie of *Herstennus*, against the foresaid *Hiorleifus*, and *Ingulfus*: who therefore joyning with his Brother *Holmstenn*, with fixe ships filled with Souldiers, let vpon *Hiorleifus* vnawares, hauing but three ships only, preparing his Voyage into ferreine Countreyes. Whose violence *Hiorleifus* a long time, and stoutly sustayning, holpen by a certayne friend comming in the meane-while, hauing slaine *Herstennus* got the vpper hand. But *Holmstennus* providing for himselfe by flight, and not a little exasperated and grieved through the violent death of his Brother, after some few monethes, came with an armed power to *Ingulfus* and *Hiorleifus* to surprize them suddenly at home. Whereof they being certified by Spies, receiue him with an armed force, and kill him. *Hallstennus* the third brother, wiser then the rest, who

Rash voves and bloudie quarrells ensuing.

comforted

conforted not with the vnjust routes of his Brethren, remayned yet aliue; to whose arbitrement *Ingulfus* with *Hiorleifus* commit the whole matter to be determined, holding him mindfull of his Vow, concerning equitie not so be violated. *Halstennus* therefore pronounceth his brother *Hersennus* to be iustly flaine: But not *Holmstennus* who compelled through bitter grieffe, desired to reuenge the death of his brother, by any slaughter whatsoeuer. For killing therefore of him, he commanded them both to be banished out of the Prouince of *Fyrdasilse*. They readily obey his award, to whom they willingly committed the censure, & with a purpose to leaue their Countrey, they sell their Lands and Possessions for mony and Merchandizes, and conceiue in their minds a worthy attempt of planting a strange people in a strange Countrey: and that not to gratifie *Halstennus* (with whom through this agreement they returned into fauour; with whom they might otherwise easily haue contended in strength) but also for feare of *Pulericomus* himselfe, raging against his Countrey, and innocent Countreymen, for the obtayning (as hath beene said) not only of the Monarchie, but *Pampesia*, of all their Possessions: nor was that to bee doubted, concerning the violence and oppression of *Harald*: for in the Historie of *Haquinus Adalstenius* his succeeding Sonne it is expressly read, that he was contented with Kingly authoritie, and restored to euery one their owne, which his Father vnjustly challenged vnto himselfe.

It was the yeere of Christ 870. wherein *Ingulfus* with *Hiorleifus* first visit *Island*, but they inhabit it not presently, but foure yeeres after, in the yeere 874. as hath beene said: bringing many Families thither.

Island first inhabited, A. 874

Moreouer *Ingulfus* comming within view of the Iland, casteth the postes of the houses which he had in *Norway* into the water, after the manner of *Ethnickes* accounting it for an Oracle, that that place was fatally chosen for his Habitation, which the postes cast out vpon the shoare should note or signifie. That custome many of the *Norwegians* retayned by turning vp the ground. But *Ingulfus* arriued not where he cast in the postes, but at the Promontorie of the South shoare (elsewhere erroneously, the West shoare) called by his name *Ingulfhofde*. Yet notwithstanding wanting the postes of the houses three whole yeeres, at length he found them in that place, which is named *Reychiarwich*, and there he erected his Habitation. But *Hiorleifus* more estranged from *Ethnick* superstition, seated himselfe in the Promontorie *Hirleiffhofda*; so called likewise from his name. There he built great houses: one of one hundred twentie six, and another of one hundred thirtie five feet long: who, the first yeere being ended, began to till the ground and sow seed.

Superstitions

In which worke, when he had exercised ten seruants or slaues, which hee brought with him out of *Island*, they fayned that *Hiorleifus* his labouring beast was slaine by a wilde Beare (for it was afterwards manifestly knowne, that *Island* hath no Beares; but such as came thither by chance) which when *Hiorleifus* (with a purpose of reuenge) sought in the next neighbouring Wood, he was deceitfully slaine by these slaues lying in ambush: together with some other companions which he tooke with him: the Seruants aswell rauishing the Wiues as spoyling the goods of the slaine; and flying into the Ilands not very farre distant from the shoare: which after of the same slaues, were called *Westmasyar*, because they were of *Ireland*. The *Norwegians* call the *Irish*, *English*, and *Scots Westmen*, that is, men of the West: seeing those Countries are distant from *Norway*, to the West. *Ingulfus* pursuing these Murtherers, set vpon them suddenly, and destroyed them euery man in the same Ilands, being much grieued in minde for the vntimely and cruell death of his deere friend and allies.

First houses, Island had anciently faire houses then now; (hauing Timber from *Norway*, &c.) & likewise Tillage was then in vte. *Hiorleifus* slaine, *Westmasyar* and *Westmen*.

But *Ingulfus* found and possessed *Island* altogether barren and desolate; on euery side beset with very thicke Woods, and scarcely fertile of any but Birches, so that hee was faine euerywhere to open the Woods with the Axe, for journeyes and habitation. Yet in the meane space, we might gather by certayne signes, I know not what Mariners had sometimes touched vpon certayne shoares of the Countrey, but not inhabited them. For *Ingulfus* found little sacring Bells and wooden Croffes, and other things made by the workmanship and arte of the *Irish* and *Britaynes*: but no tokens of culture, or habitation. Whereupon it is likely, that *Irish*, or *Scottish* Fishermen (as also the *English* at this day) accustomed to fish neere *Island*, as sometimes it cometh to passe, went ashore, and so by chance left sacring Bells and Croffes, the Vtenils of Christian Religion. For at that time the *Irish* were instructed in Christianisme as they say. And those whosoever were the ancient *Islanders*, they called *Papa*, or *Papas*: from whom, as seemeth probable to me, the Iland of East *Island* called *Papey*, deriued the name; because they were often wont to touch there: or their Monuments (such as I sayd) were chiefly found there.

Woods.

Bells and Croffes.

This side of *Island*, to such as sayle from *England*, *Ireland*, and *Scotland*, is most exposed towards the North-west. Moreouer, what and from whence these *Papa*, or *Pappa* came, I cannot sufficiently speake: vnlesse peraduenture from the Ilands of *Scotland*, whereof one is named *Pappa*, and another *Westrapappa*, as we may see in the Mappes: vnto which conjecture let euery one giue what credit he pleateth. Furthermore, very many of the *Norwegians*, afterwards boldly following the steps of *Ingulfus* going into *Island*, with their wiues and children, and great multitudes of their Kindred and friends, restored themselves to libertie. Whose names and large Families are recited in the Chronicles; as by the second Booke is vnderstood. Besides, it is there recounted what coasts, what shoares, what middle-land places euery one possessed: and at what

time

time: and also how the first Inhabitants gaue name to Straights, Bayes, Hauens, narrow straights of Land, Ferryes, Clyffes, Rockes, Mountaines, Hills, Vallies, rough and inaccessible Places, Fountaines, Flouds, Riuer, Villages, Farmes or Habitations: whereof at this day many are yet retained and in vse. Which *Topography*, supposing it would bee tedious, especially to a forraigne Reader, I haue here omitted; applying my selfe rather to the description of the Inhabitants, who in sixtie yeeres space so replenished with their multitudes, the habitable parts of *Island* now possessed.

Chap. 3.
Of the language of the
Nation.
Islanders only
retaine the
ancient Gottish

Concerning the language of the *Islanders*, the matter it selfe speaketh, that it is the *Norwegian*; I say, that old and naturall speech, deriued from the ancient *Gottish*, which onely the *Islanders* now vse vncorrupted: and therefore we call it *Islandish*. Of the letters of which tongue we will first speake somewhat: and afterwards in the Chapter following there shall be a short discourse of the originall thereof.

Two kinde of
letters.

And surely that language seemeth to haue double letters: to wit, the Old, and New. The New, which commonly wee vse at this day, are common almost to all *Europe* together with vs. Which, when they first began to bee vsed is not certainly knowne. Surely as yet, some crosses written in ancient letters, are yet seene among our Country-men, which letters also many yet know, and both reade, and write: and this naturall language it selfe is contained in the same, nothing at all changed. Moreouer it seemed good to mee, thus to present the name and shape of the ancient Characters, such surely as was offered vnto mee, placing the New or Compacie of ours, with those of *Vlphila*, the Bishop of the *Goths*: whom *Iohannes Theodorus*, and *Iohannes Israel*, brethren and Citizens of *Francosurt*, report to haue inuented these letters: by whose relation hee agreeth with vs in all things, saue where the disagreement shall bee noted here. Moreouer also, I thought it not amisse to set downe in writing the letters of certaine other Nations, to some of our Country letters, out of the same *Francosurt* copie, which the Types or Figure subscribed will demonstrate.

A	Ar	Λ	
b	Biarkan	B	
z	Knesol	η

u	Ur	Ω	<i>Vlphila</i> thus Ω
y	Yr	Λ	<i>Vlphila</i> thus ρ
p	Puss	ρ	4 the <i>ethiopian</i> ρ d. } of the <i>Arabians</i> .

Here wee see twentie one Characters, but the ancient numbred onely sixteene. And the third η, they would not acknowledge for theirs: because z. of the *Greekes*, that is to say z. or ds. (as they would haue it) they might write it in their language with distinct letters. But the fourth 1 from the eighteenth, they distinguish with some point, or an ouerthwart line, almost thus 1: otherwise it is altogether the same in shape and name, *Tyr*, but d. *Stunginntyr*, that is to say, pointed *Tyr*, as p. kaun.k, and pointed kaun p. g. So Is pointed for e. but

but *Plastur* resembleth *B*. with both the bellies open above and beneath. Besides these, the rest are numbred sixteene, as I said. For they reckoned the Diphthongs to the Syllables.

Moreover, it retained the last new Consonant of the old Alphabet, changed in name, but not in shape: which is *p*. This being set after a vowell in the same syllable, hath the sound of *d*, as *Blap* for *Blad*, which is a leafe: which kind of writing was more vsuall with the ancient, but at this day is almost growne out of vse: but being set before a vowell, it hath a peculiar force and pronunciation, not altogether *Th*, but sounding somewhat more grossly, as it were *Tzh*, putting forth the tongue almost between the fore-teeth: as *pa*, that is to say, then. In times past it had the name of *Puff*: at this day it is called *Porn*, or *Thorn*, if you put *p*. for *th*: and therefore it cannot be written or pronounced at all, but by it selfe.

They also of later time write the Consonant *f*. after this manner *ℱ*. The Moderne Writers also doe sometimes asperate *L. N. R.* the ancient very seldome, and almost neuer: as *Hlatur* in old time *Latur*, that is, a thing. *Hnissur* in times past (as also sometimes at this day) *Knissur*; that is to say, a Knife: *Hratur*, in old time *Ratur*, that is to say a Ram. In like manner sometimes *Iod*, and *Vaf*, or *Iand* *u*. Consonants: as *Hiel*, that is, a Wheele: *Hualur*, that is, a Whale: which also I thinke the ancient did concerning *Iod*, and *Vaf*.

In Vowels and Diphthongs, as also abbreviations proper to this language, the varietie is farre greater, which I purpose not to touch. Moreover also, the due handling of the letters, as of the rest of the *Etymologie* and *Syntaxis* of this tongue, would bee the copious matter of a peculiar worke, especially if any would adde the Poetrie, purposing to write the Grammer of the *Islandish* tongue, which would bee no more difficult, then that wee haue seene done, concerning the *Germane* and *French* tongue, besides others.

About the yeere of the Lord 1216. one of our Country-men wrote in his Countrey language, *Island Gram-* concerning the letters of the proper, or mother tongue: where hee affirmeth these ancient Cha-*matian.* racters to be peculiar to this language, and handleth them both, as well new as old after a legitimate and due manner of tractation, by his definitions and diuisions of the letters into Vowels and Consonants, and of the five *Latine* Vowels, maketh eighteene of his language, distinguished in sound and pronunciation: He diuideth the Consonants naturally into halfe Vowels, and Mutes, and those into Liquids and Firmes, these into open and shut; performing the part of a pretie Logician. And in deliuering the force and pronunciation of the letters, hee artificially assumeth for euery definition all the Instruments of framing the voyce, as well the lungs and throat, as the auxiliary parts of the mouth and tongue. The letter *p*. also, he calleth *the*, peradventure in imitation of the *Greeke Theta* (which almost, as we said, although not altogether it expresseth) or *Tau* of the *Hebrewes*, which *Hebrew* letter, if *th*. or *t*. of the *Latines* rightly expresse, as is reported by some, *Thau* shall come nothing nearer to our *p*. then *Theta*. The same Country-man of ours, from absolute letters, proceedeth to set downe in writing, the figures of the word and sentence in the Mother tongue, and illustrate them with examples of our language, retaining the *Greeke* titles of the Figures, or names of *Epizeusis*, *Anadiplosis*, &c.

And from this Writer of our Countrey, we receiued the Types of the old Alphabet: for there are Historicall fragments yet extant, concerning *Norus* the Name-giuer of *Norway*, and founder of the Kingdome, and those *Toparchi*, or little Kings, whom hee vanquished before hee obtained the Monarchie. *Norus*, of whom *Norway* is named.

§. II.

A discourse of the first Inhabitants of the Northerne World, supposed to be Giants expelled from Canaan. Of the Islanders Houses, Fewell, Victuall.

Moreover concerning some of the ancestors of *Norus*: among whom his father *Porro* (whom they call *Thorro*) King of *Gotland*, *Finland*, and *Kuenland*: an excellent Prince of his age, from whom the moneth of the old *Norwegians*, and now *Islanders* hath the name of *Thorre*, which in the *Julian* Calender beginneth the 10. 11. 12. 13. 14. 15. or 16. of Ianuary: for it hath a moueable beginning after the manner of their Calender. And seeing King *Thorro* this month accustomed to sacrifice vnto his gods; the *Kuenones* instituted yerely sacrifices in the same month to him, being dead, as to a certaine god, in token of an happy yeere, which they began with the winter, after the maner of the old *Lacedemonians*; & called the same month *Porre*, of *Thorro*; no otherwise then the *Lacedemonians* gaue diuine honor to *Lycorgus* being dead, building a Temple in memory of him, where hee was honoured for a god; to whom his familiar friends instituted set Feasting-dayes, and solemne assemblies which remained a long time, and the dates wherein the assemblies were celebrated, they called *Lycorgide*: concerning which matter looke *Cragius* in his third booke of the Common-wealth of the *Lacedemonians*.

Chap. 4.
Of the first
Inhabitants of
the North
parts of the
world.
Thorro.

Of

Fermotus.

Of the Ancestors also of *Norus*, all are mentioned euen to his Great-grandfather, who was *Fermotus* King of *Finland*: Moreouer, one of the three sonnes of *Fermotus*, and therefore Great vncler of *Norus*, called *Logie*, which signifieth a flame; who for the excellencie of his beautie was called *Halogie*, that is to say, an high or excellent flame. Hee was Monarch of the *Halongian* Prouince, bordering vpon the Prouince of *Nidrosia*.

Goe.

Goe also the daughter of *Thorro*, by the sister of *Norus*, is there recorded, for recouerie of whom, being stolne away (as *Cadmus* was sent by his father *Agenor* to seeke his daughter *Europa*) *Norus* was sent by his father *Thorro*: which, that it might more happily succeed, *Thorro* instituted new sacrifices to the Gods, in the moneth next following the former (afterwards called *Thorra*) and intituled the same moneth with the name of *Goe*, after the name of his daughter *Goe*: which name of the moneth likewise the *Islanders* that now liue, doe yet retaine. Furthermore, ancient Histories make mention of *Gorus*, the naturall brother of *Norus*: as also the nephew of *Gorus*, named *Gylus*, hauing the soueraigne authoritie in *Suecia*; in whose time *Odinus* happened to come (others call him *Othinus*) Stander-bearer of the *Asian* Immigration, made in the foure and twentieth yeere before Christ was born, which we mentioned before: and *Gylus* had a father called *Geiterus*, and an Vncler *Beiterus*, the sonnes of *Gorus*; from *Beiterus*, the Hauē neere the Citie *Nidrosia*, is named *Beitstod*.

Gorus.

I thought good to exhibit these things in a Table.

29

Fermotus King of Finland,

Hlar.	Kare.	Logie.
The same also is <i>Agier</i> , which other-wise signifieth the <i>Sea</i> : hee is supposed another <i>Neptune</i> , to haue dominion ouer the <i>Sea</i> .	That is to say, the <i>Winde</i> , for in the number of the Gods, after death, he is thought to be another <i>Æolus</i> , to rule the <i>Windes</i> .	Signifieth a <i>Flame</i> , honoured in stead of <i>Vulcan</i> after death (as hauing power ouer the <i>Fire</i>) and for the excellency of his beautie was called <i>Halogie</i> , so named of the Prouince of <i>Halogalande</i> in <i>Norway</i> .
	<i>Froste.</i> Otherwise called <i>Iokul</i> , both from the <i>Frost</i> and <i>Cold</i> .	
	<i>Sner.</i> That is to say, <i>Snowe</i> : furnished the <i>Ancient</i> , because hee is reported to haue liued three hundred yeeres: he left one sonne, and three daughters.	
<i>Drysa.</i> A snowy shower.	<i>Porre.</i> King of <i>Gothland</i> , <i>Kuenland</i> , and <i>Finland</i> .	<i>Fannu.</i> Signifieth <i>Snowe</i> gathered together in thicke heapes by a <i>Tempest</i> .
		<i>Miel.</i> Is thin <i>Snowe</i> descending without winde.
<i>Goe.</i> A daughter.	<i>Nor.</i> Of whom <i>Norway</i> is named, and the first Monarch.	<i>Gor.</i> Beiter-Geiter.

From this *Norus*, *Haraldus Pulcricomus* is the twelfth of them that descended from the right Line, whom some make the first Monarch of *Norway*, but amisse, being ignorant of Antiquitie: seeing hee was the third Restorer of the Monarchy of *Norway*: for betweene him and *Norus*, *Hemngus* the sonne of *Odinus* * obtayned the Monarchy also.

These (I say) besides many other things, are the manifest tokens of the Inhabitants of the Northerne World, farre more ancient then the immigration of *Odinus*: of whose originall notwithstanding, there is not one word. But because it is most repugnant to a Christian man, knowing the Bookes of *Moses* concerning Originals, to affirme themselves to be *Autochthona*, as both others, but especially the *Greekes* did concerning their Ancestors (yet with better leaue then the rest of the people of *Europe*: who next to the *Chaldees*, *Egyptians*, and *Iewes*, might worthily boast of Antiquitie in comparison of other people.) It were better truly to confesse the vnkknown originall of Ancestors, then to be carried away with the opinion and error of Earth-bred men: lest surely wee should heare some such thing, as sometimes one wittily vpbraided the *Grecians* with, so much boasting by reason of their pretended selfe-originall, to wit, that *Moses* the Law giuer of the *Iewes*, was more ancient then the Gods of the *Grecians*.

In the meane space, because through the onely confession of ignorance or doubt, truth doth

not

* This *Odinus* is said to haue made his plantation with his *Asian* followers, about four and twentie yeeres before Christ was borne.

Earth-bred or Land-sprung men, which had their originall in that Land.

not so soone appeare; somewhat is to be alleaged touching the proposed question: that the historicall Reader may haue some thing here which hee may either confute or confirme. Wee are therefore by probable reasons to inquire, who were the first inhabitants of the Northerne World, and from whence they came: then, when they began to inhabit this our World: that from hence some coniecture may arise concerning the originall of the language. And that I may here acquit my selfe without circumstances; I thinke the first inhabitants of the Northerne World, were of the number of Giants, nay, mere Giants; men that inhabited the mountaines of an huge and sometimes a monstrous body, and of monstrous and exceeding strength: and that they were the posteritie and remnant of the *Canaanites*, expelled from the Territories of *Palestina*, about the yeere of the World 2500. by *Iosua* and *Caleb* remoouing into *Palestina* through Gods pleasure and direction: and that this Countrey of the World euen vntill those times, or peraduenture longer, remayned altogether not inhabited.

Giants first inhabitants of the Northerne parts of the World.

Their originall from the *Canaanites*.

A long discourse of the Authour to proue that there haue bin Giants, is omitted.

For thus *Saxo Grammaticus* argueth in the Preface of his *Dania*. But (sayth he) the stones of exceeding bignesse fastened to the Tombes and Canes of the ancient, testifie that the Countrey of *Denmarke* was sometimes troubled with the inhabiting of Giants. But if any doubt, that it was done by monstrous strength; let him looke vpon the high tops of certayne Mountaynes, and say, if he know it well, who hath brought Rocks of such huge greatnesse to the tops thereof? For enery one that considereth this Miracle, shall perceiue that it is beyond common opinion, that the simple labour of mortalitie, or vnsuall force of humane strength, should rayse so huge a weight (hardly, or not at all moueable vpon the plaine ground) to so high a top of mountaynous sublimitie.

This *Saxo* writeth, who shall be a sufficient Author vnto vs concerning the first Inhabitants of *Denmarke*, that is to say, his owne Countrey. So concerning *Norway* and *Suecia*, and the bordering Countreies, as whatsoeuer is most ancient; so it most resembleth a Giant-like disposition and nature. Whereof examples are to be taken out of Histories, which would bee tedious here. For that I may omit ancient examples, those things are knowne of late memory to haue beene done: Concerning the Giant *Doffro*, inhabitant of the Mountayne *Doffrasiall* in *Norway*; and Foster-father of *Haraldus Pulcricomus* King of *Norway*. Also concerning *Dunabo* who liued in the time of *Drefton*: from whom the Bay *Boddick* or *Bothnicke*: in time past was called *Dumbshaff*, who in a Sea-fight, encounteringe eightene Giants alone, sent twelue of them first to Hell before he himselfe was slaine. Of thirtie Giants at once destroyed by fire, by *Dumbos* Sonnes left, in reuenge of their Fathers death. There is yet a later example of certayne Giants of *Norway*, destroyed by authoritie of *Olau Triggø* King of *Norway*, about the yeere of Christ 995. But the latest in the yeere 1338. *Magnus* the Sonne of *Ericus*, being King of *Norway*, that a Giant of fiftene Cubits was slaine by foure men: as it is found recorded in the Chronicles. Hereunto adde, that a certayne Prouince of *Norway*, or bordering vpon *Firmauchia*, in ancient time was called *Risalande*, that is to say, the Land of Giants (for *En Rise*, and *Rese*, signifie a Giant) from whence *Iotum Heimar*, that is, the habitation of Giants is not farre dissonant (whereupon as yet, *En Iat*, is said to be a Giant) that I may speake nothing heere of *Iotumland*: by which name, that which at this day is called *Istland*, was sometimes called by our Countrey men, and very many other also, the Land of the *Cimbri*, or *Chersonesus*: the same name also being giuen it of *Kemper*, that is, fighting Giants of *Nephilheimar*, and *Karnephill*, else-where, and peraduenture by others shall be spoken, as also of the *Gothes*, and *Getts* (peraduenture also *Ietts*) and such like others. Moreouer, the remnant of the Giants came into *Istland*, whose Names, Habitations, worthy Acts and Enterprizes, are sufficiently knowne, and before our eyes. Seeing therefore Giants first inhabited this our World; it is demanded, when, or whence they came?

Giants in the time of *Haraldus Harefayre* and *siace*.

1338. a Giant reported of 14 Cubits.

Istland.

Gill. Genebrand. Chronol. Lib. 1. The first Age, sayth hee, (from the Creation of the World vnto the Flood) seemeth to haue beene passed and spent within the mid-lands of the World, and that they came not to the borders of Asia, Atrica, and Europe. *Bodinus* sayth, that *Moses* wrote the Historie of the whole World (he meaneth inhabited) euen to the yeere of the World, 2450. And *Genebrand* againe, *Lib. 1. Chronol. pag. 11.* As the first Originall of Mankind was in Armenia, Mesopotamia, Chaldaea, and Syria: and men before the Flood dwelt only there: so other Countreies themselves, were first inhabited after the Flood. Also *Genebrand* sayth yet further, *ibid. pag. 35.* Before three thousand yeeres (for hee wrote in the yeere of Christ 1597.) almost all Europe was emptye, that is, about the yeere of the World 2541. which is chiefly to bee vnderstood of the Northerne World, if of the rest of Europe. But hee said, almost, not altogether, that hee might not take away the migrations of the Nations then presently beginning after the yeere of the World 2500. wee doe not therefore tye the time (wherein this further Europe began to bee inhabited) to the yeere of the World 2500. But wee say, that that troublesome time wherein the Nations (and among them the Giants of *Canaan*) were cast out of their places and dwellings, and compelled to seek new habitations, euen in Europe, happened in this yeere: as was proposed by vs in the beginning. And that Europe receiued her Inhabitants from hence, among the Ancient, *Procopius* is my Author, a Writer borne at *Casaria* of *Palestina*, Collector of the worthy Acts of *Iustinianus*, about the yeere of the Lord 530. who to proue this very thing, allea-

geth diuers Writers of the Historie of the Phœnicians. The words of Procopius are these, in his fourth Booke of the Warres of the Vandalls, not in one place only, cited by D. Cythraus: out of the which, among other things, I gather mine opinion. The Hebrewes (saith Procopius) after they returned out of Egypt, and remayned still in the borders of Palestina, Moses (who led them in their iourney) dieth: whom Iosua the sonne of Nun succeeded, who also brought the people into Palestina, and shewing strength and courage far beyond the nature of man, obtained the Country; where by destroying Nations, he easily vanquished many Cities, seeming inexpugnable vnto all. Then therefore all the Countrey vpon the Sea-coast, from Sidon euen to the borders of Egypt, was called Phœnicia: ouer which one long since raigned; as all witnesse, who writ the ancient History of the Phœnicians; here great multitudes of people dwelt: the Gergalites, Iebusites, and others named in the Hebrew Volumes, who when they saw the Armie of the strangers to be inexpugnable, leauing their Country bounds went into Egypt next adioyning, and there increasing in number and posteritie, when they found not sufficient, and conuenient place for so great a multitude, they entred into Africa, where inhabiting very many Cities, they possessed all that Coast, euen vnto the Pillers of Hercules, vsing the halfe Phœnician Tongue and Dialect, and built the Towne Tingen in Numidia, most strongly fortified in the situation thereof: where two Pillers of white stone are erected neere the great Fountayne, whereon in the Phœnician Language these Letters are ingrauen. Nos sumus Cananai, quos fugauit Iesus Latro. For Iosua in the Hebrew is Iesus. This Procopius writeth, to which purpose the Historians of the Hebrewes are cited by Genebrand: Iosua (saith he) partly expelled the Canaanites; and partly slue them. The remnant of these are reported to haue gone into Germany, Sclauonia, and the next adioyning Countreies, &c. Into Se- 20 der Olam, &c. Also: And surely in that Age, that the whole West was emptie and vnepeopled, saue that the Nations of the East came by little and little into the Countreies thereof, it appeareth by the often infusions. This Genebrand writeth. And Bodinus Method. Hist. chap. 9. The Canaanites being cast out of the Land of Palestina, by the Hebrewes, went into Illyricum and Pannonia (to wit, by those migrations and remoues, which out of the place before alleadged by Procopius, wee vnderstand) as Rabbi David Kimchi witnesseth at the end of Abdias.

Chap. 5.
Of their Cu-
stomes and
manner of life.
Separate dwell-
ings.

The ancient Islander seeme to haue bene ordayned for great frugalitie, wherein first their habitations or buildings are briefly to be touched, next their food and manner of apparell: and lastly, the rest of the exercises of their common life.

Houses.

For first as touching their habitations, the Islanders haue followed the first and most ancient 30 manner of dwelling. To wit, not by Cities and Townes; but as Tacitus speaketh of the Germanes of his time, they dwelt asunder, as a Field, as a Fountayne, as a Wood, as an Hill, or Valley, Shoare, or Bay of the Sea pleased them: Not only imitating here the example of the first Age of the World, but also of the latter Age: as the people of Athens and Laconia, in the beginning dwelt by Villages (as they write) not together or by Cities: and as in the time of Tacitus, about the yeere of Christ 120. with the Germanes there was no vse of Mortar nor Tyles: (whereupon any man may rather judge the like concerning the Northerne World) so, nor after, with the Islanders, but they built their houses with Timber and Turffe. Nor surely was it momentany worke which lasted but a while, nor yet deformed in shew, the walls were sometimes made only of Turffe, sometimes of rough Stones, adding Turffe in stead of Mortar: which af- 40 terwards they couered with workmanship of planks, as also the raftering it selfe; especially in more notable buildings. And so you might see the Roofe with the walls before mature old age ouer-growne with greene grasse every yeere, for you must vnderstand, that the Roofe and walls were couered with greene Turfe. Windowes were made in the Roofe, seldome in the walls, and certayne Roofes not very high, such as is reported the building of houses with the Easterne people was wont to be. The Inhabitants had store of Timber, cast vpon the shoare by the swelling of the waues of the Sea; through the miraculous testimonie of Gods Prouidence, considering their Woods at home yeelding plentie, as I thinke only of Birches, were not sufficient for their huge houses: which yet were a great helpe also; with those which the Inhabitants, as oft as they would, fetched out of bordering Norway, and peradventure also out of Groneland: for the 50 Islanders sayled yeerely to both a long time. Every one therefore had the houses of their Villages almost joyning together on their ground: besides the stalls of their Herds, seated some distance from the houses themselves. Also certayne piles of fuell, not altogether joyning together, to auoid the danger of fire: peradventure also certayne store-houses, which being solitary, might better receiue the Ayre and drying winds.

Fuwell.

Turfes of two
sorts, both vsed
in England; the
one in fennie,
the other in
heath grounds.
Einarus the In-
uenter of
Turfe-fewel in
the Orcaides.

Some maintayned their fires with home-growing Wood: others with clammie Turfe (as I thinke H. Iunius aptly calleth it) whereof there are two kindes with vs: the one soft and spongie, growing vnder the superficies of the Earth; which wee call Suordur: Another more thicke, and therefore more weightie; which peradventure wee may very well call digged Turfe, by the opinion of the same Iunius: because it is taken out of the deepe Quarries or Mines, dig- 60 ged a great depth out of the Earth. And both kindes of Turfe (but this much more) must bee first baked with the Sunne and winde, before it be fit to burne. This latter kind we, as also some of the Germanes call it Torff: the inuenter whereof in the Orchades a certayne Orchadensian Duke is said to be; one Einarus the Sonne of Raugnualdus a Norwegian Duke of Mere, in the time

time of *Pulericomus* King of *Norway*, who was therefore called *Torffeinarus*. He had a brother called *Rolfuo*, whom *Crantzius* nameth *Rello*, who possessed part of *France*, afterwards called *Normandie* of the *Normans*, or *Norwegians*. The Inhabitants chiefly wanted fewell to expell the distemper of cold, besides other vses sufficiently knowne: especially in the Winter time, when Hot-houses and Chimneyes are in vse, heaped together of Rocks and stone, through which the flame might easily breake forth; which as soone as through the force of the fire they were thoroughly heat, and when the Hot-house began now to leaue smoking, the cold parts of the Chimney were besprinkled with hote glowing stones: by which meanes heate vseth effectually to disperse it selfe throughout the whole house, which also is very well so preferred by the wall, and Roofe couered with Turfe.

Stoues:

Yet lest the *Islanders* might seeme through meere pouertie or want of knowledge, to haue v-sed rude buildings and poore houses; I can cal to remembrance certayne houses of an hundred and twentie sixe foot long, and some of one hundred thirte sue, as I haue before declared concerning the buildings of *Ingulfus*: and some of one hundred and twentie feet in length, and sixtie feet broad: whereof we shall hereafter speake; some also, whose hollowed rafters, and boarded feeling of the walls carued by art, report the ancient Histories, of worthy and memorable Acts. They therefore inclosed their habitations built after this manner, with certayne spaces of fruitfull fields ordayned for tillage, which spaces through toyle some labour, they afterwards compassed about with a banke cast vp, to keepe out the Heards of cattle. Moreover, sufficient huge pastures were assigned to euery Farme or plot of ground, diuided by certayne limits, or inclosures from others, whereof we shall speake in the eight Chapter. And euery Farme or Habitation for the most part, and in like manner euery plot of ground receiued the name from the first Founders: sometimes also from some other: so Mountaynes and Riuers as hath bene aduertized before; so that by this meane the places themselues, euen by their names only declared to all posteritie their first Inhabitants, and *πατριμοσι*.

Greater houses in Island, in old times.

I proceede from buildings to their victuals, and tillage of the field and ground, which partly succeeded well to the first Inhabitants, to procure Corne and fruit from thence: but I know not whether euery where alike. Yet in the meane space, that *Hiorleifus* mentioned before, exercised his slaues in tillage of the ground: and one *Gunnernus* of *Lidarenda*, sowing his Seed, was wounded by the enemy on the ball of the cheeke: and likewise *Hofchuldus Huitarnesgode* busily employed in sowing the Seed, was slaine. Hence from the fields there are proper names of certayne places. Hence came that Law concerning the gathering together, and carrying of Corne after Harvest (where they speake of the seruices which the Lawyers call *pradiall*.) All which are manifest tokens of the tillage of the ground, amongst the first *Islanders*: which also, euen vnto this day, I heare, is practised by some Inhabitants of South Island, but with lesse increase: the ground and temper of the Ayre degenerating from the first goodnesse thereof after so many Ages: peradventure also the care of the Husbandmen beeing lesse diligent, may bee the cause; since Corne comming from forreigne parts began more to be in vse. And because that tillage of the ground seemed in the beginning either not vsed of all, or lesse

Victuals and Husbandry.

Tillage anciently in vse.

fruitfull for Corne, and all manner of graine; a peculiar manner of tillage of the ground presently began: whereby they compassed with dunge those fields or spaces, which I said they inclosed within their owne circuit, especially with kowes dunge, at the mowing of the best hay, to the intent they may the better feed the Heards; and especially the Kine, that they might yeeld the more plenty of Milke. Which tillage of the ground is yet retayned: and they only exercise the same for the most part, almost by mid-land Inhabitants: seeing such as dwell vpon the Sea-coast liue most by fishing: whither also those more remote or mid-land people yeerely send their Seruants to fish. Both Plaines, that is to say, the ground and the Sea, was to bee ploughed after a sort by the *Islanders*, for the comforts of life. To whom besides instead of victuals, Sheep, Oxen, Swine and Kiddes, sufficiently abounded: and also fishes of diuers kindes, besides

Sea-fish out of the Flouds, Lakes and Riuers, they met with euery where: so that they might take them as it were out of a certayne weele, especially in that Age: also Milke and White-meate, with goodly plentie of Butter from the Heards of cattle. Besides Fowle in great number, some tame, as Hennes and Domesticall Geese, or Fowle of another kind liuing in the open Ayre, wandring also solitarily in Mountaynous places: which the possessors marked in the feet, that euery one might more easily demand his owne. They had others also not tame, which they tooke by certayne ginnes: as Geese and Duckes of the Medow, Partridges, and Swannes: and very many Sea-fowle, whose names and properties I doe not know. But Fowle of either kind tame or wilde, they either presented their Egges or themselues, or both, for the vse of men. Besides the naturall Drinke or pressed Whay of Milke (whereof the great plentie is so much the better, as the Milke is more excellent: so that halfe an ounce of water mixed with an ounce of Whay, doth not wholly diminish the taste thereof; but that it reliseth more of the Whay then of the water) they also boyled Barley Flowre, sometimes adding thereto the Honey Combe, or Water mingled with Honey: sometimes also a Liqueur made of certayne Berries growing heere. Moreover, the ancient *Islanders*, Ale.

Beasts:

Fowles:

Fishes:

Drinke:

Whay:

Mead:

Ale:

brought in drinke made of Corne, from forreigne parts, as also all manner of graine, and other things: for they were furnished with ships of their owne; wherewith they yeerely visited at their pleasure, *Denmarke, Norway, Suecia, Scotland, Saxonic, England, and Ireland.*

Our ancient *Islanders* wanted not honest Banquetings and meetings: and that surely without miserable sparing, whether we respect the number of the guests, or the time of the Banquets exhibited. For *Theodorus* and *Thornaldus*, brethren, and Citizens of *Hialtad* of North Island, solemnizing the Funerals of their Father *Hialta*, made a Banquet for fourteene dayes together, of twelue hundred persons, presenting the men of better note with some gift. And an Inhabitant of West Island, surnamed *Olaus Pa*, with his two brethren, were at the charge to banquet nine hundred men, euen for fourteene dayes space; not sending the chiefe men away without reward.

I find money was not vsuall with the *Islanders*, I meane, those of ancient time: but siluer was weighed by the ballance: and bartering of Merchandizes was very commonly vsed. Moreouer, Rings of Gold, and Bracelets, were both often sent for tokens of remembrance from Superiours to priuate men, or from one friend to another.

III.

Of their Politie, and Religion in old times.

Chap. 6.
Of their Common-wealth & Religion.

He *Islanders* going about to establish an *Aristocratie*, or State of Nobilitie (considering they dwelt scattered in the Countrey, and not together) first diuided their Citie into Fourths or *Tetrades*, named from the foure principall quarters of the World, and distinguished besides by setting of bounds (such also as was the Geographical partition of the Island it selfe, mentioned before at the end of the first Chapter) diuided into North, East, South, and West quarter. And againe, they diuided the Fourths into Thirds, except the North quarter: For this, as it was larger then the rest, was parted into Fourths. But these Thirds they subdiuided againe into their parts: some Tenth and others somewhat otherwise. For the which not finding a fit name, I haue retayned the proper name of the Countrey, that which with them is *Hreppar*, wee may counterfeitly call *Reppe*: vnto the which also we may imagine no vnapt *Etymon*, from the word *Repo*. For here was the first *apportion* of them that executed any publike Office, for equitie either of opinion and judgement, and the equall ballancing of mindes, to be preserved in the rest of the Magistrates, worthily ought to begin there, vntill any could rather thinke they had respect heere vnto *Reeb*, that is to say, Coards, with the which the diuision was made, after the most ancient manner of the *Hebrewes* themselves. Every *Reppa* regularly containd twentie Inhabitants at the least (for oftentimes it containd more) limited by a certayne increase of the wealth of their Family, vnder which they might not be reckoned to the poorer *Reppes*; to the richer they might.

Seats of Iustice and Religion.

Idols.

For and Thors day.
Frejr Niordur and As.
Odinus the same that Woden in our Saxon storie.
Odinus, Odin, or Oden by his Sorcery (which made him a Deuill) made a God.
Wednesday, or Wednesday.

Moreover in every Third, as also in the Fourths of the North *Tetrad*, (which Iurisdiccions in times past they called *Pyng*, at this day also *Syslu herad*) they appointed three more famous places consecrated to the Seat of Iustice and Iudgements; besides also dedicated to *Ethnicke* Sacrifices, which they call *Hoff*: we call them Holy Places, and Temples. Every Chappell after the manner of this Countrey was sumptuously built: whereof wee reade of two, of one hundred and twentie foot long. One in the Iurisdiction of *Walsdall* of North Island: the other in *Rialarnes* of South Island: and this surely sixtie foot broad. Moreouer, euery such holy place had a kind of Chappell adjoyning. This place was most holy. Heere stood the Idols and Gods made with hands, vpon a low stoole or a certayne Altar; about which the cattle which were to be sacrificed vnto them, were orderly placed. But the chiefe and middlemost of the Gods was *Iupiter*, by them called *Por*, from whom these Northerne Kingdomes yet call *Thors*-day *Thorsdagh*. The rest of the Gods were collateral vnto it; whose certayne number, and names I haue not heard. Yet in the ancient forme of oath (whereof mention shall be made hereafter) three besides *Thorus*, are specially noted by name: *Frejr*, *Niordur* and *As*: whereof the third, to wit *As*, I thinke to be that famous *Odinus*, not accounted the last among those *Ethnicke* Gods (of whom I made mention before) Synecdochically called *As*: because hee was the chiefe of the people of *Asia*, who came hither into the North: for in the singular number they called him *As*, which in the plurall they called *Asar*, or *Aser*. This *Odinus*, as aforesaid, for his notable knowledge in Deuillish Magicke; whereby like another *Mahomet*, hee affected a Diuinitie after his death, was reckoned among the number of the Gods: from whom at this day, *Wednesday*, is called *Odens Dagur*, the day of *Odinus*: whereupon peradventure, I shall not vnaptly call *Odin* (*Mercurie*) as *Thon* *Iupiter*. Yet the ancients honoured *Odin* in the place of *Mars*: and such as were slaine in the warres, they say were sacrificed to *Odin*. And the companions, or dr. Sonnes of *Odin* were *Frejr* and *Niordur*: who

through

through the same artes which their Father or Prince *Odinus* practised, obtaigned an opinion of Diuinitie. I haue before aduertised you, that chiefly in the North Countrey, Kings, after their death, are honoured for Gods. But the worshipping of them hath not yet come vnto the *Islanders*: wherefore we will speake nothing of them in this place.

Before that seate of the Gods placed in the foresaid Temples, stood an Altar erected, couered above with Iron, that it might not be hurt with fire, which must bee continually there. A Caldron alio or brasen vessell was set vpon the Altar, to receiue the blood of the sacrifices, with an holy water sticke or sprinkle, to bedew the standers by with the blood of the sacrifices.

The Altar.

Holy water
sprinkle.

Besides, on the Altar a siluer Ring was kept (or of copper) of twentie ounces, which being anointed with the blood of the sacrifices, they who executed any office pertayning to Iustice, being now readie to take their oath, religiously handled while they were tworne. Foure-footed beaists, for the most part, were appointed for sacrifices; to bee conuerted to the food of the Sacrificers. Although in the meane space, I finde (a lamentable matter) that the blinde *Ethnicks* in the foresaid place of *Rialarnes* vsed also humane sacrifices: where at the doore of the Temple, was a very deepe Pit, wherein the humane sacrifices were drowned; which Pit was called *Blockell-da*, from the Sacrifice.

Holy Ring.

Sacrifices.

Humane-inhu-
mane sacrifices

Demill-circle.

Also in West Island, in the Prouince of *Thornsting*: in the middle of the Market place there was a round circle, into the which, men appointed to be sacrificed to the Gods, were gathered: who being violently smitten against an exceeding great stone set there, were cruelly flaine. The indignitie whereof, that stone is reported to haue declared many ages after, by the bloody colour, which no shower of raine, or water, could euer wash away. An abominable crueltie surely, yet not wanting examples, deriued euen from the most ancient times. I omit those of later time, and found in the neare bordering Countries, as the humane sacrifices of the *French*, whereof *Cicero pro Fonteio*, speaketh: and also the custome of nearer bordering Countries. I doe not mention the *Roman* sacrifices: among which, *Lupercus Valeria*, appointed to be sacrificed, was deliuered from present death by an Eagle. Let the *nepheux*, and sacrificing of noble Virgins of the *Greekes*, not be remembred: with whom *Helena* was likewise freed from imminent perill of sacrificing, by the benefit of an Eagle. But who is it, that can be ignorant of *Benhennon* or *Gehennon* of the *Hebrewes*, and their crueltie farre greater then this, exercised not vpon slaues or guiltie persons, but euen vpon their dearest children? Concerning which matter I thought good to set downe the wordes of *Christoph. Adricomus Delpbus*. *Gehennon*, saith he, was a place in the suburbs of Ierusalem ouer against the East, under the Mountayne of Offence, neare the Fishpoole of the Fuller, most pleasant, like Tempe. In this Valley stood a Pavilion, and the brasen Idol of Moloch, cunningly wrought in the shape of a King, hollow within; whose head resembling a Calfe, the other parts a man, had armes stretched forth to sacrifice children: who through the vehement heat of the Idol, were burned amidst these cursed embracements: For when by the fire put vnder in the concavity of the Idol, it became all fiery, then the most wicked parents, with incredible crueltie, deliuered their dearest children, to wit, their Sonnes and Daughters to be burned within these detestable embracements. And least the miserable cry of the children in horrible torment being heard, might mooue the bowels of the parents, the Priests of Moloch filled the ayre and skie on euery side with the harsh sound of Trumpets, and striking up of Drummes, so long as the sacrifice continued. Whereupon also the place was named Tophet, which signifieth a Drumme. This *Adricomus* writeth. And least any might thinke, that the common people onely of the *Iewes* became thus blinde; behold Kings: *Abaz*, 2. King. 16. 2. Paralip. 28. *Manasses* there in the 21. and 33. where also the ancient custome of the Nations may bee alleaged.

Of this place
and these cries
of the children
confused with
sounds of in-
struments and
the vnnaturall
horror, Hell
was called *Ge-
henna* and *To-
phet*.

But that crueltie, and those sacrifices of *Saturne* seeme not to haue continued long with the *Islanders*: and surely, they were vsed no where else, saue in the two places assigned. Nor yet of all the Inhabitants of that Prouince, where it was exercised. For it is reported of *Horleifus*, the companion of *Ingulfus* before mentioned, that he altogether abhorred the worshipping of Idols. And *Helgo* also surnamed *Biola*, descended from the Barons of *Norway*, an inhabitant of the Prouince of *Rialarnes*, fauoured the *Ethnick* Religion but a little: for he receiued an *Irish* man, a banished *Christian*, into his neighbourhood; one named *Ornulfus*, with his families (which came with him:) and did not onely receiue him, but also permitted him to build a Church consecrated to Saint *Columbe*, in the Village of *Esenberg*. A yong man also of the same Prouince, called *Buo*, destroyed that most accursed Temple of humane sacrifices with fire, and burned all the Gods, although afterward it was repaired by the Proprietors.

Moreover, *Torchillus* surnamed *Mane* (it may bee because hee honoured the Moone, called *Mane*, and the rest of the Starres, with more Religion then the rest) a man of a very vpright life, and famous among the *Nebilitie* of *Island*, a little before the agonie of death, caused him- selfe to bee set forth ouer against the Sunne, and openly admiring the workmanship of Heauen, and the whole World, commended his Soule departing when he was readie to die, to that God who created the Sunne, and the rest of the Starres. He liued about the yeere of Christ 976. The same, or the like may be reported of very many others, while *Ethnicisme* yet continued. As of *Hallerus* a certaine inhabitant of South Island: who, because hee followed not the worship of

Chap. 7.
Of Magistrates
and Courts.

The publique Offices, some of them are distinguished from hence; others haue their originall from some other place. Those which are taken from hence, are a *Reppagogie* (that I may deuise a word) and the administration of Prouinces, to wit, as that partition into *Reppes*, and Prouinces, ended as it were in sundrie species, but both had some kinde of gouernment ioyned with it. For aswell the *Reppagogi* (for so I may call the Masters of *Reppes*) as the prouinciall Gouernours, proclaimed Assemblies, established Iudgements (euery one in their Court) and punished the guiltie: whereby it is euident that they also vsed the Law of Appeale in forren Causes (for in their own, euen priuate men had libertie of Appeale) so that I need not doubt that the *Reppagogi* also were comprehended vnder the Title of a Magistrate. Who is defined by *Bodinus* to bee *Hee, that hath part of a publique gouernment*. *Mesbo. hist. cap. 16.* I added, saith he; the word *Publique*, that it might be distinguished from the gouernment of a Master, or a Father. If therefore any would desire a more perfect distinction of a Magistrate, it should be such: A Magistrate is inferior, or superior. The inferior is a *Reppagogie* or Gouernour of five men, which five inhabitants chosen for gouernment of the *Reppes*, vied in euery *Reppe*, whom we are here compelled to call *Reppagogie*, and *The five men*, they call them *Hreppstior ar*, appointed first for their wisdome and integritie, next for the possession of immoueable goods; vnlesse concerning this latter, it seeme good to doe otherwise, by the common opinion.

A Magistrate,
who.

Care of the
Poore.

Moreouer, the Office of the *Reppagogi*, is limited by the care of the Poore. But that which the care of the Poore required, euery one within the bounds of their *Reppe*, endeouored to attaine by these two meanes. First, that they should prouide, that none should bee suddenly brought to extreme pouertie: as much surely as consisteth in mans pollicy. Secondly, how they might prouide for such as were become Beggars, to be maintayned by the common aide.

Lawes against
Beggars.

And surely, they attempted the first part of their office three manner of wayes: first, by making Lawes against such as through their owne fault (speaking after the manner of men) became beggars: of which sort are those, *titul. de exheredandis, cap. 3.* *Parentibus mendicis natus, & ipse hostiatim victum querendo educatus (nisi morbo affectus) hereditatem nullam adito &c.* that is to say, So long as he liueth from doore to doore: The 18. chapter of the same; and the first three yeere, next from the time of begging, *cap. 20.* Least any vnder a feigned shew of vertue, should deceiue and abuse the Lawes. Also, *Altera lex de eiusmodi mendicis impune castrandis, etiamsi cum eorundem nece coniunctum foret, titul. de pupillis, cap. 33.* to wit, Left liuing from doore to doore, they might beget children like vnto the parents, which afterwards should be a burden to the Commonwealth. Also, a third Law, *De iisdem mendicis non alendis, titul. de mendicis cap. 39. 63.* (not repugnant to the commandement of the Apostle, *Hee that laboureth not, let him not eate, 2. Thes. 3.*) and of not receiuing them, so much as into their house, *cap. 45.* of the same: a grieuous penaltie being inflicted, if any offended against this Law; in the same place.

Inordinate
men.

By which Decree, what other thing I pray you is meant, then the custome of the *Athenians* in times past? among whom the *Areopagus* inquired of the particular Citizens, by what art euery one liued; and prouided to haue them called in question, who gaue themselves to filthy and slothfull idlenesse? What other thing, I say, then what was meant by the Decree of the *Massilienses*, who forbade them to enter their Citie, who knew no arte whereby to sustaine their life? and lest any should practise either vnprofitable or dishonest artes: they gaue no place to Players, counterfeit Iesters, laughing Companions, sawcy Scoffers and Iugglers. To conclude, What other thing, then what the Decree of *Solon* meant, who ordained a Law, that the children should owe no thanks nor fauour to their parents, by whom they had bene instructed in no honest arte to get their liuing? The ancient World had so great and vehement prouocations vnto Vertue, euen with our Countermen, which in this last age (ah, too degenerate) you may finde wanting with griefe; all these Constitutions being taken away. Wherefore the number *τῶν ἀνέλκων* (that I may vse the word of *Paul*) is more abundantly increased, that is to say, of them, who being void of all discipline, liue infamous to themselves, and grieuous and troublesome to their common Countrey, in slothfull and filthy idlenesse, inuerting and changing that order instituted by God himselfe. The care of which thing, if the Magistrate would yet vnder- take, surely many should fare the better.

Our tithings
and hundreds
in their origi-
nall, had some
resemblance
thereof.

The second meanes and way of preventing pouertie, was a Law or Edict, concerning those who desired to be admitted into a *Reppe*, or become Citizens of *Reppes*. For none was to be receiued into a *Reppe*, vnlesse hee had first gone vnto the solemn assembly of that *Reppe*, and desired that he might be admitted; which they might not iustly denie, vnlesse to one conuicted of theft, or otherwise of some other crime, or so poore, that therefore hee was vnfit for the *Reppes*, and that hee could not sustaine himselfe and his family without the common almes of the beggars. But if any could not be present at this assembly, hee was bound to intreat leaue of cohabitation of five inhabitants, hauing lands of their owne, and next vnto him, whom hee was about to goe vnto. If any of honest fame and rich in abilitie, would notwithstanding goe into the *Reppes* without demanding leaue, hee retained his habitation, but yet was excluded from the Law and priuiledges of the *Reppes*. But if any wicked and dishonest person had thrust himselfe in with-

out leaue (although he had lawfully hired void and emptie land from the Lord and Owner thereof) the same was to be expelled by force: *Tullius de Reppis cap. 48.* To the same purpose appertaineth that Edict concerning seruants taken out of the *Rep. cap. 47.* of the same.

The third Statute against pouertie was, concerning the restitution of priuate losse in the title recited before *cap. 47.* whereof an example shall bee giuen, first in houses by chance consumed by fire: and those of foure sorts. For if a Store-house, Kitchin, Bed-chamber, or Bed, and Chappel had been burned; the losse receiued was to be valued within fourteene dayes, by five of the next neighbours, as well of the house it selfe, as of the most necessary things contained therein: as of the prouision of victuals, apparell, and household-stuffe daily vsed onely, properly belonging to the Master of the family, excluding other mens goods, as treasures, and other things more precious; because a man might bee a sufficient Citizen of *Reppes* without these. Then the halfe part of the losse valued by the whole *Reppe*, was to bee restored within an appointed time, by Subsidies contributed in common, according to the abilitie of euery Inhabitant. Another example of this liberalitie enioyned by the Lawes, is, concerning Cattle destroyed by the Murren or Rot: for if the fourth part of any mans Cattle, or more dyed, the losse likewise being valued within fourteene dayes after the Murren ceased, was to bee releued by common supplies for the halfe part, as the former was. But concerning both, there was a caution added, that this benefit should not be performed the fourth time; least any thing through too much carelesnesse, and retchlesse negligence, should procure damage to himselfe, *De Reppis cap. 47. & 48.*

20 The other part of the Office of the *Reppagogi* was imployed about the care of the poore, concerning the maintaining of such with certaine contribution of almes as were now become beggers, either through sicknesse or age, or other casualties not in their owne power: and also concerning the excluding of others, who should not appertaine vnto the almes, and diuers cases thereunto belonging. This almes was either priuate or publike. Priuate, for the which a law was made concerning the receiuing of the beggers, into the number of their family by their kindred, or cousins, one or more, inabled by a certaine increase of wealth limited by law, and to bee maintained by certaine lawes, according to the degree of hereditarie succession: For as any was next to the inheritance of the begger, if hee possessed goods, so was hee accounted the first that should sustaine him. But the next degree failing, or the same being poore, or not hauing wherewith to maintaine himselfe and his, besides that begger, that necessitie was imposed vpon the second, or third degree of kindred, &c. to be releued.

Lawes of Almes.

30 Publike almes was, as often as the kindred or cousins of the beggar failed, they liued by the helpe and reliefe of the *Reppes*: euery one was to bee maintained in his *Repp*; whereof there are prescript constitutions of lawes, to wit, what beggars should belong to what *Repp*, and what not; and concerning the driuing away and expelling of them by proesse of law, who appertaine not thereunto. Therefore the *Reppagogi* partakers of a publike Office limited with these bounds, proclaimed assemblies: Some surely both in time and place, standing, or ordinary: others not standing, or extraordinary; that is to say, as often as any new matter came pertaining to their charge to bee determined. Also priuate men might call extraordinary assemblies, to wit, they who had any cause worthy of an assembly and iudgement. But the signe and token of hauing an assembly (after the thousand yeere, when they had now sworne to the *Christian* Faith, peradventure before *Iupiters* Hammer and battle Axe, *Hamor poris*) was according to the religion of that time, a wooden Crosse, which euery Inhabitant carried to his neighbour at the day, place, and occasion of the assembly proclaimed, of which signe intermitted or neglected, a certaine penaltie was inflicted. There therefore the *Reppagogi*, concerning the matters appertaining to their charge, consulted according to equitie and right, determined them, and punished the guiltie: There the guiltie person, if the iniury were priuate, was cited into the Court of Iustice by him that was iniured, euen without publike authoritie (which also wee reade was vsed by the *Spartans*:) but if the iniury were publike (or if the partie iniured in a priuate offence would not cite the guiltie person, or could not) then was hee cited by some of the *Reppagogi*. Priuate men also had libertie and power to sue the *Reppagogi* negligent in their Office, or otherwise iniurious: where a penaltie of money fell to the Citizens of the *Reppes*: all which, and other things here belonging are handled, in *codice legum de Reppagogijs, cap. 43.* And concerning the inferiour Magistrates, that is to say, the *Reppagogi* onely, to wit, the first species of the Ciuill Magistrate.

60 Now followeth the superiour Magistracie, which is distinguished into Gouvernours of Prouinces, and Iustices. They were each of them Gouvernours in euery Prouince (which before I called *Thirds*, to wit, of euery *Tetrade*) executing as well the publike Offices of the Courts of Iustice, as of holy mysteries: or they were Interpreters of the Law, and matters of Religion: (although afterward the interpretation of the Law belonged more to the Iustices.) As with the *Romanes*, the *Ediles* also vsurped part of the *Pratorian* Iurisdiction. Among the ancient *Hebrewes* also the High Priests: also among the *Romanes* the High Priests were sacrificers. Whereupon *Horatius Carm. lib. 3. Ode 23. Victimæ Pontificum secures cernice tingit.*

These Gouvernours therefore, in that they had the charge of holy Mysteries, were Priests: in that they had to doe with the Court of Iustice and Iudgement, they were Iudges: we call them Noble-men

Noble-men in this place, and the state of the Common-wealth governed by their oversight, an *Aristocratie*. The same are called by our Country-men *Godar*, and *Hoffgodar*; from the Church or Temple (which is *Hoff*) as it were Ouer-seers of the Church, and their Office or Dignitie was called *Godora*; to wit, their name being next deriued from their *Ethnick* gods, which they called *God*: that euen by the name it selfe, they (who almost represented the Name and Office of the Gods) might bee put in minde of the Vertues, Wisdome, and Iustice, &c. requisite in such a *Gouernour*.

And that they might shew themselves such, I suppose the same place was appointed to iudgements of the seate of iustice, which was ordained for Sacred Mysteries; to wit, at the foresaid Temples. And also therefore, because the place of holy Mysteries, was religiously thought fitter for *εὐβουλία*, or the taking of good counsell, whereof there is especiall vse in the Court of Iustice. Moreouer, the Prouinciall *Gouernours* had their two-fold assemblies, as the *Rappagogi* had; yeerely or ordinary meetings, and proclaimed: or extraordinary, any necessitie requiring (those former assemblies, containing many dayes: *vid. Kapb. cap. 8. Torn. Leg.*) and that, as it is likely, assembled by some signe of holding a meeting; as we haue already said of *Reppagogies*: which surely, what it was in times past, is not well knowne; vntill it were that, which afterwards, and yet remaineth in vse; the forme of a *Norwegian* axe of Wood, carried about after the same manner, among the prouinciall Citizens: as we said a little before, of the wooden crosse. This token of the Iudiciall Court, is called *Bod* in our language, which signifieth a message.

Moreouer, euery one paid some yearely tribute or reuennue to the Temples: whereof the *Guardian* or Ouerseer of the Church was the Collector: for speaking of holy mysteries pertaining to the Church, I call euery Noble man so. To him also came the penaltie of the Temple, and Court of Iustice prophaned: who likewise ought to maintaine the Temple, or keepe it in reparations, at his owne charge. Lastly, the necessity, and specially care to amend and make good whatsoeuer damage done vnto the Prouince, or to foresee and preuent it being imminent, vsing the helpe of the Prouincials, lay wholly vpon him: so that, for the destroying of Theeves and publique Robbers, you may finde some who were prodigall of their owne life. Contrarily, it is a lamentable case, how at this day we see it euery where come to passe, where they make a great conscience to condemne a notorious Theefe by the Law, or any other conuicted once or twice of any capitall crime, much more to put him to death. These are the *Gouernours* of Prouinces: The *Nomophylaces* or Iustices follow. The *Nomophylax* was the other kinde of the superiour Magistrate, somewhat later then these: of which sort, in the whole auncient Citie of *Island* (for we yet describe it) at one and the same time, there was onely one: who of pronouncing or deliuering the Law, was called *Logmann* and *Logfogumann*. For the Commonwealth began not suddenly, but by little and little to be framed: therefore the Prouinciall Lawes were first, of the like meaning, though peraduenture not euery where the same, before they had them compact, and gathered into one body: which when they attained, for the custody and preservation of the same, they admitted trustie and wise men, whom I call *Nomophylaces*; and whose Office I shall very well describe in the words of *D. Nicolaus Cragius*, declaring the Office of the *Spartan Nomophylaces*. The Office of the *Nomophylaces* (*sait D. Cragius Li. 2. cap. 6. de Repub. Lacedæm.*) was, as we perceive by the matter it selfe, to haue charge of the custody and preservation of Lawes, for the benefit of the Commonwealth; and that they should not suffer them to be abolished, changed, or taken away by any. Moreouer, they indououred that the force of the Lawes might not grow out of vse, or the memory thereof be forgotten: but they compelled the *Magistrates* to the often obseruation of them, and execution of their dutie. And further, we may thinke these very men were the interpreters of Lawes, if peraduenture any thing doubtfully set downe, or hardly vnderstood, should come in disputation. This *Cragius* writeth: the same which I doe of ours: adding this, that they had some manner of authority in their power, together with the rest of the Nobility, of changing, or renewing Lawes, and also enlarging them, as it were *Orators* and Counsellours; the consent of the people being added. Therefore the *Nomophylaces* or chiefe Iustices, tooke nothing away from the forme of an *Aristocratie*: but were, as hath beene said before, Interpreters, and preseruers of the Law, armed with publique authority for this purpose, in whose power also, the custody of the Booke of the Lawes remained.

But I dare proceede no further with our Author in his Law Suites and Courts, lest I be therein detained with Demurs and tedious delaies. I am a Traueller, and howsoeuer I haue (not so much for *Island*, as for the knowledge of the *Arctoan antiquities*) waded thus farre: I will not tire the Reader further, but remit the more curious to the Author himselfe, who hath added much of their Lawes, and a whole Booke of their auncient Grands, and another of their Kings, both here omitted. The Kings of *Norway* began to haue dominion in *Island*, A. 1261. diuers immunities reserved: which Kingdome descending vpon *Margaret*, by her was linked with that of *Denmarke*, and so hath continued above 200. 60 yeares.

THE FOURTH BOOKE.

CHAP. I.

A Voyage set forth by the Right Worshipfull Sir THOMAS SMITH, and the rest of the Muscouie Company, to Cherry Iland: and for a further discoverie to be made towards the North-Pole, for the likelihood of a Trade or a passage that way, in the Ship called the Amitie, of burthen seuentie tuns; in the which I IONAS POOLE was Master, having fourteene men and one boy: A.D. 1610.

THE first of March 1609. I wayed at Black-wall and went to Grauesend. The third day I went downe to the Noore-head. The ninth, wee wayed and put out to Sea (blessed bee God :) and by the fifteenth day I was in the Bay of Rosse, on the Coast of Norway, in Latitude 65. degrees: at what time the wind came Northerly, and blew extreame fierce, with great store of Snow and Frost. The sixteenth day, wee had the like weather and winds, so that wee could not maintaine a * mayne-course, and we lost some of our Beere. The seuenteenth day, we had Snow, and all the Beak-head was so laden with Ice, that it seemed a firme lump, and the wind at North, which blew so fierce that we could not maintaine a * fore-course, and draue vs backe to the altitude 63. degrees, 56. minutes. The storme continued so exceeding violent, that I was faine to spoone before it fortie eight houres, and the same wind and weather continued till the twentie one day, and in that time wee were driuen as farre to the Southwards as Shottland. And being faire by the Land, and seeing no likelihood of faire weather, I got a Fisher-man to conduct mee to a good Harbour, called Hamersound, not so much to eschew the stormy weather, as to stop some leakes, and to amend our tackling. I carryed in Shottland till the twelfth of April 1610. at which time the wind was Southerly. The former wind came to the North at midnight, with great store of Snow, which froze as fast as it fell: which wind continued till the fourteenth at noone. At two of the clocke it came to the East north-east, and I stood to the Northwards, after many stormes, much cold, Snow, and extreame Frosts. I had sight of the North-cape the second day of May. Then I stood towards Chery Iland, the winde being at West North-west. The third day at noone, the Cape bare South South-east; seauenteene leagues off, we had much Snow with Frost. The fourth day, it was thicke weather with

Note.

with great store of Snow and Frost, the winde at North-west and by North. The fifth day, it was faire weather, the winde at North North-east. The sixth day, at two of the clocke in the morning, I met with some Ice, but not very thicke, so that I held my course toward Chery Island, the winde being at South: at five of the clocke, I saw the Ice so thicke, that I could not possibly get through it. Then I stood to the West wards with a short sayle, and sounded, but had no ground at a hundred fathome: thicke foggie weather, at eight of the clocke it began to cleere vp, and I stood into the Ice finding it scattered in some places; and at twelue at noone, I found the Pole elevated above the horizon 74. degrees 7. minutes, and sounded, but had no ground at one hundred and seauentie fathomes. From twelue till foure, I ran North North-west two leagues, and sounded, and had a hundred and sixtie fathomes. Then Chery Island did beare, as I iudged, North North-west, about fifteene leagues off or more: from foure till eight it was calme, at eight of the clocke the winde came Southerly, and I stood towards the Island and found the Ice so thicke, that the Ship had no roome to wend, and withall such a fogge that I could not see one Cables length; in which time the Ship had many a knocke, but thanks be to God, no harme was done. By twelue of the clocke, the seauenth day, I got out of the Ice and lay a hull till the North Sunne, at which time it began to be cleere weather: then I set saile, and stood to the Eastwards, cold frosty weather.

The eighth day it was very foggie, the winde at North and by East, with Snow and Frost: I stood to the Eastwards, in hope to get the Easter end of the Ice, and so to Chery Island; and I ranne into a Channell betweene two firme bankes of Ice, and could finde no way through, but lay in the Ice till the ninth day at a South Sunne. Then I obserued, and found the Ship in the altitude 74. degrees and 17. minutes, the winde being at North North-west, very faire weather, but frostie.

I failed in the abouesaid Ice, one while one way, and another while another, in hope to finde some opening towards the Island: but which way soeuer I stood, I saw all the Sea couered with Ice. At a South Sunne, the tenth day, I obserued both with my Astrolabe and Crossestaffe, and found the Poles height 74. degrees and 15. minutes: and the variation 13. degrees and 30. minutes the North point Westerly: by a North Sunne I got out of the Ice into the open Sea, and to write. each course, way, and winde, with all other accidents, would be too tedious: but the thirteenth day of May, at midnight, I sounded, being in very thicke Ice, and had a hundred thirtie eight fadoms; there presently I espied the Lioness standing into the Ice, I kept her company till eight of the clocke at night, and then I steered as followeth, from eight about said, till twelue at noone: The foureteenth day I sailed North-west and by North twelue leagues, the winde at South South-east, thicke foggie weather: from twelue till foure at night, I sailed seauen leagues North, the same winde and weather with raine. And by the fifteenth day at foure of the clocke in the morning, I had sailed North twentie seauen leagues, the same winde and weather: at what time I supposed, that I was not farre from land, because I see great store of Sea-Foule* about the Ship: at eight of the clocke I sounded, but had no ground at a hundred and fortie fathome: very foggy weather: likewise I sounded at twelue of the clocke at noone; no ground at a hundred thirtie five fathomes, where I met with Ice and gear store of Fowle, as before, winde at South, and foggy weather.

I stood through the Ice, till eight of the clocke at night, holding no course by reason of it, at which time I sounded, and had nintie five fathom Greene oze, the weather being all one, and very much Ice from eight, till ten of the clocke. I sayled North, one league and a halfe, and had seuentie five fathoms rockie ground. From ten till twelue at midnight I sayled North one league and a halfe, and sounded, and had thirtie seuen fathoms, the wind being at South, with great store of raine and fogs, and abundance of Ice round about, but something broken. Then I stood off West and by South, and tooke in all the Sayles, except the fore-saile and maine top-saile: and at one of the clocke the sixteenth day sounded, and had fortie fathomes oze: likewise I sounded at two of the clocke, and had fiftie two fathomes: I could neither perceiue Current nor Tide in all this time, and it did raine as fast as I haue commonly scene in England: then I stood to the Eastwards, and at three of the clocke sounded, and had fortie fathomes oze: and thus I sailed among the Ice East and East and by South, and East North-east, keeping no certaine course, by reason of the Ice, and had these depths following, 30. 20. 19. 16. and fifteene fathomes, and then I saw the Land within two leagues and lesse ofme, bearing betweene the South and by East, and the North-west: then I stood in East and by South, supposing to haue found a harborough within a ledge of rocks that lay off a low point, which seemed like an Island, and standing in, I found depths, 10. 9. 8. 7. 6. 7. 4. and three fathomes, standing in it a shoald bay, and full of rockes.

Then I steered away North-west and by West, and had six, seuen, eight, and ten fathome foule ground: this part of this Land is foule ground a great way off, therefore come no neerer this place then ten fathome, and that will carry you cleere of all dangers that I could see. Towards noone it cleered vp, and I did looke the Meridian altitude of the Sunne, which was 34. degrees and 20. minutes, the declination being 21. degrees and 10. minutes North, the Equator

must

must bee 13. degrees and 10. minutes above and beneath my Horizon. The Complement being 76. degrees and 50. minutes, the Poles height. Likewise I found by true obseruation the Com-
 passe to vary 15. degrees, and before I had sayled foure leagues I saw a Sound that lay East and
 by South in, the winde comming to the East South-east; then I sent the Skiffe on land in the
 mouth of the Sound, because I supposed I had seene Morfes on the land; but they proued Rocks.
 I followed into the said Bay with the ship, but standing in I had a stiffe gale of winde off the
 shoare, which draue abundance of Ice out of the Sound, through the which I enforced the ship, in
 hope there to haue found an Harbour; in turning in I found these depths, thirtie fme, thirtie,
 twentie, and eightene fathoms. The Boat came aboard about a North-west Sunne, and the men
 told me they found deepe water within and foule ground; they saw great store of Mohorles
 lying on the Ice, but none on land, and they brought a piece of a Deeres horn aboard, therefore
 I called this Sound *Horne Sound*, and a Mount that lyeth foure leagues to the South of it, the
Muscony Companies Mount, because it was my first landfall.

The

10 Then finding no benefit here to bee had, nor Hauen for the ship, I stood to Sea, and sayled
 North-west and by North foure leagues: at midnight it blew very hard, and I stood to the West-
 wards with a short sayle, and sayled foure leagues West by eight of the clock the seuenteenth
 day. Then I stood to the Landwards, the winde being at South South-west thick weather: and
 three leagues from me I saw a Point, which I named the *Ice Point*, because there lay abundance
 of Ice vpon it. Then I saw another Point beare North North-west five leagues off, which I na-
 med *Bell Point*, because of a Hill formed like a Bell on the top, and to the Northwards of *Bell*
 30 *Point* goes in a great Bay with two Sounds in it, the one lieth in East South-east, the other North-
 east and by East; the last Sound you can hardly discern, by reason there is a long Island lying
 in the mouth of it. But the going into the said Sound is on the North side, yet there is an Inlet
 vnder Point-partition, but very narrow and full of Rocks, and an exceeding strong Tyde setteth
 in there. This day I found the weather very warme and farre temperater then I haue found it
 at the North Cape at this time of the yeere: this place lying in 77. degrees and 25. minutes, and
 the Cape in 71. degrees and 20. minutes; this place being to the Northwards of the Cape 6. de-
 grees and 5. minutes: and note, two leagues to the Southwards of *Bell Point* is a ledge of Rocks
 three miles off the shoare, and come no neerer the shoare then fiftene fathom: vpon the North
 side of the Bay is low land, which I named *Lownesse Island*. I called the North Sound *Lowe Sound*.
 30 Into the Bay I turned, the winde at East North-east faire weather; turning in I had no lesse
 then fortie fathoms close by the shoare, and in the midst no ground at sixtie fathoms, and be-
 ing neere the Point that parteth both the Sounds, the winde increased with raine. Then I saw
 the Sound frozen ouer from side to side, and vpon the Ice a Beare and great store of Mohorles, but
 the winde blew so extreme hard, that the Boat could not row to windwards, to trie if we could
 kill some of them. The fogs and raine continued till ten of the clock the nineteenth day, at
 which time the raine ceased, and it did freeze with snow and winde and fogs, as before.

From twelue at mid-night the nineteenth day, till foure in the morning the twentieth day,
 I sayled three leagues South-west and by South, then I found the Ice thicker then before. It was
 very thick fogs, with winde, frost, and snow, and cold, that I thinke they did striue here which
 40 of them should haue the superioritie. I put into the Ice aforesaid in hope to get through, and af-
 ter many a fore stroke with the ship in it, I got through at a South-west Sunne, at what time it
 began to be faire weather. Then I stood through the Ice towards the land againe, in hope that
 that land would proue worth the labour and trauell; and going to set the mayne top sayle, it
 was frozen as hard as euer I saw any cloath in all my life time, so that all my company could ve-
 ry hardly set it; and whereas I supposed, and haue often said, that this climate is not so subiect
 to fogs in May and Iune, as it is in Iuly and August, it is contrarie; for I haue not seene the
 Sunne on the Meridian these five dayes, nor seene it at all in sixtie houres: I had not sailed three
 leagues North-east, when it was as thicke as it was before with Frost and Snow: yet I stood still
 towards the Land.

50 The twentieth one, I saw the Land at an East Sunne, and stood towards it, and at a South and by
 West Westerly, I obserued the Sunne, and found the Meridian altitude of it 33. degrees 30. mi-
 nutes, the declination being 21. degrees 56. minutes, &c. the altitude of the Pole was 78. degrees
 26. minutes. The winde at North North-east: cold frostie weather: This place I called the
Black-point Ile: I called a point (that lyeth foure leagues to the North-west of *Black-point*) *Cape-*
cold, and to the South-east of *Black-point* is a great sound, which because it was couered with Ice,
 I called *Ice-sound*, and standing neerer to the shore, I could not see any Sound or Harbour open;
 therefore I determined to stand to the Northwards to seeke what good might be done that way
 to profit the Merchants, and also to get some Wood, for we had but little left. I founded at the
 60 *Black-point*, and had twentie three fathomes streamy ground. At two of the clocke I stood off,
 and at midnight stood to the shore againe, cold weather with frost, the winde at North and by
 East. The two and twentieth day, at an East Sunne, I was faire by the Land, betweene *Cape-*
cold and *Black-point*, a league off where it fell calme, and I founded there, and had twentie eight
 fathoms, where I tried for Fish, but could take none.

The three and twentieth day, at an East North-east Sunne, I was within three leagues of *Cape-cold*: this day it was faire weather, and I tooke the Sunnes height at twelue of the clocke, and found it to be 33. degrees 30. minutes, the declination being 22. degrees 13 minutes, the distance of the Pole from my Zeneth, was 11. degrees 17. minutes, the complement thereof being 78. degrees and 43. minutes, the Poles altitude. All this day it was calme all the forenoone, warme sunshine weather, and whereas I named this place *Cape-cold*, if I had faile with it this day, or the like, I should haue giuen it another name. Here I tried to take fish, but could perceiue none. *Item*, there is a point that beareth from *Cape-cold* North & by West which I called *Faire-forland*: this *Forland*, and *Cape-cold*, and *Black-point*, are all one Iland. At fixe of the clocke at night, the winde came to the North North-west, then I determined to view the Ice-sound better; but comming neere it, I perceiued it packt ful of Ice, so that I could see no end thereof at the Top-mast-head, neither could I see any open water in it. At a North Sun, the wind came to the North-east, and by North, then I stood to the Northwards, as before.

The foure and twentieth day, at a North-east Sunne, the wind came to the South-west, faire weather and warme. At a North north-east Sun, I tooke the Meridian Altitude, which was eleuen degrees aboue the Horizon, and by working accordingly, I found the eleuation of the Pole aboue the Horizon, to be 78. degrees, 37. minutes. The five and twentieth day, at an East-south-east Sun, I set the boat to the land, neere *Fayer-forland*, and it being calme I sounded fortie five fathoms, where I proued for fish, but could find none, and within one league of the shoare I had five and thirtie, and thirtie fathome streamy ground. At a South-east Sunne, the Boat came aboard laden with Wood, and some Whales fins. The men told mee there was great store of Morfes in the Sea, about the shoare side, and about thirtie on Land. Immediately I sent my Mate, *Nicholas Woodcock* with the Boat on Land againe, to see if they could kill any of the said Morfes, and also to search what other thing they should hap to find that might proue beneficiall. Moreouer I was certified, that all the Ponds and Lakes were vnfrozen, they being Fresh-water, which putteth mee in hope of a milde Summer here, after so sharpe a beginning as I haue had, and my opinion is such (and I assure my selfe it is so) that a passage may bee asloone attained this way, by the Pole, as any vnknowne way whatsoeuer, by reason the Sun doth giue a great heat in this climate; and the Ice, I meane that that freezeth here, is nothing so huge as I haue seene in 73. degrees.

The fixe and twentieth day, at a North-east Sunne, the Boat came aboard againe, hauing slaine but two Morfes, at twelue at midnight the wind came to the North, and blew so hard, that I was enforced to try with a Mayne-course, cold frosty weather, with snow. The sayd wind and weather continued till a South Sun, the seuen and twentieth day, at eight of the clocke at night, the wind came to the North-west and by West faire weather, then I stood towards the Land againe. And at a South-east sun, the eight & twentieth day, I was within three leagues of *Fayer-forland*, and standing in I sounded diuers times, and had these depths, 15. 17. 19. and 18. fathoms, within five, fixe, and seuen myles of the shoare, and when *Fayer-forland* did beare South and by East by the Compasse. It being two miles from me, I saw the Land beare North-east and by North, about nine leagues off, the which because it was full of knottie Mountaines, I called *Knotty-point*, and betweene *Knottie-point*, and *Fayer-forland*, I saw a great Bay, which because it was foggy on the sudden, I could not discouer. In the Sea, about the *Forland*, I saw great store of Morhorses and Sea-fowle, I sounded in the Bay and had nintie five fathomes rockie ground. I stood to Sea, and had very foule weather, with snow, and fogs, and frost, which weather continued till the thirtieth day, at foure of the clocke in the morning, at which time I was within one mile of *Fayer-forland* in nine fathomes, and then I sayled East North-east about two myles, and had these depths, 18. 17. 16. 14. and 12. fathomes all rockes. Then I steered South with the like depths and grounds, but when I had runne South South-east three miles further, I had sandie ground, then did *Fayer-forland* beare West and by North, about three leagues of, the next east I had tenne fathomes foule ground, and from thence I steered two leagues South and by East, hauing these depths, 10. 9. 8. and 7. fathomes, then I saw the Bay couered ouer with Ice. I turned out the wind at North. This Sound I named *Fowle-sound*, for in this Bay are three Sounds; this I spake last of, which lyeth in South, and goeth out at *Black-point*: another lyeth in East South-east, which I named *Deere-sound*: another goeth in North, which is called *Closse-coue*, and being neere the point betweene *Fowle-sound* and *Deere-sound*, it fell calme, and I sent the Skiffe on Land, and standing after, with a little wind at West, I found the sayd Point very shoale, with a ridge of Rockes, where I had these depths, 4. 5. 6. 7. 9. 10. 18. and then 30. fathomes. At a South Sun, the Boat came aboard and brought Wood, and some Whale-fins.

The last of May, at an East North-east Sun, I was within three leagues of *Knotty-point*, at which time I saw Ice all the Sea ouer betwixt the West and the Land: then I saw another Point foure leagues distant from *Knotty-point*, the one bearing of the other North and by East, and South and by West, and it is smooth Land, the which I named the *Gurners-nose*, indifferent warme weather: and finding the Ice to bee so thicke that I could not passe it, and the wind comming to the West, I stood to the Southwards againe, determining to search the Sounds better for a Road, and

for commodities, because I saw no good to be gotten in keeping the Sea amongst the Ice, and at a North Sun, I was in the entrance of *Close-coué*, where I had no ground at one hundred & twenty fathomes, and yet I was within two Cables length of a sunken ledge of Rockes, that lyeth on the Larboord side of the Bay a mile from the shoare.

The first of June I found a good Road in *Close-coué*, on the South-west side, where I rid in seven fathomes sand mingled with oze, at an East Sun I sent a Skiffe to a low Point, that lyeth on the North side of the Bay, where they found some Whales fins, and three pieces of Mohorfe teeth, and vpon a little rockie Iland, they saw neere one hundred Mohorfes, which were there sleeping. In this time I went towards the bottome of the Sound, and slue a white Beare. At a South-west Sun, I went towards the rocke, to see if I could kill any of the Morfes, that lay there, and as wee went by the shoare side I espied Deere, three of them I slue, and one of my company one. But when I came to the rocke, the Ice that the beasts lay on was hollow, and the rocks that was betwixt the Ice and the sea stood sloping toward the Sea; the which when I saw, I determined to go aboard and let them alone, yet afterward I went on the rocke betwixt the Ice and the Sea: and as I with the rest of my company were killing them, the Ice brake, and Ice and beasts slid into the Sea together, and carryed one of the men with them, so that he escaped out of that danger very hardly; for besides the weight of dead Mohorfes, and Ice that bruised him, the beasts that were alive strook at him in the water, and bruised him very sore. I had bene in the same case, if I had not bene the nimbler, and slip on one side. I killed three Morfes, whose teeth I tooke off. Then I espied the Beare, which my Mate had hurt before with a shot; hee went into the Sea, when hee saw the Boate, where I slue him with a Lance, and brought him aboard.

The second day at a North and by East Sunne. At a South Sunne, I went to the South shoare of *Deere-sound*, where I found a good quantitie of Fins, and came aboard, at a North North-west Sunne. The third day, being Sunday, I rid still, hauing the wind at West South-West much wind. Then vpon the side of a Hill, a mile to the Westwards of the Road, I set vp a Crosse, with a writing vpon it, signifying the day of my arriual first in this Land, by whom I was set out, and the time of my being heere. This Road I called *Crosse-road*. At a South-east sunne the fourth day, I wayed, the wind at West South-west, and when I was almost out, the wind increased with fogs, which made me put back into the Road, where I anchored the same day at six of the clocke, at afternone. The fifth day, at a North-east and by East sunne I wayed, and it fell calme, then I went to the East side, and killed some Fowle, which I found in great abundance: and when I was readie to go aboard, I saw fourteene Deere, at which time I spent all my powder, and shot but one shot, with the which I slue a fat Buck. The same day, at a South sun, I went on Land and slue two Deere more. And at a South-west sun I went on Land and slue a Doe, and took the Faune alive, and brought it aboard, but it dyed the next day. The calme continued till the sixth day, at an East North-east sunne (and we droue in the Bay, with a little foaking tyde that runneth there.) Then I sent the skiffe to the rocke aforesaid, to see what store of Mohorfes were there; at three of the clocke they came aboard, and told mee there was neere two hundred beasts.

I tooke both the boat and skiffe, with all my company, and went to the rock, and in going thither I slue a Beare: but when I came to the rocke, the beasts began to goe into the sea, then I presently went on land, with all my company, and slue eightie beasts, whose teeth I tooke, and in going aboard slue another Beare, and came aboard the seuenth day, at a North-east sun. Then I saw two white fishes, which at the first sight I supposed to be Beares, they had long snouts like Sturgeons, two flat Fins close by their gills, flat bodied, small towards their tailes, and a broad taile.

The tenth day, I went on shoare and slue slue Deere, with the which, and them that I slue before I haue lengthened out my victuals, blessed be the Creator of the World, which hath not made any part thereof in vaine, but so that in these partes (which hath seemed vnpossible to our Ancestors to be trauelled vnto, by reason of the extreame cold which they supposed to be here) I find the ayre temperate in the Lands, and nothing so cold as I haue found at *Chery* Iland in slue seuerall Voyages. Moreouer, in this Land I haue seene great store of Deere, which haue neither bush nor tree to shelter them from the nipping cold of Winter, nor yet any extraordinary pasture to refresh them. If these (I say) hauing nothing but the Rockes for a house, and the Starry Canopie for a couering, doe liue here; why may not man, which hath all the gifts of God bestowed vpon him for his health and succour?

The eleuenth day in the morning, I sent the skiffe to a Beach, that lyeth Northwards from the Rocke where we slue our beasts, but when they came to the Rocke, it beganne to blow hard at North North-west, that they could not proceed any further, vpon the Rocke they found a Beare, and slue him, and came aboard. In which time I tooke the boate and went to the East side, and slue two Beares and two Deere.

The twelfth day, at a North-east sunne I wayed, and hauing very little wind, I sent the skiffe to goe to the place aforesaid, at a North sunne, they came aboard and brought some Whales Finnes and a Beare, and told mee that it did blow very much wind at Sea, yet I had

minutes.

it all this time calme in the Bay. Yet before I could get out of the Sound, the wind came to the North-west, and blew very hard, which made mee to put roome for *Crosse-road*, where Irid till the fourteenth day, in which time I caused both the boates to bee trimmed, and the thirteenth day at noone, I obserued on Land, in this place, and found the Poles height 79. degrees, fifteen minutes, and the variation of the Compass 18. degrees, 16. minutes North-west: the same day I slue a Bucke.

Ice.

The fourteenth day, at a South-east Sunne I wayed, the wind at South-west foggie weather, at a South-west Sunne, I went on Land and slew a Buck. The fifteenth day, at East Sunne, I got out of the Bay, at which time I saw abundance of Ice to the Sea-wards, but the wind came to the South-east, and I sayled betwixt the Ice and the shoare. At a North-west Sunne, I sent the skiffe (with seven men in it) to the Land vnder *Knottie-point*, at which time the wind came to the North-east, and I stood to the North-wardes, where I had these depths, fifteen, thirteen, and eleuen fathomes foule-ground. These depths were about a league, and to the Northwards of *Knottie-point*, I saw great store of Whales, the like I saw in *Deere-sound*. The sixteenth day, the Skiffe came aboard, and brought a few Finnes, and five Deere, and they told mee that within the Bay, that lyeth betwixt *Knottie-point* and *Gurners-nose* is a Hauen, in the entrance whereof is an Iland, and seven fathomes going in, but within eight, nine, fifteen, and twentie fathomes good ground. This maketh *Gurners-nose*, an Iland, for this Hauen goeth out on the North-west side of *Gurners-nose*. I named this Hauen, the *Fayre-hauen*; I found a great tyde heere, which runneth South South-west, the flood commeth from the Southwards.

Then standing to the Northwards, I saw the Sea covered with Ice, which lay close to the Land which made me stand to the Southwards again, I obserued at *Gurners-nose*, and found the Poles height 79. degrees, 50. minutes. At a North-west Sun, the same day, I sent the skiffe on Land to search the Coast to the Southwards of *Knottie-point*, where I sounded and had twenty foure fathomes Foule-ground, and in the *Fayre-way* I sounded, hauing these depths, 30. 35. 45. and 48. fathomes all Rocky-ground. By the seuenteenth day, I was in the entrance of *Close-cone*, at a South Sun, at which time the Skiffe came aboard, and brought a Beares skin, and a Buck, and a good quantite of Whales Fins and an Unicornes horne, which was five foot and seven inches long, and in the biggest part of it, it was seven inches and a halfe about. The eighteenth day, at a South Sun, I came into the Road, where I rid all that day, hauing very much wind and raine that wee could doe nothing. At a North Sunne, I sent my Mate, with the Skiffe, and sixe men to seeke for more Fins, &c. The nineteenth day, at a North Sun, they came aboard, hauing slaine ten Beares, three of their skins and fat they brought aboard, and a good quantitie of Fins, and six paire of teeth. The twentieth day, in the morning, I sent both the Boat and Skiffe to slay the other seven Beares, the wind being at North faire weather. But they were no sooner gone, but it blew very hard at North, which brought abundance of Ice out of the bottome of the Sound, but did the Ship no hurt. At a West South West Sunne, the Boats came aboard with the Beares skins, the wind abouefaid set so much Ice out of the sound vpon the Ship, that it inforced mee to set sayle.

Take heede of
this point.

The one and twentieth day, at a North Sun, I stood towards *Fayer-farland*, and sent out the skiffe. The two and twentieth day, at a South-east sunne, they came aboard, with the skiffe laden with Fins, and killed five Deere. Then I went on Land to search what I could find, and I slew a Beare, and tooke a young one alive, and at three of the clocke in the afternoone I came aboard with the skiffe laden with Fins. The three & twentieth day, at a South-east sun, the Boat came aboard, and brought a good quantitie of Finnes, and a Beares skinne. Then I stood toward *Cape-cold*, and the same day, at a South sunne, I sent the skiffe on Land to the Northwards of the Cape, where they found sixteene Mohorses on a rocke, which they slue; and at a North-east sun, the foure and twentieth day, they had brought all the teeth and blubber of them aboard; at which time the wind came to the North-west, and blew verie hard: then I stood towards the *Ice-sound* to seeke what commodities it would yeeld. At a North sunne I was neere *Black-point*, which hath a great many sunken Rockes lying on the southermost end of it, therefore you must come no neerer that shoare then twentie five fathomes. The five and twentieth day, till a South sun, it was calme, and the tyde droue the ship so farre from the Land, that I could not send the boat on shoare.

A Bucke slaine

The sixe and twentieth day, at a South South-west Sunne, I came aboard, more laden with trauell then commodities, at which time I slue a Buck. Then I stood toward *Ice-sound*, and at a Point which parteth *Foule-sound* and *Ice-sound*, I had thirtie fathomes oze, & so to ten fathomes Rockes, then I steered East along the shoare, and had betwixt thirtie and fifteen fathomes oze and sand. In fifteen fathomes I anchored, hauing the wind at North North-west, faire weather at a North-west sun, at a North sun, I sent the skiffe to the shoare to search for commodities. The seven and twentieth day of Iune, at an East North-east sun, they came aboard, and brought a good parcell of fins. At six of the clock I sent the Skiffe to the Land againe, and set sayle with the ship; but it being calme, and the tide setting the Ship towards a ledge of rocks, made mee to anchor a-

gaine.

gaine. At a South South-east Sun, they came aboard againe, and brought a good quantitie of fins: at a South Sunne I sent the Skiffe towards the mouth of *Ice-sound*, and in the entrance thereof I found a Coue in the which was twentie fathomes, and so to thirteene, but by reason of the tyde, and edy-winds, I could not get into it; here the Skiffe came aboard and brought a few finnes. Then I steered to another Sound, in the South side of *Ice-sound*, where I anchored in twentie fathomes oze, the same day at a North Sun. The eight and twentieth day I stayed at the place abovesaid, and tried the Beares grease to bring it into oyle, and when we were all busied, a Beare came swimming over the Bay, towards the ship, which I slue, and split my Peece, the wind being at West. The nine and twentieth day, at a South-east Sunne, I sent the skiffe to search the Coast to the Westwards of this Bay, the wind at North-west. The last of Iune, the skiffe came aboard, at a South-east Sunne, and brought a few Finnes, and a Bucke, the wind at North.

A Beare slaine.

A Bucke.

The first of Iuly, being Sunday, I rid at the place abovesaid, in hope to haue more Mohorfses on Land; I obserued heere and found this place in 78. degrees, 24. mitures, and the variation Westwards, seuentene degrees. Then I sent the skiffe to see if any more beasts were on Land. The wind at North-west, faire weather. The second day, at a North North-east Sunne, they came aboard and brought two Deere. The third, wee slue a few Morfses, whose teeth and blubber wee brought aboard, at a North-west Sunne, at which time I slue a Pricket: this place I named the *Green-hauen*. Immediately I sent the skiffe to take the teeth, and fat of seuen beasts, which lay slaine in another place. The wind at West, thicke foggie weather. It floweth here on the Change day South, and by West, and hyeth fixe foot water, and runneth halfe tyde halfe quarter. The fourth day, we rid still the wind at South-west with fogs and raine, and very much wind: at the same time I saw great store of Ice in *Ice-sound*. The fifth day, at a North-east Sunne I wayed, the wind at West thicke weather, and in standing out wee slue a Beare, and tooke her two young ones. Indifferent faire weather, we lay becalmed all this day.

The sixth day, I was off *Lownesse* (at a South Sunne) the wind being at East blew so hard, with raine and thicke weather, that I was enforced to take in all the sayles saue a Mayne-course, which storme continued till eight at night, at which time I set more sayle, and stood to the Southwardes, hoping to get some goods that way. The seuenth day, at noone the wind came to the North-east, and then it began to bee cleere weather, at what time I saw the Land of *Bel-sound*, whither I purposed to goe, yet could not by reason of abundance of Ice, which lay about three leagues from the Land, which I could not possibly passe. At a North-west and by West sun, I saw abundance of Ice all along the Land, to the Southwards of *Bel-sound*. The eighth day, at twelue at noone, I stood into the Ice, in hope to get to the shoare, the wind at North and by West hase weather, *Horne-sound* bearing East North-east, nine leagues of, I stood to the landwards till foure of the clocke, at which time I found the Ice so thicke that I was forced to stand to the Southwards to eschew it. I sayled by, and amongst the Ice, till a North North-west Sunne, at which time I was within three leagues of the shoare. Then I sounded, and had thirtie fixe fathomes. Then I stood to the Westwards, and finding all this part

Ice.

of the Land full of Ice, I purposed to stand to the Northwards againe to search for commodities that way: the wind being at North-west, I turned to windwards, till the tenth day, at eight of the clocke before noone, at which time wee found a part of a dead Whale, which I caused to bee made fast to the Ship, determining to get into some Harbour, there to make the best of it I could. Before I could get into *Bel-sound*, at which time I saw all the bottom of the Sound full of Ice, so that there was no refuge for the Ship. Then I was faine to turne out with the winde at West, and beganne to blow verie hard. At a North-west Sunne, it was fayre weather, and I sent my Mate with the skiffe to search the Coasts towards *Bel-point*. The fourteenth day, at a North-east Sunne, the skiffe came aboard, and brought three Beares, which they had slaine. Immediately I sent the Boat for water and wood, and then I stood through the Ice, and got through it by a North Sun the fifteenth day, the wind at North-west foggie weather. Then I turned to windwards, to double *Lownesse*, and got cleere of it: at fixe of the clocke at night thicke foggie weather.

A dead Whale.

Three Beares
slaine.

The sixteenth day, at five of the clocke in the afternoone, I got to *Black-point*, the wind coming to the South, thicke weather. Then I sent the skiffe to range the Coast, and to search what they might find. The seuenteenth day, at ten of the clocke they came aboard, and brought some Fins, and three Deere. Then I stood towards *Crosse-road*, and anchored there at a North-sun, the wind and weather as abovesaid. The eighteenth day, about five of the clocke in the morning, I sent the skiffe to see if they could find any Morfses on Land, on the Rocke, or in *Deere-sound*, and in the meane time, I, with the rest of the company got drift-wood and water readie, and about a South sunne, a Beare with two young ones; the Dam I slue, and tooke the young ones aboard the ship, the wind Northerly, cold, foggie weather. The nine and twentieth day, in the morning, I went to the East side, to see if any Mohorfses were on land; there I slue foure exceeding fat Buckes and a Doe. In which time the skiffe came aboard and brought two Beares skins, but found no beasts, and in *Deere-sound* they found Sea-coales, which burnt very well.

Sea-coales.

The twentieth day, I sent the Skiffe into the bottome of *Closse-cove* to search it for commodities, the wind at South close weather with raine: at eight of the clock at night they came aboard, but found nothing; immediately I got wood and water aboard, which was ready before, preparing to set sayle the wind and weather abovesaid, we slue three Deere. The one and twentieth, I wayed, the wind at North faire weather. The two and twentieth day, the wind came to the West, and then I stood to the Northward, at eight of the clocke hali-weather. At twelue of the clocke at noone the wind came to the North, and I stood to the Southwards by *Fayer-forland*. The three and twentieth day, at an East north-east Sunne, the Boat brought some Whales finnes, and three Buckes, and one Doe: In which time I thought I had seene Land beare West from me. I stood to the Westwards, and by a South South-east Sunne, had run fifteene leagues West and by South, then I perceived it to be fogs. The foure and twentieth day, at seven of the clocke in the afternoone I came into *Bel-sound* and found but little Ice, then I sent the Skiffe to seeke for a Road for the Ship, and also for commodities. The five and twentieth day, at three of the clocke in the morning, the Skiffe came aboard, hauing beene in the mouth of the North Inlet, which I call *Low-sound*, they went into it by *Point-partition*, but there is no good Channell that way for a Ship: neuerthelesse there seemeth to bee an Inlet or Channell, but it is full of Rockes from side to side, and the men told mee, that vpon the Land lay some Mohorles, which I sent them to kill. At eight of the clocke, the Skiffe came aboard, and brought the teeth of the sayd beasts, and some blubber. Immediately I sent them into *Bel-sound*, to seeke for a Road for the Ship, the wind at West thicke foggie weather. About an North West Sunne, I anchored in *Bel-sound*, in sixteen fathomes oze ground, this Harbour lyeth about two leagues aboue *Point-partition* on the South-side of it, and here a ship may ride safe from all windes. At a North Sunne my Mate slue a Beare. The six and twentieth day in the morning, it blew hard, and I went on Land and slue a Beare, and a Bucke which had three inches and an halfe in thickeesse of fat on the haunches. At nine of the clocke I sent both the Boats to fetch the fat of those Mohorles which were slaine the day before, and likewise to search if they could find any more, the wind at North with fogs. At six of the clocke at night the Boats came aboard with the fat, and brought two Buckes, but found no beasts on Land.

The seven and twentieth day, at a South South-east Sunne I weighed, the winde being at North and by West faire weather, and I steered out (betwixt an Iland and the point where I rid) South-west and by West, hauing these depths, 10. 7. 6. 5. and 4. fathomes: then I was in the middest betwixt the said point, and a shoald which lay South and North, one of the other, and after keeping the same course, I had these depths, 5. 6. 7. 8. 9. 10. 12. and 13. fathomes, in all these depths I had sand, and after oze. At six of the clocke the wind came to the South-west with fogges, and I turned to the wind-wards. And at twelue, the eight and twentieth day *Low-ness* did beare North-east about foure leagues off, where I sounded hauing thirtie two fathomes streamie ground with blacke stones, at which time it was calme, and continued so till the nine and twentieth day at six of the clocke in the morning, then the wind came to the North with fogges, and I stood to the Southwards, and to see what Commodities I could find that way.

At nine of the clocke I was neere the *Ice-point*, where I met with much Ice, which put mee from the Land, and I was enforced to steere South-west and by South to shunne it, the winde at North-west which blew hard with fogges. The wind increaled, I stood towards *Cherrie Iland* (if possible I could attayne it) for fogges and Ice. The thirtieth day, at foure of the clocke in the morning I saw no Ice, hauing kept no certayne course, by reason of the Ice which I had past, the winde at North and by West, cold foggie weather with raine. From the time aboue-said till twelue of the clocke at noone I sayled South South-east, and ranne fifteene leagues, the same wind and weather, at which time I sounded & had eightie fathoms greene oze like Kowes dung. I sounded at two of the clocke, and at foure of the clock, the first, eightie eight, the second, eightie two fathomes, and sayled sixe leagues, the former course wind and weather. At which time I heard a breach which proued Ice, then I steered West to eschew it, the fogges being so thicke that I could not see one Cables length.

The last of Iuly at noone, I had sayled South and by East halfe a point Southerly eight leagues hauing little wind, and sounded, and found one hundred and fortie fathomes thicke foggie weather, and in haling vp the Lead, a fish followed it to the top of the water: then I tryed to take fish but could not. At foure of the clocke in the afternoone, the winde came Southerly, and I stood to the Westward, by reason the Ice lay both to the South and East of vs, at a North Sunne it was cleere weather, and I saw the Ice round about vs, cold weather with frost.

The first of August, we beat in the Ice till noone, but could finde no end thereof, because it was so foggie, and the Ice packed very close; yet after many intricate courses, I got to the Westwards of it at mid-night the same day, the winde at South-east, cold weather with raine and fogges. And after I had seene so much Ice that I could not come neere *Cherry Iland*, to prosecute the rest of my Voyage, I determined to stand for *England*, as God would giue me leave. From mid-night the first day, till eight of the clocke the second day before noone, I sayled South-west and by South five leagues, the wind at East South-east, thicke fogges with raine. From the second

I stood to the
wards *England*.

cond day at eight of the clocke, till the third day at twelue of the clock at noone, I sayled West South-west fifteene leagues, the wind at South and by East, wet foggie weather. From noone abouesaid, till twelue at noone the fourth day, I sayled foure leagues South, the winde variable, and the most part of that time calme, and so continued till eight of the clocke at night, at which time the wind came to the South and by East, and blew very hard; from the fourth day at noon till the fift day at noone I sayled South-west Westerly seuen leagues. The sixt day, the winde was at South-east cleere weather, at noone I found the shippe in 73. degrees, the North Cape beirng by my computation, East South-east Easterly. The seuenth day at noone, I found the ship in 72. degrees 22. minutes, indifferent faire weather. And from the seuenth day at noone, till the eight day at noone I sayled foure and twentie leagues, the course South South-west, the wind at South-east and by East, at which time it beganne to be very foggie, and the winde came to the South, but immediatly it was calme, and continued so till mid-night. Then the wind came to the North, little wind, and at a South Sunne the ninth day, I had sayled South seuen leagues. From the ninth day at noone till the tenth day at that time I sayled South, and ranne seuen leagues South, it being calme most part of the day, with much rayne and fogges. From twelue the tenth day, till noone the eleuenth day, I sayled South and by West, and ranne seuentene leagues, the wind Northerly. And from the eleuenth day at noone, till the twelfth day at that time, I sayled South and by West eightene leagues, the winde at North North-west faire weather. From noone the twelfth day, vntill twelue at noone the thirteenth day, I sayled South and by West fortie eight leagues, the wind betweene the North, and the West North-west gustie weather. From the thirteenth at noone, till the fourteenth at noone, I sayled South and by West fortie five leagues, the wind betwixt the West North-west, and the West South-west gustie weather, latitude 64. degrees 21. minutes. From the fourteenth day at noone, till the fifteenth day at that time, I sayled South and by West nine and twentie leagues, at which time I obserued and found the ship in 62. degrees 53. minutes faire weather, the wind at North. At foure of the clocke the same day, I saw *Skutsness* in Norway seuentene leagues off, and bearing South-east, from whence I hold it superfluous to write it, being a place well knowne. The last of August I arriued at London, Blessed be God for euer and euer. Amen.

In 62. degrees
15. minutes.

A brieft note what Beasts, Fowles, and Fishes were seene in this Land.

BEASTS: Buckes, and Does, white Beares and Foxes, of colour dunne and grey.

FOWLES: white Partridges, a small land Bird, like a Sparrow, partly white, and partly browne, a Fowle with a combe and a taylor like a Cock, a redde Fowle of the bignesse of a Pidgeon; a white Fowle with a greene bill, the top of the bill of it and the eyes were redde, with blacke feet. Wild Geese, Coluidines, Gulls, Sea-mewes, Willocks, Noddies, Ice-birds, Recks, and Sea-pidgeons.

The Coluidine is as big as a Mallard, the male is neerer of the colour, and the female browne.

FISHES: great store of Whales, Gramposes, Mohorpes, the white fish I spake of the seuenth of Iune, a small fish like Cuplen, likewise I saw the bones of Cods, or Haddocks; but could take no fish: I often looked for Shel-fish, but could take none: diuers of my company did see two Beavers.

CHAP. II.

A Commission for IONAS POOLE our Seruant, appointed Master of a small Barke called the *Elizabeth*, of fiftie tonnes burthen, for Discouerie to the Northward of *Greenland*, giuen the last day of March 1610.

AS much as it hath pleased Almighty God, through the industry of your selfe and others, to discover unto our Nation a Land lying in eightie degrees toward the North-pole: We are desirous not only to discover farther to the Northward along the said Land, to find whether the same be an Island or a Mayne, and which way the same doth trend, either to the Eastward or to the Westward of the Pole, as also whether the same be inhabited by any people, or whether there be an open Sea farther Northward then hath bene already discovered. For accomplishing of all which our desires, we haue made choice of you, and to that end haue entertayned you into our service for certayne yeares upon a stipend certayne: not doubting, but you will so carrie your selfe in the businesse, for which you were so entertayned, as God may be glorified, our Countrey benefited, your selfe credited, and we in our desires satisfied. And for your better instruction to proceed in this your Voyage, we haue thought good to set downe our opinions what course wee thinke fit to be obserued in the same: which is, That forasmuch as by your owne report of the great

Poole entertained by a certaine stipend. He was as I haue heard, miserably and basely murdered betwixt Ratcliffe and London, after his returne from this Voyage.

store of Whales in those Seas, wee are at an extraordinary charge this yeare, of setting out a ship and men for that purpose, which ship is called the Marie Margaret of London, in burthen one hundred and fiftie tunnes or thereabout: Our meaning is, that you doe keepe company with the said ship, and not to leaue her, till God send you to the places, where she may make her Voyage: which by your report should be at a place named by you the last yeare 1610. Whale Bay.

Further disco-
uerie to the
North.

And God sending you to the said place, we would haue you to stay there the killing of a Whale, or two or three, for your better experience hereafter to expedite that businesse, if through extremitie of the Ice you should be put from your Discoveries. And in the meane time while you are staying about killing of the Whale, you may cause some of your people to bee searching the Coast with their Shallops for Whale finnes, Morfes teeth, Ambergreefe, or any other commodities, that may be found upon that Coast. And hauing thus stayed a conuenient time with the said great ship for the purpose aboue specified, wee would haue you then to proceed on your Discoverie for the satisfying of our expectations formerly mentioned, which is, to discover further to the North Pole as farre as possibly you can, and how the Land already discovered doth trend, and whether there be any inhabitants in the said Land, and whether there be an open Sea to the Northward beyond the said land. And in this your coasting the land, we doubt not but you will endeavor with your Shallops to gather up all the Whale finnes you can finde, and to kill the Morfes which you can come by on land, and to referue the teeth and blubber to the most aduantage that may bee, the better to beare out the great charge which you know we are at in these Discoveries. And to that end we haue laden in you eleuen Tunnes of emptie caske.

Thomas Edge,
See sup. l. 3. c. 2.

And hauing spent so much time in this your Discoverie, and in gathering up of such commodities as that Coast will afford, and as the season of the yeere will permit you, then we would haue you returne for England, and in your way homeward to touch at the place where you left the Marie Margaret, to see if shee be not gone; and finding her there, and that the time of the yeere will permit, wee would haue you melt your Blubber into Oile before your comming from thence, to auoid the great trouble and inconuenience you know we fell into the last yeere 1610. by bringing the same hither in Blubber. But if the said ship should chance to be full fished, and so to be gone before your comming thither, yet we would haue you stay there, or at Cherie Island some small time to melt your Blubber: to which end we haue appointed Thomas Edge our seruant in that ship to leaue a Copper, and such necessities as shall serue your turne, for the performing of that businesse, behinde him; and haue deliuered him likewise aduertisements at that place of their proceedings in the voyage, and of their intent, what course they purpose to take, together with their opinions, what course they would haue you take.

Cherie Island.

In these matters of Discoverie and vncertaine Voyages, the varietie of occurrences and Sea dangers is such, as we cannot directly prescribe a course certaine to be held: yet we hold it fitting to set downe Our opinions of the needfull, which are, that at your first departure out of England you keepe counsell together, and agree upon your places of meetings, if by tempest of weather you chance to bee separated; still shaping your course directly for Chery Island, where we would haue you stay. And if at your comming thither, you finde the same cleere of Ice, and that there be Morfes on shoare, then wee would haue you to worke upon them, as time and opportunitie will permit, alway hauing respect to your intended voyage. And hauing dispatched your businesse in that place, wee would haue you depart in company together for The Whale Bay, as aforesaid, and to follow our instructions formerly set downe to be done in that place. And hauing performed what may be done in the parts beyond Cherie Island, and so returning backe againe for England, we hold it fit you make your Rendez vous againe at the said Cherie Island, and there to stay the one for the other, and to be killing of the Beasts there till the last of August, if neede bee. And if it happen that one ship doe arrive there before the other, and no Morfes come on shoare, then wee would haue them spend the time in searching for the Lead Ore, or any other Minerall matter that may be like to be of worth vpon the said Land. And thus hauing stayed at Cherie Island till the last of August the one for the other, and not meeting together, the ship so staying having made her Voyage, wee would haue her to returne directly for England, and to leaue a Note in writing of the day of her departure. This is our opinion. Notwithstanding, if vpon better grounds you shall among your selues finde a conuenienter course to be held for the good of the Voyage, and the benefit of vs the Adventurers, wee leaue it to your selues to agree vpon, as time and opportunitie shall serue.

And for the auoyding of an Obiection heretofore used, That the want of sufficient victuals hath beene the cause of the overthrow of the Voyages by speedier returne home, then otherwise they would; wee haue thought fit to set downe the quantitie of victuals deliuered aboard your ship in this our Commission, to the intent to cleere our selues and our Agent of that imputation, and to lay the blame on your selues, if by default the same be euill husbanded. The particulars are these. Beeffe, 22. c. 3. quarters, 18^{li}. Bisquit 30. c. Beere 14. Tunnes. Fish, 200. of Haberdin, and halfe an hundred Lings. Cheefe 300. c. weight. Butter three Firkins. Oyle three Gallons. Pease ten Bushels. Oate-meale fise Bushels. Candels, fixe dosen. Aquavita, thirtie Gallons. Vinegar one rundlet of twentie Gallons. This proportion of victuals will last you seuen or eight moneths with good husbundry, together with the helpes of Fish, Fowle, and Beasts that are to be had in abundance vpon those Coasts. So that we hope you shall haue no cause to the contrary, but cheerfully to goe forward in your businesse, whereby not onely the small Barke you goe in, but the great Ship may come home fully laden with one commoditie or other, which we doubt not but by your diligence and good endenours you may attayne unto.

But

But if you shall chance by extremitie of Ice, or otherwise to be put backe from your discoverie, or from obtaining commodities upon the coast of Greenland, whereby to lade both ships; then we would have you stay at Cherie Island, or other Islands thereabout, so long time as possibly you can, and as the season of the yeere will permit you, to finish the rest of your voyage. And if there bee sufficient lading betweene you both to lade the bigger ship, wee would have her to bee dispatched from thence with all speede, and you to stay there as long as you may conveniently for the good of the Voyage: which the more beneficiall it proo- ueth, the more it will be for your credit, and we will not be vnthankfull at your returne.

10 We would have you at every place of meeting with the Mary Margaret, to deliuer to Thomas Edge our seruant a particular Note of what goods you haue taken into your ship. And at your last lading place we would have you make a generall inuoyce of the whole Cargason of goods laden in your ship, and hauing signed the same, to seale it vp, and direct the same to our Agent resident in London. And if you doe chance to meete with the Mary Margaret at or after your last Port of lading, we would have you deliuer a Copy of the said inuoyce to our seruant Thomas Edge for our better satisfaction, what casualtie soeuer might happen by the way, and at any hand to haue such an inuoyce euer readie sealed, and for mortalities sake put up in some sure place of custodie.

20 We hold it fit, that you Ionas Poole should be as grand Pilot in this voyage to the Northward. And therefore we would have you to accompany the great ship, and to bring her to the places of fishing for the Whale; or to any other place, which you out of your experience shall thinke fit to bring her for the good of the Voyage and benefit of the Adventurers. And our will is, That Steuen Bennet Master of the said great ship together with the rest of the company in that ship, doe follow the said Ionas Pooles direc- tions, as they will answer the contrarie upon their perils at their comming home.

And for that heretofore the Company haue bene abused by lewd and bad people, who haue imbeveled part of that which by our great charges and adventures hath bene obtained: Our minde and will is, That you Ionas Poole doe make search in your owne ship, that none of our Whale finnes, Morfes teeth, Oyle, or any other commodities gathered at our charge, be imbeveled or carried away by any of the Ma- riners, who will looke to haue the uttermost of their wages paid them, and to bee fed with meate and drinke sufficient. And God sending you into England, we would have you suffer none of your people to goe on shoare vnsearched: neither would we haue you to leane the ship till your comming into the Riuer of Thames, that we giue you order to the contrarie. And if you chance to be winde bound upon the coast, 30 you may send up one of your people with your Letter, but not to come your selfe on shoare till our farther order, as aforesaid.

The like order we would have Steuen Bennet to vse in his ship, by vertue of this our Commission, which we haue ordered to Thomas Edge our seruant to see performed accordingly.

And in as much as we haue agreed here with a Tanner for all the Morfes hides which wee kill and bring into England, and haue sent ten of purpose for the flaying, salting, and ordering of the same, 40 whereof we haue appointed one to goe in your ship: We would haue you reserve the said hides, and floore your ship therewith in stead of ballast. And if you obtayne a greater quantitie then you can bring away with you, hauing alwayes regard to commodities of more value, which are Oyle, Teeth, and Whales finnes, that none of them be left behind; We would haue you leaue the said ouerplus of hides in some conue- nient place, till the next yeere, that we send more store of shipping.

Agreement
with a Tanner
for Morfes
hides:

A Commission for Thomas Edge our seruant, appointed to goe as our Factor in the Ship called the Mary Margaret, of the burthen of one hundred and fiftie Tunnes, for the killing of the Whale and Morfes vpon the coast of Greenland, or any other place in the North Ocean: Giuen the 31. of March, 1611.

50 You are not ignorant of our employing you heretofore in two senerall Voyages to Cherie Island. The first whereof, by reason of one Dupperts going thither, together with certaine men of Hull, glutting the said place, prooued to vs a thousand pound losse of our principall. As also in the second Voyage, be- cause you could not come to set footing vpon the said Island, by reason of the abundance of Ice lying round about the same sixteene leagues compasse till the twentie eight of Iuly, by which occasion our whole charge of setting out that yeeres adventure had bene lost, if the refuge to lade our ship backe againe from Saint Michael the Archangel in Russia had not holpen vs: yet notwithstanding that helpe, wee lost by that voyage aboue fine hundred pounds. We entering into due consideration of the premisses, doe not impute the cause of these our losses vnto you; but to the accidents then happening contrarie to our expectation: yet these losses growing vpon vs in the times of your employment, we can doe no lesse then put you in minde 60 thereof, to the intent to incourage and stirre up your minde to doe your uttermost indeuour to further the businesse in this your third employment, that we may recouer our selues of the losses formerly sustained. And for that end we haue made choice of you againe to goe as our Factor in the Ship Mary Margaret, of one hundred and fiftie Tunnes, the Master being Steuen Bennet, for the killing of the Whale: And to that end, as you well know, haue bin at charge of procuring of sixe men of Saint Iohn de Luz, accusto- med

med to that function: whose names are as followeth: videlicet, Iuan de Bacoynne, Iuan de Agerre, Mar-
tin de Karre, Marlene de Horifada, Domingo de Sarria, and Adam de Bellocke: which men wee
would haue to be used very kindly and friendly during this their voyage, whereby being strangers and
leaving their owne Countre to doe vs service, they may haue no iust cause of complaint, but rather to be
encouraged to doe vs service hereafter, if there be cause. And although it be our meaning they should be
encouraged by all good and courteous vsage to be readie to doe vs service, yet we will haue you together
with our owne people and Mariners employed in this Voyage, to obserue and diligently put in practise the
executing of that businesse of striking the Whale, as well as they: And likewise to know the better sorts of
Whales from the worser, whereby in their striking they may choose the good, and leaue the bad. And to
that end we doe set you downe here vnder, the severall sorts of Whales, together with the differences of good-
nesse betweene the one and the other, as we haue gathered the same by information from men of excellencie
in that businesse: who make knowne vnto vs, that there are eight severall kindes of Whales, all differing the
one from the other in quantitie and qualitie. Which for your better instruction, we haue thought good to
set downe in this our Commission.

The first sort of Whales, is called the Bearded Whale, which is black in colour, with a smooth skinned, and
white under the chops; which Whale is the best of all the rest: and the elder it is, the more it doth yeelde.
This sort of Whale doth yeelde usually foure hundred, and sometimes five hundred finnes, and betweene
one hundred and one hundred and twentie Hogheads of Oyle. The second sort of Whale is called Sarda,
of the same colour and fashion as the former, but somewhat lesse, and the finnes not aboue one fathom long,
and yeeldeth in Oyle, according to his bignesse, sometimes eightie, sometimes a hundred Hogheads. The
third sort of Whale is called Trumpe, being as long as the first, but not so thicke, of colour Grey, having
but one Trunke in his head, whereas the former haue two. He hath in his mouth teeth of a span long, and
as thicke as a mans wrist, but no fins: whose head is bigger then either of the two former, and in proportion
farre bigger then his body. In the head of this Whale is the Spermaceti, which you are to keepe in
Casse apart from your other Oyle: you may put the Oyle you finde in the head and the Spermaceti altoge-
ther, and marke it from the other Oyle, and at your coming home, we will separate the Oyle from the
Spermaceti. The like is to be done with the Oyle of this sort of Whale, which is to be kept apart from
the Oyle of the other Whales. The reason is, that the Oyle of this sort of Whale being boyled, will be as
hard and white as Tallow, which to be mingled with the other Oyle being liquid, would make the same
to shew as footie Oyle, and so consequently spoyle both, and be of little value: you are therefore to be ve-
ry carefull to keepe the Oyle of this sort of Whale apart, as well of the head as of the body, for the reasons
before mentioned. In this sort of Whale is likewise found the Ambergreese, lying in the entrails and guts
of the same, being of shape and colour like vnto Kowes dung. We would haue you therefore your selfe to
be present at the opening of this sort of Whale, and cause the residue of the said entrails to be put into
small Caske, and bring them with you into England. We would haue the Master also to be by at the
opening of this Whale, and to be made priue of the packing of those Barils. And although it be said,
that the Ambergreese is onely in this Whale and in none other, yet we would not haue you be absent at
the opening of any other: but if you see cause to make a reseruatiou of the entrails of every Whale, that
you shall perceiue to be cause of the least suspect to haue any of the said Ambergreese, being a matter, as
you know, of good worth, and therefore not slightly to be regarded. The Teeth likewise of this sort of
Whale we would haue you cause to be reserued for a triall; as also any other matter extraordinarie that
you shall obserue in the same. This Whale is said to yeelde in Oyle fortie Hogheads, besides the Sperma-
ceti. The fourth sort, &c. as sup. 471. 472.

And in as much as industrie and diligence are two principall steps to atchiue great enterprises, and
negligence and idlenesse are enemies to the same; we would haue you in this charge committed vnto you,
to imbrace the one, and to auoide the other: and to shew that example of paines taking to the rest of the
company of your Ship in your owne person, as well in setting them on worke, as in putting your owne hand
to the businesse when needs requireth, as that there be no idle time spent, but that every one be employed
in some businesse or other in helping to kill the Whale, or in searching the Bayes along the coast for Whales,
Ambergreese, Morfes teeth, or any other strange thing, that may be found vpon that coast, or in killing the
Morfes, Beares, or any thing that may make profit toward our great charges.

Touching directions for your keeping company together with the Elizabeth, and of the course we thinke
fitting for the Master of that Ship to obserue, we haue set the same downe at large in our Commission de-
livered to Ionas Poole, a Copie whereof we deliuer you herewith, for your better instructions, to obserue
what is to be done on both your behalves for the good of the Voyage: which our Commission, we would haue
you strictly obserue, vntill upon some speciall occasion to vs unknowne, and by the consent of the principall
Officers in both the Ships, you shall see iust cause to the contrary.

You haue with you an order set downe by the Lords of his Maiesties priue Counsell, for the maintai-
ning of our Charter: which we would haue you make knowne to any of our Nation, that you may chance
to meete withall either at Cherie Island, or vpon any of those coasts. And if any stranger doe offer you vio-
lence, or doe disturbe you in your trade, you may both defend your selues, and maintaine your trade to the
uttermost of your powers, &c.

CHAP. III.

A briefe Declaration of this my Voyage of discovery to Greenland, and towards the West of it, as followeth: being set forth by the right Worshipfull Sir

THOMAS SMITH, Gouvernour of the right Worshipfull Company of new Trades, &c. written by IONAS POOLE.

10 **W** E Tet sayle at Blacke-wall the eleauenth of April, 1611. with foure Shippes: The one called the *Mary-margaret*, of burthen one hundred and fiftie Tuns, with nine and fortie Men and Boyes. The next the *Elizabeth*, of burthen sixtie Tuns, with eightene Men and Boyes. The third was called the *Amitie*, of burthen seauentie Tunnes, with foure and twentie Men and Boyes. The fourth was called the *Resolution*, with about sixteene Men and Boyes: the *Resolution* was appointed to goe to Saint Nicholas in Russia, in hope to make two Voyages thirther this yeare. The *Amitie* was to goe to Pichora or Nonazembla, there to see if they could make a Voyage by way of trade, or by killing of Mohorles, &c. The *Mary-margaret* was appointed to keepe the *Elizabeth* companie to Greenland, aboue said, there to kill the Whale, for which purpose we had fixe men of Saint Iohn de Luz, with all things fitting for that purpose. The *Elizabeth* was appointed to see if it weare possible to passe from Greenland towards the Pole, and to search in those Seas what likelihood of a passage that way, &c. But before we were as farre to the Northwards as the latitude of sixtie five, we were all separated, by reason of contrarie windes and foule weather: the *Elizabeth*, in which Ship I was, was stoked, that the water which was in her could not come to the Pumpe, but lay vpon the balast, which was the cause we could beare no sayle to keepe the *Mary-margaret* companie.

Foure Ships.

See Supl. 3.

The Ships separated.

30 Yet by the thirteenth day of May I came to Cherie Iland, and the foureteenth I spake with the *Amitie*. The sixteenth day I met with the *Mary-margaret*, which kept mee companie to Greenland, but in our passage thither we saw a banke of Ice to the East wards of vs, aboue fortie leagues long. The nine and twentieth of May, we anchored in a place named (by me the last year) *Crosse Road*, but before we got thither, wee were much troubled with Ice and contrarie windes, and we found almost all the sounds full of Ice, that the *Biscainers* could not strike one Whale, although they saw diuers, which as they said were of the best kinde of Whales.

Cherie Iland.

Crosse Rode.

Ice a hindrance to Whale killing and discovery!

I staid there till the sixteenth of Iune, in which time we set vp our shalops and ranged some part of the Coast, but found little, by reason the beaches were couered with Snow and Ice. Likewise in the same time, I was put out of the roade with Ice, and flood out West and by North into the Sea about foureteene leagues, where I found a banke of Ice; then I stood into the sound againe and got off the Shalop which was in the roade, at which time (which was about the eleauenth of Iune) I stood to the Sea againe and had a storme at South, which sunke our Shalop, and I saw the Ice lye close to the Land in 80. degrees. Then I went into *Crosse roade* againe, and had a Shalop from the *Mary-margaret*, and because I perceiued the Ice aboue said to lye close to the land, and vnpossible to passe that way there running verie strong Tides, in the which it is dangerous dealing with the Ice: I determined to stand to the Southwards alongst the said Ice, to see if I could finde the Sea open that way, and so get to the Westwards of the said Ice, and then proceeded on my Voyage: but I found it to lye the next hand South South-west and South-west and by South, and ranne alongst it about one hundred and twentie leagues, at which time I supposed my selfe neere Groenland, as it is laied downe by Hudson and others, and called *Hold with hope*: I ranne neere fortie leagues to the Westwards of the Eastermost part of the said Land, as it is laied downe, and by my accounts I was to the Southwards of it, neere the latitude 74. degrees, where I saw abundance of Whales by the sides of the Ice; for I failed all this time sometimes in, and sometimes by the said Ice, and sounded most commonly each watch, but had no ground at 160. 140. 180. and 200. fathomes.

80. Degrees.

New discovery

Hold with Hope.

Store of Whales.

50 Then the winde came to the North-west, and I perceiuing the Ice to trend still to the Southwards, determined to stand to Greenland, from whence I came, there to make my Voyage and likewise to try the certaintie concerning the misplacing of the Land, but the next day, being about the seauen and twentieth of Iune, the winde came to the North, and I stood for Cherie Iland, and came to it the nine and twentieth of the same Moneth, where I found that place of my being, when I supposed I should haue found Land, did beare from Cherie Iland West and by South, aboue one hundred twentie five leagues. When I came to the Iland I saw about three hundred Morfes on land, but a storme comming they went all into the Sea.

Cherie Iland.

Three hundred Morfes.

60 The twelfth of Iuly, we slue aboue two hundred; and by the three and twentieth day wee had taken all their fat Hides and Teeth, which with the Victuals we had laded the ship: then I determined to bale vp a shalop to goe to Greenland, to search if I could finde any Land or Ilands, that might proue beneficiall the next yeere, and likewise to search for Teeth and Whales Finnes.

Mary Margaret
lost.

Finnes. The foure and twentie, and five and twentie dayes, it was very much wind at North, which caused the Sea to go so high that we could not land. Yet at eight of the clock at night the wind ceased, and I went on land where I found certayne of the *Maries Margarets* men, by whom I vnderstood, that the said ship was cast away, and that Master *Thomas Edge* seruant to the right Worshipfull Company, &c. with *Stephen Bennet* Master of the said shippe, and others to the number of thirtie persons, were arriued on the South side in three Boats, and that they parted from two Boats in *Greenland* with nine men in them.

Immediately Master *Edge* and Master *Bennet* came aboard, and I weighed and stood to the West side of the Iland, and anchored there, and put neere one hundred Morfe-hides on land, and some emptie caske, and haled vp a shallop. The six and twentieth day about noone, we weighed 10 and stood to the South-west side of the Iland, and sent men on land to hale vp two shallops there. And at mid-night I set sayle for *Greenland*, carrying with mee two *Biscaine* shallops, determining there to try the Blubber of those Morfes we had killed, and bring it to Oyle, and to bring all the Oyle, Teeth, and Finnes which they had gotten in that Countrey. And after diuers winds, but indifferent faire weather, I arriued at *Blacke-point* the last of Iuly, and hauing the wind at North, I was perswaded by diuers that had gone that way to go betwixt the Iland and the Mayne, but when I was almost through, and in sight of that place where the *Mary Margaret* lyeth sunke, I could not find water enough for the ship, yet I was told there was enough by diuers that had gone that way in the shallops. Here we stayed two dayes to buoy the channell, which is shoald and narrow, for we had at three quarters fload, but eleuen foot water.

Ship of Hull.

The third of August I got ouer, and about eight of the clocke at night, I anchored neere the *Mary Margaret*, the Sunne being in 79. degrees, and there I found a shippe of *Hull* conducted thither by one *Nicholas Woodcock*, he being in one of the Boats which stayed in *Greenland*, when those came from thence that came to *Cherrie* Iland. The ships name was called the *Hopewell*, one *Thomas Marmaduke* being Master. Here we found that hee had slaine about one hundred and thirtie Mohorises, which were left on land when Master *Thomas Edge* came from thence with the Boats afore said, and we did determine to kill at my arriual. As soone as the ship was moored, wee got out Blubber and sent it on land to bee brought into Oyle, and wee followed our worke till the seuenth of August at noone, at which time hauing Oyle by the ships side, we put out all the Blubber which was in hold, saue two tuns and a halfe, supposing the ship had ballast 30 enough in her, for there was about twelue tuns of Hides, which were the chiefeest cause of the loss of the ship, and nine tunnes of Oyle, and about seuen tunnes of ballast, a Hoghead and a Barrell of Teeth: besides halfe a tunne of stones, all which was about nine and twentie tunne weight, and to any vnpartiall mans judgement, sufficient to shift a Barke of sixtie tunnes. But as the last But went out of her, the ship began to held, and with all a great many men went to leeward, there being at that time about forty aboard. Then the hides which lay in hold, slid to leeward, and brought her altogether downe, then euery man made shift to saue his life, and I being farre from the hatches, could not get vp so soone as others did. At which time I saw death before mine eyes two wayes, one if I stayed in hold, I was sure to be drowned: the other 40 if I went vp the hatches; I was in election to be slaine; for downe at the hatches fell hogheads of beere and diuers other things, the least of them being sufficient to beate a mans bones, and in attempting to get vp, I was beaten downe twice and hurt. But it was not the will of God to take my life from mee then, but to reuiue me, to plucke me euen from the jawes of death, and by swimming and crawling I got into the Sea cleere of the ship where a Boat tooke me vp, and blessed bee God, no man perished at that so dangerous an accident. We being all got into three Boats, went to the *Hull* ship, where we found but small comfort: for *Duke* told vs plainly, wee should not come aboard his ship, and caused Pikes and Launces to bee brought to keepe vs out. Then Master *Edge* and diuers others desired him to let mee come aboard, which hee did, and with much adoe I got aboard, hauing mine head broke to the skull, and my brow that one might see the bare bones, and by mine eare I had a fore wound, likewise the ribs on my right side were all broken and sore bruised, and the collar bone of my left shoulder is broken, besides my backe 50 was so sore, that I could not suffer any man to touch it.

Double danger.

That which followeth, being further accusation of Marmaduke, is omitted. And I haue here added out of his Brother Randolph Poole their returne; omitting the former part of his Relations of the same Voyage.

In this our great distresse, *Thomas Marmaduke* Master of the shippe of *Hull*, professed great kindnesse towards vs, promising vs passage, and that he would try if he could recouer our ship: but hee deferred the time one whole weeke, till shee was full of oze, so that when wee came to weigh her, both her Cables burst, and so we left her to all our sorrowes, without hope of recovery. Then we went aboard the ship of *Hull*, which God had prepared for our succour, where 60 our Merchant agreeing for the freight, we got the goods aboard; namely, about twentie, or one and twentie tunnes and an halfe of Oyle, and a Barrell of Beares Oyle, about tenne tunnes of Whales Finnes bound vp in an hundred and sixe bundels, in euery one thirtie Finnes, and in some more, five Hogheads of Morfes Teeth, and one and twentie odde paire. And if our ship had not miscarried, the Voyage had bene much better.

The

The nineteenth of August, we directed our course for *England*; the weather being reasonable faire, and the wind for the most part betwixt the North and the West: and wee continued our course homeward all that moneth.

They returned homeward.

Vpon Tuesday the third of September, about two of the clocke in the morning, we were imbayed with land, and were neere the shoare before we were aware. Wee steered backe North and by East: and at twelue of the clocke we found our selues to be on the West side of the Iles of *Orkney*, and steered East into a great sound, called *Pentlow Fryth*, where wee being entred there came a Boat from the shoare, which brought vs fresh meat, and one of the men directed vs through the Sound. This Sound lyeth in the latitude of 58. degrees and 36. minutes, and the course through, is East North-east, and West South-west, it floweth there on the change day, South South-east and North, North-west halfe a tyde, nine foote high or thereabout. At the entrance in on the North side, there is an high red Mountayne, and the Sound there is twelue miles ouer: but farther in the land is somewhat lower, and the Sound narrower. You may sayle along the North shoare two miles off the land in fortie or fiftie fathomes; and on the said shoare about foure miles East South-east. From the red Cliffe there is a Bay, into which you may steere North by West, giuing the West point of the entrance into the said Bay a good birth: for there the water is shoald and fowle ground: but in the middle of the entrance, 30. 20. 18. 12. 10. 6. and 5. fathomes: but wee anchored in 10. fathomes, fine sandie ground.

September 3.

Orkney Ilands
Pentlow Fryth,
in 58. degrees
36. minutes.

The fift of September at an East South-east Sunne, wee set sayle, keeping our course about mentioned, leauing sue small Ilands on our larboord side, and one Iland on our starboord side: and so keeping an high Cliffe, which lyeth into the Sea on *Scotland* side, open of a low Land in the sound on the same shoare, we sayled out as before is said.

Vpon the sixth day at a North Sunne, we anchored in *Humber* mouth: there it floweth on the change day West South-west. Vpon the eight day we arriued at *Hull*, safely and well in body, but much distressed and impayred in our states, which God at his good pleasure can restore.

At our first comming to this Countrey of *Greenland*, the Mountaynes and Valleys thereof, except it were some few places, were all couered with snow: but ere we went away, the tops of the high Hills, and the lower Plaines appeared greene with Mosse, and some little quantitie of grasse. This Countrey, and likewise the seas in these parts, are subiect to marvellous thicke and mistie weather, especially when the sunne with his most forcible heat melteth the Ice and snow, whose vapours obscure the light of the sunne, making small difference betweene the day there, and the irksome night in other places.

We found in this Countrey many fat Deere, which we killed with our Peeeces and Dogges at our pleasure, which was a great refreshing to vs in that vnquoth place: many white Beares, with white, grey, and dunne Foxes. We found also abundance of Fowle: namely, Culuidines, sea Pidgeons, white land Partridges, wild Geese, Willockes, and many other Fowles. Among which I noted the nature of one, which we called an *Allen*; who (like to the great fishes, which eate vp the small, or like to some great men, which deuoure all the labours of the poore) when some smaller Birds haue gotten any thing, then he leaueth not beating of them, till they haue cast vp what they haue eaten, which he laying hold of deuotheth vp: and so with little meate in their gorges, and few feathers on their backs, he leaueth them to get more, not for themselves but for him. We found on the shoares many huge Morfes.

Many fat
Deere, white
Beares, white,
grey, and dun
Foxes.
Abundance of
sundry Fowles.
Allen a deuou-
ring Fowle.

Many huge
Morfes.

There is great store of fresh water in euery Valley, which proceedeth most of the melted snow. On euery Beech is great plentie of drift wood, but neuer a bush nor tree groweth in those quarters, as farre as we haue hitherto discovered.

CHAP. IIII.

A Relation written by IONAS POOLE of a Voyage to Greenland, in the yeere 1612. with two ships, the one called the Whale; the other the Sea-horse, set out by the Right Worshipfull the Muscouie Merchants.

The seventh of April, 1612. wee set sayle at *Blacke-wall*, and went to *Grane send*.

The third of May we came to *Cherie Iland*, where we found a ship of *Holland*, in which one *Alan Salowes* an *Englishman* was Pilot. The same day about a North sunne we anchored on the West side of the Iland.

Cherie Mand.

The fourth, we trimmed a shallop which I left there the last yeere: and *Alan Salowes* went aboard our Admirall, and Master *Russell* sent for Master *Thomas Edge*, Master *Arthington*, *John Mason*, and my selfe: where wee had some speech about detayning him, and to haue brought him into *England*: but in the end hee was let goe. At a North sunne we sent our shallop to the South-east side of the Iland to fetch a shallop, which was left there the last yeere: but they could not get thither for Ice, and came aboard againe at an East North-

North-east Sunne the fift day; at which time we weighed, and stood to the Westward; but immediately we altered our course, and stood toward the land againe among the Ice; and about a West North-west Sunne wee sent our Skiffe and Shallop to fetch the Shallop aforesaid. The winde was at North and by West, frostie weather with snowe.

The eighth, wee stood toward *Cherie* land againe; and were faire by it at a South sunne: at which time the winde came to the South-east, and wee saw the *Hollander* standing with vs. Then we altered our course, and sayled West North-west, determining, if hee followed vs, to stay for him. At ten of the clock at night hee came to vs: and the Admirall sent his shallop aboard of him to command him to be gone out of our companie: and at a North sunne hee stood away from vs, and sayled North and by East, and we lay by the lee.

The twentieth at a South Sunne we saw our Confort, and spake with them, and they told vs, that they had almost split their ship with a piece of Ice, which brake nine of their Timbers; so that they had five foot water in hold.

The one and two and twentieth dayes, wee plyed to windward, the winde being at North faire weather. And at *Blacke Point* wee saw great store of Ice driving to the South. At eight of the clocke at night *Blacke Point* did beare from mee East and by North nine leagues. And the three dayes past we saw great store of Whales within ten or twelve leagues off the Land.

The three and twentieth we were faire off *Cape Cold*; where Master *Edge* and Master *Arthington* went with the *Barks* in their Shallops for *Crosse-rode*, in hope to kill some Whales. And we saw store of Whales in the Sea.

The five and twentieth we got into *Foule Sound*, all the Sounds being full of Ice; and the Shallops came aboard and brought some Venison, which was very leane. And at six of the clock the *Barks* went with the Shallops to *Faire Foreland*, to see if they could kill a Whale: and at a North-west Sunne Master *Edge* went with a Shallop, to see if *Crosse-rode* were open.

The six and twentieth, the two ships aforesaid came into *Foule Sound*: one of them was that *Hollander* before mentioned; the other was a ship of *London*, called *The Diana*, whereof one *Thomas Buxton* dwelling at *Wapping wall*, was Master.

The seven and twentieth, *Alaine Salomes* came aboard of our ship, and told vs, that his Merchant had broke his necke downe a Cliffe. The same day the *Hollander* and the *Diana* stood to the Southward. The winde was at North North-west, and Northwest, which kept the Ice in the Sounds. The twentieth, we sent the long Boate and our Shallop to *Brokenesse*, with a Shallop of ten Tunnes, there to be set vp. The winde was at West with snowe and frost. The same day the *Barks* came aboard, but could kill neuer a Whale. The winde came to the South South-west, with frost and snowe.

The nine and twentieth, the winde was at South with much snowe. The same day one of our men dyed, named *John Butcher*, hauing layen sicke about three weeks. The thirtieth, one *Michael Perkins* dyed aboard *The Whale*. The last of May, the winde was at South; and wee stood toward the *Foreland* in 79. degrees. The same day at midnight, the Chyrurgeon of *The Whale* dyed.

The first of Iune, we stood into *Foule Sound*, where wee saw abundance of Ice drive out with the winde at East. The second day, the winde was at North and by East, cold frostie weather.

All which day wee lay vnder saile in the mouth of the Sound. The third day, wee spake with *Thomas Marmaduke* of *Hull*, in a ship called *The Hope well*. Wee sent for him to come aboard, but he answered, that he was not well, and sent his Mate *Christopher Naylor*. The same day, we stood to the mouth of the Sound, but it was couered with Ice. And *Marmaduke* stood to the Northward; and as we were afterward informed, discovered as farre as 82. degrees; two degrees beyond *Hakluyts Headland*. The fourth, we sent our shallop on shoare in *Foule Sound*, to see if any harbour were open to ride in, and to put our Admirall on ground to stop her leakage. The same day, our long Boate came to vs from *Brokenesse*. And we turned into the Sound, because we saw the Ice drive out with the winde at South, and blew hard. The fift, we anchored in *Foule Sound* in seuentene fathoms water and sandie ground, where we saw the place where both the ships lay which wee lost the last yeere, couered with Ice. The same time wee sent our shallop with our Carpenters, to finish the aforesaid shallop at *Brokenesse*. The winde continued at South; and the *Whale* turned into the Sound by vs, and anchored there at a South-west by South Sunne.

The ninth, the Admirals Boate and ours went with prouision and men to worke vpon a Whale, which the *Barks* had killed; and we stood toward the *Foreland* with the ships, where the Whale was killed, the winde at South, thicke foggie weather. And by an East North-east Sunne wee anchored in the mouth of *Foule Sound* in fiftene fathoms, gray sand with some shells. At a West sunne the Boate came aboard for caske and other prouision, and told vs, that the *Barks* had killed two other Whales.

The seuenteenth, one *Barks* named *Chapel*, tooke five of our *English* men to him, and they trimmed the shallop to kill the Whale. About a West North-west sunne they went away, the winde at South. The twentieth, the *Biscaine* shallop came aboard of vs from the *Foreland*, and told vs that they had strooken three Whales, which brake away.

The

The two and twentieth wee rid still, the winde being at North-west, with snows and frost. The five and twentieth, we got the Whale on flote, hauing stopped her leake. We were no sooner off, but it blew most fiercely, so that the Whales long Boate and our shallop brake from the Whales sterne, and were split in pieces on the Ice, that lay on shoare. The same day about a South sunne two men came from *Faire Foreland*, and told vs that Master *Edge* was come from the South in the *Pinnasse*, and had spoken with one *Nicolas Woodcock* an *English* man, which was my Mate to this Countrey of *Greenland* in the yeere 1610. The said *Woodcocke* was now Pilot of a ship of *Saint Sebastian* in *Biscay*, and rid in *Ice Sound*. Moreouer, they spake with the men of the Boate of the *Diana*, and law the *Hollanders* Boate, but spake not with their men. The two men abouesaid told vs likewise, that *Iohn Chapel* our *Baske* with five *English* men had killed a Whale: and betwixt them and another shallop they had slaine another, and had them both on shoare.

Woodcock Pilot of a Biscay ship.

The fourth and fifth Whales killed.

The seven and twentieth we rid still, and our Carpenter went to worke to mend the knee of our beake-head. And I went to see what *Morses* were on Land, where I found neere one hundred and fiftie. The eight and twentieth, the shallop that had all *English* men in her saue one *Baske*, came aboard for prouision, and told me, that they and *Iohannes Chapel*, had slaine a great Whale close by our ship, which towed them off into the Sound, and our long Boate followed them. At the same time we saw fixe Whales close by the ships side as we rode in harbour: and we saw great store in the Sound, and within one houre there were so many about our ships and in the Sound, that we could not count them. About a North-west sunne our long Boate brought the men that strooke the Whale abouesaid, and towed their shallop on land: for the said Whale had sunke her with his taile. The same time our Carpenter went to worke on the broken shallop, and I went to the place where the *Morses* lay, where I found about three hundred on land. Then I went aboard the Whale to get some harping Irons: for they had all, but I could get but one, because the rest of the *Baske* had laid them vp, enuying that one *Baske*, that went with all *English* men, had done so much, because by their good wills they would not haue vs to haue any insight into this businesse. Moreouer, hee that had the chiefest command in this voyage, did greatly condemne the going of so many *English* men with that one *Baske*, either for feare they should kill none, and lose all their prouision for the said vse, or for feare that our men should kill the Whale aswell, and as soone as they; yet was there none of the other Boates but had lost more then they had lost. And as for killing, there was not one Whale killed with one Boate alone, saue ours, with all *English* saue the *Baske* afore said, which slue three without the helpe of any other Boate. This day the *Baske* slue another Whale at the *Foreland*.

The fixt whale killed.

Three hundred *Morses*.

Biscainers enuie.

The seventh Whale killed.

The eighth Whale killed.

The nine and twentieth, the broken shallop was mended, and I went to the *Foreland*, to see whether the other shallops would come where the ships rode in harbour, where abundance of Whales were still. The same time the *Baske* killed another Whale. Then I romaged my ship, and put caske on land. All this day it was calme.

The last of Iune, one came from the *Foreland*, and told vs, that the *Baske* had slaine two great Whales. All this day likewise it was calme: and there lay abundance of huge Whales in the harbour about our ships. One of the whales abouesaid, *Iohannes* with the five *English* men slue without any of the others helpe. For they stood on the land flouting, and saying, that it was vnpossible for them to kill him, and would not once lanch their Boates to helpe them: yet hee was one of the greatest that were killed this yeere. All this day the whales lay so thicke about the ship, that some ran against our Cables, some against the Ship, and one against the Rudder. One lay vnder our beake-head and slept there a long while. At which time our Carpenter had hung a stage close by the water, whereon his tooles lay. And wee durst not molest the said whale for feare he should haue ouerthrowne the stage and drowned all his tooles. In the end he went away, and carried the ships head round, his taile being foule of the Cable.

The first of Iuly, at a North North-east Sunne, the shallops came to kill whales in the harbour where we rid, and strooke three, which all brake away. The same day, *Iohannes* strooke a whale, that smit in the side of his shallop and split it. Now wee perceiued the whales to begin to goe out of the Bayes. The second day, the *Baske* slue three great whales faire by our ships, in lesse then foure houres; vvhich vvee vvith our long Boate and men towed into harbour, and made fast to our ship. And the *Baske* vvith their shallops to *Faire Foreland*.

The ninth and tenth Whales killed.

The eleventh, twelfth and thirteenth Whales killed.

The seventh day, wee had abundance of Ice about our ships, which vvith the winde and the tyde draue out off another Sound. The eight, vve rid still, and vvere troubled vvith much Ice, by reason of a storme that blew at South-vvest and by vvest, &c. The rest is omitted as hauing nothing of note, but ordinarie accidents.

CHAP. V.

*A Journall of the Voyage made to Greenland with sixe English Ships
and a Pinnasse, in the yeere 1613. Written by Master
WILLIAM BAFFIN.*

Ascension day.

B

Y the prouidence of Almighty God wee departed from *Queenborough* the thirteenth day of May with sixe good Ships, viz. *The Tigre*, Admirall; the *Matthew*, Vice-admirall; the *Sea-horse*, called the *Gamaliel*, the Reare-admirall; the *Desire*; the *Annula*; and the *Richard* and *Barnard*; with the *Iohn* and *Francis* shortly to follow.

The one and twentieth day, faire weather, the winde Southward, wee still making to the Northwards. This morning wee had sight of Land on the Coast of *Norway*; it lying East and by North off about twelue or fourteene leagues. This day at noone, we were in the latitude of 61. degrees and 30. minutes, the variation of the Compasse at *Scouten-nes* is eight degrees East, it being about ten or twelue leagues off: wee hauing made a North way halfe East, about thirtie leagues.

The three and twentieth at noone, in the latitude of 65. degrees and 45. minutes, in which place, the Needle of Declination doth dippe vnder the Horizon 63. degrees and 30. minutes by 20 that Instrument which declineth 54. at *London*.

Greenland attained in eighteene dayes.

The thirtieth day, about three of the clocke, wee espied the land of *Greenland*, being about eight or nine leagues off. The Southwardest part of it bare South-east and by East off it, which shortly wee perceived to bee the Land lying in 76. degrees and 55. minutes; which is called *Horne-sound*. This Land lyeth by our common Compasse North North-west. Within two houres after we had sight of Land, it began to snowe, and was very cold. This evening the Compasse was varied thirteene degrees West.

A ship of Saint Iohn de Luz. Eight Spaniards on the coast.

The one and thirtieth day, variable weather with snowe, and very cold, and the winde also variable: and in the afternoone the winde was at the North-east. In the morning, wee espied a ship, and about noone we spoke with her; and their Master and Pilot came aboard of vs. And wee knew them to bee that ship of Saint *Iohn de Luz*, which had leaue of the Companie to fish. And they told vs, that there were eight *Spaniards* on the Coast. Also, wee espied another ship, which we supposed to be a *French* man, and had one *Allan Sallas* to their Pilot.

The Generall was Captaine Benjamin Ioseph after flaine in fight with a Carrike.

The second of Iune, in the morning, about five of the clocke, our Generall sent our shallop to a small Pinke, that all this night we saw along the shoare, to bid their Master and Pilot come aboard vs, which presently they did. The Masters name was *Clais Martin* of *Horne*; and his ship was for *Dunkerke*, and he told vs that he was comforted with another ship that was his Admirall, the Captaines name was *Fopp* of *Dunkerke*, and that he was on the Coast. Wee kept the Master and Pilot aboard of vs, and sent some of our men aboard of her, and brought her vnder our lee: and then, we sent their Master aboard againe, charging them to follow vs. This afternoone we tooke their shallop with five or sixe men, whereof two were *English* men, and one *Scot*, at the *Faire foreland*.

Dutch ship. No night the 23. of May.

The fourth day also faire weather. This morning was the first Whale killed. Wee had no night since the three and twentieth of May. The fift day, faire weather, but very cold; the winde North. Wee sayled along the land being about eighteene or twentieth leagues in length; lying for the most part by the common Compasse North and by West halfe Westward. About nine of the clocke in the afternoone, we saw our other three ships, viz. the *Gamaliel*, the *Desire*, and the *Richard* and *Barnard*, which lay thereto and fro; because they could not goe into their Harbour by reason of the Ice: and also, because there were foure other ships in a Bay or Cote, called *Poopy Bay*, or *Nicker Cote*; and also other ships on the other side in *Greene Harbour*. We sayled along the drift Ice vntill about one or two of the clocke in the morning, at which time, we came to an anchor in the entrance of the Sound, because the Ice came driving out so fast.

Diuers strangers.

The sixt day, faire weather, the winde variable, till the afternoone: at which time it came to the Northwards. About three in the afternoone we weighed anchor, and about ten of the clocke we came to the foure ships lying in *Poopy Bay*: two of them being *Hollanders*, and one a *Rocheller*, and the other a ship of *Burdeaux*. The Masters of the *Hollanders* came aboard of our ship, to speake with the Generall, both of them being of *Amsterdam*, and brought a Commission granted by the *Graue Maurice*, for to fish in this Countrey. But, when they saw our Kings Maiesties Commission granted to the worshipfull Companie, they told our Generall, that they would depart this Coast: hauing our Generals Ticket to shew to their Adventurers, that they were there, and had made their Port, and how he would not suffer them to fish. We anchored close by the *French* ship wherein was *Allane Sallas*; being readie to fight, if they refused to come aboard vs. So, when we sent our shallop, the Master came presently and their Surgeon, who could speake *English*. At the first, they denyed that *Sallas* was aboard of them: but, being hardly vrged, they

they confessed that hee and one *Thomas Fisher* an *English* man were aboard, who were both presently sent for. This *Sallas* was their Pilot, and *Fisher* was their Gunner.

The seuenth day faire weather, we roade still at an anchor. This day I obserued the latitude of the place, and found it in 78. degrees 24. minutes. The variation of the Compasse is in this place 15. degrees 21. minutes West. About a North Sunne a small ship of *Biscay* came into the harbour where we roade. Lat. 78. deg. 24. minut. Ship of *Biscay*.

The eight day, for the most part snow, the winde Southward. This day the Master of the *French* ship, being a ship of nine score, or two hundred, called the *Iagues of Burdeaux*, agreed with our Generall that hee might fish on the coast: our Generall was to haue halfe the Whales he could kill. Also, this day, the Master of the ship of *Rochel*, and the Master of the small ship of *Biscay*, were agreed to depart from the coast. Snowe.

The ninth day, faire weather. This morning the *Gumaliel* our Reare-Admirall, and the *Desire* weighed anchor to goe for *Greene harbour*, where two ships lay, one of *Dunkerke*, and the other of *Saint Sebastian* in *Biscay*. The Captaine of the *Dunkerke*, called *Fopp*, had beene with our Generall, and told him that he would depart from this Coast. Our Generall gaue him leaue to take the Pilot of the small Pinke, and the other *Dutch* men he had taken of his, keeping onely the *English* men and the *Seots*. Also, the two ships of *Holland*, with the ship of *Biscay*, and that of *Rochel* weighed anchor, and departed from this Harbour. About six of the clocke in the afternoone, came the Master of the ship of *Saint Sebastian* aboard of vs, being brought by one of the Masters Mates of the *Desire* (they hauing taken two of his Shallops) to know our Generals pleasure, whether he should haue them againe, or no. Our Generall gaue them him againe, vpon condition, that he would depart the Coast. About a North North-west Sunne, we weighed anchor to goe for *Horne-Sound*, where we heard, that there were diuers ships; the wind Northward a small gale. Greene harbour.

The tenth day, faire weather, the winde at North, being very close weather. About a North Sunne we came to an anchor in the entrance of *Low Sound*, where we saw two ships ride at anchor. Our Generall sent our shallop to see what ships they were, who found them to bee the two ships of *Holland*. Also our long Boate went on shoare to set vp the Kings Maiesties Armes vpon a low point of land, lying a great way off, called *Low-ness*. We set vp a Crosse of wood, and nayled the Armes vpon it. Low sound.

The thirteenth day, in the morning, it snowed very fast, being very thicke weather, the winde variable, we standing off from the land. About seuen of the clock it began to cleere vp, at which time we espied three ships; and making toward them, at length we perceiued them to be the three ships which came from the Bay where we roade: the winde also was at East and by South, and blew a very stiffe gale. Then we stood in for the shoare, and spent most of this day in turning vp *Horne-Sound*. And about a North North-west Sunne, at ten a clock wee espied six ships lying at anchor on the South side of the Sound, in a small Bay. The one of them was Captaine *Fopp* the *Dunkerker*, who came in before vs, and was appointed by our Generall to come into this harbour, and there to stay for vs, and to goe to the *Foreland*, to haue his other ship which we kept there. Foure of them were *Biscaines* of *Saint Sebastian*; and one of them was in the harbour where we roade and found the *French* ship: The sixth was a ship of *Amsterdam*, wherein *Thomas Bonner* was Master and Pilot, and about twentie *English* men more. All the *Biscaines* came aboard of vs as soone as we were at an anchor: but *Thomas Bonner* refused to come, being sent for by our Generall. Our Generall commanded our Gunner to shoot at him, he himselfe discharging the second Ordnance. Then presently he began to set saile, and cut his cable, thinking to get from vs: but wee hauing shot him through three or foure times, they began to weaue vs, so we sent our shallop and he came aboard. There were fise or sixe more of the *English* men fetched aboard, and some of our men sent to bring her to an anchor, where shee might ride safe: for, shee was almost run ashore. This was about a North sunne, or eleuen a clocke. The *Biscaines* were charged presently to depart, so soone as they had filled fresh water, which, they said, they wanted; and to bring what Whale finnes they had found, or had taken, or other things. His Maiesties Armes and a Crosse set vp at Low-ness. Snowe.

The fourteenth day, faire weather, the winde at East North-east. This morning one of the *Biscaines* brought a few Whale finnes aboard of vs, and the skin of a Beare, which they had killed. Then was our Boate-swaine sent aboard of them to search their ships, and to bid them depart. Our Generall kept the *Holland* ship, wherein was *Thomas Bonner*, to the vse of the Companie. This day I obserued the latitude of this place by a Quadrant of foure foote Semidiameter, and found it to stand in 76. degrees 55. minutes: the Declination of the Needle vnder the Horizon, is 67. degrees 30. minutes, pointing to the Northwards: but pointing to the Southwards, it is 80. degrees. The variation of the Compasse is 12. degrees 14. minutes west from the true Meridian: but from our common sayling Compasse it is 17. degrees, because the Compasse is touched fise degrees and a halfe to the Eastward, and the variation is to the Westward. 76. deg. 55. min. declination 67. deg. 30. min. Variation 12. deg. 14. min.

This day in the afternoone, the foure ships of *Biscay* departed from this Harbour, which is called

called *Horne-Sound*: and about a North sunne, I, with the Master *Thomas Sherin* went ashore with other, to set vp another Crosse with the Kings Maiesties Armes, cast in Lead, nayled vpon it. Then I obserued the Sunne vpon his North Meridian, by my foresaid Quadrant, and found it eleuated aboue the Horizon 10. degrees and thirtie minutes: but because his heighth at the South Meridian, and his heighth at the North did not agree, in finding of the Latitude, I did abate five minutes from each, as the meane betwixt both: for his altitude at the South Meridian was 36. degrees 40. minutes, the declination 23. degrees and 29. minutes.

The fifteenth day, faire weather, the winde in the morning South, but almost calme. This day about noone we weighed anchor with the ship of *Amsterdam*, and diuers of her men were fetched aboard vs with their Shipper, and some of our men were sent aboard her with one of our Masters Mates, called Master *Spencer*. All this day it was so calme, that wee were faine to towne our ship. Our Carpenter did trim vp two of the *Biscaine* Shallops which they did leaue behinde them, and they did leaue diuers Hoopes and Caske staued ashore.
